TRADE NEWS
For the Trade

WHEN a new automobile comes on the market the trade wants information about it that it is unable to obtain from the daily press accounts and advertisements. What the trade wants is an analytical description of the product. The way in which MOTOR AGE specializes in furnishing such information was well illustrated by the detailed study of the New Diana Eight which appeared in last week's issue. The article was based upon on-the-spot observation and trial by one of our technical staff, with the result that an accurate and authentic story could be written.

That is the MOTOR AGE plan in handling articles of this kind. We can do this because of our large fact gathering facilities and technical talent.

An article in this week's issue dealing with the changes being made in the Rickenbacker is another illustration in point. Thru co-operation of the factory one of our technical representatives has been able to prepare a clear and concise article covering this new development in a way that will be appreciated by our readers.

News of this kind, handled in this way, has a very direct dollars and cents value to the men who read this paper. That is why we spend money to provide it.

The Car Manufacturer should be vitally interested in the profits the car dealer makes.

In my plans for the expansion of the Stutz business, I have not overlooked this great essential.

To those who are seeking a connection which will guarantee them the maximum of protection and cooperation, I have a message of real interest to deliver.

FREDRICK E. MOSKOVICS
President
STUTZ MOTOR CAR COMPANY
OF AMERICA, Inc.
Indianapolis, Indiana.

Merchandising Problems to Front at Summer Meeting of A. E. A.

Harvard Bureau's Cost Survey, Webster's Reconsideration of Resignation and Steps Toward Possible Merger With Other Organizations Are Outstanding Features

BY SAM SHELTON

Colorado Springs, June 26.

MANUFACTURERS and wholesalers of automotive accessories and equipment met here this week in the tenth anniversary summer convention of the Automotive Equipment Association for consideration of those merchandising problems which more and more are being recognized as extending all the way down through the retail dealer to the ultimate consumer.

Members of the A. E. A. and their guests were present from all sections of the United States and Canada. New England, the southern states, the central west, the Rocky Mountain region and the Pacific coast territory were well represented and there was an unusually large representation from the Association's Canadian membership. Probably the fact that the Association's summer meeting is going to Toronto next year accounts somewhat for the enthusiasm of the members from the Dominion. In all about 130 jobber members and 155 manufacturer members were represented at the convention, but the fact that most members were represented by a delegate and an alternate and that many of these representatives were accompanied by members of the families brought the convention personnel to the neighborhood of 1,000.

Outstanding among the accomplishments of the convention were these:

Report of the second survey of the cost of doing business in the wholesale automotive equipment field by the Bureau of Business Research of Harvard University.

Definite suggestions by Dr. Melvin T. Copeland, director of the Bureau of Business Research, of better methods of retailing automotive equipment and supplies as a means of increasing the profit of both wholesalers and retailers.

Authorization for the board of directors to proceed with negotiations for the consolidation of the Automotive Equipment Association with other associations in the same field.

Announcement that Commissioner William M. Webster, chief executive officer of the association since it was established 10 years ago, had reconsidered his resignation and would remain as commissioner.

Divisional meetings of both manufacturers and jobbers at which representatives of the other group talked frankly of the faults and shortcomings their own group found in the other. Thus at the manufacturers' meeting several jobbers expressed friendly criticism of the manufacturers and at the jobbers'

Lilley, Quinn & McGill Motor Supply Co., Denver.

meeting some broad-visioned manufacturers pointed out some faults they believed attributable to the jobbers.

The second Harvard survey which was presented to the members in pamphlet form and discussed at considerable length by Dr. Copeland in an address, was based on reports received from 151 jobber members of the A. E. A. This compared with only 128 members reporting in the survey made last year. Dr. Copeland's address, reported more fully elsewhere, pointed out the significant features of this comparison, the most noticeable of which was an increase in the sales force expense from 7.8 per cent of total sales in 1923 to 8.2 per cent in 1924. The common figure for total expense of doing business in 1924 was found to be 25.5 per cent of sales as compared with 23.4 in 1923. At the same time the common figure for gross margin of profit was reduced in 1924 to 24.8 per cent of sales as compared with 24.9 per cent in 1923. Thus the common figure for net profit in 1924 was 1.3 per cent of total sales as compared with 1.5 per cent in 1923. The common figure for stock turns increased in 1924 to 3.6 as compared with 3.4 in 1923.

Sees Unhealthy Condition

In the greater cost of the jobber's sales force Dr. Copeland saw an unhealthy merchandising condition and one which he charged directly to the retailer. The sales force cost has increased, he said, because of the great number of unproductive calls made and the smallness of the orders received by the jobbers' salesmen. Responsibility for this condition he laid in turn at the door of the garagemen and repair shop operators who he said make little effort to actively sell automotive equipment and supplies. He declared the average garageman and repair shop operator is not a merchant and does not serve satisfactorily as a retail distributor for automotive accessories and supplies.

It was Dr. Copeland's opinion that the great need of the industry is more active selling of automotive merchandise and he believes this will come through large, well-stocked retail stores.

Following his prepared address Dr. Copeland was questioned for more than an hour by both manufacturers and jobbers who were eager to get suggestions for the improvement of certain specific conditions in the industry. In reply to one of the questions Dr. Copeland stated that price will not sell merchandise, but sales can be increased only by making the consumer want the merchandise and enabling him to find it where he prefers to buy.

The convention approved a proposal to print Dr. Copeland's address and the full text of questions asked and answered by him for distribution to all members of the association. The merchandising committee, of which L. A. Safford of St. Louis is chairman, will have charge of that work.

The convention was unanimous in its decision to authorize the board of directors and a special committee to proceed with negotiations for the consolidation of the

Merchandising Committee

Left to right, sitting—Arthur R. Mogge, merchandising director; L. A. Safford, chairman of the merchandising committee; Dr. Melvin T. Copeland, director Harvard Bureau of Business Research; William T. Morris, president of the A. E. A. Standing—H. E. Ervin, Canadian Raybestos Co., Ltd., Peterborough, Canada; N. H. Ozburn, Ozburn-Abston Co., Memphis, vice-president of the A. E. A.; William E. Wissler, Herring Motor Supply Co., Des Moines; R. W. Proctor, Black & Decker Mfg. Co., Baltimore, and A. C. Storz, Storz-Western Auto Supply Co., Omaha

A. E. A. with other associations in the same field. The particular association with which negotiations are now being carried on is the Motor and Accessory Manufacturers Association with headquarters in New York City. This association has appointed a committee which is to confer with the A. E. A. committee. It is understood that if common ground is reached upon which these two strong organizations can combine an effort will be made to bring in several other organizations working in the automotive field on a national basis.

The chief argument advanced for the consolidation is the elimination of wasted effort that comes from the considerable duplication of the association activities. As it now stands many automotive manufacturing concerns are members of several national associations which perform more or less the same functions. It is believed that if these associations can be combined into one a considerable saving will be effected for the members and this will be reflected in a lowering of the cost of doing business.

At the A. E. A.'s spring meeting at New Orleans a year ago last April Commissioner Webster announced that he would retire this fall. Since that time many members and directors have been active in the effort to have him reconsider his resignation, and the announcement that he had decided to remain in his present position was greeted with great enthusiasm. Mr. Webster, at the request of a number of automotive jobbers, organized the A. E. A. in 1915. At first it was limited in its membership to wholesalers, but later manufacturers were taken in, at first as associate members and later on a basis of equality. Mr. Webster is firmly convinced that the great success achieved by the association has been due to the cooperation of manufacturers and jobbers on equal grounds provided by the particular type of organization.

Morris Reviews Accomplishments

An outstanding feature of the convention was the address of its president, William T. Morris of the American Chain Co., Bridgeport, Conn. Mr. Morris reviewed the activities of the association and outlined some of the work proposed for the next few months. He referred particularly to the proposed consolidation of associations and recommended careful consideration of the proposal in the interest of economy.

The first general session of the convention was held Tuesday morning. On Wednesday morning divisional meetings of manufacturers and jobbers were held in separate halls at the Broadmoor Hotel. Two more general meetings were held Thursday and Friday mornings, the convention adjourning at 1 p. m., Friday.

Definite action was taken on a number of proposals included in the commissioner's report and the board's recommendations, and action on others was deferred for further consideration.

One proposal brought before the convention was for the creation of a merchandise exchange through which jobbers might be able to dispose of surplus or slow moving stocks to other jobbers who might be able to use them. It was found that this situation was covered by one of the association's fair trade practices which recommends that jobbers exchange stocks among themselves after first notifying the manufacturer of the goods that they are to be disposed of in this way, thus giving him an opportunity to take them up if he so desires.

Consider Credit Department

The creating of an extensive credit department came up for consideration. The association already had a committee working on this proposition. The board of directors was given authority to act upon the committee's recommendation when it is ready, taking into consideration the probability of carrying out the consolidation with other associations.

The committee on contact with car manufacturers reported it is making progress in its negotiations with the car makers with reference to the accessory and equipment business. Some of the A. E. A. members have felt that the growing tendency of car manufacturers to turn out cars fully equipped and to sell accessories and equipment through their distributors was encroaching upon the business of the accessory and equipment manufacturers and jobbers. This committee is continuing its work and it hopes that it will be successful in the effort to have the annual service convention of the N. A. C. C. held in Chicago concurrently with the A. E. A. show next November. Heretofore the N. A. C. C. service convention has been held in Detroit in connection with the maintenance equipment show.

Foreign trade possibilities in the accessory and equipment business were emphasized in the report of the Foreign Trade Committee. It was pointed out that the Commissioner has already sent 800 invitations to foreign automotive wholesalers to attend the next A. E. A. show at Chicago in November.

An important report was that of the Replacement Parts Committee.

This report recommended that those jobbers who distribute replacement parts should (1) segregate the parts department; (2) have it on the ground floor with stock bins in view and close at hand; (3) locate it in a convenient place but not necessarily in the main business district, preference being given to the garage district where plenty of parking room is available; (4) use a perpetual inventory and adequate stock control system.

In addition to these recommendations the committee suggested the appropriation of $3,000 for the purpose of making a survey of the possibilities of simplified cataloging and uniform numbering and listing of parts. This

Panorama photograph of Automotive Equipment Association's summer convention which was held a

report with its recommendation was approved by the convention.

Twenty new members were admitted to the association at this convention, as follows:

Manufacturers

Allen Electric Mfg. Co., Detroit.
Clifton Mfg. Co., Waco, Texas.
Indianapolis Tool & Mfg. Co., Indianapolis.
Thompson Products, Inc., Cleveland.
White & Bagley Co., Worcester, Mass.
Wolverine Bumper & Specialty Co., Grand Rapids.

Wholesalers

Albany Hardware & Iron Co., Albany, N. Y.
John Andrae & Sons Co., Milwaukee.
Bertram Motor Supply Co., Boise, Idaho.
W. Bingham Co., Cleveland.
Bostwick-Braun, Toledo.
Herrick Hardware Co., Waco, Texas.
Miller Auto Supply Co., New York.
Nevada Auto Supply Co., Reno.
D. F. Owen Co., Tampa.
Peake Auto Supply Co., Kansas City.
Rappole & Robins, Jamestown, N. Y.
Tampa Hardware Co., Tampa.
E. J. Wilson Hardware Co., Beaumont, Texas.
Wolff-Egan Motor Supply Co., Oklahoma City.

Many recreational and entertainment features were provided for the delegates and their families. These included golf tournaments, cards and dancing. The ladies were taken on a sight seeing tour one afternoon and numerous small parties took in the many scenic trips abounding in the Pike's Peak region.

Dr. Copeland's Address

"The Cost of Doing Business" was the subject of the address by Dr. Melvin T. Copeland, director of the Harvard Bureau of Business Research, in which he analyzed the Bureau's survey of the automotive wholesale field for 1924. The reports on which the analysis was based represented 60 per cent of the firms solicited for cooperation, Dr. Copeland said. He considered this a very high and gratifying proportion.

"The outstanding contrast between the figures for 1924 and 1923," he said, "is the increase in the ratio of sales force expense. In 1923, the common figure for sales force expense was 7.8 per cent of net sales; in 1924, it was 8.2 per cent. For several other items, the expense ratios were slightly lower in 1924 than 1923. The wages of receiving and shipping force, for example, were 1.7 per cent in 1924 and 1.8 per cent in 1923. Executive salaries were 2.1 per cent last year, as compared with 2.2 per cent the preceding year. The common figure for miscellaneous expense also fell from 0.7 per cent to 0.6 per cent, a change which, in this last instance, may have been the result of more careful accounting. The effect of these changes in ratios was to yield a common figure for total expense in 1924 of 25.5 per cent, whereas, in 1923 is was 23.4 per cent. In other words, the total cost of doing business was approximately the same in both years and the only really marked change was in the ratio of sales force expense to sales." Dr. Copeland spoke further in part, as follows:

"The common figure for gross margin in 1924 was 24.8 per cent; in 1923, it was 24.9 per cent. The net profit, consequently, was 1.3 per cent in 1924 as compared with 1.5 per cent in 1923.

Comparison of Figures

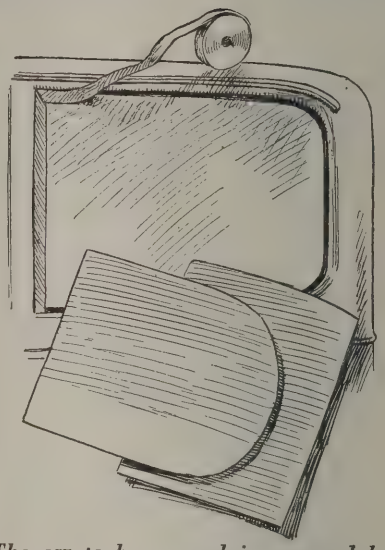
"Figures on the cost of doing business are available for several other wholesale trades as well as for the wholesale automotive equipment business, and a comparison of the figures for your trade with those of the other trades is suggestive. Your common figure for the wages of receiving and shipping force was lower than the common figures for that item for the wholesale druggists. Your total interest figure was lower than the total interest figure for the southern dry goods wholesalers, and your losses from bad debts also were less in percentage of net sales than for the wholesale dry goods trade. The ratio of taxes to sales is about the same in your trade as in these others. For practically every other item of expense, however, the ratio is higher for the automotive equipment wholesalers than for the other wholesale trades for which comparable data are accessible.

"It is probable that the cost of doing business is lower in the wholesale grocery trade than in other wholesale businesses. In 1925, the average cost of doing business for wholesale grocers was 10.6 per cent of their sales.

"I am not aware, however, of any other wholesale trade in which the expense ratios are as high as in the wholesale automotive equipment business.

"The items of expense in your business which stood in particularly sharp contrast to those of the other trades were the following: Rent, where your figure was 1.2 per cent, as compared with 0.5 to 0.7 per cent in the other trades; office supplies, postage, executive and office salaries, advertising and catalog expense, and particularly sales force expense. The common figure for total sales force expense in this trade, as I have said, was 8.2 per cent of the sales in 1924. This compares with a figure of 3.7 per cent for the wholesale druggists in 1924, 2.6 per cent for the wholesale grocers and 5.7 per cent for the southern dry goods wholesalers in 1923.

"The contrast between these figures for the various trades are not to be taken as an indication of poor management on the part of the automotive equipment wholesalers.



(*Continued on page* 18)

Colorado Springs, Colo., last week. Including members of families the attendance approximated 1,000 persons

Preparing a Car for Pyroxylin Finish

The car to be sprayed is prepared by covering the engine, upholstery, etc. In some cases the windows of a closed car are covered with grease, but a more satisfactory method is to cut pieces of heavy paper as shown and secure these in place with gummed tape. Paper and tape also can be used on the body panels

When to Remove All the Old Finish. Methods for Taking Off Paint. Protecting Engines, Upholstery, Windows, Etc.

By B. M. IKERT

WHEN a car is to be refinished by the nitro-cellulose system the first question is whether the old paint should be taken off or whether the new material can be applied directly over the old. In this respect the makers of nitro-cellulose lacquers differ, some stating that under no circumstances should a nitro-cellulose finish be applied over the old paint, while others claim this process is all right.

There are instances no doubt, where the old coats have become sufficiently hard so the solvents in the lacquer will not attack them, but very often the risk is not worth the cost of removing the old finish. It is well to bear in mind that the solvents in nitro-cellulose lacquers contain materials which make very good paint removers and once they penetrate the old surface they go clear through to the metal and effect the under coats.

A car in which nitro-cellulose lacquers have been sprayed over the old coats may look all right for a time, but eventually vibration and temperature changes will break the coating away from the body. With a complete nitro-cellulose system it takes but a little while longer to get down to the bare metal and by building up the various coats there is every assurance of knowing that the completed job will be a good one.

Take Time for Cleaning

Quite a bit of time should be devoted in cleaning the car preparatory to refinishing. In this respect the process is very much the same as in soldering, where cleanliness of the parts is about 90 per cent of the job. Any mechanic or shopman knows that it is impossible to do a good job of soldering over a surface that is not clean and the same holds true with painting over metal that is not perfectly clean.

There are several methods which can be used for removing the old paint. Some use alkali processes to do this, but in such cases it is very necessary that all traces of the chemicals are removed from the metal.

There are of course paint and varnish removers for doing this work and such removers usually contain wax. It is highly essential that all of this wax be removed from the surface which can be done with high test gasoline or wood turpentine. The surface should then be given a final wash with the solvent used for thinning the lacquer.

Rust spots must be sandpapered with a fine grade of paper and the spots should then be treated with some cleaning material, and washed with water. The surface should then be dried and a coat of primer applied as quickly as possible.

How to Know Whether Metal Is Clean

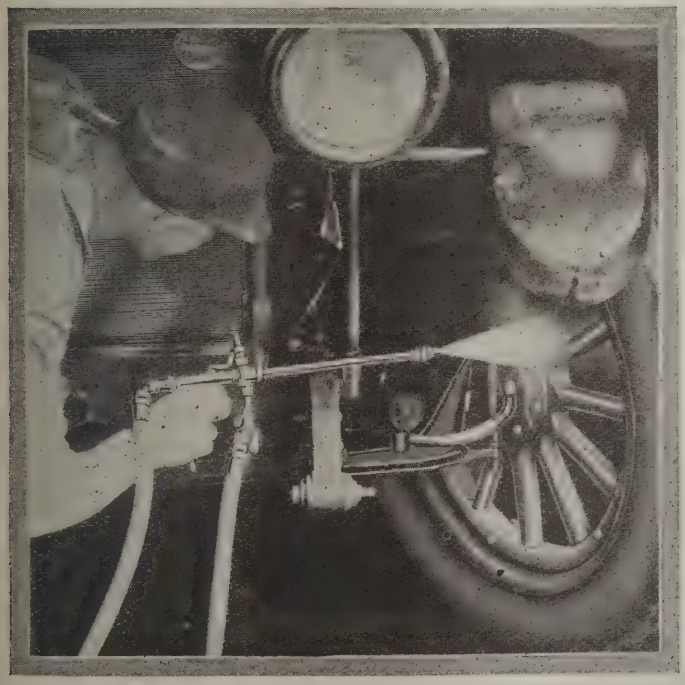
One way of determining whether or not the metal is free from grease and oil, is by washing the body with some of the thinner used as a solvent. If the metal is clean the thinner will evaporate promptly, but where the surface is not thoroughly free from grease and oil the thinner will dry much more slowly and such spots should then be washed in high test gasoline or benzine. The thinner can then be applied again and if it dries promptly the metal is ready for the under coats. Particular attention should be paid to the mouldings, seams and joints and a practical way to determine if they are clean is to spray under them with some of the thinner.

In the case of parts or bodies finished in baked, black enamel this material need not be removed, but can be rubbed down carefully either with water, sandpaper or powdered pumice stone and water. This is then wiped off with denatured alcohol and coated with the nitro cellulose finishing enamel direct.

Some concerns dip the fenders and hoods in tanks of

hot lye to take off baked enamel. When this is done these parts should be washed in clean hot water and the water blown out of the seams by air. Aluminum hoods or fenders should not be put into these lye baths however.

Where the original finish consisted of nitro-cellulose lacquer over varnish type undercoats and it is desired to refinish without removing the old finish, great care must be used not to soften up the varnish undercoats through the old nitro-cellulose lacquer by the application of heavy lacquer coats. Swelling and blistering will result, followed by chipping and peeling. The old lacquer surface must be well rubber down and absolutely free from grease, oil, wax or moisture.



Where finishing varnish has been used over a nitro-cellulose system and refinishing becomes necessary the old finishing varnish may be removed by a mixture of solevents that does not touch the nitro-cellulose underneath. The latter can then be rubbed smooth and the job finished with either more finishing varnish or nitro-cellulose finishing enamel.

One maker of pyroxylin finishes has a special cleaning fluid which has the properties of the solvent for cutting the lacquer materials, but is not so expensive. This fluid is colored green so that it cannot be used by mistake in place of the proper solvent when thinning the enamels as it cannot be used for this purpose. As an added precaution in cleaning moldings, garnish rails, and so forth, can be gone over with a blow torch to make sure nothing remains under them.

An ideal way of cleaning metal bodies is by sand blasting which leaves a perfectly clean surface and eliminates all danger from moisture or wax. It can be especially well used on open cars and also is applicable to closed cars providing the windows, and so forth, are properly protected.

Equipment Will Pay

It is possible to buy equipment for removing the old finish on a car and where a paint shop is called upon to do much work it certainly pays to install such apparatus.

Cleanliness is the big point to watch in the application of pyroxylin finishes. The body and chassis must be thoroughly cleaned and for this some of the apparatus on the market which applies the cleaning liquid under pressure is a big help. It also is a good plan to use a blow torch under mouldings and garnish rails to make sure all moisture is out

SAFETY PRECAUTIONS WITH PYROXYLIN FINISHES

IT must be remembered that there is much greater inflammability of the vapors from lacquer than those from varnish. Consequently great care should be taken that no spark, electric or otherwise, occurs where lacquers are sprayed in quantities on account of the low flash point of the vapors produced. The flash point of some of the pyroxylin materials is as low as the freezing point on the Fahrenheit scale and in some cases even lowr. The flash point of some of the high grade varnishes and paints is over 150 degrees Fahrenheit.

Spray booths should be used for no other purposes excepting the application of pyroxylin finishes. If this precaution is not taken serious results may occur because the alternating deposits of pyroxylin materials, varnish, ground coats, oil base stains and so forth makes probable spontaneous heating and eventual ignition.

In one of the later articles of this series the matter of safety precautions necessary with pyroxylin finishes will be discussed quite fully. The nature of the materials used in nitro cellulose finishes is such that ordinary precautions are not sufficient. Obviously no smoking should be permitted at or near a spraying booth.

These paint and grease removing units apply chemical hot or cold to the metal of a car and the operator has perfect control at all times. The apparatus consists essentially of a fiber brush which resembles very closely a conventional paint brush, but which is attached to a gun quite similar to a spray gun. By manipulating the trigger and at the same time sweeping the brush the solution is spread on wherever desired. The material of course, is spread under pressure and is given ample time to get a good "bite" into the paint after which the car is washed with water. Here again it is possible to buy equipment for quickly washing the car and drying it at the same time with air pressure.

Since pyroxylin finishes are sprayed on some means must be provided for protecting surfaces which are not to be covered with the particular material being sprayed at the time. For instance, if the space between the two belt line mouldings extensively used on bodies of today, is to be finished in a different color the under panels and the upper structures, glass, and so forth, must be protected by masking. On open cars the upholstery must be protected as well as surrounding parts such as the engine. To take care of the engine any material such as canvas or rubber tarpaulin, can be used and the same materials can be used to cover up the upholstery in an open car.

When a closed car is to be refinished all the windows must be closed and protected which can be done in several ways. One of the most popular ways of doing this at the present time is to cut pieces of heavy paper or cardboard in the shape of the window spaces and attach these to the windows by means of gun tape. This is easily removed later on and is much superior to the application of grease to the windows. It is true that grease is easily applied, but it is a much more difficult job to clean the windows later on. Some shops use ordinary paperhangers' paste, but in the long run the best results seem to be obtained by using paper in connection with gum tape.

Paper can also be used on the lower body panels, in between the belt line moulding and so forth. Each car probably will demand a different treatment and this will dictate as to just how the various panels must be protected. Where a car is to be finished in one color only, it is only necessary to protect the upholstery on an open car and only the windows on a closed car.

More Than 600,000 Orphan Cars Now Ply American Highways

Interesting Facts Concerning This Class of Vehicles Revealed in Survey by General Manager of N. A. D. A.

THERE are more than 600,000 automobiles running in the United States today which as new automobiles cost their original buyers approximately half a billion dollars that are today "orphan" cars, that is, cars whose manufacturers have gone out of business since the vehicles were produced, according to announcement by C. A. Vane, general manager of the National Automobile Dealers Association in concluding a survey of automobile ownership in America.

The figures are taken from official registration statistics in the office of the registration officials in the 48 states and the District of Columbia.

"The survey indicates above all things else," Mr. Vane declares, "the necessity of the buyer of the automobile looking far beyond the car right under his eyes when he is in the motor car market. All these cars were just as well painted when they were turned out, had just as good tires and the same number of wheels as motor cars built by substantial manufacturers and sold by reputable dealers, but today their value on the open market wouldn't be ten per cent of the value of automobiles of similar age and type built by substantial manufacturers.

"As all automobiles pass through the hands of from three to five owners on an average before they are finally discarded, the buyer of a new car cannot be too careful in demanding evidences of the financial stability of the company producing the automobile that he contemplates owning.

"Who buys orphan automobiles?"

"The survey indicates an interesting bit of information as to this point."

Orphans and Farmers

"Most people think that a farmer is the wariest buyer who comes into the market, but the ownership of orphan cars indicates that the farmer is far from being the cautious purchaser he is credited with being.

"Our information indicates that 40 per cent of the farmers who own automobiles above the Ford, Chevrolet, Overland, Star price class own orphan cars."

"The reason for this is not difficult to find. Most farmers are price buyers and price sellers. When a farmer turns in a substantial used automobile of the cheaper price class on a new automobile of a higher price class, he goes shopping for the best 'trade-in allowance' he can get for his used car.

"Most of the automobiles that are now orphans were sold with an inflated list price or a trading allowance to catch just such buyers."

When the farmer sized up two automobiles of about the same general style and appearance and found out that the car made by the substantial manufacturer and sold by the reputable dealer would offer him only $100 or $150 for his used car, and the other outfit would offer him from $400 to $600 for his used car, he took the larger offer for his used car.

The "Never Again" Club

"Anybody who ever owned an orphan car, who has learned how difficult it is to get repair work done on it (and all automobiles have to be repaired no matter how expensive or how good they are) will throw up his hands and say, 'never again' for me."

The most enthusiastic owners of standard automobiles are the people who once owned orphans.

"Who is your 'hard boiled' value buyer?

"The man who presumably has the least occasion for actual merchandise purchase. The man who handles the least quantity of actual goods throughout his life of any single business man. The banker.

"Only six per cent of the orphan cars of the country are owned by bankers."

This reason too is the easiest to explain. The banker is the hardest buyer in the world because he generally asks himself these three questions when he buys anything:

"'Do I want it?'

"'Am I willing to pay the price?'

"'What have I got after I buy it?'

"Any buyer can ask himself those three questions and if he does, he'll save money not only on automobiles but on everything he purchases."

Making Sure of the Title Certificate

BIRMINGHAM dealers have been bothered in their sales of used cars with the neglect of the salesmen to secure the certificate of title when taking trade-ins. Sometimes the mere fact that a certificate of title is not handy will be enough to throw a monkey wrench in the sale.

The Drennen Motor Car Company of Birmingham has an agreement with its salesmen whereby every one that fails to get a certificate of title within 48 hours after the trade-in is made is fined $2.50. The agreement is thoroughly understood by all parties concerned and for that reason is perfectly fair.

Needless to say the certificates of title are right on file within a few hours after every trade is made. It seldom happens that a salesman runs over the time limit on securing the important document.

A MECHANIC'S GUIDE BOOK

A 56 page Mechanic's Guide Book has been published by John C. Hoof & Co., 157 W. Illinois Street, Chicago, for complimentary distribution among automobile dealers, service stations and repair shops. This book contains valve timing, dimension and clearance data, together with specifications of timing gears, tappet adjusting screws, valve silencers and other products distributed by John C. Hoof Company.

Honest Values Keep Used Cars Sold

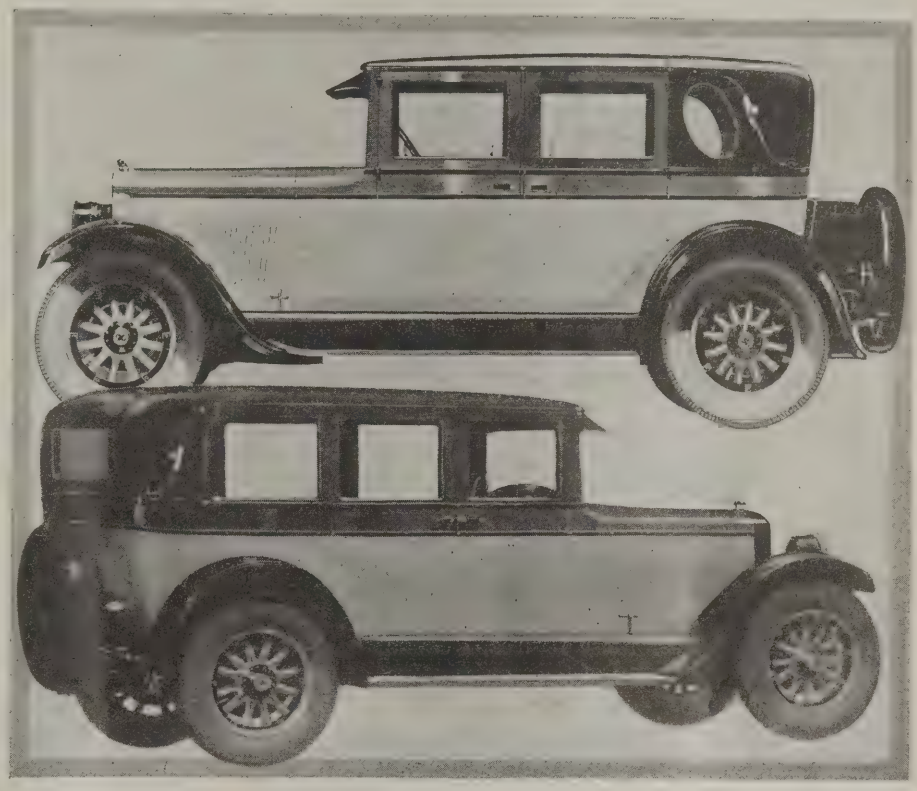
HONESTY is the best policy in selling used cars; in fact, it's the only policy if you leave it to an eastern company which distributes Cleveland cars.

It is much better to make friends than enemies in selling used cars, the Cleveland company believes. Its way of making friends is to thoroughly recondition the cars, put on new tires and other equipment that they may need, and paint them. Then give the buyer the right sort of service on the car. By following such procedure, these Cleveland people say they have never had any trouble in disposing of their used cars.

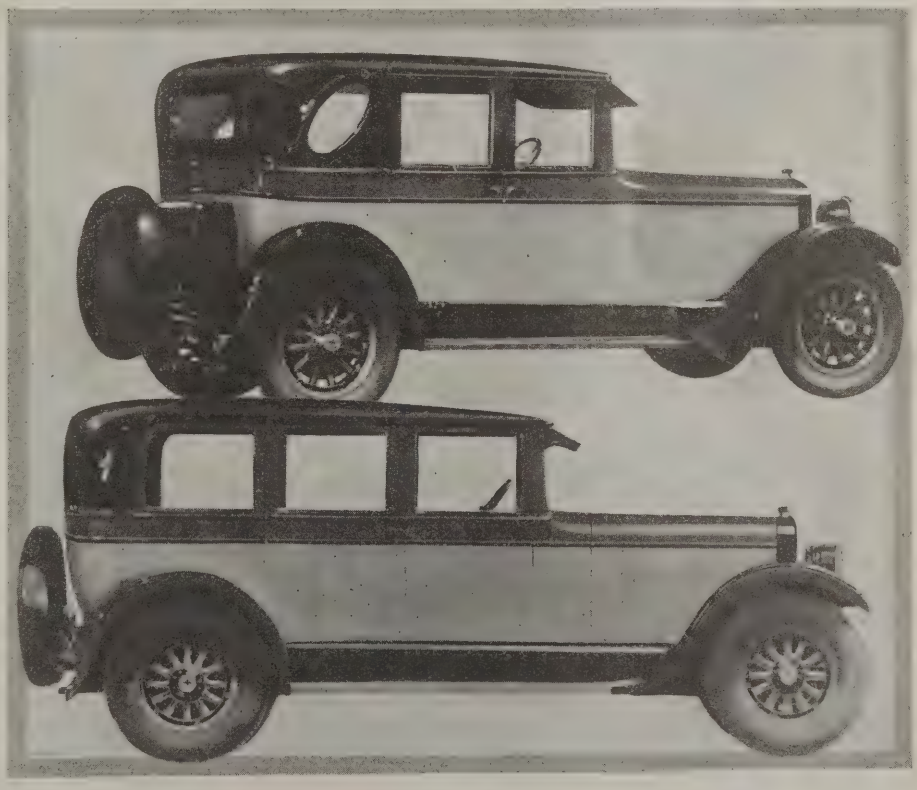
Rickenbacker Eight Units Redesigned to Coincide With Six

ECONOMIES effected through the redesigning of various important units so they are interchangeable with those of the six-cylinder chassis, making for simpler manufacturing and service operations, and increased production volume, have brought about reductions in price ranging from $200 to $600 on the Rickenbacker vertical "8" chassis.

New bodies of more advanced design are mounted on the refined eight-cylinder chassis which are priced by the Rickenbacker Motor Company as follows: sport phaeton, $1995; coupe-roadster, $2095; coach-brougham, $1995 and the sedan, $2195. A new roadster listing at $1995 and a seven-passenger "deluxe" sedan at $2470 will shortly be included. It will be seen that the open car now lists for the first time at the same price as the most popular closed model. In addition, a new line of "deluxe" models having the highest grade of upholstery and selling at $125 more than the regular models are available on both "eight" and "six" chassis.



A new line of bodies identical in design, coloring, and upholstery to those on the "eight" chassis are now mounted on the "six" which continues without any mechanical change other than a few minor refinements. The price of the "six" phaeton has been advanced $100 to $1495 and the sedan cut from $1995 to $1795. In addition to the roadster and coach-brougham which remain unchanged in price, a new coupe-roadster at $1695 is announced, while shortly a seven-passenger sedan will be included.



Smaller Parts Inventory

Through the standardization of the majority of parts used on the "six" and "eight" chassis, the dealer will be able to carry a smaller inventory in the form of replacement parts for both Rickenbacker models and the customer will benefit correspondingly in having greater facility of servicing, and the lower cost of parts.

The most important change on the new "eight" model lies in enlarging the bore of the engine from 3 inches to 3¼ inches, thus increasing the power output from 72 to 84 hp. With the bore of the "eight" the same as the "six," all parts of the smaller engine are interchangeable with the "eight," with the exception, of course, of such units as cylinder block, crankcase, crankshaft, etc. A larger and more effective water pump is now mounted on the larger engine, most of the parts of the former being interchangeable with those on the "six," while the oil pump and relief valve interchange with the "six."

Among the engine parts which are interchangeable on the two models are, pistons, pins, connecting rods complete; timing chain, sprockets, chain case, cover, valves, springs, push rods, guides,

From top to bottom: The six-cylinder Rickenbacker coach-brougham and sedan; Vertical Eight super brougham and sedan. The six-cylinder bodies are virtually the same as those of the eight. Both six and eight models are finished in a two-tone color

main bearing caps, bearing shells, studs, distributer, drive gears, shafts, generator wiring assembly, parts of the oil lines, the flywheel housing and the bell housing. The clutch throwout is also common to both models.

Simplification of the four-wheel braking system has been made on the larger car so that the hook-up corresponds to that on the "six" and all the operating parts can be used on both models. With the exception of the side rails, all frame parts are interchangeable on the two cars, as are the gasoline tanks, and the fenders, the style of the larger car fenders being adopted for both models. A new heavier construction of the rear axle is employed, while the tire size has been increased from 33 in. by 5.77 in. to 33 in. by 6 in. on all body models on the eight cylinder cars.

All body models on both chassis have a moulding strip starting at the radiator and extending the entire way round the body giving a pronounced double belt effect and enabling the two-tone exterior finish which is used on all models to be displayed to advantage. With exception in long grain leather, the interior covering of all regular closed cars is in velvet velour, while the "deluxe" models are upholstered in silk faced mohair. The following color schemes are employed in two-tone Duco effects, phaeton, Dublin gray; coach-brougham, Bambalina blue with black moulding; sedan, green with gold stripes and the roadster, brown.

Besides the new line of bodies, several minor refinements have been made on the "six" models. One inch has been added to the height of the radiator, while the thickness of the core has been increased from 1⅛ in to 2¼ in. The "coincidental lock" which has been standard equipment on the eight since its conception, is now applied to the "six" also. This theft-proof device, which locks both steering post and ignition, consists of pin tumblers in the bracket which attaches the steering post to the cowl board. In connection with the new fenders which formerly were used on the "eight" only, metal running boards have replaced the former wooden type while their height from the road has been decreased by 1½ inches.

Tires, 33 in. by 6 in. similar to those on the "eight" are now fitted on both "standard" and "deluxe" special sedan. Wood wheels of natural finish are now standard equipment on all models on both chassis.

The following are the prices now in effect.

Eight Cylinder Chassis

2-4 passenger roadster, $1995; sport phaeton, $1995; coach-brougham, $1995; coupe-roadster, $2095; sedan, $2195; 7-passenger sedan, $2470.

Six Cylinder Chassis

Roadster, $1595; phaeton, $1495; coupe-roadster, $1695; special sedan, $1795; "deluxe" 7-passenger sedan, $2070.

Merchandising Problems to Front at A. E. A. Meeting

(*Continued from page* 13)

"To my mind, the analysis of these figures raises a broad question as to the soundness of the merchandising methods of your industry.

"As I have gone over these figures, I cannot help wondering whether the sales of the automotive equipment wholesalers generally are commensurate with the merchandising effort that is being expended. If not, are the present methods of merchandising automotive equipment the methods that will stand the test of time, The high selling cost and its tendency to increase indicates the possibility, at least, that a negative answer should be given to these questions.

"Proceeding further with this analysis, I should like to suggest some of the conditions to which the higher selling costs in this trade may be attributable. In the first place, we know that the average sales per salesman are not high in this business. The average sales per salesman of the automotive equipment wholesalers were $40,000. This compares with average sales per salesman in the wholesale drug trade of $98,000 and with average sales per salesman of approximately $100,000 in the wholesale grocery trade. In 1922, furthermore, 75 wholesale grocers, among 361 for which data were available, had average sales per salesman of over $150,000 a year.

Dealers Lack Aggressiveness

"The low figure for the sales per salesman in your trade may be the result of an exceptionally large number of unproductive calls or of the small size of the individual orders or upon both of these conditions. The amount of sales effort apparently required from the sales force of the automotive equipment wholesalers indicates a lack of aggressive selling by the retailers who are your customers, and perhaps also lack of conformity to the buying habits of consumers.

"Many automotive equipment wholesalers, I judge, are seeking to merchandise accessories through a large number of garages and repair shops. The garage owners and repair men who thus constitute their customers usually are not merchants.

"Because of their locations and their lack of real interest in merchandising, many of them, I judge, carry wholly inadequate stocks. The result is that if a consumer starts out to buy a particular article, he may have to visit a number of these garages or repair shops before he finds it.

"To an outsider, it would appear that a small number of centrally located, well stocked and well managed retail stores could handle the automotive equipment trade in each community to better advantage and with lower gross cost than a large number of garages, repair shops and miscellaneous dealers."

Dr. Copeland finds a suggestion in the study which he said indicates "that the automotive equipment wholesalers are likely, in the future, either to throw their emphasis on a different type of merchandise from that which now constitutes the bulk of their sales or that each wholesaler will become an exclusive distributor at wholesale in his territory for a selected group of manufacturers." He resumed:

"The wholesaler has provided a sales organization for reaching all these small garages and repair shops and for assuming the credit risk involved in selling to these dealers. If conditions in retail trade change, however, the same provision of a force of order takers and the assumption of the credit risk will no longer be the chief service of the wholesalers. Most of the articles which the automotive equipment wholesalers handle need active sales promotion by manufacturer, wholesaler and retailer. If such changes should occur as I have suggested, it means that the wholesaler will assume a substantially greater part of the sales promotion task for particular items than now.

Important Changes

"For the reasons that I have pointed out, it seems to me that important changes are likely to occur in the methods of retailing automobile accessories. Those changes will be brought about by a growing recognition of the buying habits and preferences of consumers and the determination of the line of least resistance in merchandising such goods. If these changes in retail trade do occur, it is inevitable that they will affect the character of the wholesale business."

Dr. Copeland concluded by saying any such change as that referred to would come about gradually, not abruptly, and that wholesalers with most foresight would likely readjust their merchandising plans most readily to fit the new circumstances.

New Studebaker Bus Chassis Uses Big Six Power Plant

FOR some time past the Studebaker Big Six chassis has been operated in connection with bus service, special bodies having been built for this work. Some of these buses have operated from 100,000 to 300,000 miles, the results being so satisfactory that this company has gone a step farther and has built into two special bus chassis, the structural details which have proven their value in actual service. The features which are said to be secured in the new bus chassis are low initial cost, economy of operation, dependability and passenger comfort.

Model A-158 has a wheelbase of 158 inches; Model M-184, a wheelbase of 184 inches.

The long, flexible springs, balloon tires and the tested car construction contribute toward the comfort of passengers.

The Big Six 75 hp. engine is used in the bus, this being a unit power plant, with single-plate dry disc clutch, set in its own subframe to eliminate road torsions.

Engine L-Head Type

The engine is of the L-head type, cast en bloc with removable head, bore 3⅞ inches, stroke 5 inches. Pistons are of cast iron on 11¼ inch connecting rods. Piston pins are 1 inch in diameter. A fully machined crankshaft, inherently balanced and of extra weight, is carried on four bronze-backed bearings of 23⅝ square inches projected bearing area. Such constructions practically eliminate vibration, it is said.

Lubrication is positive, forced to crankshaft, connecting rod and camshaft bearings. Used oil passes through a circular screen; therefore the sump always contains clean oil. The crankcase may be drained by a valve at the side of the engine, without getting under the car.

The carbureter is 1½ inch, double jet, two range, specially designed for the Big Six engine, with choke on the dash and accelerator of the spherical type for relieving foot strain. Spark advance is automatic, timed by the engine itself. All electric wiring is in metal conduit and the whole ignition system is water proofed, even the spark plugs being protected by rubber shields.

Full control of the lighting system is on the steering wheel, at finger tips, an important safety provision for night driving. An inspection lamp, with extension cord, is located on the instrument board.

Semi-floating rear axle is housed in truss construction with one removable plate to admit directly to the differential. Axle shaft is 2⅛ inches in diameter.

Springs are semi-eliptic, two inches wide. The front springs are 38 inches long, those at the rear, 56 inches long. Fenders (on the front only) are of 19 gage pressed steel, double crowned and concentric to the steel disc wheels, which carry 34x7.3 6-ply tires. Dual rear wheels and tires are optional on the M-184 chassis.

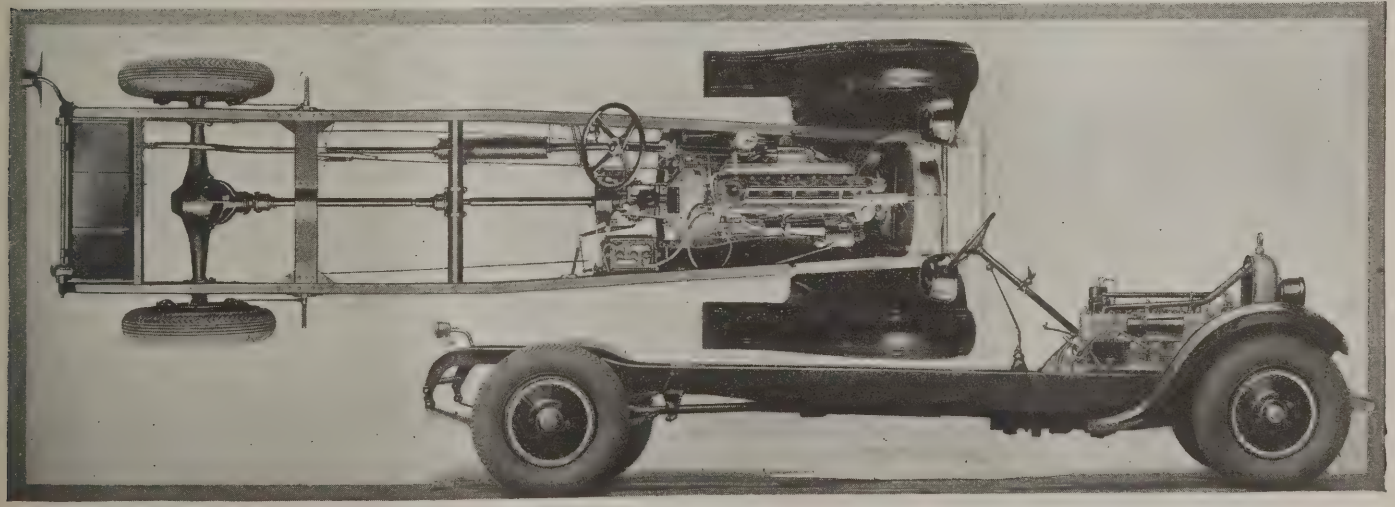
Service brakes are the Studebaker hydraulics on four wheels (licensed under patents) impossible to lock. Hydraulic equipment is at the rear of the transmission case, where two opposed cylinders, actuated by a force pump, impart a 60-40 proportioned force of 200 pounds on rear and front wheels, respectively. Driven by the propeller shaft, it is impossible to lock, since stoppage of motion of the shaft ends the compression in the cylinders.

The emergency brake works with the direct pull of a latching, pistol grip projecting from under the center of the instrument board.

The frame has side members 7 1/16 in. deep, of 3/16 in. steel, with 2¼ in. flanges on the Model A-158. On the Model M-184, the flanges are 3 in. wide and the channel is 8 in. deep at the center with a 4½ in. channel beam running 40 in. beyond the rear axle.

On the Model A-158 the seven regular frame cross members are supplemented by a 3½ in. tubular cross member. On the longer model, this supplemental bracing consists of two 3½ in. tubular cross members in the center and an additional 2½ in. tubular cross member at the rear.

The propeller shaft is in two sections with center ball-bearing steady rest, and two Spicer universal joints.



The gear ratio on both models is 4.7 to 1, which maintains the Big Six engine at its most efficient speed under average running conditions.

Standard Equipment

Standard equipment on both models includes a front bumper, extra wheel, tire and tube, motometer with winged radiator cap, combination stop-and-tail light and inspection lamp. All instruments are grouped on a walnut-finish board under one oval glass indirectly lighted against a silvered background. Instruments include a high-grade eight-day clock, ammeter, speedometer, oil gage, a gage showing the number of gallons of gasoline in the 19-gal. tank, and one showing the hydraulic pressure of the four-wheel brake systems.

The radiator is the regular Big Six type, with hood and dummy cowl for driveaway purposes. Studebaker engineers and body designers have collaborated with several outstanding bus body builders in designs for bodies built to these chassis and this designing service will be available for all purchasers of the chassis.

Model A-158 is for 12 to 15 passengers, the chassis price being $1,785, f. o. b. factory. Model M-184 is for 15 to 20 passengers, the chassis price being $2,150 f. o. b. factory. Both models will be in production in July.

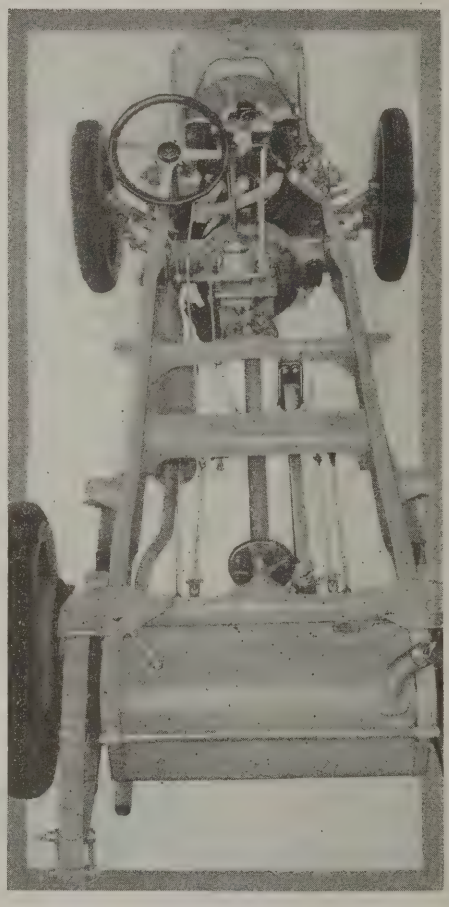
Novel Crankshaft Is a Feature in the Improved Cunningham

Appearance of Car Changed in Addition to Detailed Revisions in Engine and Chassis Mechanical Four-Wheel Brakes Standard Equipment

CHIEF among a large number of refinements which have been made recently in the Cunningham passenger car chassis is a two-plane, counter-weighted crankshaft which puts its 90 deg., V-eight engine in inherent balance. In addition to the detailed mechanical changes in the engine, axles and other parts of the car, its appearance has been improved by the adoption of a new radiator design and Perrot-Bendix mechanical four-wheel brakes have been made regular equipment.

The arrangement of the crank throws in two planes at right angles to each other and the counterweight is illustrated. As a forging, the crankshaft is of particular interest for the reason that a considerable portion of the mass of the counterweight is integral with the shaft. Another unusual feature of this shaft is the manner in which the additional weights required to balance the inertia forces, are attached. As shown, a large, tight fitting dowel takes all the centrifugal stress, screws being used merely to clamp the weights together. The dowel is locked against endwise motion by peening over the edges of the holes in the weights as shown.



Crankshaft Stiffer Torsionally

The new chankshaft also has been made considerably stiffer torsionally, its main journal and crank pin diameters having been increased from 2¼ to2¾ and 2⅝ in. respectively. To simplify adjustment for end play, crankshaft thrust now is taken at No. 1 bearing, which is provided with a flange for the purpose. The pistons have been made ½ in. longer above the pin and a corresponding reduction has been made in the length of the connecting rod, which is now machined all over.

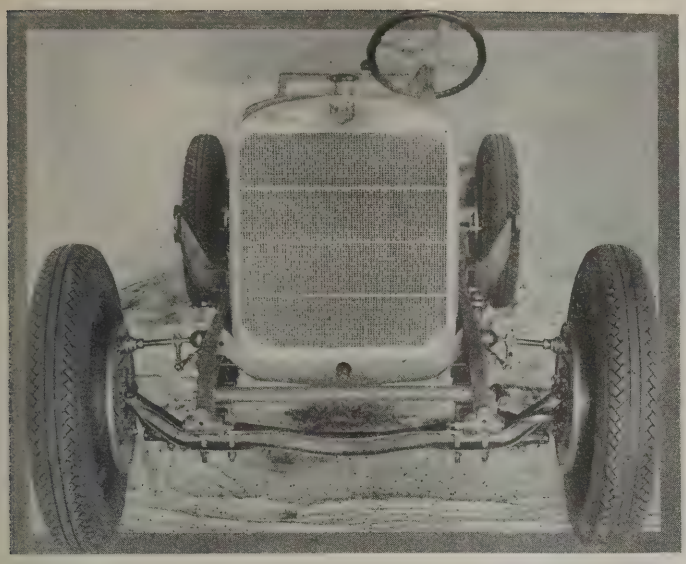
As the counterweights increase the amount of oil thrown on the cylinder walls, the pistons are fitted with an Indian oil ring. For the same reason the longitudinal groove formerly cut in the connecting rod big end bearings has been replaced with a circumferential groove. Shimless bearings are being used and the main bearing caps have been strengthened by increasing the depth of the stiffening ribs on them. Due to the increased weight of the crankshaft, the flywheel has been lightened.

The engine now fires 1R, 5L, 4R, 8L, 6L, 3R, 7L and 2R and its valves are timed as follows: Inlet valve opens and exhaust valve closes at 5 deg. after top center. The inlet closes 51 deg. after and the exhaust opens 41 deg. before bottom dead center. In addition, the valve lift has been increased from 5/16 to ⅜ in.

As in the past, the valves are operated through the intermediary of rocker levers. These levers are now bronze bushed at the rocker shaft and the cam rollers are fitted with hardened steel bushings. The end actuating the valve tappet has been provided with a renewable hardened steel button with an integral pin on its under side which fits into a hole in the rocker arm. The button fits between two lips forged on the top of the rocker level and is locked in place by peening the edges of these

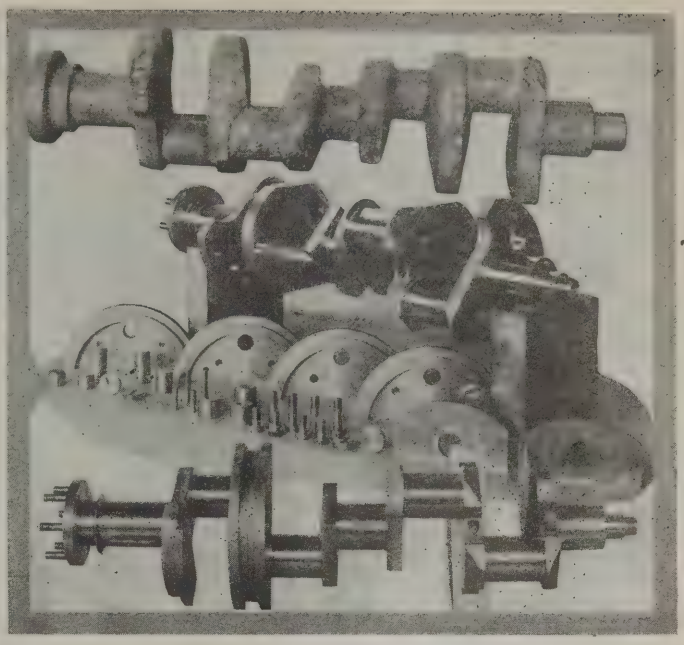
The chassis showing the single exhaust line and muffler and the new intake manifold

lips. The valve spring length has been increased ⅛ in. and the cups formerly employed at their upper ends have been eliminated, the lower flange of the valve guide being used to center the spring. The face width of the timing gears has been increased 1/16 in.



A T-shaped intake manifold, which is more completely water-jacketed, has replaced the Y-design used formerly. A change also has been made in the design of the hot air stove to muffle the noise at this point. The chassis has been cleaned up and more space provided for the tool box and battery by the elimination of one exhaust pipe and muffler. The two exhaust manifolds now discharge into a Y-connection to which a single exhaust pipe leading to the muffler is connected. In as much as a dash gasoline gage is being furnished as regular equipment, the need for a reserve fuel supply has been eliminated and this feature is no longer incorporated in the gas tank.

The outlet connections of the water pump have been simplified and the provision for taking impellor thrust improved. The hoses now connect directly to the outlet pipes intsead of through the intermediary or flanged members as formerly. The bushing supporting the front end of the pumpshaft has been provided with a thrust flange and a self-lubricating washer is installed at its forward end.



Difference in Rear Axle

The rear axle differs from the unit used in the past chiefly in the method of supporting the pinionshaft. The shaft is supported in two opposed taper roller bearings forward of the pinion and in a Hyatt roller bearing aft. The arrangement of the taper roller bearing provides for thrust in both directions and provision is made for wear adjustment. The position of the pinion with respect to the ring gear may be altered by removing or introducing shims between the differential carrier and a flange on the sleeve carrying the two opposed roller bearings.

The front axle is now a reverser Elliott design with ball thrust bearings and transversely inclined king pins. The reduction ratio of the steering gear has been increased from 8½ to 1, to 11½ to 1, this change having been made to provide easy steering with the 33x6.75 in. balloon tires, which are offered as standard equipment. The front end of the torque arm now has a fabric support, and the frame has been stiffened by the addition of a tubular cross member at its front end. Supports for the front bumper are provided as an integral part of the front spring horns. The diameter of the spring eye-bolts has been increased to ¾ in. from ⅝ in. Another change is in the suspension of the power plant which is now carried by pressed steel brackets riveted to the frame side rails, the wood block construction used formerly having been discarded.

Front view of Cunningham showing new radiator design and the front wheel brake installation. The four-wheel brakes, are of the Bendix-Perrot three-shoe serve type and are said to multiply the pressure applied at the pedal by over 2½ times. Although one set of brakes is used for service and emergency, adequate safety is provided, as, should the rods leading to one, two or three-brake fracture, the intact rods would still function

From top to bottom: The crankshaft forging; the crankshaft disassembled showing counterweights, dowels and clamping screws; and the crankshaft with counterweights attached

The four-wheel brakes are of the Bendix-Perrot three-shoe serve type and are said to multiply the pressure applied at the pedal by over 2½ times.

The brake cross shaft is unusually stiff, being made of 1⅜ in. outside diameter, steel tubing with a wall thickness of 7/32 in. This provides free motion under any condition of frame distortion and the shaft itself shows no perceptible deflection under any load the driver can exert. The stiffness of this shaft together with the fact that the rods are of large section and are under tension only, means that small motions of the pedal or hand lever will result in proportional movement of the cams.

The hand brake lever is designed so that when the brake pedal is down against the floor, there still is 25 per cent of effective travel in the hand lever. The leverage between the cross shaft and the cams is arranged so that the mechanical advantage on the rear brakes is 1.85 to 1. as compared with 1.65 to 1 on the front brakes. Consequently, there is little tendency to lock the front wheels and in addition the system has the Perrot characteristics of releasing one front wheel on making a turn.

Although one set of brakes is used for service and emergency, adequate safety is provided as, should the rods leading to one, two or three-brake fracture, the intact rods would still function. It is altogether improbable that all four brake rods would fail simultaneously or that connections from the pedal and hand lever to the cross shaft would both break.

Brakes are easily adjusted to give equal retarding effects on each wheel by jacking up the car and adjusting the nuts on the extreme ends of each brake rod until the pull measured by the spring scale is equal on each wheel, the spring scale being attached at the same distance from the wheel center in each case. The brake drums are of high carbon steel and have a stiffening flange.

N. A. C. C. Owner Booklet

THE little booklet published by the National Automobile Chamber of Commerce, which car makers and dealers are being asked to put into the hands of owners, is full of sensible boiled-down advice on the care and operation of a car in the interest of both safety and economy. The booklet is intended to assist the new car owner in getting the most satisfactory service from his car at the lowest cost. The title is "Getting the Most from Your Car."

Under the heading of, "Rules for Keeping Upkeep Down," this advice is given:

Take advantage of the dealer's offer to inspect your car at frequent intervals while it is new. It will keep little troubles from growing to big ones.

Drive the first 500 miles not faster than 20 miles an hour.

Drive the second 500 miles not faster than 25 miles an hour.

Never race the engine, especially in starting in cold weather before the oil warms up enough to circulate.

Shift gears when the engine labors on hills.

Give proper attention to lubrication, oiling often enough (according to the car maker's instructions) and using the right grade of oil or grease.

Oil is cheaper than repairs—change crankcase oil every 300 miles in winter and 600 miles in summer. If the maker recommends it, use a lighter grade in winter than in summer.

Keep nuts and bolts tight.

Have brakes and steering gear frequently inspected.

Keep headlights adjusted so as not to glare.

Keep the radiator filled—in the summer with pure water; in the winter with an anti-freeze solution.

Keep tires properly inflated—too little pressure shortens the life of the tires; too much shortens the life of the car.

Avoid sudden stopping or starting. Sliding or spinning the wheels wears tires more than many miles of normal use.

Spare the battery. Prolonged cranking is unnecessary if the ignition and carburetion conditions are right.

Keep battery filled with distilled water and watch the state of charge. A fully charged battery never freezes.

Adjustable bearings should be kept snug, because wear accelerates as it progresses.

Put your rear tires on the front when they have become well worn.

There is a chapter devoted to "Common Sense in Driving," which gives many suggestions for the avoidance of accidents.

Police Find 38 Pct. of Brakes Faulty

HARTFORD, Conn., June 27.—Thirty-eight per cent of the brakes tested by the Hartford police a few days ago proved to be faulty, a condition that Chief of Police Garrett B. Farrel calls alarming. The chief has made it known that from now on any brakes that do not work will result in a trip to court for the car owner. The tests were conducted in various parts of the city, it being the practice of the police officers to stop owners and ride along with them and on arriving at the test section command the brakes be worked. Several fines resulted from the tests.

MOTOR AGE'S PICTURE PAGES

THE FIRST SALE. Here is shown a front view of the Ajax, which recently made its debut. Rudolf Hokanson, vice-president and treasurer of the Nash Sales Co., Milwaukee, is seen with Walter J. Wilde, U. S. Collector of Customs for Wisconsin, the first retail buyer to acquire one of the new vehicles. Mr. Hokanson is one of the oldest automobile merchants in the state, starting in 1900

EXPORT DEMAND BRISK. Reports from the Moon factory are that export sales for the first five months of 1925 were 50 per cent ahead of the same period last year. The pictures show some of the steps in getting a vehicle ready for foreign shipment: 1—Where the cars start on crating line at the Madison, Ill., boxing plant; 2—Interior view of crating line; 3—End of line and hoisting derrick; 4—Part of a single order for 200 cars on way to England; 5—Vehicles being loaded for export.

OF AUTOMOTIVE INTEREST

AUTOMOTIVE VERSATILITY. For the past nine months an Oldsmobile Six has been the business office and only means of transportation of C. G. Gale of the Motor Wheel Corp. Mr. Gale is installing service stations and distributing centers for his company.

PORTABLE TIRE RACK. In the accessory department of Chester N. Weaver Co., San Francisco, a portable tire rack has been built from pipes which can be easily moved from place to place. In view of the limited space occupied by the department, this system has been found especially convenient

FOR LIGHT DELIVERY. This miniature car, used by a Los Angeles cleaning establishment, is said to be the smallest automobile in the United States engaged in actual commercial use.

Low Gas Mileage Due to Poor Compression

Q.—I have a 1924 Maxwell car that is not giving the service that it should and the owner has not been able to get more than 10 miles per gallon of gasoline. The carbureter has been changed, valves have been ground and tappets set up. Ignition has been checked three or four times and still no change in the mileage. The car seems to work well in every way. If you could give me any idea what the trouble may be and the remedy for same I would greatly appreciate it.—The Sixth Ward Garage, 2320 Union avenue, Altoona, Penn.

If the tappets are set to the proper clearance it would seem that the only remaining cause would be blow by past the pistons. When the engine is running and is fairly warmed up remove the oil filler cap and note whether there is any amount of smoke or vapor coming out of it. Also when the engine is throttled down listen with the ear near the cylinders to note whether you can hear any hissing or blow by past the rings. It is possible that at some time during the life of the car it has been run slightly dry due to high speed or insufficient lubrication with the result that the rings are scored slightly and compression is leaking.

Removal of the piston assembly and examination of cylinder walls will clear up this point. Although it is not an accurate test it is possible to determine the condition of the engine by testing the compression with a gauge and comparing the reading with that of a normal car of the same make and model. In case compression is lower or a blow by is heard it will mean replacing the rings and perhaps the pistons and refinishing the cylinder bore walls.

Gears Out of Line Change Timing Slightly

Q—Would like to know if a cam gear or spiral cut placed about ⅛ of an inch from flush with the other gears would cause any change in the valve timing? The gears all mesh up O. K. as per punch marks only. The cam gear became pushed in farther and will only stay in that position with dowel pins in holding camshaft bushings. Would this cause any difference on account of the spiral gears. Motor is not ready for running yet. Possibly it might cause gear noises but that wouldn't matter as long as the valve openings would be correct.—Sidney Topness, Taylors Falls, Minn.

With the cam gear ¼ or $\frac{3}{16}$ inch back from the edge of the others there will be a change in the valve timing of a few degrees. With this sort of mesh the gears also will be very noisy. To find out how badly out of time the valves are remove the cylinder head and with it off turn the engine over slowly by hand. Watch the action of the valves and turn until the engine is starting up on the exhaust stroke. When the piston has reached the exact top dead center the exhaust valve should close and very shortly afterwards, 5 degrees to be exact, the inlet should just start to open.

PERSISTENCE WINS IN TWO YEARS

Q.—I have located a click in a Ford car after hunting two years for same. The keeper plates of two of the magnets on the flywheel were striking the poles of the field winding due to a slight twist in the magnets in question.—P. B. Fitzpatrick, Indianapolis, Indiana.

A condition of this sort is no doubt difficult to find unless the engine is thoroughly overhauled. Then in checking the 1/32 inch clearance between the magnets and the poles of the winding a condition of this sort should be discovered.

MOTOR AGE READERS' CLEARING HOUSE INDEX

For June Issues

Smaller Ball Holds Gear Shift Lever in High

Q.—We have a 1924 Essex coach in which we changed the engine, installing a 1925 engine. We are having trouble with the transmission. It will not stay in high gear when drifting or when slowing up for rough places in the road. We thought at first it was end play in the clutch but have taken all the play out of the clutch shaft and still have same trouble. We had no trouble with the 1924 engine.—R. L. Starr, 643 Sage street, Evanston, Wyo.

It is probable that the thrust washers in front of the front gear in the transmission are worn so that this gear is too far forward and does not mesh very closely with the high speed gear immediately behind it. A remedy that you might try is to remove the ½ inch steel ball which is used to engage with the notches in the shifter shafts and replace it with a 7/16 inch ball which will mesh more deeply, into the V shaped notches.

This will necessitate stiffening the spring which operates the ball or using a new spring and may necessitate using spacers in order to get stiffer spring action. If this fails to prevent the trouble it may be necessary to remove the transmission and clutch, taking the clutch away from the transmission. It will then be necessary to install new thrust washers so that the front gear of the transmission will be properly located and will give the correct depth of meshing when in high. End play in the transmission shaft rather than in the clutch is doubtless the cause of this condition.

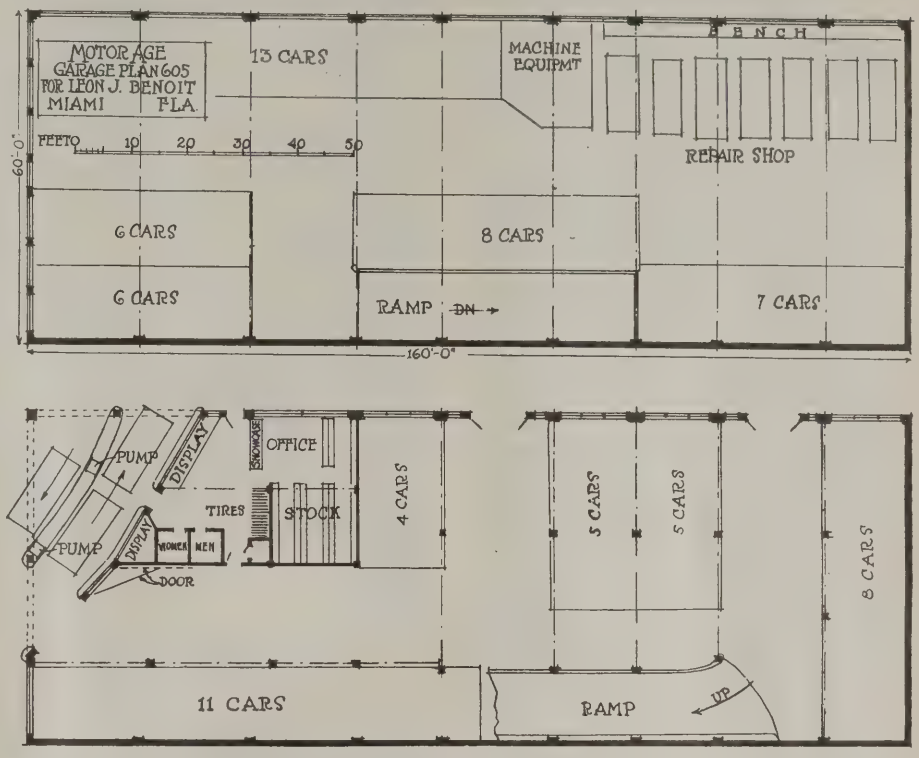
INDIAN MOTORCYCLE TIMING

Q.—Would you give me the correct valve timing and correct setting of the magneto for an Indian motorcycle, single cylinder motor No. 42E 965.—W. F. Dougal Garage, Van Wert, Ohio.

According to information supplied by the local branch of the Indian Motorcycle Company the exhaust valve should close on top dead center. The gears in this engine are marked at the factory and if they are lined up the timing will come out correct. Alignment of the gear as regard marking should start with the two gears which mesh with the flywheel pinion inside of the crankcase. There is also a mark on the flywheel which indicates the center position and which should be at right angles to the gear mark.

With regard to the gears set into the gear, the markings, which may be alphabetical or numerical should run straight across the first one being in alignment with the mark on the gear case and the others in line with it such as A to A, B to B, or 2 to 2, and 3 to 3.

The ignition setting is conventional in that the spark should be timed so that with the magneto in full retard position it occurs at top dead center.



Planning Your New Building

By TOM WILDER

The READERS CLEARING HOUSE

Repair Shop for Florida

Q—I want to build a garage down south in Miami, Florida, on a lot 60 by 160 feet. Enclosed you will find diagram. We would like a door in front (south) and a door on the west side and oil and gas filling pumps on S. W. corner. Also a wash rack, office and work shop on ground floor. The garage to be a two-story. We would like a ramp to the second floor. See profile. Except the oil filling pumps you can lock the doors (both front and side). Make office, work shop and wash rack where you believe it is best; also show where and how many supports we ought to have to support the second floor. —Leon J. Benoit, 622 N. W. 20th Street, Miami, Fla.

The front part of this garage might be converted into a car showroom by changing the door to a window

We have laid out your plan about in accordance with your diagram, but have made a change in the location of the lamp in order to save parking space for cars. You have asked that the repair shop be on the main floor, but we are very much opposed to this, due to the fact that the lighting arrangements cannot be as good as upon the second floor, where you can have the benefit of skylights as well as side windows.

Besides this, it is well to have all the storage possible on the main floor, sending only the overflow to the second floor. The front part of the storage room on the first floor, could very easily be converted into a show room, if at any future time you decide to handle new cars. In fact we would be inclined to close up the front door anyway as it will interfere more or less with the cars stopping at the filling station and these in turn will interfere with cars going in and out.

The wash rack we would place at any one of the corners next to the side street, using a 3-car space, so that two cars may be washed at once or three cars may be stored when the rack is not in use.

We have shown supports for the second floor placed to the best advantage for car storage; should you alter this arrangement of cars the supports should also be rearranged, so that the spacing is proper.

Legal Questions Answered—

By WELLINGTON GUSTIN of the Chicago Bar

HOW TO COLLECT UNPAID CHARGES

Q.—Would you be kind enough to advise us just what steps are necessary for us to take in order to sell a car which was left with us for storage? Car in question was left at our place in November of last year, with instructions to repair same. Owner ignores our statements and letters.—Automotive Service, Inc., Mt. Vernon, Ill.

You have a lien for the repairs called a common law lien, but under this lien you are only given the right to hold the property for payment.

Now under the recent garagekeeper's lien act you are given a lien covering both repairs and storage. But to keep this lien alive you are required to file a lien notice with your county recorder within 60 days from date of delivery of the automobile to the owner. The form of the lien is set out in the act found in Chapter 82, section 46 of the Illinois Statutes. This lien may be foreclosed by advertisement and sale of the car in the manner set out by the statute found at section 50, same chapter. This section is too long for quotation.

If there are no other liens to upset you on this car, you can hold the car and bring suit and take a judgment and levy on the judgment and sell in this manner.

Q—I have been taking MOTOR AGE for the last 3 years. I would now like to get a little advice. A brings car in for repairs and material, and the job is done satisfactorily. One month later A trades car in on new one. Can B hold new car for repairs done on old car? Advise how B can collect bill due on old car.—John D. Daech, LaSalle, Ill.

You have a repair lien upon the repaired car only. This lien is good against the car for 60 days after delivery of the repaired car, at which time it ceases unless within this period you file a lien notice with your county recorder as required by law. The statutes provide a blank form to follow in making and filing your claim.

You should notify the present owner of the repaired car that you have a lien and intend to help same, and it may be that this owner will see that you are paid your claim. But you cannot neglect this settlement beyond the 60-day period, unless you have the promise of the present owner to pay, and then, only, if you consider this said owner personally good for the amount. If you do not get settlement within the 60 day period (being 60 days from the date of the delivery of the car as repaired) you should before the end of the 60th day file your notice of lien, and proceed to foreclose in the manner set out by the statute. You do not have to wait, but can foreclose at any time.

AC PLANT SHOWS GROWTH

FLINT, Mich., June 27.—Organized in 1908 with a dozen employees and a production capacity of about 300 spark plugs a day, the plant of the AC Spark Plug Company at Flint has grown to where it now employs over 1500, with a production capacity in excess of 200,000 spark plugs, 8,000 speedometers and several thousand air cleaners daily.

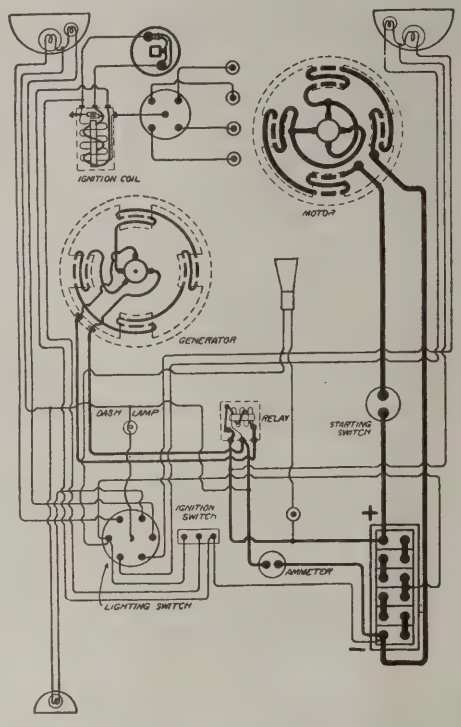
Clearing Up Electrical

The Readers Clearing House

EDITED BY A. H. PACKER

Change the Condenser or Use New Coils

Q—Supply wiring diagram of Moline Knight which had a 12-volt battery. This engine starts hard and will hardly run. Could this trouble be in a weak coil. Someone had this wired direct to one-half of the storage battery. A. C. Glinke, Palmyra, Wis.



Wiring diagram is published in accordance with your request. You will notice that this shows a wire connected to the center terminal of the battery and going to one terminal of the switch and then over to the ignition switch. This would apparently indicate that a 6-volt ignition coil is required and that the connection should be made to one half of the battery. If the ignition is poor a new coil should be tried for both the condenser and the windings are in the coil unit. If the trouble is in the condenser a good electrical shop can change the defective unit, but the time required is such that it might pay to use a new coil. It is of course, possible that the interrupter points are burnt away and need replacing or that there is a poor connection in the circuit.

GENERATOR LAZY AT 20 M. P. H.

Q.—We have a Ford generator which cuts in at the right speed and charges all right but will not charge 20 amperes unless a speed of 35 miles per hour or more is reached. The third brush adjustment is set as far as it will go and it seems to charge higher when the commutator has just been cleaned, but this lasts for a short time only. Formerly it would charge 20 amperes at 20 miles per hour. New brushes have never been installed and we wonder if this would correct the trouble. —C. M. Ford.

Oil working from the rear bearings on to the commutator will be soaked up by the brushes and will give trouble. However, this usually shows up by a generator failing to cut in, the difficulty being due to a film of oil acting as an insulator between the brushes and commutator. It is also possible that oil soaked brushes might cause trouble of which you complain especially in view of the fact that cleaning the commutator seems to correct the condition temporarily. As the brushes are not very expensive it might be well to try this.

The charging rate of 20 amperes, however is more than you require for summer conditions although it is all right in winter if the car is not run for excessive periods. Another possibility is that the brushes fit the commutator somewhat better than they did when the generator was new. It might be well to check the main brush position by running the generator as a motor with the third brush lifted. There should be no appreciable tendency for the armature to rotate, although it is permissable to have a slight tendency for it to turn in the normal direction. It is also possible that the armature is slightly shorted and there is enough leakage of current to cause the condition you describe.

Moline Knight Wiring

ONE OR TWO WINDINGS IN MOTOR GENERATOR ARMATURE?

Q.—"A" says that the armature in the North East generator used on Dodge Brothers cars has a primary and secondary winding, or two distinctive windings. "B" says there is only one. Who is correct?—E. G. Hill, 1247 DeQueen boulevard, Port Arthur, Texas.

"B" is correct, for there is only one winding in the armature of the North-East generator used on Dodge Brothers cars. Perhaps "A" is thinking of Delco motor generators, which have two commutators and two windings, each electrically separate from the other.

CHARGING FORD MAGNETO

Q.—Having seen a write-up in Motor Age about what Motor Age medicine did to a Ford magneto, would like to know just how this was done with the batteries and how to connect same. — Henneke Brothers, Cuero, Texas.

Instruction covering charging of the Ford magneto without removal from the car was printed in the March 12 issue of Motor Age on page 26 of the Clearing House section.

Ford Bulbs for Magneto and Battery

Q.—Explain the difference in headlight bulbs operated from Ford magneto and those operated from battery. Kansas Reader.

The bulbs operated on the Ford magneto have only one filament and this filament is supposed to give the proper amount of light when operating on nine volts. Connecting the two lamps in series makes the light operate properly on 18 volts. In the bulbs designed to operate in connection with a storage battery the filament is so designed as to operate properly on 6.5 volts, and there are two filaments in each bulb, one to give dim lights and the other to give bright lights. In this case the two small filaments are in parallel when the switch is in the dim position and the two large filaments are in parallel when the switch is in the bright position.

WHERE A. C. FALLS DOWN IN IGNITION WORK

Q—Can a bell ringing transformer which reduces 110 volts 60 cycle current to 6 or 8 volts be used to operate a make and break ignition and could a Ford coil be used with the same sort of transformer. Would also like to know if such a transformer can be used with a jump spark ignition. I have been told that A. C. will not do for make and break ignition. If so, I see no reason why it will not work for jump spark.—H. M. Daggett, Hollister, Calif.

There are two difficulties with your scheme. One is that the alternating current in changing from one direction of flow to the other has a zero value of current. It is accordingly possible that the make and break device will open just at the instant that the current is practically zero. This would mean that you would get no flash and the engine would miss. In the same way a jump spark type of ignition which uses a coil and interrupter might have the interrupter contacts open just as the current reversed.

Another difficulty is that with rapidly reversal of current, the value of the current may not be high enough to give good results, for the current in a coil builds up rather slowly. Operation of the Ford type coil is a possibility on alternating current because the points are pulled apart by magnetism and accordingly whenever they open a spark occurs. We rather suspect however, that the current capacity of the transformer would not be sufficient to properly operate a Ford coil. If you have a transformer and a Ford coil however, it is easy enough to try it and see what the results will be.

Trouble With Bill Fixit

EDITED BY A. H. PACKER

The READERS CLEARING HOUSE

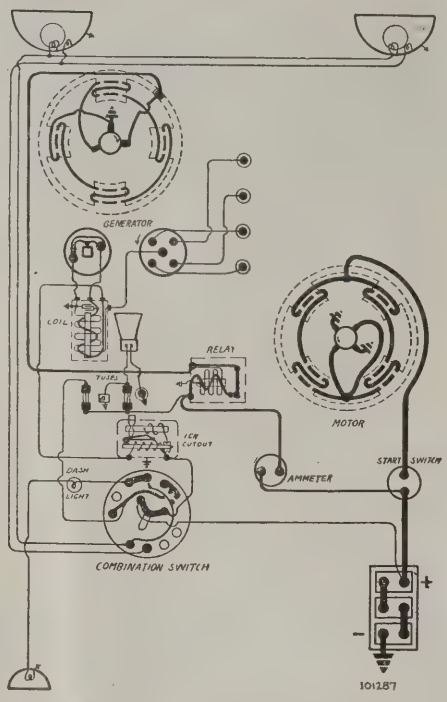
When Serial Numbers Do Not Help

Q—Supply wiring diagram for a Willys-Knight three-passenger roadster, model 20-A car No. 25421.—Erickson & Son Garage, 120 S. River Street, Eau Claire, Wis.

The serial number of a Willys Knight does not help much in identifying the car for the manufacturers do not give out information of this character. The model 20 however, was made in 1920 and 1921 and comparing both diagrams, we find them practically identical. We are showing the 1921 wiring which as nearly as we can determine is also correct for the 1920 car and we hope this will serve your purpose.

IGNITION TESTED WITH VOLTMETER

Q—When testing the wiring on a 490 Chevrolet, 1922 car with a voltmeter and connecting the meter from the interrupter terminal of the coil to ground, the hand of the meter will vibrate rapidly between 2 and 7 volts. If connected from the interrupter terminal to ground it will vibrate the same way. What is the cause of this action.—Charles Tuckfeld, North Branch, N. Y.



We assume that you made this test with the engine running, in which case the interrupter points were opening and closing. When the interrupter points are closed the interrupter terminal is grounded, due to the two points touching each other. The same thing is true of the interrupter terminal of the coil, for the closing of the interrupter points grounds this terminal. For this reason when you have the points closed you have no voltage across the meter and it tries to read zero.

On the other hand when the interrupter points are open you have one terminal of the voltmeter connected to ground and the other terminal connected through the winding of the coil, the switch and the ammeter, back to live battery so that it tries to read battery voltage. This is the wrong way to use the voltmeter, for with the needle vibrating you cannot get any satisfactory results. The voltmeter can be used for example to locate a shortened condenser. This is done with the engine standing and the interrupter points open. Then if you connect the meter in series with the interrupter and get a reading, it shows that the condenser is leaking.

TRICK WIRING FOR A SPOTLIGHT

Q—We wish to wire a spotlight on a 1923 Nash so it will burn when the dimmers are turned on and will be off when the lights are bright. We also want it to be off when the parking lights are on. How can this be done?—Ohio Tire Dealer.

On 1923 Nash cars, models 691 to 698 there are in effect three lights which can be used for driving. We have the bright headlights, also the same bulbs with a dimmer resistance in circuit and in addition to this, we have separate side lights.

Willys Knight 1921 Wiring

It is not clear to us whether you refer to the separate side lights as parking lights or whether you refer to a single light mounted on the left rear fender as a parking light. Referring to the original wiring, if you should connect the spotlight to the No. 5 terminal on the switch it would light up when the bright headlights are turned on and would be dimmed when the head lights are operated in the dim position.

This would be undesirable. If you connect the spotlight to the No. 6 terminal which is at the end of the dimming resistance, you would have the spot light dim when the head lights are bright and you would have the spot light bright when the head lights are dim. This would also not be very desirable. If you connect the spotlight to the No. 8 terminal which is a terminal used for the separate side lights, it would light up whenever the side lights are turned on. A connection of this sort is desirable when driving along a road at night and encountering a car driving in the opposite direction.

If the circuit is wired so that switching off the head lights and turning on the dim or side lights also sends current to the spotlight it makes a very simple motion and accomplishes the necessary change in the lighting. The spotlight can be trained on the ditch and automatically lights up when the side lights are turned on. If you refer to the side lights as the parking lights, then there is no satisfactory way of accomplishing what you have indicated.

Checking Advance With Spark Lever Movement

Q.—I would like some information in regard to the Willys Knight model 66 six cylinder engine. With piston on top center how far should the spark control lever be moved from the full retard position in order to produce a spark. They have automatic as well as hand advance. I am working on these cars and am not satisfied with the way some of them perform, feeling that the spark may not be advanced enough.—F. A. Johnson, 521 Masten street, Buffalo, New York.

In the retard position of the lever it is usually considered desirable to have the spark occur when the piston is on top dead center. However, to make sure that the engine does not kick back it is usually customary to have the piston start down a slight amount, say from 1/64 to 1/32 inch, before the interrupter points begin to open. This corresponds to moving the lever a slight distance in the advance direction, while the piston stays on top dead center.

We are unable to state the exact amount of this movement, but it should be rather slight, say 1/10 of the total possible movement of the spark lever. If a great deal of movement is necessary it means that the spark is too much retarded and the movement of the advance lever will merely bring the spark back to dead center and will not advance it very much.

ONE BULB FOR FORDSON HEADLIGHT

Q.—Is the current output from the Fordson magneto any greater than from the magneto on the Ford car? Carlos Farris, Tilford, Ky.

We do not know of there being any difference. However, if the Fordson engine is run at fairly high speed most of the time the voltage generated may be higher on the average.

Q.—In using just one bulb on the Fordson tractor for a headlight, what kind should be used?

You might try a 24 volt bulb if you can get one, or you might try a 32 volt bulb, although this would probably require a special socket. You might find that the dimming coil as used on Ford trucks would work very well in series with your lights, using a 6, 9 or 12 volt light. As this is a special application you will have to do some experimenting, running the engine at slow speed at first to make sure that you do not burn out the bulb. As the voltage of the magneto varies with the speed it will be best to use the dimming coil, which, due to the fact that the Ford magneto gives out alternating current, compensates somewhat for changes in speed and will give a more constant light.

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

Importance of Accurate Trouble Shooting

THE installation of a flat rate system means considerably more than merely establishing a flat price for any repair job.

It means more than the ability of quoting a customer a fixed price for maintenance work. It means someone in the shop, or whoever comes in contact with the customer, must be able to "shoot" the trouble, or intelligently ascertain the needs of the customer's car.

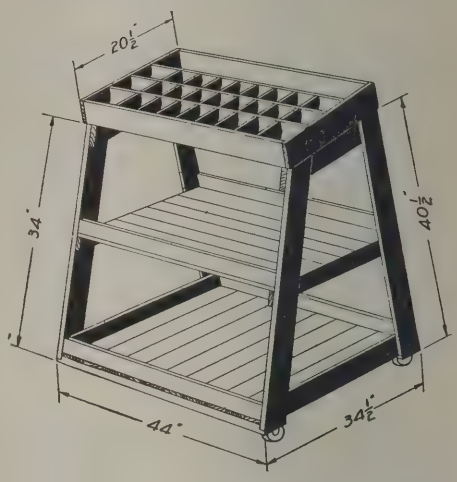
Flat rate is no excuse for poor trouble shooting. If a customer has been sold a job or series of jobs on a flat rate basis and still his engine or car is no better off than formerly, then, the flat rate has accomplished very little.

A Case on Record

There is a case on record where a customer drove his car to a garage stating the engine was slow on accelerating and often stopped completely when throttled down.

This particular garage did not operate on the flat rate basis, but this was no excuse to go ahead and suggest all sorts of remedies for the trouble in question. Everything from grinding valves to installing a new distributer was suggested. The fuel lines were blown out and a new set of plugs installed.

Still, after the customer had paid plenty of money at this garage, his trouble still manifested itself. He tried another place and was told the fuel line was clogged. This shop again blew out the line, advanced the ignition and did a few other things. Yet, the trouble was not completely remedied. Some of the mechanics stated it was one of those "mysterious" troubles hard to find.



Finally the customer took the car to the dealer's service station. A grudge against the dealer's place of business had stalled off the visit but in the belief that the dealer's men knew what ought to be done he finally went to them.

And there he found a man who could shoot trouble and knew the peculiarities of the engine and car. After the customer had explained the engine action, the trouble shooter instructed one of the men to remove part of the carbureter and polish the cylinder attached to the metering pin.

The parts were reinstalled and when the customer took the car out acceleration was improved as well as the general running. The trouble shooter knew his stuff. and the customer was only too glad to pay the slight charge for the work.

Maintenance is something which ought to be merchandised the same as any commodity and often a customer can be sold more operations than he calls for. It may be of benefit to him to call his attention to a much needed repair and a shop is justified in doing so.

But the big thing is to be sure to sell the customer at a flat price the thing he needs, which intelligent shooting makes possible.

THINGS THAT HELP FLAT RATE

When parts are taken off an engine or car much time is saved by having some sort of stand or rack in which such parts can be placed. Such stands can be bought or made. Here is one sponsored by the Franklin company to be used in connection with its standardized system of selling maintenance

MOTOR AGE'S FLAT RATE FORUM

No. 19

STAR MODEL F FLAT RATES FOR VALVE MECHANISM OPERATIONS

Manufacturer's Official Designation		Charge
1110-F	Reseat and grind valves Material required: 2 valves, 1 valve spring, 2 valve stem keys, 2 valve cover gaskets.	$4.10
1110-G	Valve stem guide—replace Material required: 1 valve stem guide.	.75
1110-H	Piston ring (three to one piston)—replace Material required: 3 piston rings (three to one piston).	1.50
1110-I	Crankshaft sprocket—replace Material required: 1 crankshaft sprocket.	2.00

1110-K	Camshaft sprocket—replace Material required: 1 camshaft sprocket.	2.90
1110-L	Generator drive sprocket—replace Material required: 1 generator drive sprocket, 1 generator nut.	1.80
1110-M	Valve lifter guide (one)—replace Material required: 1 valve lifter guide.	1.80
1110-N	Valve lifter (one)—replace Material required: 1 valve lifter.	1.05
1110-O	Valve lifter adjusting screw and nut—replace Material required: 1 valve lifter adjusting screw, 1 valve lifter adjusting screw nut.	.30
1110-P	Valve lifter guide plug—replace Material required: 1 valve lifter guide plug, 1 valve lifter guide spring.	.15
1110-Q	Timing drive chain—replace Material required: 1 timing drive chain.	7.85

School Uses Flat Rate Manual

New Britain, Conn.

To the Editor of MOTOR AGE:

Enclosed please find fifty cents for your Flat Rate Manual.

I use the flat rate very successfully in the automobile department of this school as all of the repair work is on outside cars.

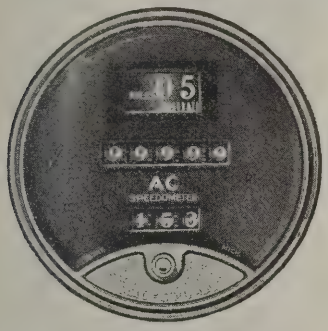
A Buick Branch Gets 50 Charts

Indianapolis, Ind.

To the Editor of MOTOR AGE:

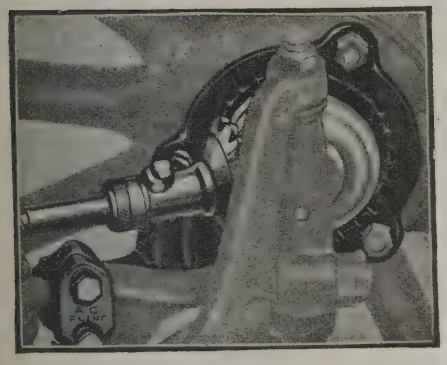
We would like to get fifty copies of your Flat Rate sheet that came out in the Oct. 23 issue. If this is possible please mail these to us at once.—Buick Motor Co., E. S. King, Supt.

Forum Prices



The charges listed for the various operations on the Star model F in the table on this page represent the total charge to the customer. They include material as well as labor and, as will be noted, the necessary material is listed under each operation where material or parts are needed.

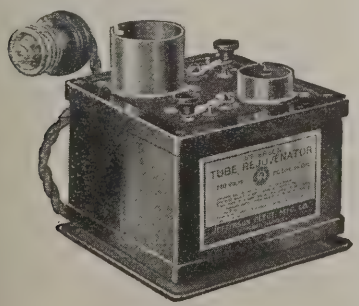
THE MARKET'S NEW OFFERINGS



Accessories—Equipment—Supplies

AC Speedometer for Fords

A SPEEDOMETER outfit which requires no swivel in the drive and designed for Ford cars and trucks is being manufactured by the A. C. Spark Plug Company, Flint, Mich. The speedometer head with its round nickeled dial is installed in the dash in a manner to make it appear as a part of the car rather than an "extra." It provides a 100-mile trip register, with tenths and a 100,000 mile total register. Miles per hour from



A. C. speedometer head

A. C. Direct Drive

one mile to 75 can be shown and it is said the instrument registers accurately even on rough roads.

The drive can be attached without drilling holes in hub flanges or spokes. Three of the regular flange bolts hold the driving gear which is connected to the flexible shaft by a coupling that eliminates the need for a swivel.

Radio Tube Rejuvenator

Accessories and Necessities

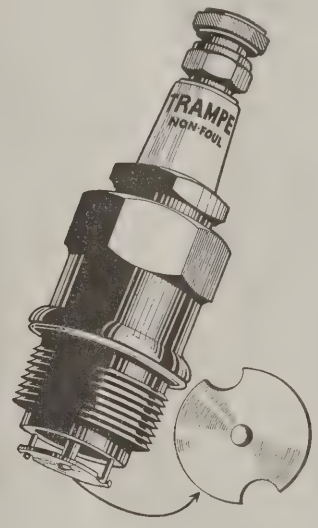
In the opinion of an enterprising equipment dealer in California it is easier to sell an owner of an old car "necessities" than "accessories."

He has come to the conclusion that the word "necessities" has a better psychological effect than "accessories" especially in the case of the old car owner. While he uses both words in circularizing owners of comparatively new cars the word "necessities" is kept emphatically to the front in circularizing old car owners.

Thus he stresses the need of buying certain additional equipments even though the old car owner might have a notion that he does not want to merely "doll up" his vehicle.

Trampe Spark Plug

A NEW spark plug, called the Trampe, has been put on the market by the Trampe Spark Plug Co. of St. Louis. The plug carries a guarantee against fouling. Actuation of a special power disc made of Monel metal is said to eliminate wastage of gasoline and prevent it from getting into the crankcase and diluting the oil therein. The patented disc is said also to take the full force of the pounding due to explosions, insuring constant performance and prevention of injury to insulators and contact points. The plug is made for all cars and retails for $1 for Fords and $1.25 for other makes.

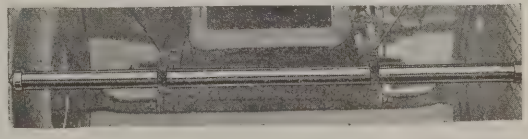


Radio Tube Rejuvenator

A TRANSFORMER device operating on alternating current is announced by the Jefferson Electric Manufacturing Company of Chicago. This device is specificially designed to restore the operating characteristics of radio tubes. is also stated that summer reception is very much improved when tubes which have been used all winter are subjected to the rejuvenation process. The retail price is $7.50.

Biflex Superb Bumper

(Cut shown above)



A MARKED departure from the regular Biflex Standard Bumper is found in the new Biflex Superb Bumper which is being produced by the Biflex Corporation, Waukegan, Ill. The Superb model is said by the manufacturers to have ultra-cushioning strength, possessing powerful resiliency. Very attractive in appearance, it is proving an extremely popular item on the Biflex list.

Trampe Spark Plug

Tubular Bumpers for Chevrolet

TUBULAR bar bumpers for 1925 Chevrolet cars have been put on the market by the Churchville Manufacturing & Laboratories Co., 246 N. 17th St., Philadelphia. Fittings for the device are universal, the same bumper being adaptable to use in front and rear. The bumper lists at $15, including fittings. Brackets are japanned and baked and the nickel rail is of the five-year guaranteed rust-proof type.

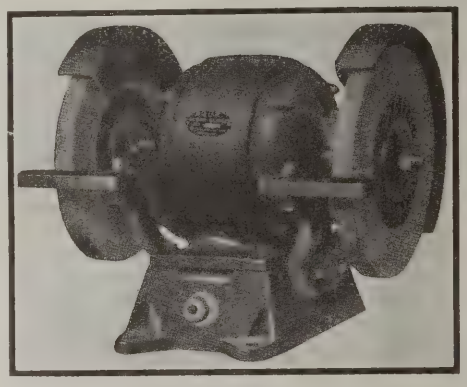
GETTING MORE OUT of the SHOP

A Super Motored Drill for the Garage Man

One of the most common repair jobs today is that of cylinder honing, for which there are a number of tools on the market. In the operation of these tools considerable power is required to do the job properly.

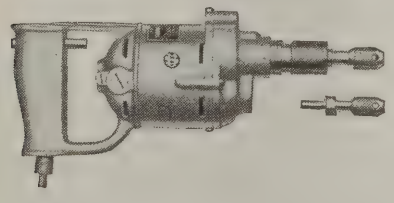
Realizing the importance of this work, and also to provide a tool that would meet all requirements, the Temco Electric Motor Co., Leipsic, Ohio, has just brought out a new super-motored half inch garage drill.



In appearance it is typical of all other Temco electrical drills, but the motor in this drill is more powerful. Like all other Temco drills, it is Temco-built throughout, except the chuck and cord. The motor is fan-cooled and mounted on ball bearings thrust being taken by a ball thrust bearing. The price of the new model G-D half-inch Temco drill is $56.

Temco drill

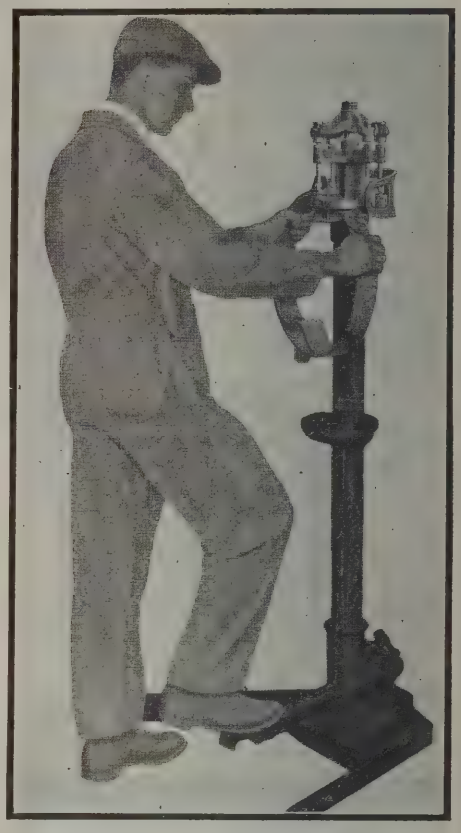
Azor Bench Grinder



The Azor Motor Mfg. Co., 7424 Bessemer avenue, Cleveland, Ohio, have announced a 110-volt bench grinder, selling for $32, for use with either direct or alternating current. It is equipped with two ¾ x 8 in. grinding wheels and shaft is threaded for 2-B Jacobs chuck. Specifications are: 1/3 hp., 1,800 r.p.m., length 13½ in., height 11 in., weight 55 lbs. It is equipped with 10-ft cord and plug.

Azor bench grinder

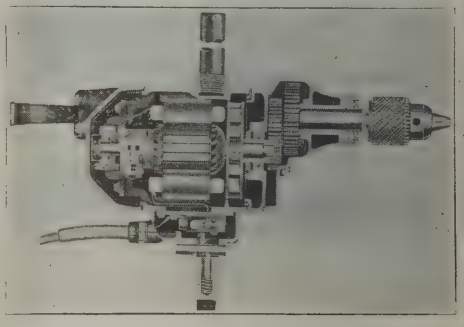
Electric Screw Driver and Nut Setter



This is an electrical tool designed to speed up the work of driving screws, lag bolts and setting nuts. It runs on 110 or 220 volts, alternating current or direct current; is equipped with positive clutch, normally held in "open" position and engaged by pressure on tool and released when pressure is released. It has SKF ball bearings and bits are equipped with "slot finder." It is made in four sizes, No. 1 size taking wood screws up to and including No. 10x1½ in., lag screws 3/16x 3 in., and nuts and cap screws up to ¼ in. No. 4 size takes wood screws larger than No. 20 by 4 in., lag screws up to ½x5½ in. and nuts and cap screws up to ¾ in. Sizes Nos. 2 and 3 take intermediate sizes or screws, lags and nuts. The prices are, No. 1, $48; No. 2, $68; No. 3, $80, and No. 4, $105. It is made by the United States Electrical Tool Co., Cincinnati, Ohio.

U. S. electric screw driver and nut setter

Brake Service Machine



A new brake service machine for relining various types of brake bands, brake shoes, disc clutches and Ford transmission bands, has just been put out by Weaver Manufacturing Co., Springfield, Ill. Mounted at a height convenient for the operator, a revolving turret carrying plungers to take care of punching and countersinking various diameters of rivets, is operated by a toggle action controlled by a long leverage foot pedal. The turret is rotated by hand to bring either of the four plungers in line with the riveting work. Each plunger can be screwed up or down so as to countersink rivets to the desired depth and take care of variations in thicknesses of bands and linings. Special attachments are included so as to make only two operations necessary to remove old lining and rivet on new for Ford bands. Price $70.00.

Weaver brake service machine model H

Hisey Half-Inch Universal Drill

The Hisey-Wolf Machine Co., Cincinnati, Ohio, has placed on the market a new half-inch universal drill equipped with a standard Hisey motor. The chuck of this drill is fitted to hardened and ground tapered spindle and is of Jacobs make. An oversize chuck spindle is used and is automatically lubricated through the gear case. A cooling fan is accurately finished to insure balance and is a slip fit over the shaft and held in place by a key. The cool incoming air passes over the commutator and motor and vents insure maximum protection against accidental abuse.

Hisey half-inch universal drill

The brush holders with adjustable spring tension are mounted as a separate unit on a bakelite yoke which makes for good installation. The end cover is a rugged casting carrying all pressure applied to the spade type handle and being independent of the motor and motor bearing relieves them of all strain. The spade handle is directly in line with the drill chuck thus eliminating side pressure and for close quarter work it can be removed and pressure applied directly on the end cover casing. The side handle is removable. The speed of the drill with no load is 525 r.p.m. and the net weight is 17 lbs. Standard equipment besides the half-inch chuck includes 10 feet of all rubber Tirex cable and suitable attaching plug. The price of the drill is $58.

EDITORIAL

Routings That Save Money

DECREASING the cost of traveling by motor through increased efficiency in routing is to be an outstanding development of the accomplishments this year of the American Automobile Association, according to Thomas P. Henry, president of that organization. Thanks to the continued extension of the nation's paved highway mileage the A. A. A. should be able steadily to improve its routing service. The character of roads over which the motorist is to travel will figure largely in the cost of operation. Efficient routing also often cuts down distance. This is a work which the A. A. A. is excellently prepared to carry on and any progress it makes is in the direction of the automotive trade's great ambition to see automobile transportation brought down to the lowest possible operation cost. Lower the cost of highway travel and more highway travel will result.

The Last Half of the Year

IN its monthly discussion of current market conditions the National Bank of Commerce, of New York, predicts better general business in the last half of the year than was noted in the first half—providing "crop yields are reasonably good and farm prices profitable."

The bank declares that "profitwise, the business outlook is the best since 1919, because it is the most stable."

One big factor in the process of stabilization has been the automotive industry. Contributing to improved conditions one of the chief forces has been the general effort to American manufacturers to measure output closely to the requirements of consumers.

No other industry has striven harder to accomplish this adjustment than have the makers of motor vehicles. In fact, automobile manufacturers must be given due credit for their leadership in this constructive movement. And they are entitled to the profits of their wisdom.

It is reasonable to expect that the last half of the year will be a substantial period for the automotive trade. The seasonal decline is on but the downward curve is apparently more gradual than ordinarily and demand is keeping some of the factories at capacity operation.

The farmer has been an important figure in the progress we have made thus far and as the New York bank has indicated the farmer's prosperity will have a significant bearing upon balances of the last six months. At this time the farmer's outlook seems sufficiently secure. Barring unlikely misfortune our agricultural industry should come through in good shape.

There should be no let-down by the automobile dealer in intensified merchandising effort. Many motor vehicles will be sold between now and the last day of December, a big volume of accessories and supplies will be marketed and much maintenance work will be required.

While we are not prepared to say that the last half of the year will be a record period it can be safely ventured that it will be better than the corresponding period of last year from the standpoint of profits and opportunity. Prospects are unusually good.

Studebaker and Used Cars

STUDEBAKER has announced plans for a broadside at the used car problem. It is a relief to see factories take hold of this matter. Studebaker offers to stand behind the dealer in guaranteeing correct representation of used cars offered for sale by the retailing organization. The pledge which the dealer is required to sign and post conspicuously in his place of business is an impressive document. In its assurance of honesty it sets forth an essential that the trade at large must emphasize and live up to if the used car problem is to be solved. Honest representations must be found in all merchandising enterprise that hopes to endure and prosper. The honest merchant, however, who fails to let the public know of his honest policies is overlooking opportunity. Most certainly he is guilty of this if he is a used car merchant.

An All-Time School

THE young man who thinks that his school days are over when he receives a college diploma is certain to bump into disillusionment when he invades the field of automobile selling for a livelihood. While his college training is a fine asset he will find that those who keep up with the automobile selling procession are never "out of school." To keep up there is a demand for constant study which has been increasing in proportion to the intensification of competition.

Factories are coming more and more to the realization that education of the field after all is the big thing in automobile merchandising. Requirements by factories for dealers and salesmen to study are yearly becoming more pressing. Factory budgets for educational campaigning in the trade have become very large. A double-jointed chin and a rubber tongue might have been considered the only necessary selling requisites at one time—but not so today. Merchants and salesmen today must THINK—they must ANALYZE—they must STUDY.

July Automotive Outlook Is Favorable

Seasonal Decline in June Is Less Than in Former Years

Several Large Producers Still Behind in Meeting Orders—Exports Set Records

NEW YORK, July 1—Good automotive business was experienced up to the end of June, and the outlook for July is favorable. There was a slight seasonal decline in sales during the month just past, but the drop was less than in former years and far less than was expected late in May.

Several large producers in various price classes are still behind in meeting orders—a highly unusual situation for this time of year. Others have caught up, however, and are slowing down in production. The lower activity is particularly noted in these factories that are preparing to introduce new models.

Three or four new cars have been introduced recently and their reception from the public has been most cordial, a particularly striking example of the keen interest in automobiles that buyers everywhere are evidencing.

Why unsatisfactory sales conditions are reported, local influences are found to be the causes, such as the coal situation in sections of Pennsylvania and the poor state of crops in the southwest.

Truck sales and production are running well ahead of last year at this time. With the opening of the tourist season the automotive supplies market has experienced a quickening in almost all lines. The tire market has shown particular strength. Replacement parts and shop equipment continue to show a slight gain in almost all sections of the country.

Exports are setting records and it begins to look as if the total for the year may reach the half million mark, against 385,000 last year, which marked the peak of foreign sales for all time.

A healthier condition among car distributors and dealers is one of the notable achievements of the year in automotive lines. This is particularly noted in used car stocks, which in most sections of the country are low. Used cars moved in satisfactory volume throughout the month and new car stocks are also in good shape.

Revenue Collections From Automotive Industry Less

WASHINGTON, June 27.—A decrease of $3,296,465.90 is noted here by the Bureau of Internal Revenue in the May, 1925, internal revenue collections from the automobile industry as compared with the collections in May, 1924. The total collections for the month just passed is given at $12,357,156.33 as contrasted with a total of $15,653,622.23 for May, 1924.

A substantial decrease is also shown in the collections from the automobile industry for the period from July 1, 1924, to May 31, 1925, which were $109,943,871.61 or $36,125,708.95 less than for the period July 1, 1923, to May 31, 1924, when the total was $146,069,580.56.

The segregated taxes collected from the automobile industry for May, 1925, as compared with May 1924, follows: In May, 1925, from automobile trucks and automobile wagons, $688,046.51 as compared with $1,098,427.70 in May, 1924; other automobile and motorcycles in May, 1925, $10,027,796.17 as compared with $11,539,012.29 for May, 1924, and automobile parts and accessories, $1,641,313.66 in May, 1925, as compared with $3,016,182.24 in May, 1924.

All Business Aided by Advance of Car Industry in Lansing

LANSING, June 27.—Through the growth of Lansing's automobile and general accessory business in the last 20 years, the value of Lansing's manufactured products has increased 116.4 per cent.

Capitol used in the manufacture of the products showed an annual average increase of 46.6 per cent and the number of employes gained 12.1 per cent. Business firms increased at the rate of 17 per cent annually, banking resources at the rate of 36.5 per cent and bank clearings at 38 per cent.

Population increased 12.9 per cent annually; families 12.5 per cent; homes 14.1 per cent; value of personal property 28.1 per cent, building and loan assets 26.5 per cent, and per capita wealth 48.9 per cent.

FORD PLANS MEXICO PLANT

MEXICO CITY, June 27.—The Ford Motor Co. plans to take over certain warehouses now under construction on the outskirts of Mexico City and use them as an assembly plant. These warehouses are modern and constructed in accordance with specific requirements so that the company will be able to assemble knocked-down cars received from the United States and to carry a moderate stock of cars, trucks, Fordson tractors and Lincoln cars as well as parts. Whether the plant will be operated as a branch or as a Mexican corporation has not been decided. Occupancy is expected early in July.

Hertz Refuses to Deny or Confirm Merger Reports

Financial Men Believe Yellow Manufacturing Will Unite With General Motors

CHICAGO, June 29—John Hertz, president of the Yellow Manufacturing Co. and associated interests, and Edward D'Ancona, secretary and general counsel of the concern, have steadfastly refused to either confirm or deny reports that a $60,000,000 merger of the Yellow interests with General Motors Corporation is pending.

Meetings were held simultaneously in Detroit and Chicago last week, and although no official announcement has been made regarding the sessions, it is persistently reported in La Salle Street that the purpose of the meetings was to effect a consolidation of the two corporations.

Financiers and financial authorities appear to be entirely satisfied that such negotiations are going forward and that they probably are nearing completion because of the fact that no denial has been issued from either the Yellow Manufacturing or General Motors headquarters.

The center of conjecture seems to be in what manner control of the Yellow interests will pass to General Motors. Many quarters credit Mr. Hertz with controlling not more than 30 per cent of the stock of the Chicago company of which he is president. This would make it impossible for him to deliver entire control. It is believed that General Motors is planning an exchange of stock as an alternative.

In its financial statement of May 31, General Motors had 5,161,800 shares of common outstanding and 10,000,000 shares authorized. The same is true of the debenture and two preferred stocks. In other words a large part of the authorized total is available for expansion. Besides this, General Motors has on hand about $140,000,000, far more than is needed for protection in its own field.

This statement shows that it is in excellent condition to consummate such a deal as is reported without any financing. Should such a deal be arranged, General Motors would be in an enviable position in the automobile field as Yellow Manufacturing is pre-eminent in the building of motorbuses and taxicabs.

Should General Motors acquire control of Yellow Manufacturing, the corporation will be closely allied with the Yellow Cab Company of New York, the Chicago Yellow Cab Company, the Omnibus Corporation and the Yellow-Drite-It-Yourself System, which are the most important Manufacturing outlets for the production of the Yellow Manufacturing Company.

Chrysler Corp. Buys Business And Properties of Maxwell

Transfer Plan of April 15 Adopted At Meeting of Stockholders in Detroit

DETROIT, June 27.—The Chrysler Corp. has acquired today all the business and properties of the Maxwell Motor Corp. The sale, pursuant to the plan of April 15, was authorized at a meeting of the Maxwell stockholders held here.

Incorporation papers for the new Chrysler Corp., were filed in Delaware, June 6. This corporation takes the place of the Chrysler Corp. formed in Michigan with nominal capital to conform with legal matters necessary in connection with carrying out the transfer plan.

Under the transfer plan 239,373 shares of Chrysler Corp., preferred will be issued to Maxwell stockholders on the basis of 100 shares of preferred and 10 shares of Chrysler common stock for each 100 shares of Maxwell Class A stock, and 100 shares of Maxwell common for each 100 shares of Maxwell Class B stock.

The new corporation will have an authorized capitalization consisting of 275,000 shares of $8 cumulative preferred stock and 800,000 of common, all no par value.

Walter P. Chrysler stated that the new company was beginning its career under the most auspicious circumstances. The new four cylinder Chrysler car, now being introduced has met with complete approval of the dealer and distributor organization. The company, he continued, has orders on its books assuring capacity production for the next three months on both the four and six cylinder models. He said that the company was never in a stronger position with respect to forward orders, organization facilities and cash.

19,000 Used Cars Sold in Boston in Last Six Months

BOSTON, June 27.—Nearly 19,000 used cars were sold in Boston during the six months period beginning December 1 last and ending May 31 of this year. Figures compiled by the Boston Police Department give the details to show that while the dealers took in 15,040 machines during the winter and spring they sold 13,340. That left a margin of some 1,700 used cars on the hands of the dealers. However, when it is considered that there were 194 such dealers licensed in Boston the average would be less than 9 cars to each on a pro rata basis.

That the used car sales this spring were good is further emphasized by the record of sales made by individuals. In many cases the dealers advised seekers after new cars to try to sell their old cars to others, and that they were successful is recorded in the books where it shows permits were granted to 5,578. Therefore, when this individual number is added to the 13,340 sold by the dealers it totals 18,918.

These figures are solely for the city of Boston and are correct because motor cars are not registered without a waiver or permit from the Boston Police Department. Furthermore, a comparison is given with the same period of a year ago. This year shows an increase for the previous year had 12,698 cars taken in trade and 11,175 sold leaving the dealers with 1,523 on hand or a difference of 177 less than this year. In the same period the individual sales ran up to 5,023 so that it made the total 16,198.

"Co-operative" Brake Tests Planned

SYRACUSE, June 27.—Syracuse automobile dealers cooperating with state, county and city officials will conduct the first automobile brake testing campaign ever held in this city.

The State Motor Vehicle Bureau, the city police, deputy sheriffs, Syracuse Safety Council and the Automobile Club of Syracuse will be organizations which will cooperate with the dealers.

An attempt to hold a campaign last year failed because the right of officials to stop automobiles was questioned. This year drivers will be invited to have their brakes tested on specially designated streets in the city in charge of officers. Testing will be without charge and there will be no compulsion on the part of the driver.

Sales of New Cars Slow Appreciably in St. Louis

ST. LOUIS, Mo., June 27.—Sales of new cars in the city have slowed down. Especially is it noticeable that those lines which are in the habit of bringing out new models about the first of July or the first of August have not been selling so well lately. Also one popular line which has not been in the habit of putting out yearly models has been enjoying a great popularity.

In fact the month of May was one of the best if not the best month the distributor of this line in St. Louis has ever had.

Dealers are determined to keep their used car stocks down. With this end in view they have taken them in trade sparingly and with due dilligence. The result is that used car stocks on hand at this time are low, 25 per cent below normal it is said in some quarters. Some dealers say they could sell a good many more cars if they were willing to allow large figures for used cars, but this they refused to do.

Accessory sales are spotty. It is said by some firms that their business is 20 per cent ahead of last year while others claim that sales are very poor.

Collections are good.

May Output of Motor Cars Exceeds That of Last Year

Both Passenger Automobiles and Trucks, However, Are Below April Figures

WASHINGTON, June 27.—The May output of motor vehicles in the United States and Canada, according to the Department of Commerce, was 382,714 passenger cars and 43,303 trucks. The May, 1924, total was 286,324 passenger cars and 35,314 trucks while April of this year showed 391,302 passenger cars and 47,815 trucks.

Figures in the United States alone show 364,363 cars and 41,415 trucks as compared with 375,787 cars and 46,239 trucks for the preceding month.

Production for last year and the first five months of this year, according to the figures gathered by the department are listed below. The table is based on data received from 185 manufacturers from recent production statements as furnished to them. The May figures from 14 small firms were not received in time to be included in this report.

	Cars	Trucks	Total
1924			
January	293,824	30,741	324,565
February	343,460	32,910	376,370
March	357,045	36,444	393,489
April	346,405	37,948	384,353
May	286,324	35,314	321,638
Total	1,627,058	173,357	1,800,415
June	225,079	29,067	254,146
July	244,544	26,391	270,935
August	255,232	28,647	283,879
September	263,528	31,960	295,488
October	260,881	32,475	293,356
November	204,343	27,905	232,248
December	182,099	27,542	209,641
Total	3,262,764	377,344	3,640,108
1925

February	252,803	34,412	287,215
March	332,151	45,096	377,247
April	391,302	47,815	439,117
May	382,714	43,303	426,017
Total	1,571,891	198,773	1,770,664

June Is Biggest Month in History of Hudson-Essex

DETROIT, June 27.—Hudson-Essex sales which will be between 26,000 and 27,000 for June will break all previous records and will be the best month in the history of the company, according to word given out at the factory today. The present sales and orders on hand will exceed those for May by about 2500.

Ninety per cent of the orders are for enclosed cars, with the demand being even throughout the entire country. The sales of both cars are running about even. The new Hudson brougham has met with a countrywide reception, factory officials said that will insure this model meeting with good demand for some time.

Plans now under way at the factory call for the output being increased from 1200 Hudson-Essex cars, the daily output now, to 2000 by the end of the month. Despite the increased demand, no unusual delay has been experienced in meeting deliveries. With the increased output it is hoped to make deliveries within an unusually short time.

Accessories Moving Steadily With July Prospects Good

May Sales Slightly Under April But Not So Much As Formerly

NEW YORK, June 27.—The automotive parts and accessory industry is proceeding at a strong and steady pace as the mid-summer season approaches. May business showed a less than normal seasonal decline from the April peak and July prospects are good. It is also indicated that business for the last half of the year will exceed the final six months of 1924 and that net profits of 1925 will be better than they were last year.

These statements are contained in the Business Bulletin for June just issued to members by the Motor and Accessory Manufacturers' Association. The association's survey of members' sales gives an aggregate index figure for May of 165 as compared with 168 for April, with business of January, 1925, furnishing the index of 100.

Sales of parts and accessories to car and truck manufacturers for original equipment dropped slightly from April to May, as did sales of accessories and maintenance equipment to the trade. Sales to the trade of replacement parts made a striking gain from an index figure of 107 for April to 134 for May.

Aggregate sales of original equipment on which the May index figure was based exceeded $12,000,000. Replacement parts sales included in the compilation aggregated nearly $3,000,000, accessory sales nearly $2,000,000 and service equipment sales slightly less than $500,000.

Indiana Registrations Off 5 Per Cent During May

CHICAGO, June 27.—Registration of new passenger cars in Indiana during May dropped 5 per cent, as compared with the preceding month, the total being 10,612 as against 11,178 for April. All price classes declined, but the decreases were small, with the exception of the high-priced vehicles which were 27 per cent under the April figures.

The following table indicates the changes for May as compared with April:

	Loss
Fords	3%
Low, excl. Fords	3%
Medium	6%
High	27%
Total	5%

Following are the detailed figures for the first five months of 1925:

Mo.	Fords	Low, excl. Fords	Med.	High*	Total
Jan.	4,239	1,024	1,837	117	7,217
Feb.	3,515	896	1,533	103	6,047
March	5,778	2,042	4,031	205	12,056
April	5,002	2,292	3,641	243	11,178
May	4,819	2,205	3,413	175	10,612
Total	23,353	8,459	14,455	943	47,110

*Includes miscellaneous cars not named.

The foregoing statistics were compiled from figures furnished to MOTOR AGE by Indianapolis Auto Trade Association, Indianapolis, Ind.

Savings Rise With Car Output

BALTIMORE, June 27.—A. E. Duncan, chairman of the board of the Commercial Credit Company of this city and affiliated companies throughout the United States, has issued figures to show that the savings of the company have not been distributed by the great increase in the number of automobiles.

According to Mr. Duncan, the number of registered motor vehicles increased from 2,445,666 in 1915 to 17,591,981 in 1924. During the same time, the number of savings depositors increased from 16,084,587 with savings deposits of $8,791,253,000 or $88 per capita to 38,867,994 depositors with savings deposits of $20,873,562,000 or $186 per capita in 1924.

Diana Deliveries Are Heavy In Chicago Trade Territory

CHICAGO, June 27.—Fifty-two deliveries have been made by the Quinlan Motors Co., distributors of the new Diana Eight, product of Moon Motor Car Co., in the Chicago territory since the first of the new models arrived here three weeks ago.

About 40 of the cars have been sold in Cook County, the other twelve going to dealers in Milwaukee, western Michigan towns and one or two in other cities of northern Illinois. This week was the first in which advertising of the new Diana has been carried out and with the beginning of an active advertising campaign sales are expected to jump appreciably.

Deliveries at present are practically immediate with the exception of the roadsters. The de luxe sedan is the model which is going best at this time.

WILLS ST. CLAIRE DEALERS

MARYSVILLE, MICH., June 27.—Distributors who have taken on the Wills Sainte Claire line are as follows: A. Lopez Ulloa, San Salvador, Central America; M. L. McCorkle, Eldorado, Arkansas. New dealers include the Nassau Boulevard Garage, Garden City, L. I., N. Y.; Wills Sainte Claire Sales Co., Hartford, Conn.; D. D. Provan, West Haverstraw, N. Y.; Barton Motor Company, Clarendon, Virginia; New Castle Auto Sales, New Castle, Pa.; F. H. Niece, Grove City, Pa.

TRUCK FEES DOUBLED

BOSTON, June 27.—Motor truck dealers have just received the copies of the new law passed governing fees for commercial vehicles beginning with 1926. The minimum has been jumped from $10 to $20. The law provides that all vehicles used in carrying freight, good and merchandise shall pay 50 cents per hundred pounds, which includes both the vehicle and its maximum carrying capacity. The present law provided for a flat rate of $10 per ton. Under the new law the five ton trucks with their chassis and bodies weighing about as much as the carrying capacity will pay about $100. This is an increase of 100 per cent.

Boston Sales for June Show Steadier Tendency Than May

Used Car Demand Advances, Dealers Selling More Than They Take In

BOSTON, June 27.—Motor car sales in Boston for the past few weeks, or since about June 1, have shown a steadier tendency than during May. There has been evidence of a letup but for only a few days instead of for a week or 10 days at a time. Distributors say that the retail sales in Boston have been good, but the dealers in the outside territory do not seem to be doing quite as well as they expected.

Used car sales have been going good, for the report turned into the police showed that during May the dealers sold 135 more of these cars than they took in, and with the scale of individual sales rising each month it meant a better movement for new cars.

Motor car distributors do not look for any seasonable slump of great proportions this summer. Announcement of one big company that it is no longer committed to yearly models will relieve buyers from waiting to learn what that company is going to do in August, as usual. There is no feeling that because summer is here the thing to think of is vacations.

With the registrations to June running 64,265 more than for the corresponding period in 1924 for Massachusetts; and the May listings alone for the state reaching 45,963 or 1,455 above May, 1924, it has given the dealers encouragement to keep plugging along.

PAIGE-DETROIT EARNINGS

DETROIT, June 27.—Paige-Detroit Motor Car Co. net earnings for May were $598,000, exclusive of earnings by branches and subsidiaries, which in April amounted to 16 per cent of the $522,000 net before taxes. Assuming the same ratio for branch earnings in May, total net for that month would be $712,000, or about 97 cents a share on the common after allowing for taxes, interest and preferred dividends. Exclusive of branches and subsidiaries, net earnings for the first five months of 1925 were $1,754,880, or $2,089,100 with the estimated 16 per cent covering branch earnings, amounting to $2.88 a share for the 615,000 shares of common.

EXTRA DIVIDEND

DETROIT, June 27.—An extra dividend of 20 cents a share, payable July 15 to common stockholders of record at the close of business July 7, 1925, has been declared by the board of directors of the C. G. Spring and Bumper Co. The corporation's new plant in Chicago is completed and in full operation. It has a capacity of 4,000 complete automobile bumpers daily. With this output combined with that of the Detroit factory it has been possible to secure greater production and increased earnings.

Passenger Automobile Sales Gaining Slowly in Oregon

Industry Believed to Be Forging Ahead in State With Outlook Promising

PORTLAND, Ore., June 27.—Passenger car sales in Oregon are gaining slowly. That is the most that can be said for the month. May sales increased 63 cars over the previous month, Multnomah County, whieh includes the city of Portland, gaining 32.

However, in view of general business conditions, even this slight increase is looked upon as an indication that the automotive industry is looking up in this state. Healthy indications are seen in a perusal of figures for Multnomah County for April and May. In April sales were 592 less than sales in April, 1924, while in May the loss was but 342 under May of last year. The percentage of loss in sales for 1925 as compared with 1924 is about the same for Multnomah County as for the rest of the state—about 24 per cent.

This loss applies to new car sales only, and considering the fact that dealers are allowing less on "trade ins" than they did last year, the profits may equal those of 1924 even though the volume be decidedly less. Some Portlnd dealers have reported that their used car stock is less than half their figures of 1924.

While truck sales for May were three less than during the same month last year, yet 215 trucks were sold in the state as against 192 in April. The number of trucks sold this year still lacks 58 of attaining last year's figure.

If applications for licenses continue to be filed this month and next as in April and May, Oregon will have more registered motor vehicles by August 1 than during the entire year of 1924.

Philadelphia Rubber Will Double Reclaimed Output

AKRON, O., June 27.—John K. Mitchell, president of the Philadelphia Rubber Works Co., has just announced plans for increasing the production of reclaimed rubber in the company's plants to 10,000,000 pounds a month, compared with present output of around 5,000,000 pounds.

The expansion program includes the cosntruction of two new factories, one in the East, probably Philadelphia, and the other in a locality not yet decided upon, and enlargement of the Akron plant.

NEW CLEVELAND DEALERS

CLEVELAND, O., June 27.—New appointments of dealers by the Cleveland Automobile Company are announced as follows:

Modern Service Auto Co., Ottumwa, Ia.; W. J. Price, Portsmouth, Va., and Alton Cleveland Sales Co., Alton, Ill.

A. A. A. Standings

FRANKLIN, Pa., June 27.—Following are the standings of race drivers announced officially by the American Automobile Association, as of June 15.

1.	DePaolo	2000
2.	Milton	1030
3.	Hartz	640
4.	Cooper	555
5.	Lewis	465
6.	Elliot	270
7.	Shafer	240
8.	McDonogh	145
9.	Duray	135
10.	Comer	124
11.	Kreis	112
12.	Batten	110
13.	Bordino	54
14.	Bennett Hill	50
15.	DePalma	40
16.	Shattuck	35
17.	Devore	15
18.	Mourre	11
19.	Corum	10
20.	Johnson	10
21.	Hepburn	10
22.	James Hill	5

Macon County, Ill., Plans Its Greatest Automobile Show

DECATUR, Ill., June 27.—The biggest automobile show ever given in Macon County, is the ambition of local dealers who have already begun preparations for the exhibition in connection with the county fair in August.

A tent, 100x250 feet will be pitched, wire-enclosed spaces allotted, the canvass decorated as magnificently as a winter show and space allotments made sufficient for three or four machines.

Southern California Sales Increase Greatly in May

New Automobiles Show Advance of 25 Per Cent Over Same Month Last Year

LOS ANGELES, June 27.—The most encouraging sales situation that has existed in southern California for many months has been revealed here with the announcement of the registration of new motor vehicles for May.

Total registration of new automobiles for the eleven counties of the southern part of the state was 9,273, or an increase of 25 per cent over May of last year. The total commercial car registration was 1,101 or an inerease of 17 per cent over 1924.

Among the makes showing the largest gain were Chevrolet, Chrysler, Dodge Brothers, Hupmobile, Lincoln, Maxwell and Nash. The most sensational increase was made by Hudson-Essex, Hudson jumping from 78 to 721 and Essex climbing from 85 to 618.

NEW JR-8 DEALERS

BRIDGEPORT, Conn., June 27.—Announcement is made by the Locomobile Company of America, Inc., of the appointment of the dealers who will handle the new JR-8, deliveries of which are now being made:

Locomobile Co. of New Rochelle, New Rochelle, N. Y.; Thomas H. Sinclair, Port Chester, N. Y.; C. A. McClintock Company, Pittsburgh, Pa.

25 Years Ago In the Automobile Industry
As Recorded In Motor Age

(From MOTOR AGE of July 5, 1900)

The Automobile in Washington

WASHINGTON, June 23.—Gradually the automobile is assuming a position of importance in the commercial life of the national capital. Several hotel proprietors have lately been experimenting with automobiles with a view to substituting them for their horse-propelled vehicles running between the hotels and the depots, and judging from the satisfaction they are giving and the patronage they are commanding, it is not too much to say that the familiar hotel omnibus with its pair of horses will soon be a thing of the past—at least in Washington. The department stores are also experimenting with automobiles in the delivery of goods and it is proving a good advertisement for them.

Cleveland Club Exhibition

The Cleveland Automobile Club, which is the second oldest organization of the kind in the country, is planning for a public exhibition and races, designed to familiarize the people with the possibilities of the automobile and to convince them that it is already a fixed element of transportation. In addition to a road race, it is proposed to have obstacle races, maneuvering contests, grade climbing races and other interesting performances. It is the present plan that the exhibition shall be free and that it shall be held at a time and place that will make it possible for a large number of people to be present.

Speed Reports

At Brussels in a contest for the flying and standing start, Jenatzy with his 3 h.p. gasoline vehicle covered the flying start kilometer in 38 1/5 seconds, a speed of 94 kilometers (50½ miles) to the hour; the former record belonged to Lemaitre, in 47 4/5. Another Belgian, Miesse, rode the same distance in a steam vehicle in 48 4/5 seconds, which is also a world's record.

German Exhibition Planned

A general motor car exhibition will take place at Leipzig from October 19 to 23 in connection with the third German cycle exhibition. The motor division will comprise six groups and deal most extensively not only with the industry itself, but with literature and other items pertaining to the industry. The exhibition is open to competitors of all countries.

New Orleans Reports June Business Better Than May

General Business Outlook Good With Heavy Buying Expected in August

NEW ORLEANS, June 27.—Business for June in most automotive lines, retail and wholesale, was slightly increased over the May business. The general business outlook as it affects the automotive industry is optimistic. Rains came in time to save the truck crops of both Louisiana and Mississippi and the rice crop of the first named state. The tendency is for an increase in time sales. Collections on cars are slow, but repossessions were reported as few. The used car demand during May was brisk. Automotive wholesalers of cars, accessories, parts, etc, reported that dealers were slow in paying and that they gave as a cause slow payment of the retail trade to them.

It is felt that July will be a good average month in this section, but that August will be much better for new cars. People, instead of buying new cars generally now, are, many of them, waiting until fall for the new models and also using their old cars or buying used cars to vacation in during the summer. The vacation period seems to have helped the accessory and replacement parts business in that it is causing many to overhaul old cars to get them ready for taking trips.

NEW PEERLESS DEALERS

CLEVELAND, O., June 27.—Following are the new dealers added to the Peerless organization recently:

Egyptian Motor Car Co. of Duquoin, Ill., Cumberland Peerless Co. of Cumberland, Md.; North Shore Peerless Co.; Woodside, L. I., New York; Van Kollem & Taemens of Babylon, L. I. New York; John E. Meyers, Boonton, N. J.; Miami Motor Car Co., Miami, Okla.; H. W. Bell, Brownsville, Tex.; A. J. Gilliam, Asheville, N. C.; James D. Hazlett Motor Co., Galesburg, Ill.

SECOND FORD DIVIDEND

DETROIT, June 20.—Directors of the Ford Motor Co., Ltd., of Canada, have declared a dividend of 10 per cent paid June 30 to shareholders of record at the close of business on June 20, 1925. This is the second dividend of 10 per cent to be declared by the Ford Motor Co., Ltd., of Canada, during the present fiscal year. The first dividend was declared last fall.

Co-operative Salvaging of Junk Rubber Is New Plan

ST. LOUIS, Mo., June 27.—A co-operative system of salvaging junk rubber from tires and the institution of a Credit Bureau involving the exchange of credit information between members were discussed at a recent meeting of the Associated Tire Dealers of St. Louis at the Claridge Hotel. A committee to work out details of both plans was appointed. It is composed of E. L. Meyer, Jr., of Meyer and Kemp Tire Co., chairman; Joseph Delabar, Sternwear Tire Sales Co.; Chris Hasenpflug, Hasenpflug Tire Co.; Arthur G. Jennings, business manager of the Association and J. A. Estes, field secretary of the National Tire Dealers Association.

Up to the present time it has been the practice of tire dealers to dispose of their salvage tires to junk dealers at a trifling price in order to get rid of them but the increase in the price of crude rubber convinced the dealers that co-operative selling of junk tires would be more profitable because it will be possible to gather them at low cost and sell them in quantity to the highest bidder. Each member in the movement is to receive a credit slip for the junk tires he contributes and at the end of a stated term the proceeds will be prorated.

Under the new plan of operating the credit bureau it is proposed to allow a disinterested official of the association make a confidential examination of the books of members to ascertain the credit standings of their customers. Previously it has been the policy to permit members to submit their own lists of delinquent customers and the results showed that such lists were not accurate.

St. Louis Distributor Will Radiocast

ST. LOUIS, Mo., June 27.—E. J. Krause, president of the Ernest J. Krause Co., 5187 Delmar boulevard, distributor of the Rolls-Royce and a Moon dealer here, has just returned from Washington, D. C., where his application for the installation of a high-powered broadcasting station was approved. The call KEJK has been allotted to his station and a temporary wave length of 400 meters has been given.

Wilson Foundry Expansion Program Will Be Rushed

Pontiac, June 27.—Orders have been given calling for increased speed in the erection of the $2,000,000 expansion project of the Wilson Foundry located here. Under the new plans, the factory should be operating at full capacity by October 1. A big increase in the demand for the new Willys-Knight sixes is given as reason for rushing work of completing the factory.

The foundry, one of the largest devoted exclusively to the manufacture of automobile engines in Michigan, is engaged in making motors for Willys-Overland. The present plant employs 4600 men. With the increased facilities, it is expected that this number will be increased to 6,000.

The building of the new structures will cost approximately $1,500,000. The remaining $500,000 will be spent in replacing old machinery and in the installation of the latest design machinery for foundry work.

Sales in Detroit Continue Sensational Pace of April

Absence of 1924 Models Features Trade-In Business This Season

DETROIT, June 27.—Sales which have kept up the sensational pace set in April may establish a new all-time monthly record for Detroit according to several of the leading dealers and registration figures for the first half of June.

New car demand has not been confined to any one particular class, each make getting its proportion of the business. Many sales topped the 11,000, the best local performance on record.

One of the unusual features of the trade-ins is the absence of 1924 models. Indications are that owners intend to drive last year's models for another season before trading them in. Dealers' stocks of used cars are lower than at any time this year, despite the large number of cars taken in on trades.

A definite shortage of used cars of the more expensive makes exists. Cars that when new sell for $2000 and up do not stay on the used car floor more than 24 hours.

Renault Stock Model Breaks World's Record for 24 Hours

PARIS, June 9—(By mail)—The six-cylinder four-passenger stock Renault, driven by Garfield and Plessier, broke the world's 24-hour record on Montlhery track this week by covering a distance of 2,103.19 miles in the two rounds of the clock.

The car used for this purpose was a 45 hp. 6-cylinder engine of 4.3x6.29-in. bore and stroke, giving a piston displacement of 602.6 cu. in. The previous record had been set up only two weeks earlier by Thomas Gillett driving an English 6-cylinder A. C. of only 122 cu. in. piston displacement, with which he covered 1950 miles in the 24 hours.

In this attempt the Renault captured nine world's records according to the ruling of the International Association of Recognized Automobile Clubs which does not recognize any records established in America. The car maintained a very regular pace of practicaly 98 miles an hour for the first sixteen hours, and began to break existing records from 1,000 kilometers onward.

Mechanical trouble developed after the twenty-first hour. The timing gear chain broke and had to be replaced by a chain taken from another car, and in addition several blades broke away from the flywheel fan. Owing to this the average during the last three hours dropped to 25 miles an hour, but the Renault had such a lead on the previous performance that these records were established with a fairly wide margin.

June Sales Show Advance In Chicago Trade District

Business Believed As Good As in May Which Was Record Month

CHICAGO, June 27.—Wholesale, retail and production phases of the automotive industry showed marked advances during June. Most of the retail dealers had far more orders than could be filled, ending the month with many deliveries still on paper.

Wholesale business throughout the trade territory served by Chicago, including several of the states west of the Mississippi, was beyond that of any month this year. May had set a record with a large number of the wholesalers but unofficial figures show that June was even better.

Although the greater number of the metal industries suffered declines late in May and early in June, with business falling off and employment figures low, the automotive industry was the principal exception. Automobile and accessory concerns were the outstanding examples of expansion in the metal trades, as they employed about 9.9 per cent more workers than in previous months.

It is believed by most manufacturers that this expansion is a salient instance of the leveling of the seasonal curve in automotive production. As the curve nears the line, the accessory business follows closely. It is believed that this accounts largely for the expansion in automotive metal trades while other metal trades are on the decline.

The same quickening of the production trade is noted in Indiana, a large part of which is included in the Chicago trade territory. Some of the Indiana brass works are reporting declines.

Dealers all report as good June business as in May which was a record month. Open models are showing improvement. Sedan models are the best sellers. but a number of touring cars and roadsters also are moving. A large percentage of the open cars are going to export trade. However, several dealers have expressed the opinion that open models are selling better at present than they have for some months past.

MINIMUM SPEED LAW

HARTFORD, June 27.—Connecticut's minimum speed law, whereby the highway commissioner may refuse to license a motor vehicle which is incapable of maintaining a speed of at least 12 miles an hour, is now in force. Commissioner Robbins B. Stoeckel announces that it will be rigidly enforced. Another piece of new legislation forbids the attaching of stickers to windshield or rear window in such manner as to interfere with vision, marking the exit of the bathing girl.

Vocational Training Boosted by Ford

WINDSOR, Ont., June 27.—Vocational education in this city has received what the school authorities regard as invaluable encouragement from the Ford Motor Co., Ltd., of Canada, in its provisions of a three-year apprenticeship course for the graduates of the Windsor-Walkerville technical high school.

The graduates who will be allowed to go into either the tool and die, electrical or sheet metal departments will be paid 40 cents an hour for the first year, 50 cents an hour for the second year and 60 cents an hour for the third and last year.

Fourteen graduates have already availed themselves of the offer, eight choosing tool and die department, four the electrical department and two the sheet metal department.

Up until the present offer, the school had nothing definite in the way of positions to offer its graduates. The offer is considered by school authorities as one of the biggest steps toward fulfilling the purpose for which the technical courses were formed.

LOOK OUT FOR THESE CHECKS

The Jessup Motor & Supply Co., Dodge Brothers dealers of Hannibal, Mo., has had a bad check experience which should be of interest to other members of the trade. The Hannibal house was given a "Universal Traveler's Check" on "The Oriental Tourist Company, of Los Angeles" in the sum of $10 in payment for storage and supplies. Payment of this check was refused on the ground that it had no value, the investigating California bank reporting to the Jessup Company's bank that it had no knowledge of the Oriental Tourist Company and stating it had been informed that the country has been flooded with such worthless checks.

AUBURN ORGANIZATION

AUBURN, Ind., June 27.—Following are new distributors and dealers added to the Auburn organization:

Distributors

Tri-City Motors, Louisville, Ky.; J. A. Wicke, Cedar Rapids, Ia.; Pittsburgh-Auburn Co., Pittsburgh, Pa.; H. W. Neuman Machine Co., Davenport, Ia.; Ike Carpenter, Allegan, Mich.; A. C. Barnhart, Wichita, Falls, Tex.; L. E. Tait, Lincoln, Nebr.

Dealers

Max H. Stock, Ashland, Ky.; B. E. C. Slauson Auto Co., Glendale, Cal.; R. E. Giddens, Carrollton, Ky.; Howard Avenue Motor Sales, Chicago, Ill.; Guy McCullough, Glasford, Ill.; Alexander Auto Co., Lebanon, Ind.; Riverside Motor Sales, Buffalo, N. Y.; W. B. Naugle, Santa Paula, Calif.; The LaFayette Phoenix Garage Co., Lexington, Ky.; Auburn Sales Co., Salem, O.; Auburn Motor Sales & Service, Canton, O.; Albert Kisielewiez, A. K. Garage, Cleveland, O.; L. LeVasseur & Sons, Arctic, R. I.; Walter D. Herr, Athens, N. Y.; Miller & Ziliox, Hamilton, O.; Catherine Levine & Son, Highland Park, Ill.

Chrysler Will "Equip" Cars With Flat Rate Insurance

New Retail Finance Rates for New and Used Automobiles Also Announced

DETROIT, June 27.—Announcement of new and reduced retail finance rates on Chrysler cars and the establishment of a flat insurance rate covering fire and theft insurance uniform throughout the entire United States was made here today by the Chrysler Motor Corporation. Effective July 1, 1925, all Chrysler cars will be delivered to the public insured for one year. This insurance is "standard factory equipment."

Arrangements have been made with the Commercial Credit Company of Baltimore, Commercial Credit Corporation, New York City, Commercial Credit Trust, Chicago, and Commercial Credit Co., Inc., New Orleans, to finance the sales. Separate and distinct terms regarding the financing of new and used cars have been made.

With new cars, there is no recourse, no re-purchase agreement. This is applicable everywhere in the United States; no insurance charges are included in the rates; the down payment will be at least one-third of the cash delivered selling price; and the balance must be paid in twelve equal monthly installments; the financing is figured on the unpaid balance.

It is possible to pay the balance in less than 12 installments and in such cases the finance charges grow less, viz.: When the note is for one month, the charge is 2½ per cent, two months, 3 per cent, three months, 3½ per cent, four months, 4 per cent, five months, 4½ per cent, six months, 5 per cent, seven months, 5½ per cent, eight months, 6 per cent, nine months 6½ per cent, ten months 7 per cent, eleven months 7½ per cent and one year 8 per cent.

According to Chrysler officials, the saving to Chrysler time buyers will be from 30 to 40 per cent less than present rates.

With used cars there is no recourse, no re-purchase agreement; as regards insurance, the finance charge includes fire and theft insurance for 80 per cent of the cash delivered selling price, for one year; the down payment is at least 40 per cent of the cash delivered selling price; the balance calls for not more than twelve monthly installments, provided that the installments shall not be less than $15 monthly. A plan for financing used car sales along the new car sales plan has been devised.

FLYER PLANS GROUND TRIP

WASHINGTON, June 27.—Lieutenant Leigh Wade, one of the army world flyers, will leave Los Angeles July 16 on an attempted non-stop automobile trip to New York, it is announced here by the American Automobile Association which will sponsor the venture. He expects to arrive in New York July 23.

Cannon Ball Baker Claims Many Long Distance Records

Rickenbacker's Chief Test Pilot Kept on Constant "Go" By His Novel Job

DETROIT, June 27.—Anyone who thinks Cannon Ball Baker has not been a busy man as chief test pilot of the Rickenbacker Motor Company will get another idea on looking over his list of outstanding "jobs" so far this year. "Miscellaneous" jobs are not included in the list. Here are some of the things that have kept Baker busy and incidentally some of the late records he claims:

Mid-winter drive from New York to Los Angeles in 71 hours, 33 minutes actual driving time.

"Three Flags" drive, from Vancouver, B. C. to Tia Juana, Mexico, 1,558 miles, covering the distance in 40 hours, .57 minutes.

San Francisco-Los Angeles run, clipping 18 minutes and 50 seconds from best previous record and averaging 49.05 m.p.h. despite handicaps of mountainous conditions and the fact that more than half the route was over gravel highways.

El Paso, Texas to Los Angeles, Calif., 21 hours, 33 minutes, total elapsed time; 908.5 miles, 42.48 miles per hour average.

El Paso, Texas to Phoenix, Ariz., 10 hours, 12 minutes, total elapsed time, 429.1 miles, 42.07 miles per hour average.

Phoenix, Ariz. to Los Angeles, Calif., 11 hours, 11 minutes, total elapsed time; 479.4 miles, 42.87 miles per hour average.

San Luis Obispo, Calif. to Los Angeles, Calif., 4 hours, 24 minutes, total elapsed time; 212.9 miles, 48.4 miles per hour average.

Ogden, Utah to Salt Lake City, Utah; 36 minutes, 18 seconds total elapsed time; 36.5 miles; 60.33 miles per hour average.

Boise, Idaho, to Idaho City, summer and return in second gear; 30 minutes, 39 seconds, total elapsed time; 16 miles; 31.32 miles per hour average.

Boise, Idaho, to Salt Lake City, Utah; 9 hours, 7 minutes total elapsed time; 398 miles; 43.65 miles per hour average.

Circle Route Denver; 1 hour, 17 minutes, 13 4-5 seconds, 57 miles; 44.28 miles per hour average.

Lookout Mountain, Denver, base to summit; 6.2 miles; 10 minutes, 31 2/5 seconds, total elapsed time; 36.38 miles per hour average. Summit to base; 6.2 miles; 9 minutes, 31 2/5 seconds, total elapsed time 39.06 miles per hour average.

Denver, Colo. to Kansas City, Mo., 16 hours, 36 minutes, total elapsed time; 686.4 miles; 41.35 miles per hour average.

Kansas City, Mo. to Excelsior Springs, Mo., and return; 1 hour, 8 minutes, 34 seconds total elapsed time; 57.6 miles; 50.4 miles per hour average.

Texas Firm Holds "Bargain Days" To Sell Used Cars

WICHITA FALLS, Tex., June 27.—The Keim Motor Co. of this city, Studebaker dealers, has applied practices of grocers and department stores to its used car department with pleasing success.

The company is featuring Friday and Saturday of each week as "Used Car Days" at which special bargains are offered. These bargains are advertised in local papers and have been found they "pull many prospects" to the sales rooms. The "Used Car Days" will be continued by the company, John L. Laughlin says.

The Keim company reconditions its used cars. On Fridays and Saturdays there are some special bargains which attract the attention of the people who are thinking of buying a car for driving about on Sunday, or any other day.

Lupton Service Helps Dealers Lay Out Parts Departments

DETROIT, June 27.—A department to help dealers lay out their parts departments and profitably merchandise parts and accessories has been instituted by David Lupton's Sons Co. E. H. Spears, sales manager of the automotive equipment division of the company, has charge of this service which is free to automotive dealers. Dealers contemplating a new buildings or change of building or parts department may have this service by submitting a sketch of the proposed floor plan. The dealer is then furnished with a detailed plan for his parts department, together with merchandising suggestions. A mail information bureau is operated to follow up and give needed advice and when necessary a field supervisor will call to assist the dealer in solving his problems. The company also has a booklet, "Better Parts and Accessory Merchandising," for free distribution to dealers.

CHANDLER DEALERS NAMED

CLEVELAND, O., June 27.—The Chandler Motor Car Company has named new dealers as follows:

McCarty-Greene Motor Co., Gadsden, Ala.; Horton E. Ostrander, Wallace, Idaho; W. H. Tanzey, Stockton, Kans.; Hagerstown Chandler-Cleveland Co., Hagerstown, Md.; Bradford Garage, Brockton, Mass.; Murdock N. Melrose, Washington Street Garage, Brookline, Mass.; Central Garage Co., Canton, Mass.; Somerville Motor Mart, Inc., Somerville, Mass.; Winthrop Chandler-Cleveland Co., Winthrop, Mass.; Broadway Garage, Cape Girardeau, Mo. B. & M. Chandler-Chevrolet Co., Columbus, O.; N. J. Boden, Avon, N. Y.; Otto Tauffener, Tonawanda, N. Y.; The City Motor Car Co., Middletown, O.; Brownsville Chandler-Cleveland Co., Brownsville, Pa.; Scott S. Gill, Coalport, Clearfield County, Pa.; West Indiana Motor Co., Indiana, Pa.; Guenther Motor Co., Souderton, Pa.; W. E. Laidacker, Watsontown, Pa.; George A. Joseph, La Crosse, Wis.

LUSK GETS WHITE TROPHY

NEW ORLEANS, La., June 27.—Milton W. Lusk, New Orleans sales manager of the White Company, has been presented with the president's trophy in honor of having achieved the highest percentage of sales of White trucks as per quota in the company's contest that ended April 15. The award of the trophy took place at a banquet at which Walter C. White, president of the White Company, presented the trophy to Mr. Lusk in the presence of all the southern executives of the company, who were present for the occasion.

Automotive Payroll Reaches High Point at End of May

Employment at Plants Increased Fifty-Six Per Cent During First Five Months

WASHINGTON, June 27.—The amount of payrolls in the automotive industry has increased over 56 per cent since last January and in April practically equalled the highest point ever reached, it is announced here by the Federal Reserve Board in its official June bulletin. It is further set forth that production of automobiles in April was at a new high record with the output of passenger cars in the United States about 376,000 in April, an increase of 115 per cent in the four months since last December, when production was the smallest since early 1922.

"Employment," continues the bulletin, "has also increased considerably, but the index for April did not equal the figures for the first four months of 1924. Weekly reports of employment in Detroit manufacturing plants, however, indicate further substantial increases during May.

Large Sales Volume

"Shipments and sales of automobiles have also been large and, in fact, according to reports, have made the high rate of production necessary in order to meet the demand. Freight car load shipments of automobiles in April were the largest ever recorded except in March, 1924, and driveaways and shipments by boat both exceeded corresponding figures for any month since 1923, when there was a slight shortage of freight cars.

Middle western dealers, reporting to the Federal Reserve Bank of Chicago, showed substantial increases in both wholesale and retail sales during April, as compared with March. Further evidence of increases in factory sales of automobiles is given by figures of internal revenue collections. Taxes collected on automobiles and motorcycles, other than trucks, totaled over $11,000,000 in April, as compared with only $5,700,000 in March and $9,500,000 in April, 1924. Sales of accessories and parts have also increased considerably in recent months.

Fiat Company Opens Active Campaign for Small Model

Novel Sales Methods Necessary Because of Rapid Exchange Rate Shifts

PARIS, June 13—(By mail)—An active sales campaign in favor of their new light car is being carried out by the Fiat Company in Italy. At the Milan Samples Fair a special hall was made use of for exhibiting all the varied types of bodies standardized on this chassis. On the close of the exhibition the twelve exhibition cars were placed in charge of the ex-race driver Felice Nazzaro and sent on a tour round Italy, calling at all the big cities and remaining on exhibition in each of them for a few days.

Fiat is taking orders for these cars on rather original lines. If cash payment is made with the order, a definite guarantee is given that there will be no increase, but there is no guarantee as to delivery date. This price is based on the present value of the lira relative to the dollar. If only part payment is made on placing the order, the possible increase on the outstanding amount will be proportionate to the increase in the cost of the dollar.

Only a general indication has been given as to delivery dates, but so great is the confidence of the Italian public in the Fiat Company that orders are flowing in at a record rate, most of them being full cash payment in advance. This has given the company several million liras cash and has made it possible for them to purchase dollars to cover the cost of all raw material required from abroad for an immense number of cars.

Recognizing the unusual nature of this method of salesmanship, and believing that it would have an important influence on the entire Italian automobile market, the Fiat Company called together all other automobile manufacturers and the leading importers of foreign cars and revealed their plan to them before presenting it to the public. Other firms were given an opportunity of participating in this scheme if they desired.

Deliveries of the new Fiat small car have not yet begun, but work on the new factory, erected specially for this model, being now almost completed, it is expected that deliveries will be made in big quantities in the early Fall.

NEW OAKLAND DEALERS

PONTIAC, Mich., June 27.—Oakland Car Company announces the following new dealers:

J.; Arlington Garage, Kearney, N. J.; Kennedy & Kipper, Bellefontaine, O.; Kaleva Auto Company, Astoria, Ore.; Smith & McCarthy, Pittsfield, Mass.; J. F. Hardin, McMinnville, Ore.

Herman Boltz, Gardena, N. D.; Oakland Sales Company, Guthrie, Okla.; Darneille Griffin Motor Co., The Dalles, Ore.; Wichman Motor Co., Farmington, Mo.; Majeres Service Station, Garrison, N. D.; Sands Motor Sales Co., Inc., New Market, N. H.; Globe Garage, Southbridge, Mass.; Patterson & Boyer Motor Co., Easton, Pa.; R. O. Vaughan, Austin, Tex.; Crawford Garage, Roxbury, Mass.; Helenick Motor Car Co., Blushing, N. Y.; Richmond Motor Sales Co., Richford, Vt.; Ward's Garage, Leominster, Mass.; Middletown Bond Service, Inc., Middletown, N. Y.

W. A. Wright, Paris, Ill.; N. M. Conger, Warsaw, N. Y.; Rucker Auto Supply Co., Ashland, Ky.; Pikeville Oakland Co., Pikeville, Ky.; A. Ehlers, 306 West B Street, McCook, Neb.; Boone Tavern Garage, Berea, Ky.; Tri-Cities Motor Co., Louisville, Ky.; Guetschuff & Quist, Gaylord, Minn.; Watsonville Garage, Watsonville, Calif.; A. B. Kelley, Shelbyville, Ill.; Anderson Motor Co., Independence, Mo.

New President of Gray Motors

Ernest M. Howe

Hupmobile Shipments Jump 30 to 40 Per Cent in June

DETROIT, June 27.—An increase of from 30 to 40 per cent will be shown in June shipments of Hupmobiles over the same period last year, according to O. C. Hutchinson, general sales manager of the Hupp Motor Car Corporation. The figures for the present month also will be higher than the shipments for June, 1923, and will exceed May by at least 500 cars.

From June 1 to June 10, eight cylinder shipments and orders for shipments totaled more than 1200 cars. This created a new Hupp record for its cars of the eight-in-line type. Figures given out at the factory show that Hupp carried over into June more than $2,000,000 worth of unfilled orders. In addition orders for the different models in excess of $3,000,000 were received at the factory during the first ten days of June.

According to Mr. Hutchinson, the recent reduction of $180 in the price of each model has caused the sales to jump 30 per cent higher than their previous record. The indications are that the sales will continue to show the same steady climb for the next several weeks.

Western Aero League Is Organized at Los Angeles

New Body Will Cover All Territory West of Denver, According to Plan

LOS ANGELES, June 27.—With the establishment of permanent airports and air landings for transcontinental flyers as its chief aim, the Western Aero League has been organized in Los Angeles with a large initial membership. The organization meeting was held at Ross Field, Arcadia, and the following officers were elected: Dr. C. T. Young, Glendale, president; Earle Ovington, Santa Barbara, first vice-president; Lieut. C. P. Kane, Ross Field, second vice-president; Frank H. Page, San Diego, third vice-president; A. L. Oliger, Santa Ana, treasurer; Howard I. Wood, Glendale, general secretary; Robert Hausler, Winslow, Ariz., field secretary.

Arrangements were made to incorporate in California as a non-profit organization and to file papers in all states west of Denver, which will be the territory covered by the new league. A program for furthering aviation was adopted and assurances of co-operation were received from more than a dozen chambers of commerce. Glendale was selected as the headquarters of the league for the ensuing twelve months, and the next formal meeting will be held at San Diego in August.

Memberships are promised the league from Arizona, New Mexico, Oregon and Washington and directors will be added from these states as soon as they are received. The directorate is now composed as follows: T. C. Young, Glendale; Frank H. Page, San Diego; W. G. Scott, Bishop, Cal.; Earle Ovington, Santa Barbara; Lieut. C. P. Kano, Army Air Service; Ben Spencer, Ontario, Cal.; A. L. Oliger, Santa Ana; George B. Harrison, Los Angeles; Howard L. Wood, Glendale; Earl S. Daugherty, Long Beach; Bob Hausler, Winslow, Ariz.; Elliott H. Barrett, Los Angeles; Thomas B. Slate, Glendale; J. W. Jennings, Bell., Cal., and J. C. Reilly, Glendale.

BODY COMPANY EXPANDS

CINCINNATI, June 27.—The Burkett Closed Body Co., Dayton, Ohio, has acquired 71,000 square feet of factory space on Davis street which will be utilized in the manufacture of closed automobile bodies. Under present conditions the company has a production of thirty closed automobile bodies monthly. In the new factory, which is three stories high with a private railroad siding, present production will be tripled. The company now employs about forty skilled workmen, but that number will be doubled in the new plant. The present factor of the company located at 1312 East First street, has been leased for five years to the Coffield Tire Protector Co.

Along Automobile Row

KANSAS CITY.—An agency for the Rolls-Royce motor car has been opened here, the first in Kansas City. The agency is known as the Rolls-Royce Parker Schaefer, Inc.

BOSTON.—The Auburn Boston Company has purchased the business here of the F. A. Dutton Motor Company, for a number of years distributor of the Auburn for New England.

CLEVELAND, O.—The Solenberger Piston Ring Company of Cleveland announces the establishment of a factory branch at Los Angeles. Thomas C. Cooper will be in charge of the new branch.

SPRINGFIELD, MASS.—George E. Adams, Inc., is now distributor in Springfield for Ford cars, taking the place of the former H. K. Smith Company.

ST. LOUIS, MO.—Diesing Motor Sales Co., Rickenbacker distributor in St. Louis, has moved to its new quarters at 2216-18 Locust street. The move was made to give the company additional space.

CHICAGO.—Thomas A. Warren has opened a Kissel agency in Oak Park, Illinois. He was for many years sales manager for H. P. Branstetter, Inc., Kissel Car distributors. The name of the new company is the Oak Park Kissel Sales Company and is located at 1028 Madison street.

LOS ANGELES.—The J. W. Leavitt Company, California distributors for the Oldsmobile, announces the following appointments of Oldsmobile dealers in Southern California: H. C. Landstrom, Bakersfield; R. A. MacLean Motor Sales Company, Burbank; Fullerton Motor Company, Fullerton; Frehm Oldsmobile Company, Santa Ana.

DETROIT.—Byron C. Foy, former Detroit business man who for the past four years has been distributing cars in Los Angeles, has returned to Detroit as a partner in the John H. Thompson Company, Maxwell-Chrysler distributors for Detroit and the surrounding territory. Mr. Foy's new position will be that of vice-president and treasurer, Mr. Thompson retaining the presidency of the firm.

SPRINGFIELD, MASS.—Jack Lenihan, proprietor of the Olive Street Garage in Greenfield, Mass., has been appointed Paige and Jewett dealer in that territory.

ROCK ISLAND, ILL.—The Greenlease Motor Company of Kansas City has taken all holdings of the J. H. Hansen Cadillac company in Sioux City and Omaha, and although complete announcement of the plans of the new owners has not been made it is understood the organizations will be retained intact.

DES MOINES.—C. B. Ziegler and W. H. Rosenberger, former owners of the Electric Car Service station, 209 Tenth street, have opened the Capitol garage, 1012-16 Locust street, with complete mechanical, lubrication and electric car service maintained.

MEMPHIS, TENN.—Appointment of the Harter B. Hull Co. as dealer in Memphis and vicinity, succeeding the Hull-Cameron Co., is announced by Dodge Brothers.

DAVENPORT, IA.—Forty agents for the Studebaker car from the eastern Iowa and western Illinois territory met at the Hotel Blackhawk for a sales-building conference conducted by the factory executives throughout the country.

MONTREAL—The Royal Garage, McGill College Avenue, has been opened to the public. It is a fireproof building with space for 370 cars, and is the last word in modern garage construction.

WINNIPEG, MAN.—Great West Motors, Ltd., has taken over the salesroom and garage formerly occupied by Capital Motors, and from this location will handle a full line of Chevrolet and Oakland cars and Reo trucks, using the premises as a salesroom and service station.

HALIFAX, N. S.—The opening recently of the new quarters of the Archibald Motor Co., this city, gives the city of Halifax the largest motor show room and service station east of Montreal.

FORT WILLIAM, ONT.—Roach & Irwin is the name of a new company operating in the twin cities and Port Arthur. They will handle Maxwell-Chrysler lines in addition to International trucks.

KOKOMO, IND.—Pending the appointment of a new sales manager to succeed E. M. Lubeck, who resigned, O. T. Guennee, formerly assistant manager of sales and advertising, is acting general sales manager of the Baker Apperson Automobile Co.

NEW ORLEANS—Abbott Motors, Inc., distributor of the Packard line in about one-third of the state of Louisiana and in a few counties of Mississippi, now located at 1400 St. Charles avenue, will remove to 1711 St. Charles avenue about October 1.

BALTIMORE—The Maryland Tire Co., Inc., 1011 West North avenue, Baltimore, has been incorporated with $25,00 capital stock to deal in automobile tires and electrical supplies.

OSHKOSH, WIS.—Krueger Automobile Company of 62-64 State street, has been appointed Nash and Ajax dealer in Oshkosh and vicinity.

MADISON, WIS.—The East Side Motor Co. has been formed at Madison, Wis., to carry on a general garage business. Capital stock of the new organization is $25,000.

WILMINGTON, DEL.—Harry N. Partington has been appointed general sales manager of the Wilmington Automobile Co., 221 West Tenth street. The company handles the Buick and Chevrolet lines.

LOS ANGELES—Lynn C. Buxton has withdrawn from the retail field as a Willys Knight and Overland dealer and henceforth will confine his activities as a distributor of Stearns-Knight cars in Southern California.

BIRMINGHAM—The Olds Motor Works has announced the appointment of the Jordan Motor Company, distributors for the Oldsmobile in Birmingham, Bessemer and surrounding territory.

DETROIT—W. M. Chamberlain, director of sales development of the Oakland Motor Car Company, announces the appointment of M. L. Buck as field instructor, succeeding G. A. Johnston, who becomes retail sales manager of the Matheson-Oakland Company, Grand Rapids, Mich.

NEW ORLEANS—Harry Dawes has opened in Natchez, Miss., the Dawes Motor Company, which will handle Star cars exclusively.

AKRON—Walter E. Smith, of Youngstown, O., is the new local distributor in this territory for American-Akron tires. Mr. Smith now conducts an automobile accessory shop in Youngstown.

HARTFORD, CONN.—Russell P. Taber, Reo distributor in nearly all of the state of Connecticut, will on August 1 take over the Reo representation in Hampden county, Mass.

SAN ANTONIO, TEXAS—The Wroten-Hundley Motor Company, Dodge dealers and distributors in the San Antonio territory, has incorporated. The capital stock is $160,000.

TOLEDO—Robert E. Clingan, who for several years has been operating head of The Bock Bearing Company, one of Toledo's largest industries, was elected president of the company at a recent meeting of the board of directors.

LOS ANGELES—Mutual Motors, Inc., Southern California distributor for the Roamer, announces the appointment of W. F. Luvasky as the Roamer dealer in Hollywood, with sales and service building at 3206 Los Feliz boulevard.

CHICAGO—J. A. Hayes, formerly associated with Garford and GMC trucks, has been appointed district sales manager for the Diamond T. Motor Company with Wisconsin and Minnesota as his territory.

NEW ORLEANS—Ground has been broken for the erection of a new building for the Chevrolet Motor Co., at the corner of Baronne and Julia streets.

MILWAUKEE—The Achen Motor Co., Chandler and Cleveland distributor in Milwaukee, has purchased a plot of ground, 120 by 156 feet, at the southwest corner of Jackson and Oneida, streets upon which a new three-story automobile sales and service building will be erected.

ST. LOUIS, MO.—A reorganization of the company which was recently formed to distribute Kissel cars in St. Louis has been effected. The name of the company has been changed from the Meyer-Price Motor Car Co. to the Price-Renaud Motor Co., Inc.

CHICAGO—The Lohley Motor Sales Company, 2658 Lawrence avenue, Jordan dealers, have been appointed northwest side dealers for sales and service an Moon cars.

LOS ANGELES—Harry Handiges, formerly assistant sales manager at the Los Angeles factory branch of the Star Motor Company of California, has been appointed sales manager of the Fresno factory branch of the same company.

MILWAUKEE—J. S. Alcott, formerly in charge of wholesale and retail sales for R. D. Rockstead, Milwaukee, when distributor of Gardner and Lexington motor cars for Wisconsin and Upper Michigan, has been appointed head of the sales organization of the Belden-Nash Motor Co. of Racine, Wis.

DAYTON, OHIO—The Miami Garage Co. has been chartered with an authorized capital of $200,000 to operate a general garage.

LITTLE ROCK, ARK.—R. A. Cook has bought the controlling stock in the McGill-Bowman Overland Company, 313-315 West Capitol avenue, local distributors for the Willys-Knight Overland Company.

BOSTON—R. W. Burham, manager of the Boston organization for J. C. Harvey of Worcester, has signed a direct factory contract to distribute Moon and Diana cars here. The company is also associate dealer for the Peerless in Boston.

NEW YORK—Gunner R. Lundane, formerly manager of the New York office of the Black & Decker Manufacturing Company, has resigned to join the United States Electrical Tool Company of Cincinnati, Ohio.

MOLINE, ILL.—Harry Holm and Andrew M. Nielson, well known auto dealers in Moline, have established an Oldsmobile agency at 246 West Main street, Galesburg, Ill., with Mr. Holm in charge of the Galesburg office.

DETROIT—Malcolm McCormick, sales manager of the replacement parts department of McCord Radiator & Manufacturing Company, has resigned effective July 1 and his duties will be assumed by P. L. Barter, vice president in charge of sales, who, heretofore, has had general supervision.

COLUMBUS, O.—Public opening of the new Hudson-Essex sales and service establishment, 552 E. Broad street, was held recently. The company is distributor for the Hudson-Essex motor cars.

CINCINNATI—Backmeier Sales Corporation with general offices in Cincinnati and branch warehouses in Atlanta and Dallas, has been appointed manufacturer's agent to handle and promote the sale of United States electrical tools in the 14 southern states.

PARIS, TENN.—E. P. Orr has secured a franchise to establish a Willys-Overland dealership here.

With the Associations

Dealers Protest Law

PORTLAND, Ore., June 27.—The Automotive Dealers' Association of Portland, in a statement signed by H. W. Roberts, president of the group, has filed protest against the interpretation placed on the new Oregon commercial vehicle tax law, which now is said to add an extra impost on practically every type of vehicle used on the highways for other than exclusively pleasure purposes.

The measure to draw the fire of the dealer group is chapter 363 of the general laws of Oregon, passed as house bill 21 at the last session of the legislature during the winter.

This measure originally was intended to impose 50 per cent additional license fee on vehicles being used for wholesale and retail delivery. But instead of confining the fee collection to trucks and delivery cars, the law now is interpreted to include passenger cars used by salesmen, or passenger cars used for any commercial purpose whatever, the auto group avers.

Hints of possible legal action, to submit the measure to the scrutiny of higher courts, were made in the discussion of the situation.

Accessory Men Meet

PHILADELPHIA, June 27.—The Automobile Accessories Business Association held its annual outing and dinner at Betzwood Inn Farms, Betzwood, recently, starting from Spring Garden and Broad street at 9:30 in the morning in automobiles headed by buglers. There were 36 cars in line, all gaily decorated with pennants and American flags. Arrived at the grounds there were baseball games for members and guests, a quoit pitching contest and other athletic events. Luncheon was served at 12:30 and dinner at 6, was followed by a vaudeville entertainment and music by an orchestra.

Bus Operators Elect

ST. LOUIS, Mo., June 27.—Four directors were elected at the second meeting of the Motorbus Operators' Association of Missouri held in the offices of the Kardell Motor Car Co., Reo distributors here.

A constitution and by-laws submitted by Robert E. Lee, manager of the St. Louis Automobile Dealers' Association was adopted. A membership fee of $25 and dues of $25 per year were established for members of the association.

The new directors are: B. V. Steinmetz, Farmington-St. Louis Motor Coach Co.; Fred Bauer, Pacific-St. Louis Bus Co.; J. R. Moore, Moore Coach Line and J. R. Delaney, Old Trails Bus Co.

The Old Trails Bus Co. and the Midwest Auto Travel Co., joined the association.

COLE WINS IN BALTIMORE GOLF

BALTIMORE, June 27.—With a gross score of 82, beating Howard Ford by two strokes, Tom Cole has again won the highest honors in the monthly golf tournament held by the Baltimore Automobile Trade Association. Low net score in Class A was made by Jack Horner with a 67 after deduction of a 24 handicap. Low gross honors in Class B were won by A. J. Hunter, 89, and low net by William L. Duck, 66. Walter Kneip won Class C with low gross of 104 and A. M. Eastwick's 50 won low net honors in this class.

Convention Planned

HARRISBURG, Pa., June 27.—The fifth annual business convention and frolic of the Pennsylvania Automotive Trade Association will take place in Pittsburgh, October 12, 13, 14. Full details of the business, entertainment and banquet program will be broadcast to every automotive merchant in the state. More than 1,000 members will attend the discussions and addresses by nationally recognized leaders of every phase of this business and to enjoy the "big town" entertainment that the Pittsburgh Automobile Trade Association is arranging. Among many other features will be a meeting of the officials and secretaries of each and every local dealers' association in Pennsylvania.

Arrange to Test Lights

ST. LOUIS, Mo., June 27.—The St. Louis Automobile Dealers' Association has made arrangements with the Nelson Motor Car Maintenance Co., 3337 Lawton avenue for free testing of automobile lights for the police department and all dealer members. A standard test board has been installed in the Nelson Garage. Dave G. Nelson, head of the company will test lights for all persons sent to him by the police and dealers may send new and used cars to him.

Robert E. Lees, manager of the association, said his organization was taking this method as a means of reducing the number of arrests for illegal lights.

A demonstration of the testing system was made by Jesse H. Phelps, illuminating engineer for the Minneapolis Electric Lamp Co., of Minneapolis, Minn., aided by Dave Nelson. Carl H. Christine, safety engineer of the St. Louis Safety Council, Lee and a delegation from the police motorcycle squad attended. A number of cars showing a variety of lighting equipments were placed on the test range and lights were adjusted by experts.

Kearney Heads Club

MONTREAL, June 27.—W. P. Kearney has been elected director of the Automotive Booster Club of Montreal. Mr. Kearney is vice-president of the Dominion Chain Company, Ltd., manufacturers of the Weed chains and bumpers. He also is chairman of the "On to Montreal" committee for the 1926 A. E. A. Summer convention.

Syracuse Dealers Celebrate

SYRACUSE, N. Y., June 27.—Members of the Syracuse Automobile Dealers' Association held their annual picnic at Bayshore Inn, Oneida Lake last week with dealers from Utica, Cortland, Auburn and other nearby cities as guests. An "athletic" program and stunts followed by a chicken dinner made the event an enjoyable one. C. W. Bull was chairman of the picnic committee which had as other members C. H. Hayes, secretary of the association, J. F. O'Connor, H. Munro Gere, Ed Moyer, George Fonda, Joseph Martlew and B. L. Eskridge.

Advertising Planned

NEW YORK, June 27.—At the last meeting of the National Battery Manufacturers' Association, it was voted to enter into a co-operative advertising campaign on a small scale for the purpose of improving the market situation in the battery field. This matter was given careful consideration, being discussed from all angles.

A committee was appointed, consisting of J. B. Perlman, of the Hartford Battery Company, L. E. Murray of Automotive Electricity, O. B. Towne, the commissioner of the association, and David Beecroft of the Chilton-Class Journal Company, which will have this matter in charge and present a plan at the next meeting.

In order that this work may be put under way and reach the field where the most immediate good may be done, it was voted that the advertising planned be confined to the dealers.

Bus Men to Meet

TORONTO, June 27.—A number of the leading motor truck and bus owners of the Province of Ontario will convene in Toronto soon for the annual meeting of the Ontario Motor Truck Owners' Association. After the election of officers several short addresses will be delivered by authorities on the various phases of motor truck transportation.

Truck Association Outing

PHILADELPHIA, June 27.—The Motor Truck Association of Philadelphia held its annual outing and dinner at the Rifle Club, Old Schuetzen Park, recently.

Battle Over Insurance Rates Is Believed Near Conclusion

Directors of N. A. C. C. Will Consider Plans for Surety Company of Their Own

NEW YORK, June 27.—The decision of the directors of the National Automobile Chamber of Commerce to consider plans for a cooperative insurance company to bring down automobile coverage rates marks the culmination of a long-standing controversy between the manufacturers and the underwriters.

For the last 15 years the automobile producers have been dissatisfied with the existing insurance conditions. In 1914 a movement similar to the present one was launched, and the Manufacturers & Dealers Motor Underwriters, Inc., was organized with two independent insurance companies participating. Internal disagreements brought the enterprise to an early end, but the manufacturers have kept the idea in mind to be brought out again at the opportune moment.

Several recent actions of the underwriters, it is learned, led to the revival of the project by the N. A. C. C. Theft rates on closed cars have been advanced, and although the schedules on open cars were lowered at the same time, the manufacturers feel that the insurance burden has been considerably increased, in view of the large proportion of closed cars in current production.

It was revealed that the underwritings have grievances of their own. Frequent price reductions made abruptly and without warning have created a moral hazard, they say, since a purchaser frequently finds himself with a car bought at $1,500, for example, and insured accordingly, and now listed at $1250. If such a car can be "stolen" the assured may make $250 profit.

It was held that the popularity of certain cars with bootleggers had led to an unusual number of thefts of these vehicles and consequently to an advance in the rates. What the rum runner particularly looks for in a car is roomy tonneau space, quick getaway and high speed. All the car rates, it was said, are based on experience tables, and represent the lowest that can be quoted if the insurance companies are to continue in business.

Closed car rates, said the underwriters' spokesmen, were advanced because thieves are finding these models the easiest to dispose of. The lock question, they added, had been agitated for five years, and despite their conviction that the coincidental lock is the best type, its adoption had been deferred again and again in deference to the manufacturers.

Considerable skepticism with regard to the manufacturers' project was expressed by the insurance men.

"They are welcome to the effort," said one underwriter. "The insurance market is free and open. There is a great deal of competition and no company could make large profits for very long. The commercial records are strewn with the wrecks of underwriting companies and if the automobile manufacturers think they can succeed where others have failed, let them by all means make the attempt."

Coming Motor Events

Automobile Shows

Boston ..... Oct. 10-17
World's Rubber and Tropical Exposition.

Dallas, Tex. ..... Oct. 10-25
Annual Automobile Show, State Fair Automobile Building, under the auspices of the Dallas Automotive Trade Association. J. W. Connell, manager.

De Pere, Wis. ..... Aug. 31-Sept. 21
Annual Automobile Show under the auspices of the Automobile Division of the Green Bay Association of Commerce.

Fresno, Cal. ..... Sept. 28-Oct. 3
Fresno Motor Car Dealers Association. Fifteenth Annual Show in connection with Fresno District Fair.

Grand Rapids, Mich. ..... Sept. 7-12
Grand Rapids Automobile Dealers Association, Seventh Annual Show in connection with West Michigan Fair, Wm. T. Morrissey, manager.

Oklahoma City, Okla. ..... Sept. 26-Oct. 3
Annual State Fair and Exposition. Passenger cars and accessories.

Sacramento, Cal. ..... Sept. 6-12
Automobile Exhibits in Diamond Jubilee State Fair.

Shreveport, La. ..... Oct. 24-Nov. 8
Twentieth Annual State Fair showing passenger cars, trucks and tractors.

New York ..... Nov. 15-21

A. A. A. Race, Baltimore-Washington Speedway.

Los Angeles, Cal. ..... Nov. 26

Monza, Italy ..... Sept. 6
Italian Grand Prix Race.

Paris Montlhery track ..... July 26
French Grand Prix.

Conventions

Buenos Aires, Argentine ..... Oct. 3-13
Pan-American Road Congress.

Cleveland ..... Sept. 14-19
Annual Convention and Exposition of American Society for Steel Treating.

Cleveland ..... Sept. 15-16
S. A. E. production meeting and exhibition.

Des Moines, Ia. ..... Nov. 12-13
Automotive Merchants' Association Convention.

Everett, Wash. ..... July
Annual state convention Washington Automotive Trades Association.

Montreal, Que. ..... Oct. 7-10
Fall convention of the Motor and Accessory Manufacturers Association.

Philadelphia ..... September
S. A. E. Automotive Transportation meeting.

Pittsburgh, Pa. ..... Oct. 12-14
Pennsylvania Automotive Association Convention.

St. Louis ..... Nov. 17-19
Annual Convention of National Tire Dealers' Association.

Tuscaloosa, Ala. ..... July 20-21
Midsummer meeting of the Alabama Automotive Trades Association

BLACKHAWK CHANGES NAME

In order that the firm name may be in keeping with the trade name of its products, the American Grinder Mfg. Co., Milwaukee, Wis., has changed its name to Blackhawk Mfg. Co. This company has manufactured for years the Blackhawk line of welded wrenches, consisting of fixed and detachable handle socket wrenches, and special service wrenches.

SERVICE SECTION TO MOVE

NEW CASTLE, Ind., June 27.—The service department of Maxwell Motor Corporation will be removed from this city to Dayton, O., according to an announcement made by company officers. The transfer will be made to give the company more room in its New Castle plant for its drop forge, transmission, screw machine and axle departments. Considerable production will be done at Dayton in making of parts for Maxwell cars built previous to 1925. All parts will be supplied from the Dayton plant which will do a business estimated at $5,000,000 to $6,000,000 annually.

Noise Elimination Features S. A. E. Summer Convention

Lubrication, Steam Cooling, Brakes, Riding Qualities and Transmission Discussed

WHITE SULPHUR SPRINGS, W. Va., June 27.—Noise elimination, lubrication, riding qualities, brakes and transmissions were among the important subjects discussed at the summer meeting of the Society of Automotive Engineers here last week.

Running through many of the sessions in a subsidiary way and receiving major emphasis in one or two instances were the topics of noise elimination and the desirability of a broader conception of commercial problems on the part of the automotive engineers.

T. J. Little, Jr., chief engineer of the Lincoln Motor Co., was nominated for the presidency of the society. The meeting followed the precedent set last year of having numerous demonstrations and exhibits to accompany the various papers.

Experiments in noise measurement were performed, details of bearing lubrication were visualized by motion pictures, and H. L. Horning had an engine in operation to illustrate his ideas on steam cooling.

New standards adopted covered valves, piston pins and battery ratings. The term "motorcoach" also was adopted in preference to "motor bus." The engineers showed a great deal of interest in the possibilities of infinitely variable transmissions, R. M. Heldt, engineering editor of Automotive Industries presenting a paper on developments in this field, but the impression was that in the immediate future attention will be centered on the development of present types.

Steam cooling received considerable attention not only through the discussion initiated by Mr. Horning, but also by the remarks of A. Ludlow Clayden.

Rice Made Chairman of U. S. Delegation to Road Meeting

WASHINGTON, June 27.—Herbert E. Rice, of Detroit, vice president of General Motors, former president of the Cadillac Company, and at the present time special assistant to President Sloan of General Motors was this week named by President Coolidge to be chairman of the Pan-American Roads Congress Commission, meeting in Buenos Aires, October 3 to 13.

Mr. Rice is succeeding J. Walter Drake, assistant secretary of commerce, who has resigned from the commission. The appointment of Mr. Rice was on the recommendation of Mr. Drake, made just before the latter sailed for Brussels last week as a delegate to the International Chamber of Commerce. He will not return from Europe until the latter part of August and the delegation sails for Latin America on September 3.

SQUEEKS and RATTLES

CALL THE WAGON

Mrs. McNutt: "Why did the Ladies' Aid try to have that man arrested yesterday?"

Mrs. Blab: "The brute choked his car 'till he killed the engine.

PAGE MR. LONGFELLOW

The shades of night were falling fast,
The guy stepped on it and rushed past;
A crash—he died without a sound,
They opened up his head and found
—Excelsior!

—Baltimore Sun.

ETHYL WHAT?

"How far do you get on a gallon?"

"All depends on what's in the gallon."

—Juggler.

1: "Say, what is a hubbub?"

2: "It's part of a wheel; but don't call me any more nicknames."

—Texas Ranger.

The machine was crossing the railroad track
To beat the train it tried
And they buried the car with the occupants
Because the engine died.

—Carnegie Tech Puppet.

Some open minds should be closed for repairs.

—Williams Purple Cow.

REPAIRS

Judge: "Why did you steal that monkey-wrench and crowbar?"

Prisoner: "I wuz broke yer honor."

Judge (waxing wise): "What do you think you are—an automobile?"

Prisoner (waxing wiser): "No, yer honor—I wanted to mend my ways."

—N. Y. U. Medley.

TWO GOOD METHODS

Here lie two men whom we agree
Have won the cut-glass bonnet;
The first of them blew out the gas;
The other stepped upon it.

—Gas Gazette.

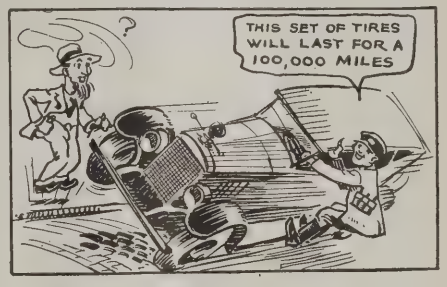
FIFTH ROW CENTER

Motor Cop: "I've a good mind to give you a ticket."

Speeder: "Well, if you must, make it for a musical comedy."

—N. Y. U. Medley.

A CINCH



"Take a dollar chance on an automobile?"

"But I don't want one."

"That's all right. You may not get it."

—Hamilton Royal Gaboon.

HE'S NEEDED

"Is your chauffeur economical?"

"Very; he never runs the car on more than two wheels or three cylinders."

—University of Chicago Phoenix.

NEW VELIE DEALERS

MOLINE, Ill., June 27.—New dealers were added to the organization of the Velie Motors Corporation during May as follows:

Iron Mountain Velie Co., Iron Mountain, Mich.; Mr. B. Hall Green, Cambria, Wyoming; Ulrich Velie Service, Massillon, Ohio; Canton Mitchell Co., Canton, O.; L. H. Stenhilber, Montrose, Minn.; Hank Wade Motors, Philadelphia.

PACKARD EARNINGS CLIMB

DETROIT, June 27.—Net earnings for the Packard Motor Car Co., for March, April and May, the third quarter of the company's fiscal year, in a statement just issued, are $3,299,385, which exceeds the net earnings for the first half of the company's fiscal year. The total net earnings for the nine months are $6,254,128. Increased volume of production coupled with a continuing demand for cars points to the probability of 1925 being the most profitable year in the history of the company. The present schedule calls for the shipment of 40 per cent more cars in the fourth quarter than in the quarter recently ended.

To Sell 'em at the Pump

When Ford, Chevrolet or Overland owners drive up for gas—call their attention to the Tasco Gasoline Gauge hanging on your pump equipment—and more than half of them will buy.
That's the experience of dealers who've tried it.
You "ask 'em to buy" at the very moment when the need for a good gauge is greatest.
Sells on sight—put one out where your customers can see it—and they'll do the rest. Liberal profit for you.

SELLING POINTS:

Guaranteed for the life of the car
Made by a reputable manufacturer
"Lift the seat and look" much easier than the old fashioned measuring stick method
No more guess work
No more "out of gas"—with business appointments delayed, family cross or sweetheart discouraged
Screws in place of the filler-cap so anyone can read the gas at a glance

Sells Quick at **$1.25** Retail

Order Tasco **Gauges** today.
Be sure to include some for the 1925 Chevrolet and Overland models.
Most jobbers have them—ask yours—if he hasn't—ask us.

NOTE: Dealers now handling Tasco Gauges should write the factory for this new steel outdoor display rack. Mention jobber's name. Send post-card at once.

THE AKRON-SELLE COMPANY
"40 Years in Business"
AKRON, OHIO

More People Use TASCO Gauges—than any other kind. Look for this Dial

FORDS, CHEVROLETS and OVERLANDS

Sure!
The Only Way to Save Time, Money, Labor
I peel 'em
So does everyone in the business who wants to cut bearing adjustment costs in half. And a much *better* job—accurate and smooth. PEEL 'em for profit. Your jobber sells Laminum. There's a shim for every type of engine.
LAMINATED SHIM COMPANY, INC.
14th Street & Governor Place Long Island City, N. Y.
St. Louis: Mazura Mfg. Co.

In Next Week's Issue—Writing the Used Car Ad

Licking the Gyp in Used Car Advertising

Competition of Misrepresentations in Classified Page Faces Legitimate Dealers With a Real Problem That Must Be Solved

By CLARENCE PHILLIPS

IN the sale of used cars the trade has become a liberal patron of the daily newspaper's classified columns. The amount of money spent by automobile dealers of this country on such insertions is necessarily enormous and the sums spent by individual companies often runs into large figures.

Demand by the trade for classified space has established this section of the daily paper as a standing directory for the used car shopper.

When he wants to buy a used car the first thing he does ordinarily is consult the classified ads. Most often he has an idea as to the makes of car he prefers and he knows definitely how much money he can allow for the purchase. What he is looking for is the car that will fit both his pocketbook and his notions.

What he is looking out for is the proposition that does not hit him as exactly square and honest. To begin with the used car shopper is a decidedly suspicious and skeptical person. He is exactly in the same frame of mind as the man who shops for a lot or a house or an opportunity to invest his money profitably. There are many gold bricks and gold brick artists in the world and his first desire is to give them as wide a berth as possible. He wants an honest buy.

The Resistance of Suspicion

This typifies the group of prospects that you deal with when you cast into the classified section of the daily paper for used car leads. To make a sale you must batter down his suspicions and win his confidence. You must convince him that you do not belong to the gold brick colony, that he can depend upon your merchandise as being of the quality represented. That goes, of course, with a sale of any sort—whether a suit of clothes or a piano—but the resistance of suspicion is so pronounced in the case of the used car shopper the dealer is called upon to present assurances that are exceptionally strong. There is no denying that in the automobile section of the classified page are many misrepresentations. Gyp dealers are given to practicing much black art in this direction while private owners often run the gyps a close second or even exceed their best efforts.

The advertising committee of the Chicago Automobile Trade Association, recognizing the general evils of this sort of advertising, is conducting an investigation through which it is hoped a remedy will be realized. The committee sees the legitimate trade is in competition with unscrupulous persons who have used cars for sale and who will go to any limit to sell their cars. Misrepresenting facts concerning a car is the least of the worries of this element, especially when the house has no reputation to preserve or when the individual has but one car to sell.

But such falsifications do untold damage to the legitimate business of selling used cars and it is the legitimate trade which suffers in later days and years from the effects of this wholesale bilking.

If the Chicago association arrives at some effective method for eradicating or reducing this evil it will accomplish much toward facilitating the movement of used car sales through the proper channels. It will score a great accomplishment if it merely succeeds in drawing the line, so the public will see it, between dishonest methods on one side and honest methods on the other—the side of the legitimate automobile dealer.

The Safest Place to Buy

In fact, the public has been rapidly learning that the safest place to buy a used car is from the reputable dealer whose integrity is known and who is in a position to give a wide range of service. The proportion of this business going to the reputable dealer is constantly growing greater—and it will grow in the future commensurate with the trade's success in convincing the public that the risk is always less when the buyer does business with the legitimate merchant.

There is but one way in which the trade can successfully meet this competition of misrepresentations. That is for the trade to sell the public on its integrity. It must match its honesty against all comers and be ready at all times to fight for its good name.

Right now, however, in Chicago and elsewhere the problem of the individual dealer who makes use of classified space is—how most effectively to use such space in the development of leads, notwithstanding misrepresentations by unscrupulous competition and other present complications. Some day, we hope, conditions will justify the used car shopper in refusing to question the veracity of adver-

tisements but today he is that same skeptical, suspicious individual who thinks there is someone on each corner plotting to take him in.

He is the fellow you are addressing when you prepare copy for the used car ad in the classified section and he is the fellow whose confidence you must win.

Broadly we find ourselves now on the subject of the best classified effectives generally, and in the absence of statistical information the only way to find out what policies and what sort of copy get the most satisfying results is to go to the trade for notes on experience. Even then considerable off-hand opinion must be accepted for there is little effort to check up except as to what newspapers prove the best mediums and many dealers will say frankly that they do not even know that.

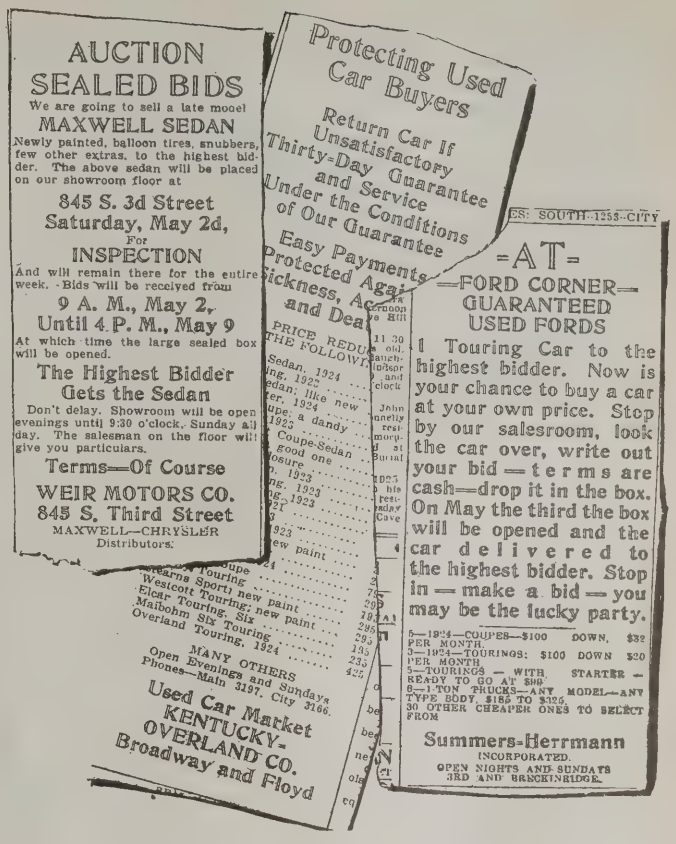
Shifting the Attack

The pulling power of the different styles of copy for the classified section can best be judged, therefore, by the average results in moving stocks under their obvious influence. When one type of copy does not seem to be getting results the average dealer will try another type, shifting the attack until he lights on what seems to be the most desirable device. While numbers of dealers believe they do better by a process of continual shifting there is a tendency among most successful used car movers to settle eventually to a great extent, upon some preferred form of copy. In other words, out of their experience, they draw up standards for this part of the work. An investigation to ascertain the policies of a large group of successful used car merchandisers produced the following revelations:

That the first rule is constancy and consistency. All are what we would call "constant advertisers."

That the integrity of the house is put behind cars listed for sale and that all misleading statements are studiously avoided.

That, in a majority of cases, the advertisement giving a rather full description of the car, is the most freely used device, and that the "singleshot" ad, relating to a single model and giving full description is considered particularly strong.



That the group ad which lists a number of different cars is considered most effective when yearly model and price are given—and better yet when some description is given with each car listed.

That the practice of giving the salesman's residence address is not being resorted to as much as formerly, having been entirely discarded in many instances.

That models bearing unusual names should always be described in such a manner that the reader will be able clearly to visualize the car types.

This is the way two St. Louis houses make their ads stand out in the classified page. Newspaper rules usually render such treatment impossible but it is being done in St. Louis by the Weber Implement & Auto Co. and the Weber Motor Car Company

Specimens of a type of copy that has proven effective were found in Louisville. With bidding for a new car as the chief attraction the stunt develops prospects for both new and used cars. And get the "punch" in the Kentucky-Overland Company's ad, also in Louisville. If the shopper wants "assurances"—there they are

In view of the fact that there is so much bald misrepresentation in used car advertising the shopper can not be blamed for refusing to believe everything he sees and hears. And in view of the fact that suspicion among used car shoppers is a condition affecting the trade that actually exists and prevails to an alarming extent—it is no wonder that an outstanding element of success attained by the group of dealers to which we have just referred is—" truth in advertising," with the integrity of their establishments behind the representations made in the newspapers.

The so-called "gyp" will smile when you suggest that it is more forceful and better "business" to avoid falsification in the used car ad, but the records of successful merchants who command high places in public respect and opinion—are decidedly against the logic upon which the gyp bases his belief.

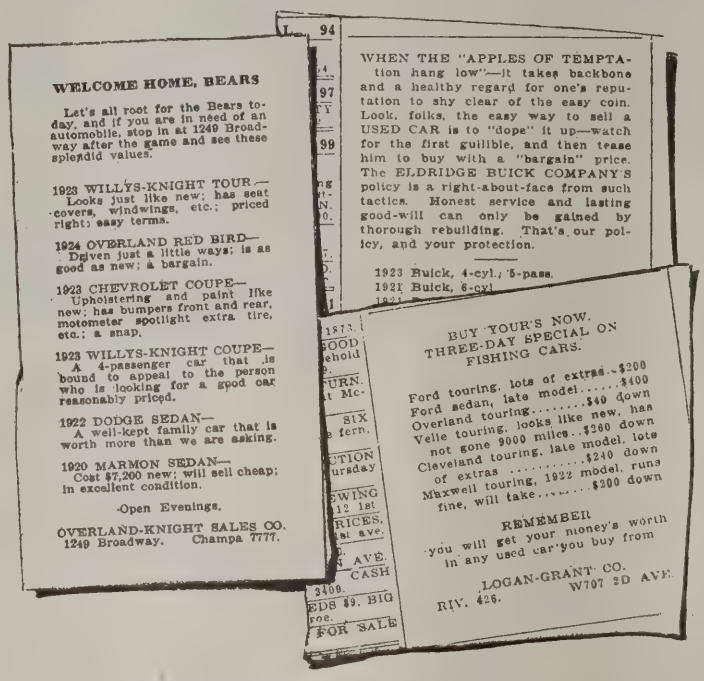
These "big" merchants are doing a volume of profitable business which by comparison would literally dwarf the business of any equal number of gyps and, moreover—they will continue doing profitable business in large volume long after the gyps of today have passed on and been forgotten. It is refreshing to go into such establishments and note what a big part integrity plays in general policies, to observe on what a high plane business is conducted—and then to dwell upon the significant fact that such dealers as these compose the real leadership of the trade.

They are the ones who have solved the problem of overcoming the used car shopper's suspicions and they have set forth one fundamental rule by which the legitimate and scrupulous tradesman can down the competitor in the classified columns who resorts to misrepresentations.

In casting into the classified columns for used car leads it is apparent that the first essential is for the dealer to put the veracity and integrity of his house behind his merchandise. The heavier the trade's pressure along this line the more completely will the falsifier be crowded out.

The type of copy used by the dealer who has seen to this first requirement is much a matter of opinion.

But it does stand out in the investigation just made that the ad carrying a more or less full description of the car offered for sale is proving the most effective. Which seems logical if you will put yourself in the place of the prospective buyer. Not only does he want to know what the car is worth, what type of car it is and that the house listing the car can be relied upon—but he likes certain details. Your ad which merely gives the make, model and price might draw the prospect to your store, which would be ideal, but he is more likely to go to the place offering a car fully and effectively described. A number of striking instances have been found wherein "stickers" were moved by taking them out of group lists and using the single ad with free description. In one case a dealer had been given considerable grief by a car of ancient design that seemed impossible to move. It had become the joke of the place. It had appeared in the group lists time and again, disappearing from print entirely for a while and reappearing again—one of the patent standbys. The price was $125, a ten line classified ad was used in which the car was fully and candidly described—and it sold at once. Another dealer declares that while he usually starts the hard-moving model in the group list he seldom moves it until he advertises it separately.



One of the most convincing group insertions in an issue of an eastern paper recently contained rather full descriptions of cars offered at $120 and $75 respectively. The notices stated frankly that the cars were old models and not in the best condition but that they would serve the purposes of certain owners who would accept them without guarantee. The other cars listed were offered as values that the company would stand behind, and the natural reaction of the person reading the ad was that this company was doing its best to correctly represent its merchandise. There is nothing wrong in capitalizing your honesty. In fact, the merchant who expects to be permanent must capitalize it in one way or another.

But if full information is a good effective in classified advertising many dealers throughout the country must be missing frequent opportunities, for a study of numerous classified pages reveals that a large percentage of automobile copy fails to give more than very meager information.

If it is a fact that vital importance attaches to giving the price many dealers are constantly overlooking good bets. There are those who appear carefully to avoid stating price.

That considerable effort is lost through merely giving the name of a model which bears an unusual factory name without classifying the model to its general type, as open or closed, etc., or in other words, giving the shopper a definite picture as to what is offered for sale—is one fact which is clearly apparent. Newspapers contain many insertions of this character. The point made here might be illustrated with reference to questions which were put to 20 persons selected at random.

The first question was: "What is a phaeton?" Six of the 20 admitted they did not know and while most of those remaining seemed to know the phaeton some were doubtful. The next question was: "What is a brougham?" Thirteen gave more or less satisfactory replies while seven were unable to classify the brougham. The third question was: "What is a victoria?" Five knew and there was either total ignorance or doubt in each of the other 15 who answered.

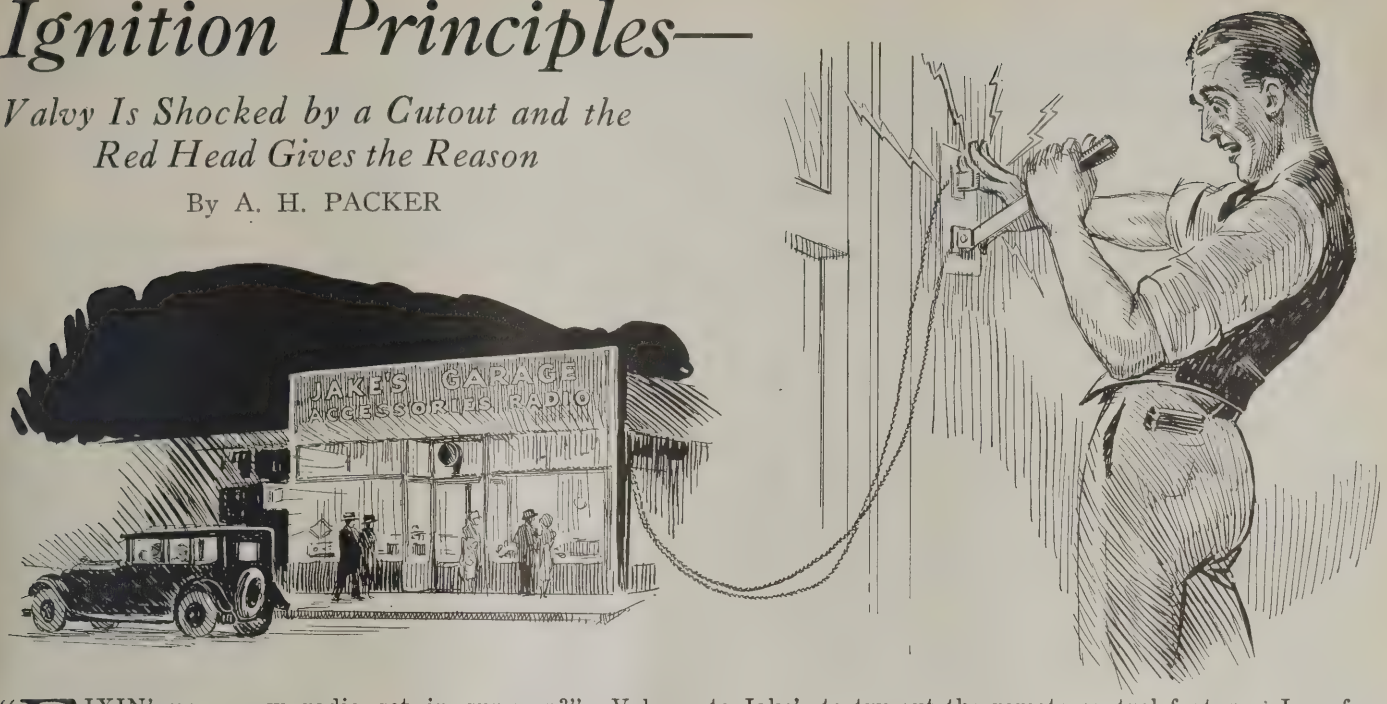
The timely thought frequently adds to the force of a classified ad. Here is where a Denver dealer capitalized the opening of baseball season while a Spokane dealer exploited fishing season. The Eldridge Buick Co., Spokane, used the third ad in this group which makes a bid for attention with its novelty

These are some of the better known "odd names," we might say, in automobile terminology. Phaetons and broughams are so well known in the parlance of the trade that a dealer might think the names would convey a definite conception practically to every member of America's automobile-wise public, from which we draw prospects, but the general public even in automobile-wise America, is not so conversant with automotive terms as is the person who is in the automobile business.

Hence, to advertise a car with the odd designation of model it is clearly wiser always to accompany the notice with enough description to let the shopper know the general type of body.

Otherwise, while it might be the very type of car for which he is seeking, the advertisement will fail to tell him as much and he will simply give it a passing glance and "shop on down the column."

Discussion of classified advertising could be carried on indefinitely but after all has been said and we seek for the outstanding essential in effective advertising we arrive at this fundamental generalization: That the forces making for effective advertising are found in the policy of the house.



Effectiveness begins with TRUTH and a reputation for fair dealing.

It does not take the public long to identify and locate the merchant upon whose representations it can depend. And it is just as quick in locating the merchant of the other variety.

Ignition Principles—

Valvy Is Shocked by a Cutout and the Red Head Gives the Reason

By A. H. PACKER

"FIXIN' up a new radio set in summer?" Valvy stared in wide-eyed astonishment, as he opened the shop door and saw Jake hard at it so early in the morning. "Thought you had enough to do without monkeying with that stuff this time of year." Jake only smiled.

"It may look queer, at that," said Jake. "The fact is, this is a new stunt, that's one reason. This attachment is supposed to bring in extra long waves, while this other jigger brings in the short ones. That part of it doesn't interest me so much, but I want to get all ready for the fall business. These folks round here do not have much to do and they will take to radio more this next season than ever before. If I start now, I can take it easy, doing a little each day and have everything the way I want it when the season starts in. Not only that but I will know something about the set I decide to handle."

Just then Red came in.

"One thing bothers me, though," continued Jake. "I want to rig this set up, so I can leave it turned on nights, working the lour speaker over the transom of the shop, and be able to turn it off from my house, which is about 500 feet away."

"You might run your A battery current over to the house and back, and have a switch there," said Valvy.

"But the voltage you would have left at the tubes, you could put in your eye," said Red. "Perhaps a relay of some sort would do the trick. We might even use an old cutout, disconnect the series winding and use the shunt coil to close our circuit. Then we would only carry about one-thirtieth of an ampere over to the house and back instead of nearly two amperes."

Jake decided to rig up such a scheme if Red would figure out the details, so a few days later, everything had been completed and Red went over to Jake's to try out the remote control feature. In a few moments he came running back to the shop, surprise written all over his face, easily traceable in spite of the dirt.

"What 'jer think," he wailed. "I got a whale of a shock off that there switch, and nothin' connected but a six volt battery."

"Except the radio set and the cutout," added the Red Head.

"What's the radio got to do with it," Valvy whimpered. "I betcher there's high tension juice got inter those wires. I most got knocked onter the floor."

"Oh, it's not that bad," said Red. "There's no hot stuff there, and the radio is probably innocent, but the fine winding of the cutout will give you a good jolt if your fingers are sweaty and you break the circuit just right. What you get is not due to the battery itself, but to the sudden voltage produced by the changing magnetism in the cutout when the current dies down. It's a jolt of that sort that fires the gas in a make and break ignition system, but it doesn't feel so good in your human system. Everything in its place you know."

Valvy was still far from placated, but Jake's interest was roused, and during their lunch hour he insisted that Red explain the whole thing to him.

"It's about this way," said Red when they had a chance to sit down and talk things over. "We figured out the way that electricity produces magnetism, and I suppose it's no more than fair that there is also a way that magnetism can produce electricity.

"When we had a wire wound around a piece of iron or steel, there was no magnetism produced until there was a current flowing in the wire. That is we had to have *electricity in motion.* In similar manner we find that it

BILL FIXIT STORIES
No. 7

PREVIOUS installments in this series by A. H. Packer were published March 19, April 2, April 16, May 7, May 21 and June 18, 1925.

SYNOPSIS: Bill Fixit's electrical trouble shooting men start on a trip in a Speedway car. They stop at various places along the way and at the Welsh mines are requested by Sandy, the foreman, to help out in fixing up a gasoline pumping engine, some strikers having wrecked the steam pumps. While there the money they had is stolen from the car, so they are forced to seek employment in Coal City with Jake Penders, the local electrician.

While at Jake's place a customer buys a tire, paying for it with a bill that Red afterwards recognizes as one stolen from them. Red goes after a job of wiring trouble that Jake had previously fallen down on, fixes it and then tells how it was done. At another time he explains the principle of electro magnets, and shows how understanding of the principles would help out on an occasional job.

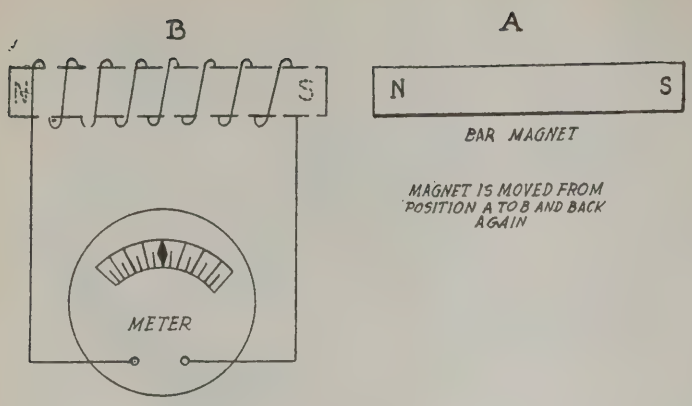


Fig. 1. Changing the magnetism in a coil generates a voltage

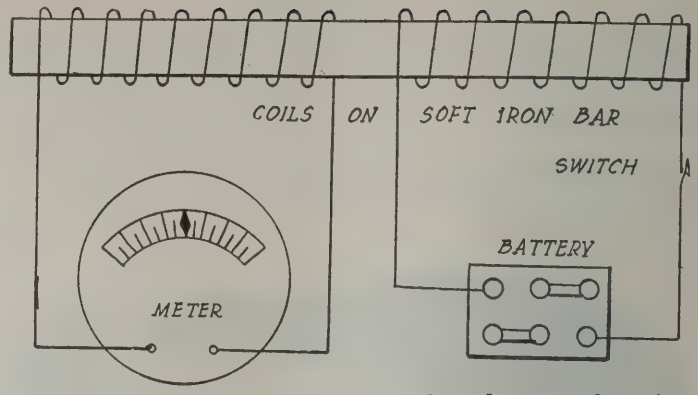

Fig. 2. Changing current in one coil produces a voltage in the other coil

magnetism by itself does not produce electricity, but it has to be *magnetism in motion* or *change in magnetism.*

"If we want to do a little experimenting after a while we can wind up a coil of wire and connect it to a meter. Then we can use a magnetized piece of steel or permanent bar maget and move it in and out of the hollow coil which is connected to the meter. Doing this will generate an electrical pressure or voltage in each turn of wire in the coil. (Fig. 1.)

"If we try to use an ordinary ammeter, nothing much will happen for the current that will flow in the coil will be slight. If we take a voltmeter we may get a slight movement of the needle. The best bet however is a millivoltmeter. If we did not have our testing set here we could try the experiment by taking one of the old style ammeters used on the higher priced cars, and cut the shunt in two to make a sort of millivoltmeter out of it. Then in the test (Fig. 1) we would find that the needle is considerably affected.

"We would also find that moving the magnet quickly gave a greater deflection than moving it slowly; that moving it out reversed the needle deflection as compared with moving it in and that leaving the magnet stand, either in or out of the coil would generate no voltage.

"We would then conclude that the voltage generated is proportional to the speed with which the magnetism from the bar cuts across the turns of the coil and that as far as the coils are concerned, it is *change* in magnetism, rather than magnetism which does the work.

What Probably Happened

"When Valvy was working the switch over at the house he probably got hold of both live sides of it when he jerked it open, thinking only of the fact that we had but six volts on the line. The current flowing through the cutout coil, however, made it a differenft proposition, for there was an inductive kick or sudden voltage generated which though it lasted but an instant, may have been 150 volts, or so, being produced by the dying magnetism, which cut through the turns of the coil while the current was dying out.

"Working on the basis of changing magnetism and the fact that an electrical current in a coil can produce magnetism we have discovered the foundation principles of a battery ignition system. In Fig. 2 we have a long bar of iron, at the left of which we have a coil connected to a delicate meter, while at the right we have another coil connected through a switch to a battery.

"The coil at the right is going to magnetize the iron and the one at the left is going to have a voltage generated in it whenever the magnetic condition of the iron changes. We will then find that when closing the switch of the battery circuit, that the meter IN THE OTHER CIRCUIT will kick to one side, and when we open the switch again the meter will kick to the other side. With the switch left open or closed however, we find that the hand on the meter settles back to zero, showing again that change in magnetism and not just magnetism generates electrical voltage.

Variation of Experiment

"In Fig. 3 we have a variation of this experiment. We still have the left-hand coil connected to a delicate meter, but the one at the right now has an ammeter and rheostat connected to it as well as the battery. We can now close the switch and turn the rheostat slowly and we will find that there is a slight deflection of the meter connected to the coil at the left. If we turn the rheostat rapidly the deflection will be greater, so we see that THE FASTER THE CHANGE IN MAGNETISM THE GREATER THE VOLTAGE PRODUCED.

"Another experiment might be made with the circuits of Fig. 3 by changing the number of turns of wire in the coil at the left, and if we did this and left other conditions the same we would find that with a coil of many turns there would be a greater deflection of the meter needle, showing that, THE GREATER THE NUMBER OF TURNS, THE GREATER THE VOLTAGE INDUCED. This is just common sense, for all the turns of wire on the bar are affected by the magnetism and as they are in series with each other their voltages add up.

"We then come to the conclusion that for a battery ignition coil we want many turns of fine wire to get a high voltage for producing the spark, and that the quicker we can change the magnetism, the better the results will be. The fine wire is used, not because the size affects the voltage, but because with fine wire we can get a large number of turns in a coil of reasonable size.

"It is one thing to say that we want a sudden change in magnetism, and it is another thing to get it. If we close the switch in Fig. 3 and watch the ammeter at the right closely we will see that its hand comes up rapidly but not immediately to the current reading. If we would take the same wire that is in the right-hand coil and stretch it out in a large loop, instead of winding it on a bar we would find the meter hand a little quicker. In other words, the current builds up slowly in a magnetic circuit.

"If we figure the reason, we find that the current in rising builds up magnetism, and this rising or changing

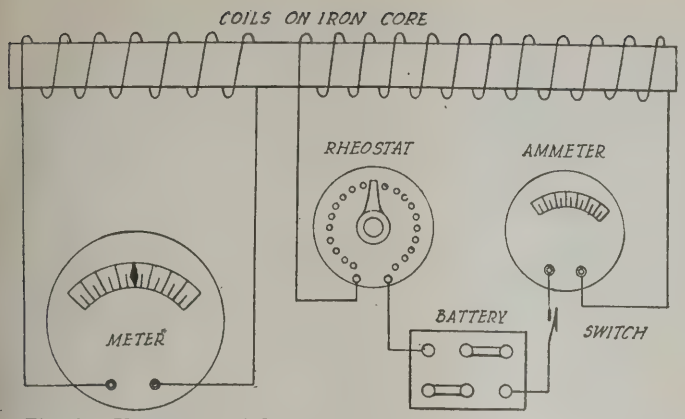

Fig. 3. Variations of battery current in circuit at the right produce induced currents in left hand circuit

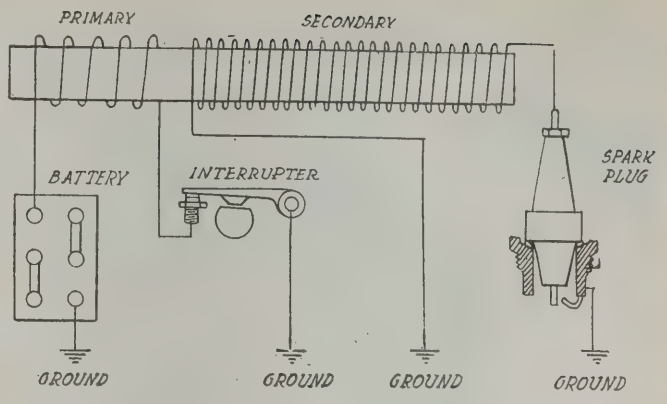

Fig. 4. Elementary battery ignition circuits. Without a condenser at the points the results are poor

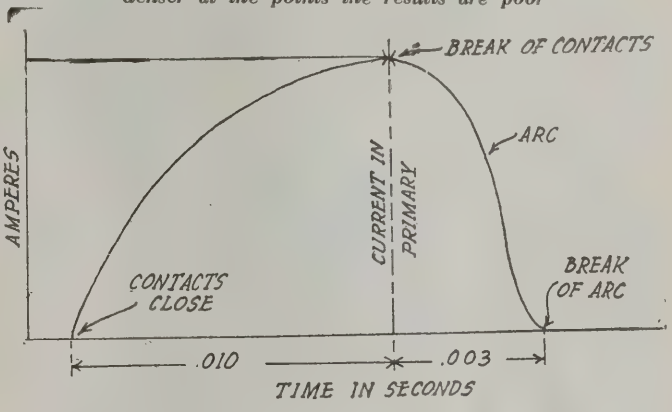

Fig. 5. Self inductance makes current slow to build up or die out in a magnetic circuit

magnetism generates a voltage, not only in the other winding, but also in the winding carrying the battery current. This voltage is always contrary, and opposes the action producing it so that when we are trying to quickly magnetize the bar, it has just the opposite effect.

"Referring now to Fig. 4 we have shown the elements of a battery ignition circuit, where a battery sends current through a coil and through an interrupter or pair of contacts, back to the battery. In this illustration we have shown one terminal of the battery and one of the interrupter contacts grounded. To ground a circuit means to connect it to the engine, or the frame or to any metal part of the car connected to the engine or frame. In this way the car frame carries the current back to the battery and saves a wire.

"We have also in Fig. 4 shown a secondary winding connected, one end to the frame or ground and the other end to a spark plug. The winding connected to battery we call the primary because its action is first or primary.

"Referring now to Fig. 5 we have a curve or sort of picture showing what happens in our ignition circuit. Distances measured up means amperes or current while distances from left to right indicate time. Starting near the left on the horizontal line we have a time indicated where the points close. As soon as this happens the current starts to flow in the primary winding but it comes up slowly due to the bucking voltage of self inductance. With a slow rise in current we get a slow rise in magnetism and consequently a poor result in the secondary winding.

"It is for this reason that no ignition systems are made which have the spark occurring when the points close and the current builds up in the primary.

"The next possibility is to have a spark when the interrupter points open and the primary current and consequently the magnetism dies out. Here however, we find the same opposing force or self inductance working, for when we try to kill the primary current, this action tries to maintain it. This accounts for the arcing at switch contacts when a circuit is broken, and the more highly magnetic the circuit, the greater the tendency for arcing.

Current Drops Off Slowly

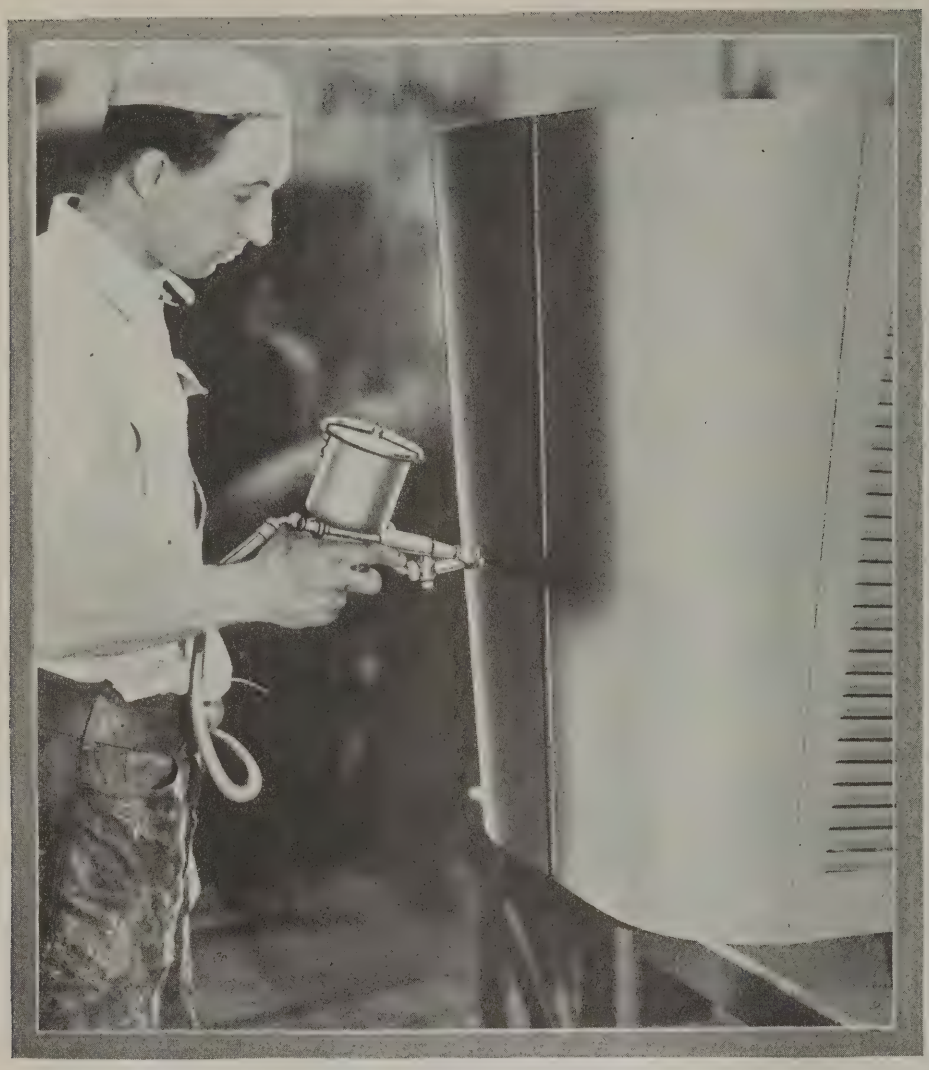
"In fact the arcing at the interrupter contacts will be so bad that the current instead of dying out immediately drops off slowly as shown in the right part of the curve of Fig. 5 so that again we get no secondary spark worth having.

"It is at this point that the battery ignition idea is saved by an electrical device known as a condenser, which acts as an electrical shock absorber and stops the arcing at the contacts to a great extent, thereby giving a sudden break to the current and accordingly a high voltage and spark in the secondary winding."

Valvy had been listening in on Red's explanation to Jake, but it was old stuff to him. The new radio set with its many dials was a constant attraction. He slipped on the phones, threw the switch of the long wave attachment, lighted the filaments and took a whirl at the adjusting dials. Not much chance of picking up anything this time of day, but as in fishing, there was always hope.

Just as he thought, nothing doing. But what was that? A voice, indistinct and yet strangely familiar. A closer adjustment and the voice came in clear. "Ten truck loads tonight. No there's no danger. On this wave length no one can get us. And tomorrow night at one, remember."

"Bootleggers," thought Valvy, and jumped up, bumping the table. The long wave attachment teetered violently and Valvy grabbed it as it rocked dangerously near the table edge.



"What's the excitement?" cried Jake.

"Crooks planning somethin'," said Valvy. "A voice I've heard before."

"Some of your friends," said Red. "Let's have the phones, perhaps we can get the goods on 'em with this set." And Red listened intently, but there was no further conversation to be heard.

"Where'd you have the dials set, before you half knocked over the table?" Red wanted to know.

Valvy stared at the set and sweat broke out on his brow. "I'll be d-d-d-durned if I know," he stuttered.

Parts such as the hood can be placed on a stand for spraying

Applying a Pyroxylin Finish to a Car

Handling the Spray Equipment—Putting on the Undercoats

By B. M. IKERT

AFTER a car has been stripped of all the old finish the bare metal should be primed as soon thereafter as possible. It is well to call attention once more to the great importance of making sure that all moisture and foreign matter has been removed from under the mouldings and so forth. The time to do this is before the primer is applied and a few minutes spent in doing this will more than make up for the extra time required later on to remedy trouble caused by foreign matter.

So far as the application of the materials is concerned a great deal will depend upon the particular make of equipment used as well as the materials themselves. It is common to apply three or more coats of pyroxylin finishes to a motor car, the exact number of coats depending largely upon the hiding power of the color used. As to the air pressure needed this depends entirely upon the make and style of air gun used and here it is best to consult the instructions sent with each air gun by the maker.

At this point it may be well to call attention to some of the things which must be observed in spraying pyroxylin finishes. What is commonly known as "spray dust" is caused by incorrect air pressure on the gun or by poor ventilation. In fact in the majority of cases it is the latter which causes this spray dust. Experienced operators are able to remove this spray dust by going over the whole surface of the car with a soft rag moistened in the solvent or thinner. It is also possible to remove spray dust by spraying a very light coat of the thinner over the car after the application of the enamels and before rubbing and polishing. However, this is a difficult job for the less experienced to perform, because the light spray of the solvent causes a reflow of the finish. It is this reflow of course, which removes the spray dust and smooths out the pebbled effect, and while this is the thing desired it usually can be done only by a skilled workman.

Mention has been made in previous articles that the application of pyroxylin finishes differs very materially from the ordinary varnish finishes, and whereas imperfections in the priming coats can be remedied with the following coats in a varnish finish, this is not so with a pyroxylin finish.

After the priming coat has been applied, in case of a pyroxylin finish and on top of this the surfacing coats it is the last chance the operator has to get the surface smooth and at this point a careful examination should be made of the entire surface of the car before the application of the enamel. Any imperfections, rough spots and ridges in the undercoats are greatly emphasized with the application of the final coats.

In using the air gun hold it about 6 or 8 inches from the metal to be sprayed and at a slight angle with the nozzle of the gun usually pointing slightly upward. The air gun should be worked lengthwise of the body of the cars and the spray laps should be brought quite close together, that is the gun should be swung from right to left and the material should not stop flowing from the gun when the latter is at arms length. It should be brought immediately back in the other direction so it will overlap the lower side of the material just applied by the swing in the other direction.

Spray on Thin Coats

It is always a good plan to spray on thin coats of the material used. This is because the solvents may attack the priming and surfacing coats and if a heavy coat of the material is applied the surfacing materials may rise and form blisters and bulges.

The results obtained with an air gun in the application of pyroxylin finishes depends very largely upon the operator. Almost in every case where trouble is experienced it is due to the way in which the gun or material is being handled, assuming of course that the surfaces are clean and that the necessary precautions have been taken up to the point of spraying the material.

Some Things to Be Observed

"Curtains, sags and runs," are caused by applying too much of the material in one spot which naturally creates a run and the result is a heavy mass which hardens very quickly and is very difficult to remove. Such runs can be overcome almost entirely by properly using the air brush for which no specific directions can be given other than those which apply to the details of the gun itself.

Practically all of the material to be sprayed must be reduced about 5 per cent more than when applied by hand brush method as this proportion of the solvent or thinner is atomized out of the material when it is applied. It is very important to regulate the pressure correctly for the specific material as insufficient pressure will cause a rough or spotted finish while the proper pressure produces a smooth glass-like finish. Light liquids are applied usually with pressures as low as 30 or 40 lbs. while very heavy liquids are applied with pressures as high as 80 to 100 lbs.

At this point it may be well to call attention to some of the things which must be observed in spraying pyroxylin finishes. What is commonly known as "spray dust" is caused by incorrect air pressure on the gun or by poor ventilation. In fact in the majority of cases it is the latter which causes this spray dust. Experienced operators are able to remove this spray dust by going over the whole surface of the car with a soft rag moistened in the solvent or thinner. It is also possible to remove spray dust by spraying a very light coat of the thinner over the car after the application of the enamels and before rubbing and polishing. However, this is a difficult job for the less experienced to perform, because the light spray of the solvent causes a reflow of the finish. It is this reflow of course, which removes the spray dust and smooths out the pebbled effect, and while this is the thing desired it usually can be done only by a skilled workman.

Mention has been made in previous articles that the application of pyroxylin finishes differs very materially from the ordinary varnish finishes, and whereas imperfections in the priming coats can be remedied with the following coats in a varnish finish, this is not so with a pyroxylin finish.

How to Use the Air Gun

In using the air gun hold it about 6 or 8 inches from the metal to be sprayed and at a slight angle with the nozzle of the gun usually pointing slightly upward. The air gun should be worked lengthwise of the body of the cars and the spray laps should be brought quite close together, that is the gun should be swung from right to left and the material should not stop flowing from the gun when the latter is at arms length. It should be brought immediately back in the other direction so it will overlap the lower side of the material just applied by the swing in the other direction.

Every now and then the operator runs into a condition when applying a pyroxylin finish wherein the coat turns color. This happens occasionally in some climates and in the language of the paint shop is known as blushing and the remedy for this usually is to spray on a coat of solvent or thinner which can be applied over the wet pyroxylin material and which should bring the color back to its original shade.

The first coat applied to a car in a complete nitrocellulose system is called the priming coat and forms the foundation of the whole structure. The primer usually carries sufficiently finely ground color of some kind such as red oxide of iron to enable the operator to see whether or not an even coat has been applied over the entire surface.

In use the primer must be stirred thoroughly from the bottom of the can up. Then it should be strained through a double layer of gauze or cheesecloth, pouring it from the can to the container used on the air gun. A thin or medium coat of primer is recommended. If the primer is too thin it will not stand the sandpapering operation which follows and if too heavy a coat is applied it may not dry quickly enough. Usually the primer will air dry in twenty-four hours at a temperature of 60 degrees Fahrenheit.

After the primer is dry the surfacing coat or the "gunglaze" can be applied. This coat is the "go-between" of the primer and enamel and literally forms the keystone of the arch of the whole job. The gunglaze or surfacer must adhere perfectly to the primer and form a perfect surface on which the enamel coats are applied later on. It corresponds to the rough stuff or sealer coats in a varnish finish job and for smooth metal the proper proportions are usually equal parts of surfacer and solvent by volumes. Where the surfaces are rough it may be used in the proportion of two parts of surfacer to one of solvent by volume.

Putty Glazing Is Necessary

Before applying the surfacing coat all of the rough spots, file marks, hammer marks and so forth should be filled in with putty glaze. Judgment should be used as to how much putty glazing has to be done, the idea of the operation is to secure a smooth surface for the application of the enamel. The putty glaze is applied with an ordinary flexible putty knife and it should be applied so that just enough of the putty is used to fill up the indentations. It is possible to thin putty glaze with turpentine to a consistency where it can be sprayed on. The putty glaze usually dries in from six to fifteen hours. And where the metal is very rough it is recommended to use three or more thin applications of putty glaze allowing the usual drying time between each application. If sufficient time is not given to dry these applications thick layers of putty will "surface dry" only resulting in bulges when the lacquer is sprayed on.

After the putty glaze is thoroughly dry it can be sandpapered to take out all rough spots made by the putty. The sandpaper can be used dry for this operation. After this operation the body should be wiped off with a rag to take off the putty dust.

The car is now ready for the surfacing coats and in preparing the surfacer the material should be strained exactly as was done with the primer. The surfacer is applied with the air gun in the same manner as the primer and the number of coats depends entirely on the condition of the body. A very good rubbing surface can be had by spraying four light coats of the surfacer on the putty coat. Usually this is done by spraying two coats a day, one in the forenoon and the other in the afternoon.

No sandpapering should be done between the surfacing coats but it is a good plan to spray on what is called a "guide" coat of yellow ochre and hour or so after the last coat has been sprayed. The purpose of this guide coat is to assist the operator when it comes to rubbing and will prevent him from going through spots to the metal or primer.

In next week's issue of MOTOR AGE the application of the enamel or lacquer coats will be discussed.

A Big City Sales and *Service Plan*

Henry R. Levy, president Studebaker Sales Corporation of Chicago

Intensive Analysis of Business and Residence Areas of Chicago Has Enabled Studebaker Sales Corporation to So Place Stores and Maintenance Shops That Business Was Increased 43 Per Cent in One Year.

By HENRY R. LEVY

President Studebaker Sales Corporation of Chicago

IN more densely populated communities, where automobile dealers maintain branch salesrooms and service stations, profits have been reaped by understanding dealers who carry these branches to the people instead of suiting their own convenience.

Where shall a branch be opened? Where shall a service station unit be maintained? Where shall the headquarters of both services be maintained?

Too often, the answers to these questions are based on the price of ground rents or leases, the convenience of the dealer, a temporary burst of sales in some locality, or temporary demand for service in another locality.

In fact, the answer should be dictated by a study of the present and future of these localities with a view to continued service to the car owners themselves, regardless of rental costs or other considerations. If this means scattering branches and equipment over a wide territory, it must be made the most of. The car owner's convenience must be paramount.

Where, in the whole community, are the centers of residential population of a character that buys or can buy motor cars?

In what section is the greater growth of such communities?

Where are the centers of transient, or less permanent residence, or the hotel and office building districts?

The effect of the right answer to these three questions upon sales and satisfied service will be found profitable by any dealer, as we have found them profitable.

Realizing that to criticize a condition, without supplying a tested cure, is pure theory, an example will be given that has been worked out by us in Chicago.

We maintain seven sales and service plants in Metropolitan Chicago. It is such solely because we have analyzed the demand in the district of Greater Chicago and have tried to fit our answer to the need.

First we identified the center of the transient occupancy, such as office building and hotel communities. We found this embraced the "Loop" of the city and ran south along Wabash and Michigan avenues for two miles.

What kind of service would car owners in such a district desire?

They wanted quick repair or adjustment work, embracing even major repairs. While they were in their offices during the day, or between two days; while stopping at hotels temporarily; where they could discuss rehabilitation of their car as a business matter, without bringing in the whole family—that was the time, that was the circumstance surrounding the work they wanted done.

So we located our central service station close to this district, and we put it adjoining a railroad, because we found many owners passing through Chicago who wanted a lacquer job or major repair done and the car shipped ahead to them.

In this central service station, which covers a whole block, we put equipment sufficient to rebuild entirely any model of our car since 1911. We installed the most complete lacquer plant outside any motor car or body building factory.

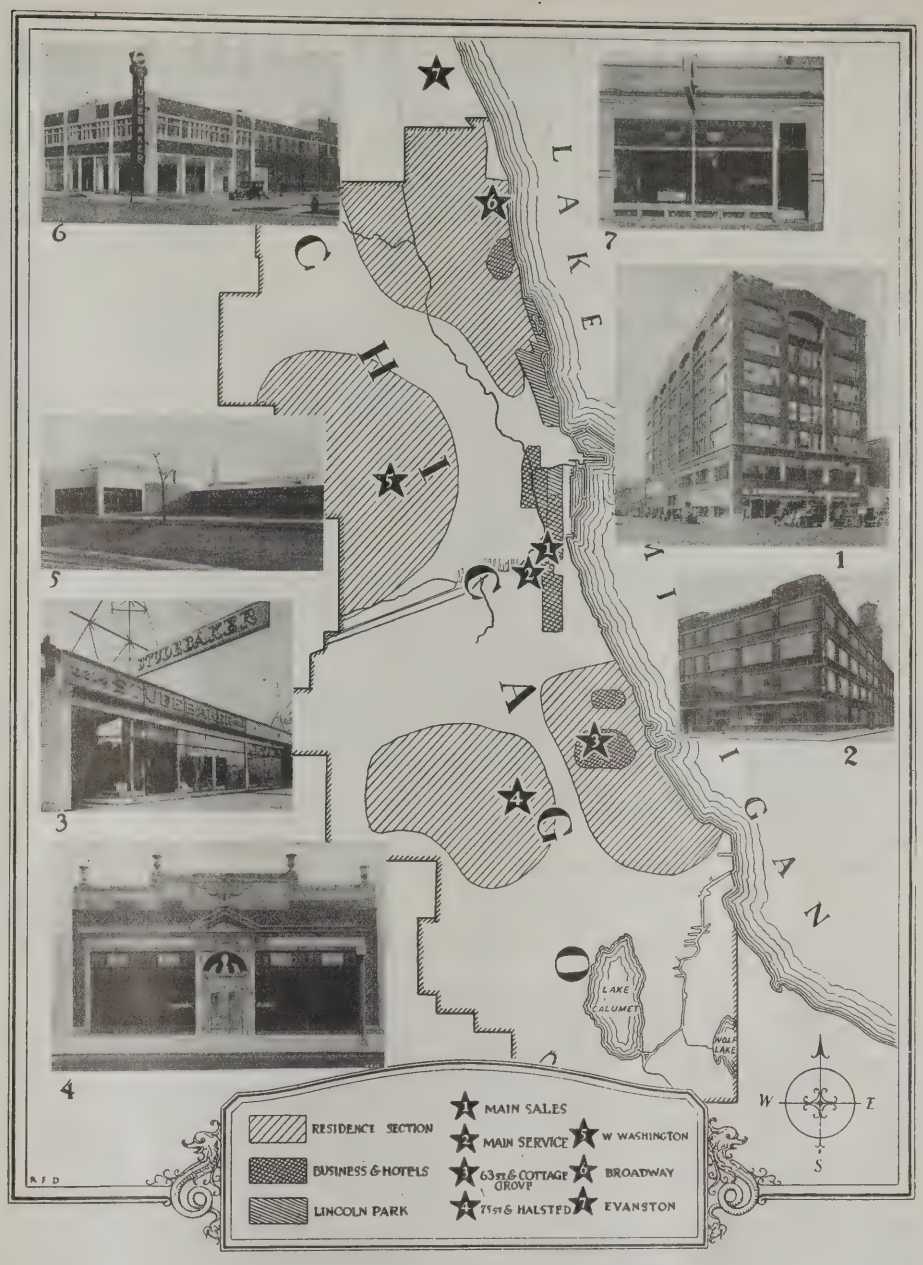
During the office hours of a day, or between days, we can handle almost

IN this article Mr. Levy tells how he planned the location of his extensive sales and service organization in Chicago which now embraces seven immense plants and a payroll of 468 employes. The fundamental principle upon which he worked was to place his sales and service conveniently to the centers of large and prosperous populations. It is a principle that the dealer or maintenance man, in large or small community, can well afford to observe. It enabled Mr. Levy to increase his business 43 per cent in one year.

any repair or overhaul job that is brought to us. Literally hundreds of such jobs are turned out weekly for men who, thereby, do not loose the service of their cars for a single day. There, every week, we handle quickly-done but thorough jobs of overhauling, adjustment or replenishment for transient motorists stopping at hotels.

General Sales Problem

Then there was the general sales problem. Where to locate the main sales room, convenient to business men's offices, or to those who normally come to the business district for shopping? General inquiries, arising from no salesman's activity, but from outside source, come most often to the main office, often located, by those unfamiliar with the concern, through the telephone directory. The main office must be near the business district.



So we must have our 6-story main sales room not alone near that district, but near the main service station, for the same reason.

In Chicago there is almost a separate business community, like a city within another, around Cottage Grove Avenue and Sixty - third Street. Around it is a residence community of high character, and not far away another hotel section.

In the heart of this district we have located a sales and service station, at 6212 Cottage Grove avenue.

South of this center, and a little to the east, there has been a rapid growth in high class residences and apartments within the last few years. So we have a branch salesroom at 7434 Stony Island Avenue, in its center.

Wider boulevards, newly located industrial centers and opening of new highway arteries there have brought about a gigantic business and residential development in Chicago's southwestern section in recent years. Business is centralizing around Seventy-fifth and Halsted Streets. So we have a similar branch at 7605 South Halsted Street.

Map of the city of Chicago showing how seven Studebaker sales and service stations have been placed with reference to populations and business centers. Photographs of the various establishments are shown in the inserts.

Until recently, there never has been any adequate provision for the great West Side of Chicago and the rich suburban districts beyond it. Now we have a branch at 4653 West Washington boulevard, in its center.

Just a few years ago, the better part of Chicago's "Gold Coast," or more prosperous North Side residential section, reached no farther than Wilson avenue, which is just six miles north of the "Loop."

But the character of building permits which were being taken out indicated this would be a rich community for another three miles north, reaching to the boundaries of "Exclusive Evanston." So our North Side branch was located in the center of that new district; at the time it was thought we had missed the mark on convenience, but time has justified our analysis, and a new "Motor Row" is reaching up to us, even now.

North of Chicago, the Lake Shore communities, homes of the wealthy and independent, reach for miles. For their accommodation, a branch has been established in Evanston.

But every family in Metropolitan Chicago can now go to see our product, or to have it demonstrated, close to that family's own home. Our branch manager is a member of each intra-urban business community. Service work is done close to the convenience of everyone, so it may be done more quickly, may be inspected while "in work" if the owner wishes to be in personal touch with the progress or nature of the work done and yet each branch has, at a few minutes' command, the entire equipment of the completely equipped central service station for special attention.

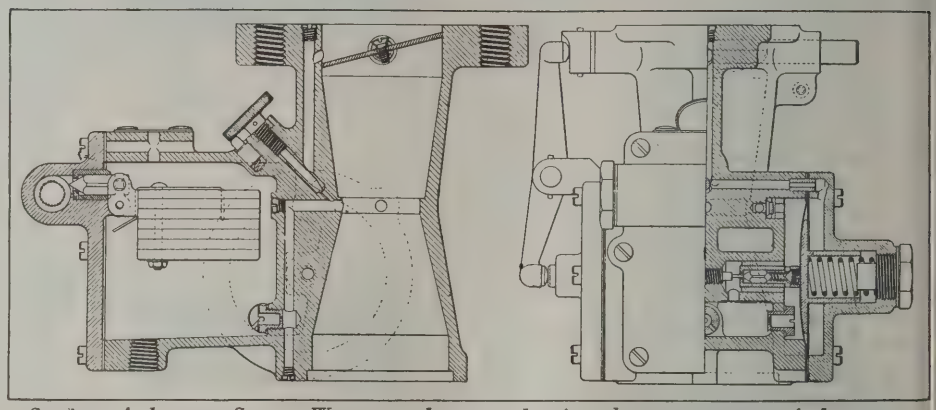
To do this has meant a substantial investment in properties. It has meant a payroll of 468 employes.

But to it we attribute in part the fact that our sales for the first quarter of this year exceeded those of the same quarter last year by 43 per cent.

To it we attribute in part the fact that 72.1 per cent of our sales are to former owners of our product.

New Stewart-Warner Carbureter Has Several Novel Features

SEVERAL innovations in mixture proportion control and in control of accelerating fuel are embodied in the new Stewart-Warner carbureter, designed and developed by P. S. Tice of the Stewart-Warner Speedometer Corporation, Chicago.



As will be seen in the sectional views, the single air passage is constructed to form a throat into which the fuel is discharged after passing through metering plugs or jets. All three jets are submerged and discharge at the periphery of the throat, thus keeping the throat clear of jets or standpipes and their supporting bosses. The absence of these latter contributes to a high pressure recovery or small drop across the carbureter.

Particular attention has been given in the design of this carbureter to securing fine spraying and consequent wide diffusion and high entrainment of fuel. This result is accomplished by the operation of the idling bypass directly upon the main fuel discharge passage, by the peripheral communication of the fuel outlets with the throat, and by the jog or step in the throat just above the fuel outlets. This latter is of particular value at wide open throttle at very low engine speeds.

The fundamental operating principle of this carbureter is such that the mixture proportion is constant or nearly so, and superimposed upon this general characteristic are design features that cause a richening at both ends of the load range.

Throat Communication

The second and smaller of the two fixed jets communicates with the throat by way of a chamber, one wall of which is a flexible diaphragm. The outer side of the diaphragm is pressed upon by a plunger backed up by a spring, and is subjected to the pressures in the intake above the throttle valve. As this pressure changes the position of the diaphragm changes, thus altering the volume of the chamber through which the fuel passes on its way to the throat. Since the entrance to this chamber is by way of a small metering orifice and the outlet is large and free, inward motion of the diaphragm following a rise in intake pressure causes the ejection into the throat, at a high rate, of fuel in excess of that normally flowing, the amount of such fuel being proportional to the motion of the diaphragm, which in turn is related to the change in intake pressure. To keep the diaphragm chamber filled with liquid and thus enable it to repeat such discharge no matter how rapidly or frequently it is called upon to do so, a free check of flapper form is built into its outlet passage to prevent the entrance of air from the throat on the "out" stroke of the diaphragm following a reduction in the intake pressure.

Section of the new Stewart-Warner carbureter, showing the arrangement of the parts and passages controlling both the steady running mixture proportion and the accelerating fuel

The third jet is in the form of a floating plug in the end of which is a hole normally closed by a small triangular spring-seated valve having an integral spigot or pin projecting through the hole. As the diaphragm is pushed inwardly by its spring plunger following a rise in the pressure in the intake, it in turn pushes the plug containing the valve ahead of it. Throughout the greater part of the diaphragm motion nothing is changed with respect to the plug and its valve, but the latter part of the motion presses the spigot against a stop and progressively opens the valve. This increases the total area of fuel jet passage between float chamber and throat and enriches the mixture correspondingly.

Since the diaphragm position, and therefore the extent of opening of the jet in the floating plug, is a function of the intake pressure, it is clear that the enrichment thus brought about is also dependent upon the pressure and therefore upon the relative air supply or relative air supply or relative load.

The entire setting of the carbureter is fixed by the specifications, with the single exception of the idling mixture, which is left adjustable.

In controlling the accelerating fuel the diaphragm is ordinarily utilized to handle about one-half of the total quantity of fuel needed for full acceleration, depending upon the engine to which it is applied. The rate at which this portion of the accelerating fuel is supplied closely approximates the rate of change of pressure in the intake. The remainder of the total accelerating fuel is applied by means of a positively actuated diaphragm pump arranged on the side of the carbureter opposite the pressure actuated diaphragm. A rocker lever transmits motion from a cam to the diaphragm through a plunger, and the diaphragm is returned by an opposing spring-backed plunger, when the cam releases it. The cam is mounted on the throttle spindle and engages the lever to move the diaphragm only after the spindle has been rotated to open the throttle through 15 to 18 deg. of its possible 75 deg. total motion. Thus, when operating at usual engine speeds, the mechanical pump does not come into action until from about 80 to 65 per cent of the relative air is flowing. The accelerating fuel control system in both its pressure and its mechanically actuated portions, is very flexible and is capable of close fitting to the acceleration requirements for maximum responsiveness in any given case.

Structure Simple and Rugged

Structurally the whole mechanism is simple and rugged. The diaphragms are of a hard rolled alloy that has been proven to have physical qualities that make it capable of long life in this service. None of the springs are delicate or sensitive as to strength; and none of the passages are so small or so located that they are liable to obstruction.

The float mechanism in its entirety is mounted by six machine screws; and fuel can reach the float valve only after passing through a screen of 100 mesh having a useful area of 2 sq. in. This screen is made up as a sleeve through which the fuel passes from the inside to the outside; and it thus retains all accumlated dirt which is withdrawn from the carbureter when the screen mounting is unscrewed. This latter is accomplished without disconnecting the fuel line.

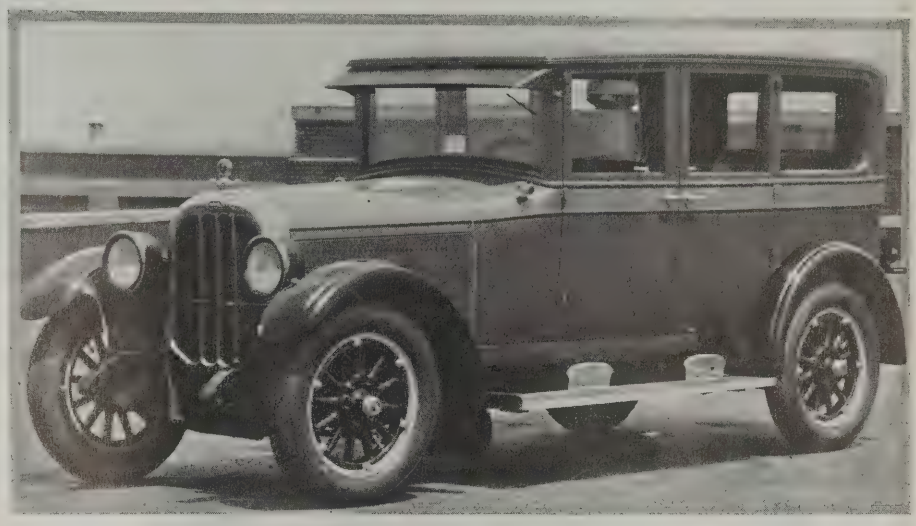
The objectives aimed at in the design of this carbureter are stated to be: maintenance of the mixture proportion at the most economical value, except when the maximum output is demanded; and the supplying of accelerating fuel in such a manner and in such quantity as to give maximum responsiveness in all accelerations, large or small.

Chandler Adds Sedan Body Model

Appearance of Radiator Changed by Adding Three Vertical Bars. Body Lines Also Altered and Better Vision Provided for Passengers in Metropolitan Sedan

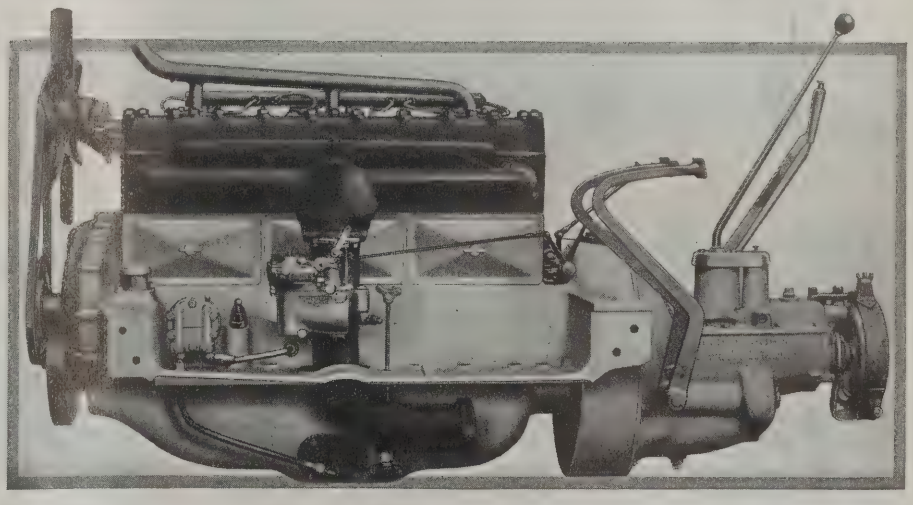
A NEW vogue in radiator design following closely European standards has been set by the Chandler Motor Car Company in presenting its 1926 line of cars. But for addition of one new body model, slight changes in the "Metropolitan" sedan, several engine modifications and the new radiator style, the latest Chandler cars are substantially the same as the 1925 models, there being no change in prices or company policy.

Three Vertical Radiator Strips



While the general contour of the new radiator is identical with the previous models, an individual and exclusive style is achieved by having three vertical strips spaced about 4 in. apart and at the front of the radiator. These triple bars which are of channel section are pressed out of the same stock and in the same operation forming the steel radiator shell, which including the vertical bars, is heavily nickel plated. A new name plate made of gun-metal having the letters in white enamel and mounted on a black background with a gold border and ending around the design is now employed.

The new sedan seating seven lists at $1795, replacing the former model at $1895 price. The most noticeable change in appearance of the new sedan over the former model is the rounding of the corners of the rear quarter upper section, the employing of heavy beading accentuating the double belt effect, the use of a one-piece vision ventilating windshield and a new color scheme. The last mentioned is a Duco two-toned brown finish while a blue brush green is offered at no additional cost.



To allow greater vision and visibility for the passengers in the tonneau, changes have been made on the "Metropolitan" sedan. The landau bows formerly mounted on each side of the body at the rear have been eliminated and their place taken by windows of larger dimensions than previously used. Leather which formerly used to cover the rear quarter upper section which is now enclosed by a pressed steel stamping. Except for the addition of an automatic windshield cleaner on the seven passenger sedan the equipment is the same as on the model it supersedes.

Refinements Are Made

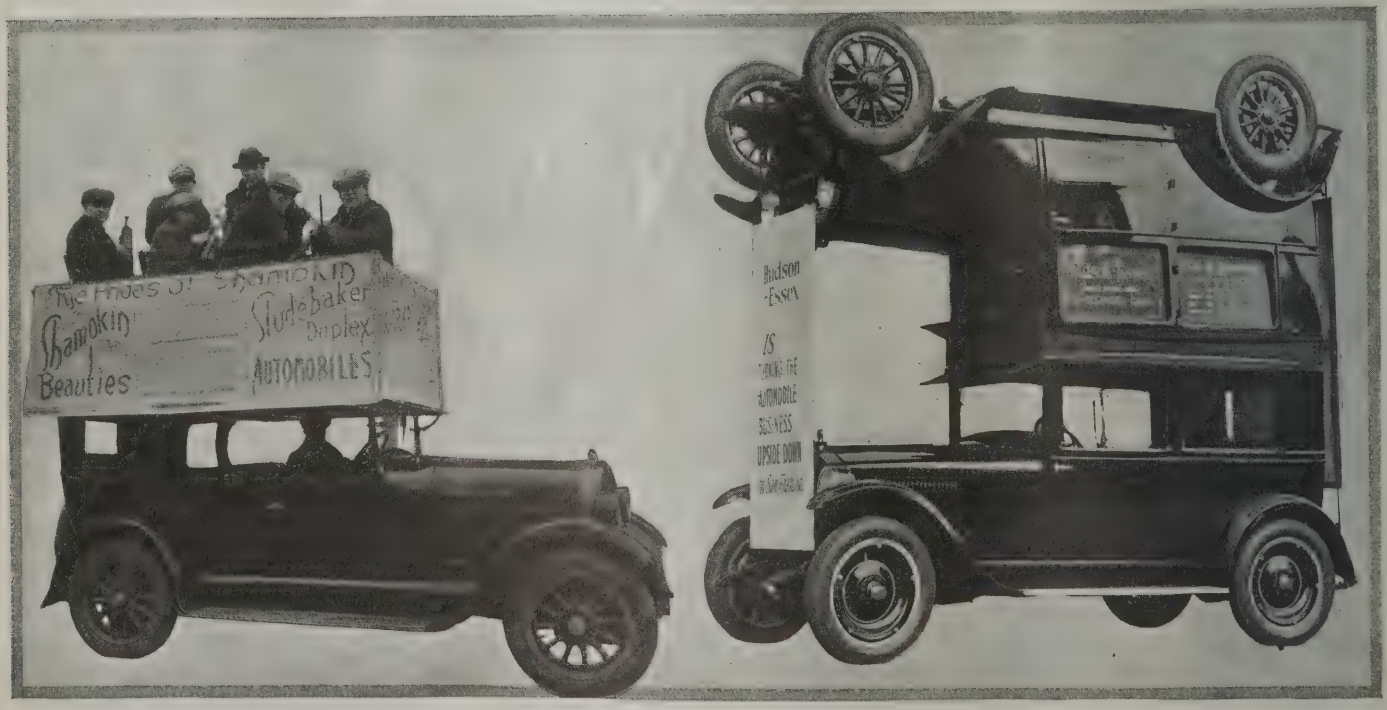
In line with the company policy of annually making announcements of changes in design at definite annual periods, the following refinements have been incorporated in the Chandler cars during the past several months. The ignition system which used to be mounted on a separate platform and driven through a coupling from the rear of the generator is now a part of the latter forming a single unit. The position of the generator remains unchanged while the make of the unit is American Bosch as formerly.

New Chandler seven-passenger sedan. The appearance of the body has been enhanced by moulding extending the full length of the car

Left side of the Chandler engine, showing the small flywheel at the front end. As will be noted the engine is very accessible

Reduced engine vibration, smoother running and fuel economy have been attained by the addition of a small flywheel carried at the forward end of the crankshaft and a newly developed manifold.

Unusual design of the manifold now permits the exhaust gases to flow through a separate passage cast in the intake manifold and from there the gases are carried behind the centrally located carbureter to the muffler pipe. The exhaust manifold which is a separate casting is now ribbed on the top with five fins to assist cooling the gases and is secured to the intake manifold by two cap screws. On the previous engines, the mixture was pre-heated by a hot spot forming part of the intake which was bolted to the exhaust manifold. The exhaust pipe also instead of leaving the manifold at the middle of the engine was carried down the front of the powerplant just behind the radiator. Slight modifications in the clutch have reduced the overall length of the transmission housing by 2 in. while minor changes have been made in the transmission brake hook-up.

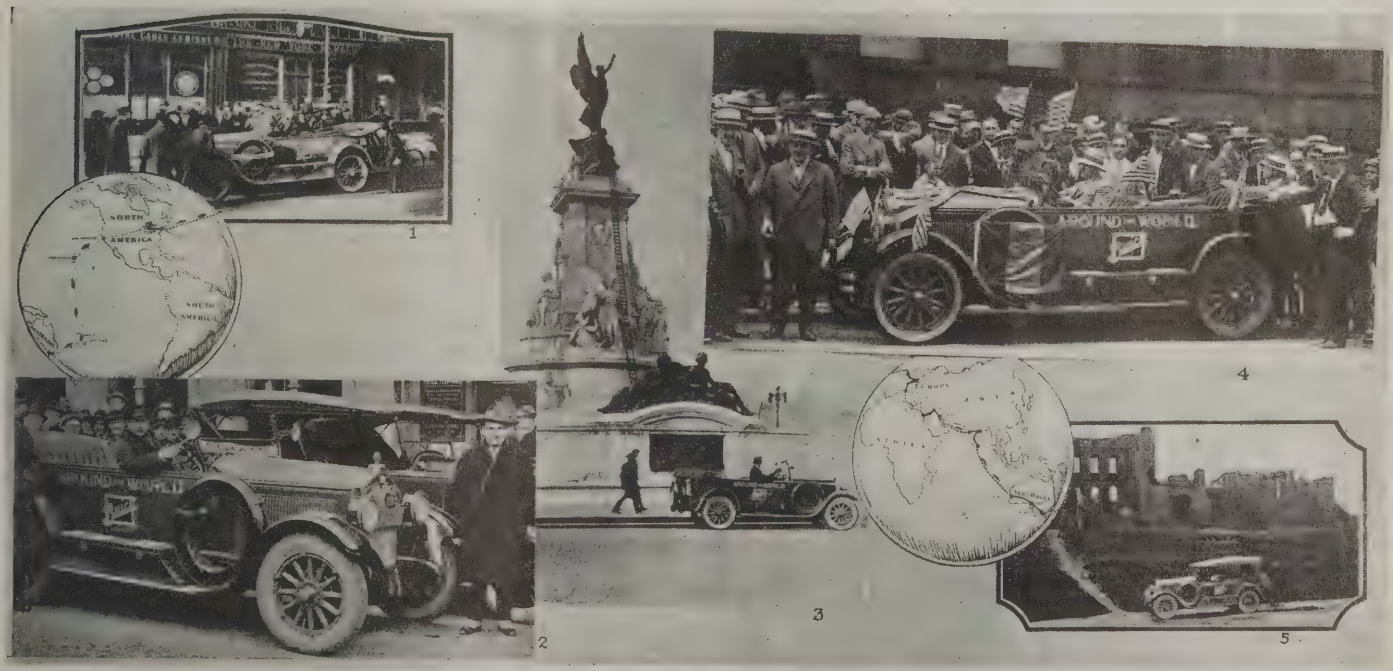


MOTOR AGE'S PICTURE PAGES

TEA FOR THREE. This young matron uses her Chandler Coach Imperial for more than transportation. When she takes the children for an outing and they get hungry, she simply spreads their picnic luncheon in the coach. The back of the front seat folds forward, making a convenient table.

ON NON-STOP TRIP. Lieut. Leigh Wade, one of the pilots in the American around-the-world flight, and Linton Wells, a newspaper writer, are shown in a Packard eight before starting on a non-stop drive from New York to Los Angeles.

SOMETHING TO MAKE 'EM LOOK. Dealers are constantly devising new stunts to attract attention to automobiles. At left is a Studebaker Standard Six Duplex-Phaeton with a six-piece orchestra on top. This led a parade at Shamokin, Pa. At right, one Essex coach carries another upside down. This stunt was staged by H. O. Harrison Co. of San Francisco, and the big banner says: "Hudson-Essex is turning the automobile business upside down in San Francico."



OF AUTOMOTIVE INTEREST

AERIAL ADVERTISING. A balloon is floated over their New Orleans establishment by Gabriel Snubbers. People can't help looking up to this kind of publicity.

INDIANS AWAIT OPENING OF YELLOWSTONE NATIONAL PARK. A group of Blackfoot Indians waiting behind the bars. The gate was opened with much ceremony, the governors of each state removing one of the bars. The park was then thrown open for the 53rd year. No doubt many automobile tourists will visit it this year.

AUTOMOBILE COMPLETES GLOBE TOUR. To demonstrate the world-wide availability of its service, the Buick company sent one of its Standard Six Touring models around the world. The company's agents in different sections took turns driving it. The views shown are as follows: 1—Paris office of the New York Herald; 2—Brussels, Belgium, with Brussels dealer in front; 3—Queen Victoria memorial outside Buckingham Palace, London; 4—The car as it drew up outside the Hotel Majestic, New York, Patrick Keating, at the wheel, completed the last lap from Flint, Mich.; 5—Kenilworth Castle, Warwick, England.

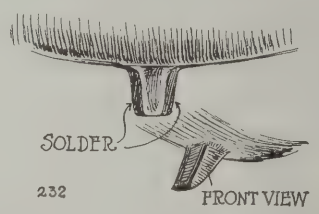
Splash More Oil to Save Main Bearings

Q.—About four months ago I tightened the connecting rods, main bearings, and installed new rings and ground the valves on a 23-54 Buick. After I did this the motor worked fine for about 1,000 miles, when it developed a knock. I then took the pan down again and examined the bearings, finding them all in first-class condition. The piston pins were all O-K, which, I forgot to mention, I had put in new before. However, the pistons were a little loose, having about .008 to .010 clearance at the top of the cylinder. I installed a new set of pistons of factory duplicates.



The cylinders were honed true to .010 oversize and the pistons were given .003 clearance. After reassembling motor the second time it still had the same knock. Connecting rods were aligned and new fiber timing gears installed. The car has been driven about 2,500 miles since and the knock is just the same. I will now try to explain the nature of the knock. When idling the engine doesn't sound bad although it has a sort of hollow knock which seems to be in pistons. The knock is worse when the car is on a constant speed of about 35 miles per hour and up. When pulling on pick up you can't hear a sound in engine but just as soon as you gain a constant speed it develops a clatter which is very loud, and not on one particular cylinder but on all six of them, and the higher the speed the louder the clatter.

Retarding the spark will do away with the knock, but also takes the pep, of which the motor has plenty. I have had engine down since installing pistons and find both pistons and cylinder true within .002 inch and pistons fit perfectly. The valve cages are all setting O-K.—Weichert Auto Service, Ellis, Kas.

May Be Caused by Bearing Looseness

It is probable that the noise is caused from looseness of the center rear bearing. You will find that the upper shell of this bearing is probably worn or burned slightly, allowing movement of the shaft up and down, even though the cap fits tight against the journal. To check on this point it is advisable to remove all of the cotter pins from all of the main bearings. Carefully unscrew the nuts, and when the shaft has dropped not more than one-eighth of an inch, or just enough so that it will not unmesh at the timing gears, jack it in position and then remove the bearing cap. With this done it will allow examination of the upper shell, and at this time very carefully examine the upper shell of the center rear bearing. If it shows signs of burning or poor contact it will necessitate pulling the engine and refitting the upper shells. The fact that the main bearing caps are tight does not necessarily mean that the shaft is properly bedded in the bearing, as in many cases it is possible for the upper shell to wear faster than the lower and for one upper shell to wear faster than its neighbor, in which case the shaft becomes unsupported at that point.

Q.—I have another Buick, a 22-45 model,

Widening oil dipper with solder

with exactly the same knock. I have installed two sets of pistons in this car, but the first set I installed were crown head with centered piston pin. When I put these in I honed the cylinders to fit the pistons very tight, that is, just so that I could push them through. When I assembled this engine and started it it sounded fine—exceptionally good for valve-in-head engine. After the owner had driven the car about 300 miles he stuck motor and scored the cylinders so I honed out the block again and put in .015 oversize pistons of same type and gave them .003 clearance and car has had same knock, which I have described, after about 50 miles.

The opinion of the local Buick factory branch is to the effect that the knock in this engine is due to the same cause as produced the noise in the 23 model. It has been suggested by this organization that to provide better lubrication you remove the crankcase sub-base trough covers and that you also widen the dippers on the conecting rods, one-eighth inch, that is, one-sixteenth inch on each side, by soldering (Fig. 232).

The Readers' Clearing House

THIS department is conducted to assist dealers and maintenance station executives in the solution of their problems.

All questions are answered direct by letter, so the name and address should be given in full. This saves waiting for the answer to be published, which sometimes occurs several weeks late, depending upon the space available.

Readers' names will not be published with articles, if a request to this effect is received with the letter. Inquiries not of general interest will be answered by personal letter only. Emergency questions will be replied to by letter or telegram.

Also state whether a permanent file of MOTOR AGE is kept, for many times inquiries of an identical nature have been made and these are answered by reference to previous issues.

Addresses of business firms will not be published in this department but will be supplied by letter.

Technical questions answered by B. M. Ikert, and A. H. Packer; Legal, by Wellington Gustin; Paint, by G. King Franklin; Architectural, by Tom Wilder; Tires, by a practical tire man; General Business questions, by MOTOR AGE organization in conference.

HOLDING THE OIL IN WITH VARNISH

Q.—We are having trouble with a Fordson tractor which flings oil from the pulley attachment. When this pulley was first installed and the tractor and pulley were new the pulley was not used to any great extent until it began to fling oil. We have removed the pulley several times and examined everything, also put in new felt. It would be all right for a little while and then would start to fling oil again. We know of other tractors that have been used more than this one which have never flung any oil. Carlos Farris, Tilford, Ky.

One possibility is that when the power attachment is used the tractor is not on level ground and the right side is lower than the left. This will tend to cause oil from the transmission to work out. Carrying the oil level too high in the transmission will also tend to produce leakage. Another possibility is that the casting which holds the bearing is upside down, so that the drain hole is on top. Another possibility is that the castings are somewhat porous and one recommendation is to remove the pulley and the pulley housing and varnish both of these units inside and out with machine varnish.

PISTONS REMOVED FROM BELOW

Q.—We have been having some trouble and argument over the removal of the pistons and rods from the Essex six. Are these assemblies supposed to come down in the regular manner on all models of this car, or only on some. Numbers two and five seem to be the joke on some. —Edgar, D. Best, 1533 S. 3rd Street Charlestown, Ill.

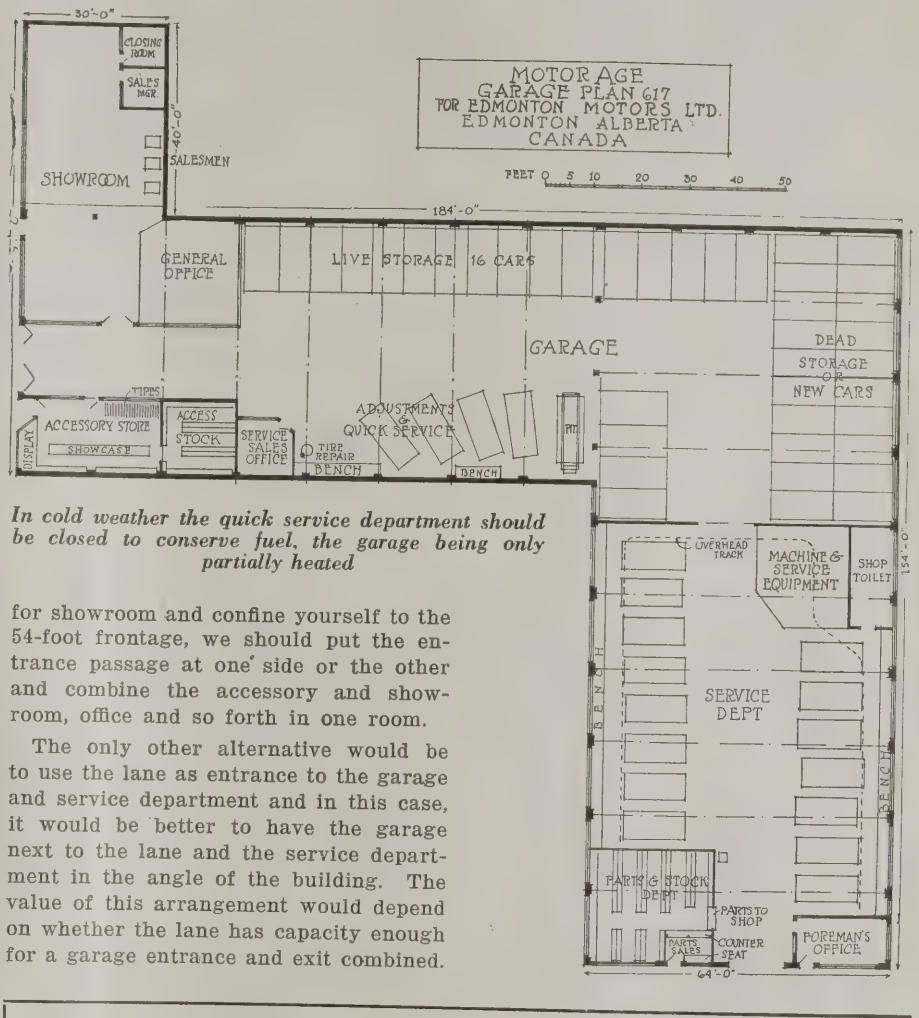
We have been advised from official sources that the pistons and rods are removable from below. In some rare cases the cylinder block casting is not uniform, so there is not sufficient space between the crankshaft and the sides of the case to allow withdrawal from below. In these rare cases it is necessary to push the piston up toward the top as far as possible, remove the piston pin and then withdraw the rod from below. Always heat the piston slightly before removing the pin.

Planning Your New Building

By TOM WILDER

The READERS' CLEARING HOUSE

A Large Building With Limited Frontage



Q—We are enclosing a rough sketch of the approximate dimensions and size of a garage we are expecting to have built, and would like to work out several plans of what you consider the best way of arranging the layout, and return to us as early as possible. The nature of our business is exclusive Chevrolet franchise for Edmonton, and the number of Chevrolet cars operating in our territory approximately eight hundred. The lane indicated in the sketch is an ordinary lane, twenty feet wide. We will be pleased if you will draw us plans of both with and without the thirty by forty foot lot adjoining the property. The frontage faces on one of the principle streets of the city, and I think it would be advisable for us to take on the thirty by forty foot lot adjoining. —Edmonton Motors, Ltd., Edmonton, Alberta, Canada.

Your request for several layouts so that you could see which one you like best is quite out of the question, since there are so many waiting for plans that it would be quite unreasonable for us to make several for you and keep the rest waiting. Besides this, the layout which we have made works out so well that we doubt very much if we could make one that could be improved.

We think you would be very wise to add the forty feet to your frontage, using this space for showroom at one side of the car entrance, while at the other side you can have an accessory store. Back of these departments is the garage with space for quick service and adjustments at one side just behind the service sales office. As cars come in for service they are inspected by the service salesman in charge and sent either to the quick service department or to the main repair shop at the other end of the building. In case the repair shop is full, the car can be stored in the garage and called for when needed.

The retail parts sales department is in a little corner of the stockroom facing on the lane. There the stock keeper can take care of sales and also supply the shop with necessary parts.

In the angle of the building well secluded and out of harm's way there is a good space for new car shortage. While both sides of the service department are well supplied with windows and lighting space, it would improve the center of this section very much to install several good sized skylights or a continuous transom extending the full length of this section. The quick service department should also be supplied with skylights, as here there is no chance for outside windows. In case you do not use the 40-foot frontage for showroom and confine yourself to the 54-foot frontage, we should put the entrance passage at one side or the other and combine the accessory and showroom, office and so forth in one room.

In cold weather the quick service department should be closed to conserve fuel, the garage being only partially heated

The only other alternative would be to use the lane as entrance to the garage and service department and in this case, it would be better to have the garage next to the lane and the service department in the angle of the building. The value of this arrangement would depend on whether the lane has capacity enough for a garage entrance and exit combined.

LEGAL QUESTIONS ANSWERED

By WELLINGTON GUSTIN
of the Chicago Bar

Q.—Does Tennessee allow a lien for work done on automobiles?

Section No. 3592a-5 of the Code of Tennessee gives you a lien for "any repairs or improvements made, or fixtures or machinery furnished" on any vehicle. The law is broad enough to include tires furnished. This lien is good for one year after "the work is finished or repairs made or materials furnished" and until the decision of any suit that may be brought within that time for the debt. This lien is good against the automobile and the improvements thereon, provided the automobile has not been transferred in the meantime to a purchaser in good faith and without notice.

You see no recording of your claim is necessary to keep your lien alive during the period of one year as in most states. However, to prevent a sale in good faith to an innocent purchaser which would defeat your lien, you should have your lien recorded immediately after it is created. Recording is for the purpose of giving notice to all of your claim.

Your lien is subordinate to the claim of a seller of the car, retaining the title until fully paid for, so say the courts in your state.

You may send out and get the repaired cars, provided you do so in a legal manner.

The law allows levy of execution on the lien property and this is safer where an attempt to evade the lien is feared; otherwise a simple suit is the least expensive method.

Clearing Up Electrical

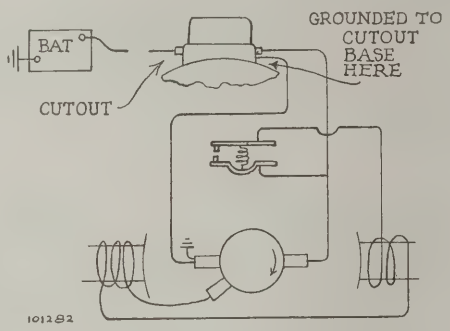
The Readers' Clearing House

EDITED BY A. H. PACKER

Tests O. K. But Generator Puts Out Only 4 Amps.

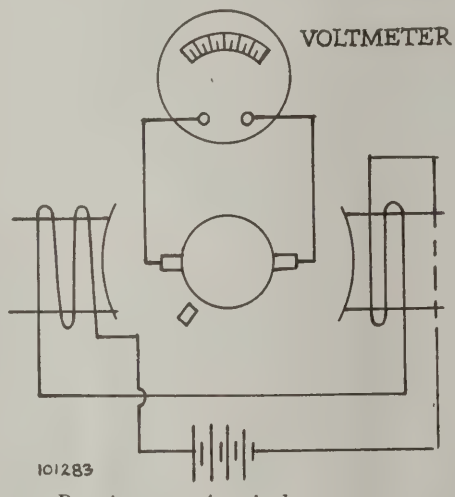
Q—We have a Remy generator from a 1918 Oakland which formerly generated 20 amperes until the thermostat cut in and then generated about 10 amperes. Recently it will only generate about three or four amperes, either cold or hot. We have dressed up the cutout points as they were somewhat burnt. We tried separate wires from cutout to battery with a separate ammeter in the circuit, so as to eliminate the regular wiring.

We also tried eliminating the cutout thinking the trouble might be there. As none of these experiments did any good we took the generator apart and cleaned it out. The commutator was in fine shape, well undercut and showed no burnt segments. We then tested the armature with one cell of a battery which showed about 18 amperes from one segment to the next all the way around. It would show 20 amperes on short circuiting the test points.



We figured that if any two coils or segments were shorted, you would get a higher reading than 18 amperes and if open a lower reading. A 110 volt test with a light showed no ground. The field coils were also clear of ground and with one cell of a battery showed two amperes through both fields and from the middle connection through either coil showed four amperes. We drew a platinum file between the points of thermostat a few times, as much as we dared, to clean them up. We taped up all brush leads where they were bare but none of these seemed to be causing the trouble. We did not try changing the position of the third brush as it had not been moved from the time when the generator was operating properly. We are enclosing a sketch showing the internal circuits of this machine.—Anaheim Reader.

Nothing Wrong With Internal Wiring



We are reproducing two sketches, one of which is the one you sent to us. We can find nothing wrong with this internal wiring. While you cleaned up the contact points of the thermostat you did not eliminate the thermostat entirely from the circuit. You could do this by connecting the lead from the field which normally goes to the thermostat directly to the insulated main brush. This would be a way of making sure that the trouble is not in the thermostat. Another test you might make which you did not mention is to use the 110 volt lamp test to see if any of the brush holders are grounded, that is, omitting the main brush holder which is supposed to be grounded. You might also check the thermostat to see if it is grounded. You have certainly done nearly everything possible.

It occurs to us that there may be trouble in the armature which only shows up when the armature is rotating, when centrifugal force which tends to throw the wires out, makes them short or ground. To detect this you might make a test like the one shown in the other sketch which we are also publishing. To make this test you can connect a dry cell to the field, disconnecting the shunt field from the third brush and also from the themostat. If you wish to you may connect several dry cells or several storage cells. Then run the generator on a test bench and read the voltage which should vary in exact proportion to the speed, for the magnetic field is constant as it is supplied by the battery.

If you find that the voltage increases

Reader's test circuits—they seem O. K.

Running test for faulty armature

in proportion to the speed but at some point suddenly becomes unsteady, and the voltmeter needle drops back then you will know that something has happened in the armature. As a last resort you might try changing the position of the third brush just to see what will happen although of course it should not be necessary if the present position is one in which operation was formerly O. K. We assume that the battery is O. K. and that it operates the starter. If so, it should be all right and take current from the generator. If one cell of the battery should be shorted however, it would maintain a low voltage at the generator and probably reduce the charging current. This is a very interesting case and would like to hear from you if you have a chance to make the voltmeter test we have indicated.

Come and Go Interrupter Trouble

Q—We have a 1924 Star touring car and of late it has been stopping very suddenly because of no spark in the distributer. The starter cranks the engine but the engine will not start until the interrupter points have been wiped off with a cloth and a slight adjustment made. In addition to working on this car ourselves, we have had it in two electrical service stations where the men are supposed to be competent on this sort of work. They have told us that the points of the distributor do not need replacing and are working satisfactorily, but it seems they can only effect temporary repair because after the car has been driven a while the old trouble returns.—Herbert J. Kersten, 511 N. Lee Street, Bloomington, Ill.

This appears to be a condtiion of defective interrupter contacts. These contacts are made of Tungsten and when this material is rolled it occasionally has impurities in it, these being in the nature of slag. When such interrupter contacts are encountered it is possible to file the surface and get perfect operation for a while, then the metal burns down to the point where the stony substance or slag makes contact and no current flows.

How to Test for Trouble

If the points are disturbed slightly they may again strike metal to metal and the operation is O. K. until the old trouble recurs. You can easily test to see whether this is the condition or not the next time the trouble happens. When the engine fails to start look at the ammeter and see if it shows discharge when the ignition switch is turned on and the engine is turned over. If it does not, remove the distributer cap and turn the engine until you can see that the interrupter points are touching. Then look at the ammeter again and see if it shows discharge.

If it again does not show discharge, take a piece of wire and touch one end of it to the interrupter terminal and the other end to the frame of the engine. If the trouble is due to the points not making electrical contact you should get a circuit and the ammeter should show discharge of about five amperes. You can then make another test by touching the wire from one point to the other and you can also press the interrupter contacts more tightly together and move them slightly to see if this makes the ammeter show discharge. If the trouble is at this point in the circuit any one of these tests will be indicated by the ammeter reading, but if you cannot get current to flow then test from one of the coil terminals to the frame of the engine, working back with a test light or with a piece of wire making contact from the ignition circuit to the frame of the car until you find the point where you get current.

Trouble With Bill Fixit

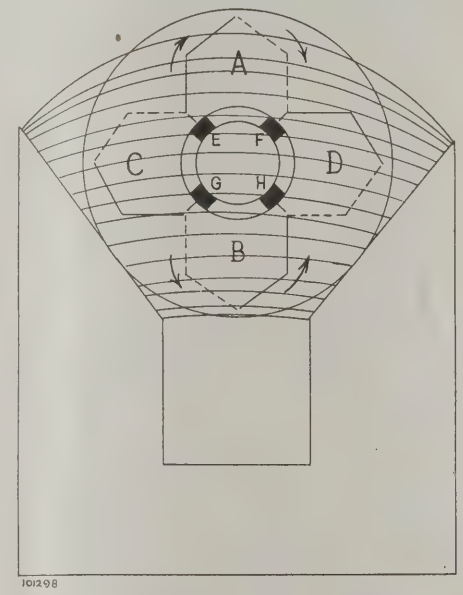
EDITED BY A. H. PACKER

The READERS CLEARING HOUSE

How a Growler Finds Short Circuits

Q.—I received your letter of May 11th in regard to the Remy generator on an Oakland car. In this letter you suggested testing the armature by running the machine with battery current flowing through the field winding, and taking voltage readings at the main brushes. I had previously tested this generator armature by using a dry cell and an ammeter, but found no trouble according to this test.

As I suspected the armature was at fault, I took it to another shop where they have a growler and it showed a strong attraction in two places. Can you explain why my test would not show this trouble? Would also like to have you explain the action of a growler and how it causes magnetic attraction when the winding is shorted.—Anaheim Reader.



In your test the ammeter would indicate 20 amperes when you held the test points together and would indicate 18 amperes on a normal coil. The difference was so slight that you may have had a slight short circuit which would cause trouble when the armature was running and yet would not be of low enough resistance to enable you to tell the difference. That is, it might have been reading 18.1 instead of 18 amperes and you could not tell whether there was trouble existing or not. Another possibility is that the short circuit does not actually exist, when the armature is perfectly still, but when running, or when being vibrated slightly by the growler, the short circuit will exist and show up on a test of this kind.

Armature Running Test Probably Would Have Located Trouble

We believe you would also have found the trouble if you had been able to make the armature running test which we indicated. In the illustration we are showing the way a growler works and the reason for a shorted coil showing magnetic attraction. Instead of a regular armature, we have shown a very simple one with 4 segments and only 4 coils, the coils being A-B-C and D and the segments being E-F-G and H. The windings on the growler would produce magnetism which would first go from left to right and then from right to left, reversing 120 times a second with 60 cycle current. We will assume that at a certain instant of reversal that voltages are generated in coils A and B in the direction shown by the arrows. Coil A would be trying to send current around to the right and coil B would be trying to send current around to the left and these two voltages would neutralize so that practically no current would flow.

There would probably be some voltage generated in coils C and D and in any other coils that might be in the armature, but we would find in all cases that these voltages would practically cancel out so that no appreciable current would flow. in the armature winding when the armature is in good condition. Suppose however, that there should be short circuit between commutator segments E and F at the bottom of coil A. This would allow the voltage generated in coil A to send current around through the winding of that particular coil. In similar manner, it would allow coil B to send current through coil D, then across from commutator bar F to E and back through coil C to coil B again.

In this way we would have two coils with current flowing in them, but the current would be stronger in coil A because the resistance is lower, while coil B had to send its current through all the rest of the winding with the exception of one coil. We know that where current flows through a coil it has a magnetic effect and this will show up as a

Coils produced by growler magnetism

local magnetic pole at the center of the defective coil. In some cases the winding varies so that a single short circuit will produce two magnetic poles on the armature. This would be true in a wave winding, whereas the one we have shown is a lap winding. Believe that from this however, you will get the general idea and understand why a short circuit produces a magnetic effect while a good armature shows no appreciable magnetism.

Does armature testing "get your goat"? The first article on page 26 tells what the Anaheim Reader was up against and the first article on page 27 tells what he found and how.

Special Machine for C. P. Charging

Q.—I have a motor generator set for charging batteries. I would like to know if it is possible to get a voltage regulator for this set so as to make it a constant potential charging outfit.—LaSalle.

A motor generator set designed to charge a number of batteries in series is not properly designed to operate as a constant potential charging machine. A set of this sort may be designed to give out 10 or 15 amperes at a voltage of from 75 to 100, while the constant potential machine is designed to give out a high current of 100 to 150 amperes or more at low voltages, such as 7 to 15. Accordingly, the parts are not the right size, and, in the high current machine, the armature conductors, brushes and all connections which carry the charging current would have to be very heavy. Consequently the mere addition of a voltage regulator would not make the machine suitable for this purpose.

MOTOR FOR IGNITION TESTER

Q—How can I vary the speed of a horn motor which I wish to use for driving the circuit breaker of a testing set which will be used in testing ignition coils and magneto armatures.—West Coast Reader.

Horn motors are series wound and the speed cannot be controlled very accurately. You can put a coil wire rheostat in series with the motor and while this will make it go slower it will also cut down the torque. You may find that this will work all right or you may find that when you try to make the interrupter run slower that it will occasionally stop. You might try connecting the horn motor field in parallel with the armature and putting a fairly high resistance rheostat in the field circuit only. Weakening the shunt field will make the motor speed up. On the other hand you might first find it necessary to rewind the field with finer wire.

Q—In testing a magneto armature with a circuit breaker and six volt storage battery should the current flowing through the primary winding be limited to a certain number of amperes or should the primary winding be allowed to take whatever it will carry under a pressure of 6 volts.

We would suggest letting it take as much current as it will except that a test should not be run long enough to permit the armature to get hot. If it draws five or six amperes with the contact points together, it will be about the equivalent of testing an ignition coil. If it draws 10 or 12 amperes with points touching it may cause some sparking at your interrupter, and a test of this sort should not be continued very long. You will accordingly have to gauge your test in accordance with the current taken and the tendency for the armature winding to heat up. It is essential to provide a spark gap of about $\frac{3}{8}$ inch before starting it or you will strain the insulation of the secondary winding.

Automobile Owners Like Flat Rate Charge System

Club Endorses Flat Rate

Worcester, Mass.

To the Editor of Motor Age:

In our contact with service through many members we have come to the conclusion that the theory of a standardized flat rate charge for repairs, overhauling, etc., is altogether practical, sound and just in every way and at an early date this club is going to pass a formal resolution endorsing and approving of its general adoption.

Only a short time ago the president of this club, passing through Jacksonville, Fla., had occasion to have a small but important piece of repair work done, and upon completion and being informed of the charge told the service man "that is exactly the same price as I paid for the same job in Worcester, Mass.," and the reply was, "Yes; we presume you Worcester service man had adopted the flat rate charge."

Your advocacy of this has been mentioned at our directors' meeting, and while no formal expression has been made as yet we are prompted to again express our appreciation of the fine work you are doing and compliment you upon the advocacy of a measure which means so much to the owners of automobiles.

If it be convenient for you will you tell us how many and which of the automobile manufacturers through their sales and service have adopted the practice of a flat rate charge.

We are going to have a special article in our local papers concerning this very soon and shall endeavor, of course, to give you full credit for your part in the matter.—Bancroft Automobile Club, Inc.

Franklin and Reo Prices

To The Editor of Motor Age:

In your issue of April 30 your flat rate chart has a notation stating "Franklin and Reo prices include labor and material." We would like to have a fuller explanation of this. For instance, a valve grinding job on a Franklin E-14, $20.42 could not include new valves. Operation E-63, taken on a Franklin is listed $154.25. What parts should this include? We do not think that the prices will include the parts needed on the ordinary Franklin. What parts would you suggest furnishing for this price? How many hours does this price allow? Kindly send us another copy of the April 30 MOTOR AGE—Middagh Motor.

The operation E-63 concerns the overhauling of the engine and this means grinding the block to .015 in. oversize, new pistons, wrist pins, new timing chain, new oil reservoir screen, new ignition points all new gaskets and whatever small parts are needed in overhauling the carbureter.

The operation does not include new main bearings or valves as you will note that it is clearly stated that the bearings are to be taken up only and the valves reground. You will also notice that the operation E-14 as given in the MOTOR AGE Flat Rate Manual reads as follows: "Clean carbon, grind valves and E-13," the latter being the operation number for tuning the engine.

In both the Franklin and Reo prices material is included. For example in the operation E-59 "Fit all pistons, cylinders out" you will notice that the price for this operation on the Franklin 10-C is $44.10. Now if you compare this price with that for the same job on other cars you will find the Franklin price far above them, but that is because the Franklin price includes the pistons, rings and wrist pins.

The same is true of other flat rate operations for Franklin where the price seems high in comparison to the price of the same operations on other makes of cars. It is quite difficult to give the time necessary for the overhauling operation E-63 since this includes the material and it is impossible to divide the price of $154.25 by $1.50 per hour and thereby get the approximate number of hours for the job. Probably 100 hours comes pretty close to it.

Readers Like Flat Rate Manual

MOTOR AGE has received numerous letters from its readers testifying their appreciation of the utility and practicability of the Flat Rate Manual, published in the April 30 issue. Likewise the discussions which have appeared on this page have proven of interest to the trade, judging from the letters that have been received. MOTOR AGE welcomes letters on flat rate problems. So write in and let us have your views on this important question.

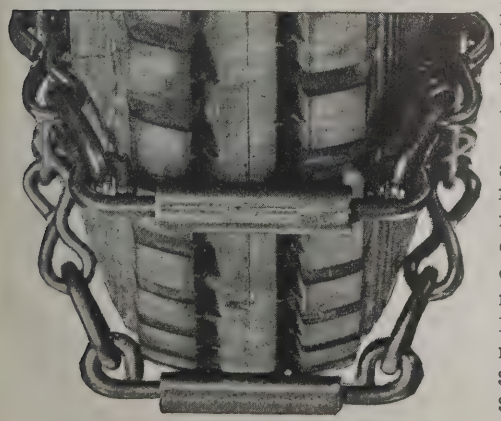
THE MARKET'S NEW OFFERINGS

Accessories—Equipment—Supplies

Harve Stabilizer for Fords

A NEW model Harve stabilizer for Fords has been developed by the Continental Co., Springfield, O. The design of the special Ford type is much the same as the regular model, controlling spring action through the basic principle of inertia of an offset weight. The following specific advantages in the Ford model are pointed out by the Continental Company: No part of the car is tampered with in making installation; Harves do not add auxiliary springs to the car in an attempt to absorb shock and check rebound; elimination of side-sway; excessive spring action, both shock and rebound, is controlled without destroying the natural flexibility of the car springs by tying the body of the car down to the axle.



Harve Stabilizer for Fords

New Rectigon Charger

The Westinghouse Electric & Manufacturing Company has developed a new Rectigon battery charger which will handle any A or B storage battery used for radio work as well as any three to six cell automobile battery. The charging rate is two amperes except when B batteries are being charged. The transformer winding which supplies the current to the battery is entirely insulated from the winding which is connected to the A. C. source of power. The use of the insulated winding gives added safety in charging a battery which is connected to a raido set.

Hoff Tire Chain showing cross member

Sell the Homefolk Before They Go

There are two opportunities to catch business from the summer automobile tourist.

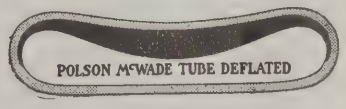
One is to sell him when he is stopping in or passing through your town. The other is to sell him BEFORE he starts out on the trip.

The dealer's first consideration is to supply the local resident who contemplates a long motor tour. He means more than the transient because the local resident will return and possibly buy again.

Now is the time to watch newspapers and be otherwise alert to find out what homefolk are going on automobile trips. Plenty of information at the store as to roads and routes, hotels and camps will offer a form of "free service" that will make contacts for selling opportunity.

Bring the buyer to the store.

Hoff Tire Chains

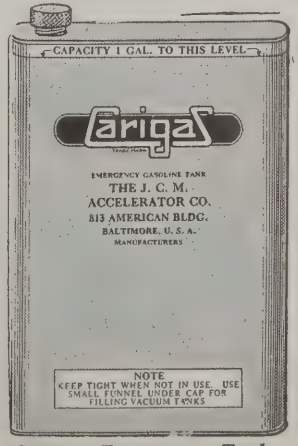


THE Hoff Metal Products Company, 70 East 45th Street, New York, contributes a departure to the accessory market in its Hoff tire chains and cross members. The cross members of this tire chain, instead of being in the form of the usual links, are in the nature of rotatable triangular tubes which it is claimed offer a number of distinctive advantages. In addition to embodying good features of the older style chain it is said the Hoff product obtains better traction, preventing side-slip and skidding under any road condition. The company further recommends its chain as one that will not break or pound fenders and not injure tires.

It is said to be easily taken on and off and that worn cross members can be readily replaced. The Hoff cross members may be used in a chain made on the cross-chain plan. Replacements of Hoff cross members for cross-chains can be made as the old cross-chains wear out. Prices for Hoff chains with Hoff cross members range from $4.75 per pair to $10.25. Cross member prices range from $9 up for lots of 100. The company will furnish other prices and details.

Puncture Sealing Tubes

EMPLOYING a principle which produces a high compression area upon the rubber of the inside, triple-thick treadside surface of the tube punctures are automatically and effectually sealed in the Polson-McWade Puncture-Sealing Inner Tubes, according to the claims of the makers, the Polson Rubber Co., 1783 E. 11th St., Cleveland, O. A nail, wire or other object entering the tube is immediately surrounded by compressed rubber and there is no escapment of air. As the puncturing object is withdrawn it is said surplus rubber flows into the hole and seals it as though vulcanized. The tube is not sold as "puncture proof," the manufacturers stressing its sealing feature.



It is claimed by the manufacturers that the tube is made of 93 per cent rubber of the highest grade, the average tensile strength being 2500 pounds to the square inch in the new tube. The tensile strength increases with age. It is claimed further that the compound from which this tube is constructed gives exceptionally long life to the unit. Repairs may be readily accomplished and the tube is easily installed.

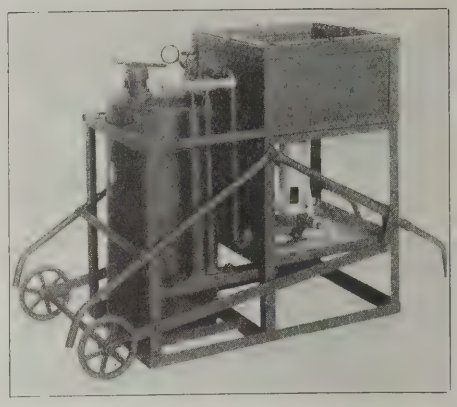
Puncture Sealing Tube

Carigas Emergency Tank

THE Carigas Emergency Gasoline Tank is manufactured by the J. C. M. Accelerator Co., 813 American Bldg., Baltimore, Md. This is a container of one gallon capacity made to fit under the seat of any stock car. It uses a brass machine threaded cap and a funnel for filling vacuum systems and carries a guarantee against leakage or evaporation. The Carigas tank is 2½ in. thick, 8 in. wide and 13 in. high. The list price is $1.25.

Carigas Emergency Tank

GETTING MORE OUT of the SHOP



Chausse Portable Furnace

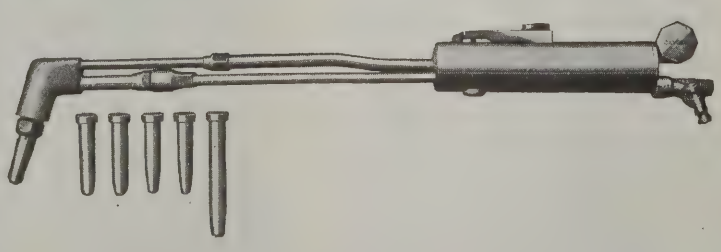
A portable furnace for use in melting lead, babbit, cyanide and other similar surfaces, has recently been produced by the Chausse Oil Burner Co., Elkhart, Ind. This machine as illustrated, is a combination of a Chausse oil burning torch equipment with a retort and mounted on a framework with wheels.

This Chausse forge weighs about 160 lbs. empty, and its overall dimensions are as follows: width 20 in., length 36 in., and height 33 in. The heating chamber is 14 in. x 14 in. x 16 in. high and is lined with fire brick with the flame entrance at the bottom. The kerosene tank holds 12 gal. which is sufficient for 12 hours operation at maximum temperature. The burners, consuming 1 gal. per hour, will deliver sufficient heat to melt 200 lbs. of lead in from 20 to 30 min. from a cold start. The maximum temperature generated by the burners is 1,800 deg., and any reduction in the amount of heat generated, will of course, decrease the fuel consumption. Pressure on the tank is maintained between 10 and 20 lbs. by one Chausse hand pump.

An interesting feature of this machine is the movement of the wheels, so that when stationary the forge sets horizontally on its base. By lifting on the handles at the rear, the side opposite the wheels, the wheels are lowered, and the machine can be moved from place to place without tilting. When it is set down, the wheels rise.

The features of this machine meet a requirement in a number of industries. It was designed as a lead and babbit melter for municipal water works and for babbitting engine bearings. It has been found satisfactory for melting cyanide for case hardening, for boiling water, for heating pipe to be bended, for expanding gears or collars and wherever an oil burning forge can be used to produce a high degree of heat.

Chausse portable furnace



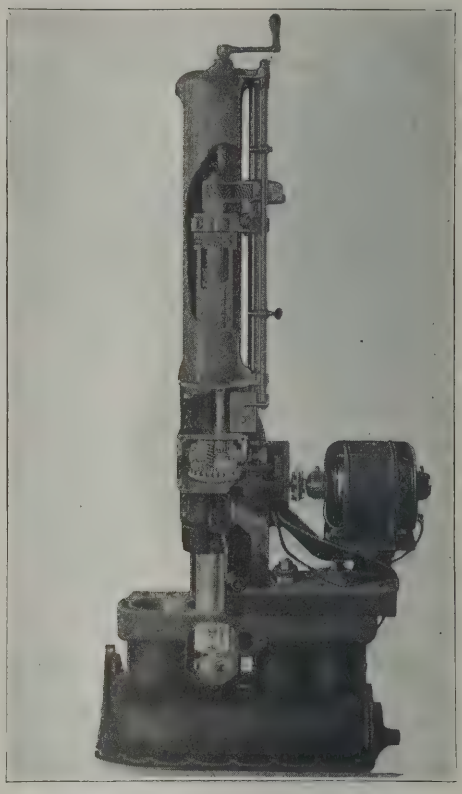
Milburn Low Pressure Combination Cutting and Welding Torch

A low pressure torch which will operate on either low pressure or high pressure gas with equal efficiency, is made by the Alexander Milburn Co., Baltimore, Md. It is especially constructed to operate with low pressure acetylene gas, city gas or hydrogen. It is excellent for use with a low pressure acetylene generator, it is stated.

It insures a correct and intimate mixture of the oxygen and acetylene resulting in "super mixing" and non-flashback qualities, it is claimed.

This torch is adapted to perform welding as well as cutting work by the mere interchange of tips. It performs practically all the cutting and welding operations within range of the process with efficiency and economy.

The torch is of bronze forgings and special seamless tubing, constructed to withstand constant service. The tips are made of solid copper and are interchangeable with a large number of low pressure torches of other makes.



Milburn low pressure combination cutting and welding torch

Jiffy-Jordan Cylinder Regrinder

The Jiffy-Jordan cylinder grinder is of the portable type and in use the block does not have to be removed from the car. The machine has a boring bar 30⅝ in. long by 2¾ in. in diameter with over 12 inches of bearing surface. Gear drive is used throughout.

The construction of the machine, it is claimed, prevents the boring bar from following the old hole. The bar is centered over the cylinder by a three point centering head and the machine is then clamped to the face of the block by two heavy clamp bolts. By thus securing the machine, it is stated that there is every assurance that the new hole will be at right angles to the crankshaft.

Jiffy-Jordan cylinder regrinder

The grinding wheel is attached to the grinding spindle by an arbor and revolves at 5250 r.p.m. The spindle travels the full length of the boring bar through an eccentric sleeve which in turn passes through the boring bar. In use the boring tool is used first to straighten the out of round cylinder taking out both the oval and taper. The machine is made by the Jordan Machine Tool Company, Longfellow, avenue and East 28th street, Minneapolis, Minn.

NEW UNIVERSAL CATALOG OF BATTERY PARTS AND SHOP EQUIPMENT

The Universal Battery Co., 3410 South LaSalle Street, Chicago, announce a new catalog, which is bulletin No. 90-E, which will be sent without charge to battery shops on request. In the front of the book is the Universal Creed, which outlines ten progressive steps which any battery shop can take to improve its business methods. The catalog lists all battery parts, complete batteries of all types for both automobile, radio and farm lighting service, and includes practically every tool that could be used in a battery shop. The catalog may be had by addressing Department MA of the company.

EDITORIAL

Bigger and Better Associations

DEFINITE steps taken by two of the largest and most influential associations in the automotive industry to effect a consolidation of organization and activities are to be commended. The most effective argument in favor of such consolidation is that of economy and no less a person than Secretary Hoover of the Department of Commerce is a most powerful advocate of this method of eliminating waste.

The two organizations actively working toward consolidation are the Automotive Equipment Association and the Motor and Accessory Manufacturers' Association. Of these two the one best known to the retail trade is the Automotive Equipment Association on account of its active cooperation with jobbers and dealers in the promotion of better and more profitable merchandising methods.

The Motor and Accessory Manufacturers' Association, however, has a long record of useful activity in its particular field and the influence of its work no doubt has been felt very definitely by the retail trade. The A. E. A. is composed almost equally of jobbers and manufacturers; the M. & A. M. A. has only manufacturers as members. There is considerable duplication of manufacturer membership in the two organizations. The elimination of this duplication through consolidation would effect a saving to manufacturers both in dues and in the time of officials necessarily devoted to association activities.

It is to be hoped that this movement, heartily indorsed by the A. E. A. membership at its Colorado Springs convention, will be developed along broad and unselfish lines. It is certain that if the general welfare of the industry is considered and factional interests relegated to the background the consolidation will eventually take place and result in great benefit to the industry and worthwhile saving to the individual concerns composing the membership.

Traffic and Children

ONE very important angle of the campaign for greater street and highway safety relates to the child. Something like a third of the victims of traffic fatalities is made up of children.

Children often play in the streets because, in many instances, there is no other place for them to play. Under present-day conditions of traffic the public thoroughfare is less adapted than ever for use as a playground and the public thoroughfare was not a safe playground even in the days of the horsedrawn vehicle.

We believe the automotive trade should take a leading part in the movement for more public playgrounds. During last year 231 cities opened 635 new play areas, representing 1924 as a forward year in this connection—but the number of playgrounds in existence now must be increased many fold before the demand will be met.

Some cities are far ahead of others in playground development. Dealers who live in those cities which are trailing behind would do well to put their shoulders to the wheel. The interest of the automotive trade in safety projects should be made outstanding. It sells "safe transportation." It wants conditions corrected which militate against all elements of highway safety.

Good Work at Indianapolis

WE can hardly think of a better activity for a local automobile dealers' association than the taking of a census of used cars in the hands of dealers, as was recently done at Indianapolis by the Indianapolis Automotive Trade Association. This census gave the make, model and year of all used cars on hand as of the date the census was taken. The detailed report was furnished to every member of the association. To the intelligent merchant this information is of great value as indicating the supply of used cars available in the particular market. But the Indianapolis association proposes to go further and make such a used car survey once a month. When that is done the automobile dealers will be able to file the monthly reports and by comparison they can readily determine the demand of the used car market and also the makes and models that sell best. No more useful function can be performed by a trade association than this, and this alone should be worth many times the cost of membership.

A Code of Ethics for Motorists

PROPOSAL of a national code of ethics for motorists by Thomas P. Henry at the three A's Atlantic City convention suggests a question: What has become of the old fashioned motorist who was always willing to lend a helping hand to another motorist in trouble on the road?

When you are stalled along the highway the offers of help from passing automobilists are not so frequent as they were a few years ago. Accommodation by the other fellow has become a moribund element. Save on rare occasions today he is utterly indifferent to the grief of anyone but himself.

Various changes in conditions doubtless have helped bring about this state of disinterest, but a code of ethics which essentially would emphasize a Golden Rule for those making up vehicular traffic, would be capable measurably of restoring the fine old institutions of highway accommodation and courtesy. A code of ethics would not likely preach accommodation but the influence of thinking along ethical lines would reach far in that direction.

Sales Continue Better Than Normal

Slowing Down From June Pace Is Observed, However

Rate of Production About 10 to 15 Per Cent Lower Than That of Early Last Month

NEW YORK, July 8.—Some slowing down in output and sales of automobiles was observed during the week just past, and in the industry as a whole the rate of production is now from 10 to 15 per cent below the average maintained during the early part of June.

Conditions are, however, still better than normal for this time of year and optimism at the factories is unabated. Those concerns which have closed down to prepare for new models are expecting a big summer business, and in the case of several large producers output has not yet caught up with sales.

The July total of production for the industry, it is expected will be rather seriously affected by a two-weeks' closing down of a leading factory which has up to now been turning out cars at a record-breaking rate.

Truck sales are showing a downward tendency, but they are still running well ahead of last year at this time.

Exports in all automotive lines are continuing at the highest rate in the history of the industry.

With the seasonal decline under way, the manufacturers are bending their efforts to solve pressing merchandising problems, with the idea of bringing down costs and increasing distribution. The most important of these is insurance, and several plans under consideration are all intended to lower rates, which have been on the upgrade recently and have tended to increase resistance from new car buyers.

The manufacturers are also seeking to win back some of the lucrative replacement parts business which they have been steadily losing to independent makers of these parts. Quicker service and lower prices, it is held, will bring about the end desired.

Dealers were never in better shape reflecting the sound policies followed since the first of the year by the factories in limiting production to sales, maintaining prices during the peak of the sales season, and withholding the introduction of new models until the peak had passed.

USED CARS IN DEMAND

ST. LOUIS, Mo., July 6.—Because he feels that used cars are in great demand in St. Louis and asserts that his company has been unable to fill the demand for nine used cars per day, Phillip H. Brookman, president of the De Luxe Automobile Co., Oldsmobile distributor in St. Louis has announced and advertised that his company will accept used cars as first payment on a new Oldsmobile.

Ford of Canada Will Build And Distribute in Australia

FORD CITY, Ont., July 6.—The Ford Motor Company of Canada, Ltd., through its subsidiary companies, the Ford Manufacturing Company of Australia Proprietory, Ltd., and the Ford Motor Company of Australia Proprietory, Ltd., has taken over the assembly and distribution of its products in Australia.

Each of the Australian companies are capitalized at £1,500,000 and are now erecting five plants to take care of the growing Ford business in that country.

Ford bodies and such other parts that can be produced will be made by the manufacturing company while the assembly and distribution of the products will be carried out by the sales company. Both companies have headquarters at Geelong while the sales company will have branches at Perth, Adelaide, Brisbane and Sidney.

Since 1905 when the shipment of Ford products began until 1911-12 when over 1,000 cars were shipped, the number has gradually increased until upwards of 21,000 were shipped from here to Australia in 1923. This will be even higher for 1924 when final figures are released.

YELLOW-G. M. MERGER ON

CHICAGO, July 6.—Rumors of a proposed merger of Yellow Cab manufacturing interests with the General Motors Corporation were confirmed here today. Details await to be worked out before any announcement will be made as to how the transfer of stock and property will be effected.

Velie Reports One of Best Years in Company's History

MOLINE, Ill., July 6.—Velie Motors Corporation, of Moline, Ill., is having one of the best years in its history, according to C. W. Hadden, general sales manager. Shipments from the Velie factory during the past nine months have exceeded the corresponding months of the previous year with one exception, Mr. Hadden says.

March shipments were the greatest for that month in four years. Shipments for May showed 12 per cent increase over May in 1924 and Mr. Hadden predicts that June will show at least a 15 per cent increase over June shipments of last year.

Velie export business has greatly increased under the promotion of L. F. Murphy, assistant sales manager. Export shipments for the first five months of 1925 were approximately 50 per cent greater than during the corresponding period of last year, according to Mr. Hadden.

Kissel Motor Car Company Announces Price Reductions

Standard Models Undergo Several Changes and Two Speedster Designs Are Added

HARTFORD, Wis., July 6.—Announcement is made by G. A. Kissel, President of the Kissel Motor Car Company, that prices on all popular models in the Kissel line have been reduced.

The price of the five passenger six cylinder brougham has been lowered from $1895 to $1795. The eight cylinder four door brougham sedan has been reduced from $2550 to $2395 f. o. b. factory.

In addition to this price reduction the factory announces certain new improvements in models. All models are now mounted on the new Kissel stabilized chassis which is said to mean a frame with greater rigidity and longer life.

The eight cylinder special sedan mounted on 137 inch wheelbase now has wide 32 inch doors. In addition to these changes Kissel is now building a four passenger open speedster and four passenger closed speedster.

The company also is bringing out wider doors on all four door models. These doors are 30 inches wide. Moreover, the windows which are low and extremely wide enhance the appearance of the cars.

Race Driver of Automobile's Early Day, Now Merchandising

COLUMBUS, O., July 6.—T. W. Pickard, head of the T. W. Pickard Co., Ohio distributor for Panyard Piston rights has the distinction of being among the first racing drivers of the Middle West if not the country at large. In 1903, while superintendent of a carriage factory he conceived the idea of building an automobile which he finshied early in 1904.

It consisted of a horizontal air-cooled motor with two cylinders. He named it the Imperial and exhibited at the Madison Garden Show of 1904 and took many orders. He entered the Glidden tour in the race from Pittsburgh to St. Louis with about 250 cars of all kinds, winning the tour by rolling into St. Louis first. His place of business which was recently opened is located at 228 North Fourth St., Columbus.

GENERAL ISSUES WARNING

AKRON, O., July 6.—The General Tire & Rubber Co. has sent word to its distributors throughout the country, warning them against over-stocking with tires now that prices are rising. The warning includes an intimation that by buying more tires now than are needed for normal requirements, the manufacturers are forced to buy rubber at a high price, and dealers automatically raise prices on themselves and on the public.

Truck and Bus Delegates Bolt From A. A. A. Meeting

Hopes of National Organization for Mutual Aid Blasted at Convention

NEW YORK, July 6.—The automobile industry's hope for a powerful and unified national organization of truck and bus operators, that would be able to function effectively on such matters of common interest as taxation and highways, received a setback at the meeting of the American Automobile Association which just ended at Atlantic City.

A virtual secession took place there of a group of truck and bus men, mainly presidents of local organizations, who had until then been active in the Truck and Bus Division of the A. A. A., which was supported by the National Automobile Chamber of Commerce. It was the avowed intention of these men, headed by Ralph W. Sanborn of Cleveland and George P. McCallum, president of the Michigan Transportation Association, to establish as an independent organization the National Bus Association.

The National Bus Association was formed recently in Chicago at a meeting in which the Truck and Bus Division of the A. A. A. was prominent, and the burning question immediately arose as to whether it should be affiliated with the car owners' body. At the Atlantic City meeting disagreement on this point came to an issue, and resulted in the secession of the executive committee of the National Bus Association.

The "independents," as they have termed themselves, have expressed resentment at what they declare to be the intention of the manufacturers to dominate the truck and bus owners activities. The manufacturers, on the other hand, declare that they are interested in cooperation on matters in which both makers and owners are concerned.

The up shot of it all is that the tendency of local association and local owners to fight among themselves is complicated by disagreement on a national scale.

DUESENBERG PRICES

INDIANAPOLIS, July 6.—A new price list of Duesenberg models has been issued, quoting only the price on the five-passenger phaeton and the prices of the two chassis lengths. The four passenger coupe which was formerly listed at $7,500, has been discontinued by the company, but officials expect to replace the coupe with another model in a short time.

The list follows:

Duesenberg roadster—On application.
5-pass. phaeton—$6,650.
4-pass. sport—On application.
7-pass. phaeton—On application.
5-pass. sedan—On application.
7-pass. sedan—On application.
Chassis 134-inch—$5,550.
Chassis 141-inch—$5,650.

Sprinter and Buick Race in Traffic

MILWAUKEE, July 6.—George Breitbach, Buick dealer in West Allis and South Milwaukee, suburbs of Milwaukee, staged a novel publicity stunt when he engaged John J. Seiler known as "The Flying Yank," and a distance runner of great ability, to race through Milwaukee streets against a Buick.

The car was operated in high gear only and Seiler had advantages in the way of being able to go through traffic signals when the car had to stop. The race attracted considerable attention, largely because of the recent appearance in Milwaukee of Paavo Nurmi and the subsequent interest in running events.

Reo's June Sales Increase 90 Per Cent Over 1924

LANSING, July 3.—June with an increase of 90 per cent in shipments and company sales as compared to June 1924 was one of the best months in the history of Reo. The shipments last month according to sales officials means sales since dealers buy only as actually required.

The company went over into July with a third as many orders as its total June record. Heavy buying the latter part of the month boosted the July production schedule.

Because of the increasing demand for the new heavy speed wagon and also for the motor busses the company will not make the annual vacation general this year. The bus plant which is producing the new heavy is included in this decision as the sales are too heavy, company officials assert, to let down for two weeks.

Continental Motors Declares Regular Quarterly Dividend

DETROIT, July 6.—At the regular meeting of the board of directors of Continental Motors Corporation held recently the quarterly dividend at the rate of 80 cents per share per annum was declared payable July 30 to the stockholders of record July 15.

With this dividend, the company will have paid to stockholders during 1925 the sum of $1,056,507.

In discussing prospects for business for the coming quarter, Ross W. Judson, president of the company said, "Our production and sales are more than holding their own, and indications point to a very successful quarter. Our customers are maintaining their schedules, and it is particularly gratifying to us to see the way our business in the industrial division is increasing. Both our Muskegon and Detroit plants are operating nearly to capacity, which is rather unusual at this time of the year."

Vice-President Haskell of G. M. Export Co. Resigns

L. R. Rumely to Succeed As General Manager—Harry Tipper in Charge of Sales

NEW YORK, July 6.—J. D. Mooney, president of General Motors Export Co., announces that A. L. Haskell, director, vice-president and general manager of the company, has resigned to engage in business enterprises that will permit residing more permanently in New York.

Leo M. Rumely, vice-president and regional director of Australasia, has been appointed to succeed Mr. Haskell. Mr. Rumely joined the export company in 1920 and during the last two years has been located in Sydney, Australia. Prior to his connection with General Motors he was engaged in the development of the implement business in foreign countries. His experience covers residence in Canada, South America and Russia.

J. H. Dreibelbis, who has been general sales manager, has been elected a director and vice-president. He will serve as executive assistant to Mr. Mooney.

Harry Tipper, secretary of the Chilton Class Journal Co., will become general sales manager of the General Motors Export Co., July 15. He has been engaged in sales and marketing work for the last 15 years, following his early work in engineering and shop management in England. For several years he was connected with sales engineering work in the marketing of mining machinery, and in 1908 joined the Texas Co., as sales engineer. Later he became advertising manager and member of the sales committee of that organization, remaining there until 1907 when he was made manager of The Automobile, now Automotive Industries.

STUTZ ADDS DEALERS

INDIANAPOLIS, July 3.—The merchandising department of the Stutz Motor Car Company reports that new dealers and distributors are being added to the organization steadily and that sales are continuing at a normal rate, keeping pace with normal factory production, which is being continued into the third quarter. The newest dealer additions reported are Harlan Fengler, Inc. of Hollywood, California, and the San Diego Stutz Company. Mr. Fengler, who heads his own selling organization, is the youthful speedway star who has retired from racing to merchandise Stutz cars.

STROMBERG OPENS K. C. BRANCH

CHICAGO, July 6.—Stromberg Motor Devices Company, builders of Stromberg carbureters, has established a new factory branch at 1809 McGee street, Kansas City, it was announced here today. It was found necessary to establish the factory branch on account of sales expansion in the Kansas City territory.

Indianapolis Used Car Trade In Good Shape, Survey Shows

About Four-Fifths of Present Stock Consists of Current Makes and Models

INDIANAPOLIS, July 6.—The used car inventory compiled by John Borman, manager of the Indianapolis Automobile Trade Association, during the latter half of June shows that there was a total of 1,615 cars on hand at that time in the city as reported by 69 distributors, dealers and used car exclusive dealers of the city. The cars were divided into three classes; current models and makes that are sold here dating from 1920 to the present; miscellaneous types and models of cars for the same years but which are not so readily saleable because there are no dealers for them in the city, and obsolete makes; and third, models of all sorts manufactured from 1912 to 1919.

Of the 42 makes of cars which are actively marketed here by new car dealers the total shows that almost four-fifths of the total stocks of used vehicles on hand at present are vehicles of this type, not more than five or six years old and but 50 of them are of earlier vintage than 1920. Thus approximately 1,300 of the total of 1,615 cars are current, active stocks of 42 makes not more than four years old. The black side of the sheet shows 273 vehicles of inactive types, with 236 ancient used vehicles from six to fifteen years of age.

The survey made a year ago with 61 dealers reporting showed 2,170 cars on hand, so this report shows a distinct gain of at least 20 per cent. While some dealers in both surveys may have failed to report exactly, the general improvement is none the less proved and the classification of all cars attempted for the first time in the current report shows that the great majority of all used cars are saleable, profitable stocks. Further the present total about equals the average month's sale of new cars in this county, as shown by monthly registration figures from the state registration bureau, and proves that the used car trade here is in a healthy state with approximately a month's supply on hand. The dealers here consider Orman's report and survey the most helpful one ever made.

N. A. F. C. Releases Brief on Recovery of "Booze Cars"

CHICAGO, July 6.—A seventeen page brief, prepared by John W. Creekmur, Chicago counsel for the National Association of Finance Companies, setting forth all court decisions having a bearing on recovery procedure in cases where automobiles have been confiscated for transporting liquor, has been released by Charles C. Hanch, general manager of the national association.

The brief has been issued to members of the organization, and covers fully the subject of title, recovery by the lienor of a car used without his knowlege for the transportation of liquor, and many other phases of the present problem which has arisen through confiscation of so-called "booze cars" by federal or state authorities. In many cases the title is still in the finance company, and the brief quotes decisions of various courts as to how the lienor may be protected should the car be confiscated.

"The brief is one of the latest instances of the aid the national association is extending to the member companies," said Charles C. Hanch. "It would cost an individual company between $500 and $1000 to prepare such a brief for its reference in cases of this kind."

DIVIDENDS DISTRIBUTED

TOLEDO, July 6.—Nearly a million dollars in dividends was distributed to stockholders of Toledo automotive plants this week. The Electric Auto-Lite Co., paid out $375,000 to its common shareholders, the Willys-Overland paid out $385,866 to its preferred stockholders, and several of the other closed corporations distributed earnings at the semi-annual date.

Pierce-Arrow Has Coach Design Body

THE Pierce Arrow Motor Car Company is the latest to reduce the differential in price between open and closed cars. On the model No. 80, lighter six cylinder chassis, a new custom built coach selling at $3,150, $55 less than the 4 passenger phaeton, has been announced, this being the first offering of a coach design body by Pierce Arrow.

Built entirely at the Buffalo factory, the body framework is constructed of Northern white ash having laminated joints whereever twisting or weaving strains occur. Both doors are double braced and fitted with weather strips to keep the body moisture proof. The body is covered with aluminum panels, hand hammered to provide perfect contour.

Six color schemes are offered for the exterior finish while a wide range of soil-proof upholstery is available. Entrance and exit from the tonneau without folding the tilting front seat is possible through the 36 inch doors, the latter carrying across the bottom a strip of carpet to match the velvet floor covering to protect the upholstery from feet marks. The rear seat is 50 inches wide, the 42 inch space between the two seats allows comfortable riding for the tallest passengers.

Royersford springs and curled hair are used for the cushions while the interior hardware is of Butler silver finish. A trunk protected by bars is carried at the rear and the interior equipment includes, silk roller curtains for the rear and rear quarter section, silk toggle grips, mahogany vanity and smoking cases, carpet covered foot rest and a dome light.

Southern Jobbers Will Meet at Asheville, N. C., July 23-25

Merchandising, Better Business Relations and Outlook Will Be Among Subjects Discussed

CHARLOTTE, N. C., July 6.—Officers of the Southern Automotive Jobbers' Association selected Asheville, N. C., as the place for holding the Summer convention, July 23-25 being the dates, according to an announcement by Thomas McP. Glasgow, of Charlotte, president, who made public details of the program. Holding the meeting at that famous resort city is expected to result in an unusually large attendance, Mr. Glasgow said.

One of the widely known men in the automotive trade world who will address the convention is Earle Hennecke, of Long Island City, N. Y., president of the Boyce Motometer Company. His address will deal with merchandising problems.

Arthur Mogge of Chicago, merchandising director of the Automotive equipment Association, will discuss that association's plans to create better business relations. Economic phases of the automobile jobbers' problems will be discussed by E. B. Galliher, of Norwalk, Conn., and a statistical analysis of the business outlook for the automotive jobbers will be given by Arthur Hope, of Hartford, Conn. In addition to the set addresses, members will engage in a general discussion of the numerous important business problems confronting them, Mr. Glasgow said.

The program also includes several elaborate social events.

Chicago Registrations Surpass 1924 Mark in First 6 Months

CHICAGO, July 6.—Automobiles paying a wheel tax to the city of Chicago for the first six months in 1925 numbered 259,759, City Collector Keane announced today. The total number registered in 1924 was 260,887, pointing to the registration in 1925 much greater than that of 1924. It was expected that the old total would be surpassed within a few days.

Delivery trucks have passed the old total, numbering 45,180 for the first six months while the 1924 aggregate was 44,931. The number of horsedrawn vehicles decreased from 21,071 to 17,452.

Money collected by the wheel tax office thus far this year amounts to $3,690,520. The first six months of 1924 brought in $3,374,170 and the total for the entire year 1924 was $3,562,458.

NEW AUBURN DEALERS

AUBURN, Ind., July 6.—New dealers recently added to the Auburn Automobile Company organization are:

J. A. Burkley, Findlay, O.; Fitz Auto Company, Linton, Ind.; Gallitto Motor Sales, Cleveland, O.; Frank S. Feeser Co., Indianapolis; W. C. Sacks, Penn Yan, N. Y.; Radio Motor Sales, 1834 W. Madison Street, Chicago, and Bondurant Motor Sales, Evanston, Ill.

New Oregon Laws Expected To Curtail Thefts of Cars

Three Statutes Effect More Rigid Control Over Title and Its Transfer

PORTLAND, Ore., July 3.—New mortor vehicle laws enacted by the last session of the Oregon legislature are expected to curtail in large measure automobile thefts in this state. Myer C. Rubin, general attorney for the Oregon State Motor Association, in outlining the provisions of the new statutes said:

"Three measures have a direct bearing on this question, although two of them only are included in the motor vehicle code and the other is general in its scope.

"Under the new provisions regulating the matter of title to automobiles, all applications for licenses made after July 1 must be accompanied by an application for certificates of title.

"This certificate, however, must be formally transferred whenever the car is sold. The placing of such records on file will, in a very shart time, provide a source of information which will be invaluable in keeping tab on the ownership of machines.

"Further clarifying the situation in Oregon is an improvement in the definition of terms. A distinction is now made between the owner of the car and the legal owner. In a case where a man purchases a car on time, and the dealer still holds actual title, the purchaser is listed as the owner, but the seller is still the legal owner, until the liens have been discharged.

"The general statute which materially affects the matter of theft of cars is one making it a crime to alter, counterfeit or change a serial number of any manufactured article with intent to defraud. A penalty of from $20 to $100 or six months in jail is provided for so doing, and also for selling the article without advising the purchaser of the change."

Sales Register Big Advance In Louisville During June

LOUISVILLE, Ky., July 3.—Sales of both new and used cars increased during June in Louisville and it is expected that figures for the entire month will show a decided increase over May of this year and June of last year. Sales on low priced cars are slightly off while dealers report an increase of nearly 50 per cent in sales of the car next above in price.

Medium priced cars show an increase of 20 per cent over the same month last year and about one-third more have been sold than in May of 1925. Higher priced automobiles are moving well. The check indicates that used car stocks are lower than usual with sales equal to if not slightly better than those of new cars.

General business conditions are excellent; very little unemployment is reported and these factors combined with good weather are pushing sales and causing repossessions to show a decided decrease each month. Collections are improving.

Tire dealers report a decided improvement in sales of balloons and regular pneumatics, sales being about 30 per cent above the same period last year. Truck solids are off a little but it is predicted that this branch of the tire business will improve during the summer months, some dealers expect record sales of balloons and regular pneumatics.

He Flies to Market

When Charles Blosser of Belleville, Kansas, one of the dealers furnished by the Chevrolet Motor Company's Kansas City branch, finds himself short of Chevrolet motor cars with which to make deliveries he no longer hops a train and spends seven hours in getting to the wholesale office in Kansas City. Mr. Blosser now flies to market in his own plane. On the left is the pilot

New England Racing to Be Revived

BOSTON, July 3.—New England is going to see a revival of motor racing which will recall memories when some of the best drivers developed in the United States were from Boston. On July 4 and Columbus Day, Oct. 12, there will be races at 100 miles on the new Rockingham Park Speedway at Salem, N. H., an hour's run from Boston. Jack Le Cain, former race driver, with several other men, bought the track recently from the Searles estate for $100,000 and they are spending half as much more putting it in shape. Le Cain has De Paolo, Milton, De Palma, Cooper, Elliott, and a number of other speedway stars signed up for the first opening July 4 when $20,000 will be given in prizes. He has received the A. A. A. sanction. The track is being reconstructed and it is expected that the drivers will show a speed of 100 miles an hour. Capt. E. V. Rickenbacker has been invited to pace the drivers on the first lap.

North Carolina Dealers Are Reporting Increased Business

CHARLOTTE, N. C., July 3.—The majority of automobile distributors in this center, third in importance in the South, are reporting a "rushing" business, with only two or three inclined to be gloomy. The Ford Motor Company's branch here has reported that total sales in this territory for the ten-day period ended June 10 exceeded by 500 cars the sales for the previous like period. Sales for the first ten days of June totaled 1,863 cars, the largest volume of business handled in a like period in this territory since it was established about two years ago with its present limits.

While this tremendous increase in sales is continuing, figures already in hand show, it will be some time before complete supplementary figures will be available, it was explained. An increase of at least 200 cars over the total for the first ten days of June was forecast for the second like period.

Production at the Charlotte plant has slumped sharply, for two important reasons, since May 1, when the local plant was operating on a schedule of about 450 cars per day. Production now on a basis of 221 cars daily, compared with 353 cars daily the middle of May. This decrease early in May was largely attributed to a slump in buying by farmers, who then began to devote almost all their time to field work in this territory.

Since that time, the opening of the Norfolk, Va., branch plant has been an important factor in cutting production here. Officials of the eompany here explained that the Norfolk plant can ship cars as far south as Raleigh, N. C., cheaper than they can be shipped from the Charlotte branch.

Cleveland Has New Sport Sedan at $1725

Cleveland Sport Sedan which is mounted on the model 43 chassis and finished in blue, with black upper structure and fenders

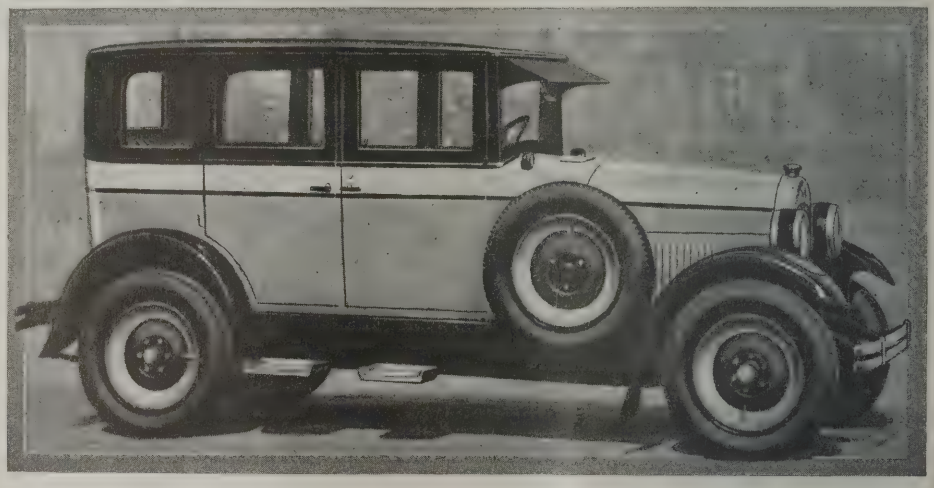
A NEW sport sedan mounted on the Cleveland 43 chassis and listing at $1725 has just been added to the line by the Cleveland Automobile Company. The latest 5-passenger closed model is patterned along the victoria type lines having oval windows with aluminum top bows built into the rear upper section and provided with an aluminum trunk rack and bars at the rear. The design of the body, which is by Fisher, gives the car a long, low hung effect.

Foch blue Duco with the beading in contrasting color, black finish above the belt and black fenders and running gear together with the nickel plated radiator shell carrying a motometer and bar gives the new model a very distinctive appearance.

Gray mohair of special shade constitutes the upholstery and color scheme. Comfort is provided by making the seats wide and high backed and providing an arm rest on each side of the rear seat.

Features of the body equipment are: Fisher "V-V" windshield and rectangular windows operated by crank regulators, instrument board finished in circassian walnut, silk curtain for rear window and dome light controlled by a push button.

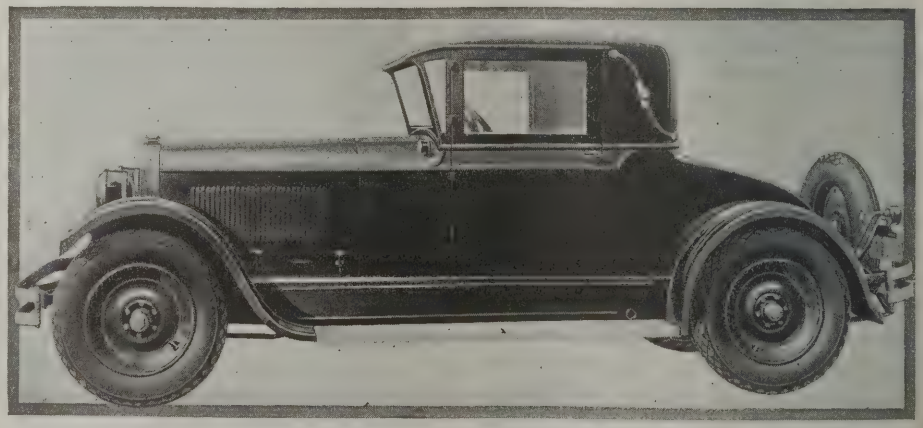
Additional items as standard equipment include, automatic windshield cleaner, sun visor, rear view mirror and cowl lights.



CANADA RUBBER RAISES

TORONTO, Ont., July 6.—Owing to rapid advances in prices of crude rubber, and in sympathy with the recent advances in quotations in the United States, prices locally have been advanced 5 per cent on tires and 10 per cent on tubes. It is stated that manufacturing costs warrant still higher prices in Canada, but that domestic competition is so keen that advances are held to very narrow margins. However, increasing costs of raw rubber may make it necessary for manufacturers to raise prices further on tires and other rubber goods.

Davis Announces a New Sedan



A NEW Davis Sedan, selling at only $200 more than the Davis phaeton, has been announced by the George W. Davis Motor Car Co., Richmond, Ind.

Three wide doors give easy access to both front and rear seats, and the interior of the car is exceptionally roomy. The interior of the car is finished throughout with upholstery of Baker velour. A new instrument board grouping, in which motor thermometer, oil gage, gasoline gage, ammeter and speedometer are assembled under an indirectly lighted oval glass panel, adds to the convenience of the driver.

The lines of the sedan are enhanced by a dual-tone finish, which is optional in combinations of either Algerian and Rolls-Royce blue or Brewster and Topango green, without additional cost. Radiator and bumpers are nickel-plated, and a spare disteel wheel is carried on the right side of the car. Balloon tires and Lockeed hydraulic four-wheel brakes are standard equipment. The new sedan is built on both the series 90 chassis and the larger Mountaineer series 91.

The Davis company also has announced price reductions of $200 on the Imperial and Berline sedans, bringing the prices of these models in the series 90 to $1,795 and in the Mountaineer series 91 to $2,095.

Gardner Eight-in-Line Foursome Cabriolet which has a windshield construction designed to eliminate "blind spots." There is a seat under the deck and a sliding plate glass window permits communication with passengers in the rear seat. The car with five Disteel wheels and 5.77 balloon tires lists for $2245, f. o. b., St. Louis

Paige-Jewett Opens Sales Contest to Close Oct. 1

Thirty Prizes Arranged in Four Classes, Each Being Trip to Factory

DETROIT, July 3. — Paige-Jewett salesmen throughout the country are given the opportunity of visiting the Paige-Jewett Motor Car Company factory here this fall at the expense of the organization through a competitive sales campaign which has just opened and which will close October 1.

Thirty prizes will be awarded in the four different classes that have been established, each prize being a trip to the factory with all expenses being paid by the organization.

The four classes under which the various contestants will compete are:

Class One. Limited to salesmen employed by distributors, dealers or associate dealers participating in the Paige direct-by-mail campaign in or having selling rights in cities of 500,000 population or over. Ten prizes will be awarded in this class.

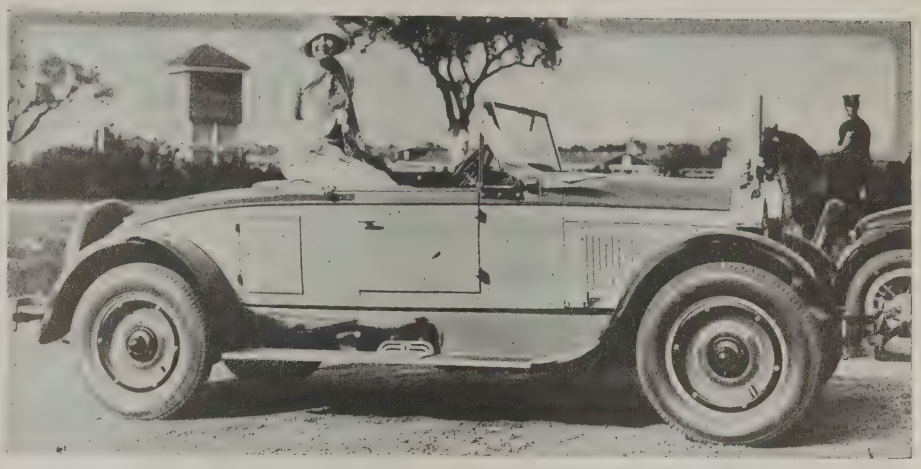
Class Two. Limited to salesmen employed by distributors, dealers or associate dealers participating in the Paige direct-by-mail campaign in or having selling rights in cities between 150,000 and 500,000 population. Ten prizes will be awarded in this class.

Class Three. Open to salesmen, retail sales managers and dealers employed by or being distributors, dealers or associate dealers participating in the Paige direct-by-mail campaign in or having selling rights in cities between 50,000 and 150,000 population. Five prizes will be awarded in this class.

Class Four. Open to salesmen, retail sales managers and dealers employed by or being distributors, dealers or associate dealers participating in the Paige direct-by-mail campaign in cities having under 50,000 population and having no selling rights in cities of larger population.

In case of ties, awards will be made on a basis of sales from October 1 to November 1. Should two salesmen be tied at the end of the contest for the last place in their class, the salesmen selling the most cars between October 1 and November 1 will be awarded the trip.

Canadian Ford Prizes Are Awarded in Sales Contest



FORD, Ont., July 6.—In the sales contest just ended which was held by the Ford Motor Company of Canada, Ltd., two prizes of $1,000 each and two of $500 were awarded to salesmen. In addition weekly prizes of $100 were awarded the salesmen who sold the most new and used cars to the classified trades and professions.

In the first divisions, the two salesmen who at the end of the 23 weeks lead the whole Dominion with the largest totals were H. P. Latter, Dominion Motor Company, Ltd., Winnipeg and N. H. Doyle, Universal Car Agency, Ltd., Windsor, Ont. In the second division, those who lead with the highest totals of clean sales were C. E. Jarry, of Jarry and Frere, Quebec, and E. McDermott, Vancouver Motors, Ltd., Vancouver, B. C.

The weekly prizes found their way to salesmen all over the country, the prizes being evenly distributed in the smaller and large communities.

The second phase of the Farmer-Ford-owner contest conducted by the Ford Motor Company of Canada, Ltd., has been brought to an end with thousands of farmers throughout Canada participating. The prizes were new Fords, Fordsons and attachments. Prizes were awarded in each of the eight branch territories throughout the Dominion.

Reo Roadster Wins Pageant

Feminine finery and latest fashions in motor cars went on parade in New Orleans together recently. The above is the winner of the pageant—the Reo roadster which Miss Lucille Mooney drove in the parade

ASSOCIATE DEALERS NAMED

SPRINGFIELD, Mass., July 3. — Continuing its policy of naming associate dealers for the Hudson and Essex, J. S. Harrington, Inc., has appointed these new concerns in that capacity: Jack Stone and Henry Puggeoli, Springfield; John C. Schmidt, Longmeadow; Zobek Motors, Inc., Indian Orchard; W. R. Taylor, West Springfield. Walter Phillips, associate dealer in Springfield, now conducts two establishments.

CHRYSLER SALES JUMP

WINDSOR, Ont., July 3.—Sales of Maxwell and the Chrysler six-passenger cars in Canada for the first six months of 1925 will more than surpass the total sales for 1924 or 1923, John D. Mansfield, president and general manager of Chrysler Motor Co., Ltd., of Canada, has announced. Ontario and Quebec are the provinces where the heaviest buying has been taking place. In the agricultural districts of the west, the outlook for the next three months is good. With good crops reported in the wheat sections and with indication of the farmers getting a good price for their goods, the sales of automobiles are expected to show a corresponding jump.

Ford Plans to Run Airplane Freight Service to Cleveland

DETROIT, July 3.—Extension of the air freight service of the Ford Motor company beginning July 1 to Cleveland has been announced here by the company. A third plane now being thoroughly air tested will be used. In case of emergency, one of the Chicago planes can be switched over to the new run.

Further extension of the air freight service is under consideration at the present time, although plans are still indefinite and may not assume shape for months. These extensions would include Pittsburgh, Philadelphia, New York, Boston, Buffalo, and St. Louis.

The arrival of the air freighter next Wednesday will formally open the new Cleveland municipal aviation field. Its cargo will consist of a knockdown Ford chassis which will be assembled on the field and then driven away under its own power.

There also will be on board the plane, the first bundle of mail to be carried by plane between the Ford company here and its Cleveland plant and some packages sent along by members of the Ford family as mementoes.

Registrations in Mississippi Are Double Those of 1924

NEW ORLEANS, La., July 6.—142,600 motor vehicles were registered in Mississippi from January 1 to June 1, 1925, with license collections amounting to more than $1,500,000 which is in excess of the revenue received during the entire year of 1924, according to figures made public at the motor department of the state auditor's office in Jackson, Miss., recently.

A total of 134,657 vehicles were registered during 1924 in Mississippi, from which license collections of $1,125,908.72 were made. On June 1 of last year the motor registration had reached 108,136 as compared with 142,600 for the same period of 1925.

Milwaukee Sales Expected To Climb Throughout July

April, May and June See Lethargy Predominating Northern Field

MILWAUKEE, July 3.—July will witness a sharp increase in the number of automobiles sold in Milwaukee and Wisconsin, in the opinion of leading distributors of Milwaukee. The fact that many manufacturers will introduce new models during July is expected to have a decisive influence in stimulating sales to a point more on a level with last year. Anticipation of price cuts to occur in July or early in August is another factor prompting local expectation of big sales for these months.

During June there was a pronouncedly lethargic condition current in the automobile sales business in Milwuakee and Wisconsin. Distributors ascribed the lack of snap in the sales end largely to the fact that bank accounts of otherwise prospective buyers were not normal and that there was some stricture in the money situation as it affects the average citizen.

That May was not entirely a month of losses is well indicated in the experience of Nash, this company forging ahead to new records, with a May, 1925, sale of 538 as compared with only 317 for the same month last year. Another substantial gain was that of Hudson, 399 of these cars being sold in Wisconsin in May of 1925, as compared with but 215 in May, 1924. A big upward jump was taken also by Essex with May sales for this year of 430 as against only 337 in May, 1924. Studebaker sold 477 cars this May and 440 in May, 1924.

These gains while large in themselves, in many instances being as high as 66 per cent increase, are all the more noteworthy in the face of the general sales trend which is something like 30 per cent below May of 1924. It is patent then, that the cars listed as registering gains of 60 per cent, are in reality about 90 per cent above average. It is also a fact that the cars leading in sales gain in May are those which led in April and in March.

VELIE ORGANIZATION MEETS

MOLINE, Ill., July 3.—Distributors from all over the nation and district representatives of the Velie Motors Corporation were gathered at the plant here this week for the first of a series of distributors' sales meetings, announced recently by C. W. Hadden, general sales manager. Mr. Hadden pointed out that Velie sales in the last nine months have exceeded those of every corresponding month in the previous period, with the exception of one and predicted that July sales would exceed the 1924 month by 15 per cent. Export business in the first five months has increased 50 per cent over 1924 he said and gave every indication that this will be a banner year for the Velie.

MONTREAL ORDERS COACHES

MONTREAL, July 6.—Fourteen coaches to cost $146,818 have been ordered by the Montreal Tramways Company, for the bus services which it intends to operate beginning in August. Six are to be bought from the White Company, Montreal, at $9,550 delivered here; four from the Six-Wheel Company of Philadelphia, at $12,968 including delivery, duty and sales tax, and four from the Yellow Coach Manufacturing Company of Chicago at $11,661.52.

Hart-Parr Official Sees End of Tractor Troubles

PEORIA, Ill., July 6.—"The tractor industry has successfully passed through a most drastic liquidation with a handful of manufacturers still swimming," declared Melvin W. Ellis, general manager of the Hart-Parr Tractor Company at a meeting of 150 state distributors held in this city.

"The dealers of those who kept going during the hard times, are the ones who will reap the harvest of tractor orders which are certain to come during the coming year," he asserted. He predicted that sales for 1925 would be the largest of any since 1920.

In connection with the meeting, a dinner was served at the Creve Coeur club. Fifty bankers were presented and heard talks by factory representatives and leading distributors of Illinois.

REGISTRATIONS INCREASE

QUEBEC, July 6.—Compared to the same period of the year in 1924 the number of motor vehicles registered in the province this season has considerably increased. Last year's figures totaled 35,000 cars registered as against 45,000 this year.

Marmon Earnings $1,178,198 In First Six Months of 1925

INDIANAPOLIS, July 3.—A Nordyke & Marmon announcement released yesterday by President G. M. Williams shows that for the first six months the company made net earnings of $1,178,198, after all deductions for depreciations and contingency allowances. Mr. Williams reports that the progress of the company for the six months has been very satisfactory with sales steadily increasing. The retail selling organization expanded about 20 per cent in the last six months.

Shipments of Marmon cars for the six months have been almost 100 per cent ahead of the similar period last year and by reason of inventory reductions during the latter part of 1924 it has been possible to revolve the inventory at the rate of 10.28 times per year.

For the future Mr. Williams sees encouraging prospects with distributors and dealers finding that the high rate of selling will continue with late summer and fall business equaling the increase shown in the first six months.

Mooring Mast Completed At Ford's Detroit Airport

Flying Club Is Given 120 Acre Aviation Field on Lake Front by Realtor

DETROIT, July 6.—Two important events in aviation circles, the completion of the 210-foot dirigible mooring mast at the Ford Airport and the presenting to the local aviation club of a flying field, have just occured in this city.

Located in the center of 200 acres at Dearborn, the $250,000 mooring tower represents a decided advance in both engineering and mechanical principles and is the latest achievement of Henry Ford to make Detroit the world center of aviation. The mast, which is 45 feet taller than the one at Lakehurst, N. J., was completed in 30 per cent less time. Most of the steel employed in its construction was fabricated in the Ford mills.

Mooring is accomplished by means of lateral couplings extending out from the landing platform on the top of the tower and in the event of a gale of greater velocity than 60 m.p.h. threatening the safety of the airship while moored to the mast, the attachments will automatically let the dirigible loose.

Within a few days the "Shenandoah" is expected to arrive for trials at the mast, while it is rumored that a rigid airship of the latest and most modern type will be built within the coming year for the private use of the Ford family.

Lewis G. Pilgrim, noted realtor, has given to the Detroit Flying Club an aviation field of 120 acres on the lake front, 15 miles south of Cheboygan. It is planned to erect hangers to accommodate both land and water planes and to make the field a vacation camp and meeting place for Michigan aviators.

Connell & McKone Selected Boston Gardner Distributor

BOSTON, July 3.—The Connell and McKone Company has been appointed new and exclusive distributor of Gardner cars in New England. The company is one of the best known in this section of the country. For a number of years it handled the Willys-Overland line until the company made it a factory branch. When Flint came on the market, the company handled that line.

A few months ago, this was released and W. C. Durant established a factory branch in Boston. The Gardner formerly has been handled here by the Leghorn Motors Co. George M. Leghorn, its president, has announced that he will continue as retail dealer for the Boston territory under the Connell-McKone company. This will allow the Gardner Motor Co. a big representation throughout New England.

The Connell & McKone Company will operate from the salesrooms of the Leghorn Motors Co., one of the finest on Commonwealth Avenue.

Sale of New Cars Continues Satisfactorily in Salt Lake

Registrations for May Ahead of Those for April But Below Last Year

SALT LAKE CITY, July 3.—The sale of new cars continues satisfactory. Business might be described as about normal this time of year. Weather conditions during the early part of June were not satisfactory but are ideal now. New car registration in May included 1,659 passenger cars and 195 trucks compared with 1,249 passenger and 95 trucks for April. This compares favorably with May of last year when the registration showed 1,683 new cars and 133 trucks.

The used car market is improving though conditions are not yet entirely satisfactory and may not be for some time to come. Dealers in most cases are still allowing more for the used cars than they can afford.

The tire market is brisk, due in part at least to the increase in prices, and also to the increase in popularity of balloons. The general accessories business is satisfactory.

Collections are satisfactory, taking the territory as a whole. This is not only true of the automobile and accessory business but business in general.

The automobile business and allied industries would seem to have an excellent future as far as the next few months at least are concerned.

President Hardy Resigns From Olds Motor Works

LANSING, July 3.—Announcement is made that A. B. C. Hardy, president of the Olds Motor Works, had sent his resignation to the New York office of the General Motors asking to be relieved of his duties at once.

Mr. Hardy has no present plans for the future. He will stay in Lansing and will rest for some months, something that he has desired for some time.

In 1892, Mr. Hardy started in the carriage business and between that time and 1900 he was with the Wolverine Carriage Company of Davison, Mich., Diamond Buggy Company of Flint and the Durant-Dort Buggy Company also of Flint. In 1901 he made an exhaustive study of the automotive industry and in the following year organized the Flint Automobile Company, the first started in that city. Two years later he returned to the carriage business remaining in that field until 1909 when General Motors called him to Detroit and placed him in charge of the Welch-Detroit Motor Company.

In 1912 he organized the Little Motor Car Company of Flint which was later merged with Mason Motor Company and the Chevrolet Motor Company, Mr. Hardy becoming vice-president of the General Motors and in 1921 was made head of the Olds Motor Works.

"Wild Driving" Test Convinces

WASHINGTON, July 3.—A test designed to convince the motoring public that "wild driving" does not pay was conducted here this week by Traffic Director M. O. Eldridge in cooperation with a local newspaper.

Two automobiles were used in the test which started in the northwest residential section and ended in the heart of the business district, a distance of three and three-fourth miles.

Only two and three-fourths minutes were saved by the car which violated 50 traffic regulations on the brief trip over the other which started at the same time and came down through the morning traffic observing every regulation.

NEW GARDNER DEALERS

ST. LOUIS, July 6.—Following are new dealers added to the organization of the Gardner Motor Co., Inc., of St. Louis: Damrow & McIlhattan, Spencer, Wis.; N. F. String, Lemoyne, Pa.; J. E. Sides Motor Co., Corpus Christi, Tex.; Ralph B. Munson, Burlington, Vt.; Joseph LaBreck, Auburn, N. Y.; F. M. Bauer Motor Co., Elyria, O.; Irving A. Halpern, New York City.

E. R. Isaacson, Sister Bay, Wis.; Peterson, Nev.; W. S. Guy Motor Sales, Everett, Wash.; A. I. Hibbard, Jr., Buffalo, N. Y.; Phillips Garage, Minneapolis, Minn.; Mr. Chas. L. Smith, Olean, N. Y.

Preliminary Estimates Place June Output at 400,000

Best Former Mark Was 386,539 in Same Month of 1923

DETROIT, July 3.—Preliminary estimates for the automobile production for June gathered from shipments made from the various factories place it at slightly less than 400,000, although it will set a new all time record for June output. The best past production mark was made in June 1923 when 386,539 cars and trucks were manufactured in the United States and Canada. Of this number approximately 12,000 were produced in Canada.

In local automotive circles, it is expected that the July production will be below that of June but that in August the sales and production will show a distinct increase.

Lessening in the June production has been caused by the slackening of the output by factories given to yearly models. With new models scheduled to come out within the next 45 days, these factories are not expected to resume full manufacturing schedules until after their models have been presented to the public.

Some of the factories are experiencing an exceedingly brisk demand and are still at capacity production. Closed cars continue to rule heavy favorites.

25 Years Ago In the Automobile Industry
As Recorded In Motor Age

(*From* Motor Age, *July* 12, 1900)

American De Dion Company

NEW YORK, July 9.—With the return of C. J. Field from abroad comes the announcement that an American company with large capital and ample facilities will have the complete United States business of the De Dion-Bouton Co. of France for their motors and "motorettes," as the new company designates their light vehicles, corresponding to the French "voiturettes."

The new company will be known as the De Dion-Bouton Motorette Co., and will have its offices and factory in New York. They will immediately put on the market motors, motorcycles and motorettes of the type of the French De Dion-Bouton, with some modifications in details to suit American demands.

Anent the Foreign Makers

NEW YORK, July 9.—Whitney Lyon, who with President Chamberlain founded the Automobile Club of America, has returned from Europe.

He says that while the French turn out the fastest racing machines, they pay little attention to the aesthetics in their motor vehicles and they are far behind us in beauty of finish and design. He thinks the British are making the greatest practical progress of all the foreign makers.

Open Air Automobile Show

NEW YORK, July 9.—E. E. Schwarzkopf, manager of the automobile show and races at the Greater Inter State Fair at Trenton, September 24-29, says that fully two-thirds of the 30,000 sq. feet set apart in building No. 3 for the motor vehicle exhibit has been already engaged. No charge is made for spaces for exhibition of automobiles and accessories, but all applications must be filed with M. R. Margerum, secretary Greater Inter State Fair Association, Trenton, N. J., before July 15.

Madison Square Show

NEW YORK, July 9.—Official allotment has been made on the main floor of all the spaces save two for the show of the Automobile Club of America, at Madison Square Garden, November 3-10. These two will probably be allotted to the Waltham Manufacturing Co. and the American Electric Vehicle Co. A track for moving exhibition purposes encircles the floor and within this are the vehicle exhibits.

Along Automobile Row

COLUMBUS, O.—P. W. Frye and H. W. Curtin have formed the Curtin-Frye Motor Co., to handle Hudson and Essex cars as dealers.

ROCKFORD, Ill.—The commercial Credit Trust, financing automobile purchases and with a capital stock of $18,250,000, has appointed Ira L. Bell, pioneer automobile dealer as its branch manager in the office just opened here.

JEFFERSON CITY, Mo.—The Heisinger Motor Company has been appointed agents for the Hudson and Essex Motor cars.

DALLAS, TEXAS.—The Ferguson Motors Company, new distributors for the Hudson-Essex lines in the Dallas territory have taken a ten-year lease on a two-story building at 2210 Pacific Avenue.

AKRON, O.—The Mueller Steam Bus Co., has been incorporated with a $50,000 capital to manufacture and deal in automotive busses.

ST. LOUIS, Mo.—A new used car showroom has been opened at 3026-28 Locust Street by the St. Louis County Automobile Company to handle Willys-Knight, Overland and the Studebaker in Clayton.

INDEPENDENCE, Mo.—The Curran Motor Co., distributors for Velie Motor Cars, has moved to its headquarters from this city to 2425 McGee Trafficway, Kansas City.

DALLAS, Texas.—F. E. McLarty, president of the Nash-McLarty Motor Company, distributors for Nash and Ajax cars in the Dallas territory has established a branch house in Oak Cliff, a suburb of Dallas containing a population of more than 50,000.

BOSTON.—The Y. D. Service Garages, Inc., of Boston has just completed arrangements to have erected in Worcester a 500-car garage, to be known as the Y. D. Worcester Garage.

NEW ORLEANS.—The New Orleans Flint Company, factory branch of the Flint Motor Company has removed from its temporary quarters on St. Charles Street to a building with better display facilities at 845-847 Carondelet Street.

PHILADELPHIA.—The Pioneer Storage Battery Company, manufacturers of the Pioneer automobile and radio batteries, will move from 244 North 15th Street to a larger plant at 1341-43-45-47 Brandywine Street, Philadelphia on July 15th.

ST. LOUIS.—A new building erected at a cost of approximately $250,000 has been opened by the Franklin Motor Car Co. of Missouri, Franklin distributors in the St. Louis district.

CHICAGO.—George E. Sherman & Co., Inc. authorized Ford dealers formerly located at 2246 West Chicago Avenue, has moved to larger quarters at 1725 West Division Street.

DAYTON, O.—The Auburn Auto Sales Co., has been chartered with an authorized capital of $10,000 to manufacture and deal in auto parts, accessories and motor vehicles.

LOUISVILLE.—The Broadway Motor Sales Company, Chevrolet dealers, have moved from 849 South Third Street to Brook and Broadway. The new location was formerly occupied by the wholesale branch of the Chevrolet Motor Company which has been moved to the Inter Southern Building.

LOS ANGELES.—E. E. Booth, wholesale sales manager for the Paige Company of Southern California, announces the appointment of the following three new city dealers: H. A. Hogue, at 4021 South Western Avenue; Camp Motor Company, 116 North Western Avenue; Mutual Motors Company, 1047 South Grand Avenue.

DETROIT.—Joseph J. Riley formerly connected with Riley and Worden, Inc., has relinquished that connection to join the D. E. Meyer Co., Hupmobile and Flint dealers in the Detroit district, as sales manager.

MILWAUKEE.—The McGadzen-Doering Motor Co. has been organized at West Allis, Wis., to conduct a general sales business in autos and parts.

PORTLAND, Ore.—Charles H. Mead, well known to the automobile trade of Portland, for the last twenty years, has joined the executive force of the Braley Auto Company, Franklin distributors in Oregon.

FREEPORT, Ill.—Edgar C. Eels of Freeport has purchased the Freeport Paige-Jewett agency from Dexter Stocking of Rochelle and possession was given on July 1. The Palace garage will continue as the headquarters of the agency.

CINCINNATI.—The Mitchell Avenue Buick Co. is a new company which has been formed in St. Bernard, Ohio, a suburb of Cincinnati, to open a sales and service station to handle Buick cars.

DETROIT.—One of the best known dealer firms in Detroit, Lewis Brothers, Inc., is announced as a new member of the Hudson-Essex selling organization by Aaron DeRoy Motor Car Company.

LOS ANGELES.—McKemmy Smith has sold out his interests in his Moon dealership in Long Beach and has accepted the appointment of wholesale manager of Don P. Smith, Los Angeles, Southern California Moon distributors.

DES MOINES, Ia.—Harry E. Hitzel, Cleveland, Ohio, for three years with the service department of the Chandler factory, has become service superintendent for the Gibson Motor Company, local distributors for the Chandler and Cleveland cars.

NEW ORLEANS.—Paul H. Maloney, candidate for mayor of New Orleans in the last primary, and until recently commissioner of public utilities of the city of New Orleans is now Hudson-Essex distributor in this territory.

CHICAGO—Earl B. Bough, mechanical transportation engineer of Chicago, has been appointed special district sales manager of the middle west and western states by the Standard Motor Truck Company. His headquarters will be in Chicago.

MOLINE, ILL.—L. J. Brady, for 13 years connected with the Velie Motors Corporation and for the last two years a member of the Dean Motor company organization, has purchased the Five Points Garage in Moline, and will take active charge of the business.

SPRINGFIELD, MASS.—H. A. Hannum has been appointed general manager of the Moon Company of Springfield, Moon distributors and retailers. He formerly conducted the Sanford Street Garage in that city.

MEMPHIS, TENN.—Plans and specifications are being prepared for a building to be occupied by the Mack International Motor Truck Corporation, 672 Madison avenue.

LOUISVILLE.—Leo W. Kummert, well known to the Louisville automotive trade has joined with Douglas M. David in forming the David-Kummert Motor Company, direct factory dealers for the Overland and Willys-Knight in Louisville.

BOSTON.—Russell Burnett, for the past 10 years a member of the firm of Burnett & Sherman, Boston distributors for the Ford and later the Lincoln, has sold out his interest in that company and bought the Pilgrim Motor Company of Somerville.

MILWAUKEE.—Appointment of the Entringer Motor Co., Fond du Lac, Wis., as retail representatives for Gardner Motor Co. has just been announced. The company already handles the Chrysler and Maxwell cars.

MARION, Ill.—The Bracy-Kingsland Motor Company has been organized here with capital stock of $40,000. A garage has been opened at 512 West Main Street, and motor cars, trucks and tractor will be distributed.

WASHINGTON, C. H., Ohio.—The H. & E. Motor is the name of a new automobile concern recently chartered with a $15,000 capital to buy and sell autos, parts and accessories.

LOS ANGELES.—Walter E. Elbe, distributor for the Cunningham car for the state of California, announces the appointment of J. W. Culver as sales manager. Culver was formerly sales manager for the Lafayette Motors at Chicago and more recently was connected with the Lincoln agency in San Francisco.

CINCINNATI.—Wilbur H. Rechtin, former sales manager for the Herschede Motor Car Co., Cincinnati, has been named general manager of the Hodde Motor Co., Cincinnati, which is opening a new downtown agency to handle Star and Durant cars.

DETROIT.—The Weisman Motor Sales Company, 3639 Woodward Avenue has just opened up a new model accessory salesroom and service station in connection with its Woodward Avenue sales store.

ST. LOUIS.—The Yellow Drive-It-Yourself System, Inc., has opened its new building at 3524 Washington Boulevard. E. L. Hudson, vice president and general manager of the company has arrived from Chicago to take charge.

DETROIT.—Distribution of the Franklin cars in the Detroit territory has been placed in the hands of the Franklin-Michigan Co., headed by Charles Koerber and George Zuver as sales manager.

CLEVELAND, Ohio.—Papers have been filed with the secretary of state, chartering the Meinert Magneto Co., with a $25,000 capital to do a retail auto equipment business.

DAYTON, Ohio.—Papers have been filed with the secretary of state, chartering the Daytonia Garage Co., with an authorized capital of $5,000. The company was formed for the purpose of dealing in autos, parts and accessories as well as operating a general automobile garage.

LOS ANGELES.—The latest expansion along Los Angeles' Automobile Row was the formal opening recently of the new showrooms and service quarters of Mutual Motors, Inc., Southern California distributors of the Roamer and Gray cars and retail Paige and Jewett dealers.

MILWAUKEE.—Andrew H. Dahl, for the past fifteen years operator of the A. H. Dahl Co. of Kenosha, Wis., Ford dealers, has turned over active management of the business to Aad J. Dahl and Victor H. Dahl, his sons.

LOS ANGELES.—The new home of the factory branch of the Mack Motor Truck Company, is now nearing completion and will be one of the largest buildings in the truck distributing field in the United States.

NEWARK, O.—The Phalen & Cunningham Co., has been chartered with an authorized capital of $50,000 to deal in automobiles and accessories as an agency.

MILWAUKEE.—Formation of the R. H. Churchill Co. to deal in automobiles, machinery and accessories has been announced at Marinette, Wis.

With the Associations

Boston Dealers Elect

BOSTON, July 6.—The annual meeting and election of officers of the Boston Automobile Dealers' Association was held this week at which President John H. MacAlman presided. A report of the show committee stated that the annual exhibition held last March was very successful financially and the attendance was very successful financially and the attendance was very good. Also that the plan tried out of not having dealer tickets and reducing the admission from 75 cents, that called for payment of a war tax to 50 cents thereby eliminating such a tax, was worth continuing.

The election of officers followed. President John H. MacAlman was re-elected. John W. Bowman was moved up from treasurer to vice president, while F. A. Hinchcliffe, formerly treasurer, was requested to fill that position again. Chester I. Campbell was re-elected secretary and manager of the shows.

President MacAlman is Stearns distributor for New England. Mr. Bowman handles Marmon, while Mr. Hinchliffe is Jordan dealer.

The directors chosen in addition to the above were Charles E. Fay (Chrysler); Joseph S. Donovan (Studebaker); Albion L. Danforth (Cadillac); Otto A. Lawton (Franklin); John H. Johnson (Buick); C. P. Rockwell (Nash); George B. Kimball (Hudson-Essex) and W. C. Sills (Chevrolet). All except Mr. Lawton were re-elections.

Speaks on Service

LOS ANGELES.—T. A. La Belle, of the Pan American Oil Company, and Ethelbert Favary, of the Moreland Truck Company, were the featured speakers at the monthly meeting of the Service Managers Association of Los Angeles. J. H. Frost of the Don Lee Company, Cadillac contributors, was the chairman of the evening. La Belle spoke on "Service," and Favary on "Brakes and Fiction."

Dealers' Association Formed

SPRINGFIELD, Mass., July 6.—The Hudson and Essex Associated Metropolitan Dealers' Association is being formed here, having its first regular meeting today. Bi-weekly meetings will be conducted in conjunction with the retail department of J. S. Harrington, Inc., Hudson and Essex distributors here.

A membership fee of $100 a year is imposed, with a rebate of $2.50 for each meeting the member attends during the year. Harry W. Stacy, secretary of the Automotive Dealers' Association, has been chosen secretary of the new organization.

The members will take part in the annual clambaker of J. S. Harrington, Inc., and the Harrington-Hudson Co. of Hartford, Aug. 5. This will be attended by approximately 1,200 persons, or twice as many as last year.

Plan National Organization

SPRINGFIELD, Ill., July 3.—Initial steps in the organization of a national association of "Drivurself" agency owners, have been taken here. Officers were elected as follows: President, B. H. Smith, Springfield; vice-president, E. J. Slevin, Moline; secretary-treasurer, R. C. Harding, East St. Louis; directors, Hugh Robb, Bloomington; John F. O'Byrne, Champaign; Edward E. Van Huffel, Galesburg; and R. C. Daugherty, Danville.

A manager-secretary was chosen in the person of H. C. Bradfield, Chicago, who will devote his time to expanding the organization.

The object of the association is to secure greater protection to rent-a-car concerns, and also to exchange experiences and ideas in order to promote the welfare of the membership. Rental companies in every state will be urged to affiliate.

Ohio Plans Shaped

COLUMBUS, O.—July 3.—Plans are already being shaped up by the officers and directors of the Ohio State Automobile Association, following the recent annual convention, for a year of militancy in taxation, highway improvement, and safety activities, with special emphasis on preparations for entering the legislative arena in a more aggressive and effective way than ever before.

This statement came from Secretary Chas. C. Janes, with the announcement that the first meeting of the association officials would be called soon to organize for the year's work.

Retiring as president of the Ohio State Automobile Association after three years spent as leader in organizing Ohio motorists as the most powerful body of its kind in the world, Fred H. Caley sounded this keynote for the future.

At the annual convention, delegates representing 150,000 organized motorists re-affirmed the association's opposition to the gasoline tax in addition to other motor vehicle taxation, and voted unanimously to consolidate their resources politically in the interest of motor vehicle owners.

Secretary Janes announced that during the year the only five counties of the state not now represented in the Ohio State Automobile Association would be made the scene of special organization activities.

Texas Body Elects

CORPUS CHRISTI, Texas, July 3.—George F. Holden, president of the Crockett Automobile Company, was elected president of the Corpus Christi Auto Trades Association at the recent annual meeting of the organization. R. M. Yantis was named vice-president and C. V. Twyman secretary and treasurer.

St. Louis Wins Honors

ST. LOUIS, July 6.—The St. Louis district office of the White Truck Co. received the bronze plaque awarded it in a recent nation-wide sales contest, at a banquet at Hotel Chase last week. Vice-president George F. Russell in charge of the western region made the presentation

Stanley P. Seward, advertising manager of the White Co., and his assistant, Charles E. Oswald, came to St. Louis for the dinner as did Vice-president Saunders Jones from Atlanta, Ga.

Reward Is Offered

PORTLAND, Ore., July 6.—At the regular monthly meeting of the Oregon State Motor Association a resolution was adopted offering a reward of $100 for information leading to the arrest and conviction of any driver of a motor vehicle who causes the death of one or more persons on any street or highway of Oregon through an automobile accident, and fails to report such accident to the proper authorities.

Tire Dealers Meet

ST. LOUIS, July 6.—The Cupples Co., acted as host to the members of the Associated Tire Dealers of St. Louis at a special meeting held last week at the Cupples Co. plant, Seventh and Spruce streets.

Bailey F. Kahl, tire sales manager, of the firm entertained the members before the meeting with a concert by the Rhino Cord Orchestra.

Kahl, who has just returned from a tour of the east, spoke on the prospects of the tire business in the immediate future. He discussed the great advance in the price of crude rubber and said it seemed Great Britain was largely responsible because of the export measure she imposed on her colonies which produced the preponderance of the supply of crude rubber.

Consider Rubber Problem

LOS ANGELES, July 6.—C. R. McCoslin, sales manager of the Los Angeles factory branch of the Firestone Tire & Rubber Company, was the principal speaker at the monthly meeting of the Automobile Sales Managers Association held at the Los Angeles Athletic Club. Thomas Duggan, Los Angeles, sales manager of Chamber & Lyon, automotive jobber, spoke on "The Spark Plug."

The general subject for discussion at the meeting was on "Market Analysis," and was led by H. C. McVey, passenger car sales manager of William E. Bush, Inc., Pierce Arrow distributor; D. W. Ferguson, sales manager, Reo Motor Car Company of California, and J. L. Dixon, of the J. V. Baldwin Company, Chevrolet dealer.

Rim and Wheel Distributors Organize to Protect Dealer

Standardization of Service Methods and Catalogs Is Association's Plan

NEW YORK, July 3.—Organization of the Rim and Wheel Distributors Association, recently accomplished at a convention in the Morrison Hotel, Chicago, brings together, for purposes of cooperation and standardization, seven of the largest rim and wheel distributing concerns in the country, doing an annual business representing several millions of dollars.

Standardization of service methods and catalogs, and protection against the sale of surplus stocks thrown on the market when manufacturers change rim and wheel types and sizes, are the chief purposes of the association, as described by John F. Creamer, manager of Wheels, Inc., New York City. Mr. Creamer is a director of the association and the officers are:

President, Charles Fields, Motor Industries Corp., Kansas City; vice president, Robert Nierman, Motor Rim Manufacturing Co., Cleveland; secretary-treasurer, Charles A. Sartain, Motor Rim and Wheel Co., Chicago.

Mr. Creamer said that the Association is composed of distributor representatives of these seven wheel and rim manufacturers:

Motor Wheel Corp., Lansing; Firestone Steel Products Co., Akron, O.; Kelsey Wheel Co., Detroit; Jackson Steel Products Co., Jackson, Mich.; Hays Wheel Co., Jackson; Motor Wheel Corp. of America, Buffalo, and Budd Wheel Co., Philadelphia.

OFFERS PREFERRED STOCK

MONTREAL, July 6.—The Yellow Cab Company of Montreal, Ltd., operating a taxicab transportation business in this city, is offering for public subscription $100,000 of its 7 per cent cumulative preferred stock at par, carrying a bonus of 25 per cent in common stock. The authorized capitalization of the company consists of $750,000 preferred stock divided into 7,500 shares of the par valve of $100 each, and $250,000 of common stock divided into 50,000 shares of the par valve of $5 each. The entire amount of common stock and $368,300 of preferred has so far been issued.

Night Air Mail Between Chicago and N. Y. Started

WASHINGTON, July 2.—The Post Office Department last midnight began the operation of an overnight air mail service between New York and Chicago, further reducing the mailing time between those centers.

The rate for the service has been fixed at ten cents for each ounce or fraction of a ounce. The charge includes not only transportation by air, transportation to and from the air mail route, but beyond as far as two-cent postage will carry the ordinary letter.

The Post Office Department reminds that every envelope should be prominently endorsed "Via Night Air Mail." Any mailable matter may be sent by air, including parcels up to 50 pounds in weight and not exceeding 84 inches in length and girth combined.

Air mail may be insured, registered and sent special delivery. Air mail letters, mailed in New York or Chicago at the close of the business day will be delivered in Chicago or New York on the first carrier run the following morning.

Coming Motor Events

Automobile Shows

Boston ..... Oct. 10-17
World's Rubber and Tropical Exposition.

Dallas, Tex. ..... Oct. 10-25
Annual Automobile Show, State Fair Automobile Building, under the auspices of the Dallas Automotive Trade Association. J. W. Connell, manager.

De Pere, Wis. ..... Aug. 31-Sept. 21
Annual Automobile Show under the auspices of the Automobile Division of the Green Bay Association of Commerce.

Fresno, Cal. ..... Sept. 28-Oct. 3
Fresno Motor Car Dealers Association. Fifteenth Annual Show in connection with Fresno District Fair.

Grand Rapids, Mich. ..... Sept. 7-12
Grand Rapids Automobile Dealers Association, Seventh Annual Show in connection with West Michigan Fair, Wm. T. Morrissey, manager.

Oklahoma City, Okla. ..... Sept. 26-Oct. 3
Annual State Fair and Exposition. Passenger cars and accessories.

Sacramento, Cal. ..... Sept. 5-13
Automobile Exhibits in Diamond Jubilee State Fair.

Shreveport, La. ..... Oct. 24-Nov. 8
Twentieth Annual State Fair showing passenger cars, trucks and tractors.

New York ..... Nov. 15-21
Twenty-first Annual Automobile Salon.

Wheeling W. Va. ..... Sept. 7-12
Wheeling Automobile Dealers Association, Eleventh Annual State Fair, Exposition Building.

White River Junction, Vt. ..... Sept. 15-18
Nineteenth Annual Twin State Fair. Passenger cars, trucks and accessories. F. L. Davis, manager.

Chicago ..... Jan. 30-Feb. 6
Twenty-sixth Annual National Automobile Show and Eleventh Annual Automobile Salon.

Danbury, Conn. ..... Oct. 5-10
Eighth annual fair, Danbury Fair Auto Building, under direction of Danbury Agricultural Society, passenger cars, trucks, tractors, accessories, etc., H. Lage, manager.

Boston ..... Oct. 10-17
World's Rubber and Tropical Exposition, Mechanics Hall, Chester I. Campbell, manager.

Chicago ..... Sept. 28-Oct. 3
Fourteenth annual Safety Congress and Exhibit, Rainbow Room, Hotel Winton, under direction of National Safety Council, A. M. Smith, business manager.

Salt Lake City ..... Oct. 1-7
Third annual Automobile Show and forty-seventh annual State Fair in Coliseum Building, Wm. D. Sutton, supervisor of Automobile Show.

Foreign Shows

Berlin, Germany ..... Nov. 26-Dec. 6
Annual Automobile Show in the Kaiserdamm.

Buenos Aires, Argentina ..... Oct. 3-13
Pan-American Road Congress.

London, England ..... Oct. 8-17
Olympia Passenger Car Show.

London, England ..... Oct. 29-Nov. 7
Annual Truck Show.

Races

Altoona, Pa. ..... Sept. 7

Charlotte, N. C. ..... Oct. 24

Fresno, CaCl. ..... Sept. 30

Laurel, Md. ..... Oct. 10
A. A. A. Race, Baltimore-Washington Speedway.

Los Angeles, Cal. ..... Nov. 26

Monza, Italy ..... Sept. 6
Italian Grand Prix Race.

Paris Montlhery track ..... July 26
French Grand Prix.

Conventions

Buenos Aires, Argentine ..... Oct. 3-13
Pan-American Road Congress.

Cleveland ..... Sept. 14-19
Annual Convention and Exposition of American Society for Steel Treating.

Cleveland ..... Sept. 15-16
S. A. E. production meeting and exhibition.

Des Moines, Ia. ..... Nov. 12-13
Automotive Merchants' Association Convention.

Everett, Wash. ..... Aug. 3-4
Annual state convention Washington Automotive Trades Association.

Montreal, Que. ..... Oct. 7-10
Fall convention of the Motor and Accessory Manufacturers Association.

Philadelphia ..... September
S. A. E. Automotive Transportation meeting.

Pittsburgh, Pa. ..... Oct. 12-14
Pennsylvania Automotive Association Convention.

St. Louis ..... Nov. 17-19
Annual Convention of National Tire Dealers' Association.

Tuscaloosa, Ala. ..... July 20-21
Midsummer meeting of the Alabama Automotive Trades Association.

Automobile Tires and Tubes Increase in Price 10-15 Pct.

Goodyear, Miller and General Lead Advance Caused by Rise of Crude

AKRON, O., July 3.—Most of the leading rubber manufacturers put into effect his week increases of about 10 to 15 per cent in prices of automobile tires and nner tubes. Ford size balloon tires are boosted slightly less than other casings.

Official announcements of price revisions are made by the Goodyear Tire nd Rubber Co., Miller Rubber Co., and General Tire and Rubber Co. Other ompanies are preparing revised lists to ecome effective at once.

Tube prices are boosted 33 1/3 marking one of the largest single revisions in he history of the industry by General, ut this company's schedules have been ut of line with its competitors. This is he third General tire advance to be made within the past three months, due to the 00 per cent rise in the crude rubber narket since the first of the year.

The British restriction act has been argely blamed for forcing up the cost f the raw material, but the unexpected eavy production of tires this year also elped to deplete stocks and create a emporary shortage of rubber. Spot rubber sold early this week at 90 cents a ound, compared with 17 cents last year. The market eased off below 85 cents later n the week.

Goodyear officials express the opinion n a statement tonight that the abnormal igh rubber prices will not continue ndefinitely. They indicate also that he manufacturers are absorbing part of he higher cost of crude rubber, rather han pass it all on to the consumer.

Huntington Dealers Start "Buy-New-Car" Campaign

HUNTINGTON, W. Va., July 6.—Twenty automobile dealers in the city of Huntington launched a "Buy a New Car This Year" campaign on July 1 and will continue it throughout the month of July. The campaign was decided upon at a meeting of dealers held recently. It will not be strictly under the auspices of the Huntington Automobile Dealers Association, but will be sponsored by at least 20 dealers. The plan is to make the slogan of the campaign a by-word on the lips of all Huntington citizens throughout the remainder of the year.

At noon on Saturday, July 11, the dealers co-operating in the plan will hold an automobile parade throughout the city and adjoining towns to help put the idea over. All cars will carry banners and all of the dealers' places of business will be decorated to fit the occasion. The idea is to bring home to prospective automobile buyers that this is the opportune time to buy a new car.

The dealers joining in the plan are the Huntington Motor Co., Max Biederman, Motor Car & Truck Corp., Huntington Buick Co., Ike Hanley, Hopkins Motor Co., Reo Cavendish Co., Nash Motor Sales Co., Magann Motors, Haan Sales & Service Co., Overland Knight Co., Curtis Motor Co., Connolly Motor Co., Lexington Sales & Service Co., Acme Motor Co., Jones Motor Co., Tri-State Motor Co., Motor Sales Co., Motor Transport Co., and Bruce Perry Motor Co.

SQUEEKS and RATTLES

THE WAY IT GOES

Sam: "Where were yu las' night?"
Doc: "May and I went coupeying."
Sam: "Big time, I suppose?"
Doc: "Fair. May did the cooing and I did the paying!"

—Tennessee Mugwump.

Certainly Not

Said the bank teller to the new girl who was making a deposit: "You didn't foot it up."

"No," she replied innocently, "I took a taxi."

The Philomath, Framingham, Mass.

Conscientious

During a recent rainy Sunday a devout member of the Motor Club who was attending church over his radio, inadvertently leaned forward and dropped a coin in his hat when the minister broadcasted, "Let Your Light So Shine."

—The Road.

Still, if you slow down to enjoy the scenery, passing cars will make you eat it.

—Quincy Whig-Journal.

TRY THIS

Cop: "Why didn't you stop when I yelled back there?"

Driver (great presence of mind): "I thought you said, 'Hello, Senator?' "

Cop: "Well, you see, Senator, I was going to warn you about going too fast in the next town."

—Middlebury Blue Baboon.

TAKING NO CHANCES

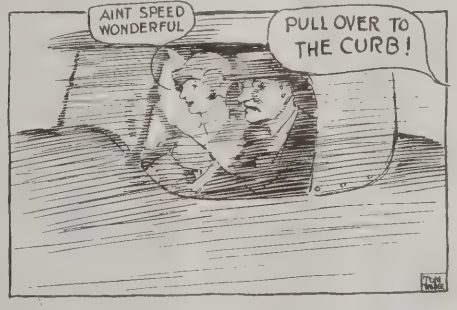
Sheriff: "What do you mean by driving through this village at over sixty miles an hour?"

Fair Motorist: "Well, you see, my brakes have gone wrong, and I was hurrying home before I had an accident!"

—Exchange.

ALL DEPENDS

What kind of car do you drive?



Any of several.

Any of several?

Yes. You see, I have several friends.

—Johns Hopkins Black & Blue Jay.

TICKET, PLEASE

The saddest words of tongue or pen,
Are NOT, by heck, "It might have been."
Much sadder is the cop's rude blurb—
"Hi there, pull over to the curb!"

—Fordowner.

OREGON SEES DIANA

PORTLAND, Ore., July 3.—The premier showing of the Diana eight-in-line in the northwest was held in the Condit & Conser Company's showrooms. This company as distributors have appointed the following Oregon dealers for their line: Salem Auto Company; Salem, Oregon; Freewater Auto Co., Freewater, Ore.; Bowman Auto Co., Marshfield, Ore.; Terminal Auto Co., Eugene, Ore. and Robin Reed, Corvallis, Ore.

APPERSON SALES SET RECORD

KOKOMO, Ind., July 6.—Sales and deliveries of Apperson cars for the month of June exceeded those of the previous month by a considerable margin, according to an announcement made by Don C. McCord, president. This brings the total for the first half of 1925 to the highest figure in the firm's 33 years of manufacturing experience. The president stated that he believes the fact that the company's June business was bigger than that of May sets a precedent in the industry. His announcement also said that the company has on hand "the largest total of unfilled orders since March 1."

McCord states that the concern is in the strongest position in years and that it plans to produce 100 per cent more cars during the last half of the year than it did during the first six months.

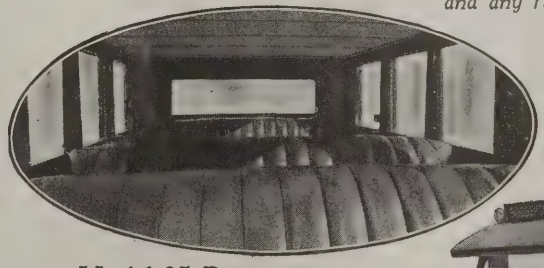
Model 50-B
Chair Coach

TWO NEW MILLER-BUILT MODELS



Mounted on Studebaker Big Six Chassis

THESE two new Miller-Built Models mounted on the Big Six Studebaker Chassis have set a new standard for comfort, ease of riding, dependable service and value.

The individual parlor car type seats, the wide aisle and the spacious windows, ideal for sight-seeing, make the 50-B job a popular coach. The 25-B job, shown with crosswise seats, may be also had with the individual chair seats, without extra charge. Both of these new designs are made in 12, 15 and 19-passenger models.

They are truly "the Parlor Cars of the Highways." Smooth, quiet, no jolts, no jars, no vibration, no noisy, rattling doors or windows. More pleasure and profit for the operator.

Tell 'Em and Sell 'Em

An Article on Used Car Advertising

By CLARENCE PHILLIPS

HOW to write a used car advertisement that will "pull" is always an interesting subject. In fact, there are a great many dealers in this country who would give a lot to obtain such a formula.

Many of them feel that too much of their used car advertising effort is thrown away and there are few who seem able to analyze the problem in a manner that will enable them to put their used car insertions on a more profitable basis. It *is* a hard job to check up on results realized through this sort of promotion.

Let it be said right here, though, that it is not the intention of this article to lay down a set of magic rules to be followed in successful used car advertisement writing. Far be it. There are two fundamental elements necessary to proper procedure, however, that will be submitted.

The first is: Make a first hand, careful study of the car to be described.

The second is: Don't be too niggardly with space for the description. Help the shopper visualize.

Edward C. O'Donnell, who writes used car ads for the New York Branch of Studebaker, believes in an on-the-spot study of the car to be described and he deals with each car as an "individual proposition"

A better way yet to express the idea would be to put the two thoughts in the words of Edward C. O'Donnell, of the Lord & Thomas advertising organization, who writes used car copy for the New York Branch of Studebaker.

"When I write a used car ad," said Mr. O'Donnell, "I do the work, figuratively speaking, while sitting on the running board. I deal with each car as an individual proposition."

"Tell 'em and sell 'em"—he said further, is the guiding slogan of his work.

This last terse phrase constituted the advice given him by the sales promotion manager of one of the country's largest newspapers when Mr. O'Donnell was about to enter the advertising field.

Mr. O'Donnell is easily competent to testify in the matter of used car advertising. His success in turning out this sort of copy for the New York branch of Studebaker has been exceptional. He writes the kind of copy which moves cars and the organization whose automobiles he describes is one of the country's larger used car movers.

And another thing. Half of the budget allowed by the New York Studebaker branch for Mr. O'Donnell's work—goes into display advertising.

This information might cause some dealers to snort, for there are numbers of them who simply can't see display advertising for used car promotion. The great majority even of the large volume merchants—and that means nearly all of them—concentrate nearly all effort in the classified section. Now and then some are prone to wander out of the classified page for a smash in some other part of the paper with display but after the smash they return to classified advertising exclusively. That is the popular way of using the newspapers for used car leads. Consistent use of display space for used car promotion is a thing which we rarely behold. Studebaker's New York Branch is one of the exceptions to the rule. It has been using display right along in conjunction with insertions in classified sections and these display ads have attracted much favorable notice.

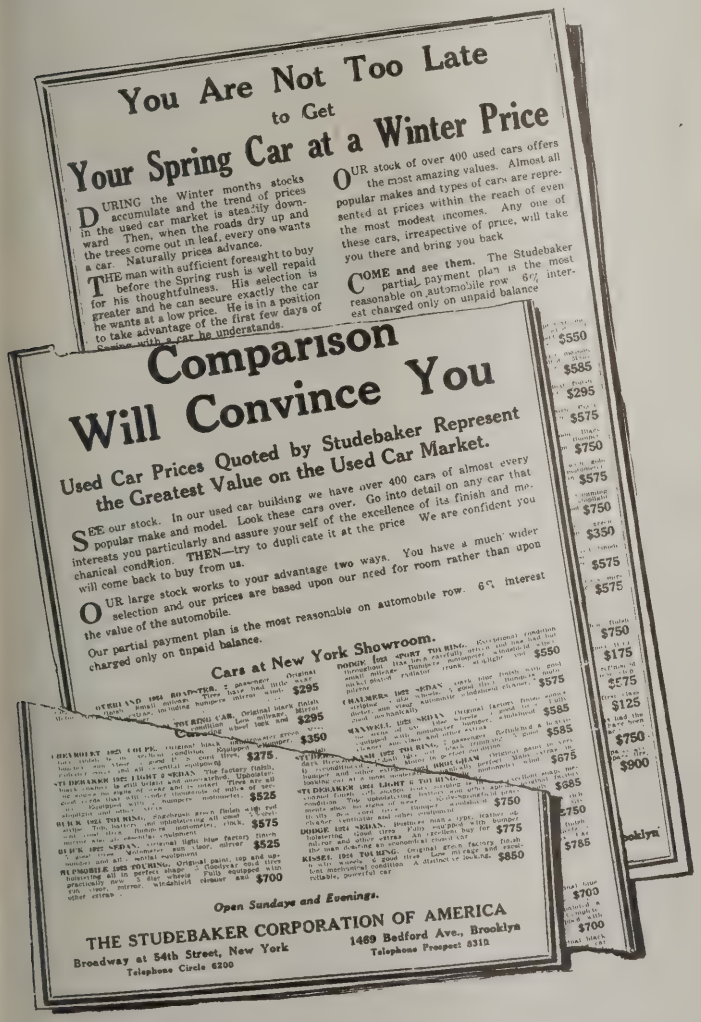
But whether applied in the preparation of copy for a display ad or an insertion in the classified page the two O'Donnell thoughts will hold as excellent fundamentals. In either case the copywriter will make no mistake by "sitting on the running board" to write the ad and then "telling 'em".

By "sitting on the running board," Mr. O'Donnell means, of course, that he never attempts to write a used car description without a particular on-the-spot study of the car he wants to advertise. This painstaking plan is not the one which is always followed. But it is the only way to develop the selling points that count and at the same time run no risk of developing some that can not be backed up when the prospect sees the car.

Not only does it enable the copywriter to pick out and stress effectively the car's more tempting features but

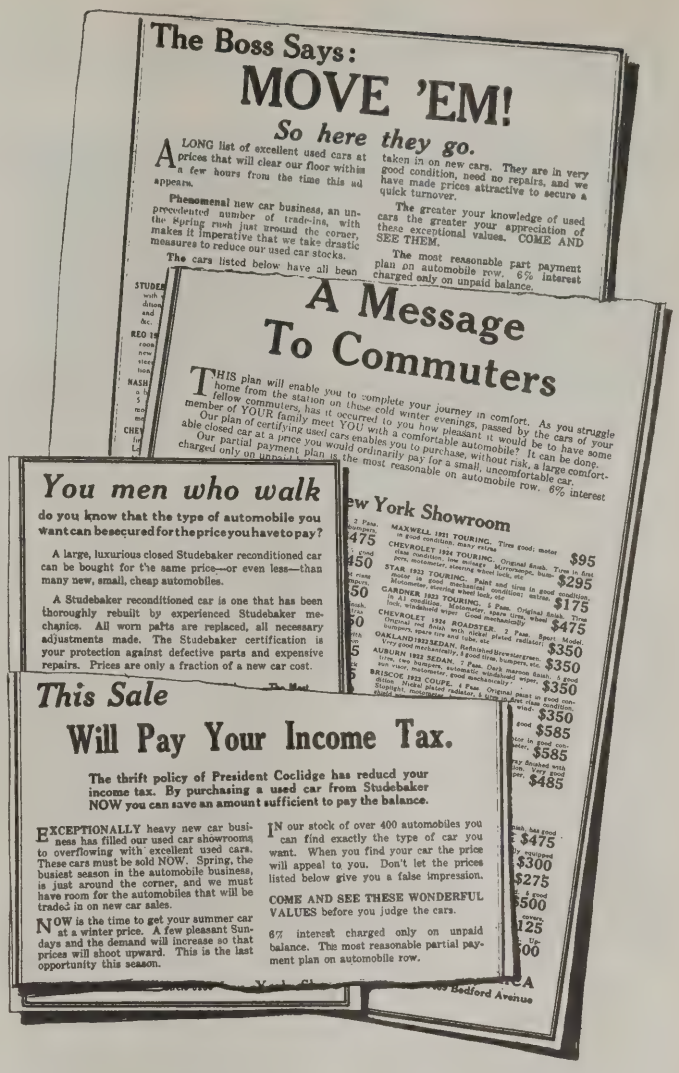
it also enables him to avoid features which had better be honestly forgotten.

Accessories That Disappoint



It is always well to look closely at an accessory before proudly telling the world it is on the car, for the accessory in question might be so unfit it will only disappoint the prospective buyer and arouse his suspicions generally. The result is worse than a muffed sale as this offended person is likely to stalk away from the store and talk about it as a gyp institution.

At the same time there is no doubt but that "jewelry" helps sell the used car if the quality is there. One dealer who seems to get most gratifying results with his used car ads says: "I hang on the accessories wherever I can." And so does Mr. O'Donnell, but he looks at them before he hangs them on. That is an all-important thing.



Long-distance and cursory methods in gathering material for used car ads are responsible for much advertising copy that falls short of what it could be made to do and such practices frequently bring troubles and losses for the house that it would be more desirable to avoid.

Not infrequently the man in charge of the used car publicity will flatter himself with assurances that he knows his company's stock like a book and he is much inclined to regard the task of preparing used car copy as an incidental chore.

While he may not always take the long chance of writing the copy "from memory" in his private sanctum he is

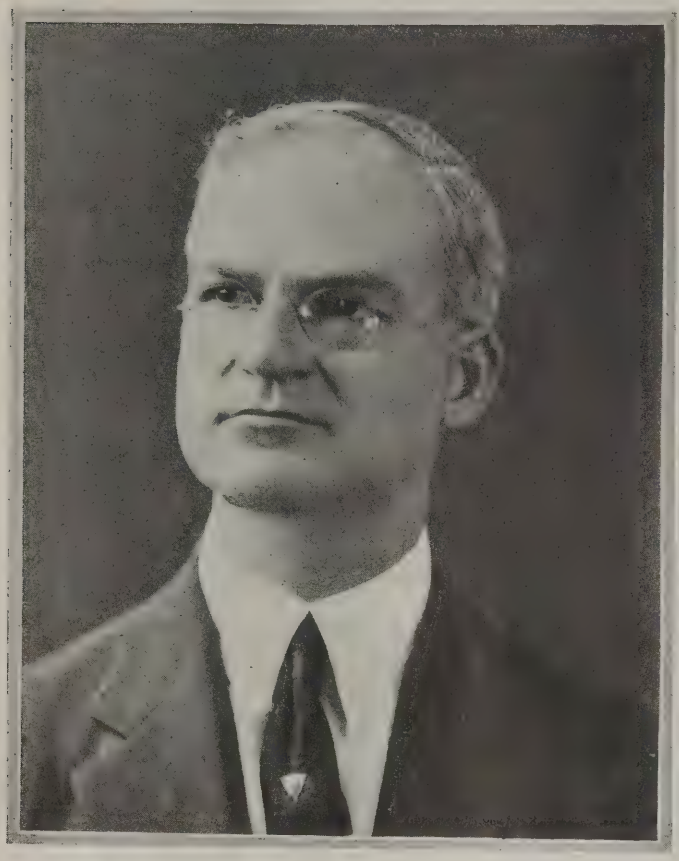
A group of Mr. O'Donnell's used car display ads. He always "tells 'em" something about each car and he likes to print the price in type that stands out prominently

Here are some typical specimens of Mr. O'Donnell's display ads that proved very effective. When a certain accessory is on a car he knows it is there and he knows it is in good order

consistently guilty of going through this performance without checking up carefully and methodically on his facts.

His fundamental trouble is that he does not take this work seriously enough, for in reality it is something that deserves much more than haphazard and perfunctory treatment. The lick-and-a-promise is not enough, notwithstanding that in many quarters of the trade there persists a feeling that a lick-and-a-promise is all the used car is worth. There is a feeling that the used car is only a necessary evil wished upon the trade by the gods of ill fate and the inclination is to treat it as an unwelcome guest.

More Love for the Used Car



Welcome, or unwelcome, though, the used car is here and its numbers are growing constantly larger. In many establishments of very successful automobile merchants even—the unit volume of used cars moved already far outnumbers the new cars sold. Holding the used car in contempt gets us nothing. Unhappily married to it though we may be it must be given due marital consideration. A little more love for the used car by the trade wouldn't hurt a bit.

Difficult as it might be to work up much affection for the used car the copywriter who wishes to help it move

(*Continued on page 20*)

EIGHT YEARS IN BUSINESS

From 75 Cars a Year to More Than 100 Cars a Month in 1925 Is Record of Bacon Motors Co., of Jacksonville, Fla., Which Recently Occupied New $75,000 Home

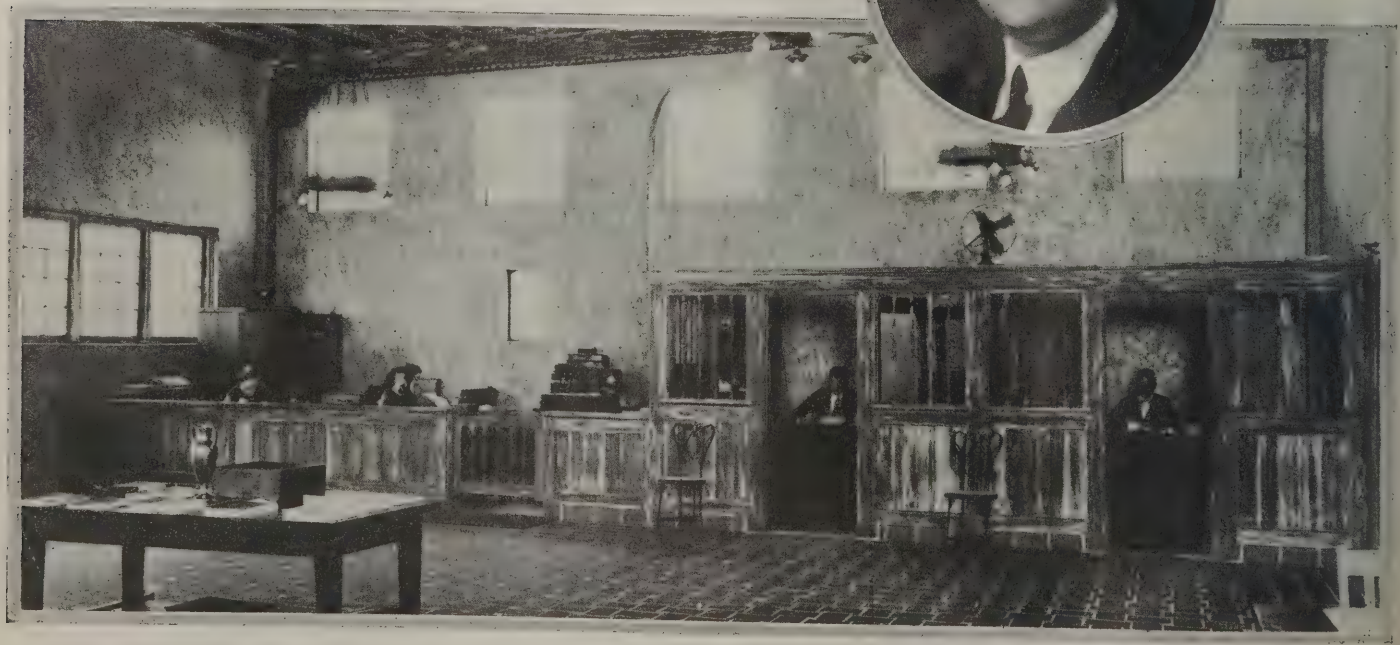
E. H. Bacon, president Bacon Motors Co., who in eight years has built his business from 75 cars a year to more than 100 cars a month.

THE prevailing style of architecture found in the best homes of the community has been adopted by Bacon Motors Co., of Jacksonville, Fla., for its new home. The result is a business building, in Spanish style, that has charm and distinction but at the same time provides a very practical home for a thriving commercial institution.

The Bacon Motors Co. distributes Hudson and Essex cars in 26 counties of Florida. The company was established in 1917 and the first year sold 75 cars. Sales in 1924 were 670 cars and for the first few months of 1925 average monthly sales were 105 cars.

The company's new building was completed recently at a cost of $75,000.

The sales and display rooms hold true to the architecture of Old Spain and the exterior is of stucco with window trimmings of mosaic tile and red tile roof.



Decorations are in real Spanish polychrome effect.

A sharp change from this old world atmosphere is experienced when the visitor steps from the display rooms to the repair shop to the rear. Here the American spirit of utility predominates and nothing is used that will retard the skilled mechanics in doing expert work and giving speedy service to Hudson and Essex owners.

A feature of the building is that every department is

Below: Show room and offices of Bacon Motors Co., in new building of Spanish architecture. The seasoned timbers which attract the attention of travelers to the districts of old Spain and bring visions of other days are reproduced in the interior of the building. Even the red tile floors are patterned after the hard stone flooring in general use in the old castles of the nobility. At right is Ralph W. Hoyt, secretary and treasurer of the company, who joined the organization a little over a year ago, and who has been an important factor in its growth.

And Now This New Building

Mosaic tiles in red, blue and bright yellow give a distinct Spanish touch to this unique business building recently erected at Jacksonville, Fla., by the Bacon Motors Co. Below at right is the gateway to the open-air used car department.

located on the ground floor, so arranged as to be easily accessible from two streets. A spacious corner of the building, fronting on Park street, with an entrance also on Dora street, is reserved for sales and show-rooms with offices in the rear.

Adjoining the show-rooms and also fronting on Park street is the parts department, where a stock of approximately $25,000 will be carried at all times.

Also fronting and opening on Park street is the used car department, with an open court in true Spanish style, and capacity of about 30 cars.

To the rear of the used car department and connected with Dora street by a concrete driveway, is space for washing cars, with equipment for compressed air cleaning.

The service garage, a massive fire-proof building of steel construction, directly behind the show-rooms, is easily accessible from Park, Dora or Oak street. It is equipped with the most modern facilities for automobile repair work. The building has a capacity of approximately 50 cars. Lockers, showers, instantaneous hot water, electric lights, and other conveniences are furnished for the workmen and every detail for their welfare has been given attention.

An overhead carriage connected directly with the parts department, eliminates unnecessary steps and consequent loss of time by the workmen. A tube system, connecting with the offices, eliminates the handling of cash in the service garage, and the necessity for daily reports.

E. H. Bacon, president of the company is one of the best known automobile men in the state. Service to Hudson and Essex car owners and a willingness to share the troubles of his dealers and tide them over business adversities has given strength and loyalty to the company in every Florida city in which it does business.

Ralph W. Hoyt is secretary and treasurer.

Service department of Bacon Motors Co.

Applying a Pyroxylin Finish to a Car

Spraying on the Enamel—Number of Coats Varies—Two Tone Effects

By B. M. IKERT

As a rule two or three coats of enamel are sprayed on in the final application of a pyroxylin finish. In the majority of cases three coats are used and even more where necessary, depending on the covering power or hiding qualities of the particular color used.

When it comes to a choice of color some discretion must be used as some colors are more stable than others and it is better to tell the customer these facts before the colors are applied. Some of the manufacturers of pyroxylin finishes advise against certain colors such as the maroons and blues which they claim have a tendency to "chalk." Some of the shades have this characteristic more than others.

There is also some difference of opinion as to the undercoats to be used with a lacquer finish. There are those manufacturers who prefer a complete nitro-cellulose finish and again there are those who strongly advocate oil under coats. Some paint manufacturers claim that the oil under coats are superior particularly when applied over steel.

One maker states it has been his experience that when pyroxylin lacquer is applied directly to steel it has a tendency to cause rust and that the pyroxylin lacquer may actually be classed as a rust accelerator. Such a condition however needs no serious attention in connection with aluminum bodies.

It is well to bear in mind that there is still much experimental work going on with pyroxylin finishes for motor cars and new discoveries are made almost daily which result in a better understanding of the materials and their application to motor cars. The majority of manufacturers are turning out good finishing materials, but it is necessary to abide by the specific directions accompanying any particular make of materials.

Application of Lacquer Coats Important

Some of the instructions which were given for the application of the priming and under coats apply equally well to the enamel or lacquer coats. It is during the application of the lacquer coats that the operator exerts the greatest influence as to the final appearance of the car. For that reason there must be every assurance that the spray gun is clean and that the air pressure is correct. The same things which were mentioned in last week's article on applying the under coats, applies to the lacquer coats so far as the equipment is concerned.

As a rule the spray gun should be held a little closer for the lacquer than for the paint materials in order that the enamel may be applied properly and the operator should use long swinging strokes over the entire width or length of a panel rather than spraying with a circular motion. The gun also should be held the same distance from the surface at all times in order to get the lacquer uniformly applied.

A good plan for one who has never used a spray gun or lacquer materials is to practice on a large metal panel that is off a car before any attempt is made to spray a body as lacquer is quite different in its application than paint or varnish. The operator may read volumes on how to spray a body but very often an hour or two with the gun will teach him exactly the things to watch out for in doing the work.

The stream from a spray gun is usually thinner o the edges than in the center and for this reason it i customary to overlap the spray about one-half th width of the stream. Some operators cross-spray th coats, that is, they apply one coat horizontally and th next coat vertically, a procedure which is said to giv very excellent results when done by a competent operato

All lacquers must be thinned before they can be sprayed and it is customary to use one part of lacquer to one o solvent. This is especially the case with the first coat o lacquer. With some of the pyroxylin materials the secon and third coat are reduced by using two parts of th enamel to three of the thinner or reducer.

After the first coat of enamel has been applied it shoul be left to dry for one hour after which the second an third coat can be applied. The first coat is dried at temperature of 60 degrees Fahrenheit and the third coa should not be applied until the second coat has air drie for at least 15 minutes at 60 degrees Fahrenheit.

May Be Safely Varnished

One of the makers of pyroxylin materials furnishe three types of clear nitro-cellulose lacquer consisting o (1) a clear lacquer for mixing with the last one or tw coats of color enamel, when it is to be left as sprayed or coated with finishing varnish to obtain an especiall deep luster, (2) clear lacquer for mixing with the las one or two colors of color enamel when it is desired t have an especially hard final coat which may be rapidl polished to a high gloss, (3) clear lacquer for use o natural wood wheels, mouldings, steering wheels, instru ment boards, etc.

The particular lacquers above mentioned both clear an colored are unique amongst nitro-cellulose materials fro the fact that they may safely be varnished. Because o their ingredients most pyroxylin lacquers will not hol varnish. This is also true because of their low degre of elasticity. Since nitro-cellulose under coats lack th so-called "suction" of the old type undercoats, they mak

WITH the advent of pyroxylin finishes there is a feeling among some of the smaller establishments that they are going to be forced out of business sooner or later because motor car factories rapidly are adopting lacquer finishes, said to last practically as long as the car itself.

There is no cause for alarm so far as this publication can ascertain because cars will have to be refinished sooner or later regardless of the fact that the factory may have put on lacquer coats. When the owner of a lacquer-finished car turns in such a car after several years use there is just as much chance that the buyer of the car will want a refinished job as was the former case with varnish finishes.

The new purchaser also may want a change of color, and one of the distinct advantages of the lacquer system is that the new coats can be applied directly over the old lacquer. That is, the car will not have to be stripped to the bare metal.

an ideal surface for finishing varnishes, materially increasing the life of these materials. Many car owners demand a high lustre procurable only with finishing varnish and it is advantageous therefore to be able to apply varnish over pyroxylin enamels in such cases.

Where the final finish is to be polished lacquer a special lacquer for polishing is mixed with the final coat. The finished body should be allowed to dry over night at room temperature so that the final coat is sufficiently hard to attain a high lustre when polished. The harder the final coat is allowed to get the simpler it will be to attain a good polish. Also if the gunglaze and surface coats are as smooth as possible the more perfect will be the enamel surface and the better the final polish.

It is considered good practice to rub with pumice stone and water or with water proof sandpaper before the last coat is applied to even up the surface. Where the highest type of finish is desired, this should be done.

It is generally the best plan to apply lacquer to such parts as the cowl and rear deck, gasoline tank, etc., after the sides have been done. This is to avoid spray dust. Whenever the sides and top are being coated it is quite difficult to prevent some of the spray from settling over the cowl in the form of dust, consequently if these parts are left until last the final lacquer usually will dissolve the spray dust into the film. As previously mentioned should the job when finished have any traces of spray dust a coat of the reducer or thinner will generally dissolve it. It is customary to apply this last coat using about five parts of the thinner to one of the color.

Cover Windows and Doors

In order to get a two tone effect on closed cars the windows and doors must be covered with paper to prevent the finishing material from settling on the glass. All the coats after the surfacing coats should be applied on the lower panels first being particularly careful to get as little as possible of the over-spray above or on the moulding. When the last coat has dried at least an hour or longer a strip of paper should be pasted against the lower edge of the moulding, using tape or ordinary library paste. This will prevent the over-spray from settling on the lower panel. Then when the ground colors and enamel have been applied to the lower panels the paper is removed by soaking with water and a sponge. If adhesive tape is used gasoline can be used to remove all traces of it.

One company is now experimenting with a liquid to be used for masking or screening various parts of the body which are to be protected from the spraying. It is the intention that this liquid be non-soluble in nitrocellulose solvent but soluble in water. The liquid will be brushed over surface to be protected so that none of the lacquer deposited on it will go through to the body panel and when the spraying process is finished the masking liquid can readily be washed off with water, taking what lacquer has adhered to it with it.

Every now and then it happens that one or more of the body panels becomes damaged after a car has been finished with lacquer and the job is then one of touching up these spots. It is difficult to give specific directions for this because each job is a case unto itself and very often it will be found more advantageous to refinish a complete panel rather than attempt to remedy a particular spot in such a panel. In repairing bad scratches and where the machine has been scraped off to the bare metal the spot has to be built up in practically the same manner as though the entire panel were being finished.

One of the makers of pyroxylin materials states that in repairing a damaged portion of a panel it is wise to block off the damaged panels from the rest of the body by pasting at least 6-inch strips of heavy wrapping paper around the entire panel. This prevents the dried spray dust from settling on the undamaged portion. Also when the finish is not off all the way to the metal it may be possible to repair the damaged spot without using all the coats needed for the entire finish. Thus if the primer is still in place and the damaged portion is not too large it may be possible to repair by puttying up the scratch, sanding this down after drying and then following by a coat of ground color and two or three of the proper enamel. Sometimes it is necessary to use a surfacer first followed by the other coats.

When it becomes necessary to repair small scratches through the enamel only some operators make a mask by cutting a hole in a piece of heavy paper so that the hole will be just a little larger than the scratch to be repaired. This mask is held tightly against the damaged spot and one or more coats of enamel applied as necessary to bring up the finish flush with the surrounding surfaces. When spraying the material during such repairs it is often found advantageous to adjust the spray gun for a round spray. With such a spray it is easier to do the repairing as it is possible to blend the material better.

Next week's article will take up a discussion of polishing operations, striping and so forth.

PAASCHE AIR BRUSH CO.
1909-1923 Diversey Parkway
Chicago, U. S. A., July 3, 1925.

Mr. B. M. Ikert,
Technical Editor,
Motor Age,
Mallers Bldg.,
Chicago, Ill.

Dear Sir:

I have just had brought to my attention your article on nitro-cellulose finishing which appears in the July 2nd issue of Motor Age.

I wish to compliment you on the clear and concise manner in which you entered into the discussion of this comprehensive subject. I enjoyed reading it very much. It seemed to me that it would prove rather difficult to you to find the line of demarcation between the necessary and unnecessary facts which enter into an intelligent treatise on automobile painting. However, this is not evidenced in your opening number.

I feel that you have entered upon this discussion from the most advantageous point, namely; the beginning. This is a thing that most writers on this subject fail to see or take into consideration.

The fact that all material must be in such a form as to be readily grasped by the mind of a layman, makes your task doubly difficult. You deserve commendation for the manner in which you have handled the subject without becoming technical.

I would greatly appreciate it if you will see that a copy of each article is addressed to me personally as I am interested in reading and filing your whole series for reference.

Assuring you of our desire to cooperate with you at all times, we remain

Yours very truly,

PAASCHE AIR BRUSH COMPANY

(Signed) C. E. Valentine, Jr.

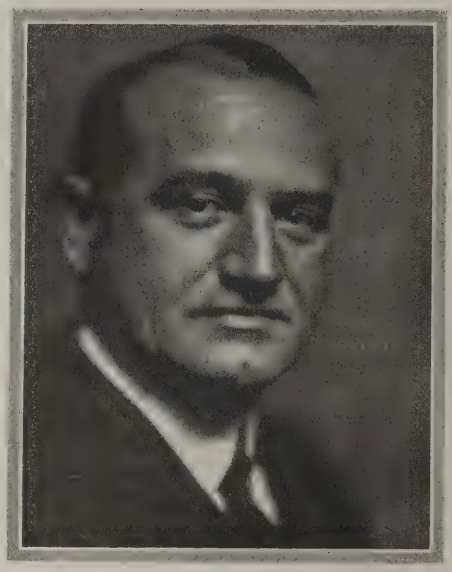
Yellow Cab Joins General Motors in $36,000,000 Merger

New Corporation Will Have Full Line of Buses, Trucks, Taxicabs and "Drivurself" Passenger Cars. No Public Financing Involved and Policies of Y. C. Line Will Remain Unchanged

ONE of the largest consolidations in the history of the automotive industry and probably the greatest in recent years was effected in Chicago last week when the General Motors acquired a $16,000,000 interest in the Yellow Cab Manufacturing Company. This provides General Motors with a full line in the revenue-producing vehicle division.

The truck division of General Motors is to merge wtih the Yellow Manufacturing Company, the new concern to be called the Yellow Truck & Coach Manufacturing Company. To this corporation, General Motors will transfer all real estate, buildings, plants machinery, materials, products, assets and trade marks belonging to its truck division, including licenses for patents and the good will. The aggregate value of the property to be transferred, exclusive of good will is $10,811,310. General Motors also will pay $5,188,690 in cash, making a total of $16,000,000.

The authorized capitalization of Yellow Truck will be $36,000,000 consisting of 200,000 shares of 7 per cent cumulative preferred stock of $100 par value, callable at $120; 600,000 shares of class B stock of $10 par; and 1,000,000 shares of common stock at $10 par. The B stock is to be distributed to present holders of B stock on a share for share basis. Present stockholders also will receive a 25 per cent stock dividend in the new cumulative preferred. All the $675,000 of class A preferred of the Yellow Manufacturing Company, held by the Chicago Yellow Cab Company, an operating concern, will be retired at par.



G. M. Gets 800,000

General Motors will obtain 800,000 shares of the common stock in payment for its $16,000,000. The common stock and the class B stock will have the same voting power a share. After cumulative dividends have been paid on the preferred stock, class B and common stock will share alike in remaining dividends to be distributed. However, for a period of three years, should dividends declared and paid be less than 75 cents a share on the aggregate of 1,400,000 shares of class B and common outstanding, then the class B shall have preferential cumulative rights on dividends up to 75 cents a share.

Following the three years, should the class B stock have had these preferential rights, the common stock will then be given the same right for the next three years. These provisions guarantee present holders of the class B stock receipt of the current annual dividend for the next three years, and at the same time give promise of the possibility of larger distributions.

There is no public financing involved in the entire transaction.

Heads Consolidation

John A. Ritchie, formerly president of the Yellow Coach Manufacturing Company, who is made president of newly formed Yellow Truck & Coach Manufacturing Company

Active management of the new concern will be for the most part in the hands of the present officials of the Yellow Cab Manufacturing Company. Yellow Manufacturing will be represented by thirteen seats on the board of the new corporation, with General Motors getting the remaining eight seats.

The board of the new company will consist of the following:

John D. Hertz, chairman; Irving B. Babcock, Donaldson Brown, Edward N. D'Ancona, P. L. Emmerson, Harold E. Foreman, John L. Pratt, Leonard S. Florsheim, F. J. Fisher, Paul H. Geyser, George A. Green, Pierre du Pont, Robert Lehmann, Charles A. McCulloch, Otto W. Lehmann, John J. Raskob, John A. Ritchie, A. P. Sloan, Jr., Otto E. Stoll, A. H. Swayne, John R. Thompson and William Wrigley, Jr.

The officers of the new corporation will be:

John A. Ritchie, president; John D. Hertz, chairman of the board; Paul H. Geyser, vice president in charge of production; George A. Green, vice presiden in charge of engineering; Irving B. Bab cock, vice president in charge of account ing and finance; P. L. Emmerson, vic president in charge of sales; Otto E Stoll, vice president and manager of th truck division.

In announcing the merger, Mr. Hert said:

"This will enable us to carry out a rather extensive plan we have had i mind for some time, to become the larg est manufacturer of commercially oper ated revenue-producing vehicles in th world.

"We have established a reputatio through many years of manufacturing a the producers of the highest class an biggest revenue-producing taxicabs coaches, and light delivery wagons in th world. We have never built to a price but always to an ideal, with the resul that we build the most efficient, reliabl and dependable product in the industry This, at present comprehends a line o seven types of motor coaches, two type of taxicabs and two types of 'drivurself cars and several types of one-ton wagons Through this purchase, we will now ad to our present list a complete line o trucks varying from one to seven tons

"This does not mean any radical de partures or drastic revisions in our busi ness as would seem at first glance, a our motor coaches are really six-to carrying vehicles.

Logical Combination

"Many advantages will naturally accru to the company by becoming affiliate with the General Motors Corporation. I many respects this is the most logica combination of interests, and under th new order of things will not only give u the manufacture of a line of commercia vehicles more comprehensive than an other manufacturer, but will enable u to incorporate in the design and con struction of our trucks many of th operating and manufacturing refinement to be found in the construction and de sign of our motor coaches and taxicabs

"Incidentally, I might say that the Gen eral Motors Corporation truck divisio is a profitable organization. It has a experience in the manufacture of heav duty vehicles extending over many years and has in service today many of th heavy duty trucks doing satisfactor duty all over the world.

"The well known policies of the Yellow Cab Manufacturing Company will remai unchanged.

"The personnel and management of th company will remain the same, exceptin

for some minor changes in positions which will naturally result from a merger such as this. The operation and manufacturing organization of the General Motors Corporation truck division will remain practically in its entirety. This will be headed by Otto E. Stoll, who will become vice president and a director of the new company. He will be manager of the Pontiac truck plant and the Detroit engine plant.

"John A. Ritchie becomes president of the new company. His experience as a bus operator and manufacturer began in 1918 with the Fifth Avenue Coach Company. His experience has been further widened since his connection as president of the Yellow Coach Manufacturing Company. He will have under him all the men that have made our company a success. This will not be a one or two man organization. Everybody on the staff is an individualist and a builder. We believe we have the best producing and service organization in America.

Cab Company Unchanged

"Mr. Ritchie will also remain as head of the coach operating company. Neither this company nor the Yellow Cab Company of Chicago (which is an operating company) is to be affected by the merger.

"We feel that our industry is on the brink of a tremendous evolution. Throughout the nation, all thinking transportation men appreciate that the motor coach and motor truck are destined to fill an increasingly important niche in the general scheme of things. For some time we have been preparing for this eventuality.

For instance, I believe that the time is near at hand when a passenger will buy a railroad ticket calling for transportation for himself and baggage from his home to the place at which he intends to stop in some distant city. In other words, the purchase of his original railroad ticket will include such transportation as taxicabs and coaches.

"This is equally true in the transportation of freight. In the near future, I believe we will see the railroad shippers' bill of lading include pickup service and delivery as well as transportation from one place to another. In other words, railroad companies must necessarily avail themselves of the use of such vehicles as ours in order to carry out a complete plan of transportation.

"As far as the financial end of the purchase is concerned, the figures speak for themselves. Our contact with the organization of the General Motors Corporation has convinced all of us that the Yellow Truck & Coach Manufacturing Company, as the new company will be known, is going to derive untold benefits in many ways. This holds particularly true of the assistance we will receive through the tremendous world-wide selling organizations, research departments, and the general advice and assistance received from a strong organization of officers, manufacturers and financiers.

"This deal brings to Chicago not only the coach, taxicabs and 'drivurself' industries, but now adds to it the heavy-duty truck business."

Sloan Makes Statement

Alfred P. Sloan, Jr., president of the General Motors Corporation said:

"The Yellow Cab Manufacturing Company, apart from its position in the taxicab business, occupies a strong position in the bus field. A merger of the General Motors truck business with the business of that company is calculated to result in material economies in the manufacturing and distribution ends of both of these important lines of business.

"General Motors Corporation has recognized the importance of the bus, and believes that the proposed merger with the Yellow Cab Manufacturing Company will immediately place it in a strong position in the bus business, with the opportunity of enjoying a really unique position in the future development in that field. It also believes that its position in the heavy-duty truck business will be greatly strengthened as a consequence of the combined management and the benefit derived from more economical manufacture and distribution."

G. M. President

Alfred P. Sloan, Jr., president of General Motors Corporation

Business Structure of Yellow Cab

THE business structure of the Yellow interests as it is about to pass into the control of the new organization is built upon the following lines:

The Yellow Cab Manufacturing Company is the parent organization. Subsidiaries have been organized to control the sales, finance and manufacturing divisions of its operations. Officers of the parent company and of many of its subsidiaries are interlocking. Of the manufacturing companies the largest is the Yellow Coach Manufacturing Company, of Chicago, whose officers are:

President, John A. Ritchie; vice-president, C. A. Green; secretary and treasurer, Irving B. Babcock.

Officers of the Yellow Cab Manufacturing Company are:

President, John Hertz; vice-president, Irving B. Babcock; general manager,

(Continued on Page 35)

Began as Newsboy

Born in Chicago 45 years ago, John Hertz, president of the Yellow Cab Manufacturing Company and executive head of the majority of its many subsidiaries, started his business career as a newsboy. A few years later he drove a delivery wagon and later still became a newspaper reporter. He rose in the newspaper profession until in 1907 he was assistant sporting editor of one of the Chicago dailies.

It was at this time that he met Walden W. Shaw and became interested in automobile selling.

One day he noticed a number of idle used automobiles in the showroom and conceived the idea that it would be profitable to rent the cars for livery purposes. He found, however, that the cars were too large and expensive to operate; that the wear and tear ate up all his profit.

He then delved through a number of catalogs listing prices of automobile parts' and figuring up the aggregate cost of a completed automobile from these catalogs, decided it would be cheaper to build his own automobiles to specification than to purchase the product of some other manufacturer for use in his livery trade.

He planned his cars to be small and easily operated as well as strong and economical. He began painting the cabs yellow to attract attention and the business immediately began to grow.

The Yellow Cab Company was organized in Chicago in 1915. From this grew the huge business which was headed by the Yellow Cab Manufacturing Company before the merger with General Motors.

Expect Exchange to Down Deadbeat

ELIMINATION of bad credits caused by the practice of the habitual "deadbeat" in buying from one source, without paying, as long as possible, and then doing the same thing somewhere else, is expected to be accomplished by the credit exchange organized by the Tire and Accessory Dealers Association of Louisville, Ky.

Members of the Association found that they were losing thousands of dollars annually through such bad credits, according to William Mohlenkamp, president.

"For a long time," he said, "credit has been allowed persons who proved to be bad risks, but until recently we have had no means of ascertaining the credit rating of the many who buy in the neighborhood of $100 worth of tires and accessories at a time.

"Consequently, the regular deadbeat has made a practice of buying from one seller as long as credit was extended, and then buying from another for the same length of time, until he had accounts all over the city.

"We have been to blame, to some extent, for this situation. Keen competition sometimes encourages charge sales that ordinarily would not stand close scrutiny.

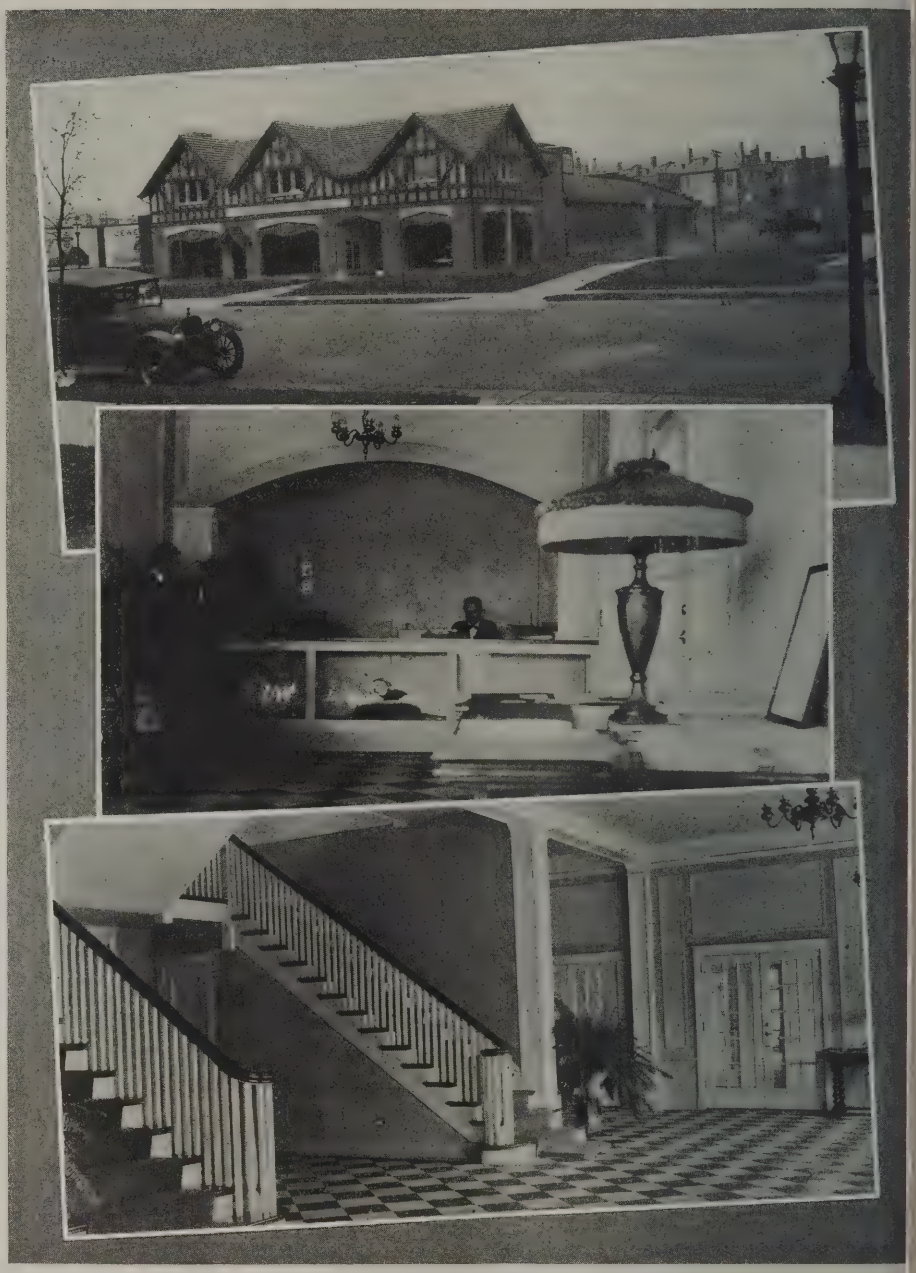
"While our association is just beginning to function, beneficial results have already been obtained and we expect to pare needless credit losses to a bare minimum by not permitting the professional deadbeat to deceive more than one association member.

"To our credit bureau at association headquarters each member will report promptly any and all names to be added to the credit list. A phone call will enable any member to ascertain the credit standing of each prospective customer."

COMPRESSED AIR WASHING DEVICE

A compressed air car washing device installed by the Kendall filling station in Hartford, Conn., on a very busy corner has been favored with liberal custom since the opening recently. A steel building in harmony with the filling station was erected and made large enough to accommodate two cars. The washing device is a stock affair purchased from a local wholesale house and is reported to be working very satisfactorily. This station is the forerunner of many more that will be opened in this city. The business man who does not use his car during the day finds the service offered by Kendall of much benefit.

CUSTOMERS LIKE SERVICE



Regular greasing and a free inspection for every thousand miles the car is run make a strong appeal to Cadillac owners in New Orleans and are largely responsible for the growing patronage of the Gus D. Revol Cadillac workshops, according to the management of this company.

"Automobile troubles are diagnosed before the owner leaves the shop," the manager of the Revol company said. "The prices on labor and material are also made to insure the customer's satisfaction. We have a full equipment of men, tools and machinery for special work so that the time taken in handling the automobile may be considerabl shortened. This is a feature that appea to our public.

"Engine and chassis are steam cleane without charge when work is approx mated at $15 and $20. The garage floo is scrubbed with live steam weekly. Ou customers appreciate these services.

"We are an authorized Dupont Duc refinishing station where beautiful Duc two-tone jobs are turned out in shor order."

Old English Tavern

Here are views of the new building of the Lambert-Graves Motor Company, of St. Louis, which recently was erected at 4035 Lindell boulevard at a cost in excess of $100,000.

(Top) An outside view. (Center) Corner of showroom, with information desk which incorporates accessory display cases. (Bottom) Stairway to second floor.

Idea in Dealer Home

(Top) The workshop. It is as attractive as any part of the building. It is truly a "sunlit" room as may be seen by the amount of glass in the side walls. (Center) Second floor above show room used by salesmen and for conferences. Picture does not show full charm of room. (Bottom) Section of show room revealing fireplace and homelike appointments.

DISTINCTIVE PUBLICITY

How is this for good used car publicity?

The Drennen Motor Car Company, Birmingham, Ala., ran an advertisement in which all of the salesmen in their used car department appeared, that is their photographs appeared. By mistake three of the men were left out of the copy.

The next Sunday the pictures of the three salesmen appeared in the automotive section with the statement.

"Last Sunday Drennen Motor Car Company ran pictures of the men who sell used cars for them, but these three were omitted because they were too busy selling used cars to pose for the photographer. They were responsible in large part for 126 people in and around Birmingham buying used cars the 'Drennen Way,' during April."

There was more used car copy but the above was the distinctive part.

He Sells Them on Way to School

DRIVING a Fordson tractor 700 miles in seven days and calling on 32 dealers while on the trip is a mild week's work according to E. F. Case of Wagoner, Okla., who attended the national school for Fordson salesmen at Houston, Wis. Mr. Case was one of the students at the school and he decided since he was going to a Fordson school he might as well go in approved style. So he crawled on the seat of his Fordson at the station in Wagoner, Oklahoma, and "hit the trail" for Houston.

Mr. Case is also representative of the manufacturers of Kingham trailers for Fordsons. He decided to "kill two birds with one stone" in calling on the "trade" between Wagoner and Houston. He called on 32 dealers during the seven days and sold a good many of them. On the seventh day out he piloted his Fordson into Houston and entered the school. He was graduated with "honors" at the end of the two weeks term.

When he finished the course at Houston he straddled the seat of his Fordson and left for Wagoner, Okla., his home town. He said he expected to run into the Wagoner service station in six or seven days, depending upon the number of dealers he called on enroute.

"Traveling on a Fordson is great sport," he said, "and you are in a better position to talk tractors and trailers to a dealer when you drive up to his place on both of them."

FEATURE RACE TIRE IN SHOW WINDOW

H. C. Graham Co. of Milwaukee, dealers in Firestone and Oldfield tires attracted many spectators to the company show windows at 138 Oneida Street, with an exhibition of one of the balloon tires that "got in the money" in the 500-mile race at Indianapolis on Memorial Day. Promotional matter liberally sprinkled about the window made the assertion that this race finally established the balloon tire as practical for all purposes, and free from the many objections hitherto made against it.

NEW FORD REPAIR BOOK

The 1925 revised and enlarged edition of "The Model T Ford Car," by Victor W. Page, has been published by the Norman W. Henley Publishing Co., 2 West 45th street, New York City, at $2 a copy. This is a book of 455 pages devoted entirely to the operating principles of all parts of the Ford automobile, with instructions for driving, maintenance and repairing; also complete instructions on the Fordson tractor.

Write It While Sitting on the Running Board

(*Continued from page 11*)

must, before all others, bring himself into the ecstacies of sheer adoration. He must have honest enthusiasm over the used car, tempered with and controlled by a well cultivated sense of discrimination and good judgment.

Enthusiasm is necessary because enthusiasm is necessary to the business of selling any product, while it requires good judgment to keep enthusiasm from overdoing matters.

The copywriter must sell himself on the conviction that the used car is *good* merchandise. That should not be difficult. He offers more miles of transportation on the basis of price asked than is offered in a new car. There should be no hard work stirring up enthusiasm over such merchandise as that.

Illustrating the liability of running into undesirable consequences through the practice of long-distance copywriting is an experience related by a dealer who since has made the "running board" idea an iron rule of his house.

Where a Sale Was Lost

In a list of cars advertised for sale a Buick model was mentioned which, according to the copy, had "four practically new tires," a spare tire and certain accessories. A prospect came into the used car department apparently much interested in the Buick. He gave it one good look, his face took on a grim aspect and he turned to leave without explanation. Plainly he was mad.

The salesman was puzzled, for the car was in good condition, the price was fair and he really thought that it offered an unusual value for the money asked.

"Would you mind giving me your objections to that car?" the salesman questioned as the prospect was about to go out the door.

"No, I don't mind a bit, as you insist," the man replied. "That car simply does not have a thing on it that you say it has in your ad."

Out he went.

Investigation by the proprietor developed that the man was absolutely correct with respect to the accessories and the condition of the tires as described in the advertisement.

To his chagrin he discovered that there was no spare tire at all on the Buick advertised and that the four on the car were not in the best condition. The young man charged with the responsibility of writing used car ads was called into conference and he offered this awkward, limping apology.

"Well, I got that dope from one of the boys in the shop who had been working on the car."

And the mechanic to whom he referred admitted later that he had the Buick in question mixed up with another car.

Each Car an Individual Case

Long-distance methods are positively hazardous in the work of used car advertising. It requires more trouble to deal with each car as an individual proposition, on the O'Donnell plan, but for immediate purposes and in the long run this additional trouble pays.

A speaker who remarked during the Chicago show that "some people buy the used car for the car and others buy it for the accessories" offered an excellent advertising thought, but he should have added:

"Be sure that you hang on the right accessories and be sure the accessories are in good condition and as described."

Be sure, to put it another way, that the veracity of the advertisement in all particulars cannot be challenged. Truth in advertising not only is a fine virtue but it is *business*. It is much better, quoting a prominent advertising expert "to understate than overstate."

Let the used car shopper have the real picture. The chief objective of the man who writes the copy is to help the shopper visualize. Tell 'em and sell 'em.

The shopper is much more likely to covet the thing which he can picture in his mind than that which is but vaguely conceived.

Cars of all kinds are listed in the daily newspapers and without descriptive assistance even though the make, year and price are given the car advertised for sale in this fashion means no more to the prospect than any other car in the paper in his price class.

Often it will mean less to him than numbers of other cars advertised in the same page because the other ads more readily help him "see" those cars.

"Sit on the running board," get the facts, get them straight—then tell 'em, and tell 'em enough.

New Radiator Shell on Studebaker Standard Six Models

ALL Studebaker models on the Standard Six chassis are now being equipped with a radiator shell of changed appearance. Earlier models of the Standard Six carried a shell whose upper part while of convex shape had a somewhat flat appearance. The new shell which is interchangeable with those of the former style, has a perfectly rounded contour and is very similar to the Big Six design except that it is smaller and the fluting or scroll work eliminated. A slight change has also been made in the shape of the side rear quarter windows on the duplex-phaetons.

Front end of the Studebaker Six, showing the new design of radiator shell

N. A. C. C. FIGURES DELAYED

DETROIT, July 11.—The usual monthly estimate of domestic car and truck production by the National Automobile Chamber of Commerce is delayed because of the fact that the board of directors meeting, for which the figures are prepared, will not be held until late in the month. Unofficial estimates, however, bear out the prediction made a week ago that the June figure will not be far below the 400,000 mark. It will probably be between 366,000 and 399,000. as compared with 404,300 in May and 421,878 in April of this year, and 249,868 in June, 1924.

PEERLESS ORGANIZATION

CLEVELAND, July 11.—The Peerless Motor Car Company has appointed the Oldsmobile Motor Company of Seattle, Wash., Peerless dealers to succeed the Peerless Pacific Company, it was announced here today. J. F. & M. M. Stein have been appointed Peerless distributor as Asbury Park, N. J. Contracts of Mattern Motors, Inc., of Flushing, L. I., N. Y., and of the Jefferson Motors, Inc., of Perth Amboy, N. Y., have been cancelled.

Some *Letters* to the *Editor*

A Mechanic's Side of the Story

Dalton, Mo.

To the Editor of MOTOR AGE:

What I want to tell you people is that I'm a reader of several magazines, but I get more good from reading your paper. I'm a careful reader of your editorials and of such items as Packer and Tom put out. One piece of A. B. C. Hardy, of Olds Motor Works, in your December 25 issue of MOTOR AGE impressed me a great deal. He says that after so many makes have fallen out, that there will be probably 60 to sell in the year of 1925. And with all he says who knows the automotive business better than these men that have put their all into it.

Then I say who knows the clearance dimensions of pistons, shape and construction of motors in these 60 makes of cars better than the alert mechanic. Of course we all know a mechanic is looked upon as a greaser. People won't shake hands with him because they would have to wash immediately after the operation. Most of them know nothing else but to use the hammer and cold chisel. But you find one now and then who is trying to get ahead. Trying to learn more about motors, construction of springs, frames, brakes and controls. There are some who are better read on 20 makes of cars than some salesman is on the car he sells. Why? Because he has never gotten his hands or clothes dirty finding out.

A mechanic knows how a piston of a certain car looks after running 45,000 miles, and he finds pistons in other cars that have only run one-half that distance which are worn worse than the 45,000 mile car, and we say why? No one knows better than the good mechanic. I mean the mechanic who watches and learns.

We see cars come in with a broken axle shaft. The owner says, why don't they put a larger axle in these cars and then I would have a real car. I tell him, no, Mr. Owner if they would put a stronger axle in this particular car of yours they would have to put a better gear into the differential, and if they did that, Oh, My, that clutch, and so on until you reached the front springs.

He says then how can they build a real car? I tell him we have them, good ones made by real manufacturers, which are built so near perfect that they remind me of the old story of the One Horse Shay which ran 100 years to the day and then what happened—the same thing that happens to our buggies today, go to pieces.

My point is this to you dealers, there is coming a time not far distant that before a man is going to purchase a car he is going to know the mechanic that is to do the (manicuring) for him, or the giving her "the once over" that the car needs now and then. I believe the greatest salesman of the future will be the A-1 mechanic. And what are the dealers doing to better the mechanic? Why can't we have conventions for mechanics where we can learn, get acquainted.

But Mr. Dealer, a specification sheet on a car, or a shop note, a blue print of a new carbureter, or a description, of some new device used on cars, will sure help the mechanic. If a mechanic knows he can push the sale of accessories for cars while they are being worked on. I know I do for my firm, the Triangle Motor & Supply Co. of Dalton, Mo., and they appreciate it,—I can tell that by the check at the end of pay day.

You may ask me what a good mechanic means. It means a man of a good education, lots of horse sense, not afraid of work and who knows a car from one end to the other, who can repair it from one end to the other, who can operate any kind of shop equipment, who can do a job in a minimum length of time, and a man who can weld, run a lathe, build batteries, paint, take care of tools, resharpen, dress and temper. He can also keep up on manufactures, new appliances and improvements in cars. And people, this is not too strong for a mechanic, I wouldn't put so much on them if I didn't know I could fill the place of a good mechanic. And you mechanics can all be what your employer terms a good A-1 mechanic if you will keep your eyes open, read a good motor journal at night instead of going to a movie, pick up a book and read it at noon hour instead of sitting around the stove telling yarns.

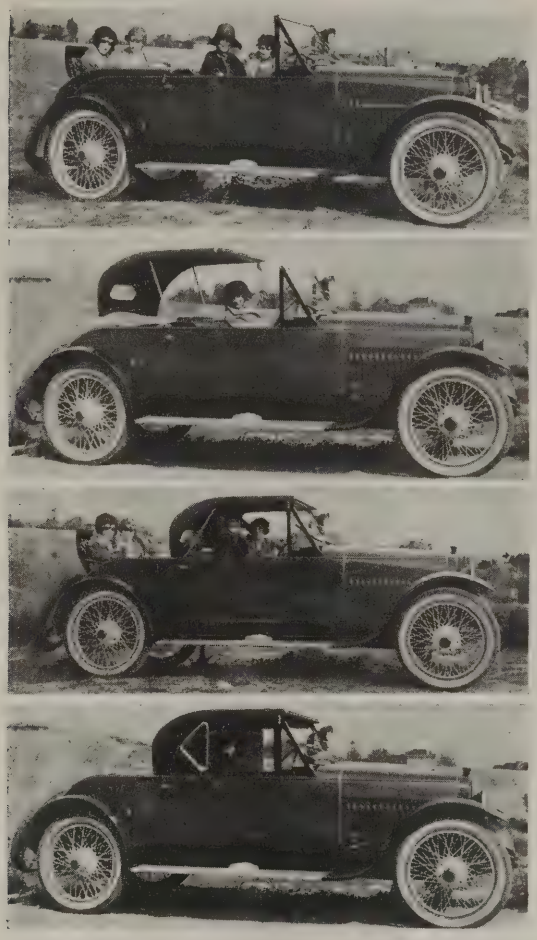
A mechanic's side of the story.

"BERT."
Albert M. Alexander.

More About Superchargers

To the Editor of MOTOR AGE: Chicago

I have read Mr. Ikert's article in a recent issue of MOTOR AGE entitled "All About Superchargers" and would like to call your attention to an error that occurs in the first paragraph of this article. You state—



> "but the first practical application of it, according to available records, goes back only to 1923 at the running of the French Grand Prix at Tours."

My recollection is that the first use of supercharging in automobile racing occurred in 1908 when the Chadwick Engineering Company of Pottstown, Pa., ran out a six-cylinder engine of the same bore and stroke as the four-cylinder they had previously used with considerable success. Contrary to their expectations the car with the six-cylinder engine was not appreciably faster than the one with the four-cylinder engine with the result that they set out to discover why this was true. Analysis showed that the inlet valves and ports were the determining elements and as there seemed no easy way to get around this condition the thought occurred to them that they might put the charge in under pressure and in that way compensate for the shortcomings of the induction system. Their first effort was a single-stage centrifugal blower, mounted between the carburetor and the manifold and driven at a speed of 6 to 1 by a 3 in. wide belt running from the outside diameter of the flwheel to a pulley on the rotar shaft of the blower. This application worked so well that they continued their experiments and developed three-stage blowers mounted and driven in the same manner as the single stage. Cars so equipped won quite a few races and it was one of these cars which Willie Haupt drove approximately 100 miles per hour more than fifteen years ago. These cars qualified as stock cars inasmuch as a number of them were built and sold to the public.

Several years ago, when I was located in Philadelphia, certain English motoring papers carried the story of the Mercedes cars used in the Targa Floria race in Sicily, and they gave the Mercedes or, as they stated, "our late enemy," credit for having been the first to use supercharging in automobile engines. I questioned this statement and, as a result, was asked to support my contradiction with same evidence of the Chadwick's prior use and was able to get in touch with both Mr. Chadwick and Mr. Nichols, the former Chief Engineer of the Chadwick Engineering Works, also with Mr. Willie Haupt, who assisted in the developing of these cars and drove them, and the information herein given can be supported, if you wish, by dated drawings of the parts used although I think you will find support in the files of MOTOR AGE.

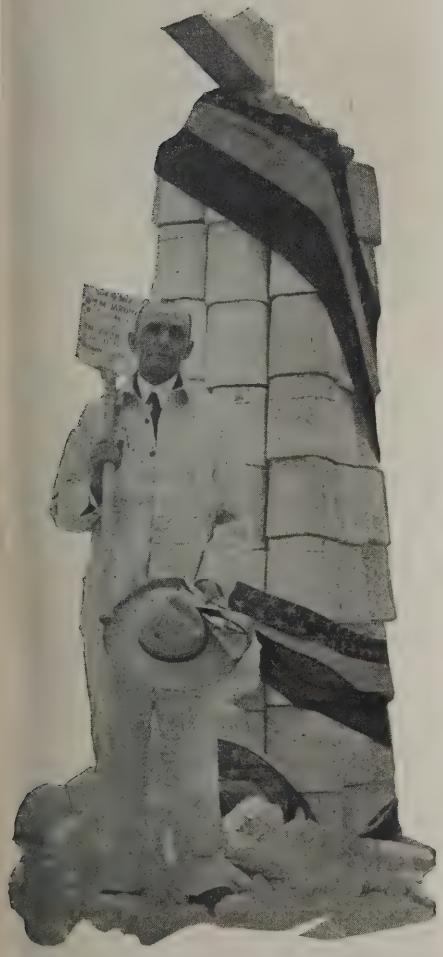
L. W. OLDFIELD.

MOTOR AGE'S PICTURE PAGES

SHIFTABLE TOP FOR ROADSTERS. B. B. Ellerbeck of Salt Lake City has designed a hand operated roadster top to provide for maximum range of vision in heavy traffic. It is carried on a set of arms which swing it down over the rear deck. The weight is counterbalanced by springs fastened to the body sills and connected to offsets on the shaft which joins the top supporting arms. These springs are under tension when the top is down. To allow use of the deck seat when the top is down, a panel in the roof is removable.

WAITING FOR THE NEWCOMER. An air of mystery surrounded the advent of the new Diana in New York. Private showings were first held to which admission was gained only by invitation. This so whetted the curiosity of the public that when the show rooms were finally thrown open for inspection there was a steady stream of visitors to view the new vehicle. The suspense element proved to be a potent sales stimulus.

WHAT'S WHAT IN DISPLAYS. Broadway salesroom of the New York branch of Stutz Motor Car Co. of America exhibiting a special roadster body. The background is a red brick wall with a picket fence coping in white. A white picket gate hinged on one end of the wall allows access to the automobile for inspection. The flooring gives a reproduction of flagstones with real moss growing between the stones. Around the garden wall growing out of real earth and grass are various colored hollyhocks.



OF AUTOMOTIVE INTEREST

MAKE 'EM INVESTIGATE—THEN SELL 'EM. The Chrysler Four was introduced in New Orleans by covering the windows of the showroom by a coat of orange paint, leaving six portholes in each window. Curiosity got the better of the people in the picture, and, it might be remarked, the men seem to predominate.

SIMPLIFYING UNLOADING. Mack Motor Truck engineers have devised this ramp-track method of unloading special containers which are deposited by simply driving in and backing out.

OPENS HIGHWAY AT SALT LAKE CITY. Secretary of Agriculture Jardine with inscribed silver shovel presented to him to dig away salt barrier blocking way through an arch built of solid salt.

A CLIMBER. Marmon 4-passenger speedster owned by distributor at Berlin, which finished fifth in the Hainberg Hill Climb. It is a stock car and competed mainly with special racing cars and others especially prepared for the hill climb.

Questions and Answers on Dealers' Problems

BUILDING ▲ ELECTRICAL ▲ FLAT RATES
SHOP ▲ LEGAL ▲ PAINT & TRIM ▲ ACCOUNTING

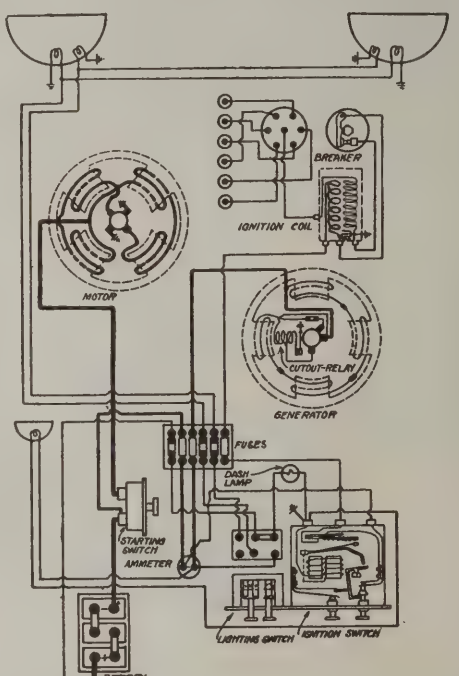
Horse Power, Carbureters and Wiring

Q.—I have a Lexington car, motor number 7W-66675, model R. R., 3¼-inch bore and 4½-inch stroke. I want to know the horsepower and revolutions per minute of this motor. Give the maximum r.p.m. and what speed I can expect from a good running motor in this car.

The power and torque characteristic of this engine are shown at the illustration at bottom of page. With everything in good shape you can expect as much as 200 R. P. M. more than the maximum indicated on the diagram. In good shape this car should make a little over 55 miles per hour.

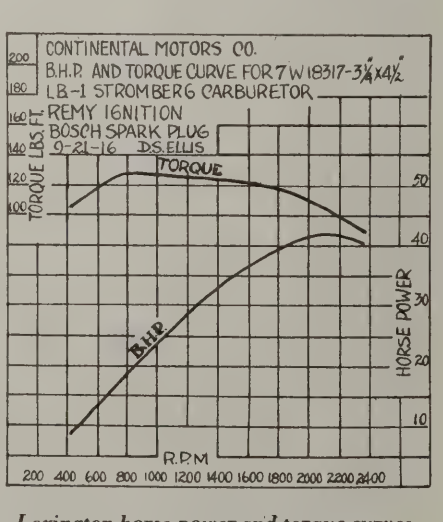
Q.—I have an L4 Zenith carburetor and would appreciate it very much if you would send me the right numbers of the jets and compensator and all the sizes necessary so that I can use it on the Continental motor used in the Lexington model I just mentioned.

Horizontal Carbureter Required



You do not give us the serial number of the car but, according to the Zenith service manual, this engine requires a horizontal type Model HP44 carburetor with the following internal specifications: No. 19 choke, No. 90 main jet, No. 95 compensator, No. 50 idling well and No. 30 needle valve seat. The HP series carburetor takes the same internal specifications as the 14, so that if you do not wish to go to the expense of securing a new carburetor it probably will be all right to secure a special elbow in order to adapt your vertical type carburetor to the horizontal installation. In other words, you will want a short manifold in order to allow you to hook up the vertical type carburetor. This manifold can be secured from the local representative of the Zenith Carburetor Company or from the factory direct.

Q.—Send me directions for adjusting the Rayfield in this car. I believe it is a model M carbureter.



Before adjusting be sure that there are no obstructions in the gas line and that all conections are tight and free from air leaks. The valve and ignition should be properly timed, and be sure that there is a hot spot and good compression on all cylinders. The Model M Rayfield carburetor has two adjustments, one for low speed and one for intermediate and high speed. The low speed adjustment, which is the one located nearest the flange where the carburetor attaches to the cylinder, should be turned to the right or left as required until engine runs properly at low speed.

The high and intermediate speed adjustment is located out toward the hood from the low speed adjustment. To get at it it is usually necessary to remove the hot air elbow from the main air valve. Do not move this high speed adjusting screw more than one-eighth turn at a time. Turn it to the right for a richer and to the left for a leaner mixture. The low speed adjustment has the same characteristics in that it is turned to the right for more gas and to the left for less gas.

Q.—What is the gear ratio for this car?

Wiring of Model RR Lexington

Lexington horse power and torque curves

Unfortunately, this information is unavailable for this car.

Q.—Give a wiring diagram.—Jerry Cervenka, 2321 Sawyer avenue, S. Chicago, Ill.

Wiring diagram of the Model R. R. Lexington is illustrated on this page.

The Cause of Vibration in Engines

Q—What causes an engine that is balanced in every way to vibrate at certain speed. I have a 1924 Oakland that vibrates at a speed of about 48 miles per hour. Below and above that point the operation is all right. What is engine vibration and why is it loud enough so it can be heard. I was told by a dealer that it is the torque of the engine but what torque was he didn't know.—John Strieff, Milton Junction, Wis.

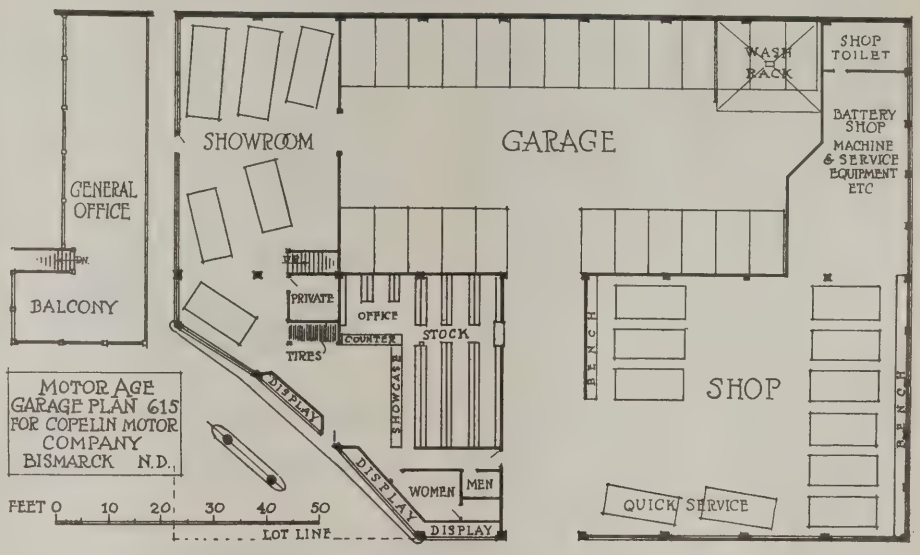
The chief cause of vibration is the motion of the reciprocating parts such as pistons and connecting rods which go up and down in the cylinders. At the end of the stroke these have to come to a sudden stop and then must start in the other direction. The rapidity with which the pistons move up and down of course varies with the car speed. The faster the car goes the faster the pistons jerk up and down. The noise is caused by the fact that certain parts of the car happen to be constructed so that they will naturally vibrate at a certain frequency very much as a pendulum has a certain speed at which it swings back and forth.

Synchronous Vibration

When the reciprocating parts such as pistons are moving up and down at a certain speed they will synchronize with the parts of the car that can be vibrated. This causes them to keep vibrating and make a noise. Comparing this action to that of a pendulum again we find that if a very heavy weight is suspended by a rope, we can give the weight a push and make it swing. It will then swing back and then swing in the original direction. If we again give it a push as it starts to go in the original direction, we will increase the amount of the swing and if we time each push properly, we can get the pendulum to swing violently. On the other hand, if we push or knock a weight without regard to the natural swing or period we will not produce any appreciable action, for we are just as likely to give it a push when it is coming back as when it is going.

In the engine this accounts for the fact that at only a certain speed is vibration likely to be very pronounced, and nearly all cars have some critical speed at which the vibration is noticed, while above and below this speed the operation is very much better.

Planning Your New Building



By TOM WILDER

The READERS CLEARING HOUSE

Filling Station to Boost Accessory, Parts and Service Sales

Q—We are planning on building a new garage, starting at a very early date. Our property is a corner lot on a main highway, one hundred foot front by one hundred forty foot deep, facing south. We plan on a filling station on the southeast corner. We have the Ford contract here, selling about two hundred fifty cars yearly and a parts business of about $35,000 yearly—Copelin Motor Co., Bismarck, N. D.

Your lot is especially well located and well sized for the building you wish to put up. Dividing it with a row of posts through the center, you have a good garage on one side and plenty of space for a well equipped repair shop on the other. A corner filling station always cuts into a building rather awkwardly but here it seems to give less trouble than usual. The accessory and parts departments fit in very nicely, so that there is not so much waste in the angular section as in most cases. The rest rooms are so placed that customers will have to pass the accessory show cases to reach them, which is always a feature which makes selling opportunities.

The stockroom is handy to both shop and sales counter and the garage is roomy

While you did not suggest it in your letter, we think it would be a good plan to make the first three bays of this building higher than the rear section, thus giving opportunity to install a balcony office. You will note that in our plan, this balcony extends over the front section of the garage and also over the parts office and counter, small private office and tire rack. If you do not approve of this balcony plan you can take a strip of the front part of the garage moving the showroom sufficiently back, so as to give you the necessary space.

While you probably have very good opportunities for window lighting, especially if there is an alley back of the building, we would suggest a few skylights in order to get light to the interior of the shop, the garage and the stockroom. The wash rack also should be well lighted. The roof of this building is planned to be supported on trusses which are carried on piers in the side walls and on the row of columns through the center of the building. These trusses should have their lower side about 12 feet from the floor, except the three front ones, which, if the balcony is used, would need to be 18 to 20 feet above the floor.

Legal Questions Answered—

By WELLINGTON GUSTIN of the Chicago Bar

SATISFYING CLAIM THROUGH SALE

Q—Will you please advise me what legal steps should be taken in regard to a car left for storage and uncalled for?—Park Garage, Storm King Highway, Cornwall-on-Hudson, New York.

You may sell the automobile at public auction and apply the proceeds first to the costs of selling, then to the satisfaction of your claim.

But before such a sale, you are required to serve a notice upon the owner, if he can be found within the county, but if not so found, then the notice may be served by mailing it to him at his last known place of residence or to his last known post office address. A like notice must also be served upon any person who shall have given you notice of an interest in the property subject to the lien. This notice shall contain a statement of the following facts:

(1) Nature of the debt and an itemized statement of the claim and the time when due.

(2) A brief description of the personal property.

(3) Its estimated value.

(4) The amount of the lien at date of the notice. This notice shall also call upon the owner to pay the amount of such lien, on or before a day named, not less than 10 days from the service thereof; and the notice shall state the time, when and place where the sale is to be made, if such amount is not paid.

You are entitled to collect on storage until date sale is made or claim is paid, but to do so your notice must contain a statement that such additional sum is demanded.

Then you are required to make oath to the statement that the lien is valid, that the debt upon which the lien is founded is due and has not been paid and that the facts stated in the notice are true to your knowledge and belief.

Each sale of personal property to satisfy a lien thereon shall be at public auction to the highest bidder, and must be held in the town or city where the lien was acquired. Now after the 10 day period given in the notice, another notice of the sale must be published once a week for two consecutive weeks, in a newspaper published in the town or city where the sale is to be held, and such sale shall be held not less than 15 days from the first publication. If there is no newspaper in the town, then the notice must be posted at least 10 days before such sale in not less than six conspicuous places in the town. This notice of sale must describe the property to be sold and give the name of the owner or person for whose account the same is held and the time and place of the sale.

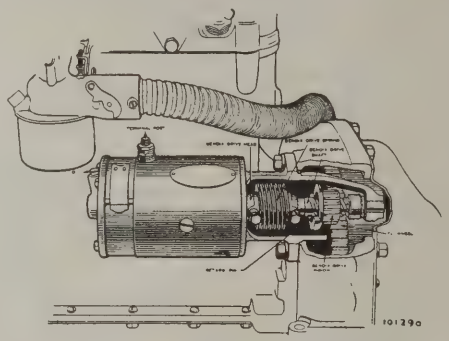
The owner is permitted to redeem his property before a sale by paying the garagekeeper the amount due on the lien and whatever legitimate expenses have been incurred in serving the notice and advertising the sale.

The statute also contains provisions regarding disposition of the proceeds of the sale.

Clearing Up Electrical

The Readers' Clearing House

EDITED BY A. H. PACKER



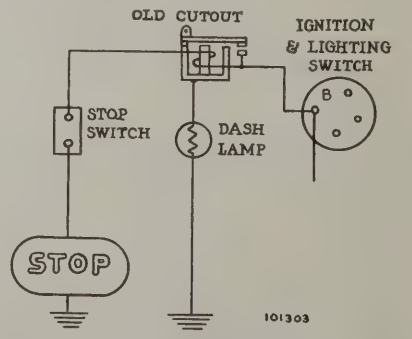
A Flat Spot on the Commutator—Who Can Explain?

Q.—I have been a constant reader of the Clearing House for several years and find that your answers are usually correct and that the readers will always come to your assistance, if need be. I have noticed on two different occasions that your answer to the question in regard to flat spots burning on the commutator of the Remy starter of the Chevrolet car was not correct. Your suggestion that the trouble was due to loose wires on the commutator would be correct for troubles of this nature in general, but it is not the case in this instance. You will notice when the starter is cranking the Chevrolet engine that there is a thump or jar each time the motor goes over compression which is due to strong compression.

This jar is transmitted through the starter gearing and armature to the commutator and brushes, causing them to throw sparks thus burning the commutator. There may be some definite relation of the starter gear to the flywheel and the compression of the engine which causes the commutator to burn on one side. Of course, if it starts burning it will continue to burn in that place. The remedy is to turn the commutator down in a lathe which however, is only temporary. To make a permanent repair it would probably be necessary to install another pair of brushes and brush holders in the places provided for them, connecting them in parallel with the other brushes, thus cutting the current to each brush in half and distributing the current more evenly on the commutator as was suggested by Wolf's Garage in the May 14th, issue of MOTOR AGE. G. E. Fretz, Electrician, 614 W. Fifth St., Pratt, Kan.

It is interesting to consider the operation of the starter and the effect of compression. We doubt however, if this completely tells the story. On the starter pinion there are 12 teeth. On the flywheel there are 120 teeth for model 490 and 122 teeth for the Superior model. In each case the starter pinion makes approximately 10 revolutions for each revolution of the flywheel. When one of the pistons is coming up on compression the engine and consequently the starting motor will run slower and when the piston goes over compression it will speed up again. If the period of comparatively slow speed running should take one tenth of a revolution or only 36 degrees on the flywheel it would mean that the commutator makes a complete revolution so it would be hard to figure how any one place on the commutator would be burned due to slowing up.

There is another possible explanation which the illustration of the starting motor may make clear. When the flywheel kicks the Bendix pinion out of mesh the pinion runs forward as shown in the illustration and the teeth no longer mesh. When the driver takes his foot from the starter button the starting motor is then allowed to stop. It then occurs to us that the weight on one side of the Bendix pinion may have the effect of causing the armature to stop in the same position nearly every time. If this happens it means that every time the starter is operated the brushes are in approximately the same position on the commutator. As the initial current is in the vicinity of 500 amperes and the running current only about 100 to 150 amperes it would indicate a reason for the burning occuring in one place.



The starter pinion is out of mesh when engine stops

WANTED—A ½ VOLT, 2 AMPERE BULB FOR PILOT LIGHT

Q—Give wiring diagram for stop light with a check light on the dash, to show when the stop light is working. Also give the proper bulbs to use. The battery is a 6-volt battery.—L. B. Draper, 7220 Nagle avenue, Detroit, Mich.

This matter has been taken up with two of the largest lamp manufacturers and they state that no bulb which is suitable for this purpose is made at present. When dash lamp and tail lamp are in series, two bulbs, each rated at 3-4 volts may be used for they are both of the same size, that is, 2 candlepower. However, when you try to use anything larger than the 2 candlepower in the stop light, you will find that there is no suitable lamp to go with it for use in the pilot lamp. We understand that one stop light has been made with a special low voltage high current small bulb for use as a pilot light, but these do not seem to be available on a replacement basis.

We are showing a wiring diagram which gives a method used in another stop light. This is to use a magnetic relay or electrically operated switch. The current from the battery terminal on the ignition and lighting switch goes through the heavy winding of the relay to the stop switch which is operated by the brake pedal. When the circuit is completed through the stop light the magnetic effect of this current closes the contacts of the cutout and completes the circuit through the pilot light on the dash.

Circuits for pilot light used with a Stop Signal

If the current does not go to the stop light, then the dash lamp will not light up. The circuit using the pilot light in series with the stop light would be from the switch to the pilot light, then through the stop switch and finally through the stop light, but as previously stated, bulbs are not made which are suitable for this purpose. You might try a 3-volt, 2-candle power lamp in the dash and a 6-volt 4-candlepower lamp in the stop light, but we do not believe the results would be perfectly satisfactory. If an old cutout is used, the fine winding could be discarded and the heavy winding only used.

To Make A. C. for Growler

Q.—Give the name and address of some electrical company that carries new and second hand motors and generators.

This information will be given by letter.

Q.—We have a growler which operates on 110 volts, 60 cycle single phase current and we do not have any power of this sort. We need a ¼ horse power alternating current generator, 110-volt, 60 cycle. Could a ¼ horse power—110-volt, 60 cycle single phase motor be changed over to a generator without much trouble.—George G. Thomas, Rural Valley, Pa.

We do not believe the motor can be changed over as motors of this sort are usually inductor type which are not suitable as generators. A growler is sometimes operated by means of battery and a vibrator. It is necessary, however, to have a vibrator, the coil of which has a very low resistance. One type which at times has been used successfully, is the Old Delco ignition relay used in 1910 or 1911 Hudson cars, these being located at times in automobile wrecking establishments.

The vibrator of a Ford coil might serve this purpose if the secondary winding were removed. We faintly recall at one time a subscriber mentioning some experiments made in using the magneto current from a Ford car for operating a growler. It would appear as if the voltage of the Ford magneto would be too low and might require rewinding the growler, so we cannot recommend this procedure. The alternating current generator giving the correct voltage would be the best device to use.

Trouble With Bill Fixit

EDITED BY A. H. PACKER

The READERS CLEARING HOUSE

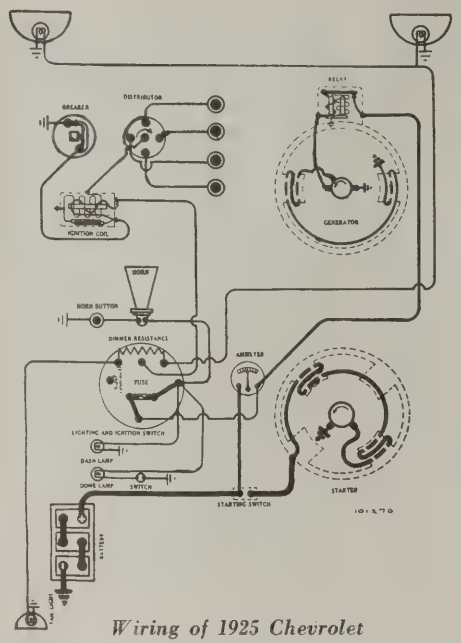
Does a Ford Generator Lose Residual?

Q—Supply wiring diagram of the new 1925 Chevrolet.

This diagram is shown in accordance with your request, it being correct for both 1924 and 1925 cars.

Q—I have a Ford generator here which continually loses its residual magnetism. If the car is left for two or three days the generator will not build up, but by putting battery current into the field it will build up and charge all right. The generator and cutout seem O. K.—Reginald H. Trevor, Blubber Bay, B. C., Canada.

The usual trouble when a Ford generator will not build up is caused by oil from the rear end getting on to the commutator and being soaked up by brushes. This condition can be remedied by installing a new set of brushes and then omitted the oiling or else oiling very carefully, putting in not more than one or two drops at a time. It is of course, possible that there is some other trouble such as a poor connection between field coils.



Energizing the magnetic field with battery current makes the machine generate enough voltage to cut through any insulating film on the surface of the brush or through any poor connection of the field coils and after the current once starts to flow the resistance is not sufficient to stop it and the generator keeps on working. While the engine is warm and the generator is also warm the oil in the brushes is thin and does not act as an insulator. When the car is allowed to stand for two or three days, however, the oil congeals and forms an insulating film between the brush and the commutator.

BATTERY REVERSAL TEST

Q—Why are some of the cars arranged to have the positive post of the battery grounded and others the negative? If a car has its battery removed before you start working on the car, how can you tell without trying the battery and damaging the electrical system whether you have the connections right or wrong?—C. Neiheiser, 1130 Lovers Lane, Akron, O.

In most cars it does not make any difference whether you have the battery one way or the other if the cutout points are once closed by hand, so as to magnetize the generator in the proper direction. Of course, if the wiring is laid out to have the positive grounded and you ground the negative instead it will cause the ammeter to read the wrong way showing charge when the lamps are turned on and showing discharge when the generator is sending current to the battery. Aside from this no harm results.

One exception is the Dodge Brothers car where the horn is connected to the live side of the battery. With the negative grounded and the horn positive, it has been found that corrosion takes place in the horn much as it does at the positive battery terminal. For this reason when the horn circuit was changed a change was also made in the battery, so as to ground the positive and have the negative end connected to the horn. The simplest test to make when installing a battery is to turn on the lights and see that the ammeter shows discharge. If it shows charge when the lights are turned on, it indicates that you have the battery reversed.

Wiring of 1925 Chevrolet

ZENITH CARBURETER SPECIFICATION

Q—Please send me by return mail proper model number and jet sizes of Zenith carbureter to fit the Maxwell 1920 model.—John Lettellier, R. F. D. No. 2, David City, Nebr.

Zenith specifications for this car call for a carbureter model 04 with a No. 19 choke, No. 90 main jet, a No. 95 Compensator and a No. 45 idling well. Other fittings necessary are as follows:

Throttle lever.
Hot air sleeve.
Hot air sleeve lever.
Hot air stove.
Manifold adapter.
No. C-1518 right.
No. C-2477 with bracket No. E-1459.
No. D-1460.
1½ inches by 7 inches long.
No. 4.
No. B-753 union body.

Taking a Chance on Fordson Magneto Charging

Q—I read your article on charging Ford magnetos in the March 12, 1925, issue of MOTOR AGE on page 26. I would like to have similar instructions on charging the Fordson tractor magneto.

The difficulty with the Fordson magneto is in properly setting it for the compass cannot be located in such a position that it will give definite results. One method suggested is to use a 6 volt battery and connect from the magneto terminal to the frame of the engine. When this is done there will be a magnetic attraction between the flywheel and the framework which holds the magneto coil. When the magnets are in the proper position this attraction and the accompanying thud or knock will be most pronounced, while the attraction will be slight when the magnets are in the wrong position.

If the crankshaft is pushed backwards after each test with the battery and if the engine is turned over by hand with the spark plugs removed, it is possible that a place will be located where the thud is most pronounced. If this position can be accurately determined it is the right place to leave the flywheel and magnets while the charging work is being done. The battery can be connected either with negative or positive to the magneto terminal in making this test, but whichever way it is connected, the same connection should be used when using 24 volts instead of 6, for the recharging process. You can readily see that this method would be quite experimental and should only be done as a last resort in case the magneto is inoperative.

Leaving Switch On Burns It Out

Q—Is there a relay cutout in the generating circuit of the 1923 Oldsmobile Six. We have been unable to find one on this car and when the switch is accidently left on it burns out the switch or wires?—Kelly Johnson, Johnson's Garage, Mazon, Ill.

There is no cutout and the operation of the ignition switch supplies battery current to the ignition coil and to the generator, while stopping the engine shuts off the ignition current, also disconnects the generator from the battery. The current that the generator will take when the engine is not rotating should be in between 15 and 20 amperes and the ignition current would be about five amperes more if the interrupter points happen to be in contact. The answer of course, is that the driver of the car should become accustomed to watching the ammeter and when he sees a very heavy discharge should turn off his switch, if he has not done so previously. Twenty-five amperes is a fairly heavy current and in time might cause some overheating especially if at any point the connections are not very good.

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

Importance of Major Operations

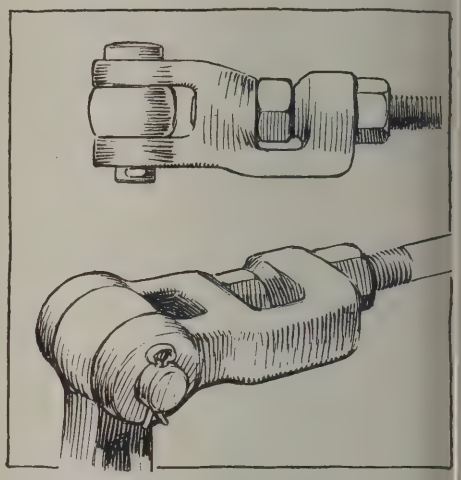
MOST of the present day flat rate systems are made up of several major operations together with various minor operations to go with them. The major operations play a very important part in the selling of flat rate. For instance when several jobs have to be done on a car there may be but one or two major operations, the execution of which allows the other operations to be performed at the same time.

To make this clear suppose a car comes into the shop and the owner says there is a knock in the engine, that the engine does not pull well and fires irregularly. Assuming that the car is turned over to an inspector or trouble shooter the latter may report that the bearings need taking up, valves must be reground with a possibility that a few need replacing and the carbon must be cleaned out and the oil pressure relief valve setting must be changed.

The above operations can be performed under two major operations these being, first, the removal and installation of oil pan and the removal and installation of the cylinder head.

The first thing to do when there are several operations like this to be done is to find the major operations which must be performed to take care of the others. If additional operations are desired they can then be done also. Thus, while the crankcase oil pan is off and the cylinder head has been removed, it might be found that there are several loose pistons. These can be removed and replacements effected while the job is down. In this way the customer pays for the major operations but once, whereas if he came back the following week for example, to have the pistons replaced he would have to pay for the major operations as before.

Conditions Govern Prices



Lansing, Mich.

To the Editor of MOTOR AGE:

I have been thinking of installing a flat rate system in my garage but do not know just how to arrive at the prices to charge for the various operations. How is this done in other shops and does the same price hold good on a job all over the country. That is, does the price for grinding valves on the Buick, for instance, in the case of one dealer's shop apply in another Buick dealer's shop 1,000 miles away? I would appreciate being set straight on this.—T. W. H.

Prices for flat rate operations vary in different localities, because conditions are different. The price of labor varies and usually you will find that the prices for flat rate operations are slightly lower in the smaller communities as compared with those in large cities. Labor is higher in the larger cities and it naturally makes a difference in the price of the job to the customer. Flat rates are based on $1, $1.25, $1.50, $1.75 and $2 an hour depending upon local conditions. The price you charge must be based on the price of labor in your community. You can get these prices by referring to MOTOR AGE's Flat Rate Manual. These prices easily can be adjusted to suit your operating conditions.

Many of the motor car companies are establishing a flat rate price for various operations to be the same all over the country, so every one of their dealers will have the same fixed price for the operations to quote customers. This naturally has advantages in that an owner of such a car if on a long trip will be assured paying the same prices for maintenance work he is used to in his own locality.

THINGS WHICH HELP FLAT RATE

This shows a form of yoke end used on brake connections in which adjustments can very quickly be made without having to remove the clevis pin. It is done by merely loosening the lock nut and turning the nut in the center, after which the locknut is set up tight

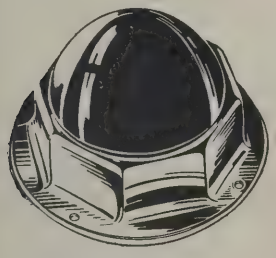
MOTOR AGE'S FLAT RATE FORUM

No. 22

CHRYSLER FLAT RATES FOR PISTONS, PISTON RINGS AND PISTON PINS

Manufacturer's Official Designation		Time
7040	Remove and install new pistons and rings, new pins if necessary, including removal and installation of cylinder head and oil pan, check connecting rod bearings, and align rods	9½ hrs.
	(a) Install new connecting rod in conjunction with above	No extra charge
7041	Remove and install one new piston, new rings and pin if necessary, including removal and installation of cylinder head and oil pan, align connecting rods and check bearings	3½ hrs.
	(a) Each additional cylinder, add	1¼ hrs.
7042	Remove and install piston rings, full set, including removal and installation of cylinder head and oil pan	8 hrs.
	(a) New pistons or pins in conjunction with above, etc.	½ hr.
7043	Remove and install piston rings in one cylinder, including removal and installation of cylinder head and oil pan	3 hrs.
	(a) Each additional cylinder	1 hr.
	(b) New pistons or pins in conjunction with above, each	½ hr.
7044	Remove and install piston pins, full set, including removal and installation of cylinder head and oil pan, align connecting rods and check bearings	6 hrs.
	(a) Install new pistons or rings in conjunction with above, add, each cylinder	½ hr.
7045	Remove and install one new piston pin, including removal and installation of cylinder head and oil pan, align connecting rod and check bearings	3½ hrs.
	(a) Each additional cylinder, add	½ hr.
7046	Remove and install piston pins, customer brings parts in, each	½ hr.
	In the first five of the above operations the company advocates recommending to the customer operation No. 6906 which reads —Grind valves, adjust tappets, and turn engine when cylinder head has been removed for some other operation	5½ hrs.

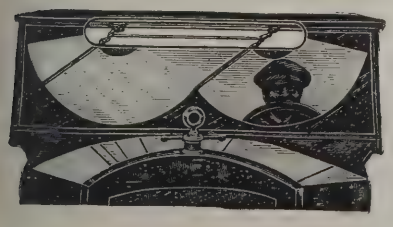
THE MARKET'S NEW OFFERINGS



Accessories—Equipment—Supplies

Clark Motor Stabilizer

ELIMINATION of the vibration common to four-cylinder, three-point suspension engines is said to be accomplished with the Clark Motor Stabilizer, invented by E. E. Clark, of Junction City, Kansas, and manufactured by Weldon and Company, Thirteenth and Oak Streets, Kansas City, Mo. This device is said to be so designed that it holds the top of the engine when the piston exerts a side thrust against the cylinder wall, thus preventing its oscillation and tendency to rotate with the crankshaft. Installation is accomplished simply without special tools and the attachment does not interfere with any other special equipment on the car. It is not necessary to remove the stabilizer in order to remove the cylinder head for shop jobs. Prices range from $5 to $6.25 according to the car for which the stabilizer is designed.



Clark Motor Stabilizer

Running Board Light

Tiffany Courtesy Lamps

TIFFANY Manufacturing Company, 42 Spring Street, Newark, N. J., is producing courtesy or running board lights that are both artistic in appearance and hard to damage. The lights are known as Model CL 2. They have heavy ribbed beehive lens. The shell is of brass, heavily nickeled and highly polished. All parts are rustproof and heavy gaskets make the lamps waterproof. They come in pairs, a red one to be installed on the left side and the green on the right. List price $3 a pair. Dealers prices in lots of one to nine pairs come at $2 a pair while lots of ten or more pairs are priced to dealers at $1.80 a pair.

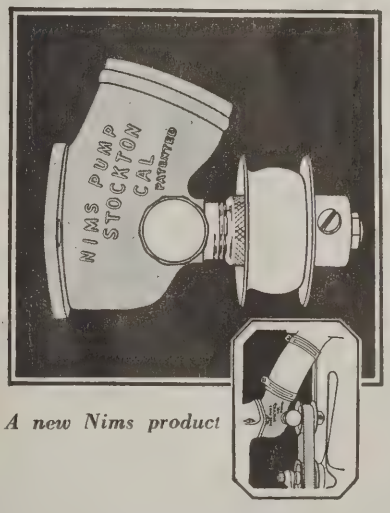
Fulvishun Windshield Cleaner with double wiper feature

A Tip From the Umbrella Seller

Rainy spells and other temporary weather conditions are profitably capitalized by merchants in various lines. A rainy day is sure to suggest an umbrella display to one, raincoats to another and perhaps rubbers to another.

The sale of an umbrella not only brings a profit on that item but the fact that it is raining causes the customer frequently to linger in the store, with the chance that he might buy something else and be cultivated for future business.

With the automotive merchant such articles as tire chains and windshield cleaners can be applied to the same purpose as umbrellas at these other stores. The state of weather will emphasize the value of the items displayed and help prolong possible selling contact with the customer.



Fulvishun Windshield Cleaner

A SMALL, easily folded bracket which when attached to the ordinary windshield cleaner will keep the entire windshield free from moisture is what is offered in the Fulvishun Cleaner by the Metal Stamping Company, Long Island, N. Y. The Fulvishun Cleaner is said to accomplish a complete job of clearing up the windshield through operation of its double wiper. Five minutes or less is all required for its adjustment and the Fulvishun Cleaner costs $1.25.

Co-Pa-Lite Windshield Glass

A SPECIALLY designed windshield glass for the upper section of the windshield which is said to afford the driver a clear vision that will show the exact location and position of any passing automobile having bright lights is being produced by the Co-Pa-Lite Windshield Glass Company, 242 Fourth Avenue, Pittsburgh, Pa. It is known as the Co-Pa-Lite Windshield Glass. The special grinding and polishing of this glass diverts the rays of an approaching light to a given point on the windshield and is recommended by the producers as an essential to safety in night driving.

The Co-Pa-Lite glass is simply substituted for the old glass in the upper windshield section. It is made of plate glass and cut to full sizes and to measurements when given, with instructions as to installation accompanying each unit. The Co-Pa-Lite company will furnish dealers with full information.

A new Nims product

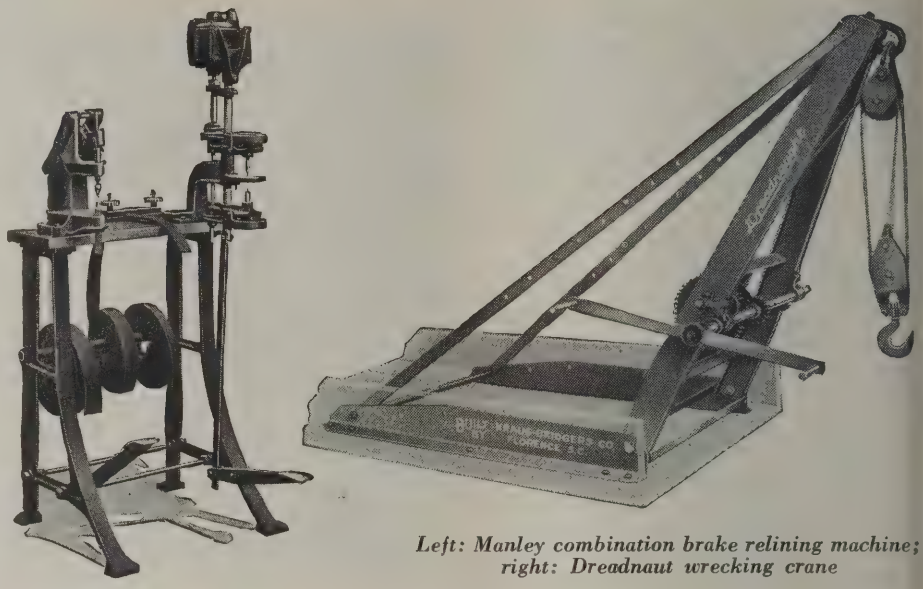
Nims Pump for Fords

WHAT the manufacturers offer as a practical and highly efficient water pump for Fords is being produced by the Nims Pump Company, Stockton, Cal. These pumps are installed on the front of the engine in place of the regular water outlet manifold. By making the installation at this point no change is necessary in the fan, fan belt or the fan belt drive. Nor does the pump interfere with the Thermo-Syphon system. The pump housing and bearings are made of bronze, the bearing being constructed with a special end—thrust shoulder—which is said to eliminate leakage. The Nims pump's fuel consumption is 1/20 H.P. Price $5. A larger pump similar in design sells at $15.

GETTING MORE OUT of the SHOP

Manley Combination Brake Relining Machine

The Manley combination brake relining machine is a countersinking and riveting machine built in one unit.



It consists of a Manley drilling and countersinking machine and a Manley heavy duty riveting machine, mounted on a bench, supported by heavy duty iron legs, with natural wood top; and provided with a clamp for holding the brake lining while cutting.

A rod for holding the rolls of brake lining is also provided. The price complete without motor is $76. If adaptors for electric drills are desired the size and make of drill used for motive power must be specified. It is built by the Manley Manufacturing Company, York, Pa.

Dreadnaught Wrecking Crane

A universal wrecking crane having 80 lbs. of lift to every pound pressure applied to the crank has been brought out by Kraus-Bridgers Company, Florence, South Carolina. A unique link construction at the top of the boom permits pulling or lifting from any angle without binding on the cable. The boom is made from one piece of heavy channel steel and is easily adjustable to any elevation by lengthening or shortening the braces, which have a series of holes for this purpose. The crank can be applied to the shaft on either side and two cranks can be furnished when required.

By removing a pin and pulling the crankshaft outward the gears are unmeshed which frees the cable drum and allows the hook and bottom tackle block to be carried to the work. 36 ft. of high grade plow steel cable having a tensile strength of four tons is furnished. When a disabled car is too far from the crane or is down an embankment and a long pull is necessary, the drum can be used as a winch by taking out two pins and removing the cable from the blocks. The distance from the base to the top of the boom is 60 in. The length of the base is either 40 or 46 in. while the width with the flanges turned in is 32½ in. and with flanges turned out 37½ in. The distance from the shaft to the floor is 20⅝ in. and the length of the crank from end to end is 30 in. The price of this crane is $75.00. If desired 72 feet of cable on the drum can be furnished for $7.50 extra.

---

Gas Fired Automobile Cleaner

A gas fired cleaner for washing cars and removing paint and grease has been brought out by the Eclipse Fuel Engineering Co., 814 S. Main street, Rockford, Ill. The device consists of a small steam boiler, container for the cleaning chemical and a sprayer with two lengths of hose. One of the hose carries a high pressure supply of steam while the other delivers the cleaning composition which is mixed with the steam in the nozzle just before being sprayed over the parts to be cleaned.

When it is desired to merely clean the car a weak solution is used. But when paint or grease is to burned off a few applications of full strength solution are said to remove all foreign matter almost immediately. Advantages of the device are said to be speed of operation and economy in upkeep. The cleaner is particularly helpful in removing the grease from engine parts as well as the chassis and a few sprays of the nozzle are said to leave the metal as clean as new. The regular model for cleaning cars sells for $320, while the same outfit with attachment for paint removing sells for $375.

Gas fired steam cleaning apparatus of the Eclipse Fuel Engineering Co. which is said to quickly and efficiently clean cars. A flue, not shown in the illustration connects to the boiler for carrying off the heat and gases

EDITORIAL

Inspiration in Selling

THE motor car salesman is engaged in a worthy business. He is in an exhilarating and inspiring enterprise, if he will only let it be so. What could be finer than providing the people with the miracle of modern individual transportation? And what could give more joy to sell than the vehicle of today, fleet of wheel, sturdy, dependable, comfortable, useful in the highest degree?

The motor vehicle is a comparatively new article of commerce, and one that is in universal demand. Yet it must be sold. It cannot be left lying on the shelf for the customer to come in and carry away. This year's car soon becomes a last year's model. The car must get on the street while it is young.

The missionaries of this great business are the salesmen who go into the homes and offices of the people to sell them automobiles. The salesman's job is one of responsibility and opportunity. He assumes the responsibility of representing not merely a particular make of automobile but an industry that in 25 years has grown to immense magnitude. This industry is worthy of the highest type of representative.

The automobile salesman has opportunity almost unlimited. He sells that which all men want. An article of the highest quality. Pleasure, comfort, recreation, profit, travel, sociability—all are delivered in constant supply with the article of merchandise that he sells.

The salesman of vision sees farther than the dotted line of the order blank. He sees the family on Sunday enjoying an outing that will give inspiration for the whole week; he sees them taking the children to the park for a picnic supper; from their own door to the theater and home again in the evening; bags, suitcases and all belongings whisked to the railroad station for a long journey; the children to school and back on a rainy day; to market and all provisions taken home and put away without the uncertain delay of store delivery; fresh vegetables from the country; the sense of freedom that a dependable motor car brings—these are some of the things that automobile salesmen of vision see and sell.

We need more automobile salesmen of vision and inspiration. Those who have these two qualities in full measure will make their own reward and it will be ample.

Clean Show Windows

IT is not the good fortune of every accessory dealer to have a good show window—one which would be considered ideal for the purpose of display.

The dealer who has any sort of a show window, however, is never handicapped with inability to keep it clean and to see that the displays, small though they be, are maintained in neat, orderly arrangement.

One window, noticed a few days ago, contained a dusty and fly-specked display which obviously had not been given attention for months. The only saving feature was that the panes of glass were so beclouded with ancient accumulations of dirt the passerby would not often be tempted to strain his eyes in order to see what lay in the partitioned section beyond.

Perhaps this merchant would say he "hasn't had time" to look after the windows. If not, it would be better to have no display in them at all. Even the window which is not ideal for show purposes can be used to some advantage, but the first rule should be cleanliness. To make the display inviting it must be kept spick and span and fresh looking.

Say We "Buy" Them

NOW and then a bad word creeps into the lexicon of automobile merchandising. The Chicago Automobile Trade Association does not like the word "appraisal" and some time ago this body urged in substitution for "appraisal" the word "value."

This recommendation has been well received in many quarters as has the one originating in St. Louis which proposed adoption of "maintenance department" in the place of "service department."

There is something in a name and there also is much of something occasionally in the coloring of words and terms used to describe human activities. Maybe our trade dictionary is in need of revision.

If so, one of the words which should be stricken from its pages most enthusiastically is that unhappy, ill-conceived, misleading pet and profit wrecker—ALLOWANCE.

Why not throw out this word bodily and substitute for it the good business man's term—BUY.

Let's quit telling the prospect that we will make such-and-such an "allowance" on the old car and, like real merchants, tell him we will BUY it from him if in turn he buys a new car from us.

And then let's really BUY his old car at a price that will enable us to dispose of it in resale at a fair profit.

The word "allowance" is fundamentally unsuited to the dealer's purposes in its psychological influence. It often causes the merchant to forget that he really is a "buyer" who buys to sell at a profit. It is not to the point and it is not of sufficient directness to let the prospect know that he, himself, is offering something FOR SALE.

Automobile owners have been trained to regard an "allowance" as an indefinite something made largely of rubber. There is need for a reschooling. To offer to "buy" a car means—just that.

Registrations in U. S. Gain 13.7 Per Cent

Total for First Half Almost Equals Entire 1924 Figure

New York Leads With 1,332,168 With California Second and Ohio Third

NEW YORK, July 13.—Motor vehicle registrations in the United States totalled 17,548,377 on July 1, 1925, a gain of 2,108,407 or 13.7 per cent over July 1, 1924, according to a survey just completed by the Chilton Class Journal Company. Registrations for the first six months of this year are nearly as high as the 17,605,501 recorded on December 31, 1924, as the total for the whole of last year. Total registrations by the end of this year are certain to surpass those of 1924 by a good margin, indications now being that the December 31, 1925, figure will be very close to 19,000,000.

New York, as in previous years, holds first place, 1,332,168 cars and trucks having been registered in that state since the beginning of the year. California holds second position with 1,283,203 and Ohio is third with 1,232,943.

The real estate boom in Florida evidently has had a highly favorable influence on automobile sales in that state, the number of registration today being 51.2 per cent greater than on July 1st last year. This is the largest percentage gain recorded by any state. Texas has the largest numerical gain over last July with an increase of 191,710.

There are 6.47 persons per motor vehicle in the country today, population estimates of the Bureau of Census for July 1, 1925, being used as a basis for the calculation. Fees paid into the various state treasuries by automobile owners totalled $218,333,826 for the first six months.

Motorcycle registration dropped again, registrations in the first six months of 1925 being more than 10,000 less than in the first half of 1924. The present total is 115,400.

Yellow Engine Works Sees Added Strength by Merger

MOLINE, July 11.—Louis Ruthenberg, general manager of the Yellow Sleeve-Engine Works of East Moline, today declared that merger of the truck division, General Motors Corporation, with the Yellow Cab Manufacturing Company would materially strengthen the engine works. He predicted that by the first of the year production would be doubled.

The East Moline plant's principal business is the manufacture of engines for busses and taxicabs produced by the Yellow Cab Manufacturing company. Three hundred engines are being produced each month at the present time and 350 workers are employed in the plant, Mr. Ruthenberg states.

While the engine works is a distinct corporation in itself, its stock is owned by the Yellow Cab Manufacturing company.

Quake Fails to Hurt California Sales

NEW YORK, July 11.—No seriously adverse effect on automotive sales in the Far West is expected to result from the Santa Barbara earthquake. Late advices to the Chamber of Commerce of the United States, through its Pacific Coast representatives, show that Santa Barbara was the only community affected and that the major damage was confined to about one per cent of the city's business district. A tentative estimate by engineers of the cost of rebuilding the destroyed buildings and making them of modern construction was $10,000,000 and California financial institutions have agreed to loan needed funds for rebuilding.

Chrysler Corp. Assets Gain $6,000,000 in Six Months

NEW YORK, July 11.—The consolidated balance sheet of the Chrysler Corp and subsidiaries, as of June 25, 1925, shows total assets of $71,423,179 against $65,442,814 for the old Maxwell Motor Corp. and subsidiaries on December 31, 1924.

Major items on the asset side are plant and equipment, $15,715,338, a reduction of $200,000; good will, $25,000,000 unchanged; cash $8,163,186, against $5,680,611; acceptance and deposit certificates, $7,311,007, against $481,191; inventories, less reserves, $10,055,842, against $11,398,161. On the liability side, profit and loss surplus showed a big gain, standing at $6,070,667, while accounts payable declined to $3,262,264 from $5,244,642.

Total current assets as of June 25 were $25,654,324 and total current liabilities $4,375,775, leaving net working capital of $25,278,549. As of December 31, current essets were $23,029,398, and current liabilities $6,763,494, leaving net working capital of $16265,904.

VICTOR ADVANCES PRICES

SPRINGFIELD, O., July 11.—Sales are steadily increasing at the plant of The Victor Rubber Co., President H. H. Durr announces. Indications are that the company will have one of the best years in its history, he said. Business during May and June was far ahead of the same period in 1924. Victor has a new schedule of prices, effective at once. An advance of 10 per cent was made on tires and 15 per cent on tubes.

De Paolo Wins Inaugural At Baltimore-Washington

Italian Racer Announced Winner After Recheck—McDonough Is Second

WASHINGTON, July 11.—Peter de Paolo, winner of the Indianapolis speedway race on Memorial Day, today was declared the winner of the Baltimore-Washington 250-mile inaugural following a recheck.

It was first announced that Bob McDonough, protege and understudy of Tommy Milton, and the youngest driver on the track, had won the race, but it was later discovered that the timing devices had failed to register a lap for De Paolo and McDonough was found to have finished second, almost a full lap behind De Paolo.

Race officials under the supervision of Fred J. Wagner of the A. A. A. conducted the rechecfl. They said an official announcement from the A. A. A. would be forthcoming later.

De Paolo's time was 2:01:37 and McDonough's 22.28 seconds slower. The winner received a purse of $9,000, McDonough, $5,000, Harry Hartz, $3,000, Fred Comer, $2,000, Frank Elliott, $1,500, Jimmy Hill, $1,000, Tommy Milton, $900, Ralph Hepburn, $800, and Phil Shafer, $700.

Milton's proceeds, however, were considerably more than the $900 as he added McDonough's $5,000 to his own as McDonough's employer. He announced that the youthful star would receive 38 per cent of the $5,000.

General Motors Executives Plan European Inspection

DETROIT, July 11.—General Motors Corporation executives, including Fred J. Fisher, Charles Fisher, John J. Raskob, John L. Pratt, Charles S. Mott, Alfred H. Swayne and James D. Mooney, will shortly visit the various European countries to get more closely in contact with the export activities of the General Motors Corporation.

While abroad the party will inspect the corporation's subsidiary companies and assembly plants in London, Copenhagen and Antwerp in addition to making a survey of the motor car situation in England and the various continental countries.

The proposed trip according to President Alfred P. Sloan, Jr., is in keeping with the company's policy to send to Europe at various times different groups of its officers and engineers in order that they may be able to study at first hand the business and economic conditions of foreign countries with special reference to the importation of American-made automobiles.

Mack Bus Sales Advance 433 Per Cent Over 1924

Business for First Six Months 34 Per Cent Better Than All of Last Year

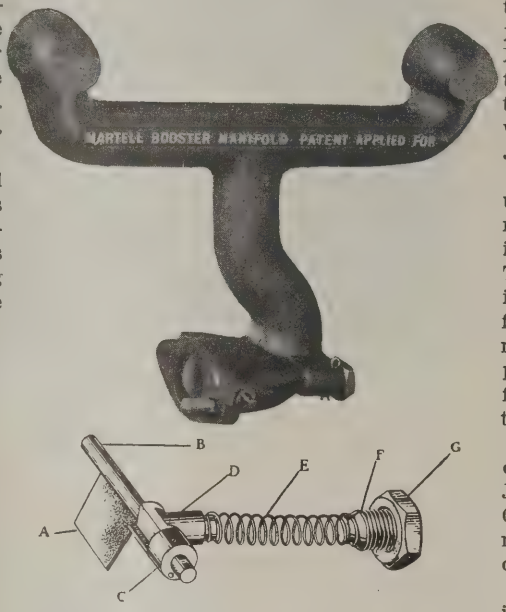
NEW YORK, July 11.—Sales of Mack buses for the first half of 1925 increased 433 per cent as compared with sales during the first six months of 1924, and were 34 per cent more than the total sales for the entire year of 1924, according to the semi-annual sales report of Roy A. Hauer, manager of the bus department, Mack Trucks, Inc.

Bus sales for the month just passed were 39.9 per cent ahead of May business and to date July promises to show further substantial gains over previous months. More buses were sold during the first half of June than during the entire month of May.

When January figures were published early in February, says the report, officials of the International Motor Co. pointed out that business for that month had established a bus sales record for any one month in the history of the company. Since January every month has shown substantial gains.

Mr. Hauer calls attention to the fact that business for the first half of 1925, as compared with 1924, is undisputed evidence of the increasing popularity of the bus as a public conveyance and that there is every indication that demand will continue throughout the remainder of the present year. It further indicates, says Mr. Hauer, that bus operators are rapidly discarding old equipment for new and standard buses of high quality.

Columbus Garages to Test Lights Before Police Drive



COLUMBUS, O., July 11.—Testing screens, now being made by the Yeager Tilt-O-Lite Co., will be placed in 10 different garages throughout the city to test defective automobile lights when the police campaign against them starts July 15. The campaign against defective auto lights will continue for 30 days, during which time no arrests will be made. It is intended to reduce automobile accidents in Columbus.

Tags now being printed will be handed to motorists whose auto lights are faulty. The tags will bear the names of the garages where the testing facilities are located, and will order the motorists, to whom they are given to report to one of the stations within 36 hours. A small fee will be charged for the testing.

On the tag will be indicated which of the nine classes of violation the motorist is committing. Officials of the test stations will advise motorists as to how to remedy their lights. After the 30 day campaign those still having faulty lights will be arrested.

Booster Manifold for Fords

In order to overcome the fluctuating suction through the intake manifold with varying piston speeds a manifold called the Martell Booster Manifold for Fords has been brought out by Albert A. Martell, inventor of the Martell reamer, and is distributed by the Russell Automotive Products, 2019 S. Michigan Avenue, Chicago.

Top—Martell Booster Manifold for Fords. Bottom view shows the valve mechanism which keeps the gas velocity more nearly constant

This manifold is about 40 per cent larger than the stock manifold at the carbureter opening and the valve mechanism as shown in the detail illustration provides means for keeping the gas velocity more nearly constant. The valve A is fastened to the spindle B which is mounted in the manifold, supported at its opening end by bushing C.

A cam surface formed on the enlarged portion of spindle B engages a follower D that resists the action of the valve, as influenced by the passage of the gas, by means of the pressure spring E. This spring E is adjusted to the correct tension by screw F locked by nut G and finally cotterpinned, after setting to gage.

An air port in bushing C admits additional air after the valve A is partly opened.

On account of the formation of the cam surface on spindle B the pressure or resistance to the action of the valve A decreases as the valve opens. When the throttle is wide open the valve "floats" on the gas stream and maintains the velocity without in any way restricting the amount of gas. When the car is traveling at slow speed the valve is nearly closed, automatically reducing the manifold opening, maintaining gas velocity at any speed or throttle opening.

Ford Sets New Sales Mark Of 195,300 Cars in June

Retail Business 6,000 Automobiles and Trucks Ahead of Record Month Year Ago

DETROIT, July 18.—A new June sales record was established by the Ford Motor Company during the month just passed, when approximately 6,000 more Fords cars and trucks were delivered to retail customers in the United States than during the same month a year ago, which held the previous high mark for June.

Reports indicate a continued large volume of business through the summer months with a higher buying level than is usual during this season of the year. The outlook is for another record breaking month for July. Urgent requests for additional shipments have made necessary increasing the company's July production schedule, which now calls for several thousand more cars and trucks than were produced in June.

Sales figures just given out by the company show that the total sales for June were 195,300 Ford cars and trucks. Of this number, 176,256 represent domestic sales, as compared with 170,547 cars and trucks sold in June a year ago.

Buying conditions also continue good in the high priced car market. Evidence of this appears in the sales of Lincoln cars during June, with deliveries to domestic customers totaling 892, an increase of 95 over June a year ago.

Illinois Registrations Drop 19 Per Cent During June

CHICAGO, July 11.—Registration statistics covering new passenger cars in Illinois during June reveal that there was a drop of 19 per cent in the total as compared with May. This, however, is not unusual for June, as many undoubtedly defer registration of new motor vehicles until July in order to take advantage of the semi-annual rate.

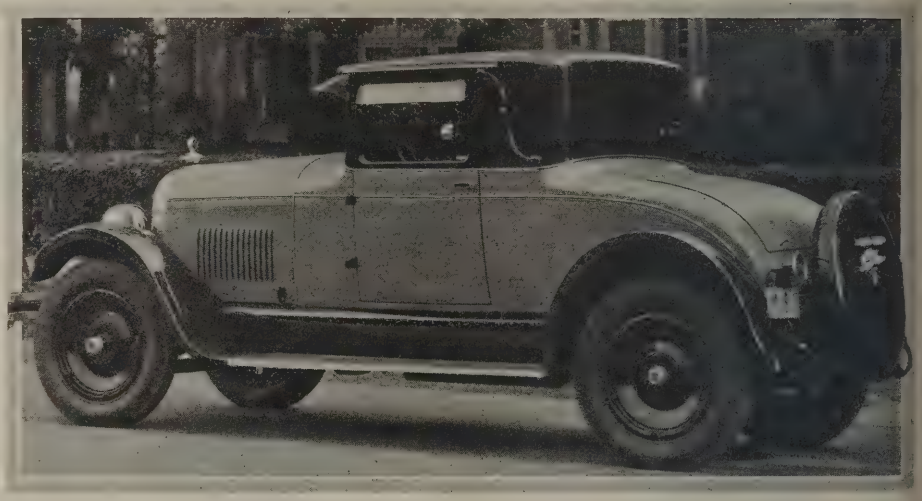
The sharpest decline was in the case of Fords with a loss of 26 per cent. Medium priced cars were off 20 per cent. The following table indicates the percentages of loss during June as against May:

	Loss
Fords	26 per cent
Low, excl. Fords	6 " "
Medium	20 " "
High	7 " "
Total	19 per cent

Following are the detailed figures for the first six months of 1925:

Month	Fords	Low, excl. Fords	Medium	High*	Total
Jan.	4,060	2,275	5,748	808	12,891
Feb.	3,424	1,718	4,977	612	10,731
March	5,714	2,729	6,416	784	15,643
April	9,010	3,755	8,801	861	22,427
May	8,751	3,644	8,014	899	21,308
June	6,473	3,400	6,383	828	17,084
Total	37,432	17,521	40,339	4,792	100,084

*Includes miscellaneous cars not named.



These statistics were compiled from figures furnished to MOTOR AGE by Robinson's Advertising Service, Springfield, Ill.

Glove Finish Fabric Body on New Apperson Coupes

THE use of glove finish fabric over an expanded metal frame, said to possess many advantages over the conventional steel body style, is announced as the outstanding feature of two new coupe models now in production by the Apperson Automobile Company, Kokomo, Ind. The fabric bodies are being introduced in two series of sport coupes, one on the Straight-Away-Eight chassis and the other on the Super-Value Six. It is planned to extend their use to other models in the Apperson line. All bodies in the coupes will be gray and black, with a choice of bright stripes.

The new models are said to be impervious to weather conditions. Company officials declare that a damp cloth removes dust and grime and that the use of a good dressing at specified intervals maintains the original attractiveness and freshness.

The entire cab on the new coupes is of expanded metal, reinforced and cross-membered, with all joints heavily padded to protect the fabric. Top and quarters are of ash, covered with top material of contrasting color. The hood, made of sheet metal, is lacquered, fenders are enameled and radiator shell and lamps are nickeled. Moulding of a contrasting color runs in a stream line from the radiator shell along the sides of the body to the rear, a strip of fabric being inserted in an aluminum-bound channel running parallel to the moulding.

New Apperson six-cylinder coupe with glove finish fabric body. The hood is of metal finished in lacquer

Advantages claimed for the new body type are: Freedom from paint problems, longer wear and greater beauty under adverse conditions, very marked economy, simple and inexpensive replacement of any section of the fabric; ease of cleaning; greater strength of body frame, with considerable reduction in weight; and complete elimination of body squeaks and rattles. Individual panels of the fabric can be replaced in event of accidents, it not being necessary to refinish the entire body.

Pay Dime a Name for Prospects

"What's in a name?" Shakespeare once asked. If he had addressed his question to the authorized Ford dealers of Houston, Texas, the reply would have been:

"Ten cents each."

That is the price that the Houston Ford dealers offered to pay for the names of prospects. And had Shakespeare appeared on the scene to inquire: "Where are you going to buy the names?"—the Houston Ford dealers would have answered: "Through the newspapers?" For after deciding to pay ten cents each for certain names they launched a newspaper advertising campaign in which their wants were alluringly set forth. The publicity campaign covered one week—with the result of a long list of names at ten cents each that made an excellent prospect reference.

In offering to buy names the Ford dealers made certain specifications. One condition was that the name should be accompanied with the person's address. another was that the person must not be an automobile owner and another was that his salary—or hers—should be at least $125 a month. The dealers got the names and their salesmen did the rest.

Following the introduction of the Fisher Fast Freight chassis eight months ago, the Standard Motor Truck Company, Detroit, now announces a Fisher Bus having a 21 passenger pay-as-you-enter type body. Except for the mounting of 30 in. by 5 in. dual tires in place of 32 in. by 6 in. tires at the rear, the chassis is identical with the "Fast Freight" chassis and sells at the same price, namely, $1295.

EISEMANN HEAD IN WEST

NEW YORK, July 11.—President Shaw of the Eisemann Magneto Corporation, is now on a trip to the Pacific Coast where he is making a thorough inspection of conditions. Mr. Shaw will call on the leading representatives and customers of his company, and return to his desk a month hence; stopping for a brief vacation in the Canadian Rockies.

Atlanta Dealers Sponsor Joint Advertising Contest

Accessory and Automotive Merchandisers Stage Novel Co-operative Campaign

ATLANTA, July 11.—A group of several automotive and accessory dealers in Atlanta recently staged a co-operative advertising contest, using a full page of space in one of the Atlanta daily newspapers.

The page was divided into several equal parts, and the first advertisement contained nothing except the photographs of an official of each of these companies taking part in the plan. For the best list of answers received from the public identifying these photographs—that is, giving the name of the man and the company—a prize of $25 was given. The second best list received $15, and the third and fourth best lists $5 each.

At the end of the contest another full page advertisement was published including the photographs again, this time with the names of the men and of the companies.

The automotive firms taking part included the Automotive Sales & Service Co.; W. T. Adams, Ford service; the Rolls Battery Co.; the Meixel Tire Co.; the Nassau Lubricating Co.; the J. B. Anchors Auto Co.; the Lamar Welding Co.; the Rent-A-Car Co.; the Jack Wall Garage; the General Storage Battery Co.; the J. F. Clark Garage; the Camp Cylinder Grinding Co., and the Spring Street Garage Co.

Crowds Throng Showrooms To View New Chrysler Four

DETROIT, July 11.—Upwards of $10,000,000 worth of Chrysler fours have been ordered by foreign distributors from the Chrysler Corporation here for the trade in their respective countries, since the introduction of the new model, according to J. E. Fields, vice president in charge of sales.

From the reception accorded the Chrysler four in this country and abroad, the big problem to be met, according to Mr. Fields, is to step up the production necessary to keep pace with the present demand.

In various parts of this country, the crowds which thronged the different showrooms to see the models were so great, according to reports received at the local office, as to require special details of police in some instances.

Perhaps the greatest reception the new model received was in this city. As the showrooms of the John H. Thompson Co., distributors for this district, more than 24,000 persons inspected the models during the first three days. At the end of that time, the company with the help of its city dealers had taken approximately 500 orders for the different four models.

Yellow Cab Joins General Motors

(Continued from Page 17)

Paul H. Geyser; vice-president and sales manager, P. L. Emmerson; secretary and general counsel, Edward N. D'Ancona; treasurer, C. H. Ritter.

Another manufacturing subsidiary is the Yellow Sleeve Valve Engine Works, of East Moline, Ill., whose officers are the same as those of the Yellow Coach.

Foreign manufacturing subsidiaries include the Canadian Yellow Cab Manufacturing Company, Ltd.; the Societe Francaise des Automobiles Yellow, of Paris; and two companies in Buenos Ayres.

Sales subsidiaries consist of the Yellow Manufacturing Sales Corporation with headquarters in Chicago, the New York Yellow Cab Sales Agency, Inc., and the Hertz Drivurself System, Inc. Of the latter the following are the officers: President, John Hertz; vice-president Paul H. Geyser; vice-president Irving B. Babcock; vice-president and general manager, P. L. Emmerson; secretary, Edward N. D'Ancona.

The finance subsidiary is the Yellow Manufacturing Acceptance Corporation of which John Hertz is president, and Alfred Ettlinger, Mr. Hertz' son-in-law, is vice-president and actuary.

The Omnibus Corporation of America, since its organization, has been the principal outlet for the product of the Yellow Coach Manufacturing Company. John Hertz is chairman of the board of the Omnibus Corporation, while John A. Ritchie, president of Yellow Coach, also is president of the Omnibus Corporation. The directorates are largely interlocking. The two principal operating branches of the Omnibus Corporation are the Chicago Motor Coach Company and the Fifth Avenue Coach Company of New York.

Duesenberg Reports Sales On Strong Upward Trend

Many New Dealerships Requested as Result of De Paolo's Victory At Indianapolis

INDIANAPOLIS, July 11.—Fred S. Duesenberg, president of Duesenberg Motors Corporation, reports that Duesenberg sales and distribution records are on the strong upward trend, with a number of new distributors and dealers to be announced shortly.

Many dealer applications have been received since the De Paolo Duesenberg ran away with the annual 500 mile festivities, and a number of veteran dealers report more demand for this car than at any time in the past. One phase of the new business that may startle some dealers is the large demand for open types of the sport and roadster models. One family in a Pennsylvania city has purchased three open cars that will be delivered this week, a trio of sales that may constitute a record for one family in the 1925 closed car season.

This trend toward open car types with tops that can be folded, while noticed in other Indiana factories, seems to have reached its peak in the Duesenberg plant which has always found a great demand for its sport, touring and roadster types.

STROMBERG OPENS IN LONDON

LONDON, July 11.—The Stromberg Motor Devices Co. of Chicago, manufacturers of Stromberg carbureters, has opened a direct factory branch in London to take care of the company's growing business in England. This branch also is introducing the Stromberg Super Shock Absorbers in this country.

Aged Reo Still Performing Well

Frank W. Bowren of Dousmann, Wis., still drives his 1908 Reo runabout on his trips from his farm to nearby towns. He says it has called for few repairs and such as have been necessary he has done himself. He affirms his love for his little red bus with the declaration that he would not trade it for the most up-to-date car on the market. It has created so much curiosity on his trips to town, that he has pasted a "history" of the car on the radiator, where all who will may read. The history announces that the car cost $510 when new, and that it is paid for

De Palma Wins Opening Race at Rockingham Park

Eleven Start in 100-Mile Event Which Revived Interest in New England Speedways

SALEM, N. H., July 11.—Ralph De Palma won the 100-mile race here from a field of 11 starters in the opening of the new Rockingham Park Speedway.

The track is one and one-quarter miles long with banked turns and a surface of hard clay. There were more than 50,000 present to show that a revival of motor racing here would be welcomed.

De Palma won the pole in the time trials and the drivers were placed in rows of three by Starter Fred J. Wagner as follows: De Palma, Duray, Devore, first line; De Paolo, Shafer, Cooper, second row; Hartz, Elliott, Milton, third row; McDonough and Wonderlich, last. Fred Comer did not start.

On the first lap De Palma swung down the stretch at more than 90 miles an hour with Shafer and Duray close behind. De Paolo, who had the same trouble here as at Indianapolis in not getting started for the first flying lap, was fourth, pacing De Vore. The others began to trail, Milton dropping some distance behind. It was soon evident that De Palma had the race well in hand before 10 miles were finished, for he showed his same superior skill as a dirt track driver taking the turns.

A few times there were real thrills with the drivers fighting at the turns, refusing to give way. Before 25 miles passed Milton, McDonough, Wonderlich and Cooper were out.

De Palma lengthened his lead all the time and before the race ended he had lapped every driver, some of them several times. There was a real fight between Shafer and Duray for second place. Shafer held it for 25 miles then Duray passed him. Later Duray fell back to third but finally overtook Shafer. So they finished with De Palma a lap ahead of Duray; Shafer third, one and one-half miles behind De Palma; De Vore fourth, De Paolo fifth, Hartz sixth. De Paolo was three laps behind the winner. Elliott was flagged off with more than 10 miles to go.

De Palma's time was 1:18:7 3/5, Duray's 1:19:20, Shafer's 1:19:40 1/5. De Palma's victory was a popular one. The winner got $4000, Duray $2500, Shafer $2000, De Vore $1000, De Paolo $500. They also got $6000 appearance money. Jack Le Cain, veteran race driver, ran the meet and he expects to have another one here October 12, Columbus Day, a holiday.

Hudson-Essex to Expand Distribution in Northwest

SPOKANE, Wash., July 11.—Spokane is to become one of the largest distributing points on Hudson-Essex cars in the northwest, doing an annual business of $2,500,000, under a program of expansion announced by Walter S. Evans, general manager of the John Doran Company, factory distributors of Hudson-Essex automobiles in eastern Washington, the panhandle of Idaho and western Montana.

The program, now under way, provides for the creation of 40 new Hudson-Essex agencies in this territory.

"We obtained 10 new dealers in the last week, and are now negotiating with several more in our territory," said Mr. Evans. "Before August we expect to have 100 dealers, who, we estimate, will sell an average of 175 cars a year. Our present dealers are selling about 1500 cars a year.

"The new dealers will be located in the smaller towns, where we have found excellent selling opportunities this spring and summer."

Scientists Pronounce Crude Oil Airplane Engine Without Spark Plugs Practical in Principle

WASHINGTON, July 11.—The principle of the crude oil airplane engine without spark plugs has been found practicable and this revolutionary motor, sought by engineers since airplanes first flew, is now being completed by the National Advisory Committee for Aeronautics, it is announced here. The success comes as a dramatic climax to more than four years of experimentation by a distinguished group of scientists.

Although qualifying his announcement with typical scientific caution, G. W. Lewis, director of aeronautical research, advises that the committee constructing the engine "sees daylight ahead" after years of laborious study.

The new engine eliminates a wide variety of equipment which has contributed to the dangers of flying heavier than air craft, Mr. Lewis says.

Spark plugs and the present types of ignition systems used in airplane and automobile engines are entirely done away with, being supplanted by heavy compression and cylinder heat. Instead of the accustomed spark igniting the gasoline vapor in the cylinder, the engine heat, combined with 3,000 pounds compression, causes an automatic explosion.

The same rough principle is known to motorists whose engines are full of carbon. "Pre-ignition," or an explosion ahead of the spark, caused by the glowing carbon, was the explanation given by the aeronautical engineers of the new system.

The greatest feature of the engine, however, according to Mr. Lewis, is the fact it uses ordinary crude oil. Should a plane crash, crude oil would not immediately ignite and envelop the pilot in flames before he recovered from the shock of the fall.

BADGER MFG. EXPANDS

WEST ALLIS, Wis., July 11.—The Badger Manufacturing Company, makers of automobile bumpers, will move into new quarters here shortly after having secured a 15-year lease on the former Avery Manufacturing company's plant. The new location will offer 95,000 square feet of floor space and production will be more than doubled with the increased capacity. The company now turns out 600 bumpers a day and additional machinery and equipment will be obtained to raise that figure to 1,500 bumpers per day, making it the largest bumper manufacturer in the country.

Instructor's Car Again Used Advantageously by Dealer

NEW ORLEANS, July 11.—Another Nash dealer organization is making use of an instructor's car, equipped with two driving wheels, one for the teacher and the other for the pupil. Employed in connection with an offer of free driving instruction the car is developing many sales. The company is the Nash Mississippi Valley Motor Company, of New Orleans, of which F. E. Truett is general manager. Mr. Truett readily admits that he borrowed the double steering wheel idea from the Jack Neal company, Nash representatives in San Antonio, which also found it a big help in a business way. Following are some of Mr. Truett's observations concerning the New Orlean's company's driving instruction with this novel car:

"With this instructor's car we interest persons whom we could never reach without it. The car makes a big appeal to women, especially to middle-aged or elderly women—and there are more men in the 'I can't learn to drive' class than you might imagine. Every week we find men who do not know how to drive cars well. Then there are almost unlimited advertising possibilities in such a car. Nothing in particular about selling is said as we let the person get the feel of the wheel and become thoroughly convinced that learning to drive is not such an impossible feat after all. Usually the lessons sell the person on the line of cars we handle.

"We have never put on a stunt, campaign or any unusual feature that has brought in as much money for the amount invested as has this and the best part is that it is more than a temporary attraction." The double-steering wheel arrangement was installed for $250.

NEW LOCOMOBILE DEALERS

BRIDGEPORT, Conn., July 11.—Announcement is made by the Locomobile Company of America, Inc., of the appointment of the following dealers who will handle the new JR-8, deliveries of which are now being made:

H. S. Horwood Sales Company, Morristown, N. J.; Norton Motor Company, Edgemere, L. I.; Joseph Schaffer, Brooklyn, N. Y.; Kingsway Locomobile Company, Brooklyn, N. Y.

Finance Co. Condemns Plan of Small Initial Payments

Practice Reacts Unfavorably Upon Used Car Sales, Declares Hare and Chase

NEW YORK, July 11.—The trend toward unsound financing is rapidly bringing a new and serious issue before the dealer, says a statement issued by Hare & Chase, Inc., automobile finance company, which refers particularly to a "finance plan recently announced for a well known car, permitting down payments ranging from less than $15 upward. In a city in which this plan was tried there was an immediate unfavorable reaction on the used car market, it is declared.

"The plan in question requires two endorsers," says the statement, "which the average buyer of limited means cannot command—but the effect of its announcement was to turn the minds of all prospective buyers of those cars, however limited their resources, towards the brand new article and completely away from that which had already seen service in other peoples' hands.

"The automobile man may as well convince himself, before false reasoning leads him into costly mistakes, that the proportion of our population which can afford both to buy and operate a motor car of current design in any price class will only increase very slowly over the present figure. The total number of users should increase as the population grows but their percentage is likely to gain little until the average margin between living costs and income becomes appreciably wider.

"Which being so it is obvious that the process of teasing the public with easier terms will only rearrange the present market without enlarging it. Let the low down payment mania become general and the used car carry-over from the active season would sink the average dealer before he could unload it on a public thus thoroughly under the influence of the new car ownership complex. For when you tell the buyer he can have a new car for a cash outlay equivalent to the cost of two theatre tickets or a suit of cloths you automatically close his mind to the used car appeal.

"Once you sell the market off the used car idea your total sales of both new and used may actually decrease. For if the logical used car buyer feels the new car urge too fiercely he may conclude not to buy at all until he can meet the new car terms, either by getting the needful endorsers or saving a higher percentage of cash.

"And if the endorsement requiring is waived—as it will be by weaker finance companies here and there—he will buy his new car for a pittance in cash and the used car will sit in the same old spot on the dealer's floor until it rots for all the public cares."

Cut Your Initials In This

KAHOKA, Mo., July 11.—Here's bad news for the prophets of the doom of Dobbin!

The city council last week authorized expenditure of $1,450 for a site for a new hitching rack for horses and teams. The rack at the public square was demolished to make way for a paving project and the city dads felt it necessary to provide new accommodations.

Horace Dodge Buys 2,592 Curtiss "OX-5" Air Motors

DETROIT, July 11.—Horace Dodge, one of the directors of Dodge Brothers, has just completed purchase of 2,592 Curtiss airplane engines from the surplus stock of the air service. These engines which were paid for at the rate of $80.26 apiece have been in storage for a considerable time and were originally intended for use in training planes of the "OX-5" series, 90 horsepower.

The "OX-5" engines have been used with success in high speed motor boats and it is understood Mr. Dodge is interested in the construction of speed boats. The possibility of their use in a new type of airplane could not be confirmed.

FORMER TRADESMAN DIES

WASHINGTON, July 11.—Michael J. Keane, a prominent attorney and at one time president of the Oldsmobile Company of Washington died here suddenly recently.

Popularity of Open Car Is Believed to Be Advancing

Sale of Windshield Wings Reaches Highest Total in June in History of Product

KOKOMO, Ind., July 11.—What seems to be a revival in the popularity of the open car is indicated by a very marked increase in the sales of windshield wings by the Kokomo Automotive Manufacturing Co., of this city, during the last two months. More than a year ago, when the trend toward closed cars was at its height, sales in the windshield wing division of the local concern dropped to a low figure, but, starting early last spring, wing sales started up with the result that during June of this year the total was the largest of any single month during the company's history.

"If it is not caused by increased popularity of open cars," said Neil T. Albright, secretary and general manager of the company, "it must be that the use of closed cars has caused motorists to want more protection, when they drive in open cars, than the ordinary touring car affords. I am inclined to believe that both of these factors have influenced the situation."

Albright also reports that mirror sales have been unusually good during the last few months, the total for June being 30 per cent more than any previous month. While distribution has been good in all sections of the country, he said, business is especially strong in the west. The plant has been running night and day for more than six weeks.

25 Years Ago In the Automobile Industry
As Recorded In MOTOR AGE

(*From* MOTOR AGE *of July* 19, 1900)

Across Ohio in Fast Time

CLEVELAND, July 16.—A. S. Ingalls, a leading member of the Cleveland Automobile Club, and a son of President Ingalls of the Big Four Railway, made a flying trip across the state of Ohio Friday and Saturday, establishing a record which will probably stand for some time to come. He left Cleveland early Friday morning and reached Springfield late in the afternoon. He stayed there over night and made the remaining 80 miles into Cincinnati Saturday morning, reaching that city by noon. The distance covered was something over 250 miles and his actual running time was less than 20 hours.

Now Allowed in Munich

The Bavarian Government, according to a statement made by Consul Worman, has just set aside the city ordinance preventing the use of automobiles on the streets of Munich. This opens up one of the best German cities for American manufacturers of horseless vehicles of every sort because of the large class of wealthy residents there. Munich is the third largest city in the German Empire.

Automobile for Customs Delivery

NEW YORK, July 16.—The New York Custom House has in use a locodelivery for the purpose of transferring invoices from the custom house to the public stores. This is one of the first of the delivery wagons now being built experimentally by the Locomobile Co. of America at its Bridgeport factory, with a view of making them a feature of the company's product next season. Collector George R. Bidwell, by the way, is an enthusiastic locomobiler and may be seen any day in the park and on the boulevards in his Stanhope.

German Show

BERLIN, July 2.—The automobile exhibition at Frankfort-on-the-Maine will be opened on July 14, Prince Friedrich Carl of Hesse, a brotherin-law of the German emperor, having undertaken to perform this ceremony. The Frankfort A. C. has entered 23 vehicles for competition.

June Business in Toledo Ahead of Sales in 1924

New Cars Do Not Move So Well As in May Which Set Several High Records

TOLEDO, O., July 11.—Sales of new cars in Toledo and surrounding territory during June were not up to the pace set in May when some lines set new high records but continued very much better than at this time last year.

Farm sales are continuing to hold up and dealers in the smaller towns are contributing much to the better business.

Accessory distributors report a fair run of business.

Replacement business is very good.

Tires are rather slow, business being spread out thin among many dealers.

Used car market continues very good with large cars moving slowly.

Finance is ample and money easy. Banks are advertising to place loans in the real estate field and this is an indication of the best of money conditions.

Dealers are expecting considerable lull in July and August but are preparing sales forces to take advantage of this period to push sales much more thoroughly than in the last few months.

Chevrolet Establishes Two More Zone Sales Branches

DETROIT, July 11.—Two more zone offices, one at Indianapolis and the other at Jacksonville, Fla., have been opened by the Chevrolet sales organization, making a total of 26 zone offices that are maintained throughout the United States.

Charles R. Lee will have charge of the Indianapolis zone office located between the three zone offices in adjoining states. No stock will be carried by this office.

The Jacksonville zone office will serve as the distribution center for Florida and Southern Georgia and will be in charge of Chester A. Smith. Plans are being drawn for a two-story building to provide reserve storage for cars and a $50,000 stock of parts.

CHEVROLET AT HIGH POINT

JANESVILLE, Wis., July 11.—The July production schedule for the Chevrolet plant here calls for 6,100 cars. During the last week in June and the first week in July the company reached the high mark of an average of 300 cars per day, a mark which will be continued for July.

NEW AUBURN DEALERS

AUBURN, Ind., July 11.—New dealers which have been added to the organization of the Auburn Automobile Company follow:

Frank L. Smale, Riverside, Cal., Cole & Andrus Motor Sales, Tiffin, Conn., The Ruhlman Motor Car Co., Inc., Portsmouth, O., C. G. Crawford, Lexington, Ky., Joseph A. Bruno, (Stamford Motor Sales Co.), Greenwich, Conn.

"Tag Boy" Service Develops Volume Storage Business for Seattle Garage

SEATTLE, Wash., July 11.—When you cannot find a place to park in Seattle, just keep smiling until you see a negro boy in a white uniform, with the words "Tag Boy" in black letters on the pocket of his coat. Give him the S. O. S., and he will take your car, give you a receipt for it, park it in a fireproof garage until you telephone for it, and then deliver it to you, wherever and whenever you order it. The charge for all-day parking and this tag-boy service is 50 cents, but if you have your car washed and polished while you are shopping or busy in your office, the charge for storage is eliminated.

This new method of solving the parking problem is being applied by the T. A. G. Garage, owned and operated by James D. Esary, Jr. Arrangements are made with department stores and with the caretakers of office buildings, to station tag-boys from 8 a. m. to 6 p. m. at the entrances. There they offer their service to shoppers and others. The service has packed the garage to capacity with profitable day storage, and has so worked to relieve the parking situation that Mr. Esary has been complimented by the traffic department of the city government.

The tag-boys carry cards with the name and address and telephone number of the garage and very brief description of the service rendered. They present these cards to every person they see seeking a parking space. In addition to this advertising, personal letters are written once a month to prominent business and professional men of the city, outlining the service and the guarantee of safety given for the car.

Optimism in Oakland Field Is Noted by G. M. President

PONTIAC, July 11.—Optimism in the future of the Oakland line was voiced recently by Alfred P. Sloan, Jr., president of the General Motors Corporation who with other members of the executive committee of the corporation were guests of Alfred R. Glancy, president and general manager of the Oakland Motor Car Company.

"During the course of a recent field investigation," Mr. Sloan said, "I found a general spirit of optimism among Oakland dealers which is one of the things that makes us expect much from the Oakland line in the near future."

Besides Mr. Sloan, the delegation included Charles S. Mott, vice-president of the General Motors Corporation, Lawrence P. Fisher, vice-president of the General Motors Corporation and president of the Cadillac Motor Car Company, and Charles T. Fisher of the Fisher Body Corporation.

Indianapolis Realtors Back Plan to Establish Airport

INDIANAPOLIS, July, 11.—An airport for Indianapolis at any early date seems assured by the action of the Indianapolis Real Estate Board which is behind the movement to raise at least $25,000 for the enterprise. Other clubs, commercial organizations and associations are to be enlisted in the campaign to raise money for the airport and to help plan for all the civic support the enterprise needs.

Though no proposed location for the landing field has been picked, the flat country lying on all sides of Indianapolis is said to be favorable for an adequate field at moderate costs. The only field here at present is the Shoen Field at Fort Benjamin Harrison which lies some ten miles northeast of the city. This is the army field where the reserve flying outfit has its headquarters, but army flyers say the field is not adequate or as smooth as it might be.

At one time the landing field at the Indianapolis Motor Speedway was extensively used by civilian and army flyers. There is both interurban and bus transportation to these fields with hard surfaced roads that would facilitate truck transportation of airplane freight or mail. The federal government has already advertised for bids for airmail from Chicago through Indianapolis to Memphis and the south.

DUESENBERG ADOPTS SCHEBLER

The Duesenberg Automobile & Motors Company of Indianapolis, twice successively winners of the Indianapolis Motor Speedway races, has just announced the adoption of the new Schebler Model "S" carburetor for all Duesenberg automobiles.

BALLOONS DEMANDED

DETROIT, July 3.—Since the middle of February when the Ford Motor Company announced that it would provide balloon tires as optional equipment on all new Ford cars until the end of May, the demand for these tires by Ford buyers has jumped 40 per cent. In February, Ford dealers estimated that out of the number of Ford cars produced, 20 per cent should be balloon equipped. Since then the demand for balloon tires among new Ford buyers has increased until at the end of May, 60 per cent of the cars turned out by the Ford company were balloon equipped to meet the demand.

PARIS HAS LARGEST SIGN

PARIS, June 26 (by mail).—The biggest luminous sign in the world is about to be erected on the Eiffel Tower, Paris, for the Citroen Automobile Company. It will be 69 feet at the base and will have a height of 655 feet. The total height of the Eiffel tower is 984 feet.

Ohio N. A. D. A. Meeting Will Stick to Problems of Dealer

Entire Program to Be Devoted to Discussions of Retail Sales and Expenses

ST. LOUIS, July 6.—There will be no discussion of tire vulcanizing or battery repairing at the meeting of Ohio automobile dealers at Cedar Point, Sandusky, O. August 6 and 7, according to an announcement of N. A. D. A. The entire program will be devoted to the car dealer and his profit problems.

Information on automobile sales, service and management will be given by leaders of the industry. The meeting will be under the auspices of the Ohio Council, N. A. D. A., the new unit instituted by N. A. D. A. to carry on the state work in Ohio.

It is estimated that 1500 automobile dealers, their sales managers and service managers, will attend. Everybody who can is being asked to drive to Cedar Point, as it is to be an automobile dealers' meeting from top to bottom.

An invitation has been extended to dealers to bring their families to enjoy an outing on the greatest beach resort in America.

At only seven cities in the United States have similar meetings been held. They were Atlantic City, Boston, Buffalo, Chicago, Milwaukee, San Francisco and Los Angeles. Eleven hundred automobile dealers, salesmen, sales managers and service managers attended the Los Angeles convention recently concluded.

Full discussions of balanced department sales and budgeted expenses will be held at the Ohio meeting.

Everybody attending the meeting will be housed at two hotels, Hotel Breakers and Hotel Cedars. If no preference is specified those attending will be assigned to one of the two hotels by the resort management.

Theory of Quality Rather Than Low Price Has Helped Build up This Business

CLEVELAND, O., July 11.—The Atlas Tire and Rubber Co., at 2111-19 Prospect avenue, at Cleveland, Ohio, which is rated as one of the oldest and largest independent tire companies in the Forest City, has in 16 years grown from an infant enterprise with retail sales of $30,000 a year to a lusty concern with sales of tires which last year aggregated $500,000.

J. M. Mendelson and O. P. Reed, the proprietors, assert that the emphasis that they have placed on the service and quality of their goods rather than price, has been the main factor in building up sales and good-will.

"If of two makes of tires that were offered to us, the one offered at $12 would give 40 per cent more service than one quoted at $10 we would not hesitate in buying the $12 tire, for the owner of such a tire would get about 20 per cent more service for his money than had he purchased the lower priced tire from us" said Mr. Reed.

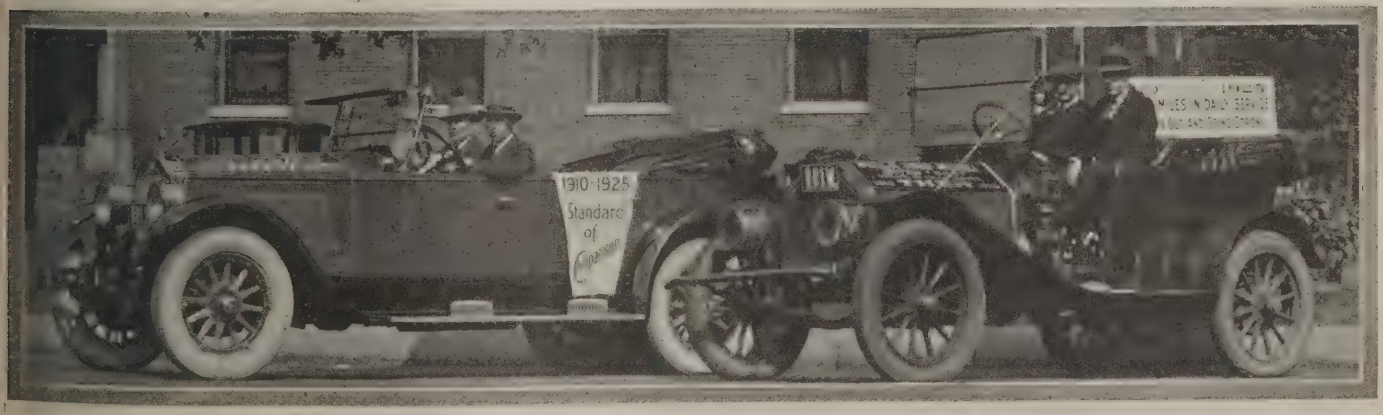
"We have found that although the original purchase price of a tire from us may be heavier than at some other places, yet if we are able to show better service in our tire, we usually retain the good-will and patronage of our customer.

NORTH EAST IN CANADA

ROCHESTER, N. Y., July 11.—The North East Electric Co. of Canada, Ltd., has begun the manufacture of North East starters, generators and ignition equipment, it is announced by officials of the company here. The Canadian concern will supply electrical equipment to car manufacturers of Canada who are using North East electrical equipment as standard.

NORTH CAROLINA PAYS $10,117,589

CHARLOTTE, N. C., July 11.—The automotive trade and owners of motor vehicles paid $10,117,589.51 into the state treasury of North Carolina for highway construction and maintenance in the fiscal year ended June 30, 1925, according to a statement received here from Revenue Commissioner Doughton, of Raleigh. The several sources of this income and the amounts of each were given as follows: License plates, $4,710,234,87; gasoline tax, $5,277,113,41; title fees paid by automobile manufacturers $35,000; automobile owners' fees for title registration, $130,239.23.



Deed for Maxwell-Chrysler Sale Is Recorded in Detroit

DETROIT, July 11.—The deed by which the Maxwell Motor Corporation transfers all of its property in Detroit, Highland Park, Ill., and Dayton, O., to the Chrysler Corporation has been recorded with the register of deeds of Wayne county.

The papers covering the transaction contained more than 6,000 words in booklet form totaling 14 pages in all. Revenue stamps on the deed amounted to $5,480.50, which indicates the total value of the properties as around $5,400,000.

In transferring its properties to the Chrysler corporation, the Maxwell corporation adds: "Together with all hereditaments and appurtenances of sale lands thereunto, belonging to or in any wise appertaining, and all plants, buildings, structures, fixtures, and erections, additions, betterments and improvements now erected on or attached to any of these premises above described are hereby conveyed and all equipment, machinery, tools, implements and appliances thereunto belonging, whether or not the same be affected to the freehold."

Old-Timer Goes Too When Good Will Tour Is Staged

Accompanying the 1925 Good Will Tour of the St. Louis Chamber of Commerce and making a great impression upon the forty-nine towns in western and northern Missouri visited on the tour were two Buicks, the one shown to the right being a 1910 model, with engine number 8657, and the one pictured at the left, a new Buick sport touring, 1925 model with engine number 1399172. The cars were owned by the Vesper-Buick Auto Co. of St. Louis, Buick distributors. Seated in the cars are, left to right, W. C. King, traveling representative, John F. Dawson, advertising manager, A. F. Stephens, shop superintendent, and F. H. Minshall, manager of sales promotion, all of Vesper-Buick

Along Automobile Row

EAST ST.LOUIS, Ill.—The Davies-Dougherty Company has been organized here and a garage has been opened at 707 Missouri avenue. Capital stock has been fixed at $7,000. A number of makes of motor cars will be distributed and accessories will be handled.

NEWARK, Ohio—The A. P. Hess Co., has been chartered with an authorized capital of $100,000 to deal at wholesale and retail in new and used autos and accessories and conduct a general auto garage.

PORTLAND, Ore.—W. S. Knudsen, president of Chevrolet Motor Company, R. H. Grant, vice-president, accompanied by F. N. Coates, regional manager, W. C. Williams, factory production manager, and W. I. Richmond, zone manager, are making a tour of the Pacific Coast visiting their distributors.

NEW ORLEANS—Milton W. Lusk, until recently New Orleans sales manager for the White Motor Co., and who was recently presented with the president's trophy, in honor of having achieved the highest percentage of White truck sales as per quota, in the company's contest, has been promoted to the position of district manager of the Baltimore district of the White Company.

CLEVELAND—The White Company has completed a new branch sales and servicing plant in Cincinnati and has new branch buildings under construction at Nashville and San Francisco. Additions to branch buildings also are being made at Washington and Dallas.

SEATTLE—Nute Motor Company, Hudson-Essex distributors in the Pacific Northwest has named the following dealers: Myers-Baird Motor Company, 4311 W. Alaska street, Seattle. Bucey Motor Co., Ketchikan, Alaska; Thos. J. McCaul, Juneau, Alaska; Anchorage Commercial Co., Anchorage, Alaska.

DALLAS, Tex.—William Morris, for the last seven years Hudson-Essex dealer and distributor, has taken over the Chrysler lines in Dallas, it was announced this week. The Hudson-Essex lines were taken over by the Furguson Motor Company, July 1.

With the Associations

National Inventory Planned

NEW YORK, July 11.—Jobbers and rubber and tire manufacturers express keen interest in a questionnaire now being conducted by the National Tire Dealers' Association, which will show the condition of dealers' tire stocks as of June 30.

On April 27 the rubber division of the Bureau of Foreign and Domestic Commerce issued a report showing dealers' tire and inner tube stocks on hand as of April 1, 1925. George J. Burger, president, believes that the association's questionnaire will be of particular value in that it will offer a comparison between stocks on hand April 1 and stocks on hand June 30.

Thus the questionnaire will show what effect the rising prices of tires and tubes, during the April 1-June 30 period, had upon dealers' stocks. In addition, Mr. Burger says that about 80 per cent of the dealers reporting in the government's survey carried not more than 100 casings in stock, whereas the association questionnaire covers between 1,000 and 1,500 of its members who, on the average, carry stocks of from 300 to 400 tires.

Mr. Burger adds that the questionnaire will show whether the sizeable dealer and the consumer, in anticipation of the various boosts in prices, has been buying stocks in advance. Mr. Burger's information is to the effect that this has not been the case.

He points out that the answers to the questionnaire, which are requested by August 1, will be of special interest to jobbers, indicating the amount of dealer stocks on hand and thus gauging the jobbers' orders to the manufacturer.

Mr. Burger does not expect the questionaire to show that dealers' stocks have been appreciably reduced between April 1 and June 30. Each dealer is asked to state the number of tires, tubes and solid and cushion tires he had on hand as of June 30; whether purchases and sales increased during the first six months of 1925 over the same period in 1924; whether general business conditions in June were good, bad or fair; whether consumers are buying in advance of their requirements; whether dealers are securing advance prices for tires and tubes; and whether the dealers have obtained a new number of the association for 1925.

Louisville Moves Headquarters

LOUISVILLE, July 11.—Headquarters of the Louisville Automobile Dealers Association have been moved from 614 South Fifth street to 610 South Third street, in the Elks Club building. The move was made in order to place the association offices in a location more convenient to the automobile dealers of this city.

Will Close Saturday Afternoons

ST. LOUIS, July 11.—What does it profit an automobile dealer or distributor to keep his repair department open on Saturday afternoons? Very little or nothing, according to a recent survey made by members of the service managers' bureau of the St. Louis Automobile Dealers' Association.

At a recent meeting it was determined to have the members survey and report on the work done in their shops on Saturday afternoons. At a meeting held last week the results of this survey reported and all showed that Saturday afternoon was unprofitable in their shops, in some instances not enough being taken in to pay the wages of the men on duty. Therefore a resolution was adopted stating it was the belief of service managers that no loss of money would result to automobile establishments by closing their repair shops at noon Saturday and having them remain closed until Monday morning. The secretary of the bureau was told to bring the resolution to the attention of the heads of the respective firms represented by the service managers.

The officers of the bureau who were elected when it was organized to serve three months were all re-elected to serve nine more months for a complete year's term. They are J. O. Lowell, service manager Vesper-Buick Auto Co., Chairman; W. G. Miller, service manager, Stewart-Warner Products Co., vice-chairman, and Robert E. Lee, manager St. Louis Automobile Dealers' Association, secretary.

G. H. Brown, manager of the Gabriel Snubber business in St. Louis addressed the bureau on the servicing of Gabriel Snubbers and James Jambor, service manager of the United Motors Service Corporation, spoke on ignition troubles.

Johnson Is Re-Elected

LOUISVILLE, July 11.—Alex Johnson, president of the Louisville Automobile Club was re-elected a director of the A. A. A. at its recent convention at Atlantic City. Joseph M. Emmert, another Louisville delegate, was also elected a director. The A. A. A. indorsed the resolution of the Louisville club proposing that the federal government take over Mammoth Cave as a national park.

Oakland and Buick Win

ROCHESTER, N. Y., July 11.—The opening games of the Rochester Automobile Dealers' Association were won by the Oakland and Buick nines, the Oakland team defeating the Oldsmobile outfit, 18 to 12, and the Buick combination winning from the Hudson-Essex team, 14 to 8. The teams are composed of workers at the agencies.

Service Men Organize

INDIANAPOLIS, July 11.—All Indiana section of the Automotive Electric Service Association was organized here recently by Adolph Wagner of the H. T. Electric Company. The new section of the national association will be known as the Hoosier section.

Representatives of 30 authorized electrial service stations were present and after completion of the business session, a general discussion of topics of local interest rounded out an enthusiastic meeting.

The following were the elected officers:

Chairman, C. E. Smith of Indianapolis, vice chairman, H. W. Morris of Paris, Ill., secretary, A. A. Burgman of Logansport, Ind., and treasurer, G. E. Sligh of Evansville, Ill.

The next meeting is scheduled for September 25 at which time a large increase in membership is expected.

New Boulevard Opened

CHICAGO, July 15.—South Park Way, another new boulevard connecting link between Chicago's great South Side and the loop, was opened to traffic today. The Chicago Automobile Trade Association was represented in force with thousands of automobiles and trucks taking part in the floral parade that marked the opening of the new driveway.

Nearly every dealer in the city was present, heading a unit of from 10 to 50 cars, driven by his customers. All the cars and trucks were filled with flowers. Prizes were distributed for the best decorated cars, the best unit showing and many similar combinations.

Following the parade a banquet was held at the Congress Hotel.

Form Credit Association

LOUISVILLE, July 11.—Tire and accessory dealers of Louisville have lost approximately $150,000 from bad credit accounts during the past six months, according to a report presented at a recent meeting of the Louisville Tire and Accessories Association. Members of the recently formed association adopted a plan to exchange credit reports through a central office in an effort to eliminate bad credit risks. Officers of the association are William Mohlenkamp, president; R. D. Heman, vice-president; R. E. Dean, secretary and Ben Schulman, treasurer.

Electric Association to Meet

CLEVELAND, July 11.—The general meeting of the Automotive Electric Association will be held September 14 to 17 at Eaglesmere Park, Pa., according to an announcement by Earl Turner, manager.

Alabama Trade Sets Stage For Tuscaloosa Convention

Program Practically Completed for State Organization's Annual Meeting July 20-21

BIRMINGHAM, Ala., July 1.—The program for the meeting of the Alabama Automotive Trades Association is practically completed. The meeting will be held at the Chamber of Commerce in Tuscaloosa July 20-21 with E. W. Brownell, president, holding the gavel. The meeting bids fair to be the largest the association has ever had, according to Jim Farley, secretary, who has charge of the arrangements.

The following tentative program has been arranged for the meeting.

July 20

Registration of members and visitors.
Formal opening of the convention.
Address of welcome by Jim Robertson of Tuscaloosa, president of the Tuscaloosa Association.
Response by M. K. Johnson of Montgomery.
President's address.
Report of secretary.
Report of committees.
Unfinished business.
New business.

Adjourn for Lunch

Address by Arthur Mogge.
Address by Sidney J. Bowie of Birmingham.
Address by Henry B. Mathews.
Address by Congressman Kister Hill on "Legislative Needs."
Address and Short Talks by other speakers.

July 21

Boat trip to Lock 17 on the Warrior River. Luncheon will be served on the boat and the return trip made in the afternoon.

Mississippi Town Discards Street Cars for Bus Lines

NEW ORLEANS, July 11.—Hattiesburg, Miss. taxpayers have approved the substitution of motorbuses for their electric street car system, official tabulations of the recent election show.

The Hattiesburg Traction Company recently purchased by the Mississippi Power Company already had two motor buses in operation at Hattiesburg, and as soon as additional ones already shipped arrive, the electric street cars will be abandoned.

Hattiesburg is the first city in Mississippi to give up its electric railways for motor bus transportation. Meridian, Laurel, Gulfport and other cities are expected this summer to consider adopting buses for transportation.

NEW GARDNER DEALERS

ST. LOUIS, July 11.—New dealers added by the Gardner Motor Co., Inc., include:

C. E. Gass, West View, Pa.; N. A. Smith, New Castle, Pa.; M. A. Patton, Marietta, Pa.; Kline Motor Co., Colorado Springs, Colo.; Jos. S. Ronnow, Las Vegas, Nev.; T. H. Stuart, Sapulpa, Okla.

BUMPER GOES BY AIR

WAUKEGAN, Ill., July 11.—Recently a rush order for Biflex fender guards was received by the Biflex Corporation, Waukegan, and in order to give quick service, a pair was carried from Chicago to Dearborn, Mich., via the Ford Air Service.

NEW PEERLESS DEALERS

CLEVELAND, O., July 11.—Following are new dealers appointed by the Peerless Motor Car Company of Cleveland:

Joplin-Peerless Motor Company of Joplin, Mo.; A. C. Gielow Motor Sales Co. of Michigan City, Ind.

A. A. A. Will Continue Bus Division, President Asserts

Thomas P. Henry Announces Campaign to Enroll Members Will Open at Once

WASHINGTON, July 11.—The American Automobile Association will continue its bus division, according to President Thomas P. Henry, despite the fact that a complete basis for affiliation could not be worked out at the recent Atlantic City meeting with a committee representing the newly formed National Bus Association. Already representatives of several state bus associations have asked the A. A. A. to continue its bus work, officials of the latter association stayed three days after the Atlantic City meeting, and an immediate campaign will be started to enroll members.

"It is vital that the owners of all types of motor vehicles should stand together and work out their common problems, and we will throw our entire organization experience into a program to effect such a condition not only in the public interest, but in the interest of all motor vehicle operators," said President Henry when asked to comment upon the Atlantic City meeting.

"The difficulties we faced at that meeting were perfectly understandable" he said, "when one considers that the independent bus operators have had such hard fights for recognition, and against drastic laws and taxation that they become unduly suspicious and see in simple organizing principles, a deeply laid plot to control their desires and policies. We are seeing light upon this new and intricate transportation problem, and while as an organization, we have been perfectly capable of maintaining our own position for 23 years, we feel that the interests of bus and truck operators and owners are so identical in principle that one great Association ought to represent the varied interests, with all groups making up the association having adequate representation upon the governing board.

"There are bound to be differences of opinion, but it will be far better for all of us if we settle those differences within our own circle and then present a united front and a constructive program."

WISCONSIN CARS INCREASE

MILWAUKEE, July 11.—Figures on motor vehicle registration in Wisconsin as of June 30 indicate a substantial gain over the registration for 1924 at the same time. There was an increase of a half million dollars in the fees received for registration this year over last, the respective amounts being $7,190,449 for this year and $6,712,637 for last year. There were 538,001 vehicles registered in Wisconsin on June 30 this year is compared with 473,913 last year. Most of the funds derived from license fees will be used in the building and maintenance of state highways.

SQUEEKS and RATTLES

THEN IT WORKED

"What became of that hired hand you got from the city?"

"Aw, he used to be a chauffeur, and the doggoned idiot crawled under a mule to see why it wouldn't go."—Santa Barbara News.

It Is

Man, in speeding car, to driver, Say, this is a pretty town, wasn't it?

—Harvard Lampoon.

Metropolis

Mose—"Say, Eph, dis town 'Private' must be some city."

Eph—"How come, Boy?"

Mose—"Cause all dese yere Alabama cars is from dere."

—E. E. Rains.

IN REVERSE

She: He says he has had his car for three years and hasn't been in a wreck.

He: He means he has been in that wreck for three years and hasn't had a car.

1925: "Looky, horse!"
1955: "Looky, pedestrian!"

—Life.

A JOLLY WHEEZE

"For sale, Studebaker, to seat six, no room for same."

It would have been funnier not to say anything until afterwards.

—London Daily News.

Fable—Once upon a time a radio fan described his set coherently.

—Toronto Telegram.

Padded Cell

Advertisement in the Rosewell (New Mexico) Evening News:

"For Sale—Twelve fresh milk cows, twelve calves and one hundred lambs. Scientifically adjusted. Terms to right party, but no last year's bird nests need apply."

—American Legion Weekly.

A USED CAR

Father (with new car): Can't understand what's wrong. It went all right when I drove it down yesterday.

Bobbie (with vivid memories of his own toys): Yes, but yesterday it was new, Daddy.

—London Opinion.

WATERED STOCKS

Customer—I see you are selling canoes now.

Accessory dealer—Yes, that serves two purposes. It works in well with the tourist trade and gives me a line with a good turnover.

June Marmon Sales Double Those of Same Month, 1924

INDIANAPOLIS, July 11. — Final check-up by Nordycke & Marmon Company sales department shows that retail sales reported by the distributors and dealers for June are more than double the sales made in June 1924. Fifteen per cent more Marmons were sold and delivered than in May, and summer sales have been in excess of factory shipments in spite of the fact that factory shipment for June, 1925, were three times as large as those of the same month last year.

The record of unfilled orders on hand July 1 will keep the plant at capacity during July, while for some models in high demand there are sufficient unfilled orders on hand to assure production all summer.

These records show that the prospects for late summer Marmon sales and production were never better, and that the next quarter may equal the pace established during the first six months of the year when the total volume of business exceeded the total 1924 volume.

DURANT PRICES REDUCED

LANSING, Mich., July 11.—Effective July 10 prices of Durant cars were reduced as follows: Chassis from $720 to $710; Standard Touring from $830 to $810; Standard Coupe from $1160 to $1090; Standard Sedan from $1190 to $1150; Special Touring from $950 to $930; Special Coupe from $1235 to $1160; Special Sedan from $1310 to $1280.

Balloon tires were made standard equipment on all Durant models. All prices quoted above are f. o. b. Lansing, Mich.

Entered as Second Class Matter Sept. 19, 1899, at the Post Office at Chicago, Ill., under Act of March 6, 1879.

A Trade Paper —Exclusively—

MOTOR AGE is a trade paper. It is published in the interest of those engaged in the retail automotive trade, and it is not intended for anyone else.

You know that, of course. So does everyone else that reads MOTOR AGE. Yet it is surprising how many people outside the trade think they want the paper. Every day we return a batch of subscriptions received from people who are not in the business, but who want to read MOTOR AGE. One month we sent back $300.00 worth of orders of that kind.

As an exclusive trade publication, MOTOR AGE gives its editors an opportunity of thinking in the terms of the dealer or merchant, whose business life is wrapped up in things automotive. These editors can talk to you in your own language. With such a well directed editorial policy their attention is not diverted along other lines. They can concentrate in studying and writing about automotive sales and service exclusively.

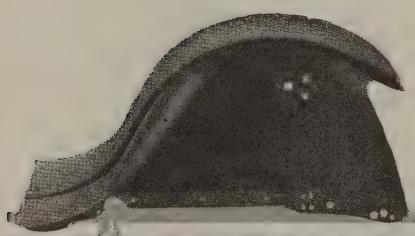
We believe that our policy of restricting our circulation to the trade is correct. We know that it is necessary if we are to continue to supply a magazine of the type that we are now sending you. And we hope that you will lend us your co-operation in our efforts to maintain MOTOR AGE as a trade paper—exclusively.

Have You Tried "Re-Fendering?"

It is a labor-saving, profit-building business!

FOSTORIA FENDERS
THE STANDARD REPLACEMENT FENDER

A word to the Parts Distributor



If there is vacant territory where you are, and you would be interested in a Fostoria distributorship, let's get together and talk it over. Write and ask for distributor plan.

RE-FENDERING is a profitable new business that Fostoria is developing for dealers and repair shops and service stations everywhere. It puts more money in their pockets than the old method of hammering out battered fenders. It gives greater customer satisfaction—and saves delays.

You can secure Fostoria Fenders from a nearby distributor, usually the same day you order them—very different from ordering from a far distant car factory and waiting days for delivery.

The Fostoria Wall Chart lists all Fostoria distributors. It will be sent free if you fill in the coupon below. Then hang it where it will help sell new fenders, and order from the nearest distributor on the list.

THE FOSTORIA PRESSED STEEL COMPAN
Department B
FOSTORIA, - OHIO

The Fostoria Pressed Steel Company, Department W, Fostoria, Ohio.
Please send me, without obligation, my copy of the Fostoria Fender Wall Ch
in a special mailing tube without folding.

MOTOR AGE

Vol. XLVIII July 23, 1925 No. 4

Summary and Index of Important Events in

This Week's Automotive News

Detailed Stories from* MOTOR AGE *Staff Writers and Special Correspondents Appear in News Section Beginning on Page 32

AUTOMOTIVE production now at low point for the year but sales continue in heavy volume, many predicting last half of 1925 will be as good as or better than first six months. Page 32.

Meeting of Yellow Cab Manufacturing stockholders to ratify merger with General Motors scheduled for August 18. Page 32.

Climbing prices of crude rubber have little bad effect on Wisconsin factories thus far. Page 33.

Net sales of Dodge Brothers passenger cars and parts totaling $117,045,569 for first half of 1925 set new high record. Page 32.

Goodrich and Ames Holden Canadian products now being developed with consequent expansion. Page 33.

Tire prices raised by Goodrich for fourth time this year. Other companies expected to follow. Page 33.

General Motors' sales during June, 1925, are 10,557 greater than those of same month last year. Page 34.

New Ford branch at Mexico City will be headed by A. R. Lajous, formerly manager of the Havana branch of the Ford Motor Company. Page 34.

Transportation section of the International Chamber of Commerce to study economic phases of motor vehicular freighting with relations to other transportation. Page 39.

The second of a series of sales meetings is held by Velie Motors Corporation at the factory in Moline, Ill. Increases in business over 1924 are reported. Page 43.

Diana Eight is received enthusiastically by the public, says Vice President Rengers after extended tour of metropolitan centers where new Moon product is being shown and sold. Page 38.

Secretary Mayes of Missouri agricultural board urges farmers to establish roadside markets for accessories as well as produce. Page 43.

Number of unfilled Stutz orders at the end of June is greatest in history of the company. June business 20 per cent better than May. Page 38.

Ford roadster is sent from Detroit to Cleveland by air when the new airport at the latter city is opened. Page 35.

Canadian automobiles pass 600,000 mark in registrations for the first time in history. Number is 652,121 January 1, while last year it was 593,323. Page 35.

With about 40,000 orders on the books, Chrysler plants at Detroit speed up production to 750 cars daily. Page 35.

Maudslay Motors Company of Coventry, London, brings out a safety coach chassis in three models, designed for high speed bus travel. Page 42.

June sales by Hupp Motor Car Corporation are reported to be greatest in history of the company. Eight cylinder models increase in shipments 77 per cent over May. Page 42.

Manufacturers of motor cars seek through N. A. C. C. to arrange return of replacement parts business, largely held by independent makers. Page 39.

C. C. Hanch, general manager of National Association of Finance Companies, will speak on time-payment problems at meeting of Ohio council, N. A. D. A., August 6-7. Page 37.

IN NEXT WEEK'S ISSUE—Driving All Wheels of the Car

As the Editor Sees the Automobile Business

Random Observations on Sales and Service

By SAM SHELTON

PYROXYLIN painting systems are making a wonderful impression on automobile dealers. Some see the possibilities for new and profitable business opened up by this development and, as might be expected, there are others slumbering peacefully while opportunity saunters by.

Dropping in here and there among small city dealers the other day I was highly gratified upon finding in a town of 2,000 population a dealer who had a pyroxylin painting system in full operation although he had not yet had time to build special spraying booths, install ventilators or do a number of the other things that it is advisable to do if one expects the best and most profitable results.

This dealer did what many others have been thinking about. He put in an outfit primarily to repaint used cars to give them readier sale at better prices than they otherwise would command. He found that one of his men soon became very adept at spraying cars and could put on a very presentable refinish job. It was the kind of job that could be put on in a reasonable time and that customers were willing to pay a fair amount for.

There is such a thing, you know, as doing too good a refinish job. I may be offending the old time painters in saying so, but to spend days and days of a high priced man's time painting and polishing a used car until it shines like a new piano seems to me to be nonsensical. The car owner is not likely to be in the market for a repaint job until his vehicle is at least a year old and then what he wants is a new finish that will preserve the vehicle and make it look well without the pretense of trying to pass it off for a new car.

Just a decent refinish job that a moderately skilled workman could put on at a cost the car owner can afford to pay is what the trade needs, and that is just the sort of job this dealer I started out to tell about was doing.

The work was done in a corner of the shop near a large window. Fenders and hood were taken outside, in a protected place, and sprayed in the open air. The work was going along nicely. The equipment hadn't cost much, the spray gun operator was on to his job and there were plenty of customers in sight. The proprietor was planning to install a regulation spraying booth, but meanwhile he was educating a lot of car owners to the advantage of the pyroxylin method of refinishing their old cars.

Another dealer handling a car that comes finished with pyroxylin found that a spraying outfit was a big help to him in making sales. His customers frequently demanded new cars in unusual colors, in which case by means of a spraying outfit he would proceed to change the color of any car in stock to suit the requirements of the customer, having the vehicle ready for delivery within a day. And $35 extra on account of a special paint job easily covered the cost of the transformation with a reasonable profit included.

Unfortunately not all good dealers recognize the advantages of the possibilities opened up by the pyroxylin painting systems. In one town the dealer with the largest plant had leased space on the second floor to a painter who promised to put in a pyroxylin painting establishment.

The painter did put in considerable equipment, including spray gun, air separator and other needed apparatus, but his heart was not in the enterprise for he had been a painter of the old school too many years to forget it. Furthermore he was a commodious consumer of moonshine and naturally the business was a failure.

Pyroxylin painting got a severe setback in that town simply because the dealer did not appraise it highly enough to be personally responsible for it and see that it was done right. Another dealer without so large a plant and business, but with more foresight, probably will annex this profitable business.

Fire and insurance regulations in some states and localities seem to make it hard for the dealer to put in a plant that complies with all the regulations.

And yet a lot of nonsense has been spread abroad about the hazard of pyroxylin painting.

Repeated tests have demonstrated that it is not to be considered any more hazardous than ordinary painting.

In fact one of the large manufacturers conducted an experiment recently in which a car was sprayed in a room with no more ventilation than ordinary windows while two men in the room smoked cigars. This practice is not recommended.

There is no use taking fool chances, but it simply shows that considerable exaggeration has been spread around about the extreme danger of fire in a pyroxylin painting shop.

Letters received by MOTOR AGE indicate that this series of articles on Pyroxylin Finishes is pleasingly appreciated by our readers. The articles are practical, containing information for those contemplating equipment for this work and others who are already at it. All tradesmen who want to keep abreast of the times will find them well worth reading.

SINCE the running of the last Indianapolis 500-mile race in which the front wheel drive Miller-built car finished second and only a few seconds behind the winning Duesenberg, there has been much talk pro and con about the application in the future of front wheel drive to passenger cars and other automotive vehicles.

Many hold that front wheel drive alone for passenger cars would be doing the job but half and that if anything the future cars will be ones in which all wheels are driven. The logic behind this is that it is just as feasible to accelerate as it is to brake on four wheels.

In the belief that much of interest could be published about driving and braking independently on all wheels of an automotive vehicle, multiple drive in other words, a representative of MOTOR AGE recently interviewed a recognized authority on the subject and results of this interview will be published in the July 30 issue.

Should Floor Days for Automobile Salesmen Be Abolished?

N. A. D. A. Spokesman Says—"Yes"

COMPLETE abolition of floor days for automobile salesmen is recommended by A. R. Kroh, of the sales promotion department of the National Automobile Dealers Association, and his argument in favor of its abolition will be presented at the first annual convention of the Ohio Council, N. A. D. A. at Cedar Point, Sandusky, Ohio, Thursday and Friday, August 6-7.

Between 1,000 and 1,500 dealers, their salesmen, sales managers and service managers are expected to attend. Attendance at the meeting will be by automobile, the members having decided to make this a "motorized meeting."

"Salesmen spend three-fourths of their time now praying for floor day" is Mr. Kroh's description of happenings in the automobile salesroom. "Their prayers are well founded too, from all dealers tell me, some dealers declaring that as high as 75 per cent of their prospects walk inside the salesroom before the salesman is aware they are prospects. The salesman who is on duty the day the most prospects walk in is the salesman with the most prospects and the greatest number of sales. Naturally the salesman who draws an unlucky day is considerably perturbed about it. As a consequence the entire sales force is in turmoil.

A. R. Kroh

"The question of compensation for salesmen is agitating not only the automobile business, but all business. We are asked constantly, 'which is the best plan of paying salesmen, salary or commission?' There is no hard and fast answer to that question. The thing the salesman is interested in, is not HOW he is paid, whether by salary or commission, but HOW MUCH he is paid.

"There has been very little constructive attention paid to this subject in the automobile industry until recently. Many of the leading dealers are paying salaries, salaries and commissions, commissions and bonuses in the hope of getting greater efficiency from the sales force. Elimination of floor day seems to me one of the first steps to be taken in the balancing up of the sales situation in a modern manner. There is too much hazard and too little recognition of pre-sales effort as a vital part of the closing of the deal."

Mr. Kroh is one of the three automobile sales experts of the United States, who will be heard at the Cedar Point dealer convention. For many years he was with the sales department of the U. S. Motor Truck Company, later became dealer development manager for the Goodyear Tire & Rubber Company at Akron, and for the past two years he has served in the same capacity with the Chevrolet Motor Company, of Detroit. Other sales experts will be Edward Payton of Cleveland, considered the leading retail sales manager in the automobile industry today, and Howard J. Wisehaupt of Cleveland, of the N. A. D. A. staff of sales specialists.

"The salesman problem in the large town is a matter of grave concern to the merchants," Mr. Wisehaupt declares, "but the problem is greatly aggravated in the small town.

"This is largely the result of the belief of the home town boy that his opportunity lies in the larger city, while as a matter of fact it is often right under his nose.

"It may be true in a number of cases that the salesman of the large city will make a bigger gross income, but the percentage of satisfying, satisfaction-giving incomes in the smaller towns is greater than it is in the large city.

"The small town salesman who keeps his mind on the job has more at the end of the year than the average salesman in the large city.

"While it is true that the large city salesman has a greater opportunity for study and training than the small town salesman, it is also true that the diversions of the large town are greater and the percentage of those who study and train in the city isn't much larger actually than the percentage in the small town.

"Since the perfection of the trade organization movement in the more substantial industries, the facilities for salesman education is extending farther and farther into the rural communities and the traveling institutes maintained by the larger trade organizations actually give to the salesman who is seeking information, as much material as the large city salesman will acquire."

Mr. Wisehaupt is considered one of the foremost authorities of the country in the training of salesmen.

After a special tour of 50,000 miles in which he visited more than 150 merchandise distributing centers of the United States studying retail selling methods, he was engaged by the National Automobile Dealers Association for special sales work among the automobile tradesmen.

He is one of the staff of merchandising specialists maintained by the National Automobile Dealers Association for consultation and analysis of business in the automobile industry.

The Ohio meeting will be one of the more important dealer events of the year and is to be unique in more rspects than one.

Association affairs of the Buckeye dealers are distinguished in the fact that they now are under the complete supervision of the N. A. D. A. through the Ohio Council of this national organization.

Since assuming this responsibility, following dissolution of the Ohio Automobile Trade Association, the N. A. D. A. has been doing some intensified and fruitful campaigning in that state. Big accomplishments are expected to be scored through the great gathering Aug. 6-7.

Common Sense in the Saddle

New Wave of Sounder Business Practice By Dealers, Plus Sanity in Makers' Policies Proving Profitable

BY CLARENCE PHILLIPS

WERE we to hunt for a bit of paraphrasing that the trade would like to sing in lusty voice—and conditions would lend the proper enthusiasm—the song could well start off with:

"Yes, we have no used cars."

It will be generally conceded that this would make an inspiring chorus.

Conditions at present would not warrant such a great din of vocalization. Yet it is worthy of note that here and there are automobile merchants who could qualify today for participation in this song.

Last year they could not have done it, but that was last year when conditions were less favorable and when they did business, as a rule, in a different way. Last year at this time most of them were too well supplied with used cars and with the shadows of the season lengthening the middle of July found them working hard to clear the floors.

That is how well the used car situation has been taken in hand in certain localities and by certain dealers..

Rarely as such reports are received it is sweet music to hear actual *complaints* that the dealer is hard pressed to find used cars for prospective buyers—where his usual experience at this time has been quite the reverse of this situation.

In these exceptional cases we hear of dealers going into the open market to replenish used car stocks. They are not fighting to get out from under large stocks bought unwisely but rather they are bending energies to stock used cars at a period which often before has found them overloaded.

What is the answer?

Something has happened, for one thing, in the field of motor vehicle merchandising. A new power has taken root in the trade. There is a slow but steady revolution taking place which is bringing the merchant into the possession of his better business judgment. These dealers who are buying used cars in the open market simply have caught step with the new movement in the trade which prescribes sound and conservative used car practices.

It is safe to venture that the used cars which they buy now to meet demands of their trade will be bought at figures enabling them to sell at a profit.

Investigation of some of these cases divulges that allowances on trade-ins invariably have been closely figured. That is one of the big screts of the quick clean-up. Having bought the cars "right" they have been easier to sell quickly without a sacrifice of profits and by moving the stock swiftly capital was liberated for other operations—capital, in this instance, being diverted *to the purchase of more used cars.*

Notwithstanding the "worry" to which these dealers are subjected in finding suitable used cars for their business needs they are in an ideal situation and they have demonstrated what might be done by any retailer who will apply the same brand of horse-sense in dealing with this problem.

Ability at this time of the year to sing that thrilling refrain "Yes, we have no used cars"—is an attainment well worth striving for. If the time comes when all the trade can join in the chorus we will quit talking about the used car as being a burden to the new car business. That much is certain.

As previously indicated the cases to which we have just referred are isolated instances, yet they hold a big significance, standing as outward signs of a tendency toward better practices that is steadily developing in the trade. Theoretically used car stocks should be well worked down toward the last of July, yet we observe some dealers upsetting previous rules and cleaning up their large accumulations of used cars before the first of July and even by the middle of June.

They are the luminaries of the retail field at a time when the used car situation for the trade at large is exceptionally good.

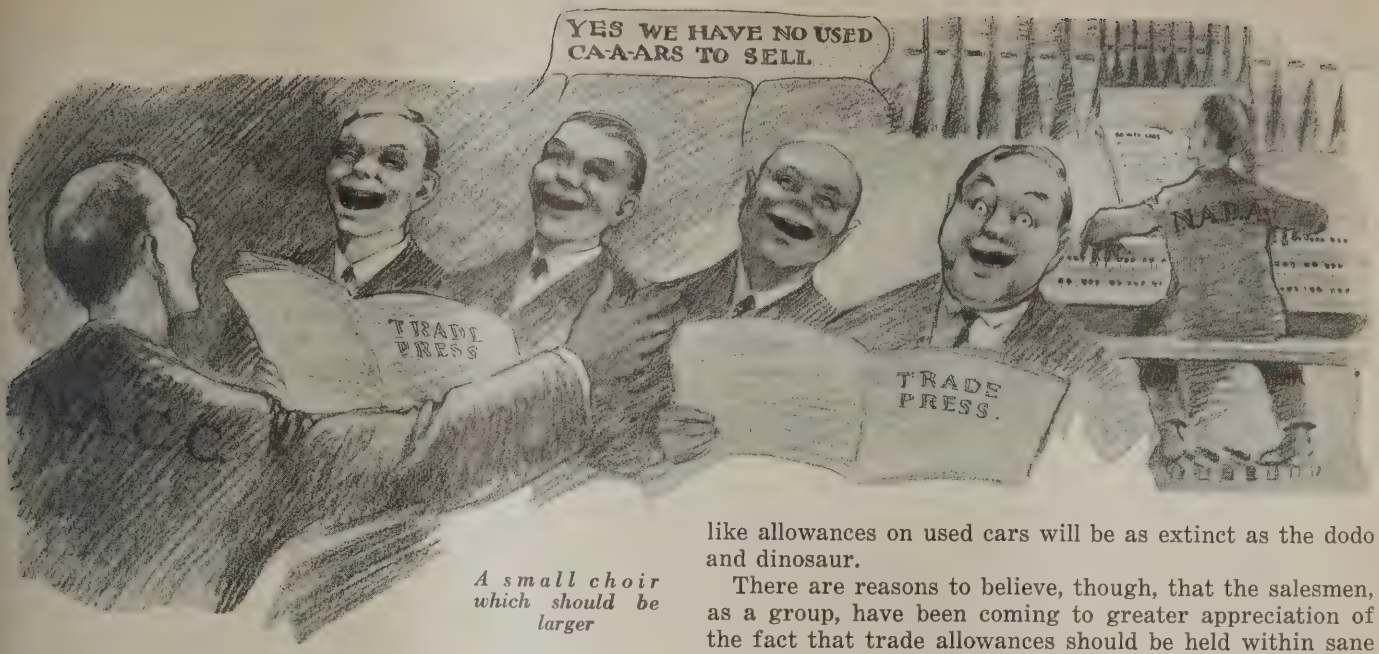
Reports from substantially all sections of the country tell us that stocks of used cars have been satisfactorily reduced. In some localities the summer is making a new record respecting this important phase of merchandising operation. Of course there is a certain spottiness and there are dealers who are overburdened with used cars. But we can't expect too much.

From all accounts the trade doubtless is buying second hand vehicles more closely than in former years, indicating again that the new force of practical business sense in handling trade-ins is really asserting itself.

A factory representative who has just completed an extensive tour to study retail conditions made this comment: "There is a sharp and highly favorable contrast between the business methods employed by dealers this year and those of last year. I see it nearly everywhere I go. They are attacking their problems generally in a more gratifying manner."

Contributing to the improved situation, it should not be overlooked, is the sane policy of manufacturers, in planning production schedules from the first of the year to meet only the demands of the market.

This policy has rendered so-called "factory pressure" a substantially negligible element of which relatively little has been heard during the present year.



MANUFACTURERS and retailers are going to profit this year as the result of the new movement of saner business practices throughout the industry and the trade.

An important contribution by the producers has been in the policy of striving to hold output within the limits of demand.

Dealers have not been overloaded by the factories and hence they have not been guilty of the wild used car trading that characterizes a period of overproduction by the maker.

And it is apparent that the trade as a whole is operating on business lines of an improved character.

Business sense is taking hold. Let business sense continue its reign.

A small choir which should be larger

What has been and what still is being heard in numerous quarters are complaints of salesmen that they are unable to make sufficiently quick delivery of new cars. We can sympathize with the salesman on this point but his position is vastly better than would be the case were the house stocked to overflowing with cars that could not be moved without a sacrifice of profits. Such losses for the house are losses for himself, if he will only analyze.

The salesman's prosperity can not exceed the proportion of prosperity enjoyed by the retailer he represents.

Not So Sorely Tempted

Not overloaded by the factory and often having to wait his turn for factory deliveries the automobile dealer this year has not been so sorely tempted as in times past to make reckless allowances on used cars in order to move an over-abundance of new cars.

This has been to the salesman's advantage for he has not been obliged to stand his share of the sacrifice. And where he is called upon to sell used cars as well as new cars the low level of used car stocks, composed of models wisely bought, is a situation decidedly in his favor.

It enables him to give more of his time to new car selling and also make more money for himself on the used cars that he markets.

That dealer having a force of salesmen fully recognizing the importance of allowing for the used car only what it would be worth on the resale market is the kind which we trust will be typical in the future.

Resisting the salesman's unreasonable insistence for excessive allowance in order that he might collect a commission on a new car sale is something which has put the retailer severely on trial and inability to stand by his guns in such emergencies has cost the dealer many a dollar, if not those necessary extra dollars that mean continuance in business.

What the dealer, ordinarily, has failed to put across in the mind of the salesman has been the vital truth that such practices also minimize the salesman's own opportunity for profits.

Convince him of that and the used car problem will be greatly simplified, brought closer to the basis of profitable merchandising—and new car selling can be made more attractive for all concerned. One of these days, we trust, the salesman who talks the house into making unbusiness-like allowances on used cars will be as extinct as the dodo and dinosaur.

There are reasons to believe, though, that the salesmen, as a group, have been coming to greater appreciation of the fact that trade allowances should be held within sane limitations. Explanation of this awakening might be found largely in indications that there has been a steady ascendency in the intelligence and general capacity of the group. Misfits and those who are utterly unfit have been stepping out to make room for others more capable and with a broader grasp of business principles.

It is the salesman of this higher school who is looking out after the broad interests of his employer and who, if a confident guess will be permitted, has had much to do this season in helping move new and used cars and helping make real profits for the business.

He, so we believe, is representative of the type that eventually will dominate the selling field. All others gradually will be eliminated. It is the salesman, of course, who to a great extent makes or unmakes the dealer's business. He has helped unmake it more in the past than he will hereafter.

Looking behind the entire picture of the healthful condition now prevailing and of the trend in the direction of sounder practices we easily discern the influence of organized effort and educational campaigning.

Undergoing Important Transition

Led by the National Automobile Dealers Association and the National Automobile Chamber of Commerce recent years have witnessed a remarkable catalog of assaults upon business evils readily capable of doing untold damage to the interests of all concerned. Eradications and progress toward further eradications and corrections have resulted and as cases stand today leaders in the trade are justified in the belief that the entire industry now is undergoing the most important transition in its history—a changing over from policies and practices of less sound character to those that make for a better and sturdier general business structure.

In the final analysis it might be said that Common Sense has come to the front and it is being well demonstrated that Common Sense pays. Conditions respecting the used car still are far from ideal but much fine headway has been made and there will be further progress. With factories holding steadfastly to the policy of limiting production to meet requirements of buying demand, with increasing factory cooperation, and with the dealer conducting his business in used cars upon a sensible merchandising basis the trade will have little to fear in the future.

Saying the least the situation has improved and sanity has figured materially in the betterment.

Applying a Pyroxylin Finish to a Car

Polishing Operations After Application of Enamel Coats. Striping Over Lacquer. Amount of Material Required for Average Job

By B. M. IKERT

RUBBING constitutes quite an important part in the various operations necessary in applying pyroxylin finishes to motor cars. While most of the newer finishes dry with some lustre naturally given by the enamel itself, a higher lustre can only be had by rubbing or polishing.

These rubbing and polishing operations as ordinarily performed by hand require considerable time, as much as 20 hours being needed some times to get the desired results after the application of the last enamel coat. Consequently it is very desirable to have on hand equipment or other means for reducing the time for rubbing and polishing. In this connection it might be stated that it is possible to buy rubbing, polishing and sanding machines pneumatically operated which very materially cut down the time required for any polishing or rubbing operation.

The particular machine as illustrated herewith is one which imitates very closely hand rubbing, or in other words it has a reciprocal motion. The machine weighs nine pounds, measures 7½ in. long, 3 in. high and 3 in. wide. The maximum length with the felts fully extended is 8¾ in. and the length of stroke is 2¾ in. It travels at a speed of 1800 strokes per minute with no load and 1600 strokes per minute with a light load at 80 pounds air pressure. It requires 8 cu. ft. free air at 80 lbs. to operate.

Has Holder for Steel Wool

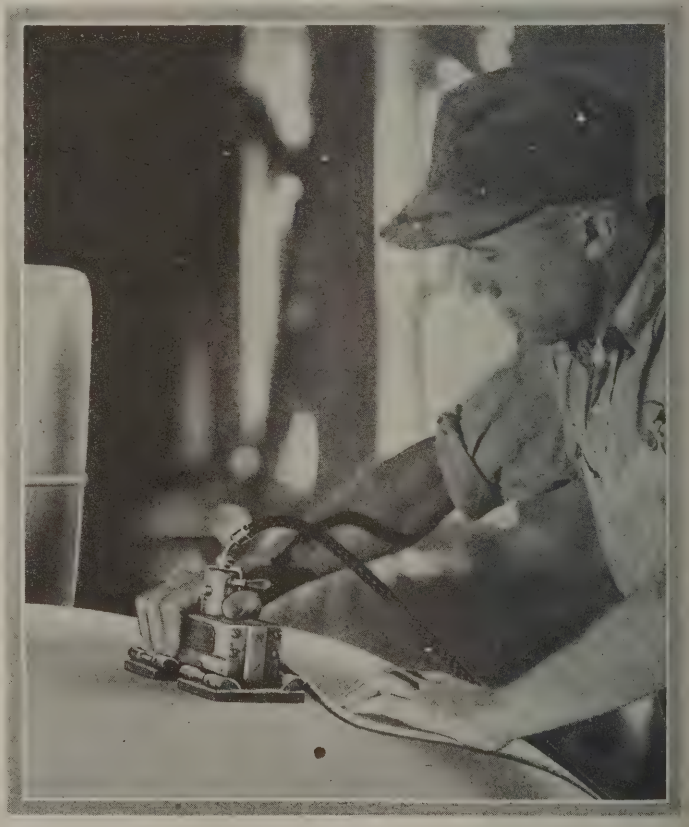
It is possible to get this machine with what is called a universal holder designed to hold steel wool for the surfacing of curved or irregular surfaces such as automobile bodies. These holders also provide a simple and efficient means for securing felt and sandpaper. A sandpaper or emery cloth attachment permits 6 or 10 sheets being applied at one time which as the paper fills or becomes worn is torn off leaving a fresh sheet underneath.

The sandpaper attachment is very desirable since the use of water-proof sandpaper has greatly increased and is being used quite extensively in place of felt and pumice. Steel wire brushes are also useful in a machine of this kind and are quite extensively used in the removal of rust and so forth preparatory to painting a surface.

A moisture trap with the necessary gage and fittings is considered essential in connection with every rubbing machine in order to remove the water condensation in the air line and also to prevent scale, dirt and other foreign substances from getting into the working parts of the machine.

If a rubbing machine is not used it is customary to use a folded pad made of clean burlap. This is immersed in water and the excess water rung out before applying the rubbing compound. Rubbing should also be done in straight lines with even strokes the same as in rubbing varnish. As a general thing it is better to rub the body lengthwise and the same is true of the hood.

Striping Done After Rubbing



When it is desired to do any striping it can be done immediately after the rubbing operations. Any of the enamels can be thinned down to striping consistency with special reducers furnished by the makers or with regular Japan color reduced with a long oil finishing varnish and turpentine to striping consistency. A soft striping pencil of the proper size to give the desired width of stripe should be used and the latter should be put on with one straight stroke if possible, as the less the stripe is disturbed after it has once been applied the better will be the results.

If a lacquer stripe is used it should be allowed to dry for one hour or even longer before polishing and if Japan color has been used, at least six hours should be allowed before any polishing is attempted.

Requires Skilled Operators

It will generally be understood, of course, the striping is something which can be done only by a skillful operator. In one case today striping is being done by using a wire bound striper and a mixture of 50 parts of color and 50 parts of thinner and when using this mixture and stripers the maker advises to go over the work twice.

Very often the question is asked as to how much material is needed to finish a car using nitro-cellulose materials. It is rather difficult to give a definite reply to this question because the quantity of materials needed varies and each maker of materials has a somewhat dif-

The rubbing and polishing operations are the most tedious and a high lustre can only be had on the final coats by such operations. For this a rubbing machine is a decided help and above is shown a pneumatically operated machine for rubbing, polishing and sanding

ferent answer. It might be interesting, however, to know what the chemical products division of E. I. Dupont De Nemours & Company specifies as to the materials needed for finishing the average car. Here are the materials as listed by this company:

1 quart primer.
2 pounds putty glaze.
½ gallon sanding surfacer.
1 gallon Duco.
1 gallon thinner No. 3601.
1½ pounds Duco rubbing compound No. 2.

In connection with the subject of pyroxylin finishes it might be interesting to know that in a recent demonstration in a large automotive plant a small car was finished completely from the bare metal up to and including the final coat in 4 hours and 10 minutes.

The particular finish applied was the natural or satin finish as it is called and is known by this company as the "One day system." This system, as used by Valentine & Co., is applied as follows:

One Day System

Natural or Satin Finish—(Surface—perfectly clean, bare metal wood, or composition board)

(A. M.)

NITROCELLULOSE PRIMER: Spray a thin even coat just as the material is furnished, after careful stirring, and allow to dry at room temperature for half an hour.

NITROCELLULOSE GUNGLAZE: Spray on the necessary amount of nitrocellulose gunglaze—double or triple-coating where surface conditions demand. The gunglaze should be thinned only with the maker's type of solvent, using not more than one part solvent to one part gunglaze by volume, nor less than one part solvent to two parts gunglaze by volume. Gravity or pressure feed is desirable, especially if heavier mixture is used. Allow the gunglaze to air dry for 2 to 3 hrs. at room temperature.

(P. M.)

Scuff sand very lightly with fine dry sandpaper to remove dust specks and nibs. Dust off carefully and tack tag if desired.

NITROCELLULOSE ENAMEL: Spray on two coats of nitrocellulose enamel of the desired color thinned with equal parts of solvent by volume, the second coat following immediately after the first. Finish with a final coat—one part nitrocellulose enamel colored, one part nitrocellulose enamel clear, and two parts solvent by volume.

A car so finished may be safely driven out under normal air drying conditions (75 degrees Fahrenheit or over) a couple of hours after the final coat of enamel has been applied.

Standard Two-Day System

Natural or Satin Finish—(Surface—perfectly clean, bare metal, wood or composition board)

(First Day)

NITROCELLULOSE PRIMER: Spray on a thin even coat just as the material is furnished, after careful stirring, and allow to air dry at room temperature for half an hour.

NITROCELLULOSE GUNGLAZE: Spray on necessary amount of nitrocellulose gunglaze—double or triple-coating where surface conditions demand. The gunglaze should be thinned only with the maker's solvent, using not more than one part of solvent to one part of gunglaze by volume, nor less than one part of solvent to two parts gunglaze by volume. Gravity or pressure feed is desirable, especially if heavier mixture is used. After the gunglaze has air dried 1 to 2 hrs. at room temperature, nitrocellulose spot putty may be used to fill any extra deep imperfections not filled by the gunglaze. Allow to air dry at room temperature over night.

(Second Day)

Sandpaper the gunglaze coat. This should be done with two grades of water sandpaper—starting with No. 180 to No. 220, and finishing with No. 280 to No. 320. For final sanding add a little pumice powder, and on the highest grade work, finish with a fine pumice flour, felt and water, if desired. This sanding operation is highly important and care should be taken to avoid scratches. Rinse off thoroughly and dry with compressed air, taking special care to blow out all water from under mouldings, etc. Then wipe off with clean dry rags or chamois, and then tack rag carefully.

NITROCELLULOSE ENAMEL: Spray on two to four coats of nitrocellulose (according to color) thinned with equal parts of nitrocellulose solvent by volume only. Each coat may be sprayed on immediately after the application of the previous coat is complete, or any desired interval may be allowed between coats. The last coat should be made up as follows: One part enamel colored, one part enamel clear, and two parts of solvent by volume.

In next week's issue of MOTOR AGE the complete directions for cleaning a car with the Deoxidine Process will be given. So much depends upon the proper preparation of a car before refinishing it and so much interest was shown in one of the previous articles on this particular point that we have prepared an article on the Deoxidine Process since it is recommended by many paint and varnish makers for automobile refinishing establishments.

From letter of Sherwin-Williams Co., Cleveland, Ohio

Thank you for sending us the copies of the June 11th and June 18th issues of MOTOR AGE. We are very glad to have these.

In reading over the article as appears in the July 2nd issue, under the heading "Preparing the Car for Pyroxylin Refinishing," we experienced a couple of reactions that we are at least going to tell you about.

You say that in applying lacquer over the old finish the old coats may look all right for a time but eventually the vibration and time will break the coat away from the body. There are a number of expensive cars running in New York City today that have been on the road for two years and look practically as good as new, that were finished with our Clear Binder and Binder Surfacer by our Mr. Saxe a couple of years ago.

We have gone into the matter of a fire hazard pretty thoroughly and find that there is a lot of bunk connected with this. We know of a reliable source of reference, one of the largest underwriters in the country, who, in a recent bulletin stated that 18 months of investigation has definitely proven that the use of pyroxylin was less hazardous than paint and varnishes.

Last week in a local shop, where the only ventilation was windows, several cars were sprayed with the operator and several looking on smoking cigars and cigarettes. Of course, this is extreme, but it simply confirms our belief that all this excitement and extreme caution is out of order. Of course, the safest thing to do is to avoid smoking and not place any unnecessary hazards.

Remember that any time we can be of service, please feel free to call upon us.

Yours very truly,
THE SHERWIN-WILLIAMS COMPANY.

(Signed) E. W. Windsor.

Oakland Has New Line of Bodies and Numerous Chassis Refinements

Five Styles Now Available. Harmonic Balancer Applied to Crankshaft. Oil Filtering Device and Air Cleaner Regular Equipment

WITH the introduction of a new line of bodies, improved radiator design, a harmonic balancer for the crankshaft, and more than one hundred refinements in design, including the addition of an air cleaner and oil filter, the prices of the new Oakland cars are from $70 to $350 lower than the previous models.

Concentrated production has resulted in five body styles. Prices on the five models are as follows: Touring $1,025; Coach $1,095; Landau Coupe $1,125; Sedan $1, 195; and Landau Sedan $1,295.

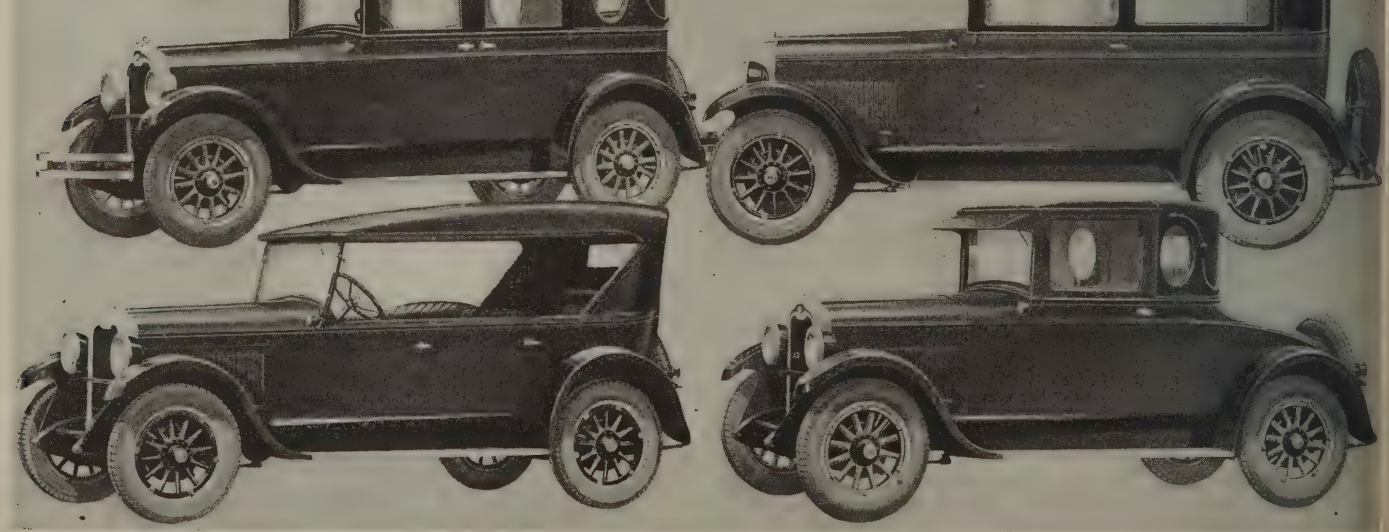
Has Harmonic Balancer

An exclusive and outstanding development of Oakland and General Motors Research engineers, the new harmonic balancer which is applied to neutralize torsional vibration of the crankshaft, is fitted to the new Oakland cars for the first time. Forming an integral unit with the crankshaft and located between number one and two crank pins, the balancer is a positive non-wearing medium, requiring no adjustment. The device consists of a light steel bar, pivoted to the shaft at its center and tensioned by stiff springs at both ends. The weight of the bar and the stiffness of the springs are so selected that the balancer has a frequency of vibration the same as the shaft itself. When, therefore, there is the slightest movement of the shaft, the harmonic balancer immediately picks it up and vibrates in an opposite direction. Each movement of the shaft is opposed by a heavy force which the balancer applies through its springs, and thus holds the shaft steady.

Turning to the latest chassis changes, the majority of the improvements have been made in the engine to provide for longer life and ease of maintenance. There has been no departure from the characteristic Oakland features and dimensions.

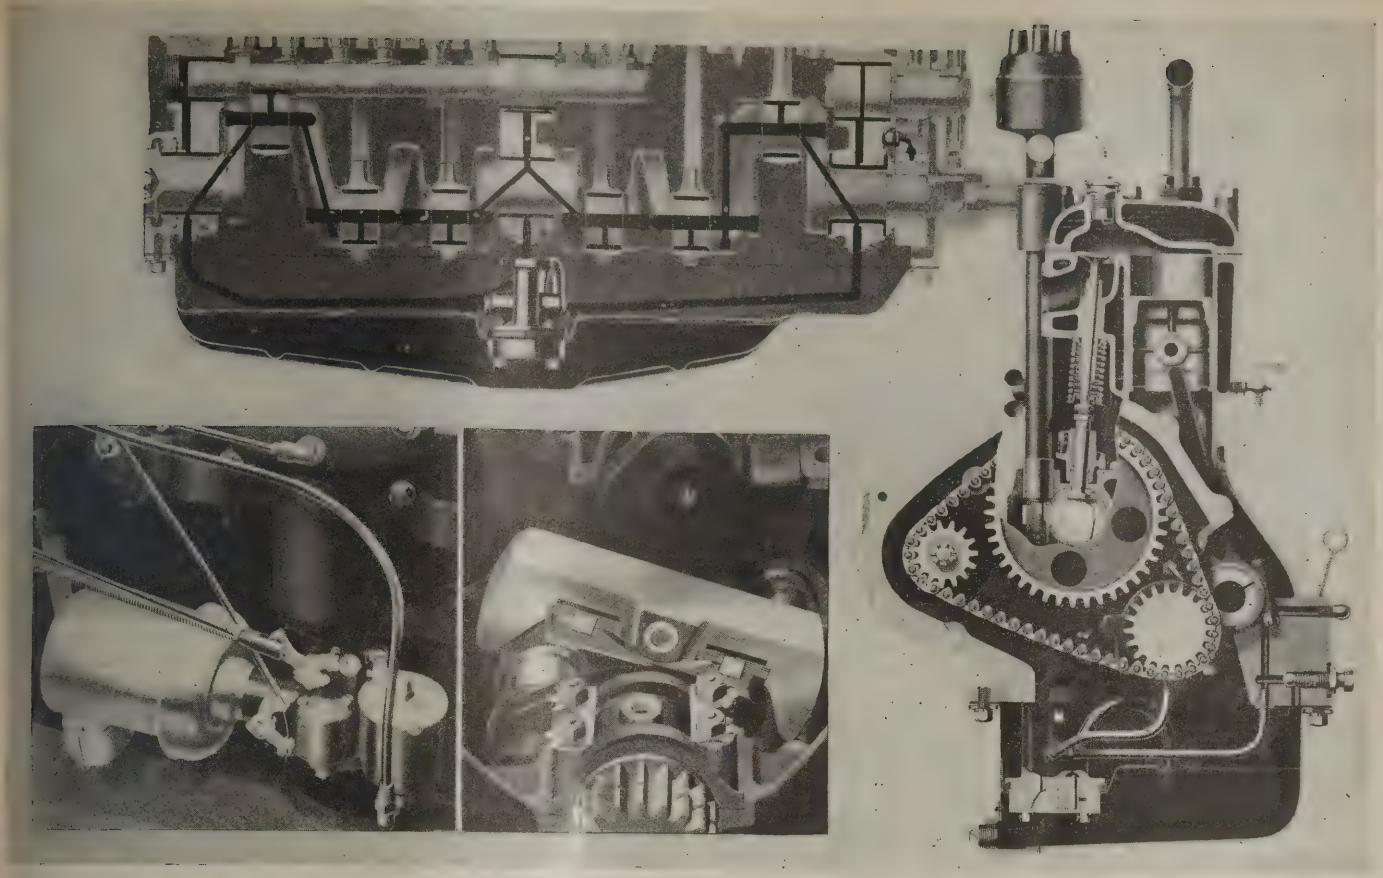
Increasing the weight of the crankshaft 13 lbs. to a total weight of 66 lbs. has allowed the webs to be greatly strengthened making the shaft stiffer and stronger. This together with the harmonic balancer virtually eliminates all vibration. To provide greater rigidity for mounting the crankshaft, the center main bearing has been lengthened from 2⅛ in. to 2⅜ in., while all main bearing caps are secured by four bolts instead of two bolts only.

To keep the lubricating oil free from grit, carbon particles and other foreign matter, an oil cleaner consisting of filtering cloths and screens carried inside a metal case is adopted. The interior of the filter which may be replaced at nominal cost when choked, allows the oil to pass through freely but retains the sediment. Under ordinary summer driving conditions, it is recommended that the oil be replaced between every 2,000 and 2,500 miles.



Oil is now fed through ducts in the crankshaft which form a continuous passage the entire length of the shaft thus eliminating exterior oil tubes. Through each of the three main bearings, oil is forced into this passage thereby equalizing the pressure of flow to all main and connecting rod bearings. Leads from the oil distributing system also go direct to all the camshaft bearings, the timing chain and sprockets. The use of pressure feed to the connecting rod bearings through holes drilled in the crankshaft provides for positive lubrication.

Instead of being at the front of the engine as formerly, the oil pressure regulator is located in the center of the crankcase where it is accessible for adjustment, and insures full uniform pressure throughout the oiling system. The line to the pressure gauge is now taken off from this point.



Oil Pan Deepened

Deepening the oil pan below the pump allows space for the accumulation of water below the level of the oil pump, thus preventing the pump from freezing in cold weather. Extending the screen across the entire length and width of the pan, strains the oil as it returns from its passage through the oiling system. In the extreme possibility of this screen becoming clogged, a by-pass pipe extending from the pump below the screen will automatically allow the oil to be delivered to the engine without passing through the screen.

An important feature from a service standpoint has been incorporated in the redesigning of the oil pan. Instead of placing the drain plug in the bottom cen-

Four of the new Oakland models. Top, left, landau sedan; right, coach. Bottom left, touring, and right, landau coupe

Some of the mechanical details of the Oakland. At the top is shown the oiling system, which is further shown in the cross section view of the engine. The two lower views show the carbureter air cleaner and the harmonic balancer on the crankshaft

ter of the oil pan, it is now located at the lowest position on the right hand side of the pan so that it is no longer necessary to crawl under the car to drain the oil. On account of its location, when the oil is released, it carries wtih it any water or foreign matter which may be collected beneath the pump.

Formerly the valve lifters were of case-hardened steel, now they are built up with cast iron feet welded by a patented process to steel barrels. The diameter of the valve lifter stems has been increased by $\frac{1}{16}$ in. while the valve stem guides have been lengthened by $\frac{11}{16}$ in. To give better high speed performance, the valve springs have been compressed more tightly at their upper ends.

Two Locking Devices

Two locking devices are now employed to secure the piston pins. Instead of the former full floating type, the pin is now locked in the piston by a set-screw and works in a solid bronze bushing in the connecting rod. The locking rings at each end of the pin are still retained.

An A. C. air cleaner, General Motors development, of centrifugal type is provided as standard equipment to filter the air entering the carbueter. While there are no moving parts in the cleaner, the design imposes a minimum restriction on the air flow which is estimated to be 72 cu. ft. per minute at 25 m.p.h. road speed of the car. Save for the emptying of the quick detachable sediment container at the front end once a year, the cleaner requires no attention. Improvements in the gasoline tank to prevent water and foreign matter passing into the fuel line have been made by extending the gas line further into the tank.

To eliminate the possibility of the ignition coil becoming wet in inclement weather, it has been removed from the side of the engine and placed under the cowl. At the same time the headlight wires are now carried through the inside of the raidator shell to afford greater protection. A fully perfected automatic spark advance is also fitted.

Making the radiator core deeper and wider has provided 12½ per cent increased cooling area.

Lowering the running boards by 1½ in., the adoption of 30 by 5.25 in. balloon tires mounted on artillery wheels in place of 31 by 4.95 tires on disk wheels and a change in the four wheel brake leverage, constitute the alterations of any importance which have been made on the remainder of the chassis. Braking efficiency of the mechanical four wheel brakes has been accentuated by increasing the wrap of the rear brake. This change allows all brake bands to be interchangeable. To make the brake pedal action softer, the brake pull-back spring has been lengthened and made more flexible.

A new nickel plated radiator shell of ornamental and distinctive design together with special head lamps now supported by a tie rod and cowl lights to match, gives an impressive front view. The design of the Oakland name plate has also been improved.

Nickel Plated Radiator Shell

Because of the reduced body height, lower running boards and fenders full crowned and deeper by ¾ of an inch, the new cars have a long low symmetrical appearance which harmonizes with the new radiator design. All bodies which are built by Fisher and finished in Duco have compact low-hung lines achieved through the use of beading of the double moulded type extending from the radiator entirely around the body.

Genuine leather is used in the upholstery of the touring car. The windshield is of a new one piece design and swings outwards from near the top where it is fastened to the standards in such a way as to prevent water leaking through into the front compartment. Side curtains fit unusually tight as the top is of the permanent type which allows the employing of glass enclosures, the latter being obtainable at extra cost. Finish is in duo-tone Buckingham gray below the beading with Waverly light gray above.

Pullman type front seats double hinged to fold forward with a large three

passenger rear seat are provided in the Coach. Doors, 34 in. wide allow easy entrance and exit. Interior finish is in rich gray corduroy upholstery with gray side walls while the outside is Buckingham gray with black upper structure.

Finished in Bowling green, the Landau Coupe is upholstered in genuine Spanish leather and comfortably seats three persons. Besides the spacious compartment in the rear deck, smaller parcels may be carried in the opening behind the seat.

Pleasing lines have been worked out in joining the top structure to the rear upper panel, while drip moulding along the sides of the top prevent water dropping from the roof on the Sedan model. A fine grade fabric is used for the interior upholstery while the exterior is done in Cobalt blue with black upper section.

Exterior finish the same as the Coach is employed on the Landau Sedan with a gray upholstery completing the color scheme. In addition to the equipment which is standard on the other closed models, it has many distinctive features that make for beauty and utility. The head, cowl and tail lights are nickel plated, a visible gasoline gauge is mounted on the instrument board, nickeled bumpers in the front and fender guards in the rear, motometer and wing cap, snubbers and special walnut steering wheel are some of its other special distinctive equipment.

The lever for operating the door latch is now located in the center of the door on the Oakland closed models

All closed models have double beading extending along the hood and cowl. Natural wood wheels are supplied on the Landau Sedan and Coupe, while the other three models have wood wheels finished in the respective body colors. Disk wheels may be had at slight extra cost.

Instrument board and steering column fastenings are concealed beneath the cowl on all cars. Instead of being located in the center of the steering wheel as formerly, the ignition switch and carbureter choke have been placed back on the instrument board within easy reach of the driver. The dimmer control, throttle and horn button are still retained in the center of the wheel.

All closed models have a stationary visor designed to harmonize with the bodies, dome light, crank type window regulators in doors and quarter windows, door locks, rear view mirror, window shades, automatic windshield cleaners and Fisher "VV" windshields. The open model is supplied with a hand operated windshield cleaner.

Checking Up on the Allowance Shopper

ST. LOUIS, July 18.—Frank C. McDonald, president of the St. Louis Automobile Dealers' Association, recently remarked that his company would be able to sell many more new cars than it otherwise would be able to sell—providing it submitted to the lure of paying fancy prices for old cars taken in trades.

There are plenty of prospective customers, said Mr. McDonald, but a large share of them want excessive trade-in allowances and the excessive trade-in allowance is a thing that promises steadily to fade away into the history of past practices on the part of St. Louis dealers.

One of the forces that has caused St. Louis dealers to take a more solid stand against foolish trade-in allowances is the educational campaign that the local dealer association has been waging among its members.

The chief instrument of the association's movement along this line is its Used Car Bureau.

Two Years' Test of Plan

This bureau has been in operation for nearly two years now and has proved conclusively, association members say, that it is a good thing. It is under the control of the Used Car Bureau committee of the association, composed of George T. Berry, president of the Berry Motor Car Co., Packard distributor, Jack Sallsbury, salesmanager of the More Automobile Co., Marmon distributor, and Joseph T. Kellerman, salesmanager of the Hudson-Frampton Motor Car Co., Hudson and Essex distributor.

The work is divided into two parts, one covering the field of high-priced cars, that is from $2,000 up, under the chairmanship of Mr. Salisbury, the other covering the field of cars with prices ranging up to $2,000, under the chairmanship of Mr. Kellerman. Mr. Berry is chairman of the entire organization.

A young woman is employed by the association to do the clerical work for this division. She sits at a telephone in the offices of the St. Louis Automobile Dealers' Association and each dealer as he appraises a car calls her up and gives her particulars of the transaction, detailing the make of the car, the yearly model, the serial number and the amount he offered for it.

Check Up on Buyer

Should the prospect go to another dealer, this merchant goes through the same process. Such a practice makes it impossible for a prospect to go from one dealer to another and say the first dealer offered more money than he really did, because the second dealer would only have to call the Association office to ascertain the truth.

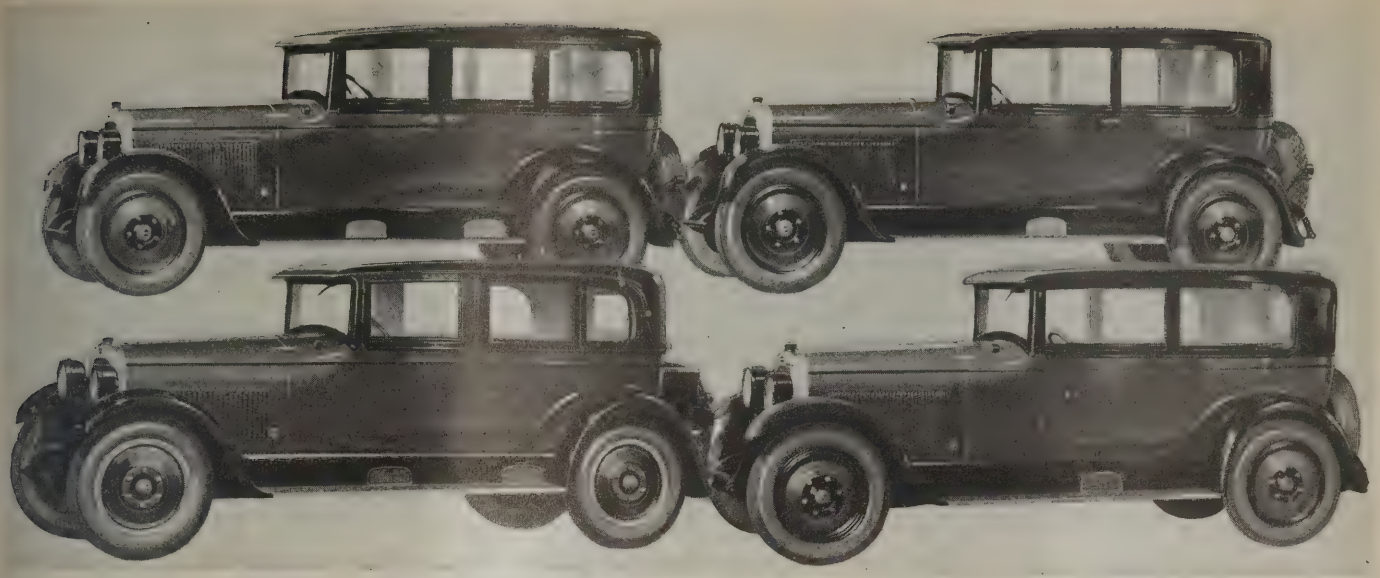
There is no effort to fix prices. A dealer may offer any amount he cares to for any car and if the other dealers refuse to meet the bid he is at liberty to close the deal at that price.

$8,000,000 CHRYSLER ORDER

DETROIT, July 18.—An order for $8,000,000 worth of Chrysler sixes and fours to be delivered during the twelve months starting with July 1, 1925, to July 1, 1926, was recently placed with the Chrysler Corporation by the John H. Thompson Co., Chrysler distributors for the Detroit area.

Approximately $2,700,000 worth of Chrysler cars have been contracted for during the months of July, August and September. Since the announcement of the Chrysler four, orders have been coming in at the rate of 40 to 50 a day.

MOTOR DELIVERY FORMED



PEORIA, Ill., July 18.—The Rapid Motor Forwarding Co. has been launched here with offices at 213-215 South Water Street, and Edwin A. Watson, president has secured James A. Burbidge as traffic manager. The Peoria station is the main office although a Chicago plant is maintained at 2619-21 South Michigan Avenue. Mr. Burbidge said that the system will be an innovation in carrier service trucks making deliveries from door to door, guaranteeing delivering within 12 hours of receipts of parcels, the system covering any Illinois point on hard roads.

Jordan Reports Earnings of $228,575 in Second Quarter

CLEVELAND, July 18.—The Jordan Motor Car Company has just finished the second largest quarter in the history of the company from the standpoint of volume, it was announced by officials today. With the Jordan Line Eight selling in the $3,000 class, the number of cars delivered was approximately the same as the number helivered in the same quarter last year when Jordan was building sixes priced around $2,300.

Earnings for the second quarter which totaled $228,575.80 covered the dividend more than twice over. With no bank obligations and no other indebtedness and all current bills paid to date, Jordan has $1,604,710.01 in cash and securities.

Quick assets as of June 30 totaled $2,526,897.71. Liabilities totaled $590,945.11, more than a four to one ratio.

Four of the new models in the Nash Special and Advanced Six lines. At the top are two of the Special Six closed models, while the lower ones are of the Advanced Six series. From this the similarity of the bodies can be noted

Eleven Bodies in New Nash Line

Announce Number of Refinements—Trunk Platform at Rear Has Been Eliminated

ELEVEN types of body styles four on the Special Six and seven on the Advanced Six chassis contitute the new line of Nash cars just announced. The particularly outstanding feature of the bodies on both the Special and Advance Six is the similarity. Excepting for the size the bodies look very much the same.

In the Special Six line is a touring, roadster, four-door sedan and a two-door sedan, while the Advance Six line includes a five passenger touring car, seven passenger touring, roadster, two-door sedan, Victoria, four-door coupe, a seven passenger sedan. All models in both lines are fitted with balloon tires, five Budd disc wheels and four-wheel mechanically operated brakes.

Number of Refinements

Quite a number of refinements have been made in the bodies which are built by the Seaman Company and among other things the trunk platform at the rear has been eliminated adding length to the body which affords quite a bit of space in the interior. This together with widened doors and forward folding front seats gives ample space to get in and out of the rear compartment.

To add to the riding comfort the front seats are wider and deeper and adjustable so that passengers may regulate the tilt of the seats to any desired position. The adjustment is by knobs located in the floor. An added touch has been given to the appearance by fitting ebony toned moldings on the window frames of both the Special and Advanced Six five-passenger sedans and these models are now both equipped with dome lights of colonial pattern and with the new type door latch and window lift. The latch on the left hand door is a combined opener and inside door lock.

Deeply crowned fenders have been added to the Special Six. The hood also is higher and better proportioned with high and narrow louvres. The radiator is finished in a heavier and higher polished nickel plate. All enclosed models in both series have the new French type roof and visor and the length of the cars is accentuated by a molding which runs the entire length of the body and hood.

Some change has been made in the location of the gear shift lever and hand brake lever whereby the latter is now placed on the left side of the driver while the gear lever is shaped so that it allows entrance or exit from either side of the car.

The instrument board layout on the Special and Advanced Six series has been refined and the lighting on the Special Six series is now done from beneath the car, somewhat similar to the arrangement of the Advanced Six. The instruments on the latter model have been supplemented by a gasoline gauge operating hydrostatically.

Several changes have also been made in the chassis of both series and outstanding of the chassis refinements is the application of an air cleaner on the carbureter. A heat treated steel band is now shrunk on the flywheel of both engines and the teeth are cut in this band. It is claimed by this construction injury to the flywheel is impossible by incautious use of the starting motor.

All models in both series are now equipped with a new type of gasoline tank filler cap as well as a cap for replenishing the oil supply. These caps instead of having the conventional threads are fastened in place by a half turn. The front springs on all cars in both series are now equipped with rubber bumpers which materially add to the riding comfort when the car is passing over rough roads.

Equipped With Accessories

All open and closed models in both series are equipped with an automatic windshield wiper, rear-view mirror and many other items adding to the comfort and safety of the occupants.

In speaking of the introduction of the new models E. H. McCarty, Nash general sales manager said: "It can be disclosed that our plans for increasing factory production capacity still further have been completed and we are now entering into a period which will establish the heaviest production records ever achieved by the Nash Motors Company."

Mr. McCarty stated that sales and production by the Nash organization for the past 12 months averaged monthly close to 62 per cent over and above the high mark set by the same period of a year ago.

"Now, with these new Special Six and Advance Six models in our dealers' showrooms throughout the United States," remarked Mr. McCarty, "we are looking forward to seeing the coming months sweep far beyond the notable records achieved during the past twelve months."

Left: Chrysler Six roadster model showing barrel nickel plated headlights, nickel plated windshield, etc., as well as new design top. New colors also are a feature; right: New Imperial sedan revealing more rounded corners at rear of body

More Powerful Engine Features New Chrysler Six

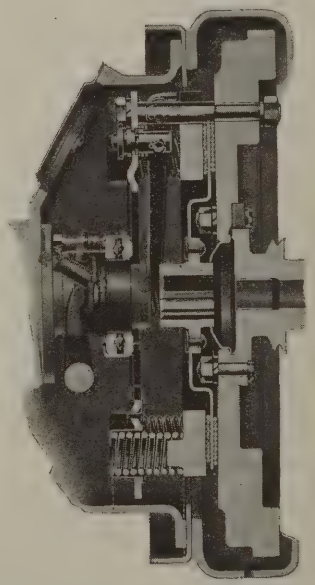
Vibration Dampener Added, Single Plate Type Clutch as Well as Several Improvements in Chassis. New Colors Are Introduced

FINER BODIES in new color designs, a vibration dampener, added to a more powerful and refined engine, new single plate type clutch and several improvements on the chassis, characterize the latest Chrysler Six cars.

The revised list of prices follows: Phaeton, $1,390; Coach, $1,445; Roadster, $1,625; Crown Sedan, $2,095; Imperial Sedan, $1,995; Brougham, $1,865; Coupe, $1,795; Sedan, $1,695. Roadster prices remain the same. Other prices have been reduced.

Except for changes in the roadster design, a droop in the top line of the closed bodies towards the rear, rounding off the back corners and the new color schemes, the distinctive body lines which identify the Chrysler cars are retained.

In order that performance would be unaffected by the increased weight of the new improved bodies and other refinements, ⅛ in. has been added to the bore of the engine which now stands at 3⅛ in. in diameter. This change increases the rated horsepower from 21.06 to 23.44, the piston displacement from 201.4 cu. in. to 218.5 cu. in. and allows 8½ per cent greater engine torque.



To balance the increased power, the crankshaft has been made larger and heavier. All seven main bearings are enlarged in diameter from 1⅞ in. to 2¼ in., while ⅛ in. has been added to the connecting rod bearings which are now 2 in. in diameter instead of 1⅞ in. Corresponding increases in sizes have been made on all main and connecting rod bearing caps, studs and bolts.

Smooth operation at any engine speed has been insured by mounting a vibration dampener which is friction driven from the hub on the front end of the crankshaft, thus taking the place of the former weighted lower fan pulley. The dampener is a simple automatic device acting as the secondary flywheel, the latter providing the drive for the fan.

Piston Design Modified

Of the same design but slightly modified, the pistons are now fitted with a pin of $\frac{13}{16}$ in. diameter instead of ¾ in. and of greater length. Similar to the ends of the crankshaft, welch plugs instead of screw-in plugs are used to seal the ends of the hollow camshaft.

Wider by ⅛ in. the face of the oil pump gears has been changed to provide the same oil pressure as used on the smaller engine, which represents an increase of the pump capacity by 12½ per cent. At the same time, an improvement in the oil suction feed has been made. If the oil screen should become clogged, the suction of the pump will open a valve held in place over relief holes by spring tension. This opening of the relief holes will allow the oil to come through the pump without passing through the screen.

Sectional view of Chrysler Six new single plate clutch

Although no changes have been made in the radiator or water pump, the water capacity of the cylinder jackets has been increased to provide greater cooling for the engine. No changes have been made in the fuel system or manifolding except that the intake of the Ball and Ball carbureter has been enlarged by ⅛ in. Extra rigid front support of the engine has been accomplished by casting the legs integral with the timing chain case cover.

Into a slightly larger flywheel has been fitted a new and simpler type of clutch which is claimed to make gear shifting much easier, has greater capacity to resist heat and will stand considerable more wear.

In place of the former multiple disk type clutch, a single dry plate unit similar in respects to that used on the Chrysler Four, is employed. Comprising a pressure plate assembly having six springs, pressure is applied to a drop forged hardened steel splined hub to which is riveted the metal disk carrying the special woven asbestos cord facings. Three release levers provided with spring locked knurled nut adjustments are connected with the stationary sleeve which carries the clutch release bearing. A hole drilled in the bottom of the clutch housing permits any oil leakage from the rear crankshaft bearing, clutch release bearing or from the transmission to drain off.

To compensate for the added engine

torque, the face of the transmission gears has been increased in size ranging from 1/16 in. to 3/16 in. larger. Instead of the stub type teeth which are customarily used, teeth are of full depth, thus giving larger rolling contact. By grinding all constant mesh and intermediate gears, smoother and quieter transmission operation has been obtained. The speedometer gears are now located under the rear main bearing where they operate constantly in a bath of oil. Because of the larger transmission case necessary to accommodate the new gears and shafts, the propeller shaft has been shortened while at both ends the flanges have been changed. The gear shift lever has been made longer to give greater comfort in changing speed while the pedals have been changed in shape and material. To make for smoother application, the emergency brake has been redesigned and in its new form incorporates several parts common to the four cylinder model. The diameter of the transmission brake drum has been increased by one inch.

Rear Axle Housing Strengthened

In line with the other chassis changes, the rear axle housing has been strengthened and the differential carrier made more sturdy and rigid making at the same time for quieter operation. Both ring gear and pinion are now larger by ¼ in. and have the spiral teeth cut at a steeper angle forming a more substantial engagement. A change has also been made in the angles and capacities of the pinion shaft bearings as well as on the pinion shaft sleeve.

On the frame, the cross members have been altered slightly, the body holes are in new positions and the position of the battery box changed. As a result of the basic alterations on the chassis, there have also been changes in the design of the hood sills, radiator hold down bolts, dust pans, front fender brackets, muffler, exhaust and tail pipes.

Except for changes in the master cylinder body, tube leads and "T" fittings, there has been no alteration in the four wheel braking system.

Turning to the bodies, most changes have been made on the roadster model

Chrysler Six Coach showing top line lower at the back

which is now finished in two-tone drab, copra drab above the streamline bead and chickle drab below, set off with black molding and a fine flamingo carmine stripe. New bullet type nickel-plated headlights and nickel-plated windshield frames and stanchions give an added touch of dash. Both doors have been widened by 1 1/16 in. to afford easier access while the door of the golf club compartment now opens sideways instead of downward as formerly. The top bows which are now of wood, finished, in walnut to match the steering wheel and new type of instrument panel, fit into nickel-plated thimbles, giving a neat finish. Directed to appeal to a growing number of persons who prefer to drive with the tops down, the latter cannot only be folded down neatly but are so designed to be readily detachable by those who desire to have no top at all. A new top material of taupe tan effect made of two ply rubberized fabric ensuring durability and waterproof features is employed. An automatic nickel-plated windshield cleaner is provided as standard equipment.

Distinctive Colors Employed

Plymouth and Pilgrim grays are used on the phaeton which is set off by a striking stripe of flamingo carmine. Long grain, bright finish waterproof material is used for the top which has a white whipcord lining to harmonize with the Colonial gray ivory tinge soft leather of the upholstery. Side curtains are now of the same weight and material as the top and are equipped with new type of rods and stiffeners, the latter being steel reinforcements to hold the curtains more rigid and provide additional comfort in inclement weather.

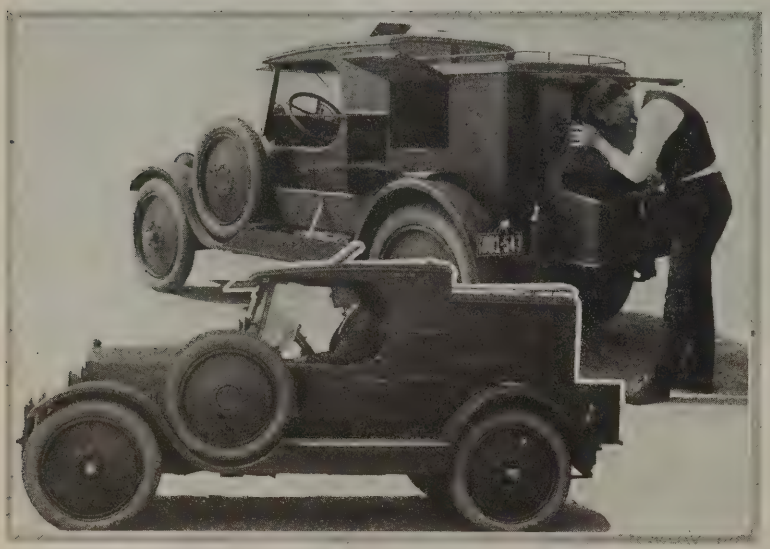
A "D" shaped window in the rear quarter adds greatly to the appearance of the Crown Imperial, which is now finished in two-tone color schemes with a black upper structure. The belt is in Bagdad green and lower part of the body in Topango green while the striping is of gold bronze. In place of wood window molding, steel finished to resemble walnut is employed. The body trim is of gray mohair with head lining to match.

Little change has been made in the Imperial except that the interior fittings are the same as those on the Crown Imperial.

Body colors on the Brougham have been changed to correspond with those on the new roadster model, the interior being the same style as the Crown Imperial.

The new top lines and rounded corners on all closed models are more noticeable on the Sedan which also is finished in chickle drab, black upper structure and carmine striping. Its interior trim is of blue gray worsted pile fabric with a velour headlining.

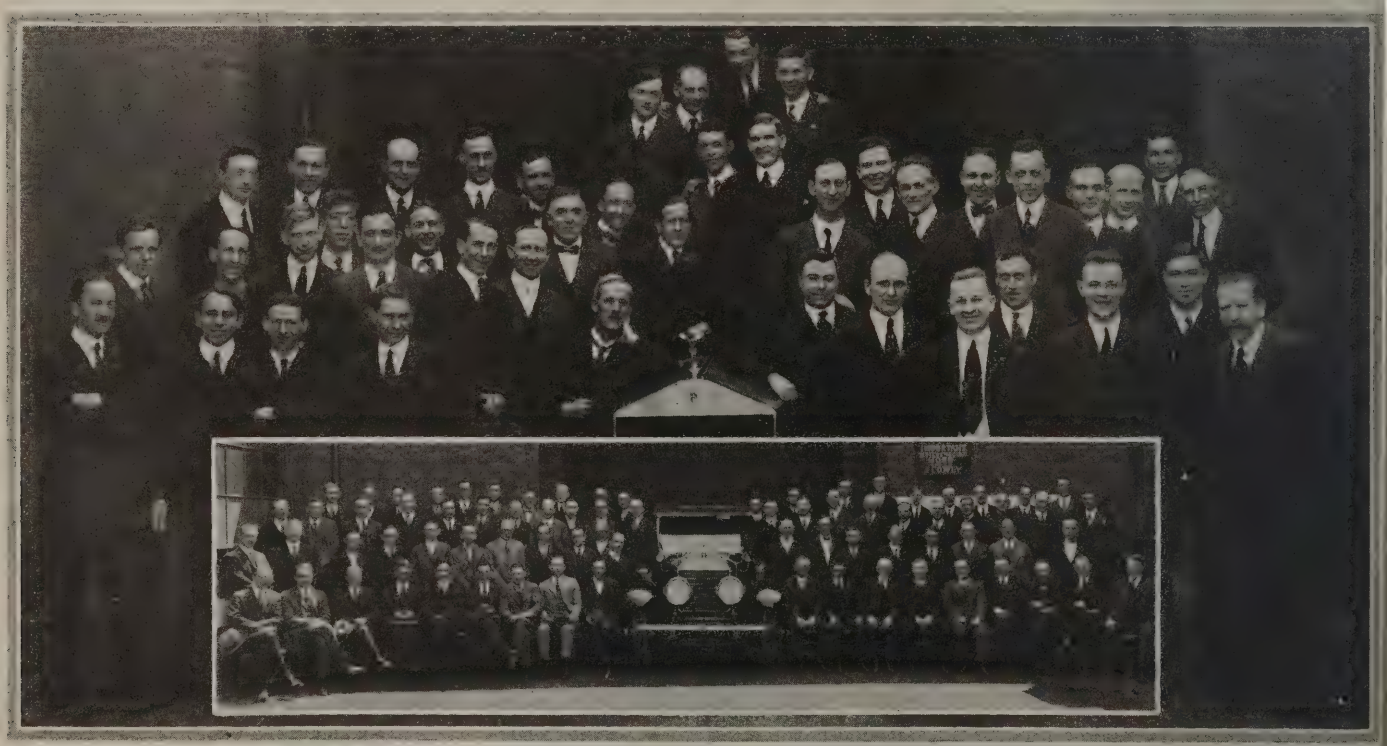
On the Royal Coupe, the back window has been altered so that it can be lowered by a crank making it possible to converse with the persons seated in the rumble seat, the latter being raised 3 in. to provide greater riding comfort. A striking finish is obtained by using an Algerial Blue above the bead, Bambalina below the bead and fawn gray striping which harmonizes with the interior finish of blue gray mohair.



The color of the Coach has been changed to Thebea gray with fawn gray striping, which with the exception of the changes already mentioned as applying to all closed cars, remains the same as the previous model.

In addition, the doors of all closed models are fitted with the remote type of latch control which greatly facilitates the opening of the doors from the inside.

Gardner Foursome Cabriolet body mounted on the six-cylinder chassis. The company only recently announced a similar body on the eight-in-line chassis. The price including complete equipment is $1845 f. o. b. St. Louis.



MOTOR AGE'S PICTURE PAGES

ADD CAMPING JOYS. Hart L. Weaver, San Francisco automobile dealer, built the special camping car shown at the left. It has an especially constructed compartment in which is carried an outboard engine for motorizing row boats and has a special top designed to withstand a "tipover." Guns and hunting equipment are carried in a special compartment, and there also is a place for fishing poles and tackle. The car is for the exclusive use of Mr. Weaver's employes.

AT THE PITS. Italian Diatto stopping for repairs during 24-hour stock car road race, for the Rudge-Whitworth cup, held at Le Mans, France. A six-cylinder Lorraine Dietrich covered a distance of 1,388.1 miles at an average speed of 58.83 miles per hour. French, Italian, English and American cars were entered.

THE FUGITING OF TEMPUS. The large picture shows the first Rolls-Royce chassis made in America and some of the men English and American, who produced it. In the group, which was taken at the Springfield, Mass., works in 1921, are 30 executives and experts selected from the staff of the company at Derby, England, to launch the American enterprise. The insert shows a 1925 model emerging from the works at Springfield, with most of the men who produced the first chassis still on the staff. Of the thirty and more Englishmen who came to the United States, not more than two or three have returned to the mother country

OF AUTOMOTIVE INTEREST

THE ETERNAL OVERHEAD. One car atop another, to demonstrate the strength of the Studebaker Duplex-Phaeton body, attracted much attention at the Fresno, Calif., Raisin Day festival. In the baby racer on the top was seated R. K. Morey, manager of the Visalia, Calif., branch of the Chester N. Weaver Co. of San Francisco. The baby racer was built by Delmer Wood, a mechanic in the Visalia branch.

PUBLICITY PLUS. Display of the new Diana by Krause Motor Car Co., Moon dealer at 5200 Delmar boulevard, St. Louis. A living model impersonated Diana. The display attracted a great deal of attention. On some occasions three traffic policemen were required to keep the street open.

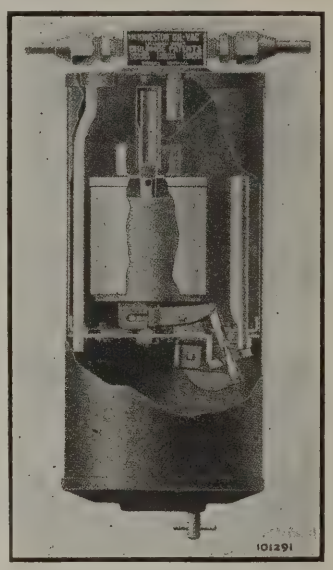
Questions and Answers on Dealers' Problems

BUILDING ^ ELECTRICAL ^ FLAT RATES
SHOP ^ LEGAL ^ PAINT & TRIM ^ ACCOUNTING

Gears That Sing and Oil That Clicks



Q.—We have a 1924 Jewett with metal timing gears that have become noisy. What would you recommend? M. F. Huffaker, Magna, Utah.

If this is a very slight rattle, draw up the water pump packing nut. If the rattle is very much pronounced, due to end play in the pump shaft, it may be necessary to install a new pump shaft bearing. If the gears sing as would be the case with improper meshing of the teeth, it may be necessary to install a new set of timing gears.

Q.—Describe the Vane type oil pump used on 1924 Jewett and state whether it is possible to take the click out of same. If not what kind of pump can I use that will operate without this noise?

The Vane type oil pump is another way of describing the centrifugal pump, which has blades which in rotating carry the oil from the center to the outer portion of the pump, due to centrifugal force. We assume that this car is equipped with a Kingston Oil Vac fuel system and if this is the case, the click is due to a hydraulic noise. To see if this is the condition, have the engine running and then loosen the connection slightly which is on the pipe running from the vacuum tank to the oil pump.

You can loosen the connection at the oil pump end of this line. If allowing a slight leakage at this point overcomes the click, then you can remedy the trouble permanently as follows: Remove the nipple at the end of the line next to the oil pump and drill out the hole with a No. 60 drill. The hole in the standard nipple is made with a No. 70 drill. This slight enlargement of the hole in the nipple will overcome this condition. The appearance of the tank of the Oil Vac system is shown in the illustration.

Kingston Oil Vac fuel tank used on Jewett

LEAKS TWO QUARTS OF OIL IN TWENTY MILES

Q—We have a 1922 Rickenbacker that leaks oil from the crankcase into the generator. The oil seems to work past the silent chain sprocket and back into the generator. At speeds of 30 or 35 miles per hour and higher the leakage amounts to one or two quarts of oil for every 20 miles of travel.—L. A. Williams, R. F. D. No. 2, Box No. 72, Bradford, Penn.

At the front of the generator there are supposed to be two felt washers and also a metal oil slinger, which is designed to throw the oil back and prevent most of it reaching the bearing. We suspect that at some time or other the generator has been overhauled and this oil slinger left off. The nearest American Bosch authorized service station, can take care of this requirement as far as these parts are concerned. If leakage occurs at the starter it is necessary to place a felt washer and in some cases it is necessary to take the starter off and grind the metal surfaces to improve the contact.

MUD SPOT PREVENTION BETTER THAN CURE

Q.—I have found that after washing a new car and after it has been splashed with mud that it leaves a spot and if you could advise any remedy, I will certainly appreciate it.—R. E. Allen, Eufaula Motor Co., Eufaula, Okla.

We are sending you by separate letter the name of a polish which was given to us by one of the large service stations here in Chicago. The best remedy, however, is to prevent the occurance and when it is necessary to have a new car go out in the mud and rain it is desirable to have it immediately put on the wash rack and washed off. If mud is allowed to stand on new varnish for any length of time there is a great chance that it will spot. It is possible that the mud contains either acid or alkali which affects the finish.

WANTS A CURE FOR A COFFEE GRINDER

Q—We have a Ford car in which the transmission has been overhauled and it operates all right at low and high speeds. When the foot brake is applied however, it makes a snapping and grinding noise as though something was going to break. —C. Harper, Borough Garage, 679 McDonough Street, Brooklyn, N. Y.

The trouble is doubtless in the rear axle and is due primarily to wear in the thrust washers. The strain on the rear axle produced by applying the brakes is greater than when accelerating which probably accounts for the condition you describe.

Taking the Cooling Strain From Cylinder Castings

Q—What method is used in curing th cylinder blocks used in Pierce Arrow cars

To the best of our knowledge these ar seasoned by being allowed to stand fo a period of time after they are cast be fore the necessary machine work is don

Q—What method is used by Studebaker Willys Knight, Wills Sainte Claire, Olds mobile, Stevens Duryea, and Stearns.— Edgar F. Durnan, Jr., Grant Hotel, 75 Bush Street, San Francisco, Calif.

We are going to answer your questio in a general way rather than specificall Where a large production is necessar the time required and the space necessar makes seasoning an impractical metho Under these circumstances the same re sult is obtained by annealing the castin in order to take out the strain which i produced in the metal when the castin cools after being poured.

TIMING A 1919 CHALMERS

Q—I am installing a new timing chai in my service car and wish you woul tell the proper valve timing for a 191 model C Chalmers. Give this informatio in degrees as well as inches.—Woods Serv ice Station, Morse avenue, Westfield, Mas

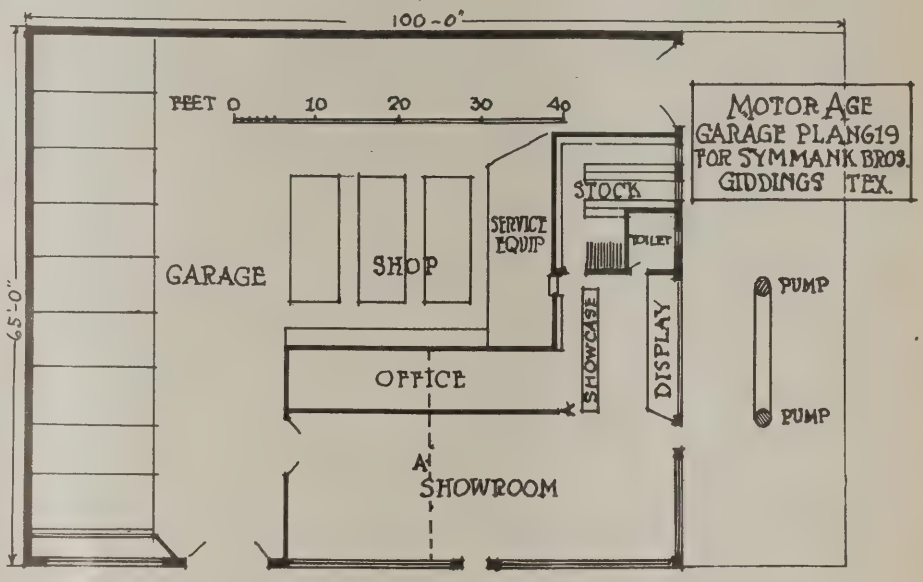
The intake opens on top dead cente and closes 50 degrees after bottom dea center. Exhaust closes ten degrees afte top dead center and opens 50 degree before bottom dead center. Checkin the intake opening and exhaust closin will be sufficient. You can get the exac top dead center position by measurin the piston travel. Turn the engine b hand until the piston has come up t within one-half inch of the top positio Note the position of the crank handle o the front of the radiator.

Turn the engine farther until the pisto goes up to top dead center and goe down so that it is again one-half inc from the top position. Again mark th crank handle position on the front o the radiator. The crank handle positio in between these two marks will give yo the exact dead center position. Ten de grees is 1/36 of a complete revolutio which would mean a one-inch movemen of the crank handle if the crank were 5.7 inches long. For a longer crank it wi be increased in proportion.

Q—What would be the effect if the tim ing were one tooth early or late?

If the engine is timed too early ther is a tendency for the exhaust gas in th cylinder to be slightly compressed an to cause a slight fluttering in the ca bureter when the intake valve opens. O the other hand the timing which is to late is characterized by overheating an loss of power. The best timing is worke out when the engine is built and shou be adhered to when it is repaired.

Planning Your New Building



By TOM WILDER

The READERS CLEARING HOUSE

Replacing Two Old Frame Buildings

Q.—We note in your issues you give descriptions of how to build inexpensive garages. We have two frame buildings side by side facing east and south. Building on south side is on corner, frontage on both buildings being 65 feet and length 100 feet. We want to have a drive-in filling station on the corner and we also want to have showroom for cars, not forgetting display for accessories.—Symmank Brothers, Giddings, Texas.

Although you have not said so in your letter you no doubt wish to tear down the frame buildings which are on your lots. This would be almost necessary, if you build a drive-in filling station. Since the long side of your lot is on the front on the main street it would be better to install the filling station facing this street, but we found that upon doing this the space would be cut into seriously and the space left would be almost unusable, being too narrow at the rear and also at the sides. By placing the filling station at the end of the lot instead of the side there is a large square space left which will be much more applicable to garage purposes.

Two entrances are convenient but waste space.

If you are desirous of having more storage space than we show in our plan, the showroom and office could be cut down to the line A giving room for four more cars. If you would be willing to eliminate the entrance on the side street, this space could be used for service equipment and another car could be serviced where the service equipment now is shown.

This plan will undoubtedly not be possible if you wish to use your old frame buildings. It is however, a very good layout for a plot of this size and if it will not suit your convenience, write and tell us just what you have and we may be able to alter things somewhat so that it may still be used.

Legal Questions Answered—

By WELLINGTON GUSTIN of the Chicago Bar

MUST LIVE UP TO GUARANTEE

Q.—Attached to the present letter you will find a copy of a letter written to a firm in San Francisco in regard to a deal we made with them. We do not know if we have the right to claim against that firm, and we want your advice in that respect. The history of the transaction is as follows: Early in April, we received a catalog from the firm. Attached to the catalog was a letter in which they offered entire satisfaction and a definite guarantee to the customer that would order second hand parts. We wrote them asking the price of new and second hand parts for a Cadillac Model 63-E-622. They answered, giving price of $160 for new parts, and $120 for second hand ones.

They said they were behind the used parts, assuring of the good condition they were. We ordered the parts used, and when they arrived here we found out that they were not as good as they claimed to be. We did not want to return them, because that means a great loss of time and we needed the car. When we tried to put them on the car we found out that the parts were for an older model and could not be used on the car we have. The carbureter intake flange is on a different way and the screws that hold the blocks to the crankcase are set different. We wanted to see if the cylinder heads were the same as the ones on the car, but they also will not fit. Now we are sending the letter, copy of which you will find attached, and, in case that the firm refuses to back their offer, what shall we do?—Alfonso Rome Gandoulff, Aguascalientes, Mex.

Where a firm sells goods on a guarantee as stated, the buyer can hold the seller to the strict terms of the guarantee. Two remedies are open in the case you present. You can keep the parts and sue for the loss under the guarantee or you can return the part or parts and sue to recover the full purchase price. From your letter it appears that the parts ordered by you were not only not according to the guarantee, in that they were not in good shape as you desired, but they were actually not the parts ordered. So, if the parts are as you state, you have a good and valid claim against the seller for the full purchase price of the parts. If you are not able to get an amicable settlement of the matter then you will be forced to send your claim to attorneys at San Francisco for collection.

RECORD LIEN IN TENNESSEE

Q.—Does a mechanics lien hold good on cars in my state where there is a mortgage on the car held by another party? That is where the car has been allowed to be carried out of the shop without being paid the repair bill. The thing that I want to know is if the car is good for the repair bill in a case of this kind.—Robert M. Smith, Parsons, Tenn.

Regarding the garagekeeper's lien in your state. He has a lien for repairs, labor and materials furnished, good for six months, and where suit on the lien has been brought within that time, the lien continues good until judgment has been obtained. This lien is not good against purchasers or other lienors who buy in good faith and without notice of your lien. Notice to all is given usually by recording the lien claim with the recorder of deeds, etc. This lien is good regardless of the fact that the repaired car has been returned to the owner. Now if another holds a valid mortgage on the repaired car, which mortgage was created and recorded before a repair lien was made and recorded, the rule is that the prior lien of the mortgage is superior to the subsequent repair lien. A few states have by statute attempted to give the subsequent repairman's lien a preference. The wording of the Tennessee statute would imply that the legislature did not intend to give preference to the repair lien.

Clearing Up Electrical

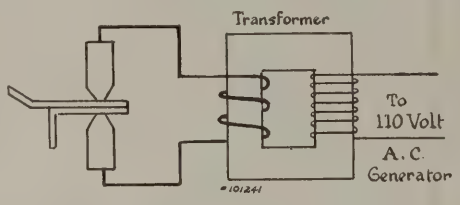
EDITED BY A. H. PACKER

Electric Welding and Rod Alignment

Q—We have a 110 volt D. C. generator made for charging batteries of a farm lighting plant. This is a Western Electric generator and has three terminals. We would like to rig this up to do small arc welding jobs on fenders and light sheet metal work. Can you tell where to put the resistance and how much to use.—Nichols' Garage, Jackman Station, Maine.

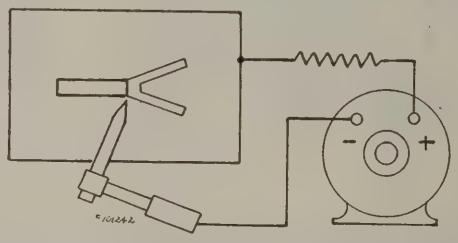
We are showing two diagrams, one of which gives the general principle of the arc welding circuit and the other gives the general principle of the spot welding circuit. Ordinarily for arc welding a generator capable of developing 220 volts is recommended and a rather high current is also desirable. It is possible that you could use your machine however, for light work to which you refer. In the illustration of the arc welding circuit two pieces to be welded are shown in place on a metal plate which is connected through a resistance to the positive terminal of the generator. A carbon stick is then connected to the negative terminal and is used for the purpose of making contact with the joint to be welded.

Heavy Arc Will Form



When this is done a heavy arc will form and great heat will be generated at the work which is the positive end of the arc. You may have to experiment using iron wire in various lengths and sizes for the resistance unit. As the generator you have was not designed for this class of work we have some doubt as to the ability of the machine to stand up under the heavy current which is usually required for this work. In the other diagram the circuit indicates that your machine would be entirely unsuitable. In the first place an alternating current generator is required for the voltage must be reduced to from 3 to 5 while the current must be increased proportionately. Here the principle of current flowing through a comparatively high resistance producing heat, is used to form a weld.

In the illustration we will assume that two pieces of sheet metal are placed between the copper electrodes, which when brought together permit a short circuit current to flow through the sheet iron thus causing a spot weld. From an experimental standpoint a weld of this sort might be made by using a battery as a source of current, but the battery would soon become discharged.



Q—How can we line up the connecting rods on a Hudson super six so as to get the proper distance between the piston pin bosses. After the cylinder block is on, the piston will not come down through and we would like to know about the alignment before the job is carried this far. We have a connecting rod aligning gage.

If you check up the connecting rods, with reference to the lower end you will be still more nearly correct. However the check for twist and bend are the most important.

Then after the pistons and rods have been installed and the cylinder block is in place you can get under the car and see whether the upper end of the connecting rod has clearance at both sides

General scheme of spot welding circuits

Arc welding requires using a resistance with the generator

both for twist and bend before installing them you will have them about right. If you further check to see that the upper end of the rod is in its proper location as far as the piston bosses are concerned. It is not essential to have the rod exactly in the center. Then if you find that the rod touches one boss or is very close you can spring it away by means of a bar. This method while not ideal from a theoretical standpoint seems to work out all right in practice when the rod has been previously checked on an aligning gage.

THREE CYLINDERS ADVANCED—THREE RETARDED

Q.—I noticed our Pike's Peak Chandler engine had a peculiar rhythm some time ago, occurring at all speeds. It sounded as if the spark (magneto ignition) were retarded when three of the cylinders fired and advanced when the other three fired. An inspection of control rods and wiring revealed nothing out of the way and it was not until the general overhaul at five thousand miles took place that the cause of the irregular running was found.

I took the magneto off and found that the bottom cam had come unscrewed and was sliding about for a distance of ½ inch. Dressing up the cam and inserting another screw cured the trouble, which many might have thought was due to improper carbureter adjustment.—J. B. Flynn, Mgr., A. B. C. Taxicab, 48 Domain Terrance, Spreydon, Christchurch, New Zealand.

We wish to compliment Mr. Flynn on his capable trouble shooting, for a job of this character might readily lead a good man astray.

Charging Batteries in the Land o' Lakes

Q.—Will you please give us your opinion on a complete battery charging outfit? We have an 850 k.w. Koehler automatic lighting plant which is too small for this work. Our battery storage was limited to about 30 last winter but is rapidly increasing each year and our Koehler has about all it can do to take care of the Radio batteries in use here. We are located in the land of the lakes and during tourist time we have considerable occasion for recharging outfits, the nearest battery station being 23 miles away. We are thinking of securing a four or six K. W. generator second hand, and drive same with a stationary gas engine or a Ford motor.

We prefer a Ford motor on account of the different ranges of speed obtainable which could be regulated according to the amount of current required. What is your opinion on this matter and how much power would be required to drive this generator.—Boulder Junction Garage, Boulder Junction, Wis.

Ford Engine Handles Either

A four K.W. generator is the equivalent of a 5.4 h.p. generator while a six K.W. generator is the equivalent of an 8 h.p. generator. The first will require about 6.7 h.p. to drive it while the second will require about 10 h.p. to drive it figuring an efficiency of 80 per cent. A Ford engine will handle either one, the larger type being about the maximum that the Ford engine should drive as a continuous load. If you can secure a Fordson engine it will stand up longer in this sort of service for it is built for heavy duty. What you refer to as an 850 k.w. lighting plant is probably an 850-watt outfit which is less than one k.w. The speed to run the engine would be about 900 or 1,000 r.p.m. while the generator would probably have to run about 1,800 r.p.m. Accordingly you would need to belt drive the generator with a 2 to 1 ratio having the larger pulley on the engine.

This would mean the necessity of some provision for taking the thrust such as an idler shaft mounted on large ball bearings, or at least plain bearings very well lubricated to take care of the pull of the belt. In getting a generator of this sort it would be desirable to have a field rheostat so as to control the voltage although as you say you can get some voltage control by reducing the speed below the rated speed given on the generator name plate. You would also need a cutout of some sort and we will give you name of concern making such a device, also name of concern having used generators for sale. With the cutout you might find that it will be necessary to maintain approximately the same voltage in order to have it work properly. In other words if you have a 32-volt cutout it will work with five or six batteries on the line but will not work very well if you have too many or too few batteries.

Trouble With Bill Fixit

The READERS CLEARING HOUSE

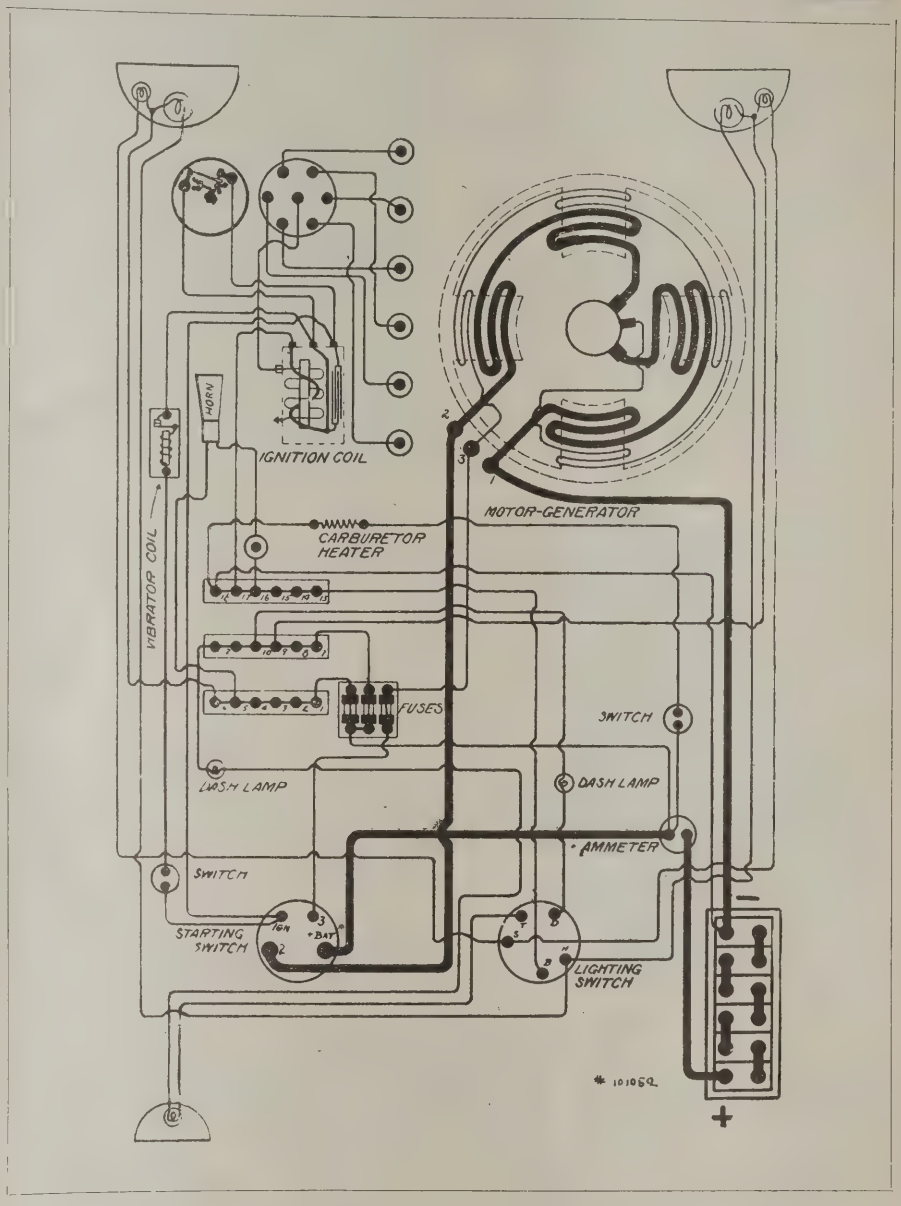
Franklin Circuits Wanted

Q.—Can you send me a wiring diagram of the electrical system used on Franklin car No. 90970-S. This may have been given in some of your publications of MOTOR AGE but my old copies have been destroyed and are therefore not available.—Wade Stevens, Beaver City, Nebr.

According to our records this is a Franklin Series 9-B, a wiring diagram having been published on October 11th, 1923. As other MOTOR AGE readers will also doubtless be interested, we are publishing it again and also sending you a copy by letter.

HOME MADE ELECTRIC LIGHTING FOR A GAS STATION

Q.—I want your advice on lights for a small filling station 5 miles from town. At present I am using three gasoline lanterns but as there is a lot of traffic at night I thought I might arrange for better lights in connection with a free air outfit. Here is the proposition; I do not want to put $400 into a lighting plant and even if I had a plant I would have to buy an electric motor at a cost of $55.00 to run the air compressor.



Now if I buy a 2 or 2½ horse power gas engine to run the air compressor would it be practical to belt drive one or two automobile generators and by using about two storage batteries have 6 or 7—27 or 32 C.P. lights for an average of three hours per night, with one to burn all night? Would there be much loss of current if some of the lights were thirty feet from the battery? What size and kind of wire is best for me to use? What size and type of air compression and tank is best for small place and what will be the approximate cost of such an outfit?—Texas Gas Station.

If the gasoline lanterns are of a type that we have seen they produce a rather high candle power so that it would take a rather heavy current to give the equivalent amount of light from electric light bulbs. The ordinary head lamp bulb for example which is rated at 21 candle power draws about 2.5 amperes from the battery and on this basis a 32 candle power bulb would draw about 3.8 amperes. To obtain the watts we multiply the current by the volts which in this case would be 3.8 times 6 or approximately 32 watts as the energy consumed by each lamp.

The ordinary small generator as used on average automobiles would be capable of lighting three of these lamps, but if you use six of them two automobile type generators would be required to balance the load. Of course if the lamps were required for three hours it would be possible with a storage battery to run the generator for six hours but we have some doubt as to the desirability of this scheme. For one thing we suspect that the light distribution would not be ideal. You might try out a single light and an automobile type reflector, hoisting it up in the air to see what the distribution is like. If the bulb is in focus you will have a bright spot of light on the ground underneath the lamp and around the bright spot the illumination will not be so good. Perhaps you can improve it by putting the bulb out of focus, that is either farther in or farther out from the reflector. If you have a battery, bulb and a reflector out of a Ford headlamp you can try this some night and see what the results would be. Generators for belt drives should have ball bearings, for the pull of the belt would rapidly wear out plain bearings.

If a generator such as a Ford is used it would be necessary to provide an oiler at the front end for normally this bearing is lubricated by means of oil from the crankcase. We would recommend using No. 10 wire and would suggest running separate leads from the battery to each of the lights. No. 10 wire has a resistance of 1 ohm for each thousand feet. A 30-foot length of wire would then have a resistance of .06 ohms for the double circuit, that is the wire carrying the current to the lamp and the wire carrying the current from the lamp back to the battery. To find the loss we multiply this resistance by the current which gives us .06 ohms multiplied by 3.8 amperes or .23 volts.

In other words the voltage of the lamps will be approximately ¼-volt less than at the battery. If you would run the same pair of wires to three or four lamps there would be a greater voltage lost. If it is desirable to do this however, you could use larger wire such as No. 8 or No. 6. In regard to the air compressor, would suggest that you get in touch with concerns making this type of equipment.

Motor Age's Flat Rate Forum

The READERS CLEARING HOUSE

EDITED BY B. M. IKERT

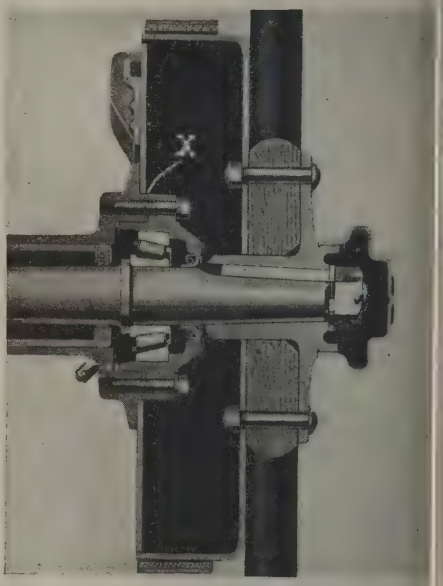
Selling Flat Rate Operations In Groups

SOME shops have not as yet cashed in to the fullest extent on the flat rate system when they have not made up a combination of operations to be sold as a group.

For example there are certain operations which lend themselves very well to grouping and a little time spent in working out such a group usually will be found worth while because it is quite easy to sell the whole job to a customer particularly when it is a matter of only a few dollars cost.

As is pretty well known there are operations such as engine and chassis lubrication which can be grouped and others taking in such things as tightening shackle bolts, spring clips, etc.

One Chicago concern which specializes in maintenance work on Hupmobiles has for example what it calls a Hupp Owners Economy Service consisting of thirty-two operations which as a group are sold at a flat price of $10.00 complete.



The thirty-two operations included are as follows: Change oil in engine, regulate oil pressure, lubricate generator and starting motor, adjust timing chain, lubricate steering gear, adjust steering gear, lubricate fan assembly, adjust fan assembly, lubricate clutch studs, adjust clutch pedal, grease universal joints, fill transmission to level, grease front wheel bearings, adjust front wheel bearings, align front wheels, tighten steering spindles, tighten spring clips, paint springs with oil, tighten tie-rod bolts, grease Alemite system, fill differential to level, tighten body bolts, tighten all dash lines, tighten running boards, tighten fender bolts, adjust rear axle shaft nuts, flush and test battery, make lights burn, adjust tappets and points, tune engine, adjust carbureter and clean screens and adjust brakes.

The same concern, Hawkins & Bergland Maintenance Company, 2532 S. Wabash Avenue, Chicago, also has a Hupp Owners Special Service consisting of sixteen operations selling at a flat price of $6.25. These operations consist of changing the oil in the engine, checking oil pressure, lubricate generator and starting motor, grease Alemite connection, grease universal joints, fill transmission to level, tighten all body bolts, tighten running boards, tighten fender bolts, make lights burn, flush battery, lubricate clutch studs, adjust brakes, paint springs with oil, align front wheels and road test.

The Right Way and The Half Baked Job

To the Editor of MOTOR AGE:

The Flat Rate Manual issue of April 30th denotes a flat rate charge of $44 for renewing engine main bearings in a Dodge Brothers car. Give your opinion either by letter or through The Flat Rat Forum of any method of doing this fo $12 flat rate. The method employed o the $12 basis is to remove the pan an the bearing caps and drive out the uppe bearing. The new bearings are then pu in by sliding them around the shaft an then new lower caps are also fitted. Ca this operation be successfully done i your estimation and if not what would b the result.—H. R. Reed, Service Foreman A. H. Henneberger Company.

Rear wheel bearing adjustment on the Hupmobile easily is accomplished by the use of shims, as shown in the above illustration. Such constructions largely have cut down the time factor in maintenance work

This is a method which may or ma not work and it is a 100 per cent gues as to whether the upper halves of th main bearings are properly lined up. I they are not the tightening of the lowe half will put a bend in the crankshaf and the bearings will rapidly pound ou again. The local Dodge Brothers servic station advises that whenever all mai bearings have to be replaced the onl safe way is to tear the engine down, al though if only the center one needs re placing then there is a fairly good chanc of getting by in the method suggested When all bearings are replaced the shaf is rotated in the upper half and an bearing which is low is shimmed up wit shim stock.

Finds Manual a Help

New Haven, Conn.

To the Editor of MOTOR AGE:

Enclosed you will find check for $1.0 for two copies of the MOTOR AGE Fla Rate Manual. I think the manual is a great help to all garages running on fla rate. You deserve praise for your work on this manual.

—Frank N. Mason.

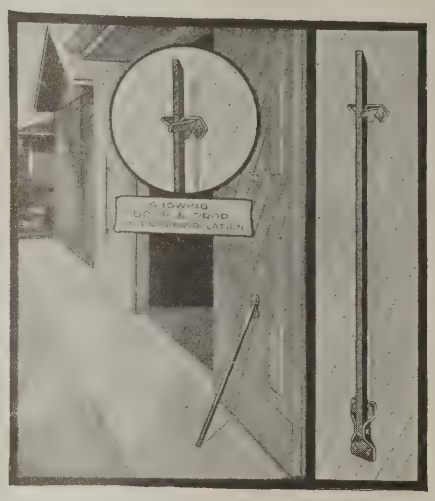
CHEVROLET MODELS FOUR-NINETY, SUPERIOR AND UTILITY EXPRESS

FLAT RATES FOR BEARINGS, CONNECTING RODS, PISTONS AND PISTON RINGS AND PINS



Manufacturer's Official Designation		Time Hours
43	Bearings—490 Motor. Tighten all bearings (Includes Operation No. 36-40-41)	3.9
44	Bearings. Same as Operation No. 43 on Superior motors	4.4
45	Clyinder Head, Under Pan and Oil Pan. Remove and replace (Includes flushing of oil pan, oil lines and adjust tappets)	2.5
	(a) Grind and reseat valves	1.0
	(b) Connecting rods and piston assembly. Remove and install one (includes the lining up of the rod removed and tightening the other three rods)	1.2
	(c) Connecting Rod. Replace, refit and adjust one rod bearing and true up rod	.6
	(d) Cylinder. Read and burnish one cylinder	.8
	(e) Piston. Install and fit one oversize piston, 3 piston rings and one pin	.8
	(f) Piston Rings. Replace one set of 3	.3
	(g) Piston Pin. Replace 1 (Includes reaming and fitting)	.3
46.	Connecting Rod and Piston Assembly. Remove and install 4 connecting rods and pistons. (Includes tightening and truing of 4 connecting rods and Operation No. 45)	4.5
	(a) Main Bearings—490 motor—Tighten	1.0
	(b) Main Bearings—Superior motor—Tighten	1.5
47	Piston Rings. Install 12 new piston rings (includes Operations No. 45-46)	6.0
	(a) Grind and reseat valves	1.0
48	Piston Pins. Install 4 new piston pins. Includes Operation No. 45-46	5.9
49	Piston Rings and Pins. Install 12 new rings and 4 pins. (Includes Operations No. 45-46)	6.8
Operations No. 36-40-41 referred to above are as follows:		
36	Under Pan and Oil Pan. Remove and install. (Includes flushing oil pan and oil lines)	1.5
40	Connecting Rod Bearings. Tighten. (Includes Operation No. 36)	2.5
41	Main Bearings—490 Motor. Tighten. (Includes Operation No. 36)	2.9

THE MARKET'S NEW OFFERINGS

Accessories—Equipment—Supplies

Properprop for Garage Doors

SERVING as a prop to hold the swinging garage door open and as a handle for opening the door when it is closed the Properprop is being made and marketed by the Bovey Automobile Heater Company, 3911 Prairie Avenue, Chicago. When it is desired to close the door the device is folded up into a door handle and held in position by a gravity latch. The Properprop is said to work equally well, in preventing a door from closing, on concrete, dirt or any other surface. One of its merits is in preventing the door from slamming shut when the car is being taken in or out of the garage. Price per pair $1.25.

Properprop

New Spring Control Device

Hassler Stabilizer

A NEW spring control device known as the Hassler Stabilizer has been perfected by Robert Hassler, Inc. of Indianapolis. The product is offered at present for such cars as Chevrolet, Dodge Brothers, Hudson, Essex, Buick, Overland, etc. It was created to meet the needs of peculiar spring reactions created by requirements of the balloon tire. Based upon the principle of "smooth friction" as opposed to "rough friction" it is said that the Hassler Stabilizer eliminates the jiggling sensation which is experienced when the balloon tired car is driven at certain speeds over uneven roads.

Another feature is said to be the quick recovery of the flexible member, or connecting belt, this accelerated recovery being urged as very important especially where balloon tires are used. The internal mechanism is sealed against mud, water, dirt and other destructive elements. A separate model has been developed for each make of car to which the stabilizer has been fitted. While the device is being made at present for a limited number of makes it is announced that it will be fitted to all other popular makes of cars.

Show and Demonstrate

And this bit of advice from the manager of a large sporting goods house to the clerks in that establishment:

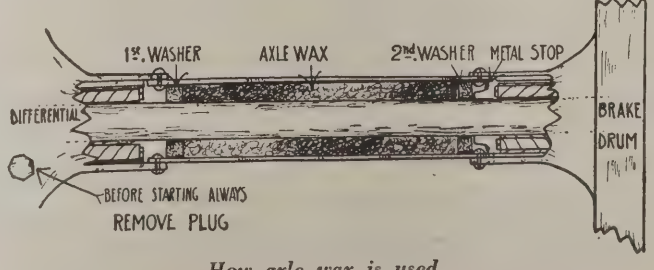
"Don't be afraid to show or too lazy to demonstrate."

This sounds almost like the manager of the sporting goods house has had experience in running an automotive accessory store. And his advice to sporting goods sellers is excellent also for accessory store salesmen.

Rare types of patience in showing stock to prospective buyers can be found in any large department store. It is this patience and pleasant willingness to go the limit for a customer that makes the cash register ring. The accessory salesman must have lots of such virtues. It is well to remember that so long as the person being served is "interested" he is a "prospect."

EXTENSIVE price reductions on all Schebler package outfits for carburetor replacements on automobiles were announced July 1 by the Wheeler-Schebler Carburetor Company, Indianapolis, to all their distributors and dealers. These reductions particularly affect package outfits including the new Schebler Model "S" Carburetor.

The Silent Salesman

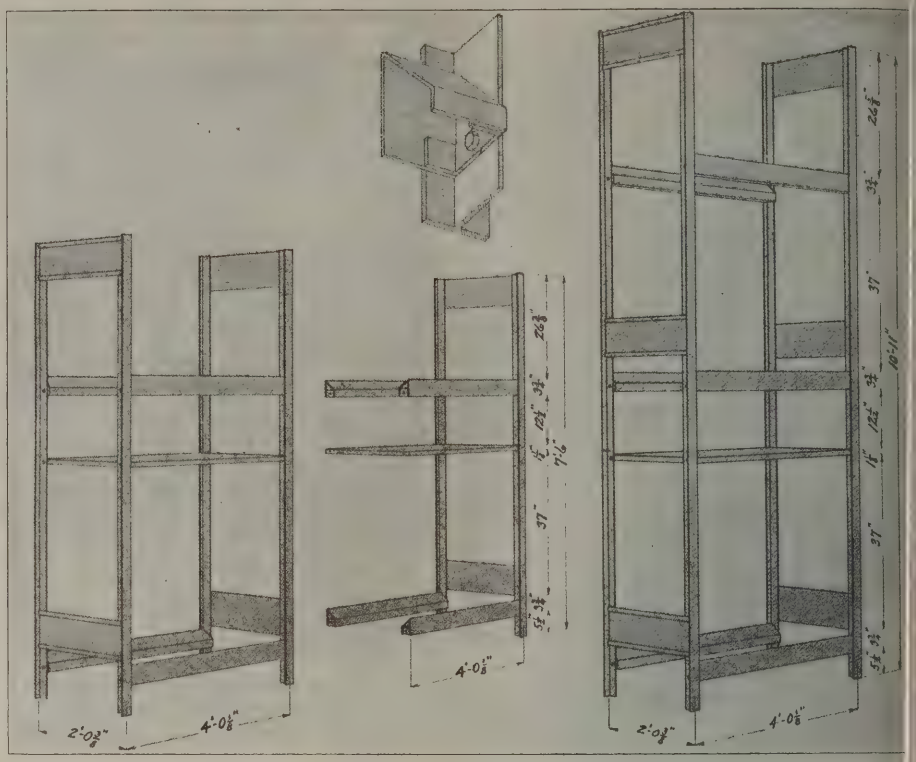


TO facilitate sales of Tex-Oil Silencers and Fabroil Silent Tappet Adjusting Screws John C. Hoof & Company, 157 W. Illinois Street, Chicago, offers to furnish automotive merchants, without cost, a handsome display case for counter use. The company calls the case "The Silent Salesman" and it is sent to the dealer with an assortment of the items it is intended to exploit. The case, in orange and black, is made of pressed metal, with a glass top through which the customer may view the assortment. In the rear is space which may be used for storage of surplus stock.

"The Silent Salesman"—a counter display case

Axle Wax

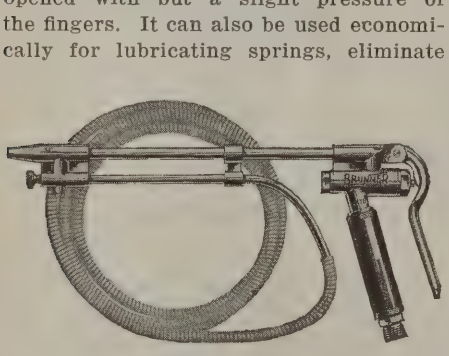
HUTCHINSON & Company, of Dallas, Texas, describe their Axle Wax as a "grease retainer on a new principle." It is a wax compounded preparation which goes in the rear axle housing for the stoppage of dope leaking. The substance is packed between the outer and inner bearing, filling the entire space between axle and housing. It is said to be a sure "stop," holding regardless of the condition of the axle or bearing. This preparation is packed in a tin can, each such unit including two fiber washers and one metal stop washer. Prices—touring, 75 cents; truck $1.



How axle wax is used

GETTING MORE OUT of the SHOP

Lupton Tire Rack



An addition to the Lupton line has been made in the shape of a new type 2 tier and 3 tier tire rack designed with particular attention to rigidity to resist sway in both directions. The uprights are heavy rolled T sections and each rack is equipped with a shelf for carrying tubes. The depth of the rack is properly designed to take tires from 30 inches in diameter to 36 inches, the distance in the clear being 37 inches, which makes it possible to handle cord and balloon tires on the same rack. The height of the 2 tier and 3 tier rack is 7 ft. 6 in. and 10 ft. 11 in. respectively, while the depth in each case is 24⅜ inches. The total capacity based on 4 in. tires is 22 for the 2 tier and 33 for the 3 tier and each rack holds 36 tubes. Price for the first unit is $20.00 for the 2 tier rack and $31.00 for the 3 tier rack. The prices are based on a first unit and an additional unit making it possible to have a continuous tire rack in multiples of 4 ft. Additional racks cost $16.00 for the 2 tier and $22.50 for the 3 tier. The above equipment is made by David Lupton's Sons Co., Philadelphia, Pa.

New two and three tier rack recently introduced by David Lupton's Sons Co. It will handle cord and balloon tires.

Brunner No. 78 Engine Cleaner

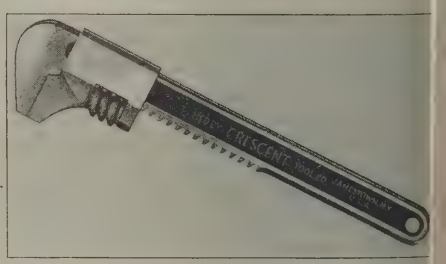
This tool can be profitably used for cleaning engines and its balanced pistol grip makes it easy to hold without tiring or cramping the hand. The valve is leakless when closed and can be easily opened with but a slight pressure of the fingers. It can also be used economically for lubricating springs, eliminate

Brunner No. 78 engine cleaner

body and chassis squeaks, blow out clogged gasoline and oil lines, etc. To lubricate springs the tension is taken off the springs by a jack against the car frame, any rust, dirt or corrosion is removed with a wire brush and then a good grade of penetrating oil sprayed on the springs. This engine cleaner is made by the Brunner Manufacturing Co., Utica, N. Y.

Transco Aluminum Solder

This is a self fluxing solder for aluminum which flows at 355 degrees Fahrenheit, a temperature so low that there is no danger of distorting or burning the aluminum. The solder is non-electrolytic which means it is not affected by oxygen in the air or the oxides of aluminum. The solder will take a polish and when used on aluminum and then polished it is impossible to find the part soldered, it is stated. It is not affected by acids and it acts like a weld and when applied to aluminum drives out the oxides and becomes a part of the aluminum. In its application if a soldering iron is used the latter should be filed clean and tinned with half and half in the usual manner.



Transco X X brazing solder flows at 470 degrees Fahrenheit and is also self fluxing. It is puddled with a small flat tool instead of a brush, any tool similar to a screw driver being acceptable. It is especially suited to repairing cast aluminum parts such as crankcases, manifolds, etc. If it becomes necessary to repair a small sand or air hole, the Transco X solder can be used, but if a casting is cracked so it is hard to get the solder in place a V groove is filed in the crack and filled with Transco XX. The above solders are made by L. D. Beck, manufacturer, 901 Irvin Park, Blvd., Chicago, Illinois.

PYROXYLIN FINISHES

forged handle and jaw made from ste of a special analysis. The teeth a accurately milled to afford strength a easy adjustment. The adjusting knu is turned from a solid bar of steel a hardened and a small spring pressi against the knurl holds the adjustment the setting. The entire tool is harden by a special process of heat treating a oil tempering. It is hand polished improve its appearance. The total lengt is 9 in. with a capacity fully open 3 in. The length of the jaw is 1⅛ i

EDITORIAL

Why Is The Sticker?

IF an automobile dealer desires to profit by past mistakes in used car trading he must begin with an effort to analyze, in so far as possible, the mistakes of which he has been guilty.

While this can not be done comprehensively one way for the dealer to get a fair line on past errors of judgment is by making a study of the "stickers" in comparison with cars that move more readily.

Just why have certain cars been "stickers"? The answer to this question often will give the retailer some valuable suggestions for application in future transactions involving used car trades.

In the great majority of cases the "sticker" fails to move because of poor initial judgment in making the allowance when it was taken in. Very often in order to sell it the price is cut to a point below possibility of profit—which is a confession that the house was out-traded when it agreed to accept the car at the terms of some bargain-driving owner determined to shift a loss, properly his own, to other shoulders.

When a car is priced right aggressive merchandising effort usually will place it in the hands of a buyer. If the dealer prices it too low for a profitable sale, just to get it out of the way, he is certainly paying a premium on a previous blunder.

Buy them right in the first place and selling them profitably becomes a much more simplified matter.

Study the stickers comparatively with the better sellers. They are always with you *for a reason.*

If that reason is chargeable to error or folly on the part of the house you want to know it for the purpose of future guidance.

Success, in the first place, is erected largely with the lessons we learn from our mistakes.

1926 Models

AND now for the 1926 models. Factories will be announcing the new offerings from time to time as usual at the seasonal period. Ordinarily the announcements are followed by more or less stimulated sales and it may be expected that the 1926 models will deliver a certain merchandising impetus.

Harking back a year we see a different condition in many quarters of the trade as the new models were about to come forth than we behold today.

When we hit the new model introductions in 1924, heralding 1925 designs, many dealers still had on hand cars of 1924 vintage in numbers embarrassingly large. As you went about among them you heard considerable sour comment about the practice of "yearly models" which they said were so often catching them in a bad position.

Whether bringing out new models each year will continue permanently as an outstanding feature of factory policy only the future can reveal but this much is certain—dealers will complain less about yearly models this year than they did last.

And they will never be so inclined to complain about the policy of yearly models if their floors are well cleared of the previous year's cars when the new models are introduced.

The yearly introductions of 1926 designation will be given full advantage to show what selling impetus they are capable of engendering.

A Campaign in Huntington

AUTOMOBILE dealers in Huntington, West Virginia, recently launched a "Buy a New Car This Year" campaign. The idea is to keep constantly before the public the thought suggested in the slogan. Through consolidation of efforts it was agreed that a considerable awakening of public interest could be aroused and most likely the campaign will cause people of that locality to "think" more about buying new cars than would be the case without this reminder. While people do not always buy the thing they think about we know one thing for sure—they never buy the thing they don't think about. This Huntington campaign is to set the folk to "thinking"—and keep them thinking.

Automobile Merchants

ONE of the factories announces the appointment of new automobile "merchants" for its line. There is compelling charm in that word. Assuredly these "merchants" will be known popularly as automobile "dealers," but more specifically they are "merchants" and the more they commit themselves to that impression the more they are apt to conduct their establishments as real merchandising institutions.

In noting the obsolescence of the word "dealer," as used in this sense, Webster's recognizes a distinction which is worth more than passing thought. Pursuance of custom will maintain the "dealership" in popular use but in treating with his own business it is well for the "dealer" to bear constantly in mind that while a "dealer" in the popularly accepted sense he is first and foremost an automobile —merchant.

Oregon's Anti-Theft Laws

OREGON has fallen in line with enactments intended to curb automobile stealing. One of the new statutes makes it a criminal offense to tamper with a serial number with intent to defraud while another requires that all applications for licenses shall be accompanied with certificates of title. Both laws, as drawn up and passed, seem to cover their objectives adequately. They are laws which work well together and which, if rigidly enforced, should do much toward a reduction in automobile thefts.

Automotive Production at Low for Year

Sales, However, Continue Good And Optimism Is Predominant

Business for Second Half of 1925 Predicted as Good or Better Than First Six Months

NEW YORK, July 20.—Production of motor vehicles is at low ebb for the year, due to seasonal closing down of plants for vacations and inventories, but reports from all sections of the country show that sales continue heavy and many in the industry are optimistic enough to predict that business for the last six months of 1925 will prove as good if not better than during the first half of the year.

Domestic production in June was 364,806 cars and trucks. This compares with an output of 249,868 in June of 1924, but it is slightly below the June, 1923, figure, which was 376,000.

It is not expected that July production will approach that of June, especially since several of the biggest manufacturers including Ford are operating part time during the taking of inventories, but there is as yet no very definite indication that sales are slacking up.

As a matter of fact the demand for motor vehicles remains so firm that many companies which otherwise would slow down at this period of the year are compelled to keep going at capacity to keep up with unfilled orders on their books. One factor which is interfering somewhat with production is the inability of the manufacturers to get sufficient closed bodies to meet the demand.

An outstanding feature of the automotive industry so far this year is the great earning power it has displayed. Financial statements covering the first six months of business evidence an extremely healthy condition. This is due in large measure to the fact that producing companies have kept their manufacturing geared closely to demand, thus keeping finished stock-end inventories lower probably than ever before.

Fresh buying activity is expected to develop with the coming of new models, beginning this week. Nash and Oakland are bringing out new lines and Chrysler is announcing important changes in the six-cylinder models. Along with the new models will come some price changes.

In discussing prices, it is interesting to note that practically all manufacturers have reduced the cost of their cars since January. The cuts in some instances have amounted to as much as $800 on higher class jobs, but despite these reductions profits have never been more satisfactory. Makers of commercial vehicles, trucks and buses, report an unusual volume of business. Buses, especially, are selling far in advance of a year ago. Accessory and specialty manufacturers are working at capacity to keep pace with the demand.

Sales of $117,045,569 By Dodge Brothers Set Record

Increase of Business Over First Six Months of Last Year About $10,000,000

DETROIT, July 18.—Net sales of Dodge Brothers, Inc., passenger cars and parts totaling $117,045,569 for the first half of the present year established a new high record. Net earnings after depreciation but before deducting debenture interest and federal income taxes were $16,487,891. This is more than $2,000,000 better than the estimate made earlier in the year.

For the half year, preference dividends were earned four times over, and after deducting all charges, taxes, bond interest and preference dividends the company earned at the annual rate of $9.48 on its 2,000,000 shares of outstanding common stock.

Earnings of Dodge Brothers, Inc., combined with those of its predecessor company for the six months ending June 30 as compared to the same period last year follows:

	1925	1924
Net sales—		
Cars and parts	**$117,045,569**	**$107,250,350**
Earnings from sales	**15,129,205**	**8,592,774**
Net earnings after depreciation but before deducting debenture interest and federal taxes	**16,487,891**	**9,111,099**
Other earnings	**1,358,686**	**508,325**

In a statement of earnings sent to stockholders by Frederick J. Haynes, president, was the company's initial dividend check on its 7 per cent preference stock. This dividend, which inaugurates quarterly payments on the stock, amounted to $1.75 per share payable July 15 to stockholders as of record July 1.

Yellow Cab Merger to Come Before Stockholders Aug. 18

Hertz Believes All Holders Will Readily Agree to Consolidation With General Motors

CHICAGO, July 23.—Ratification of the recently announced plan to merge the Yellow Cab Mfg. Co., with a division of the General Motors Corp., will be acted upon by Yellow Manufacturing stockholders at a meeting set for Aug. 18. The stockholders' meeting will be held in Portland, Maine.

Meanwhile proxies are being prepared to mail to stockholders. Indications, it is said, are that the two-thirds vote necessary for the ratification of the proposed merger will be forthcoming.

"We have every reason to believe that our stockholders are overwhelmingly in favor of the merger," said John Hertz, who engineered the deal and who became chairman of the board of directors of the new corporation which is to be known as the Yellow Truck & Coach Mfg. Co. "I believe that the stockholders of the Yellow Cab Mfg. Co., realize that our plan is the most logical combination of interests. This is not a deal arranged for a few insiders, but is one which is calculated to benefit all concerned.

"The merger plan was handled direct by representatives of both sides. There was no intermediary. Consequently no one individual will especially benefit by it, nor will anyone receive any commission or a bonus of any kind."

While the merger will result in voting control passing into the hands of General Motors the destiny of the Yellow organization remains with Mr. Hertz and his associates under the arrangement. Active management of the new company will be almost entirely in the hands of the present Yellow Manufacturing officers and the present management will also have majority representation on the new board to the extent of thirteen out of twenty-one members, the other eight being directors of General Motors.

STUDEBAKER ADDS MODELS

SOUTH BEND, Ind., July 13.—The Standard Six line of the Studebaker Corporation now includes a sport phaeton listing at $1255 and a sport roadster listing at $1235. Both models are finished in a dark gray lacquer, and have leather upholstery. The equipment of these new models is identical with the Duplex roadster and Duplex phaeton, but in addition they are furnished with a spare tire, a front bumper, and a motometer.

DUESENBERG PHAETON $6,850

INDIANAPOLIS, July 8.—A new price of $6,850 for the five-passenger phaeton model has been announced here by Duesenberg officials.

Wisconsin Rubber Factories Unhurt by Climbing Prices

National Association Plans Conservation Program—No Immediate British Relief Seen

MILWAUKEE, July 18.—Wisconsin's big rubber factories have not yet felt the pinch of soaring crude rubber prices, according to an investigation made among leading units in the industry in the state. Immunity from price increases to date has been due to fairly liberal supplies on hand in the majority of instances.

"The boost in raw rubber means the producers will be compelled to conserve present supplies to the best of their ability," said H. A. Githens, sales manager of the Federal Rubber Co., division of Fisk. "Earnings ought to be fair on prices received for tires manufactured from crude materials for which from 35 to 50 cents per pound was paid. Tire prices advanced in May, June and on July 1, and it may be necessary to again increase the prices if the market for raw material does not cease to skyrocket. Conservation of supplies and curtailment of production seem to be the only methods that can keep prices down right now. We have about 2,200 men employed at our Cudahy plant and have not yet thought of following the lead of some of the small producers who have already curtailed or shut down."

L. T. Vance, vice-president and manager of the Ajax Rubber Co. of Racine, Wis., which employs between 1,300 and 1,400 men, asserts that raw rubber growers in Java and Sumatra have largely increased production since the prices reached high figures. Mr. Vance expresses the conviction that maintenance of the ruling prices of this period will result in higher tire prices.

L. H. Sheperd, vice-president and sales manager of the Racine Horseshoe Tire Co., described the present high price of raw rubber as "speculative." Salvage plants are doubling their capacity since the advent of high prices, he pointed out, but asserted that the life of the built-up tire is nearly twice as long as that of the rebuilt tire so that the factor of dependability assures the industry of little relief from this source. Tire prices will go up, Mr. Sheperd says, unless crude rubber prices come down. Only companies forced by lack of stock are paying the holdup prices for crude rubber now prevailing, in his opinion.

CONSERVATION PLANNED

NEW YORK, July 18.—A. L. Viles, secretary of the Rubber Association of America, has paved the way for a special sub-committee to make drastic recommendations to the industry with the idea of conserving rubber.

The committee will be appointed probably this week, as the result of a special meeting here a week ago when directors determined to abolish the "spring dating purchase plan." Under this arrangement orders for crude rubber were placed in the autumn, ordinarily in November, for delivery of rubber at the seller's option, up to March 1. In some cases settlement for the invoices was carried until June.

Elimination of this plan, Mr. Viles explained, undoubtedly will cause manufacturers to make larger use of their current stocks of rubber.

It also is intended by the manufacturers to clear out the stocks on hand of odd-shaped and odd-size tires. The subcommittee will recommend the reduction of types and sizes and will be specific in every point in its plea for drastic conservation.

NO TARIFF REDUCTION

LONDON, July 11.—(By mail.)—With the price of crude rubber four times what it was in the spring of 1924, the British government is not inclined to consider that it justifies reconsideration of the existing ordinance restricting the output of the Malay Peninsula.

W. G. A. Ormsby-Gore, parliamentary under-secretary for the Colonial office, replying to questioning in the House of Commons, said the legislation originally was drawn to restrict export, not production. Admitting that the existing price of rubber was a surprise, Ormsby-Gore said that it would bring an automatic increase in the amount of rubber for export August 1.

Nevertheless, if the prevailing high price continues, the situation would be re-examined, the Under Secretary added. Legislation would be necessary in the Straits Settlement, the Federated Malay Settlements, the Federated Malay States and Ceylon, to increase the percentage of August 1 by 20 per cent instead of 10.

Rubber soared to 4 shillings, 2 pence (about $1.00) today. Last spring the price was about a shilling a pound. The present price is the highest since the famous rubber boom in 1910.

Aviation Oil Found in Crickets

WASHINGTON, July 18.—It appears that a very precious oil, suitable for aviation, since it does not congeal even at a very high altitude, can be extracted from crickets, says consular advices to the Department of Commerce from Algiers.

Recently about eighteen tons of crickets were sent to Holland from Algeria. Part of this quantity was utilized for feeding poultry, and from the remainder the oil for aviation purposes was extracted and has apparently given every satisfaction.

Goodrich and Ames Holden Expand Canadian Projects

KITCHENER, Ont., July 18.—Completed plans for the expansion and development of the Goodrich and Ames Holden products have just been put into effect. Under the new arrangement the B. F. Goodrich Rubber Company, Ltd., now becomes a sales company with separate warehousing facilities while the Canadian Goodrich Company is now mainly concerned with the engineering and production of tires.

With Kitchener as the headquarters of the sales company premises at the corner of Waterloo and Victoria Streets formerly occupied by the Canadian Consolidated Felt Company have been taken over. Tentative arrangements to obtain additional premises have been made to take care of increased business.

The manufacturing company is now known as The Canadian Goodrich Rubber Company, Limited, and its products in the way of tires, footwear, etc., are turned over to the sales warehouse. The sales company is also planning distribution of the Ames Holden product. Distributing warehouses under the direction of the new company are being maintained with complete stocks at important centres throughout the Dominion of Canada.

Goodrich Raises Tire Prices For Fourth Time This Year

Automobile Pneumatics Jump 10 to 15 Per Cent—Other Companies Expected to Follow

AKRON, O., July 18.—The B. F. Goodrich Co. today initiated the fourth tire price increase since crude rubber started its phenomenal rise early this year.

Announcement is made by Goodrich officials of advances of from 10 to 15 per cent in prices of all pneumatic and balloon automobile casings and 15 per cent on inner tubes. Solid and cushion tires are boosted 10 per cent.

While official announcements were not ready it is learned that executives of other companies are prepared to meet the Goodrich advance. The new schedules became effective today.

Simultaneously with the announcement of the latest tire increase, crude rubber soared to a new peak of $1.17 a pound, the highest price reached in the last six years.

Prices of tires sold as original equipment to the motor car manufacturers also have been advanced from 40 to 60 per cent, it is announced here. The higher tire prices have increased car costs from $5 to $25 and, while this must be added to future car selling, it is not believed automobile prices will not be raised immediately.

Tire manufacturers say that several of the volume automobile producers have contracted ahead for tire requirements throughout the last half of 1925. Many other car makers, however, are being forced to pay higher prices for their original equipment. Furthermore, the tire companies are showing reluctance in making long term contracts for future delivery to the automobile manufacturers.

Greater Activity Is Expected to Result From Big Merger

Leaders of Industry See GMC Trucks and Yellow Buses Making Strong Bid for Leadership

DETROIT, July 18.—In the recent General Motors Corporation and Yellow Cab Manufacturing Company merger, those in the automotive industry in the greater Detroit area see GMC trucks and Yellow buses making a strong bid for the leadership in their respective fields.

Two reasons are given to support their claim, one is that General Motors is well equipped to operate on a large basis and the other is that Yellow Cab distributing facilities are exceedingly good. Under the new company, The Yellow Truck and Coach Manufacturing Company, these two factors can be operated to advantage.

Turning over of Northway Motors and GMC truck divisions to the new company will give these two companies an outlet for their products, especially Northway Motors. It is well known in local automotive circles that both plants had been operating at but 10 per cent of their full capacity and with the formation of the new company, they will be able to increase their production materially.

This increased production is expected to make for greater competition, and with Yellow Truck and Coach Manufacturing Company striving to gain the leadership in the field, the industry is looking forward to much greater activity than in the past.

Carolina Sales Districts Reorganized by Ford Co.

CHARLOTTE, N. C., July 18.—Reorganization of sales territories in North Carolina and South Carolina and several promotions in connection with the enlargement of the sales supervising staff are announced by the Charlotte branch of the Ford Motor Company.

The four sales districts were divided into eight districts, and Zone Supervisor L. H. Diehl of Charlotte, was promoted to the newly created position of chief roadman. Other promotions announced were: F. M. Wright, truck sales representative; T. W. Hancock, truck department representative; A. J. Beck, truck sales representative; H. G. Thrasher, service department representative; J. D. Perry, tractor department representative, all of whom were appointed zone supervisors.

The duties of those supervisors in a general way will be to see that the dealers in the Carolina territory are carrying out sales, service and advertising policies satisfactory to the company, it was explained.

DELAWARE TAX RECEIPTS

WILMINGTON, Del., July 18.—The state highway department reports that the motor vehicle fees from January to May, this year, totaled $588,638. The budget estimate for the entire year was $605,000. There are seven more months in which to make up the estimated amount. The gasoline tax collected by the department for the first six months of the current year, January to the end of June, aggregated $148,322.20. The budget estimate for the year was $300,000. Last year for the last six months the gasoline tax aggregated $184,007.25.

Would Standardize Highway Terms

WASHINGTON, July 18.—Standardization of a large number of technical terms in the English, Spanish and Portugese languages will be one of the results of the Pan American Congress of Highways at Buenos Aires next October, the Pan American Confederation for Highway Education.

It is advanced that international communications on the subject of highway building will be greatly expedited if an exact definition is given to the many technical and semi-technical words used.

It is proposed, therefore, to compile a glossary of all terms including many common to the automotive industry, which may be useful to highway engineers. The North American delegation will present to the Congress a tentative glossary.

General Motors Sales Beat June of 1924 by 10,557

DETROIT, July 18.—Sales of General Motors passenger cars and trucks to ultimate consumers during June totaled 75,781, or 10,557 more than for June, 1924. The sale of passenger cars and trucks to dealers by the manufacturing divisions of General Motors for the past month totaled 70,974 as compared to 32,984 for June, 1924.

Following is the tabulation which shows monthly sales of General Motors cars to ultimate consumers and sales by the manufacturing divisions to their dealers:

	Dealers Sales to Users		
	1925	1924	1923
Jan.	25,593	33,574	31,437
Feb.	39,579	50,007	33,627
Mar.	70,594	57,205	74,632
Apr.	97,242	89,583	105,778
May	87,448	84,715	90,327
June	*75,781	65,224	74,423

	Division Sales to Dealers		
	1925	1924	1923
Jan.	30,642	61,398	49,162
Feb.	49,416	78,668	55,427
Mar.	75,527	75,484	71,669
Apr.	85,583	58,600	75,822
May	77,223	45,965	75,393
June	*70,974	32,984	69,708

*These preliminary figures include passenger cars and trucks sales in the United States, Canada, and Overseas by the Chevrolet, Oldsmobile, Oakland, Buick, Cadillac and GMC Truck manufacturing divisions of General Motors.

Havana Manager Heads New Ford Branch at Mexico City

A. R. Lajous Leaves Cuban Post to Handle Constantly Mounting Mexican Sales

MEXICO CITY, July 18.—A. R. Lajous, formerly manager of the Ford Motor Company at Havana, Cuba, is manager of the new branch office of that company which was opened here July 1. The opening of this branch is expected to be the means of greatly increasing sales in this country.

When President Plutarco Elias Calles learned that the Ford Motor Company was seeking a suitable location here he showed his personal interest in the matter and gave official aid in carrying out the company's plans.

The sale of Ford Motor Company products in Mexico is constantly mounting and new agencies are being established even in many smaller towns which until recently were believed to have but few possibilities in the way of affording a market for automobiles. There are at this time approximately 50 dealers of the Ford Motor Company in Mexico.

Prior to the opening of the branch here the Mexican business was handled by the Houston office of the company. Besides Mr. Lajous, the staff of the branch here will consist of W. W. Townsend, a manager of the wholesale department, O. C. Schulz, chief traveling salesman, and J. C. Weller, manager of the Lincoln department.

Much Winter Storage to Be Stopped by New Enactment

MILWAUKEE, July 18.—Automobile owners and dealers of Wisconsin will pay an added tax of thousands of dollars as a result of measures passed by the state legislature this year according to Bart Ruddle, Milwaukee, secretary of the Milwaukee Automotive Dealers association and secretary of the Wisconsin Automobile Dealers association.

Dealers will be forced to discontinue storing cars during the winter for spring delivery, in many cases, because they cannot absorb the personal property tax.

Farmers and others had previously waited until the tax assessor checked them up on May 1 or later and then wanted automobile delivery and the situation was cared for by the dealer who stored cars against such an emergency demand.

Big distributors who store many cars now will have to pay the personal property tax which has previously been offset against their income tax. According to Mr. Ruddle between three and five thousand cars have been stored in this manner in Milwaukee and vicinity during peak years. In dollars and cents Mr. Ruddle estimates the annual additional tax on Wisconsin dealers and distributors at $200,000.

Ford Roadster Is Sent to Cleveland By Air

Top view shows Ford roadster being loaded in Maiden Dearborn II before it left Detroit. Bottom left pictures the car being assembled on special platform provided for that purpose at the landing field in Cleveland. Lower right is the assembled roadster being driven from the platform under its own power. Seated in the car left to right are W. R. Hopkins, city manager of Cleveland, and W. B. Mayo, chief engineer of the Ford Motor Company.

SIMULTANEOUSLY with the opening of Cleveland's municipal airport which is a stopping point in the Chicago-New York U. S. night air mail service just inaugurated, Henry Ford's new air freight line between Detroit and Cleveland went into operation.

Piloted by LeRoy Manning, the 400 hp. Stout metal airplane, "Maiden Dearborn 2," left the Ford airport at Dearborn at 6 p. m. carrying the complete parts for a Ford roadster, arriving at Cleveland before dusk. This was intended as a testimonial of Mr. Ford's to Cleveland to show the practicability of the air freight service. The roadster in knocked down form was unloaded from the plane immediately it landed and assembled in record time by mechanics from the local Ford assembly plant before thousands of spectators who thronged the field all day.

Upon completion, the car was driven under its own power from the specially constructed platform by William B. Mayo, chief Ford engineer, who carried with him as passenger W. R. Hopkins, Cleveland's city manager. Included in the 1,412 pounds of freight transported in the plane was the regular Ford mail directed to the New York branch, the mail later being transferred to the night mail plane going East.

Extending the freight air lines to Cleveland marks the second stop in the development of the Ford airways which will eventually link all assembly plants with the Detroit factories. Two Ford planes have been in continuous use between Chicago and Detroit for more than two months and during this period there have been no accidents of any kind or serious deviation from schedule.

Airplanes from several parts of the country attended the opening of Cleveland's municipal field and besides six privately owned Detroit planes a number of pursuit ships and bombers were present. Among several of the prominent personages in automotive and aeronautical circles attending the demonstrations were Major General Mason N. Patrick, chief of the army air services; Harvey Firestone, tire manufacturer; William B. Stout, George B. Wilkins and George W. Hopkins, president Detroit Flying Club.

Automobiles in Canada Pass 600,000 Mark First Time

WASHINGTON, July 18.—Automobiles in Canada have passed the 600,000 mark for the first time in history, according ot an announcement just made here by the Department of Commerce.

Motor vehicles registered in Canada January 1 numbered 652,121, compared with 593,323 on January 1, 1924.

Ontario was the leading automobile owner among the provinces with 308,693 cars to its credit. The prairie provinces of Manitoba, Saskatchewan and Alberta combined accounted for 166,234 automobiles. More than 60 per cent of the cars in that area are owned in rural districts.

NEW MOON DEALER

ST. LOUIS, July 18.—The Moon Motor Car Company announces the appointment of A. L. Bendure Motor Company of Arkansas City, Kans., as Moon and Diana dealers. This company formerly handled the Maxwell and Chrysler cars in this territory and previous to that A. L. Bendure, head of the company, was connected with the Ford Motor Company.

Chrysler Speeds Production To Handle Heavy Demands

DETROIT, July 18.—With upwards of 40,000 orders on their books for Chrysler sixes and fours, production at the two Chrysler plants here have been speeded up to 750 cars a day.

Of this number, 500 are of the different Chrysler four models and 250 of the different six offerings. According to J. E. Fields, vice-president in charge of sales, plans have been made to produce 16,000 cars during July.

To maintain this rate of production, several hundred thousand dollars worth of the latest and improved machinery has been installed. Other improvements tending to speed up the output have also been installed.

Inability to obtain bodies for closed cars has proved the biggest setback so far. Dealers who could sell as many as 100 cars in a few days have been able to get but one-tenth of this number. The increased production is expected to do away with this difficulty.

UPTOWN STUTZ OPENS

CHICAGO, July 18.—Formal opening of the Uptown Stutz Company at 5051 Broadway is announced by Joseph Melin and George W. Peak. Mr. Melin is proprietor of the Melin Motor Sales at 3020 Lawrence Ave., where he handles Stutz and Flint cars. Mr. Peak is the Stutz dealer in Evanston. In the spacious show-room at 5051 Broadway, a special showing of the new Stutz models was made all this week.

Passenger Car Production Slows in U. S. and Canada

First Five Months of 1925 Show Decrease of 55,167 Compared to Same Period in 1924

WASHINGTON, July 18.—Production of passenger cars in the United States and Canada for the first five months of 1925, says the July issue of The Federal Reserve Board Bulletin just made public here, totaled 1,571,891 as compared with 1,627,058 for the first five months of 1924 and 1,526,601 for the first five months of 1923. The Bulletin makes the observation that "production and distribution of automobiles although not as great as in April continued large during May."

The May, 1925, production figure is given as 382,714 as compared with 391,302 for April and 332,151 for March.

"Although production," continues the Bulletin, "in both April and May of this year exceeded that of any previous month on record, the output for the first five months did not equal the corresponding total for 1924. Production of trucks has been well maintained and during the first five months of this year exceeded totals for the corresponding period of any previous year.

"Shipments of automobiles from factories in May were also less than during April, but fairly large as compared with previous months. Shipments by boat were particularly heavy. Sales by dealers to users of General Motors Corporation cars during May exceeded division sales to users. Both figures were slightly smaller than in April, but much larger than a year ago.

"Sales of cars by wholesalers in the Middle West, reporting to the Federal Reserve Bank of Chicago, were larger than in May, 1924, while retail sales were slightly smaller. Stocks of new cars on May 31 were smaller than on April 30 and considerably less than a year before. A few reductions have been announced in prices of automobiles in recent weeks, but no general decline in prices has occurred."

Miami Ford Dealer Sells 400 Cars in One Month

MIAMI, Fla., July 18.—The S. A. Ryan Motor Company has established what is believed to be a national sales record. Orders for 400 Ford cars were taken by the Ryan organization during the month of June, but owing to factory production and transportation difficulties, only 343 could be delivered.

Notwithstanding that the Ford factories in all parts of the country are working to capacity they have been unable to meet the demands of the dealers in many sections.

The Ryan Company also sold 20 Lincoln cars of various models during June; and the month's business totaled more than $750,000, according to a statement of Mr. Ryan.

Between Gyps and Gypsies—What?

PEORIA, Ill., July 18.—Gypsy bands working through this section have made prey of automobile dealers, members drawing the merchant's interest with fortune telling while others of the band worked the cash register. In one local garage, a gypsy woman so successfully "good-lucked" a roll of bills in the hands of the owner, that it passed from him entirely. In Earlville, Ia., a short distance away, evidently the same band worked, securing $40.

French Excited Over Ford's Move to Produce in Paris

PARIS, July 9. (By Mail).—French automobile makers are volubly excited about the purchase and equipment by the Societe Anonyme Francaise des Automobiles Ford, of a large plant near Paris for immediate production of 300 Ford cars and trucks a day. Ford heretofore, has operated his factory at Bordeaux merely to assemble parts shipped from the United States.

French manufacturers are more concerned over Ford's plans for sales abroad than in France. Last year they shipped but 47,000 cars and trucks to foreign buyers. The figures for the first four months of 1925 indicate a total for the year in excess of 50,000. They estimate that Ford will produce about 90,000 cars a year and see in this threatening total a plan to compete with them outside.

Citroen and Renault, makers of two popular priced French cars, are confident of their ability to compete with Ford in France.

SEATTLE GETS WHITE TROPHY

SEATTLE, Wash., July 18.—Sixty-five members of the branch of the White Company officially received President White's sales trophy plaque during the past week when G. A. Urquhart, vice-president of the company banqueted them at the Olympic Hotel. The trophy came to Seattle as a result of this branch having sold a higher percentage of White trucks in excess of its quota than any other branch in the Pacific Coast region.

CHRYSLER PLANS N. Y. FIGHT

NEW YORK, July 18.—Chrysler Motor Corp. will carry to a finish its fight to issue fire and theft insurance with the cars it sells in New York state, where James A. Beha, state superintendent of insurance, has declared it illegal. "The objections of the insurance commissioner have been turned over to our legal advisers and a test case will be instituted," said Guy Nunemaker, secretarfy to President Chrysler. "We believe that our insurance plan is legal and that the move against it is rank discrimination."

Present Six Months Seen Best in Industry's History

New Models and New Makes Give Greater Impetus, Assuring Good Business Rest of Year

DETROIT, July 18.—With but a short time left before the introduction of new models, those in close touch with the automotive industry in this area are expecting them to give greater impetus to sales and to make the present six months the best in the history of the industry.

This is borne out in the number of orders that have been placed for the new models and also the new passenger cars that have been introduced in the past month. Ajax, Diana, and the Chrysler four, the new passenger cars to be offered the public, have met with an unusually larger number of sales and orders.

With the coming of the new models, the field is being divided into two classes, one that favors new models and those who believe in periodical changes. The action of Studebaker in announcing no yearly models has added another line to those who have discontinued the bringing out of yearly models.

Quite recently, one of the high officials in the motor car industry here said that America being a prosperous country, its inhabitants demanded a change. This, he said, was also shown in the demand for new shoes, new hats and clothes and other wearables. Those who believe in no yearly models say that while the public does like something new, that the price of a pair of shoes does not compare with the capital invested in motor cars and therefore the periodical change is the best.

But whether the no yearly models followers gain additional supporters, it is certain that the introduction of the new models which will be made in the next few months will assure the industry of more and continued business for the remainder of the year.

Missouri Registrations Near 1924 Total During First Half

ST. LOUIS, July 18.—There were a total of 532,528 motor vehicles licensed in the state of Missouri up to July 4 as against 544,635 for the entire year of 1924, according to a report filed recently by Oscar G. Steininger, commissioner of automobiles. Of the vehicles licensed this year 486,146 were automobiles and 49,382 were trucks.

License fees have brought to the state road fund $6,380,507 so far this year as against $4,540,000 for the entire year in 1924. The increase in fees of course was in a large measure due to the 50 per cent increase in license cost voted last November.

St. Louis had a total of 122,068 motor vehicles licensed in 1924 and 110,592 so far this year.

Hanch Will Explain Time Payments to Ohio N. A. D. A.

Financial Authority Sees Danger in Material Reduction of Automobile Credit Terms

CEDAR POINT, SANDUSKY, O., July 18.—Tendencies to reduce automobile time-payment credit terms which have had a sporadic outcropping in the industry in the last two years, had their parallel forty years ago in the milling machinery business and with the same adverse results, according to C. C. Hanch of Chicago, general manager of the National Association of Finance Companies, who will be one of the feature speakers here of the first annual convention and outing of the Ohio Council, N. A. D. A., August 6-7. Between 1,000 and 1,500 automobile dealers, their sales managers, salesmen and service managers are expected to attend.

Mr. Hanch has had a long and responsible connection with the automobile industry. From 1896 to 1914 he was credit manager and treasurer of the Nordyke & Marmon Company at Indianapolis, a period during which they were the world's largest manufacturers of flour milling machinery and among the largest producers of fine passenger automobiles. From 1915 to 1918 he was treasurer of the Studebaker Corporation of America, from June 1918 to February 1919, chief of the automotive products section, War Industries Board, and during 1919 and 1920 he was general manager of the Maxwell Motor Corporation. Since 1920 he has been engaged in consulting and research work for automobile manufacturers, has been a director of the National Automobile Chamber of Commerce for many years.

"Intensive competition in the milling machinery business led to the institution of too liberal credits forty years ago," Mr. Hanch declares, "and was the primary cause of the later demoralization of that industry. Only in the last ten years has it recovered from the devastating effects of ill-considered sales policies.

Our association of industrial bankers who are financing probably 80 per cent of all the automobile time-payment sales in the country in laying down its policy demanding a third down on the purchase price of an automobile and completion of the transaction in twelve months, took the steps we believed necessary for a healthy and permanent business development.

"Judicious credit has made automobile ownership possible for millions of persons who could not have owned cars if compelled to pay cash. It is very important for dealers to realize the great work that legitimate credit has done for them and not expect that time-payment sales can be made to people whose credit for any article of merchandise might be questioned."

Lorraine-Dietrich Wins Twenty-four Hour Stock Car Race

Two Lorraine-Dietrich six-cylinder models are shown above, the one to the right being the winner of the Rudge-Whitworth Cup twenty-four hour race held recently at Le Mans, France. The winning car was driven by DeCourcelles and Rossignol. It had a piston displacement of 212 cubic inches. Second place was captured by a 179-cubic-inch Sunbeam. The Lorraine-Dietrich traveled 1,388.1 miles in the twenty-four hours, or an average of 57.83 miles per hour.

25 Years Ago In the Automobile Industry
As Recorded In MOTOR AGE

(From MOTOR AGE of July 26, 1900)

Turning Out Many Wintons

Reports from Cleveland are to the effect that the Winton Motor Carriage Co., owing to its recent increased facilities, is turning carriages upon the market in greater quantities than ever before and can now guarantee delivery of both single and double seated carriages within thirty days from receipt of order. This company is at present engaged in broadening its field still more and hopes soon to be equipped so as to produce a quantity sufficient to give immediate delivery.

The Automobile in Philadelphia

Philadelphia, July 23.—Automobiles are becoming more and more plentiful here with each succeeding week. This can readily be explained by quoting a local dealer's statement to the effect that during last week alone he delivered no less than ten vehicles to their owners, all of whom are Philadelphians. He further stated that he is still far behind in his deliveries.

The Lafayette Hotel and several of the larger department stores having already enlisted the automobile in their respective services, other local caravansaries are preparing to swing into line. A certain large hotel has already placed an order for six passenger buses to run to and from the various railroad stations in the city.

Locomobile Newport Branch

The Locomobile Co. of America has just opened extensive and finely equipped headquarters at No. 110 Bellevue avenue, Newport, to take advantage of the demand for motor vehicles. E. S. Jaffray, Mr. Peekham and other representatives of the company are in charge.

A New Automobile Club

NEW YORK, July 23.—Westchester, the home of many wealthy New Yorkers, has a big automobile boom. On Saturday night, at the residence of Howard Willetts, White Plains, a number of automobilers met to form a club that will work in harmony with the Automobile Club of New York. One of the main objects of the members will be to provide supply stations along the Albany post road, the Boston post road and the new macadamized boulevards which are being built through the Bronx and Hudson River valleys, and the other cross country roads leading to the Ardsley Casino, Westchester Country Club and the Knollwood Country Club.

Most of the prospective members are millionaires. The charter members are Paul G. Thebaud, Howard Willetts, Trenon L. Park, Oliver Harriman, Jr., Eugene Reynal, Nathaniel Reynal, William K. Vanderbilt, Jr., William E. Iselin and William Rockefeller, Jr.

Diana Eight Is Received Enthusiastically by Public

Vice-President Rengers Sees Big Year Following Tour of Metropolitan Centers

ST. LOUIS, July 18.—Frederick H. Rengers, vice president and general sales manager of the Diana Motor Company, who has just returned to St. Louis after an extensive trip through the metropolitan centers, says that the reception accorded the new Diana light eight- inline car manufactured by the Moon Motor Car Company, is little short of being marvellous. In a statement given out today at the Moon plant Rengers said:

"The genuine enthusiasm and the sincere interest shown by the public and by our entire distributor organization for the new Diana light eight both before and since the new car was officially introduced June 25, bespeaks a fine future for the new Diana eight. We have designed, created, and are now producing in our modern plant in St. Louis, this light eight automobile upon the desire and demand of the American public for an eight cylinder car of power and beauty plus lightness and serviceability and with an emphasis upon economy in operation.

"The enthusiasm being shown for the new Diana eight is being steadily reflected in ever-increasing sales. Monday of this week we received a total of 22 long distance calls from our distributors all over the country from coast to coast and from Minneapolis to New Orleans, wanting to know the shipping dates on their Diana orders. At the present time we have approximately 1,500 unfilled orders on hand and the production department was given orders today to speed up production, particularly on Diana closed models, on which the demand has been so great during the past week that the large stock of Diana closed bodies which had been considered entirely adequate for present needs, is exhausted. Numerous long distance telephone conversations with our body plant have elicited the information that production there will be stepped up so we expect immediate relief from this quarter."

NEW DURANT DEALERS

NEW YORK, July 18.—New dealers added to the organization of the Durant Motors, Inc., are as follows:

E. E. Whitten, Gunertsville, Ala.; College Motor Co., Sulphur Springs, Ark.; O. L. Andrews, Wheeler, Ark., Charles H. Wingate, Laurel, Del.; Mitchell County Motor Co., Camilla, Ga.; W. E. Bradley, Baxley, Ga.; T. H. Ennis Motor Co., Milledgeville, Ga.; Christopher Brothers, Reddick, Ill.; Dempster Garage, Evanston, Ill.; H. C. Gauker, New Castle, Ind.; Maurer Sales Co., Spencer, Ia.; L. W. Sanford, Westfield, Ia.; Strackbein & Hein, Lowden, Ia.; Joseph Roser, Brownell, Kans.; State Line Garage, Kanorado, Kans.; Hill Brothers, Germantown, Ky.; T. G. Wade & Co., Halethorpe, Md.; Richards Motor Car Co., Grand Rapids, Mich.; Paul J. Skaiem, Northfield, Minn.; George H. Gray, Pipestone, Minn.

Embryo Ministers Build Cars

DETROIT, July 18.—Under the supervision of a special supervisor chosen by the Ford organization, fifty students of the Yale theological school have entered the River Rouge plant of the Ford Motor Company as employes. It is part of an experiment by Yale University authorities who believe that a period of experience in a modern manufacturing plant will add to the future ministers' knowledge of present-day life and will help to give their words weight in future sermons.

The students have began their industrial experience as production men and at the regular wage rate. During the period of their stay which will end the latter part of September they will be given a chance to study the problems of management. Round table discussions to be held weekly will give them a chance to exchange observations and information.

At the end of their period, each will be called upon to report embodying their impressions. The reports will be entered in a prize contest which will be decided by five judges who are Henry Ford, James J. Davis, secretary of labor, Dr. Raymound B. Fosdick of New York, and Professors Jerome Davis and Edgar S. Furniss of Yale.

Jeff Carter Motor Co., Qutman, Miss.; Cunningham Motor Co., Ionia, Mo.; Riley & Money, Allen, Neb.; Grant Motor Co., Silver City, N. M.; Washington Motor Sales, Washintgon, O.; DeVoll Brothers, Caldwell, O.; McCalmant Motor Co., Lawton, Okla.; Roemer Motor Co., Union City, Okla.; Wexford Garage, Wexford, Pa.; M. & H. Motor Co., Wilkes-Barre, Leon A. Wylen, Philadelphia; Dorneyville Auto Co., Allentown, Pa.; Keagy & Sipe, Hanover, Pa.; Daniel H. Mattern, Selinsgrove, Pa.; Darnell Motor Co., Beaufort, S. C.; Oliver Springs Garage, Oliver Springs, Tenn.; Doan & Howard, Wallins Creek, Tenn.

Liberty Garage, Schulenberg, Tex.; J. B. McIntyre, Sweetwater, Tex.; DeGarmo & Son, Colorado, Tex.; Cunningham & Ward, Bridgeport, Tex.; Ganado Electric Co., Ganado, Tex.; J. T. Moore, Balmorhea, Tex.; Dante Motor Corp., Dante, Va.; Sneed Buick Co., Covington, Va.; D. W. Carson, Allegheny, Va.; J. L. McQuain, Walkersville, W. Va.; J. B. Maxson, Weston, W. Va.; Sturm Motor Sales, Grafton, W. Va.; Heishman's Garage, Vordensville, W. Va.; H. F. Krueger, Milwaukee; Bancroft Garage, Bancroft, Wis.

VESTA MAKES NEW LINE

CHICAGO, July 18.—The Vesta Battery Corporation has announced the "EAU" line of radio A batteries, designed and intended exclusively for radio use. The new product will have oversize positive plates with heavy type separators. They will be supplied in the 75, 100 and 125 ampere hour capacities and will be supplied vacuum sealed if desired.

Stutz' Unfilled Orders Are Heaviest in Firm's History

June Business 20 Per Cent Greater Than May With Sales Still Ahead of Supply

INDIANAPOLIS, July 18.—A report issued this week by Fredrick E. Moskovics, president of the Stutz Motor Car Company, covering company business for April, May and June, the first quarter during which Mr. Moskovics has been directing the concern, shows a remarkable production, sales and distribution gain with company affairs at July 1 foreshadowing a constant advance in production and sales.

At the end of June the Stutz factory had a larger number of unfilled orders on hand than at any similar period in the history of the company. This is in line with the proportion of retail sales to factory production which has been noted for the past quarter when actual sales in the territory constantly kept ahead of the factory production.

The June business showed a 20 per cent increase over May and an increase of distributor connections 30 per cent larger than in the preceding year. The forecast for July, August and September production shows that an even greater advance will be made in these months than in the first quarter.

The Stutz merchandising department records show that more than 40 new distributors and dealers have been added in recent months, and new dealer and distributing connections are being added each week. The latest distributor to join the Stutz organization is Arthur Shaffer of Syracuse, N. Y., and the following new dealer connections have been made recently: Corwin and La Porte, Lockport, N. Y., Graff Motor Company, Blacklick, Pa.

INDIANA TAX RECEIPTS UP

INDIANAPOLIS, July 18.—Gasoline tax collections for the state of Indiana for the second quarter of 1925 amounted to $1,812,026.97 showing an increase over last year's second quarter of $665,595.66 due in part to a 1-cent increase in the gasoline tax which went into effect in May. The tax is now 3-cents per gallon. The state highway department receives $1,148,077 of the first quarter gasoline taxes, while counties, cities and towns receive $574,038.95 for road work in their respective units. The total June gasoline tax amounted to $765,714 as against $451,-029.28 for June, 1924.

WILLS STE. CLAIRE DEALERS

MARYSVILLE, Mich., July 18.—Dealers who have taken on the Wills Sainte Claire line recently are:

Geo. H. Stewart, Washington, Pa.; Joseph Lazzari, Monongahela, Pa.; J. J. Baxter Motor Sales Co., Charleroi, Pa.; Keoughan Bros., Cohoes, N. Y.; John G. Wier, Titusville, Pa.; The Amsterdam Wills Sainte Claire Co., Amsterdam, N. Y.

Manufacturers Seek Return of Replacement Parts Business

Committee Being Formed by N. A. C. C. Head to Investigated Conditions

NEW YORK, July 18.—Motor car manufacturers, acting through the National Automobile Chamber of Commerce, are seeking means of winning back some of the business they have lost to independent makers of replacement parts. Col. Charles Clifton, president of the chamber, has been directed to form a committee to go into the matter thoroughly.

The manufacturers have recognized for a long time that much of the replacement parts business goes to independent garages and repair shops not affiliated with the sale of any car and that independent markers of parts suitable for use in various passenger cars have done a good business for years in the replacement market, selling not only through the garages and service stations but also through jobber to passenger car dealers as well.

Just what policies the committee will consider as best for the car manufacturers cannot now be forecast, but the prevailing sentiment is that the competition should be met with better merchandising methods. The N. A. C. C. members believe that only parts bought through the car factory should be used for replacement by their dealers, but it is recognized that the independents have made heavy inroads through quick service and low prices.

The manufacturers realize that by no means all of the parts made by independent factories are inferior in quality, and that quality being equal, the agency which provides the quickest service and best price will get the business. In the decision to form the parts committee the N. A. C. C. members took due cognizance of these facts.

The disposition now is to accept the situation on a purely competitive basis and through appropriate action to increase the share of the car factory in this profitable end of the business.

One manufacturer, acting independently, has just decided to absorb freight charges on replacement parts, enabling dealers to quote factory list prices on the items.

GOOD TRUCK AND BUS DEMAND

SPRINGFIELD, O., July 18.—One of the busiest plants in Springfield is that of the Springfield works of the International Harvester Co. It is keeping up its schedule of 50 light high speed trucks daily, Superintendent Karl Schreiber announces. The motor bus business is also decidedly active, good sized orders being booked from points in the United States and also foreign countries.

Motor Pilgrimages to Mecca Seen

WASHINGTON, July 18.—Pilgrimages to Mecca in automobiles by the hundreds of thousands is predicted in the near future to the automotive division of the Department of Commerce as a result of the penetration by American automobiles of the interior of the Arabian peninsula. It is stated that this peninsula has seldom been crossed by a white man is one of the least known parts of the world.

Ibn Saoud, the leader of the Wahabi, who are practically supreme throughout Arabia and who recently purchased three small American cars, is credited with the conquest of the Arabian peninsula.

While it would be extremely difficult and dangerous for a white person to make this trip, it is pointed out that the journey is the entering wedge, and the Arabs will probably purchase more automobiles. Such will not only be useful for the transportation of food and merchandise but specially for the transportation of pilgrims, which will again flock to Mecca by the hundreds of thousands as soon as they regain confidence in the order established there.

Railroad Will Construct New Underground Garage

CHICAGO, July 18.—One of Chicago's first underground garages will be built shortly by the Chicago & North Western Railway in the city block between Randolph and Washington Streets and Canal and Clinton Streets, President Fred W. Sargent of the company, has announced.

The garage will have a storage capacity of 250 cars. It will be started at once and will be ready for occupancy by August 1.

The garage will aid in affording much needed relief from the parking congestion in the loop district. Mr. Sargent said the garage would be largely for use by patrons of the road, who wish to store their cars while on vacations but that it will be open to the public as well.

BUSES REPLACE TRAMS

KLAMATH FALLS, Ore., July 18.—W. E. Young has just obtained the franchise for operating buses in Klamath Falls, replacing the entire street car operations there, and has placed an order for buses with the Mack Truck Company, which will consist of one 29-passenger and two 25-passenger buses. Klamath Falls is the second city in Oregon to replace the street railway system with buses. The Astoria Transit Company was granted a similar franchise by the city of Astoria last year and placed in operation six street car type of buses a year ago last June.

Economic Phases of Motor Transportation to Be Studied

World Chamber of Commerce Convention in Brussels Appoints Body to Make Survey

BRUSSELS, July 9.—(By mail.)—Creation of a special committee charged with studying, from the economic point of view, the best methods by which the motor vehicle can fulfill its object as a means of transportation and with studying from the same point of view the relations between motor transportation and other means of transport—such was the net result of the meetings of the transportation section of the International Chamber of Commerce congress which has just come to a close in this city.

The initiative in this move was taken by the American section of the International Chamber of Commerce, and it was principally due to the efforts of Roy D. Chapin, chairman of the highway transport committee, that the question of highway economics was brought up for discussion.

At the close of the Transport Session Mr. Chapin entertained about 100 delegates to lunch at the Palace Hotel, Brussels, and at the close of this meal the film "The Highway to Happiness," was shown on the scene, not with any idea of proving, as Mr. Chapin explained, that things were done better in the United States, but to give an illustration of how some difficulties had been met and overcome.

American delegates were numerous at the Congress and the automotive industry was well represented at the transport session. In addition to Mr. Chapin, among those present were W. O. Rutherford, president of the Rubber Association of the United States, John N. Willys, M. L. Hemingway, general manager of Motor and Accessory Manufacturers' Association; Stephen D. Briggs, of the Maxwell and Chrysler Corporations, and Mr. Henderson, continental representative of the Chrysler Corporation.

NEW CLEVELAND DEALERS

CLEVELAND, O., July 18.—New dealers have been announced by the Cleveland Automobile Company as follows:

Chand-Cleveland Motor Company of Fresno, Cal., Love Motor Company of St. Petersburg, Fla., Medford Motor Mart of Medford, Mass.; Harland A. McPhetres, Inc., of Lynn, Mass., and the Blanks Garage, Inc., of Roxbury, Mass.

PIERCE-ARROW TO EXPAND

CHICAGO, July 18.—M. E. Forbes, president of the Pierce-Arrow Motor Car Company was a recent visitor at the Chicago branch headquarters. He declared that the Buffalo plant of the company is materially increasing its capacity for the 1926 output on automobiles, trucks and busses.

Along Automobile Row

SEATTLE, WASH.—The Sutherland Company, Inc. distributors for general tires throughout the Northwest, have recently opened new quarters at 128 Westlake Avenue North.

NEW LEXINGTON, OHIO.—A. Edgar Hammond, C. W. Morris, O. N. Spring, W. R. Donnelly and J. W. Hillare are the incorporators of the newly incorporated $75,000 Perry County Buick Co. The new concern is located at New Lexington and will conduct a general auto sales agency.

LOS ANGELES.—The California Stutz Company, Inc., announces the appointment of Harlan Fengler, famed speed king, as the Stutz dealer in Hollywood, Culver City and Beverly Hills, with his sales and service building at 6415 Selma avenue, Hollywood.

ROCKINGHAM, N. C.—Hudson-Essex Sales Company, Inc., has been chartered with an authorized capital stock of $25,000 and $3,100 subscribed by R. B. Naper, E. S. Naper and H. S. Boggan, all of Rockingham.

MILWAUKEE.—Howard Peterson, Forence E. Peterson, Ethel N. Roberts and Bryan Roberts have organized the Service Motor Sales unit at Union Grove, Wis., with capital stock of $25,000. The company will sell motor cars and offer motor car service.

CHICAGO.—The United Truck Company of Chicago has been named northern Illinois distributor for the Gotfredson trucks, according to an announcement by R. B. Gotfredson, general manager of the motor truck division. This makes the fourth branch to be opened in the United States, the others being in Detroit, Cleveland, and Los Angeles. A complete sales and service staff will be maintained for Gotfredson buyers.

GALION, OHIO.—The Pattinson-Hubbard Motor Co. has been chartered with an authorized capital of $10,000 to deal in autos, parts and accessories.

DES MOINES, IA.—P. L. Holt of the Oklahoma City, Okla., branch of the Ford Motor company, has been transferred to the Des Moines branch to succeed F. S. Reinhardt, as assistant manager.

NEW ORLEANS.—The Romain Motor Car Company, temporarily located at 618 Baronne street, is the new dealer for Pierce-Arrow in New Orleans. This company will handle the new Series 80 as well as other units of the Pierce-Arrow line, including the truck and bus.

COLUMBUS, OHIO.—A year lease has been obtained on the storeroom at 839-43 N. High St., by the newly incorporated Stanton Motors Co. Organization of the concern took place with the election of A. T. Stanton, president, S. Stanton, vice president, and P. L. Brothers, secretary and treasurer. The new company was formed to act as distributor for Chrysler motor cars, succeeding the Dobson Auto Sales Co.

MILWAUKEE.—A change in the corporate name of the King Motor Supply Co. of Milwaukee has been officially made and hereafter the organization will be known as the Replacement Parts Corporation. No change in the management has been announced and C. B. Clugston, Chicago, continues as president.

DETROIT.—Distribution of Auburn motor cars in the Detroit territory has been taken over by Hurley-Barnett, Inc., 5513 Woodward Avenue. The active conduct of the business will be handled by Steve Hurley.

LOVINGTON, ILL.—Marshall Whitaker, Overland dealer, is planning the erection of a new garage and salesroom here.

KENNETT, Mo.—Pickard-Wilson, local dealers for the Dodge Brothers automobiles and Graham Brothers trucks, are this week moving into their new quarters on Kennett street.

SEATTLE, WASH.—N. F. Sutton, Ford dealer, has recently moved into his new garage building at 12th Avenue and Yesler Way. Mr Sutton has been identified with the automobile business in Seattle for many years, having formerly been associated with the Nash organization.

FORT MADISON, IA.—M. L. Ulrich has taken the Rickenbacker car agency for this community and is established at 611 Second street.

TOLEDO, OHIO.—At a recent meeting of stockholders at the office of the company in Toledo, it was decided to increase the capital stock of the Toledo Yellow Drive It Yourself Co. from the original $10,000 to $100,000. C. F. Wall is president and L. L. D. Chapman, secretary of the company.

DURHAM, N. C.—The Swift Motor Company is a new concern here. It will handle Essex and Hudson cars and do a general garage business. Proprietors are J. Frank Swift, formerly connected with the Holt Motor Company of Greensboro, N. C., and H. J. Mangum, formerly with the Banner Motor Company of this city.

OAKLAND, CAL.—Improvement in general business conditions for the first half of 1925 has compelled the Pierce-Arrow Pacific Sales Company to move into new and larger quarters at 2850 Broadway, Oakland. Arrangements also have been made for the establishment of a complete service department for the mainland side of San Francisco Bay.

WARREN, OHIO.—The Park Auto Wrecking Co. has been chartered with an authorized capital of $10,000 to buy and sell new and used autos, parts and accessories.

SALT LAKE CITY.—The R. T. Mitchell Company, Ogden, Studebaker dealers, have opened a branch store in Salt Lake City. George Stevenson, attached to the company at Ogden, will be in charge.

PORTLAND, ORE.—Kirk Thompson has been appointed general manager of the Covey Motor Car Company. Mr. Thompson has been associated with the Covey Company for the past eight years in Cadillac sales and service departments.

KIRKSVILLE, MO.—H. E. Tucker of the H. E. Tucker Motor Company of Kirksville, has opened a service station and sales office of Dodge Brothers automobiles here.

STEWARDSON, ILL.—The Wilson Auto Company has purchased the brick garage operated by the Yakey & Ulmer Company and will take it over to be used as a Ford salesroom. The Yakey lease expires April 1, 1926, when the full change will be made.

NEW YORK.—Mortimer J. Roberts, who with his brother Montague Roberts will be remembered as winners in the Brighton Beach twenty-four hour race, Vanderbilt cup, Briarcliff and Fairmont Park races, is back in New York as engineer with the Red Seal Refining Company, in charge of its recording instrument division.

CHICAGO.—The U. S. Armature Service, largest rewinders of armatures for the automobile trade in the United States, has moved into larger quarters at 11-17 S. Desplaines Street, where the facilities are greater in all departments.

RALEIGH, N. C.—Ransom Saunders of Smithfield, N. C., has obtained the contract for the Ford agency in this city heretofore held by C. H. Rawls of the Rawls Motor Company.

WELLSVILLE, UTAH.—The Peach Motor Co. of Burley, Ida., has opened a Ford agency here. It will be called the Monte Cristo Motor Co. and will handle batteries and tires. Chas. Height will be manager. Mr. Height has been the company's sales manager for some years.

CHILLICOTHE, MO.—Joe Shirley has accepted the position of Lincoln representative for the Burt Gill Motor Company of this city and the McVey Motor Company of Trenton.

DALLAS, TEX.—The Perry Motor Company, Dodge distributors and dealers has closed a lease for a three-story building at Pacific and Pearl Streets which will be the future sales and display rooms of the company. The lease was taken for ten years at a cost of $190,000.

PORTLAND, ORE.—S. V. W. Peters, vice-president of the Portland Motor Car Co., Hudson and Essex distributors for this territory announces the appointment of Condit & Conser as dealers in Multnomah County.

GALESBURG, ILL.—Ben Park, who has been with the Pattee Plow Co. of Monmouth a number of years, has purchased the Declo Enameling Co., 571 East Main street, formerly operated by his brother, Roy Park and Claude Craver.

AKRON O.—The R. J. Schmunk Co., of Cleveland, distributor for Hudson-Essex motor cars, has appointed the C. E. Maloy Motor Company, dealer for its line in Akron. Workman Motor Sales Co., 36 N. Summitt Street, is the new dealer in Akron for Star and Durant motor cars. The company also handles the Rickenbacker.

MEMPHIS.—The Mack International Motor Truck Co., has taken a lease on a large new building to get more space than their present place. The truck company is doing much bus line equipment in the Delta section.

BOSTON.—George M. Leghorn, owners of Leghorn Motors, former distributor of Gardner cars for New England now under Connell & McKone has reconsidered his decision to handle the line at retail in Boston and he has announced his retirement from the automobile business.

OAKLAND, CAL.—The Western Auto Supply Company has a new store and warehouse at Twenty-fourth street and Broadway, Oakland, a four story building remodeled to suit the needs of the company, and all of which will be occupied by the one firm. This is the 126th store to be opened by the Western Auto Supply, putting it in the position of the largest retail automotive accessory concern in the United States.

CHICAGO.—E. V. Wills, formerly assistant service manager of Westinghouse Automotive Division and more recently connected with Barter-Oppenheim, Newark, N. J., has entered the employed of the Eisemenn Magneto Corporation. Mr. Wills has been assigned to the branch office at Chicago and will act as service traveler in the middle western states.

DALLAS, TEX.—The Patton Overland Company of Greenville, Texas has been appointed agents for the Willys-Knight and Overland cars in the Greenville district according to announcements of the Dallas branch of the company.

BURLINGTON, IA.—The Warming Motor Company has completed negotiations with the Barton Motor Company by which it takes over the later's Ford and Lincoln franchise for this territory, the Barton shop, equipment, parts stock and appoints J. G. Turner as sales manager. The Warming Company, now handling the Paige-Jewett and Willys-Knight cars will drop these to handle the Ford exclusively.

PORTLAND, ORE.—The Therkelsen Motor Car Company, Portland, Oregon, distributors for Rickenbacker cars, have moved into new quarters at Fifteenth and Burnside Streets, which will double the size of their former quarters.

OGDEN, UTAH.—C. W. Trounson, manager of the Ogden Auto Service Company, has purchased the stock in that company and will continue the business as an individual hereafter.

With the Associations

Bus Service to Unite

SPRINGFIELD, Ill., July 18.—All bus service companies in Illinois will be united in the Illinois Motor Transportation Association which will have its first semi-annual meeting in the state arsenal here July 23-25. The association has established general headquarters at 505½ East Monroe Street, under James E. Simpson, secretary-treasurer. An exhibit of motor buses and accessories will be a feature with practically all the larger manufacturers participating.

Harry G. Wright, DeKalb, president of the Northern Illinois Service Company, is president of the association; H. E. Barber, Marion, head of the Egytian Transportation System, vice-president; Mr. Simpson of the Red Line Company, East St. Louis, secretary-treasurer and Altoe Nelson, Aurora, in charge of the state office here assistant secretary.

The association has taken cognizance of the belief that freedom in the industry from steadily mounting costs of transportation requires an alignment of the two basic factors—the operators of the vehicles and the manufacturers and its programs will stress this point.

Gasoline Dealers Organize

VANCOUVER, B. C., July 18.—Retail gasoline and oil dealers, meeting under the auspices of the Retail Merchants' Association, are organizing an independent gasoline and oil dealers' division of the automotive section of the R. M. A. This is a new movement and one likely to have a far-reaching effect in the distribution and sale of oil and gasoline in Greater Vancouver.

Carolina Tradesmen Meet

GREENSBORO, N. C., July 18.—Directors of the Carolina Automotive Trades Association, meeting in Greensboro, considered problems of their business and how to solve them through cooperation. Kelly A. Grice of Charlotte, president of the organization, presided at the meeting.

Freight rates held a prominent place in the discussions, especially relating to oil. Dealers were of the opinion that they had about all the overhead they could carry and they want to protect themselves against further inroads.

Formal application for a charter was signed by the directors. The association was organized last May 12.

In connection with the meeting of the directors, dealers in gasoline, tires and all accessories from Greensboro, High Point, Burlington, Winston-Salem and Gibsonville, held a meeting to discuss shop efficiency.

Following the two meetings the visitors were the guests of the Greensboro dealers at a luncheon.

Directors of the association are: Kelly A. Grice, Charlotte, president; George Taylor, Washington; Arthur Ruffin, Wilson; James B. Hughes, Wilmington; Henry Allen, Raleigh; J. C. McDonald, Charlotte; W. H. Arey, Shelby; F. C. McArthur, Asheville; E. K. Snyder, Winston-Salem.

St. Louis Committees Named

ST. LOUIS, July 18.—Frank C. McDonald, president of the St. Louis Automobile Dealers' Association has announced a list of committees to serve the organization during the year.

The committees follow (in each case the first named is chairman):

Used Car—George M. Berry, J. T. Salisbury, J. N. Kellerman and E. C. Meissner.

Constitution and By-Laws—R. C. Frampton, W. H. Vesper, Phil Brockman.

Gasoline Tax—Phil Brockman, J. T. Salisbury and R. E. Lee.

Arbitration—E. A. Hatfield, George Weber, H. C. Merry, William Walsingham and A. S. Johnson.

Legislative—E. L. Kuhs, Phil Brockman, H. W. Kardell, J. James MacGregor and W. L. Johnson.

Dealers Thwart Frauds

ST. LOUIS, July 18.—Fraudulent advertising schemes are costing automobile dealers in the city of St. Louis around $100,000 per year, according to a recent estimate of Robert E. Lee, manager of the St. Louis Automobile Dealers' Association. The association maintains a service for dealers which would relieve them of the task of refusing subscriptions to every charitable program that comes along if they would use it.

The system consists merely of a sign hung in the dealer establishment stating that the dealer is bound to make no contribution to any advertising or charitable fund until approved by the Advertising Censor Committee of the St. Louis Automobile Dealers' Association.

At a recent meeting of the board of directors of the organization the value of this service was discussed and it was decided to have a large sign printed and neatly framed to be hung in dealer establishments directing solicitors to the advertising censor committee.

Atlanta Headquarters Moved

ATLANTA, July 18.—C. V. Hohenstein, executive secretary of the Atlanta Automobile Association, membership of which includes practically all the dealers and jobbers in Atlanta identified with all the branches of the automotive industry, announces the recent removal of the general offices of the association from the Gould Building, where they were located for years, to larger quarters at 1308 and 1309 Citizens & Southern Bank Bldg.

At present the association legislative committee is unusually active in connection with the regular summer meeting of the Georgia State Legislature, now in session, pushing legislation favorable to the industry, and combatting legislation that would have an unfavorable effect on the business if allowed to get onto the state's statute books.

The association is strongly supporting a bill seeking a bond issue of $70,000,000 for road building and maintenance in Georgia.

Shops Close Saturday Afternoons

ST. LOUIS, July 18.—A recent decision of the Service Managers' Bureau of the St. Louis Automobile Dealers' Association that Saturday afternoons are unprofitable to a large majority of dealers' repair shops has resulted in a campaign by the association for the closing of repair shops on Saturday afternoons to remain closed until Monday morning.

A letter of notification sent out by R. E. Lee, manager of the Dealers' Association, states that the board of directors after consulting with a considerable number of service managers was convinced that Saturday afternoon business was unprofitable and that closing would result in no financial loss to the dealers.

Last week was the first since the board passed the resolution and a number of shops closed. It is expected that most of the establishments will fall into line and that in a short time all dealer repair shops in St. Louis will be closed on Saturday afternoons to remain closed until Monday morning.

Ohio Association Meets

COLUMBUS, O., July 18.—The newly elected board of directors of the Ohio Automobile Association, composed of 81 clubs in Ohio, met in Columbus recently, for the purpose of organization, following the annual convention in Cedar Point, O., in June.

Charles C. Janes, who has been secretary of the association for the last five years was re-elected to that position for a term of three years. This is the first time that a term of longer than one year has been given the secretary, but owing to the fine record made by Mr. Janes he was complimented by the longer term.

During the time that he has been an official of the association, Mr. Janes contributed in a large measure to the growth of the association. Mr. Janes was elected secretary of the A. A. A. for the second time recently.

The trustees adopted a resolution requesting Secretary of State Thad H. Brown to call a meeting in Columbus of all deputy registrars of automobiles in order to iron out the difficulties contained in the new law which becomes effective July 20. Under the new law there is much "red tape" to be followed and many deputy registrars refuse to continue the service, even if permitted to charge a fee of 15 cents per registration as is allowed under the new law. Wesley S. Thurstin, Jr., of Findlay, recently elected president, presided at the meeting.

Maudslay Motors Brings Out Safety Coach in 3 Models

Chassis Designed for Safe High Speed Travel, Developing Up to 40 M. P. H.

LONDON, July 8.—(By mail.)—A safety coach chassis in three different models has just been brought out here by the Maudslay Motor Company of Coventry. The chassis throughout have been designed to furnish maximum amount of safety under high speeds, the coaches being intended for operation at speeds up to 40 m.p.h.

The M. L. 2 model has a 180 in. wheel base and is intended for open coaches seating 22 passengers. The M. L. 3, with a wheel base of 198 in., is built to carry a single-deck bus body holding 37 persons and the M. L. 4 with a wheel base of 200 in., is suitable for saloon buses seating 30 passengers.

The M. L. 3 model, due to its forward type of construction, has an unusually long body somewhat over 25 ft. being available back of the dash. A low center of gravity is aimed at throughout. The clearness of the back axle is 11 in. and the tread is 69 in. between the centers of the rear wheels and 72 in. at the front. The rear springs which are 54 in. long and 3 in. wide are practically flat under load, while the similar front spring has a length of 40 in.

No radical changes from other Maudslay models have been made in the power plant. A number of minor refinements have been made however, such as the inclusion of an oil filter. The rated speed of the engines is 2,000 r.p.m. at which speed the M. L. 2 engine develops 60 b.h.p. and M. L. 3 and M. L. 4 engines 70 b.h.p.

The foot brake on all the models operates on the transmission but with it is combined the Servo device for operating the Perrot type front brake. The engine propeller shaft and gear box have all been brought into line by inclining the subframe and the low built chassis makes it possible to enter the coach with but a single step.

June Hupp Sales Greatest in History of Corporation

DETROIT, July 11.—Due in part to the continued large demand for the Hupmobile Eight, June was the largest month in the entire history of the Hupp Motor Car Corporation in sales volume in dollars, and the second largest in number of cars manufactured, the company has announced.

In making this record, Hupmobile reports that the June shipments of eight cylinder cars increased 77 per cent over those for May. More than $700,000 in unfilled orders for eight cylinder cars was carried over from June 30 while $2,000,000 in unfilled orders for four cylinder models was also carried over.

July 1 showed the trend toward the Hupmobile Eight when additional orders totaling upwards of $1,000,000 were received.

Total shipments of all models for June exceeded those for May by 61 per cent, and of June, 1924, by 92 per cent. June, 1923, was beaten by approximately 36 per cent.

According to O. C. Hutchinson, general sales manager, more than 10,000 Hupp Eights will have been shipped before the end of August at the present rate. The stocks of cars on hand by dealers and in transit by the end of June represented less than a three weeks' supply.

Coming Motor Events

Automobile Shows

Boston ..... Oct. 10-17
World's Rubber and Tropical Exposition.

Dallas, Tex. ..... Oct. 10-25
Annual Automobile Show, State Fair Automobile Building, under the auspices of the Dallas Automotive Trade Association. J. W. Connell, manager.

De Pere, Wis. ..... Aug. 31-Sept. 21
Annual Automobile Show under the auspices of the Automobile Division of the Green Bay Association of Commerce.

Fresno, Cal. ..... Sept. 28-Oct. 3
Fresno Motor Car Dealers Association. Fifteenth Annual Show in connection with Fresno District Fair.

Grand Rapids, Mich. ..... Sept. 7-12
Grand Rapids Automobile Dealers Association, Seventh Annual Show in connection with West Michigan Fair, Wm. T. Morrissey, manager.

Oklahoma City, Okla. ..... Sept. 26-Oct. 3
Annual State Fair and Exposition. Passenger cars and accessories.

Sacramento, Cal. ..... Sept. 5-13
Automobile Exhibits in Diamond Jubilee State Fair.

Shreveport, La. ..... Oct. 24-Nov. 8
Twentieth Annual State Fair showing passenger cars, trucks and tractors.

New York ..... Nov. 15-21
Twenty-first Annual Automobile Salon.

Wheeling W. Va. ..... Sept. 7-12
Wheeling Automobile Dealers Association, Eleventh Annual State Fair, Exposition Building.

White River Junction, Vt. ..... Sept. 15-18
Nineteenth Annual Twin State Fair. Passenger cars, trucks and accessories. F. L. Davis, manager.

Chicago ..... Jan. 30-Feb. 6
Twenty-sixth Annual National Automobile Show and Eleventh Annual Automobile Salon.

Danbury, Conn. ..... Oct. 5-10
Eighth annual fair, Danbury Fair Auto Building, under direction of Danbury Agricultural Society, passenger cars, trucks, tractors, accessories, etc., H. Lage, manager.

Boston ..... Oct. 10-17
World's Rubber and Tropical Exposition, Mechanics Hall, Chester I. Campbell, manager.

Chicago ..... Sept. 28-Oct. 3
Fourteenth annual Safety Congress and Exhibit, Rainbow Room, Hotel Winton, under direction of National Safety Council, A. M. Smith, business manager.

Salt Lake City ..... Oct. 1-7
Third annual Automobile Show and forty-seventh annual State Fair in Coliseum Building, Wm. D. Sutton, supervisor of Automobile Show.

Foreign Shows

Annual Automobile Show in the Kaiserdamm.

Buenos Aires, Argentina ..... Oct. 3-13
Pan-American Road Congress.

London, England ..... Oct. 8-17
Olympia Passenger Car Show.

London, England ..... Oct. 29-Nov. 7
Annual Truck Show.

Races

Altoona, Pa. ..... Sept. 7

Charlotte, N. C. ..... Oct. 24

Fresno, CaCl. ..... Sept. 30

Laurel, Md. ..... Oct. 10
A. A. A. Race, Baltimore-Washington Speedway.

Los Angeles, Cal. ..... Nov. 26

Monza, Italy ..... Sept. 6
Italian Grand Prix Race.

Paris Montlhery track ..... July 26
French Grand Prix.

Syracuse, N. Y. ..... Sept. 19

Salem, N. H. ..... Oct. 12

Conventions

Buenos Aires, Argentine ..... Oct. 3-13
Pan-American Road Congress.

Cleveland ..... Sept. 14-19
Annual Convention and Exposition of American Society for Steel Treating.

Cleveland ..... Sept. 15-16
S. A. E. production meeting and exhibition.

Des Moines, Ia. ..... Nov. 12-13
Automotive Merchants' Association Convention.

Everett, Wash. ..... Aug. 3-4
Annual state convention Washington Automotive Trades Association.

Montreal, Que. ..... Oct. 7-10
Fall convention of the Motor and Accessory Manufacturers Association.

Philadelphia ..... September
S. A. E. Automotive Transportation meeting.

Pittsburgh, Pa. ..... Oct. 12-14
Pennsylvania Automotive Association Convention.

St. Louis ..... Nov. 17-19
Annual Convention of National Tire Dealers' Association.

Eaglesmere Park, Pa. ..... Sept. 14-17
General meeting of the Automotive Electric Association.

'elie Holds Second of Its Series of Sales Meetings

ecent Months All Show Increases in Business Over 1924, Hadden Says

MOLINE, July 18.—Sceond of a series distributors' sales meetings recently nounced by C. W. Hadden, general les manager of the Velie Motors Corration took place at the factory here st week. Distributors attending repreted Iowa and Illinios territories. Last ek distributors from various parts of e United States were present at a nilar meeting.

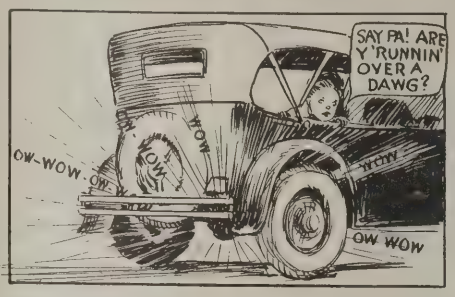
Mr. Hadden pointed out that sales for e last nine months have exceeded those the corresponding period in the preding year in every month except one. les for March 1925, he said, were the rgest for any March for four years. ly sales increased 12 per cent over the me month in 1924 and a larger increase expected for June when that month's ports are all in.

Mr. Hadden spoke of the export sales having increased 50 per cent during te first five months of 1925 over the me period a year ago. These sales ve been under direction of L. F. Murly, assistant sales manager, formerly th General Motors Export Corporation.

In Iowa during the last six months lie sales have made increases ranging m 36 to 170 per cent; this latter record longing to Joe O'Leary of Iowa City. alter Saner, Davenport distributor, dised of 125 cars during the first six nths of the year. The sales record of hnson & Phillips of Freeport, Ill., Garky Brothers of Mount Morris, Ill., and arles E. Moore of Ottawa, Ill., were o complimented by Mr. Hadden.

armers Urged to Sell Accessories at Roadside

JEFFERSON CITY, Mo., July 11.—Jwell Mayes, secretary of the Missouri te board of agriculture, is urging f mers to cash in on highway traffic, b establishing roadside markets—not oly for farm produce, but for automobe accessories. The suggestion is emblied in the following paragraphs, der the head of "The Farmer's Adverting," in the Missouri Clip-Sheet for Jly—issued by the Department of Agric ture:



"Without discrediting or minimizing ay other means of farm market development, it must be admitted that the farmer ishelping himself and will continue to increase his income through advertising products of his farm.

"The roadside marketing of farm products has already begun in Missouri, al will mightily increase with development and finishing of the state highways. Radside bulletin boards are helpful.

The Missouri State Board of Agriculte passes the word along to its farmer friends that they will do well to give thought to advantageous locations for operating wayside marketing, wood lots suitable for small tourists camps, and to spots adapted to farmer-owned oil stations with emergency car supplies."

SQUEEKS and RATTLES

GNASHING OF TEETH

What's your new mechanic doing?
He's working on axle adjustments.
Is he good at it?
I leave that to my foreman, but he says every job turned out is a howling success.

EFFICIENCY

It seems to us these efficiency engineer people are carrying things too far. One of them was working for a contractor. He wanted some bricks carried, so he said, "Here, now, Murphy, what about carrying some more bricks?"

"I ain't feeling well, guv'nor," said Murphy. "I'm trembling all over."

"Well, then, lend a hand with the sieve."—The Furrow.

A green apple a day buys the doctor's coupe.

HE KNEW HIM

Newrich: "I don't suppose you're used to driving men like me, are you?"

New Chauffeur: "Oh, yes, I drove the police patrol for three years."—The Furrow.

SAVED

All eyes were strained at the daring aviator in the clouds. Then a shout of alarm went up. "The parachute! It won't open! He's falling!"

"Don't worry," admonished the birdman's best friend. "He's got on rubber heels."—American Legion Weekly.

A NERVOUS GUY

"Why do you jump at the sound of a motor car?"

"Well, some time ago my chauffeur eloped with my wife, and every time I hear a horn I think he's bringing her back!"

ASHLAND MFG. PURCHASED

FOSTORIA, O., July 18.—The Fostoria Pressed Steel Co. has purchased the business of the Ashland Mfg. Co., of Ashland, O., manufacturers of the Eureka line of pumps, jacks and wrenches. The business will be moved to Fostoria, where the Fostoria Pressed Steel Company will continue the manufacture and sale of Eureka pumps, jacks and wrenches, in addition to their present line of Fostoria Fenders. A separate building has been acquired for the manufacture of the Eureka line.

CATALOGS 24 PAGES

WASHINGTON, July 18.—Automobile manufacturers and dealers who use catalogs in their sales literature must string them out to twenty-four pages, says the Post Office Department, if they want to get advantage of the 1 cent per 2 ounce rate. Twenty-four pages make a catalog, the department rules, and catalogs less than this number must bear a rate of 1½ cents per 2 ounces.

CALIFORNIA RECEIVES GRAHAM

STOCKTON, Cal., July 18.—The automotive industry in California received another healthy boost when the truck plant of Graham Brothers, a division of Dodge Brothers, Inc., was opened here recently. More than 250 Dodge dealers, through whom the Graham product is marketed, attended the opening, and the Stockton Chamber of Commerce acted as host both to Graham Brothers and to the visiting dealers from every county in the state. Graham Brothers' trucks stood first in the 1½-ton field in California for the first quarter of 1925, and in the combined 1 and 1½-ton division, were exceeded only by the Ford for the same period. A drive-away of 150 trucks featured the opening day. Production basis is 10 trucks per day and Graham Brothers have 30 acres in their plant site to be used for future expansion.

G. M. UNIT ON 55-HOUR WEEK

BRISTOL, Conn., July 15.—The New Department Manufacturing Co., a unit of General Motors Corp., is operating on a 55-hour week plan in all departments except the coaster brake plant. Heretofore the company has worked on a 9-hour day schedule. There will be no vacation period this year owing to increasing business.

THE NEW IMPROVED
JUNIOR AND MIDWAY
Westinghouse Air Springs

Announcing—

New Designs and a New Wholesale Policy

AND MORE PROFITS FOR DEALERS!

There are three new things the trade should know about the Midway and Junior Westinghouse Air Spring.

1. New in design including mechanical improvements. Perfect in action, self-lubricating, long lived and fool proof.

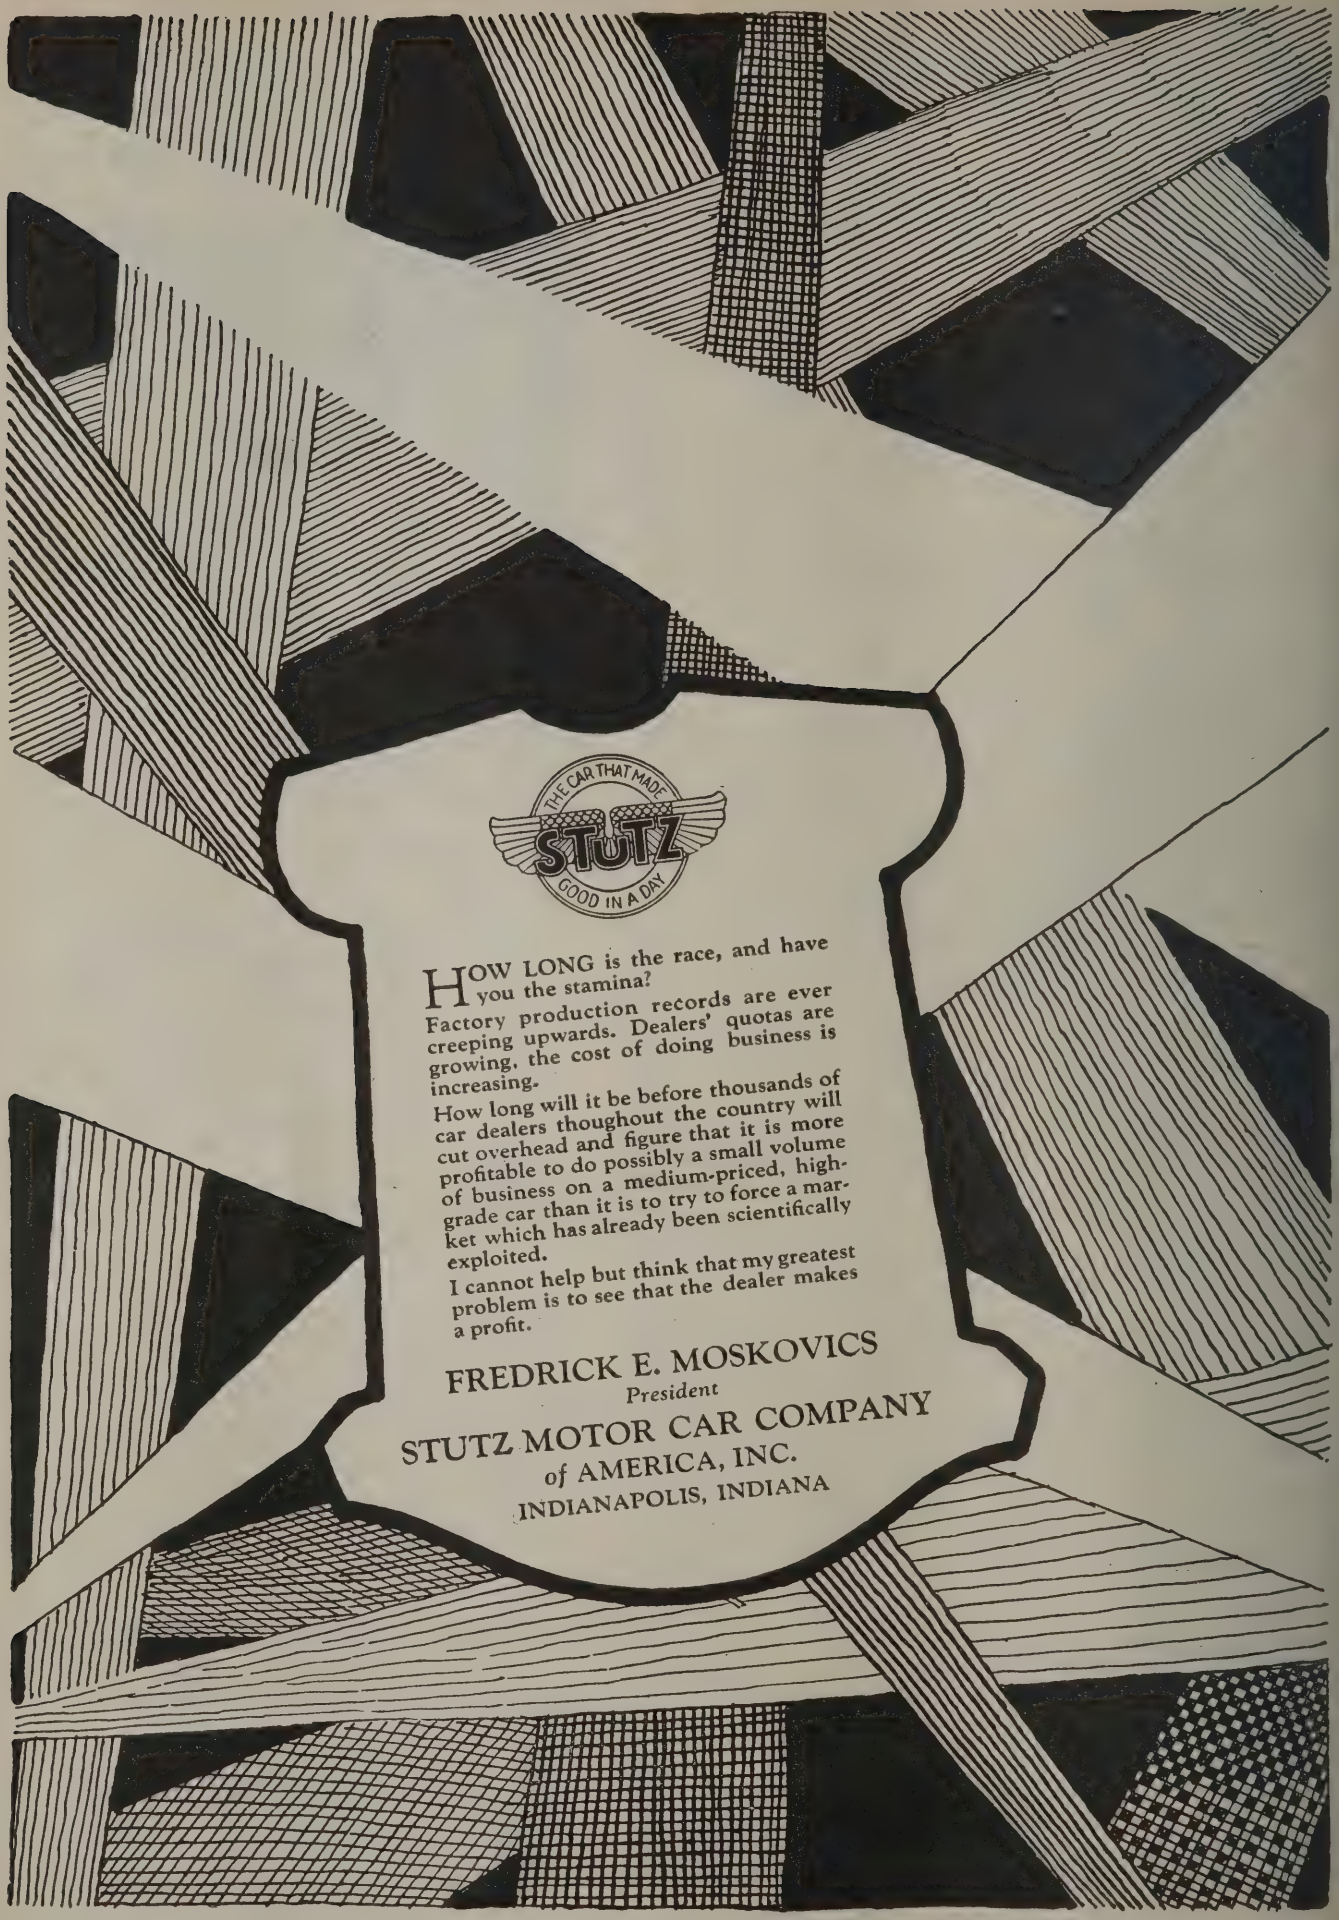
2. Installed with new no-cut brackets, integral and interchangeable with standard car brackets, easier and quicker to install.

3. A new wholesale policy—selling direct to dealers at a large margin of profit. The dealer does the installation profitably.

You can make real money selling and installing Westinghouse Junior and Midway Air Springs. They are made for practically every type of car. Juniors for cars up to 3000 lbs.—Midway 3000 lbs. to 4000 lbs. Easily and quickly installed, last longer than the car and make the car last longer.

Westinghouse Air Springs—the finest known device for shock elimination.

Westinghouse Air Springs are made for every type and size of car, truck and bus.



Get our wholesale prices and full details at once.

HOW LONG is the race, and have you the stamina?

Factory production records are ever creeping upwards. Dealers' quotas are growing, the cost of doing business is increasing.

How long will it be before thousands of car dealers thoughout the country will cut overhead and figure that it is more profitable to do possibly a small volume of business on a medium-priced, high-grade car than it is to try to force a market which has already been scientifically exploited.

I cannot help but think that my greatest problem is to see that the dealer makes a profit.

Wisconsin insurance commissioner opposes Chrysler policies and threatens action if company persists in plan. Page 33.

Dealers report stocks of old-style models unusually low, putting them in excellent position to receive new types. Page 33.

Fisher announces purchase of Fleetwood Metal Body Company. No change in policy planned. Page 33.

Michigan registrations this year expected to reach 955,000. Page 32.

Tire dealers advised by national association to buy only for 40-day turnover as result of mounting rubber prices. Page 32.

Registrations in Louisiana are expected to reach 200,000, or about 21,000 more than in 1924. Page 32.

Output of automobiles in Canada during 1924 decreases about 10 per cent, government report says. Closed car production rises above 1923 figure, but open models bring average down. Page 42.

Antoine Ascari, dealer at Milan, Italy, wins European Grand Prix at Spa, Belgium, with straight-eight supercharged Alfa Romeo car. Page 34.

Extra dividend of $6.50 per share on the common stock is declared by Nash Motors Co. Net income for quarter is nearly $3,000,000 greater than in same three months last year. Page 38.

Dodge Brothers begins program of expansion at factory which will enlarge output from 1,100 cars as at present, to 1,500 automobiles daily. Page 43.

World-wide survey of air transportation possibilities and advantages from economic standpoint will be carried out by Department of Commerce and the American Engineering Council. Page 43.

Parts, accessory and service business during first six months of 1925 runs substantially ahead of same period of 1924, M. & A. M. A. figures show. Page 35.

Delegation of American rubber manufacturers urges Secretary of State Kellogg to make representations to Great Britain regarding the restriction of raw rubber output. Page 35.

Chevrolet expects production, at present rate, to equal entire 1924 total by first of August. Page 42.

Ruinously low prices for used cars cause California dealers in new and rebuilt automobiles much concern. Page 38.

In Next Week's Issue—Accurate Diagnosis Makes Repairing Easier

The Junior Eight Special, a Miller-built racing car in which the drive was applied to the front wheels only. The excellent performance of this car at Indianapolis this year caused much favorable comment and showed especially well the apparent desirability of pull over push in propelling a race car around curves at high speed.

Driving All Wheels Of A Car

Making Every One an Independent Tractor and Brake. What Multiple Drive Design Vehicle Offers in Performance and Economy of Operation.

By B. M. IKERT

IN analyzing present day motor car design a point is reached where the future would seem to hold much for the multiple drive car.

Briefly, such a vehicle is one wherein the engine power and brake is applied equally to all, instead of the rear wheels only, as in the conventional car of today. A multiple-drive car may have four, six, eight or in fact any number of wheels.

The performance of the Miller-built "Junior Eight" front wheel drive car which finished second in the recent 500-mile Indianapolis race upset a good many theories about such cars being unmanageable, tricky to steer, and so on.

It is true the power in this car was not applied to all four wheels, but during the race it was clearly demonstrated that applying the power to the front wheels need not interfere with steering.

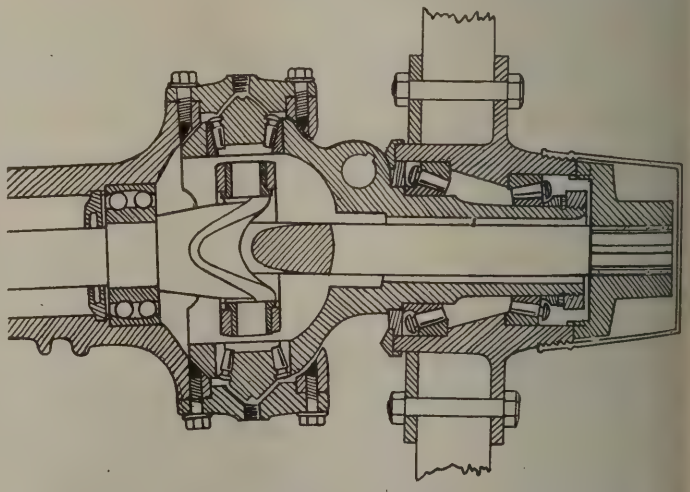
Many have claimed that the front wheels cannot be driven and steered at high speed. We have only to recall the "Junior Eight" averaged about 100 miles per hour for the 500 miles and "held the track" fully as good or better than the rear wheel driven cars to discount this claim.

At the conclusion of the race many comments were made as to the possibilities of adapting front wheel drive to passenger cars and motor vehicles in general. One newspaper said after the race: "The front wheel drive car developed by Harry Miller proved itself in the most gruelling test that can be given to a mechanical design, and its success here presages what may be a new development in passenger car design."

In the belief that there was something to say at this time on the subject of driving and braking on all wheels, a representative of MOTOR AGE interviewed Mr. P. J. F. Batenburg, Consulting Engineer, who has done considerable work on the development of multiple-drive automotive vehicle design.

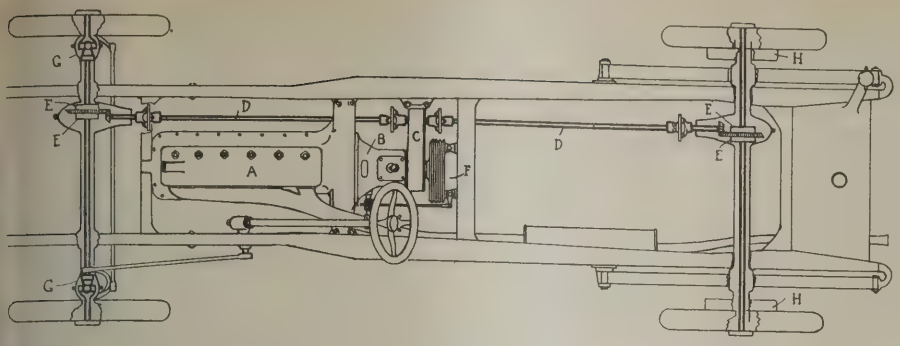
Consequently what follows are largely the thoughts of Mr. Batenburg as presented to the author in this interview.

While it is entirely possible to adapt front wheel drive to motor cars, it is not very probable. The job still would be but half done, many claim, as it now is in driving the rear wheels only.



Advantage of Pull Over Push

It would have the advantages, to a certain extent, of pull over push when it comes to moving a load. This might well be illustrated in a workman turning around and pulling a wheelbarrow over a curb when it cannot be pushed over.



In aircraft practice the tractor (puller) type of plane has superseded the pusher to the almost total exclusion of the latter type. The item of stability, speed and maneuverability has been improved in the plane by the adoption of the tractor type wherein the propeller, the pulling power, is placed at the front of the plane.

It may be of interest to know that a car in which all four wheels were driven was bought in 1912 by Mr. Matthew Worth Pinkerton of the firm of A. E. Pinkerton & Company, detective agency which operated over the United States. Mr. Pinkerton desired a car which could negotiate any sort of road and under all conditions. Mr. Batenburg related the following experience Mr. Pinkerton had with the car:

It seems that in some particularly bad going where there was no road to speak of, the left front wheel steering arm broke. The tie rod was removed and for 60 miles, including the down-town section of Chicago, the car was steered with the right hand wheel only. The left wheel, which, of course, was driven by the engine, automatically followed the direction of travel of the other front wheel. Since the wheel had power applied to it, less resistance was encountered, which with the caster of the axle made it possible for the wheel to function practically the same as though the tie rod and steering arm had been in place.

Sectional view of the Batenburg patented combination driving and steering axle as used on a multiple drive car. That it is possible to safely and efficiently combine steering and driving was demonstrated in the front-wheel drive car which finished second in this year's 500-mile Indianapolis race.

chematic diagram of a multiple drive car as laid out by Mr. Batenburg. Due to absence f differentials and substituting for these the driving and braking devices shown at E, each heel becomes an individual tractor and brake. In the above diagram A is the engine; , clutch and transmission; C, sub-transmission; D, drive shafts (interchangeable); E, riving and braking devices (all parts interchangeable); F, multiple brake, operating on l wheels; G, driving and steering axle; H, rear wheel brakes, to hold car on hill, etc.

In a conventionally designed motor car the front axle is ragged along by the springs. This means, then, that very time the front wheels drop into a chuck hole or ncounter an obstruction they are dragged out, rather nan rolled out, as they would be if power were applied) them.

At this point it is well to mention that multiple-drive ehicles have generally been looked upon as "stunt" cars,) perform in places only where the going is bad or where dverse road conditions exist.

It is true during the war trucks in which all wheels were riven performed admirably under the most terrible conitions, and this fact, no doubt, has given rise to the general mpression that driving front and rear wheels of a motor ehicle is applicable to trucks only.

This is not so. It is reasonable to believe if a motor ehicle in which all the wheels are driven possesses advanages under adverse conditions it also will possess these nder more favorable conditions, even if it meant but the se of a smaller power plant with resultant economy.

As less resistance is encountered in a multiple-drive car, aturally less power is required to propel the vehicle. In ear wheel driven cars the entire load is lifted and pushed rom the rear, because the front axle is not a live axle. In multiple drive car the load is more equally distributed n both axles, which are alive and offer a combination of imultaneous lift, push and pull, with a natural tendency) climb.

Every Wheel Independent Tractor

Multiple driving and braking means that every wheel ; entirely independent of the others and a multiple-drive ar could be moved under its own power even if any three f the four wheels were off the ground.

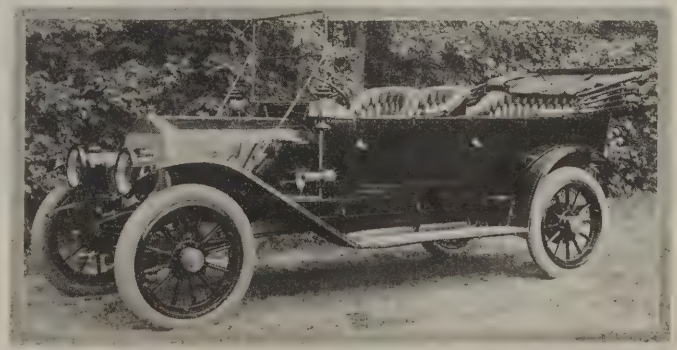
Unlike a vehicle fitted with an ordinary differential or ompensating gear a multiple drive car does not get stalled hen one of the wheels becomes mired, nor will any of ie wheels spin on ice or slippery surface.

In a car fitted with a conventional differential gear, pinning of the wheels in mud or on ice takes place because iere is little or no resistance to the drive and because of ie differential mechanism affecting both wheels. Hence ie wheel on firm ground offers more resistance and conseuently the mired or free wheel is spun by the engine nce the planetary gears of the differential simply run ound the side gear of the axle shaft on the stationary heel.

Differential gears are not found therefore in a multiple ive car. The mere fact of driving front and rear wheels a car does not constitute a multiple-drive car, according Mr. Batenburg's viewpoint, so long as differentials are sed in front and rear axles, as well as at the center of the two propeller shafts. Such vehicles have been built in the past, and while they offer the advantage of driving the front wheels also, each wheel is not independently driven or braked independently from the others.

In a multiple-drive car each wheel is an independent tractor and brake obtaining traction as traction is available and braking as resistance is obtainable. That is, the wheel or wheels which are on a firm or dry surface take the drive from the engine and in braking the same wheels which have resistance are the ones on which the braking takes place. This means, then, that the brake is not applied to a wheel which does not revolve, as for instance when a rear wheel of a conventional rear-wheel-driven car skids, with the application of the brake. Skidding after all is merely a matter of wheels not traveling the required distance and when a brake is applied under such conditions nothing is accomplished since proper braking can only be had on a revolving wheel. When wheels cease to revolve on a moving car they become uncontrollable sleds.

Climbing and Pushing



In crossing a ditch there is an enormous advantage in a multiple-drive car, for the front wheels will always climb while the rear wheels push.

Making every wheel an individual tractor and carrier as well, greater traction is obtained in a more efficient manner. The rear-wheel-driven car imparts a long leverage to the front axle, variable with the wheelbase. The front axle being dead is dragged along, meeting with resistance and digging bluntly into the resisting object instead of climbing over it as does the axle in a multiple-drive car.

So far as complication is concerned, multiple-drive offers no particular obstacles and there is no problem in multiple drive construction which is not satisfactorily solved in the conventional rear-wheel drive type of motor car. That is to say, there is nothing freakish about the design of the multiple-drive vehicle.

That the above is true will readily be appreciated by referring to the plan view of a multiple-drive chassis as shown on these pages. Reference to the illustration shows the disposition of the various units in practically the same manner as with a rear wheel driven car. Frame, axles, springs, engine, steering gear, transmission, gasoline tank, etc., are laid out exactly the same as in a conventional car.

The essential difference lies in the use of a driving and

This is a four-wheel drive car built in 1912 for Mr. Pinkerton, famous detective, who at the time stated he wanted a car which could go everywhere and anywhere under all sorts of conditions.

steering axle at the front, the use of a sub-transmission and the placing of the propeller shafts to one side of the center line of the chassis. In addition there is the use of a single multiple brake which operates on all wheels and applies the braking effort in the reverse manner that traction is obtained.

Many of the parts of a multiple-drive car such as illustrated are interchangeable, thereby lowering the production cost and adding materially to the serviceability and maintenance facilities of such a vehicle. Thus the two propeller shafts and flexible joints are interchangeable as well as the driving gears of the axle, together with the driving and braking devices.

Excepting for the fact that the front axle of a multiple-drive vehicle, as shown, is steerable and has, therefore, a different layout at the axle ends, the two axles, front and rear, are interchangeable so far as the housings and axle tubes are concerned. From a production cost standpoint the additional cost of a multiple-drive vehicle will run from 4 to 6 per cent more than for a rear wheel driven vehicle of the same capacity. This additional cost is manifested in a few additional parts necessary to make a live axle out of a dead axle.

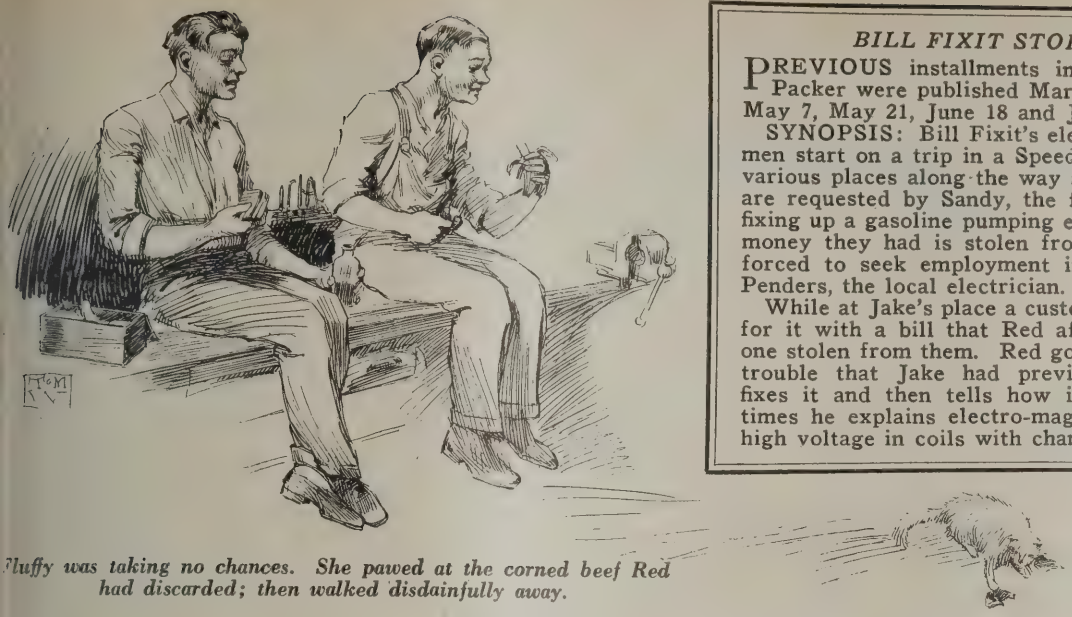
The extra power required to drive the additional live axle is insignificant compared to the power conserved. As traction is more easily obtainable there naturally is less strain on the driving mechanism, consequently less wear and tear, smoother operation and more dependability. Since every wheel is an independent tractor and brake in itself there is less chance for skidding and consequently greater safety and easier control.

Having no dead axles, loads can be more equally distributed, which means greater load capacity in less space and less damage to roads. The effect of the power applied to each wheel particularly in starting the accelerating and the load carried by such a wheel should not be underestimated in motor vehicle design and the study of the effect of this energy applied should be of interest to highway engineers interested in road cost and maintenance.

Every person associated in any way with motor vehicles knows that the rear tires of the conventionally designed motor car wear out before the front tires. Hence there will be less tire wear on a multiple drive and brake motor car because the loads are more equally distributed and there is less driving and braking strain per wheel.

From what has been said in the preceding paragraphs it becomes apparent that a multiple-drive vehicle makes possible acceleration and decelleration on all wheels, whereas in the present day design of motor cars it is possible only to decellerate on four wheels since front wheel brakes have come into such prominent use. The advocates of multiple-drive therefore claim that if it is logical to decellerate on four wheels it also is equally logical to accelerate on four wheels. Braking could then be done in the reverse manner than traction is obtained and since there is but one good sized brake located on the end of the transmission it will readily be seen that perfect equalization can be had. To hold the car on a hill a pair of ordinary external band brakes are fitted to the rear wheels only.

By having but one large service brake which could be cooled properly with flanges or by other means, the maintenance and service work necessary is practically nothing.



Sell the Car, Then Sell Accessories—This is the Way They Do It in the Establishment of a Kansas City Ford Dealer

A successful plan for the sale of accessories for Ford cars has been put into operation by the E. L. James Motor Co., Ford dealer in Kansas City, Mo. After a prospect has been sold a car he is taken into a quiet, luxuriously furnished room to sign the necessary papers. In this room, which is hung with lavender velour draperies, are displayed accessories for Ford cars.

While the car buyer is arranging for the purchase of his vehicle he sits at a desk facing many things for his machine which he should have and many things he would like to have. He sees a motometer, a spot light, a fire extinguisher, bumpers, rear vision mirror, skid chains, steering wheel, vacuum bucket etc.

About the time he has finished writing the check to cover the initial payment he looks up and begins to ask for recommendations on the various accessories. These recommendations are of course readily forthcoming.

Fluffy was taking no chances. She pawed at the corned beef Red had discarded; then walked disdainfully away.

BILL FIXIT STORY NO. 8

PREVIOUS installments in this series by A. H. Packer were published March 19, April 2, April 16, May 7, May 21, June 18 and July 9, 1925.

SYNOPSIS: Bill Fixit's electrical trouble shooting men start on a trip in a Speedway car. They stop at various places along the way and at the Welsh mines are requested by Sandy, the foreman, to help out in fixing up a gasoline pumping engine. While there the money they had is stolen from the car, so they are forced to seek employment in Coal City with Jake Penders, the local electrician.

While at Jake's place a customer buys a tire, paying for it with a bill that Red afterwards recognizes as one stolen from them. Red goes after a job of wiring trouble that Jake had previously fallen down on, fixes it and then tells how it was done. At other times he explains electro-magnets and production of high voltage in coils with change in magnetism.

Ignition Condensers—

When Is a Plumbing Job Like an Ignition System? The Red Head Tells the Answer to This One.

By A. H. PACKER

THE Red Head opened his lunch box and ate one sandwich slowly and thoughtfully. At the second one he decided a little investigation was in order. Removing the inspection cover he discovered a piece of ancient corned beef, picked it gingerly from the under layer and tossed it to Fluffy.

But Fluffy was taking no chances either. She sniffed in haughty manner, gave it a poke with one white paw and walked disdainfully away.

Jake watched with interest the comedy being enacted before his eyes.

"Gettin' tired of that Polock grub they hand you at the boarding house?" Jake hazarded.

"It's not so good," said Red. "Valvy gets by all right, but he has a hollow leg. I'd rather cook my own grub if we only had some place where we could."

"You might live upstairs over the garage," Jake said, half joking. Then added: "That's not such a bad idea either; if you run the gas and water pipes up there we can rig up a stove and a sink and you would be all set to do the dishes or take in washing when work here gets slack."

The boys talked it over and decided to take Jake up on his proposition, so a few days later Valvy started fitting pipe to carry the water to the upstairs kitchen. It was new work but Valvy liked it for a change and two days later things were in readiness for the amateurs to start housekeeping.

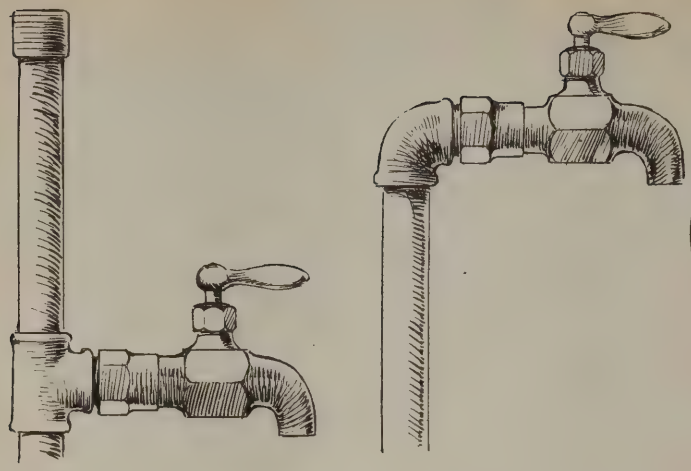
Red tried the faucet over the sink; the water flowed, but what was that rumbling knock as the faucet was turned off? Jake heard the hammering of the water in the pipe and came running up to see if a blacksmith shop had been opened on the second floor without his knowledge.

The faucet was a new one, so that could not be the trouble, but every time the water was turned off there was a hammering knock which jarred the whole building and seemed to threaten to crack the pipe itself.

"I see it all now," said Red. "There's no condenser."

"Condenser?" asked Jake. "Are you kidding or what? I never heard of condensers except in ignition or else in a power house where they use a different kind to change the old used steam back into water again. But with nothing but cold water up here, you will not need to worry about any steam."

"It's just my way of thinkin' I guess," said Red. "You see this faucet here is at the upper end of this pipe (Fig. 1) and Valvy in connecting up didn't allow any pipe to extend past the faucet so there would be an air cushion to stop the rushing column of water (Fig. 2). Without a cushion of some sort there is that awful jarring action and a tendency for the water to force its way past the rubber ball in the faucet.



"This experience we are having with this piping is similar to the experience we would have if we tried to operate an ignition system without a condenser, which is a sort of electrical shock absorber, for the current when it flows in a magnetic circuit such as a coil around an iron core has a sort of momentum or inertia so that it does not want to stop when it gets to flowing.

Current Jumps the Gap

"For that reason in a simple ignition system (Fig. 3) the current will arc at the points, for when they start to open the current jumps the gap, just as the weight of the column of water tried to keep flowing when the faucet closed and raised an awful rumpus when it was unable to.

"You will remember that the last time we talked about ignition principles we found that the voltage generated in the secondary winding was produced by a change in magnetism and that the faster the change the greater the voltage. That's just where we get into trouble if we have no condenser, for the fact that the points arc shows that the current in the primary or magnetizing winding does not die out quickly. Then with slow drop in the primary current, there is a SLOW change in magnetism and a LOW voltage.

"That's why if a condenser is open or disconnected that the points burn so badly, and the spark is so thin and weak that it has no heat and usually fails to fire the gas

Right: Fig. 1—With no air cushion, the solid column of water stops with difficulty when the faucet is turned off, like an interrupter without a condenser. Left: Fig. 2—With the pipe extended above the faucet to form an air cushion, there is a shock absorber effect which compares to the action of a condenser in stopping the primary coil current when the interrupter points open.

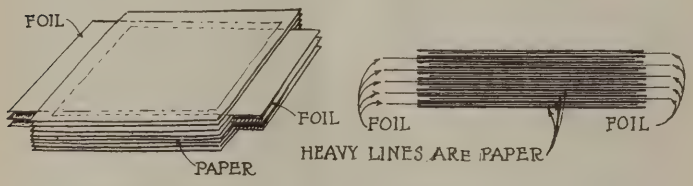


Fig. 5—Method of making a stacked condenser. One set of tinfoil sheets makes no connection with the other set.

in the cylinder. With a condenser in use (Fig. 4) there is a rush of current to charge the condenser, and this gives the points time to separate and break the current. Then the condenser charge rushes back in the form of a slight current, going the reverse way through the coil, which again helps to break down the magnetism and give a good sparking voltage."

Valvy had been listening in on the conversation and decided to butt in. "I took a condenser apart the other day. It was out of a Ford coil. There was just a lot of tinfoil and paper in it and I never did find a connection from one terminal to the other."

"Good reason," said Red. "That's because there is no connection."

"No connection?" Valvy wanted to know. "Then how does it work?"

Like Spring On the Car

"In our water pipe there would not have been a connection at the upper end of the air chamber (Fig. 2) either, and yet there would have been a cushioning effect. In the same way the insulation in the condenser acts like an elastic medium and takes the shock. We can also compare the condenser to the spring on a car. When the car hits a bump, the spring deflects, but the car does not travel through the spring and hit the axle, unless the spring breaks.

"In similar fashion the current does not travel through the condenser; it merely strains the insulation as the leaves of the spring were strained, and if the current ever does go right through, we say the condenser is shorted. This sometimes does happen and when it does the car stops for you get no ignition with a punctured or shorted condenser any more than you get spring action with a broken spring."

"And how are condensers made and tested?" Valvy wanted to know.

"One thing at a time," said Jake. "Suppose Red tells us how they are made first."

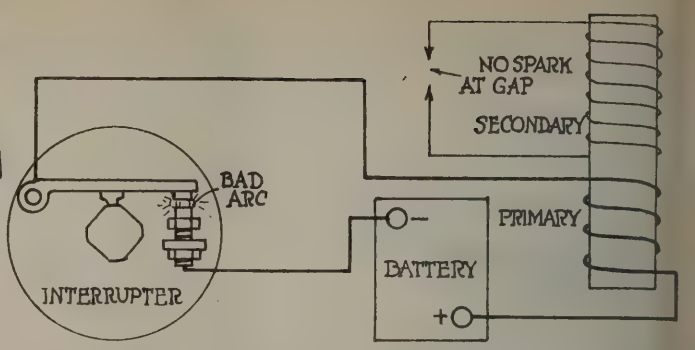

Fig. 3—A simple ignition system with the condenser omitted. The points would arc badly and there would be no spark at the gap.

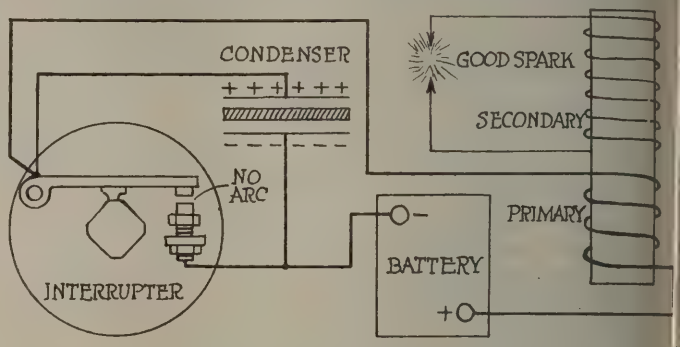

Fig. 4—With a condenser across the points, the rush of current through the coil is diverted to the condenser which it charges. This permits the points to open with little or no arcing, and the quick stopping of primary current produces a good spark at the gap.

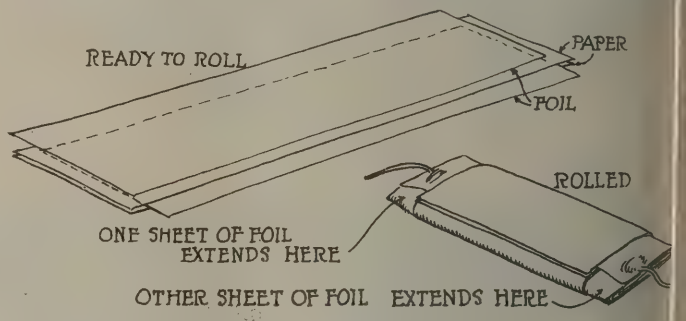

Fig. 6—The rolled condenser is easier to make and when finished looks like a small bolt of cloth. The two strips of foil in this type do not touch each other.

"Just as you say," said Red. "The ignition condensers are made two ways; some are stacked but most of them are rolled. In a stacked condenser, alternate layers of paper and tinfoil are used, but one piece of foil extends out over one edge of the paper, while the next piece extends out in the other direction (Fig. 5). When the job is finished the edges at one side are all soldered or sweated together in contact with one terminal while the same is true at the other side. If you had gloves on and the meshed the fingers of one hand with the fingers of the other, you would have the fingers of the two hands interlocked, but not touching due to the gloves. In similar fashion the two sets of tinfoil leaves mesh together but the paper keeps the two sets apart. In most condensers thin paper is used, two or three sheets being used in each layer of insulation. This is better than one thick piece of paper, for if any defects exist, they are not likely to lineup in the different layers.

"In the rolled condensers (Fig. 6) the idea is the same but long strips of paper and foil are used, there being two strips of foil, and as with the other type, one strip extends out from one side while the other extends in the opposite direction. Ford condensers for example are made in this way.

Getting the Car Ready to Paint

Problem Is Quite Complicated as It Involves Not Only Complete Removal of Dissimilar Materials, But Production of Surface Which Must Permanently Hold and Not Affect Applied Finish. Deoxidine Process Explained

By B. M. IKERT

IN preparing the body of a car for painting more things have to be taken into consideration than merely the matter of getting off the old finish. Simple as it may seem the problem is quite complicated, involving as it does not only a complete removal of many dissimilar materials, but the production of a surface which will permanently hold and have no effect on the applied finish.

In order to accomplish the above, whatever cleaner or process of cleaning is used must have the ability to dissolve rust, remove oil and solder solutions as well as other rust stimulators and to eliminate alkali. On top of this the cleaner or cleaning process must leave a surface which is clean and free from any tendency to change after the finishing materials have been applied.

This illustration, made from a photo taken in the Nash plant, shows the application of Deoxidine. The process has been in use in production work for some time, but is readily adaptable to the small paint shop.

Many shops doing automobile refinishing find the use of the Deoxidine process a big help in preparing cars for finishing. This process has been in use in production shops since 1914 and is especially desirable in conjunction with the pyroxylin finishes where it is absolutely necessary to remove the last traces of oil and to counteract any paint shedding property of the solvent or alkali materials that have been used to remove the old paint coats and which are not removed with a sand blast or some of the solvent cleaners generally used in the refinishing shops.

It must be remembered that in cleaning the surface with high test gasoline or benzine, any oils present on the surface are diluted in the solvent, but upon the evaporation of the cleaner these same oils are still present on the surface.

In the case of Deoxidine, the oil is not merely moved around from one spot to another but is completely removed in the washing operation, it is stated.

In addition to removing the oil, Deoxidine is said to counteract the rusting action of soldering acid and hand marks, even though these rust stimulators be invisible at the time the surface is cleaned, so that the process affords an adequate protection against the development of rust under the new finish, as it prevents the development of defects in the painted finish.

Briefly, the Deoxidine Process consists of the following steps:—

1. Applying the Deoxidine.
2. Allowing time for the Deoxidine to act and to drain.
3. Scrubbing the work with steel wool.
4. Washing the work with cold water.
5. Drying the work with cloths.
6. Air or oven-drying the work.
7. Final dry-wiping before priming.

Each step is simple and can be easily learned by unskilled labor in a short time. Although simple, each step must be carefully performed according to the detailed description given below by the maker:

Step No. 1—Applying the Deoxidine. Apply the Deoxidine to the work with a brush. Do not brush the Deoxidine out like paint but flow it on like varnish, being sure that the entire surface is generously covered. Much of the Deoxidine will drip from the body. Economies can be effected by catching these drips as they are suitable for use again. The most practical receptacles for catching the drips are long throughs placed under the bodies. These should be constructed of wood, and be free from leaks.

Step No. 2—Allow Time for Deoxidine to Act.—Do not let the applied Deoxidine dry as it will be very difficult to remove. In the refinishing shops, after the Deoxidine has been applied to the entire body, the operator may immediately proceed to Step 3, as sufficient time will have elapsed for the Deoxidine to have accomplished the object of Step No. 2.

In most refinishing shops the Deoxidine Process will be carried out by one man and it will be found that in some cases, particularly on exceptionally heavy rust, that Deoxidine cannot be applied to the entire body before it dries on the parts where first applied, so that the process will be somewhat modified in that sections of the body will have the Deoxidine applied and before it dries will be washed off, as described in the subsequent steps.

Step No. 3—Scrubbing the Work with Steel Wool. While the Deoxidine is still wet on the surface, the panels should be hastily scrubbed with steel wool to bring the Deoxidine into intimate contact with the steel. On spots where heavy rust occurs or where soldering acid is known to

Applying Deoxidine to open bodies. One operator is applying it with a brush, the material being held in the can in the operator's hand.

exist, the scrubbing should be more thorough and, if necessary to the complete removal of rust, an extra application of Deoxidine should be made to these spots.

It would be advisable for the workmen to wear rubber gloves in this operation to protect the hands against splinters from the steel wool.

Step No. 4—Washing with Cold Water. While the Deoxidine is still wet on the surface, the body should be washed down with a liberal supply of cold water. Hot water should not be used at this stage as it sometimes causes the "setting up" of the Deoxidine which makes its removal difficult.

Usually a sponge and a hose are used in applying water to the surface although an open barrel and a sponge are entirely satisfactory. In any case, a liberal quantity of water should be brushed over the entire surface so that all traces of the cleaning materials and the waste product are removed.

Great care should be taken to thoroughly wash out behind the mouldings and in all crevices. A high pressure stream of water from a small nozzle, or a high pressure stream produced by partly closing the end of the hose, will suffice to remove from behind moulding and from crevices any of the product of the cleaning, and any waste materials that have lodged there. It is at this point that paint troubles usually develop and too much care cannot be exercised in thoroughly washing in the vicinity of the mouldings.

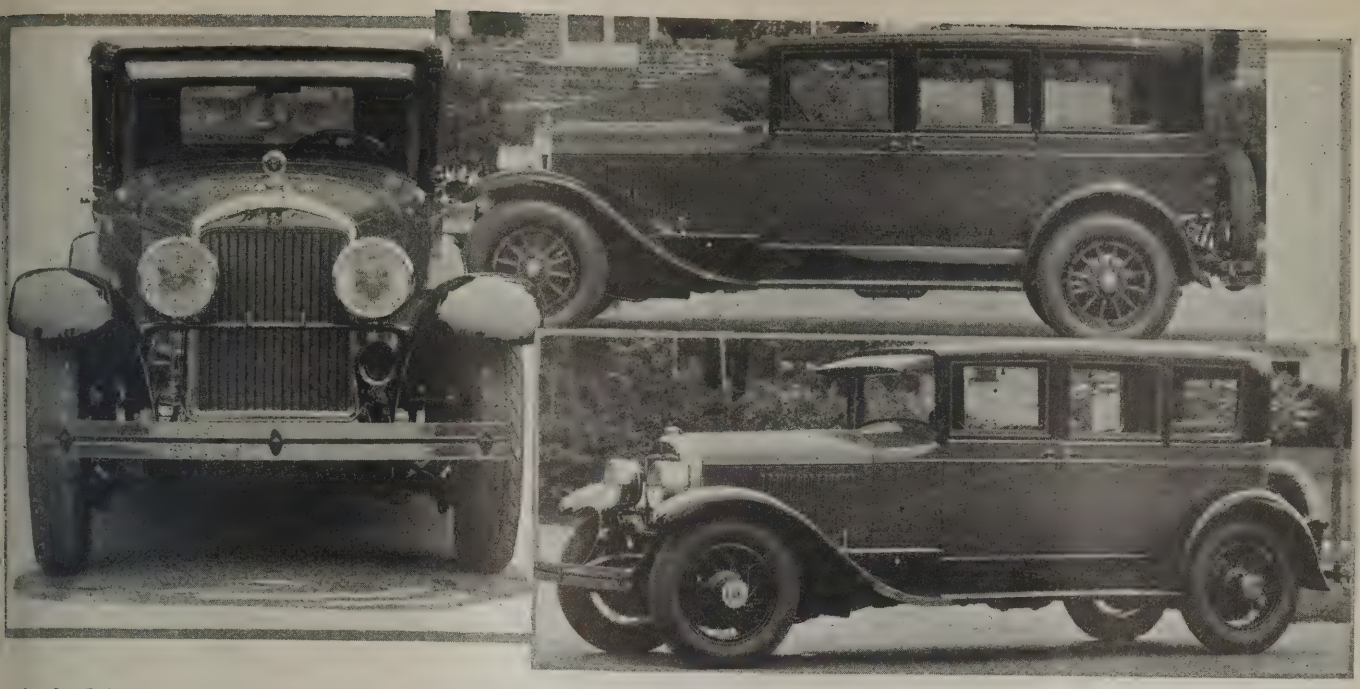
Care should also be taken that no brass or copper nozzles, or brass or copper fittings, touch the cleaned steel panel for they produce peculiar markings in the finish which are invisible until after the paint has been applied.

Step No. 5—Drying the Work with Cloths. After the work has been thoroughly washed as described, it should be dried as quickly as possible to avoid discoloration. This is accomplished by wiping with clean cotton cloths.

All of the moisture should be blown from behind mouldings and from crevices with a jet of air and that moisture which has been blown to the surface should be wiped up with clean cloths.

In the large production shops, in order to save time in drying, it is usual to blow a jet of steam over the panels before wiping the surface so that in absorbing the heat from the steam the panels will dry quickly. After the work has been thoroughly dried with cloths it is, in some cases, found advisable to actually heat the mouldings with a torch to expel any moisture that has remained there and it is considered good practice to dry the bodies in a heated oven for twenty or thirty minutes before applying the primer. This drying operation in an oven constitutes the Sixth Step.

Step No. 7—Final Dry-Wiping Before Priming. After the work has been dried in the oven or in the air, it is inspected for any white deposits which may have been caused by water runs and if any have occurred they are removed by sanding with fine sand paper, used dry.



Great care should be exercised not to touch the work with the bare hands as perspiration at this stage may deposit on the surface chemicals that will produce rust.

All dust is now removed by wiping with clean, dry rags, or with a tack rag, and the primer should be immediately applied.

An article dealing with safety precautions necessary with pyroxylin finishes will appear in the next issue of MOTOR AGE.

Radically Different Car Is Found in New Cadillac Offering

While Product Bears Signs of Company's Past Practice Effect of Changes Presents Vastly Different Design

By W. L. CARVER

WITH the compensated crankshaft which has featured models of the last 2 years and the bore nd stroke dimensions which have been haracteristic since the original anouncement of the eight cylinder V-type ngine serving as the foundation, the dillac Motor Car Company now is proucing an entirely new car. While the ew product bears the earmarks of dillac construction, many new features ve been incorporated as the result of a ogram of simplification and the utilition of recent engineering developents. The complete chassis weighs 250 s. less than its predecessor and of this mount, 130 lbs. have been removed from te engine. Semi-elliptic rear springs ith ball-jointed rear shackles have reaced the former platform type. Two nit electrical equipment has supplanted te single unit generator and starter hich have been used for more than 10 ars. One timing chain is used instead d two and the generator and fan are lit driven. As the result of this arrangent, the valve actuating mechanism has en simplified and the intake manifold stem has been improved materially. Te starting motor is placed vertically ar the back of the crankcase and drives t flywheel through a system of crown aring.

Along with this program of mechanical revision which has resulted in a lighter car of more power and greater flexibility of performance, bodies have been improved by co-operation between the Cadillac engineers and the Fisher Body organization. Previous body lines have been followed but detailed refinements have resulted in a slight reduction in weight. In some instances doors have been made wider. The instrument board has been rearranged and its appearance enhanced by walnut panels. Bodies are divided into two classes which correspond to the two wheelbases in which the line is built. The standard line which is built on chassis of 132 in. wheelbase embraces the following body types with prices as indicated.

Five Passenger Brougham	**$2,995**
Two Passenger Coupe	**3,045**
Four Passenger Victoria	**3,095**
Five Passenger Sedan	**3,195**
Seven Passenger Imperial	**3,435**
Seven Passenger Sedan	**3,295**

Supplementing this standard line is the Cutom line which is built on a chassis of 138 in. wheelbase with the exception of the roadster priced at $3,250 which is on the 132 in. chassis. The balance of the Custom line with prices is made up as follows:

Roadster	**$3,250**
Seven Passenger Touring	**3,250**
Phaeton	**3,250**
Five Passenger Coupe	**4,000**
Five Passenger Sedan	**4,150**
Seven Passenger Suburban	**4,285**
Seven Passenger Imperial	**4,485**

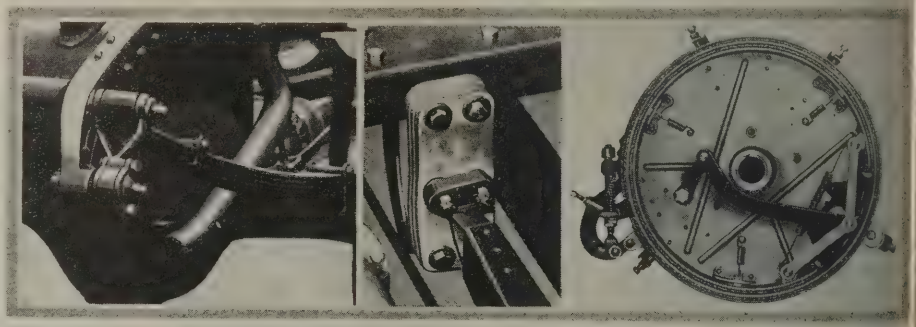
Duco finish in three color schemes, blue, Waverly gray and Arizona gray is applied to the standard line. In the custom line, any color scheme is available upon 60 days notice although these bodies are produced regularly with Duco finish in six color schemes, all of which are in regular production. In addition to this range of finishes, the appearance of the entire line has been modified by new lines at the hood and radiator. While the curve over the top has been retained, the radii between this surface and the sides have been shortened and the latter slope outward toward the bottom. The new combination blends with present day body lines to better advantage and the appearance is further modified by the addition of vertical shutters in the nickle radiator shell. Drum type nickle head lamps and elliptical crowned fenders round out the distinctive appearance of the new models. Wood wheels with heavy spokes and low pressure tires of 33x6.75 dimensions are standard equipment although wire wheels are optional at additional cost.

Closed bodies are equipped uniformly with the Fisher one-piece ventilating windshield, an adjustable rear view mirror and an automatic windshield cleaner. The custom line is fitted with bumpers at the front and bumperettes at the rear in addition to a motometer and spring covers. To prevent drumming, the tops of all closed cars are constructed of 2 in. wide wood slats covered with padding and leather fabric. A variety of accessory equipment including such items as robe rails, smoking and vanity set is offered in the closed models. Windows in the standard line are operated by segment and pinion type mechanism while those in the custom line are operated by cable lifts. In the standard cars, the upholstery is mohair velvet while custom cars are trimmed to the buyer's specifications. The brougham being a two-door job has a door opening of 37 in.

While the new engine has a typical Cadillac appearance, closer inspection reveals a number of striking departures from previous practice. The crankshaft is substantially the same as that used for the past 2 years, although a trifle shorter, the decrease having been made at the outer ends as the result of better understanding of the benefits of the compensating counter weights which remove unbalanced loads from the bearings. For the same reason, connecting rod length has been reduced from 12 1/2 in. to 11 in. between centers. In view of the stroke of 5 1/8 in. it will be seen that the new length is still more than twice that of the stroke. The shorter rod brings about a substantial reduction in overall width of the engine and a material reduction in weight and has no effect on the smoothness and flexibility of operation as all inertia forces are opposed and then balanced out by the compensating weights on the crankshaft. In order to improve bearing conditions at the piston, the pins have been placed 9/16 in. farther down from the top, creating somewhat of a cross head effect with equal bearing value above and below the pin.

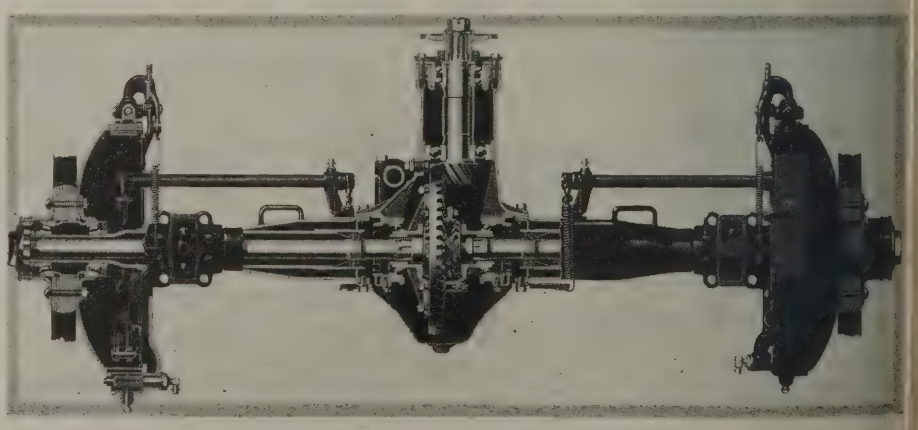
Two Unit Electrical Systems

With substitution of a two unit electrical systems for the former combined starter-generator unit, a great number of changes making for greater simplicity and accessibility and better operation followed. The new generator is flange mounted at the top of the timing case and driven at about twice crankshaft speed by a heavy rubber V-belt from a pulley mounted on the front end of the camshaft. The fan is mounted on the forward end of the generator shaft and has six blades with a dia. of 21 in. The first result of this change is the elimination of the friction clutch at the fan and of greater importance, the elimination of one chain from the timing train. Along with this, the complicated chain adjusting assembly at the front end of the camshaft has been dropped.



In the new layout a single Morse chain is used to drive the camshaft and its tension is regulated by a spring actuated idler which is located in the right half of the timing case. Chain of the plain pin type is used instead of the former split pin type but the quietness has been improved by using a chain of finer pitch. Another product of this revision is the substitution of a simple pressed steel timing gear cover of 3/16 in. thickness for the complicated aluminum casting assembly. With the elimination of the universal shaft which extended the full length of the trough between the cylinder blocks to drive the generator it has been possible to clean up this portion of the engine. The carbureter has been dropped to eliminate tortuous bends in the intake passage and improve the heating conditions in the incoming gas stream. This change in conjunction with the adoption of dome type combustion chambers which induce turbulence has increased power output and improved the flexibility of performance. The overflow passage for the carbureter now passes down through the crankcase instead of being piped around the end of the cylinder.

In conjunction with the change of carbureter location, the branch intake manifolds for each of the cylinder blocks have been removed from the cylinder blocks and now are cast separately and enamelled on both inner and outer surfaces. Because of the additional room in the trough, roller tappets operating directly on the cams have replaced the former tappet levers. These tappets are drilled and subsequently hot-formed so that they are not only extremely light but have substantial sections and great strength at points of high stress. The tappet is restrained from rotation which would throw the roll out of line by a lateral plug which moves in a broached slot. This feature is utilized to simplify tappet adjustment. The adjusting screw is threaded into the top end of the tappet which is split and equipped with a lateral clamping screw. Therefore during tappet adjustment, it is not necessary to restrain any part or manipulate a lock nut. The adjusting screw is set to the proper clearance and then is in no way affected by the locking action.



Striking Change at Front

The space between the blocks is remarkably clean. The carbureter is in the plane of the center crankshaft bearing while the generator is clear of the front valve housing covers. The distributer head which is Delco, as are the generator and starting motor, is driven by helical gears from the rear end of the camshaft and therefore is outside of the trough. Consequently nothing interferes with valve adjustment or access to the various parts of the carbureter. The ignition head is fitted with two four lobed cams and two breaker arms which permit correct operation at higher speeds.

At the front end another set of striking changes is visible. Where the cross shaft formerly drove two water pumps, one at each side of the block, one of these, that at the right side has been eliminated and has been replaced by the oil pump which is transferred from the front end of the crankshaft. The water pump on the left side has been made much larger and has a capacity greater than both of the pre-

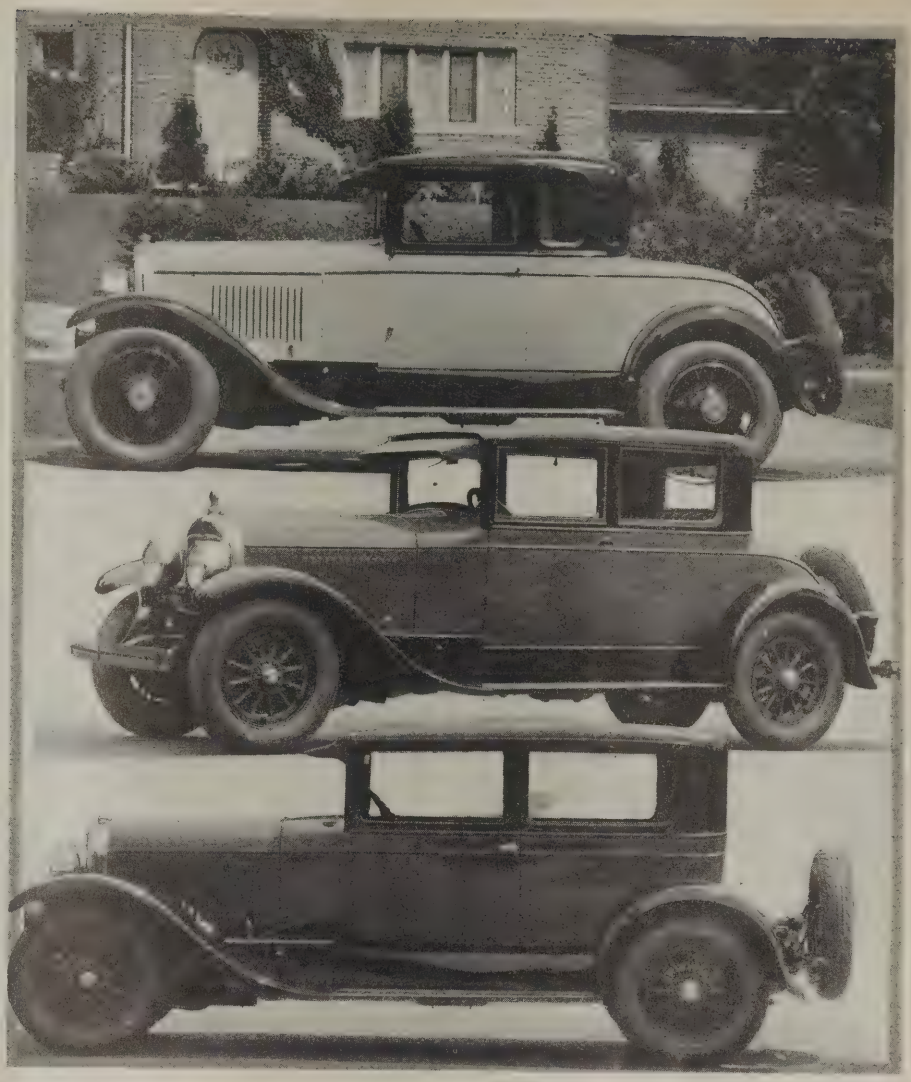
At the left is shown the rear end of the Cadillac frame. The shackle has a ball mounting at the lower end; Center, fabric connection of torque arm; Right, toggle arrangemen of emergency brake

Cross section of Cadillac rear axle showing the new bearing arrangement and concave brake drums which clear low pressure tires

vious pumps combined. A single connection joins the pump with the lower tank of the radiator. The outlet connection which is rubber hose extends back along the left side and the stream is divided so that half goes up through the left block and the other half is lead through the crankcase by means of a cast-in copper pipe to an elbow which connects with the lower portion of the right cylinder block. Each block is connected to the top tank of the radiator by a rubber hose although it is not necessary to break the hose connections in service work as flanged elbows equipped with gaskets are bolted to the top of each cylinder head.

Vertical shutters thermostatically operated have been installed in front of the radiator core, which is cellular, in place of the former fin and tube construction. These shutters with their thermostatic control replace the heat control system installed in the water lines. The radiator shell is stamped from nickle instead of being plated brass or steel. The carrier bars for the shutters and the bearing pins at the ends of these parts have been given a rust proof treatment.

Over-Running Clutch



The starting motor is mounted vertically on the flywheel housing. A spur pinion at the lower end of the starter shaft is engaged with crown gear teeth cut on the back of the steel flywheel ring by the usual foot pedal on the toe boards. The first portion of the pedal travel advances the pinion into mesh with the flywheel gear while the last portion depresses the ignition switch. An over-running clutch interposed between the pinion and the starter shaft allows the pinion to overrun as the engine starts and complete disengagement occurs when the starter pedal is released.

The former pressure pump for the fuel line which was operated at the front end of the camshaft by an eccentric and strap has been placed just abead of the left cylinder block and its plunger is operated directly by an additional cam which is located ahead of those for No. 1 cylinder.

The oil level gage has been placed on the right side of the crankcase instead of in the trough between the cylinders and the screw type filler cap which closes tightly, extends diagonally from the right side of the timing gear case.

Within the crankcase, six bearings support the camshaft instead of the former five and all of these are pressure lubricated. Incidentally, the tappets are slotted with lateral holes into which pins may be inserted so that these parts may be held up out of the way to allow the withdrawal of the camshaft while the engine is in place in the chassis. The rear crankshaft bearing has been shortened while the front has been lengthened although the center bearing remains unchanged. The dia. of all three continues at 2 3/8 in. Main bearing caps are of deep section aluminum alloy eliminating the former auxiliary steel plates. Instead of through bolts, studs are used to secure the main bearing caps.

One of the outstanding features of the new engine design is the crankcase ventilating system which prevents the water

Top, Cadillac standard 2-passenger coupe, Center—Custom 5-passenger coupe and below the 5-passenger Brougham

and sulphur products of combustion from descending into the oil reservoir.

This feature is based on the fact that the two plane compensated crankshaft acts as the impeller of a centrifugal pump and given the correct conditions of air circulation, will build up a pressure greater than atmospheric in adjacent air spaces. Therefore the design is arranged so the breather just back of the water line elbow on the left side of the engine serves as an air intake. The breather opening on the right side has been closed and the oil filler is closed by a screw cap. Following these holes have been drilled in the skirts of the pistons and those engage with holes drilled in the inner sides of the cylinder walls at the bottom of the stroke. The holes in the cylinder walls are the outlets of the air pump system.

As the pistons are fitted with relief holes at the lower ring grooves the products of combustion will seep through at this point. They are forced down by the pressure of combustion above and opposed by pressure greater than atmospheric which is produced by the crankshaft's rotation. At this stage, it must be remembered that these products are membered that these products are vapors rather than liquids. Due to the pressure below, the only path for these vapors is out through the vent holes in the cylinder walls. These holes communicate with the valve housings which are closed by plates. The final outlet from each side is at a hole drilled well up in the rear wall of the valve housing enclosure. From this point elbows and lengths of metallic hose conduct the vapors down below the body of the car.

Special Valve Stem Lubrication

With this system, the valve gear housings are not vented with the crankcase as is usual but have only small drilled drain holes which allow any surplus accumulation of oil to drain back into the crankcase proper. Due to this arrangement, special provisions are made for the lubrication of the valve stems. Small semicircular grooves are cut in the piston lands between the second and third ring grooves from the top. Naturally oil collects in these grooves and as they pass small holes which are drilled in the cylinder walls to communicate with the valve gear chambers, is blown through in a spray.

As mentioned previously, the oil pump

Several Mechanical Changes and Body Refinements in Buick Models

Company Announces Price Reduction on All Cars in Both Special Six and Master Six Lines—Engine Size Increased

By LESLIE S. GILLETTE

RETAINING the essential features which have characterized the Buick cars of late, the 1926 Standard and Master Six models, in addition to marked improvements in general appearance, embody several important refinements, making for more durable and economical operation, superior performance and increased driving comfort.

Concurrent with the introduction of the new series, The Buick Motor Company has reduced prices on all models, ranging from $25 to $370 on the Standard Six, and from $100 to $430 on the Master Six, with the exception of the Master No. 47 sedan which has been cut $730.

Sixteen body models in new color schemes and having mouldings extending from the improved design radiator entirely around the body, which on the closed models accentuates the popular double belt effect, comprise the new line. The prices are announced as:

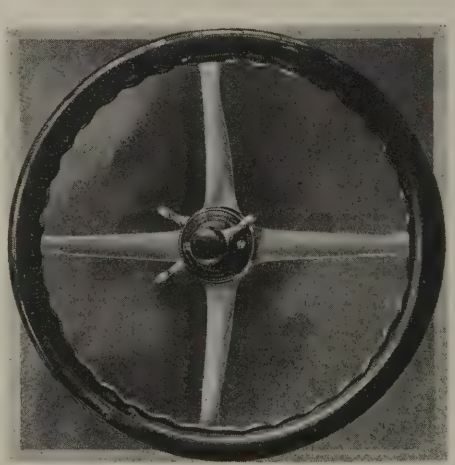
MASTER SIX, 128 IN. W. B.

No. 54	4 pass. Sp. Roadster	1495
" 55	5-pass. Sp. Touring	1525
" 54C	3-5 Pass. Country C. Coupe	1765
" 48	4-pass. Coupe	1795
" 51	5-pass. Brougham Sedan	1925
" 50	7-pass. Sedan	1995

As compared with the previous models, the price differential now existing between the regular touring and the four-door sedan is $145 instead of $490 on the Standard Six chassis, $200 instead of $830 on the 120 in. Master Six chassis and $400 instead of $6125 on 128 in. Master Six chassis.

Chief among the mechanical changes on the engine and chassis of both models are the increasing of the cylinder bores by ⅛ in., so that the Standard Six now measures 3⅛ in. in diameter and the Master Six 3½ in., the fitting of an oil filter, air cleaner and gasoline strainer, and the adoption of an improved Delco two-unit electrical system in place of the former single unit type.



To give ample capacity for the increased power of the engine, the clutch, while retaining the basic principles of the previous type, has been entirely redesigned. The transmission case has been made more rigid and all gear teeth increased in width, while several changes affecting the axle sizes, bearing dimensions and spring seats are made on the rear axles. In addition to slight refinements in the four-wheel braking system to provide more effective braking with lighter pedal pressure, larger section tires, 31 by 5.25 in. on the Standard Six and 33 by 6.00 in. on the Master Six chassis are provided.

In harmony with the improvements made in the appearance of the bodies, the radiator shell while maintaining the characteristic Buick design, has been rounded out in the front by ½ in., allowing the use of larger radius at the corners. Greater length has been emphasized at the front of all cars by pressing the bead into the shroud and finishing it in the same color. Formerly a strip of aluminum beading marked the joining of the hood with the cowling. The Duco finish is in new attractive colors with suitable striping and black moulding. On the Master Six chassis, two of the closed models and both sport cars are in two-tone effect, the latter two being offered with two color options at no additional cost.

With the exception of both sport models on the Master Six chassis, all open cars are now provided with permanent tops having a strip extending along the inside edge which allows closer fitting of the side curtains and the installation of winter enclosures, the latter being available at extra cost.

Straighter roof lines and smaller radii used at the rear corners identify the Fisher closed cars. On the Master Six models, the height of the roofs has been lowered by 1⅜ in. although there has been no reduction in the amount of headroom. In addition to the "VV" type windshields having an improved rubber water seal and increased width of the rear windows, all bodies on both chassis are fitted with the remote type of door latch control, the operating handle being located several inches below the glass and in approximately the center of the door. The door pull fittings are integral with the garnish mouldings while exterior bar type handles of new design and more easily operated are employed. A special feature on the coupes and roadster models is the spring hinges which open the rear deck when the key is turned, the latter also fitting the transmission lock and on the closed models, the doors.

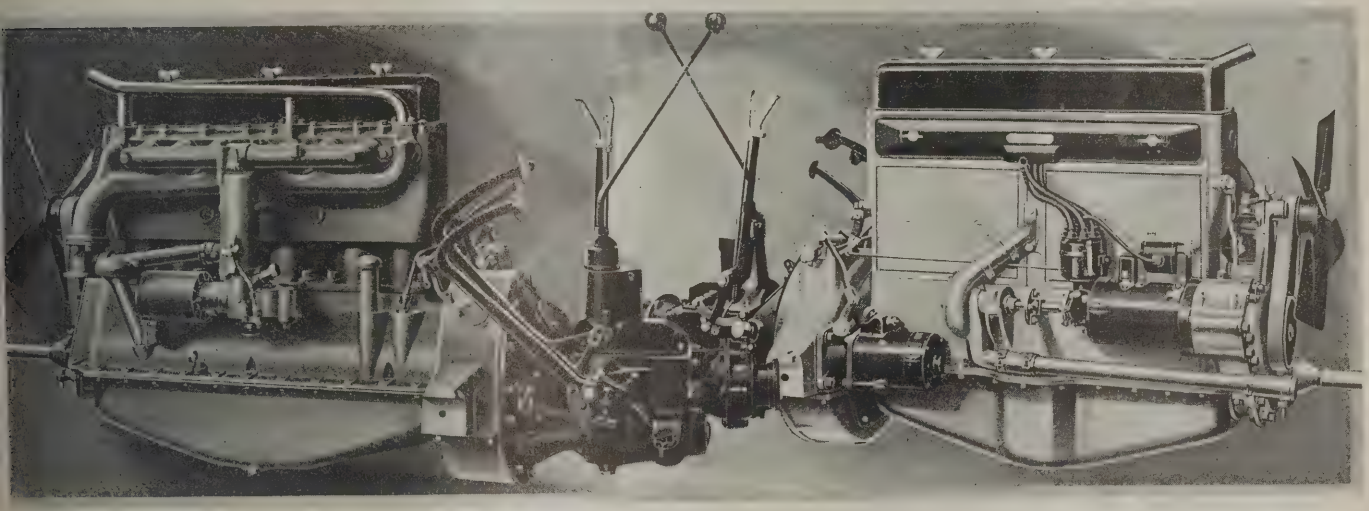
Headlamps of new type allowing raising or lowering of the light beams for general or traffic driving and controlled by a lever at the center of the steering wheel, are provided on the new cars.

Details of the steering wheel now used on the Buick models

Enlarged Cylinder Bores

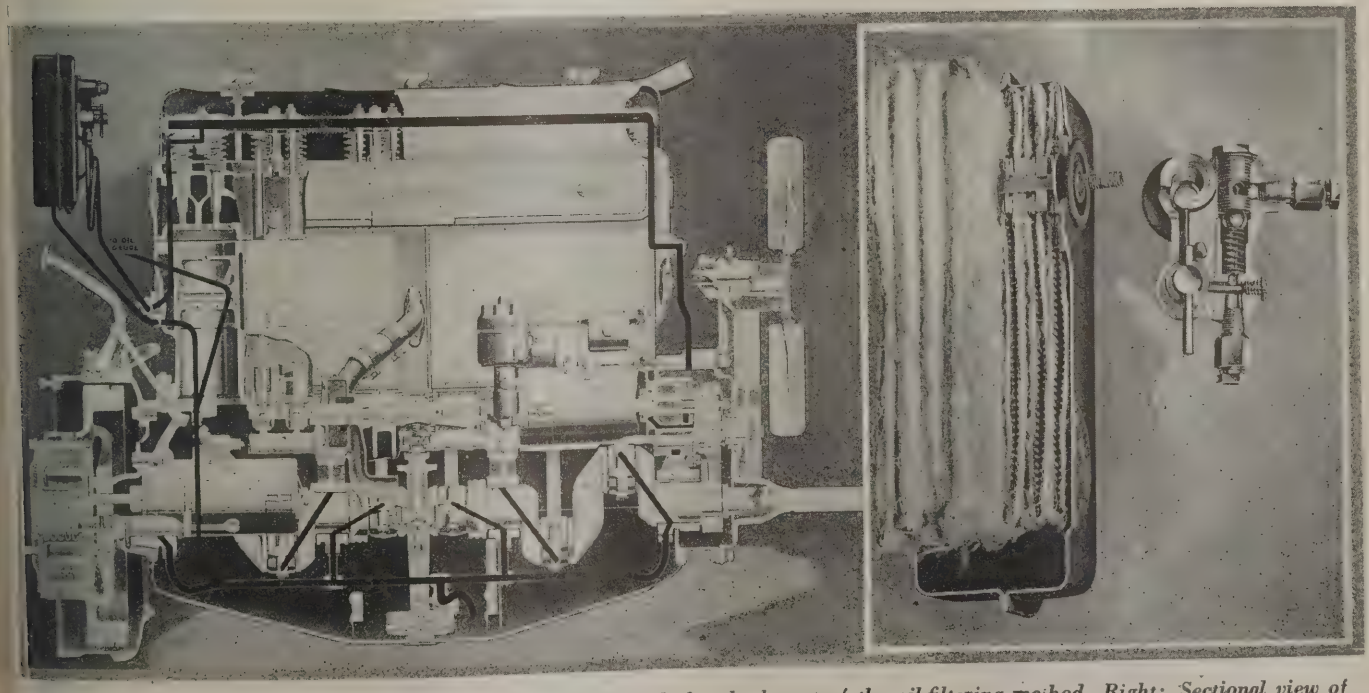
Bulbs employing two filaments, each being of the same candlepower, special lenses and reflectors are used in the new lamps. Although the bulbs are so designed that they cannot be assembled in the wrong manner in the headlamps, a regular standard bulb providing only "bright" light may be used if bulbs of the two-filament type are not available for replacement. To eliminate the necessity of left and right headlamps and to simplify adjustments, the lamps are mounted at the center of their base on the reinforced channel extending across the front of the car. An outside focusing device and improvements in the door mounting are included in the new lamps.

Enlarging the cylinder bores by ⅛ in. and improved carburetion has increased the horsepower from 51 to 60 at 2800 r.p.m. on the Standard Six engines and from 65 to 76 also at 2800 r.p.m. on the Master Six, while the maximum torque of the smaller engine is now 14 ft. lbs. instead of 120 and on the larger powerplant is 179 ft. lbs. instead of 160.



As the water pump no longer has to drive the former single unit type electrical system, a smaller case-hardened shaft, ground to reduce wear, is used while one packing gland only is now necessary. Driven through two universal joints from the end of the generator the pump is mounted on a rigid bracket integral with the upper half of the crankcase.

Providing oil grooves to the outside diameter of the valve lifters which feed lubricant through an oil hole in the wall of the lifter, increasing the width of the valve rollers from ⅜ in. to $\frac{7}{16}$ in., using



Some Views Showing Buick Changes

Buick Master Six Models. Top to bottom: 4-passenger Sport Touring; 2-passenger Sport Roadster, and 2-door Sedan

a small radius on the corner of the roller, adding four solid coils at the bottom of the valve springs and case-hardening the rocker arm shafts, has insured longer life of the valve mechanism. Made of 25 per cent heavier stock so as to provide greater rigidity and thereby prevent oil leaks, the push rod covers are provided with copper-asbestos washers under the cover screws as a further guard against possible oil leakage. To provide sufficient cooling for the larger engines, the fan on the Standard Six has been increased in diameter from 16 in. to 17 in. and on the Master model the fan blades are considerably wider, while to provide better ventilation, the engine side pans have been made deeper at the rear. In line with these changes, the diameter of the exhaust pipes on both models are increased in diameter, the pipe of the smaller engine now being 2 in. and the larger 2¼ in., while the inner tube of the mufflers are made in one piece and with one seam for greater strength.

Virtually everything has been done to prevent foreign matter entering the engines from any source and several thousands of miles are claimed to be added to the life of the engines by the fitting of an oil filter, air cleaner and gasoline strainer. Mounted on the dash above the right side of the engine, the oil filter consists of filtering cloths and metal screens carried inside a metal case and at car speeds over 20 m.h.p. all the oil in the crankcase is cleaned every 5 min. Taken from the oil system at the rear of the engine, the lubricant passes through the filter to the rocker arm bearings. The possible clogging of the filter will in no way interfere with the regular oiling system as a by-pass will automatically direct the oil to the rocker arm bearings under this condition. A pet cock is provided to show when the oil flow indicates the interior of the filter should be replaced with a new filtering cartridge, the latter being obtainable at nominal cost. A centrifugal type air cleaner having no wearing parts and fitted with a small detachable dust container is connected directly with the carbureter. Provided with a detachable glass bowl making the water and dirt accumulation plainly visible, the fuel passes through a metallic screen in the gasoline strainer which is placed directly below the vacuum tank, between it and the carbureter. To provide more positive lubrication and to assist in the filtration, the Standard Six oil pump has been changed to provide increased pressure. Pipes from the main bearings are enlarged in diameter from ⅜ in. to ½ in. and the relief valve altered to the same design as that on the Master model.

Coinciding with the design of the smaller engine, the upper half of the crankcase on the Master Six has been changed from aluminum to cast iron and a separate detachable flywheel housing having the engine arms cast integral is employed on the new model. This design allows more rigid support for the crankshaft and makes for easier servicing.

On both models, new calibration of the carbureters and several changes in the dimensions of the interior passages, valves and jets have been made while minor alterations are incorporated in the heat damper and dash pot plunger. To allow better installation of the air cleaner, the heat outlet from the carbureter is now located in the lower part of the riser body making it unnecessary to disturb the heat pipe when removing the carbureter from the riser. On the larger engine, the diameter of the intake manifold has been increased from 1⅝ in. to 1 7/16 in.

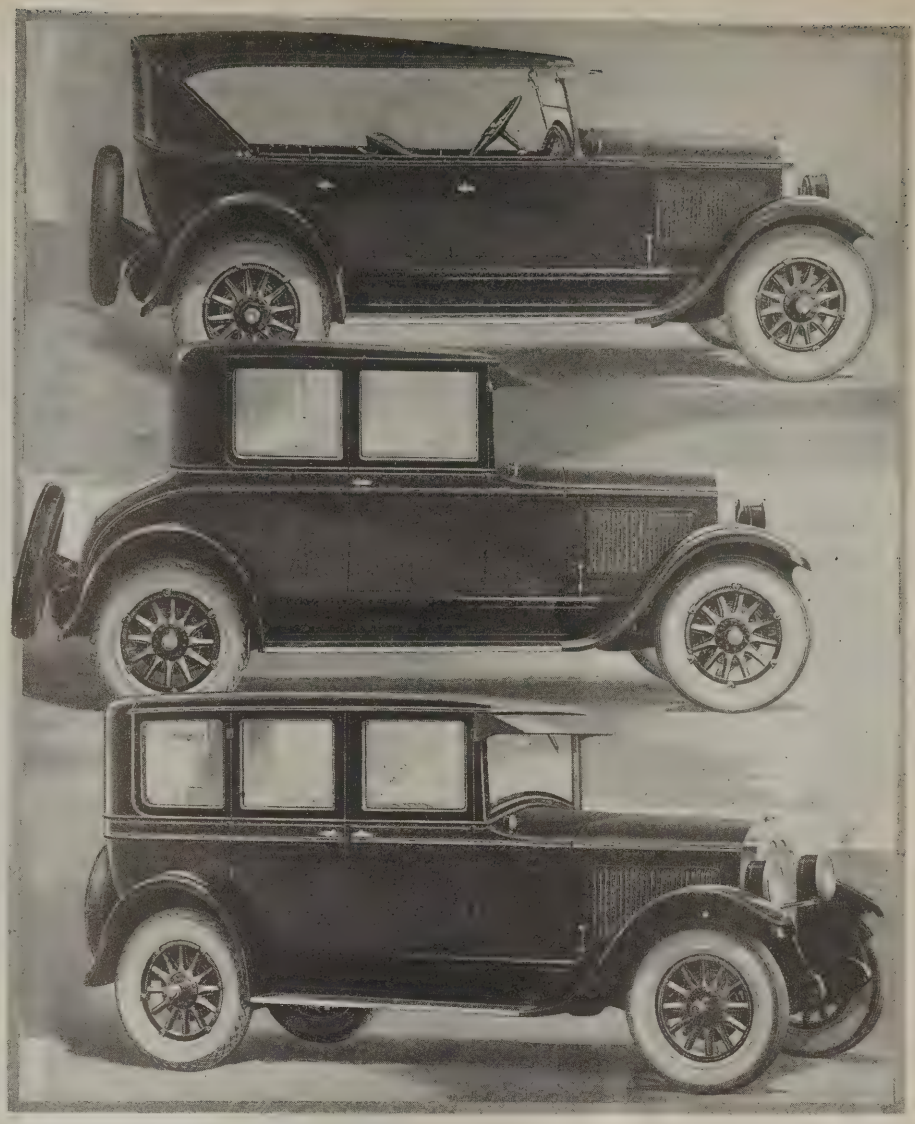
Starters Interchangeable

Supplanting the single-unit type generator-starter which has been a Buick feature for over 10 years, the new models are equipped with a specially developed two-unit Delco electrical system. Starters on both models are interchangeable as are the generators, the former being located in an accessible position on the right side of the engine and the latter being driven by the timing gears and mounted on the same side as the starter.

The starting motor, known by model designation No. 316 is of the positive mechanical type. Pressing down on the starter pedal which is mounted on the top of the flywheel housing, pushes the gears into mesh with the teeth on the flywheel before the current in introduced. After the gears are in mesh, a contact is formed with the switch on the starting motor, this completing the circuit and providing a fast cranking of the engine and a quick break-away torque. An over-running clutch in the starting gear assembly allows the motor to run ahead when the engine starts. Cut on a steel ring which is shrunk on the flywheel and secured by dowel pins, the teeth on the starter flywheel gear are chamfered for easy and silent engagement. To allow for easy service work in the event of the starter teeth being damaged, it is possible to pry the old ring gear off the flywheel after the dowel pins have been drilled out. Incorporating simplified leverages, the starting pinion can in an emergency be pulled back out of mesh with the flywheel in the event of a jam, by pulling backwards on the starter pedal.

Smaller and lighter in weight than used on previous models, the generator carries the ignition distributor directly over the rear armature bearing. The weatherproof distributor coil and the cut-out relay are also carried on the top of the generator. Brush mountings have been improved to eliminate squeaks and the commutator and brushes have been designed so as to have much longer life.

The model designation of the generator is No. 317 while the combination switch on the Standard Six is known as No. 1259 and the Master Switch No. 1288.



Clutch Redesigned

The multiple dry-disk clutch has been entirely redesigned insuring better balance, smoother operation and longer life and is carried in a special flange on the flywheel itself. In place of a bronze bushing, a New Departure ball bearing packed in grease and sealed, and located in the rear end of the crankshaft now carries the forward end of the clutch shaft, helping in the alignment and fitting of the clutch shaft. Driven through the teeth cut in the outer diameter which mesh with teeth cut in a special flange on the flywheel, the drive disks provide over 200 per cent more wearing surface at this point than on previous models. The driven disks being made from special high-carbon steel have the teeth cut on the inner diameter and working with the teeth on the clutch hub give considerably more wearing surface than before. Clutches on both models employ ten facings developed of special material and having larger outside diameter and wider face to give longer life. On the smaller car, these facings are ⅛ in. thick and on the larger edition 5/32 in. thick. Made of heat treated high carbon steel, the clutch hub is splined for both the clutch shaft and for the driven disks. The rear clutch plate and release spring carrier are now made of one piece to prevent oil leakage into the clutch.

Bolted to the flywheel housing, the transmission case has been made more rigid and the hand inspection hole reduced in size to increase the strength of the unit. By using different steel and heat treatment, the transmission gears are increased in hardness and toughness, and by widening the face of the gears. Strength and longer wearing surface has been added. An oil baffle cast in the transmission case cover, eliminates the possibility of oil leaking past the control lever opening. Offsetting the hand brake lever forward and raising the control lever ball to a more accessible position, allows the right forward seat on the two-door sedans to be folded all the way forward. For easier operation, the clutch pedal is 1 in. longer than previously.

Considerable difference exists in the changes which have been made on the rear axles of the two cars. The axle shafts on the three-quarter floating Standard Six axle have been increased in diameter for strength, while the inner ends of these shafts are splined instead of square to insure a better fit between the shaft and differential side gear. To reduce the tendency to whip at high speed, the long portion of the pinion shaft has been increased in diameter, while the size and capacity of the bearings carrying this shaft have also correspondingly been increased.

New Departure, single row type, replace the former double row bearings carrying the rear wheels on the Master Six full floating rear axles. On the 120 in. wheelbase chassis only, the differential bearings have been increased in size, corresponding with those employed on the 128 in. chassis. The pinion bearing is also larger. Although the dimensions of the axle shafts remain unchanged, additional strength has been secured by forming the shafts of manganese instead of carbon steel previously employed.

Three of the Buick Standard Six Models. Top to bottom: 5-passenger touring; 4-passenger Coupe and 5-passenger Sedan

Common to both axles, the spring seats are changed to use a drop forged hardened steel thrust block providing two and one-half times more wearing surface on each side. Grit and dirt has been eliminated from this point by grinding the contact surfaces enabling a closer fit to be made and insuring longer life thereby. For convenience in raising the rear wheel from the ground, the jack rest construction has been altered to allow a greater purchase and eliminate the possibility of the jack slipping.

Four-wheel external contracting brakes are the same design and principle as used on the previous model except that the operating mechanism at the bands is reversed. This arrangement gives more effective braking with lighter pedal pressure and allows one long piece of brake lining to be used on each drum. Due to the fulcrum of the brake operating mechanism now being at the long end of the band, the latter moves in the same direction as the drum while the car is traveling ahead and the brake pedal is operated. This increases the efficiency of the brakes, as the rotation of the drum helps to set the brakes, making them easier to operate and reducing the tendency to squeak. With this design, the wear on the facings is the same at the brake anchor as at the ends of the band and filling in the space with brake lining under the anchor clips has added 41 sq. ins. of extra breaking surface. One brake lever pin instead of two is used in the operating brake lever at the brake end, while the adjustment for the band clearance is simplified. By using a nut at each end of the brake adjusting, each nut controls the clearance for its end of the band independently of the other end.

Shields fastened to the brake drum disks with screws, cover the inner edge of the brake drums and bands, preventing water and dirt thrown up from the wheels entering between the lining and the drum. Another shield performing similar duty is part of the band clips and covers the space be-

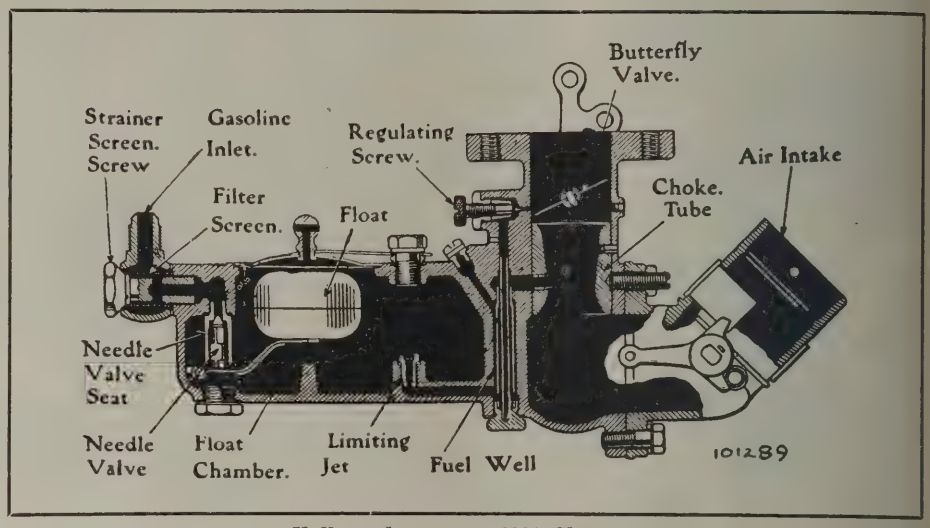
Chokes When Accelerating

Q.—A customer of mine came in the other day to have me overhaul his car. It is a Chevrolet Superior model that was new in 1923 and has the new model Holley carbureter. He says it has given trouble ever since he had it due to poor acceleration and using too much gasoline. When the throttle is quickly opened the engine seems to knock in two cylinders and kicks back, then takes hold and picks up to the speed indicated by the throttle opening. He says he gets 12 miles to a gallon of gasoline. Other Holley carbureters of the same type have been tried without improving the operation.

I ground the valves, adjusted bearings, lined brakes, cleaned out carbureter and checked gasoline level which stands at ½-inch below top of float chamber. Also examined vacuum tank, cleaned out gas line, checked exhaust valves, which close when piston is 1/16-inch down from top dead center. Checked valve clearance at .005 inches and timed ignition. I found the two front inlet valves had more clearance around the stems than the other two, but did not put in new valves. Also cut off inlet manifold and raised carbureter 6 inches and checked for air leak. Compression is good but after trying car on the road there was no improvement. Then gave valves a clearance of .020 inches and acceleration was better but not right. Henry Hier, Rushville, Ind.



We are showing an illustration of the Holley carbureter for reference. Would recommend that you remove the cover of the float chamber and see that the gasoline level is lower than at present. The recommended level is 9/16 from the top of float chamber and you can increase this distance by bending the float down. A local Chevrolet service man recommends in some cases having the level as much as 3/4 inches below the top of float chamber.

The reason for this is that with a high level for the gasoline the carbureter loads up and then when an attempt is made to accelerate it chokes and will not pick up properly. We also believe that improved operation could be obtained by using a manifold which combines a hot spot. If the clearance around the valve stems is excessive improved operation might be obtained by reaming out and putting in oversize valves or by using a valve packing of some sort.

THE CAMSHAFT BEARING SLIPPED

We have just read your question on page 23 of the May 7, 1925, issue of MOTOR AGE about a so-called valve knock in a Jewett engine. Wish to say we have experienced the same difficulty in a Jewett belonging to one of the officials of our company. We found this knock to be due to the fact that the rear camshaft bearing had slipped forward sufficiently to allow the last push rod to come in contact with it causing a knock very similar to that of a tappet noise. By loosening the set screw that holds this bearing and driving it back into place our knock was eliminated. The Indian Territory Illuminating Oil Company, M. H. Snoddy, Garage Department, Bartlesville, Okla.

MOTOR AGE is very glad to have this letter which gives a very plausible reason for a condition of this sort.

Holly carbureter on 1923 Chevrolet

The Readers' Clearing House

THIS department is conducted to assist dealers and maintenance station executives in the solution of their problems.

All questions are answered direct by letter, so the name and address should be given in full. This saves waiting for the answer to be published, which sometimes occurs several weeks late, depending upon the space available.

Readers' names will not be published with articles, if a request to this effect is received with the letter.

Inquiries not of general interest will be answered by personal letter only. Emergency questions will be replied to by letter or telegram.

Also state whether a permanent file of MOTOR AGE is kept, for many times inquiries of an identical nature have been made and these are answered by reference to previous issues.

Addresses of business firms will not be published in this department but will be supplied by letter.

Technical questions answered by B. M. Ikert and A. H. Packer; Legal, by Wellington Gustin; Paint, by G. King Franklin; Architectural, by Tom Wilder; Tires, by a Practical Tire Man; General Business questions, by MOTOR AGE organization in conference.

Removing Crankshaft Play

Q—I have an easy way of taking out the end play in a Ford crankshaft. I first remove the small timing gears on the crankshaft and put a rear axle felt retaining steel washer on the shaft. I then put the gear back on and put a groove or a center punch mark around the front of the gear to keep it from slipping. I have found this method gives service for almost a year.

I have in mind one car having a cubic inch piston displacement of 250 inches which develops more power than a second car which has a piston displacement of 290 cubic inches.

Suppose these two cars have equal weight. Which one will have more pulling power when the car is running up hill at 15 miles per hour. I always thought the actual horse power was determined by the amount of fuel it uses or the total cubic inch piston displacement.—Oklahom Subscriber.

The piston displacement is not a measure of the power that the engine can develop for the piston displacement is figured on the basis of two revolutions of the engine, that is, allowing each cylinder to fire once. From this it can be seen that if one engine turns twice as fast as another it will have a chance to burn twice as much fuel assuming that the two engines are the same size. There are however, so many factors that enter into engine design and affect the power that there is no formula or measurement which will enable us to say which one will climb a hill better or which one will pull better. This can be determined by trying out the car and in the case of the engine it can be determined if a horse power and torque test is made.

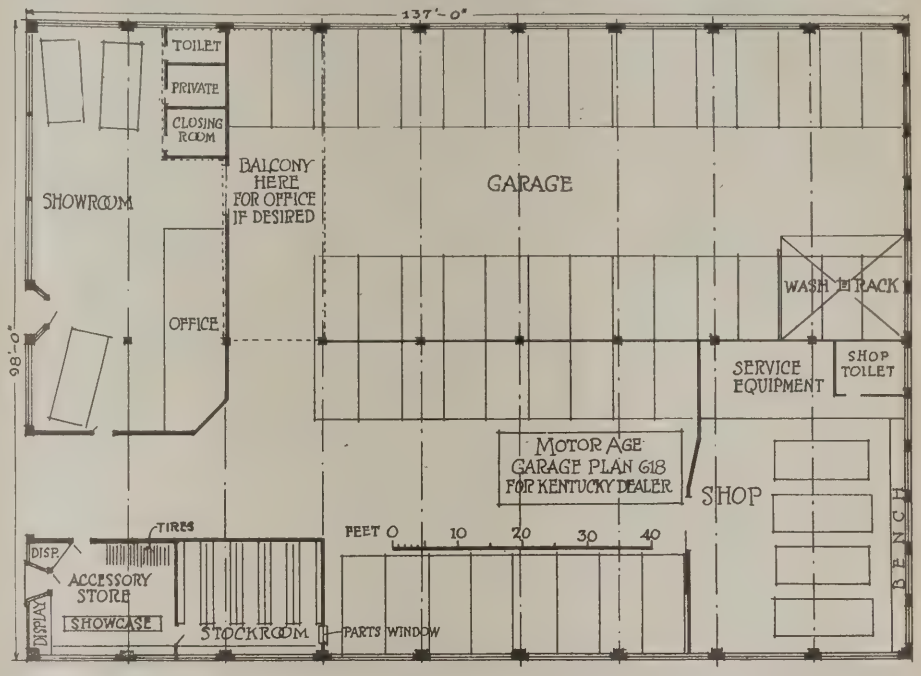
Assuming that one engine is designed as well as another, the power will usually be proportional to the amount of fuel burned.

Planning Your New Building

By TOM WILDER

The READERS CLEARING HOUSE

Floor Space Well Proportioned Is the Prime Feature of a Storage Garage



Q.—We are encosing a rough sketch of a plot of ground fronting 98 feet on the street and running back 137 feet to an alley, there being an alley on each side of this plot. The plot fronting 54 feet on the street has a two-story building running back 85 feet, and it was our first intention to build a garage upon this ground and try to save the wall that is already there as designated by the red line, but we cannot figure out how we can be able to store more than about 18 or 19 cars after making provisions for show room for new cars, stock room, office space, etc., and a shop and wash rack. Want shop to accommodate about four men.

If you can give us plan whereby we can get more storage space we would thank you to do so. You will note the sketch shows another piece of ground fronting 44 ft. on the street and running back 137 ft. to the alley and we believe that this ground may be bought at a reasonable figure.

After studying the proposition of building a garage on your 54-foot lot, we have come to the same conclusion that you have, namely, that not more than 18 or 19 cars could be stored with suitable provision for other departments. With this is mind we have gone ahead on the 98-foot layout since there is no alternative except to build two stories. Building a two-story building, however, on a 54-foot lot would not be satisfactory, as it would necessitate elevator communication and we are of the opinion that the cost of the elevator, the cost of maintenance and the inconvenience would not make up for the added cost of the land and the convenience of the building all on one floor. As to the difference in cost of the two buildings, there would be about the same difference as there is in the area, the larger one being a little less in proportion since there would be more unfinished storage space in proportion to the total area in this one than the smaller.

If built here the larger building would cost in the neighborhood of $2.50 to $3 per square foot and this would figure around $35,000. Of course, we do not know the condition of labor in your market, but the price with you should not be any greater than this. Your best course is to get some figures from local contractors and then you will know definitely. One contractor will often figure 50 per cent higher on the same job than another, so you can see our figures do not mean much.

In this plan we have devoted as much space as possible to storage and since you are featuring storage, it is probably advisable to make your entrance in the front of the building. If the alleys are ample in size and not congested, they might be used, one as an entrance and the other as an exit, making the doorways on opposite sides of the building, but we would hardly advise this in a storage garage as the accessibility of the entrance makes considerable difference to your customers.

Separate the small cars and store them on one side of the aisle to gain aisle width

We have shown the general office in the corner of the showroom, but if more office space is desired, or larger showroom space, a balcony might be used as suggested in the drawing. In this case, the front of the building including the showroom and office space will have to be built up higher in order to get the added headroom necessary for the balcony.

The windows along the side of the building should have their sills about 8 feet from the floor and extend from there to the point where the trusses meet the sidewalk or about 4 feet. With cars stored along the side walls, the lower part would be of no value in admitting light and the cost of the glass might just as well be saved. Skylights must be used to get light into the center part of the building. One will be absolutely necessary over the balcony, if it is used.

LEGAL QUESTIONS ANSWERED

By WELLINGTON GUSTIN

of the Chicago Bar

CAN COLLECT FOR STORAGE

Q—I have in my possession a Buick Six touring car that was towed in for some necessary repairs on August 20, 1924. The repairs were made and the owner notified that the car was finished, also that space was valuable and was renting for $5 per month. I have since sent him no less than four statements and to date have not heard from him. How long must I hold the car before I can sell same to cover, repair parts, labor and storage? The parts and labor came to $27.57 and the job was completed on August 3, 1924. The owner is a large real estate owner in a neighboring farm community, but the car is about a 1918 and has seen some hard knocks. Can he be made to pay the bill or will I have to sell the car to get my pay? How would you proceed?—Jesse Egly, Egly's Garage, Forrest, Ill.

Where the garagekeeper repairs a car and notifies the owner that same is ready for delivery and that he expects storage charges for keeping he may charge a reasonable rental for storage together with his charges. Now you have a lien on the car in question, which you may foreclose according to the statute, or hold, at your pleasure. You may start foreclosure proceedings at any time.

If the customer is worth a judgment it would appear a simple matter to bring suit for the amount of your claim, and then when judgment is obtained you may levy upon and sell enough property to fully satisfy your judgment and court costs.

Clearing Up Electrical

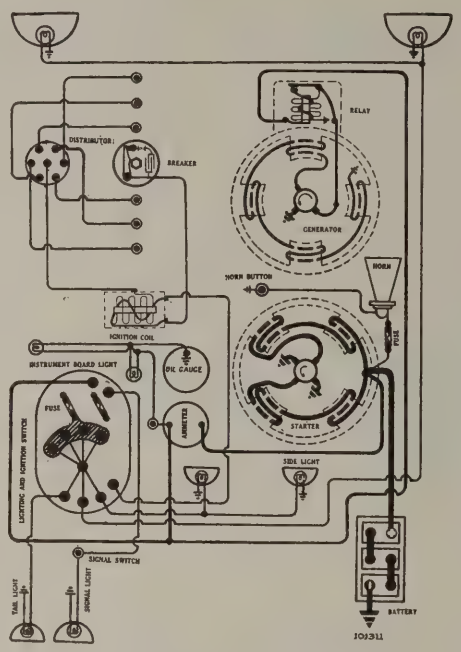
EDITED BY A. H. PACKER

Ordinary Generator Not Suitable for C. P. Charging

Q.—Do you know if Thomas Edison is going to put a radio on the market? Also give address of some Edison office or factory.

Thomas A. Edison, Inc., is located at West Orange, N. J. with offices in both Chicago and New York, but we have no information as to whether this concern is going to put a radio on the market or not.

Q.—Why is it that a constant potential charging outfit can charge a battery in eight hours without damage?



Damage in battery charging occurs only when a battery is overheated or when it is charged so fast that the electrolyte boils violently and disturbs the active material and loosens it from the plates. Therefore the charging rate can be very high if the battery does not gas or overheat. When a battery has been discharged and has not been allowed to stay in a discharged condition until hard sulphate has formed on the plates it can be charged at a rate of 50, 100, 150 amperes or even higher for a short time.

A battery while in a discharged condition and while receiving charging current will show a low voltage, approximately 6 while the same battery when fully charged and with charging current still flowing into it will show a voltage of about 7.5. For this reason if a generator can maintain a constant voltage of about 7.5 or slightly higher there will be a difference of 1.5 volts when operating a discharged battery and practically no difference in voltage when charging a fully charged battery. Therefore as the battery becomes charged and its voltage rises the charging current will be automatically reduced.

This does not mean of course that a constant potential system can be operated without any attention, for in nearly every case the battery will be to some slight extent sulphated, and may have to be disconnected for a time to prevent overheating. This does explain however, why the 8 hour charging is practicable for the heavy amperage which the battery can take at first materially cuts down the time required.

Q.—If I use a 32 volt dynamo and regulate the amperage according to the number of batteries connected and the amount the battery has in it from time to time and connect them in parallel the same as on a constant potential system what would be the difference between this and the constant potential systems which are being sold now?

The difference is in the design of the armature, brushes and other circuits of the generator which must carry the current. For example we might have a machine capable of giving out 25 amperes at 32 volts and another machine capable of giving out 100 amperes at 8 volts. The latter type would be known as a constant potential machine for its voltage is about

Present Rickenbacker electrical circuits

right for charging one battery. You could reduce the voltage of a 32-volt generator so as to charge the batteries in parallel but you would be limited to 25 amperes and accordingly would accomplish nothing.

If you tried to take more than 25 amperes from this machine you would find that the brushes would overheat and that the armature would overheat. This is due to the use of small brushes and small wires in the armature as compared with a constant potential type of machine.

Q.—Has any company got this constant potential type of machine patented?—H. L. Ludewig, Park Garage, Pittsville, Wis.

The general principle of building a generator to supply heavy current at low voltage is not new and we do not believe that there is any basic patent covering this. There may however be patents covering various systems of voltage control.

LAZY GENERATOR—TOO MUCH OIL

Q.—Why is it that a generator on a Ford car will not cut in and start to charge until you speed up the engine to very high speed after it has been standing for some time?—D. C. Slick, The East Granite City Garage, Granite City, Ill.

This condition usually occurs when too much oil has been put into the rear bearing of the generator. The oil gets on to the commutator and soaks into the brushes and forms an insulating film. It then requires either high speed or running for a time until the brushes heat up and the oil thins out so that current gets through readily. The remedy is to install a new set of brushes and then be very careful not to over oil the generator.

Two Ways of Recharging Magneto Magnets

Q.—I am looking for information in regard to a Ford magnet recharger which I purchased second hand. This charger has four quart jars which are filled with liquid and there is one positive and one negative plate in each jar. There are wires running from one-half of the negative plates and one of the positive plates to a 110 volt line and two wires lead from the other half of the plates to the car. The one coming direct from the plate goes to the magneto post which is located on top of the flywheel housing. Can you advise the nature of the liquid that is used in these jars.—Marker's garage, 730 N. Jefferson street, Muncie, Ind.

This is known as an electrolytic rectifier and uses a saturated solution of ammonium phosphate.

Q.—We sent the rectifier to an electrical service station and they returned it and said that could not repair it. Can you advise where this charger can be repaired as we cannot tell the make of it.

Devices of this sort have been used with alternating current for the purpose of changing it to direct and also to cut down the voltage. However if you have four or five good six-volt batteries in your shop at any one time you can recharge the magnets in the Ford magneto without bothering with either an alternating current or with a rectifier. From time to time we publish instructions as to how this should be done and we also have these instructions in typewritten form. We are accordingly mailing you a copy and believe that if you study them carefully you will find that the process of recharging is very simple. It can be done in 15 or 20 minutes if you have a compass and four or five batteries.

POOR CARBURETION SOOTS THE PLUGS

Q.—We have been having trouble with a 1916 model Franklin six and a 1924 model Ford. These cars get dry soot on the plugs. The Franklin misses on No. 1 and 5 in about 20 miles and the Ford behaves about the same way. We have checked up the electrical system and replaced practically all parts on the Ford and have put in new rings, but this did not overcome the condition.—Leonard Johnson, Walker Garage, Revere, Mo.

We do not believe this is a case of oil getting into the combustion chamber. It appears to be trouble with the carbuetion. Since 1916 the quality of the fuel has changed so that it would be advisable to install a new type manifold and carburetor which can be obtained through any authorized Franklin dealer. On the Ford car, we would recommend the installation of a hot spot manifold.

WIRING OF 1925 RICKENBACKER SIX

Q.—Supply wiring diagram of the 1924 and 1925 Rickenbacker six.—D. C. Slick, The East Granite City Garage, Granite City, Ill.

The wiring diagram is published at the top of this page in accordance with your request.

Trouble With Bill Fixit

The READERS CLEARING HOUSE

Simple Wiring for 1918 Maxwell

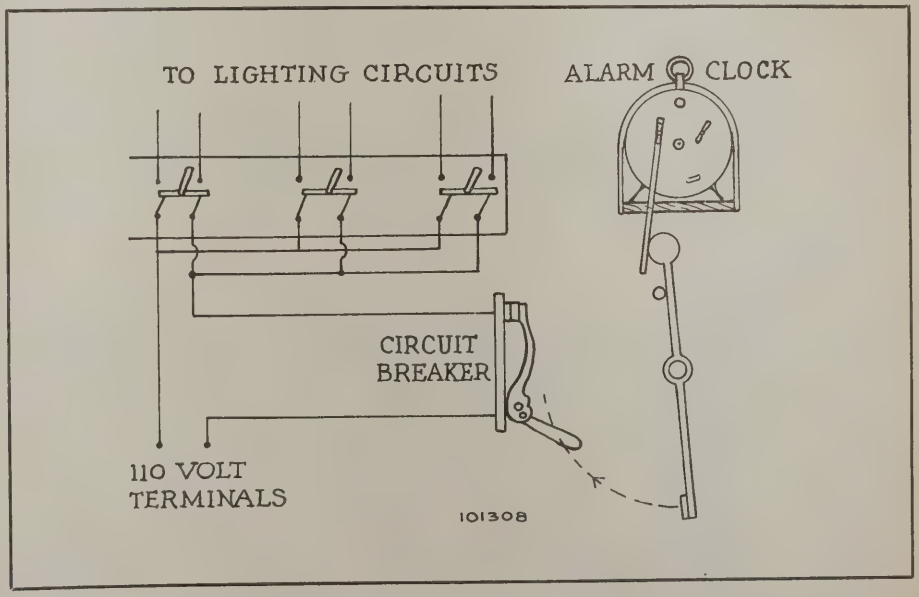
Q.—Supply wiring diagram for installing simple regulating scheme on a 1918 or 1919 Maxwell as printed on page 26 of the June 18th, 1925 issue of MOTOR AGE.—D. C. Slick, The East Granite City Garage, Granite City, Ill.

At the time of writing the article to which you referred we had merely made a pencil sketch for the MOTOR AGE subscriber, Sidney Topness, of Taylors Falls, Minn. There is so much interest in this old electrical system however, that we have decided to publish the diagram in question. We are also sending you a copy by letter. In the diagram we have shown the old Maxwell fuse block and ignition switch. The ammeter, cutout switch and two gang lighting switch used for regulation have been added, and the diagram shows the method of wiring up these units.

The resistance on the back of the lighting switch which is used for a regulator might be the regulating resistance taken from the old system. If this is not in condition or is not available then iron wire could be used with twice as much wire in one coil as in the other. The operation of either button or of both buttons at the same time will give four different resistance values in the field circuit, so that the current may be controlled in proportion to the car speed. This system of regulation while simple and not likely to get out of order, of course requires some attention from the driver. If, with both buttons pulled out the charging current is still too high, then it means that more resistance wire or a greater length of wire should be used.

A standard cutout and switch replace the Maxwell regulator

Alarm Clock to Turn Off Show Room Lights



Q.—I would like to have some information on how to cut the salesroom lights off with an alarm clock. If there is some way this could be done. I would sure appreciate it. If this will be any benefit to you, there are about 12 switches all operating different lights but I figure on cutting the current off from the whole switch board at once. The current is 110 volts, 50 cycle A.C.—Long Beach Subscriber.

If the circuits in your salesroom are fused, we believe it would be advisable to either replace the fuse box with a circuit breaker or else install a circuit breaker in conjunction with the fuse box. The service department of the company which supplies your power can probably recommend a suitable circuit breaker.

Most of these devices are designed to open when a short circuit occurs and are operated by the heavy current flowing. The circuit breaker is then reset by means of a handle which is usually pulled down. On the other hand the circuit breaker may be operated by hand if the handle is pushed up. We have not shown 12 switches, but have indicated three and you would merely extend the circuit for your purpose.

We have also shown an alarm clock with the winding handle equipped with an extension. We have also shown a lever pivoted and with a weight at its upper end, it being very nearly balanced and a pin being used to keep the weight from swinging down. In operating the device the alarm clock would be wound up until the extension of the handle is in approximately the position shown. The operation of the clock permits the handle to unwind, so you would have to figure which way the handle is going to turn before you would lay out the whole apparatus.

If in the illustration shown the handle will unwind to the left or counter clockwise, it will push the weight over center, moving it to the right, and the lower end of the weight lever will swing up and strike the handle of the circuit breaker causing it to trip and shutting off the lights. It will be necessary to mount the alarm clock on a suitable shelf and hold it down by means of a metal strap so that the clock would not be tipped over when the alarm operates.

This shuts off the juice when the folks have gone home

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

Some Suggestions When Installing a Fixed Price System

NOT long ago the owner of an automotive repair shop told us that flat rate was all right for the shop working on one make of car, but that you could not apply fixed prices for repair work in the shop catering to work on practically every make of car.

A statement such as the owner of this shop made might have been all right a few years ago before the flat rate system was as fully worked out as it now is.

Flat rate has proved many times that it will work in any kind of shop, even the small town dealer who has to make his living repairing automotive vehicles and who naturally cannot concentrate his work on any particular make of car is successfully using flat rate in many localities today.

If the small town dealer's competitor for example, does a job of regrinding valves, cleaning carbon and tuning engine for a fixed price of $10.50, such a dealer then must come mighty close to that figure. If the competitor requires four hours for the job, then he too must do the job somewhere around the scheduled four hours.

It obviously is wrong for the dealer to have a mechanic around who is a slow worker and likes to tinker around a car, thus handing in a time card with eight hours marked up for the job. The customer is the one who gets the wrong end of the deal in this case.

We have long maintained that the so much per hour rate of charging for automotive repair work is wrong, unless it is for operations on which it is difficult to place a flat price such as where parts are "frozen". Even then it is perfectly possible to have a fixed price under such conditions, because many service stations and shops in doing work on steering knuckles for example, have a definite price on such work when the parts are in normal shape and also a definite price when such parts are rusted or frozen and require considerable more time for the work.

To those contemplating the establishment of a flat rate system a few words of advice are given.

1. The first thing to do is to clean house. No one can apply the flat rate profitably where dirt and disorder prevail.
2. Keep records. Usually a lot of figures have to be handled before the flat rate system can be put into effect. Even though flat rate prices and time schedules are available such as in the MOTOR AGE Flat Rate Manual, time sheets and other records must be kept to check this system for revision to suit labor conditions and other local conditions.

Give Price of Parts

3. Price of parts. So far as possible the customer should be given the cost of the operation plus parts needed, if possible. Some companies have had their flat rate schedules worked out to include the price for labor and parts. It may be misleading to quote a customer a price on installing a new connecting rod when he is given the price of the labor only and later on gets quite a jar when his total bill includes a new rod.
4. The exact cost of a job is not always possible. Sometimes the work necessitates the complete tear down of an engine or other unit before an inspection can be made and the job properly diagnosed. However, there can be a definite price for the tear down and reassembly for which the customer pays in case he does not want whatever work is necessary. Most of the flat rate systems of today specify tear down and reassembly operation to which can easily be added any additional work necessary. This easily answers the frequently asked question about the impossibility of quoting a customer a flat price on a hidden operation such as ring gear and pinion work.
5. Prices will vary. Prices for certain operations on the same make of car will vary in different localities owing to the different costs of labor and working conditions. But even so many of the dealer service stations have the same price schedule on their operations from Bar Harbor, Maine to Coronado Beach, Calif.
6. Ability of average mechanic must be considered. Just what constitutes an average mechanic, we not know, but at any rate in establishing the time factor for any given operation the time must not be based on the ability of the fastest man in the shop, but rather on that of an average workman.

THINGS THAT HELP FLAT RATE
Tools, tools, tools. Always it becomes a question of having the right tool for the job. One of the things which makes flat rate efficient and profitable is having all the necessary tools and equipment to do specific things

MOTOR AGE'S FLAT RATE FORUM

No. 24

OLDSMOBILE MODEL 30 FLAT RATES FOR BEARINGS, CRANKCASE, CYLINDER HEAD, CRANKSHAFT, CAMSHAFT AND GEARS

Manufacturer's Official Designation		Time
M-2, 1	Install complete set of main bearings	4 hrs. 15 min.
M-2, 2	Install new crankshaft thrust washer	2 hrs. 00 min.
M-2, 3	Install new front main bearing	3 hrs. 15 min.
M-2, 4	Install new crankshaft rear bearing cap cork	1 hr. 45 min.
M-2, 5	Install either new rear or center main bearing	1 hr. 45 min.

M-4, 1	Install new flywheel	4 hrs. 00 min.
M-5, 1	Install new set of timing gears	3 hrs. 45 min.

EDITORIAL

Trade in the Quake Zone

RECENT earthquake damage in California is not expected by the trade of that section to seriously effect automotive sales. That sounds cheerful and reasonable. While local disasters in this country have always demoralized business temporarily and rendered the people momentarily stunned they have been followed usually by periods of constructive, unprecedented progress.

The disaster's challenge to American enterprise has always been squarely met, with the result that such visitations have only planted the seed of yet greater accomplishments—and yet greater cities. Chicago's fire in 1871 was only the signal for an upbuilding spirit such as Chicago had never known before. The building of a greater Galveston came directly on the heels of the Galveston flood of 25 years ago. San Francisco's earthquake and fire of 1906 touched the spring that put constructive effort in high speed.

What disaster does do is put the agencies of cooperation and determination on their mettle. It brings the people of a community into closer fellowship—and where such disasters have been in this county they have been followed by a better social and business status all around. No one need worry about the future of the automobile trade in Santa Barbara. Reconstruction will release a tremendous flood of money, giving profitable employment to many buyers, and reconstruction will put that city in a vastly improved position as a city and with respect to business opportunity.

Bus vs Private Ownership

JUDGING by occasional expressions in recent gatherings of bus operators there is a feeling in certain quarters of this industry that private automobile ownership competes most formidably with the bus. One bus operator declared not long ago that private automobile ownership is much more to be feared by the bus industry than the steam and electric lines.

There is not much danger of conflict between the bus industry and the automobile trade because we feel convinced that the great majority of bus operators do not share in the opinion above set forth and we have seen nothing within the automobile trade to indicate anything but a fraternal feeling on the part of automobile dealers toward the bus field.

The bus man whose ambitions for his industry contemplate a great abandonment of private automobiles because of carrying service that a bus might render is simply basing his analysis upon an illusion. Business for the bus is destined to grow and we can look for the annual number of persons carried by buses to reach constantly greater proportions. More and more passenger car owners will ride in buses as bus facilities develop and expand—but that does not mean passenger cars will be junked or that there will be less passenger car driving. The bus is a public convenience and as such it will be patronized by the general public.

On the other hand the passenger car is a private convenience which no public mode of transportation can replace.

Both fields of business are as distinctive as barbershops and safety razors. Their interests are more mutual than otherwise and for common welfare their futures will demand harmonious cooperation.

American Cars Abroad

ANYONE who frequently inspects foreign magazines and newspapers is bound to observe that lately there has been a steady growth of advertising space taken by American automobile manufacturers.

These insertions tell the story of more intensified campaigning by American producers to obtain bigger business abroad. This, no doubt, will be a record year in the exportation of automobiles from our country.

Popularity of the American product in other countries rises pleasingly upward. Not only do people of other lands find certain superiorities in the American products but, as stated by a well known student of merchandising who recently studied conditions related to the industry in various parts of the world, the foreign owner is learning that replacements are more easily and certainly procured in the United States than in any other country where automobiles are manufactured.

We hope, for the good of the industry, that our manufacturers will pursue this advantage abroad for all it is worth—and there is no doubt it could be made worth much in the enlargement of American automobile output.

Buyers in foreign countries are just like buyers in this country. When purchasing a car they want assurances that getting correctional service and replacements will not be a difficult matter. The stronger these assurances can be made the better. The quicker the service can be delivered the better.

Going and Coming

WIDE-AWAKE automobile merchants keep a sharp lookout for business with the vacation tourist. Some dealers go about this phase of the work in a systematic and more or less comprehensive manner.

If there is no chance to sell the vacationist a car there might be a chance to sell accessories or maintenance.

Now—how about that same vacationist as he returns from his trip?

A long, hard motor trip might mean needed repairs, adjustments or even a new car. The motorist who started off on a long trip with an old car might come home about ripe for another buy. These are good contacts which are capable of developing new leads. And isn't the modern idea to develop as many good contacts as possible? It is contact that often changes the owner from a "suspect" into a "prospect."

Sales Volume Greater Than a Year Ago

Normal Rate of Seasonal Decline Seen in Industry

New Models Hold Center of Interest With Prices Being Lowered in Several Instances

NEW YORK, July 29.—Sales in nearly all automobile lines are showing the normal ratio of decline from the brisk business during the height of the season, but cars, trucks, tires and accessories are all being disposed of at a higher rate than at this time a year ago, a condition eminently satisfactory to the industry.

Just now the center of interest is held by new models, and the price changes that accompany them. By August many changes will have been announced and the cars will be on sale, when an opportunity will be given for a better line on just how good late summer and fall business will be. Many prospective buyers customarily wait to see the new models before buying.

In several outstanding instances prices are being lowered, but this is a condition that the industry has come to expect with the introduction of new models. It is unlikely that the reduction will seriously affect earnings of the companies, as the factories are being run on a higher plane of economy than ever before, and as a good volume of business can justly be expected to follow the attractive prices now being established. Of course a price war would result unfavorably, but only the most pessimistic see any signs of such a condition.

The fact that most of the price cuts were withheld until the spring selling season had passed is a source of considerable satisfaction, as otherwise the business of dealers would have been badly disrupted. As the situation stands now, dealers in virtually all the leading lines are in exceptionally good condition, with stocks low and old models pretty well cleared from the floors.

The new cars for the most part represent only minor changes in chassis design, which means that no expensive alterations in plant equipment were required for their production. The greatest changes have been in the bodies, and a continuation of the tendency toward brighter colors, less height, and smoother streamline effects is noted. Even the most conservative factories are giving way to what has been demonstrated to be the prevailing taste of the motoring public.

BUCKWALTER PROMOTED

CANTON, O., July 25.—T. V. Buckwalter, who has been chief engineer for the Timken Roller Bearing Company was made vice-president in charge of engineering at the July meeting of the directors of the company.

FAGEOL TRUCK PRICES CHANGE

OAKLAND, Cal., July 25.—Price changes in their line of trucks have been announced by the Fageol Motors Company simultaneously with the bringing out of a new one and a half ton truck chassis. The price of the two-ton model has been increased from $3,300 to $3,750, while the 4 and 6 ton models have been cut $150 and $350, respectively, and now list at $4,950 for the four-ton and $5,450 for the six-ton model. The new one and a half-ton truck lists at $3,150.

Michigan Expects Registration of 955,000 Cars This Year

LANSING, Mich., July 25.—Approximately 955,000 motor vehicles will be operated this year under Michigan licenses according to estimates prepared by Charles J. DeLand, secretary of state.

In spite of the 100,000 increase over last year, the license revenue will not be more than $13,000,000, or $1,000,000 below legislative estimates. To date only $11,500,000 has been received, and comparisons with other years indicate that the total will not run much higher than $13,000,000.

The state so far has ordered 960,000 sets of license plates. The original order was for 950,000, but a sudden demand for plates in Detroit was responsible for the extra 10,000 which were delivered direct to the branch office there.

The loss in revenue from the weight tax, however, will more than be made up by the gasoline tax which so far has exceeded original expectations. It is probable its total will run close to $9,000,000 as compared to the original estimate of $6,500,000.

VELIE PLANS NO CHANGE

MOLINE, Ill., July 25.—The best information here is to the effect that there will be no change in Velie models announced on August 1. It is indicated, however, that on August 23 there will be some changes in design, not classified as model changes, announced. It is known that the same chassis and four wheel brake patterns will be followed with the principal change being in the body line of a four-door sedan which will be put out to take the place of the present coach model. Production continues along the usual rate with better than 50 cars a day being turned out.

EXTRA GOODYEAR DIVIDEND

TORONTO, July 25.—In addition to the regular quarterly dividends on the prior preference and preferred stock of the Goodyear Tire and Rubber Company of Canada, Ltd., for the second quarter of the year, an additional 1¾ per cent was declared to apply on the deferred dividends on the preferred, bringing arrears down to 5½ per cent.

Tire Dealers Advised to Buy Only for 40-day Turnover

National Association Counsels Against Taking Chance of Losing When Market Turns

NEW YORK, July 28.—"Buy only for a forty-day stock turn at the outside." This is the advice which the National Tire Dealers' Association is giving its members.

"Our reasons for making this statement at this most important time," says George J. Burger, president, "are due to the fact that this industry has had four advances in a ninety-day period.

"There must be something serious in the crude rubber situation to cause these sensational advances. Rubber manufacturers have been urging their dealers to buy only for immediate requirements. Will dealers go beyond this advice and gamble on possibilities? It is far better to take a profit on a forty-day stock than to find yourself overloaded when the market goes the other way."

Discussing retail prices, Mr. Burger has written to dealers:

"You fully realize that if you had the good fortune to purchase tires before the price advance, there is no reason why you should be a philanthropist and give away the possible added profit to those who may be in need of tires.

"For fully five years the market has been going the other way. Why not try to make up for some of the lean years? When you sell tires you purchased before the advance you have to go into the market and again purchase at the newer price, so you really do not gain any real profit because you were fortunate in buying and re-selling at the new."

Louisiana Registrations Are Expected to Reach 200,000

NEW ORLEANS, July 25.—Louisiana's motor vehicle registration for the present year will almost reach 200,000, about 21,000 more than in 1924, when the registration reached a total of 178,500, including trucks and trailers, according to C. F. Bailey, motor registrar in the office of the secretary of state in Baton Rouge.

According to Mr. Bailey, up to July 15 the registration was about 185,000 and at the present rate, in the remaining five and one-half months, 15,000 more vehicles would be registered. The total collected for motor vehicle registration to July 15 and approximately $3,400,000 while for the entire year of 1924 the total was only $2,738,269.92. By the end of the year the registration fees will be close to $4,000,000.

On the basis of the foregoing figures, the 1926 registration was estimated at 210,000, but in all probability will be even greater than this estimate, which is conservative.

Dealers' Stocks of Old Style Models Are Unusually Low

Situation Believed Best in Years as Sales Have Kept up to or Ahead of Output All Season

DETROIT, July 25.—At a time when dealers' stock of old style models ordinarily are plentiful, especially when certain manufacturers are bringing out new models, this year finds the situation exactly the opposite.

In fact, certain of the larger car manufacturers, find that the stock of the 1925 models which will be the old models in the near future are down to bedrock and that this situation is the best in years. Few if any are to be found in the dealers' showrooms. This condition does not apply to any certain locality but is apparently nationwide.

Trying to find the reason for this is extremely hard. Most of the manufacturers attribute it to the continued buying which except for a slight seasonal decline has not dropped to any great extent. One reason may be that the late spring in certain sections of the country has caused the buying demand to continue, another is that the prosperity throughout the United States is greater than for the past few years and the third is that the manufacturers have used good common sense in gauging their production.

Despite the knowledge of certain of the motoring public that new models will shortly appear, one of the leading automotive executives said that this fact was not deterring them from making purchases. They, the buying public, realize he said, that the new models will not differ greatly from the old ones, and that the value they will get for their money will not be greatly different. This, coupled with their desire to own a car, has led to the stock of 1925 models in the field to be exceedingly low at this time.

Purchase of Fleetwood Body Co. by Fisher Is Announced

DETROIT, July 25.—Purchase of the Fleetwood Metal Body Company, Fleetwood, Pa., by the Fisher Body Corporation, is announced by W. A. Fisher, president of the Fisher Body Corporation. The shops will be maintained at Fleetwood under the direction of Ernst Schefera. The purchase brings about the retirement of Harry C. Urich who founded the company.

Except for a few minor changes, the policies of the Fleetwood company will be followed. It is believed that jobs calling for individuality to suit the taste as outlined by the purchaser will be completed here.

In purchasing the company, Mr. Fisher said that his company had but one object in view and that was to preserve of the finest traditions of hand-craftsmanship to be found in the United States.

Boston Department Store Sells Cars

BOSTON, July 25.—The Gilchrist Company, one of the largest department stores in Boston, has announced that it has signed a contract to sell Hudson and Essex cars in its building as a sub-dealer under the Henley-Kimball Company. The Gilchrist Company occupies a large building on Washington Street at Winter in the heart of the department store district. It is remodeling one part of the store with a private entrance on Winter place where the cars will be displayed. This is the first time that any department store has ever gone into the sale of automobiles in New England and the outcome will be watched with interest. To meet the fire laws various regulations must be obeyed and the section of the store where the cars are displayed will be made fireproof.

Boston Plans Garage For Bus and Truck Use Only

BOSTON, July 25.—Ground has been broken in Boston for what will be the first garage erected here for the sole use of buses and trucks. It will be located in the business district just on the edge of the big retail department store section on one hand and the waterfront and railroad terminals on the other. It is planned to accommodate operators of buses running between Boston and out of town places and also trucks used in long hauls. At present the big increase in bus operation has been such that it is difficult to house them near their terminals. The new garage will accommodate 400 buses and trucks.

It will be a two-story brick and concrete structure fronting 140 feet along Albany and Lehigh streets and will extend 290 feet back toward the waterfront. It will cover more than 26,000 square feet giving double that area with its two floors, and allowing for additions when business warrants it. A ramp 110 feet in length will lead from the first to the second story providing an easy grade.

Among the features will be the partitioning off of sections to be assigned to fleet owners, and the construction of special repair rooms. There will be lockers and shower baths for drivers and helpers. The owners are T. J. Moynahan, Jr., and Albert Erlandson. Mr. Moynahan operates a fleet of trucks used in the distribution of newspapers, and who found it most difficult to garage his vehicles without scattering them widely. Mr. Erlandson has had many years experience in garage work.

RUBBER WORKERS' WAGES CUT

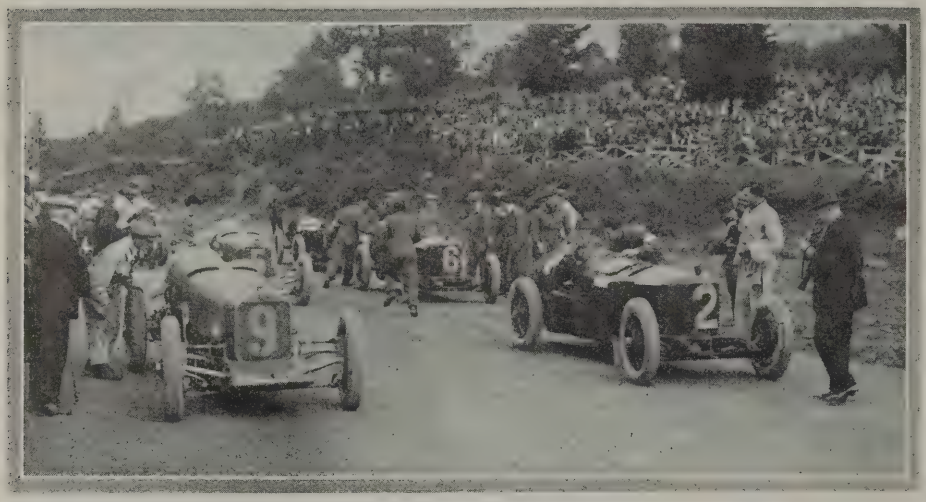
NEW YORK, July 25.—Reports reached here today announcing 5 to 10 per cent wage reductions at the Goodyear Tire & Rubber Co. Ajax Rubber Co. also was said to have cut wages.

Wisconsin Commissioner Hits Chrysler Insurance

Opposition to Plan Is Based on Four Counts—Threatens Action if Company Persists

MILWAUKEE, July 25.—Strong opposition to the plan of the Chrysler Sales Corporation of Detroit to offer an insurance contract with each car sold has developed in the insurance department of Wisconsin where Commissioner W. Stanley Smith has threatened "to take action" if "delivery charges on cars sold after July 18 include an insurance premium and you continue to give the above kind of coverage in accordance with the plan."

Commissioner Smith's opposition is based on four separate counts. He alleges first that the company is not licensed to do business in Wisconsin, meaning the Palmetto Fire Insurance Co. of Sumter, S. C., which is underwriting the risk. Although the company has application for a permit on file, the commissioner claims that he is not disposed to grant Wisconsin privileges because "the rates on Chrysler cars are apparently discriminatory and could not be used in the state."



Secondly he objects to the plan, calling it illegal because every Wisconsin Chrysler dealer would in some manner aid or assist in placing this insurance, and they are not licensed as insurance agents under the law. Thirdly he finds fault with the plan because fire and theft policies under Wisconsin insurance law must be countersigned by a resident agent, and could not therefore be sent from Detroit and be construed as a Michigan contract. Fourthly he objects because provisions of the policy do not provide for a return of unearned premium in case of cancellation and exclude other provisions required in policy forms by the Wisconsin insurance laws.

"We are not acting as insurance agents nor insurance collectors, declared George E. Brown, general manager of the E. W. Clark Motor Co., which distributes Chryslers in Wisconsin. "Every Chrysler car comes equipped with an insurance policy. It is as much an accessory as a pair of headlights. The car is sold that way. The buyer if he does not like it, can tear it up. If he doesn't like the headlights he can get them changed too. Under the Chrysler plan every car that leaves the factory is covered by insurance for protection of the ultimate buyer. The cost of this policy is included direct in the price of the car."

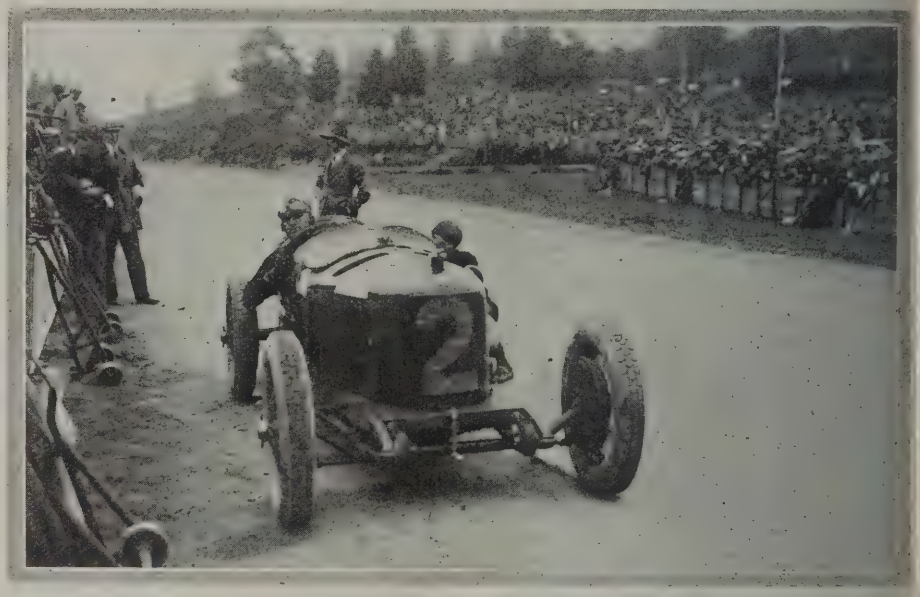
NEW GARDNER DEALERS

ST. LOUIS, July 25.—New dealer names recently added by the Gardner Motor Co., Inc., include: Danford Motor Co., Quapaw, Okla.; Conner-Hoxsey Auto Sales Co., Taylorville, Ill.; Lehigh Garage, Shenandoah, Pa.; The Connell & McKone Co., Boston, Mass.; Herman Jones, Denver, Colo.

Alfa Romeo Wins European Grand Prix

Preparing for start of European Grand Prix race. Ascari, the winner, is seen to the right in car No. 2. Campari, second, is directly behind in No. 6.

SPA, Belgium, July 6.—(By mail.)—Antoine Ascari, automobile dealer at Milan, won the European Grand Prix here, driving a straight eight supercharged 122-inch Alfa Romeo car at an average speed of 74.46 miles an hour for a distance of 500 miles. Campari, on a sister machine, finished in second place 22 minutes behind the winner. No other cars finished the race.



The European Grand Prix, which theoretically is the most important speed contest in Europe, was entrusted to Belgium this year and was run over a short hilly and winding road course in the neighborhood of Spa. Only twelve entries were received and only seven cars (three Alfa Romeos and four Delages) faced the starter.

All four of the twelve cylinder Delages, driven by Rene Thomas, Benoist, Divo and Torchy, were forced out of the race. In addition, one of the Alfa Romeos, driven by Brilli Perri, dropped out of the race after breaking a spring clip. The two Italians, Ascari and Campari, took the lead at the beginning and were never headed. Divo, who had a 1925 supercharged Delage, attempted to catch the Italian cars and set up a lap record at 79.4 miles an hour, but immediately after this Ascari spurted up to 81½ miles for a lap.

Rene Thomas dropped out after his car had taken fire and he had been slightly burned on the left hand. The gas tank on Benoist's Delage was pierced by a flying stone. The exact reason for the withdrawal of the two other Delages was not ascertained.

The failure of Delage to place a single car in a road race coming just one month before the French Grand Prix is a surprise and disappointment to French partisans.

Alfa Romeo used last year's cars rebuilt. These were designed by Engineer Jano, formerly with the Fiat Company, and have very much in common with the Fiat recently driven by Bordino in America. Up to half distance Ascari averaged 77 miles an hour, but when the Delages had been weeded out he reduced his speed, his average for the full distance dropping to slightly less than 74½ miles an hour.

Ascari stopping at pits during race.

Closeup view of Campari, who was second in big race

PARIS, July 27.—Antoine Ascari, Milan automobile dealer who drove the winning car in the Grand Prix d'Europe at Spa, Belgium, was killed at the Montlhery track here yesterday while driving in the French Grand Prix race. His car skidded at a turn after a drizzling rain had wet the track.

Parts, Accessory and Service Business Greater Than 1924

First Six Months of 1925 Show Steady Gain With June Decline Less Than Formerly

NEW YORK, July 25.—The business of automotive parts, accessory and service equipment manufacturers for the first half of 1925 ran substantially ahead of the same period in 1924, according to figures compiled by the Motor and Accessory Manufacturers Association.

A large number of representative makers of products sold to the motor car and truck manufacturers, the wholesale and retail trade and the motoring public reported an average increase in the wholesale value of their shipments to customers substantially in excess of the first six months of last year. The same companies reported that their plants had operated at an average of 83 per cent of capacity during this period and were operating on July first at 79 per cent of capacity.

Sales reports for June, also compiled by the association, showed a considerably less than normal seasonal decline from the high levels of April and May. The M. & A. M. A. index of sales for June stood at 158 per cent of January as compared with 165 per cent of January in May.

By divisions of the industry the index showed sales of units, parts and accessories to motor vehicle manufacturers in June 164 per cent of January sales as compared with the May figure of 174 per cent of January sales. Replacement parts sales to the trade in June were 129 per cent of January sales as compared with 134 per cent in May, accessory sales to the trade were 172 per cent of January as compared with 173 per cent in May and maintenance equipment sales showed a gain, aggregating 150 per cent of January as compared with the figure of 146 per cent.

Reports of sales by automotive jobbers throughout the United States and Canada showed a gain for the first half of the year over 1924 and a substantial advance in June over business of June a year ago. The jobbers' June business ran ahead of May in 13 of the 18 wholesale territories.

CANADIAN TIRES ADVANCE

TORONTO, July 25.—Owing to the apparent scarcity of raw materials in the rubber products industry, local prices on automobile tires and tubes have again been advanced. This advance affects all styles and sizes. On the smaller tires, the advance has been in the neighborhood of 3 per cent, whereas on the larger sizes the advance amounts to approximately 8 per cent. An advance is also effective on tubes to the extent of from 3 to 5 per cent. The market remains decidedly strong, as American markets have had much larger advances than have taken place in Canada.

Women Found to Excel as Drivers

WASHINGTON, July 25.—Women excel men as automobile drivers, it has been established by the American Automobile Association following a series of tests just carried out here by scientists and psychologists.

In these tests, conducted by Dr. F. A. Moss of the Institute of Government Research and one of the leading psychologists of the country, and assisted by H. H. Allen of the Bureau of Standards, women have uniformly scored higher averages as regards those qualities essential in a good driver.

Two of the tests in which the women outscored the men are of particular importance because they are among the primary factors that constitute driving ability. These are: First, the speed with which the driver reacts to danger and takes steps to avert it, such as applying the brakes. Second, the consistency with which the driver responds in such a situation.

Not only did the women show a quicker reaction time but they were also less variable. The average reaction-time of ten college women examined was 0.56 seconds, while that of twenty-five men from the same institution was 0.59 seconds. The mean variability of the ten women students was 0.17 seconds, while that of the twenty-five men students was 0.22 seconds.

K-D PLANT EXPANDS

LANCASTER, Pa., July 25.—The K-D Manufacturing Company, makers of automotive tools, has completed additions to its plant here which will double its output facilities. Another story has been added to the main building and two new buildings, a warehouse and parkerizing plant, have been added. The company was organized five years ago with one product, the K-D parallel jaw valve spring lifter. It then began the manufacture of K-D Britesteel Washers. Two new products which will be announced in a short time, have made it necessary to add the space.

NEW RECORD EXPECTED

DETROIT, July 25.—Willys-Overland dealers in the Detroit territory sold a total of 4,478 Willys-Overland and Willys-Knight passenger cars during the six months just ended, the figures including the sales registered in Detroit and Wayne county. During 1925, approximately 5,555 passenger cars of the above make were sold in this territory, 1,077 more than were sold during the last six months. Orders already booked and prospects assured make it seem likely that the sales in this territory for the year will establish a new high sales mark.

Rubber Manufacturers Urge Aid of State Department

Leaders of Industry Ask Secretary Kellogg to Make Representations to British

WASHINGTON, July 25.—Secretary of State Kellogg was asked this week by a delegation of American rubber manufacturers to lend his assistance to their efforts to break the British rubber monopoly.

In the delegation were Frederick Hood, president of the Hood Rubber Company, A. L. Viles, manager of the Rubber Association of America and Edward B. German, president of the Dunlop Tire and Rubber Company.

Great Britain has a restrictive policy which permits rubber planations within its dominions to produce only 65 per cent of their rated capacity. Reduced production has resulted in rapid increases in rubber prices, making it difficult for American manufacturers to buy rubber at a reasonable figure. They want Secretary Kellogg to make diplomatic representations to Great Britain to lift the ban on production.

The Department of Commerce, by direction of Congress, is now investigating rubber culture throughout the world with a view to developing fields outside the areas controlled by the British. Congress appropriated $500,000 for this inquiry.

The conference of the rubber leaders this week with Secretary Kellogg is taken as the opening shot in the long expected fight between British and American interests for control of crude rubber supplies, with indications that tropical areas throughout the globe would be economic battlefields during the next decade.

NEW VELIE DEALERS

MOLINE, Ill., July 25.—New dealers announced by the Velie Motors Corporation recently include:

Barney Wetzel, Sterling, Ill.; Hubert Motor Sales Co., Tipton, Ia.; E. E. Boynton, Camden, Me.; Newburyport Motor Co., Newburyport, Mass.; C. W. Boak, Yakima, Wash.; Williams Mtr. Service Co., Inc., Elizabethtown, N. C.; Rone H. Lewis, Whiteville, N. C.; G. E. King, Dublin, N. C.; Mrs. E. D. Morris, Everett, Wash.; George Hillerege Auto Paint and Upholstery Shop, Scottsbluff, Neb.; W. A. Helsdon & Son, Byron, Ill.; Sloan's Garage, Gloucester, Mass.; E. E. Burkett, Union, Pa.; Milton Fairley, Laurinburg, N. C.; W. L. Moore, Smithfield, N. C., and J. W. Turnage, Dunn, N. C.

FIRST AUSTRALIAN SHIPMENT

FORD CITY, Ont., July 25.—The S. S. John C. Howard has loaded 1,100 Ford cars, trucks and tractors at the Ford company's docks in Ford City, Ont. This shipment is part of the first consignment to the company's new $12,000,000 assembly plants now being erected in Australia. It is also the first time the docks have been used for exportation purposes.

Radically Different Car Is Found in New Cadillac Offering

(*Continued from page* 19)

is located at the right end of the cross shaft at the front and the oil pressure regulator is placed back of the right cylinder block. The capacity of the pump has been enlarged materially so that the overflow at low engine speeds is great. Oil is delivered under the desired pressure to all of the cam and crankshaft bearings by copper tube manifolds, drilled holes in the crankcase and the crankshaft. The overflow which leaves the oil regulator is passed through a Purolator oil filter located on the front of the dash. Due to the large capacity of the pump with consequent liberal rate of flow through the bypass at the pressure regulator, the rate of filtering of the entire oil supply is very high.

Increased Power in Engine

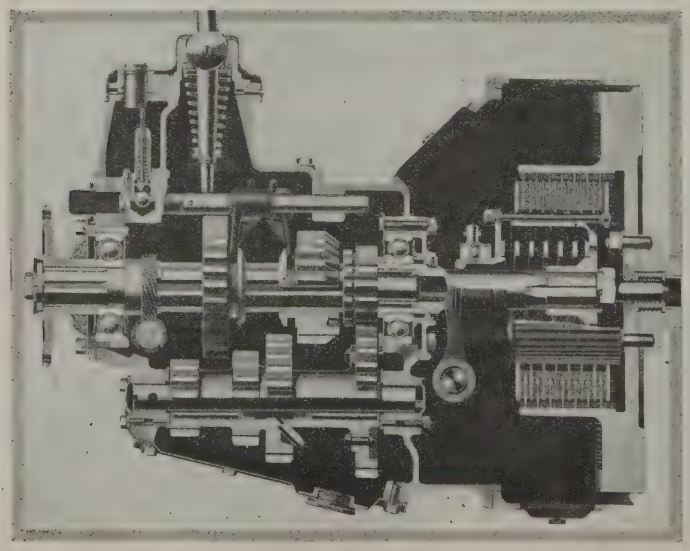
These provisions have resulted in an engine which has increased power and flexibility with longer life and at the same time which is more simple and accessible. In rounding the program based on this ideal, the dia. of the exhaust valves has been reduced 1/8 in. to 1 9/16 in. dia. while the cone type valve springs are made somewhat lighter and are reversed. The length of valve stem guides has been reduced and these no longer project into the ports. Both inlet and exhaust valves are made of silico-chrome steel in place of the former tungsten.

With the new arrangement of the flywheel a steel band in which the crown gear teeth are cut is pressed over a cast iron center member and held in place by dowel screws. The center flywheel member and the outside ring of the multiple disk clutch are integral. Where the former construction involved six inserted keys for driving the clutch dise, 45 gear teeth are cut into the new integral member and the periphery of the clutch dics has been modified accordingly. Both the clutch and brake pedals are mounted on a common shaft which is fixed in a bracket that is bolted to the side of gear case.

Within the gear box but few changes have been made, the chief of which is the simplification of the interlocking system by substituting one spring loaded ball for two plungers and a ball. The pilot bearing at the front end of the clutch shaft is a Hyatt roller running direct in the rear end of the crankshaft. An aluminum cover which forms part of the floor board trim has been added to the gear box cover. No change is made in universal joints although the lubrication method has been modified for greater accessibility. Instead of the customary tapered screw plugs which are threaded into the steel protecting shell of the joints, Alemite fittings are located on the end of the propeller shaft adjacent to the joints and drilled leads conduct the lubricant to the working surfaces.

The torque arm has been shifted from the right to the left side of the propeller shaft and the ball and spring assembly at the front has been replaced by a rubberized fabric member.

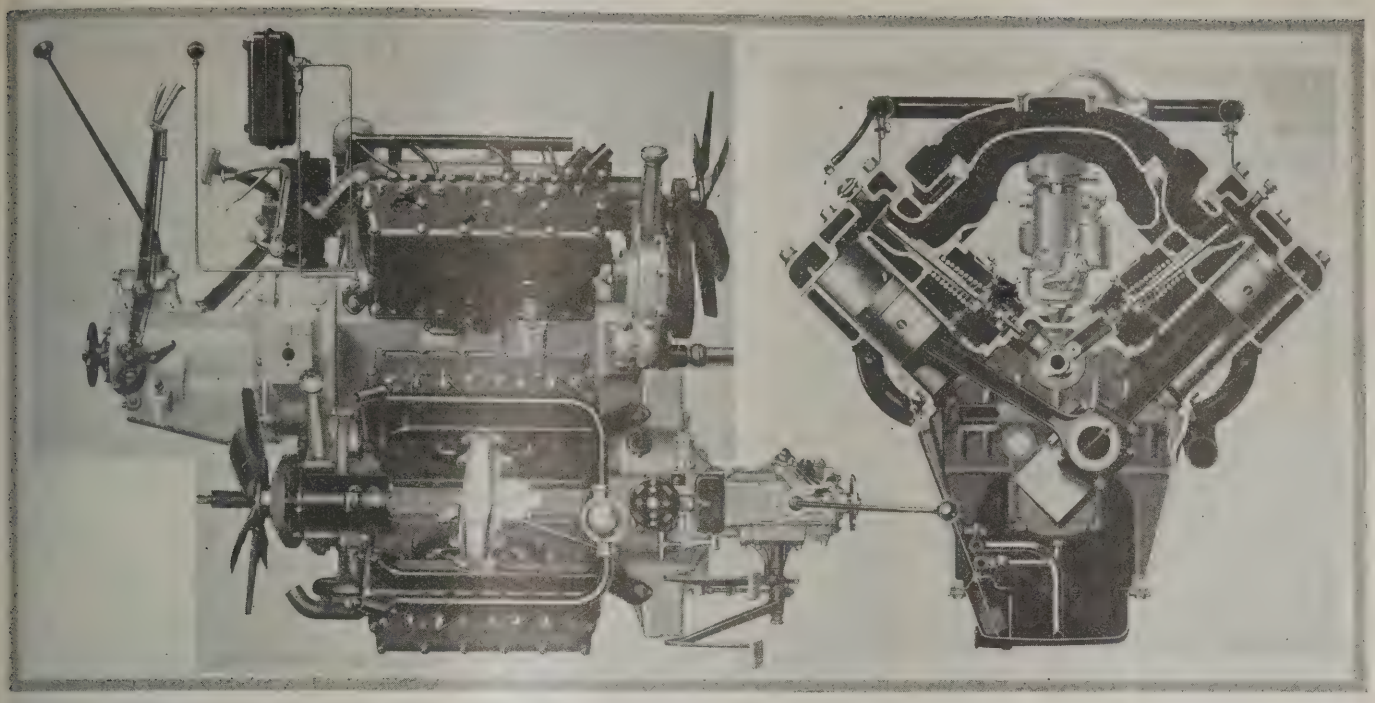
Gears in the rear axle continue as formerly and while the bearing layout on the pinion shaft is identical, two radex bearings have been substituted at the differential mounting for the previous single row and two annular combination. At the outer ends of the live axles comprising the full floating construction, fourteen generated teeth have supplanted the former lug and slot arrangement. With the change to semi-elliptic springs at the rear end, the spring pads are now riveted to the axle housing instead of being swivelled. Here again the possibility of noise is elimated and the new construction decreases the stress on the torque arm by imparting some of the driving reaction to the springs.



Although the spring suspension is changed, frames, with the exception of a decrease of 1/32 in. in thickness, making this figure 5/32 in. are identical with the frames of the last series. More than 30 lbs. were cut off by this change.

The additional drop required for the elliptic springs was obtained in the forged spring horn. While the front of the rear springs, which are 60 in. long, is attached at the conventional pin and bushing the rear end is shackled with pins above and a ball joint below at the spring horn. It is stated that this ball joint construction allows the same riding comfort as the older platform spring arrangement and makes for longer life of spring bushings. While the rear springs are 2 1/4 in. wide, the front spings have a width of 2 in. and a length or approximately 42 in.

Mufflers and exhaust pipes are substantially like their immediate predecessors. While the tire carrier continues at the back the lamp combination has moved to the left rear fender. Both the battery and tool box have been removed from inside of the frame and now are located in metallic boxes which are set in the rear ends of the front fenders and enclosed by locked lids. The battery which has a capacity of 130 amp. hrs. is enclosed in a composition rather than the usual wood case.



Braking Ratio Effort Modified

Brakes have been subject to little or no change. The ratio of braking effort has been modified to exert slightly greater pressure in front and with this change, the rear service brake bands have been made of hard brass so the feature of thermal equalization will be maintained for longer periods under the conditions of greater load at the front end. Adjustment within the rear internal or emergency brakes has been eliminated by modifying the toggle mechanism which operates the band so that it has capacity to operate the brake up to the full thickness of the band.

Left: Cross section of Cadillac clutch and transmission showing the crown gear on flywheel and Hyatt bearing in rear end of crankshaft; right: Driving compartment of the new Cadillac, showing walnut panels and ventilating windshield

Upper left Cadillac engine showing the arrangement of the single water pump and oil filtering device. Immediately below is a top view of the engine showing the clean trough between the blocks. Right cross section showing tappet arrangement, combustion space and new intake manifold arrangement as well as the trunnions for main bearing studs

All electrical wiring on the entire chassis is enclosed in armored conduit and all of the connections between the chassis and body are made at a junction box located on the front of the dash. The automatic cut-out which formerly was on the hidden side of the instrument board also has been moved to the front of the dash. The horn has been removed from under the hood and now is located on the left headlamp bracket. Instead of the former tilting headlamp reflectors, two filament bulbs controlled from the dash switch are used now for dimming. Auxiliary lamps of 3 c. p., also located in the drum headlamps are used for parking. A cigar lighter on a 12 ft. cord is located on the instrument board and may be removed to allow connection with a trouble lamp which is located on the front of the dash.

An interesting feature is the electrically operated gasoline gage. Due to using the pressure feed system for supplying the carbureter, none of the remote type of gasoline gages can be used. In conjunction with the Nagel Electric Co., Cadillac engineers have developed an electrical gage of the potentiometer type. The actuating element is interconnected with a float in the gasoline tank and connected by a single line of wire to the gage on the instrument board. The current consumption is in milli-amps. and 80 days would be required for the gage system to run the battery down. This interval eliminates any question of the effect of the electric gage on the battery. With the installation of a reliable gage on the dash, the emergency compartment in the gas tank has been eliminated although the capacity continues at 20 gallons. The gas tank drain has been placed at the back in conjunction with the sediment cup.

Another refinement is found under the hood as the front of the dash and the engine are finished in Duco and therefore easier to keep clean. The adjustment of the steering gear has been made more accessible and the steering column and worm may be removed without tearing down the steering gear housing.

Mechanical and Body Changes in New Buicks

(*Continued from page 23*)

tween the ends of the bands. Hexagon head brass cap screws at the brake anchor add greatly to the ease in making adjustments. The outer universal joints on the front brakes are now covered with leather boots.

Tubular Cross Brace

To increase the frame stiffness at the forward end of the Standard Six chassis, a tubular cross brace is used in place of the "U" section member at that point. Body brackets are added to the sides of the frames and are located under the main sills of the closed bodies on both chassis. This design allows better support for the bodies and makes the hold down bolts more accessible.

Easier steering on the Master Six has been achieved by adding 7 per cent to the steering gear reduction, the rolls on the yoke shaft having moved further apart on the larger model, while on the smaller car the diameter of the wheel has been enlarged from 17 in. to 17½ in. On both steering gears, a heavier wall is provided under the worm on the steering tube while the steering worm key is integral with the worm instead of a separate part used to lock the worm to the tube.

Special bosses for centering the rims on the new 21 in. wider spoked wheels are provided which in connection with the new special type rim wedges provides a better support for the rim on the wheel and insure a very rigid and positive mounting. On the Standard Six model, the hub flange and bolt circle are longer in diameter by ¼ in., with the hub caps larger in size to correspond with the new hub flanges.

All body wheels on the Standard Six chassis are finished in Buick Gray with red striping, while the upper portion of the closed bodies is in black duco. Both open models are upholstered in genuine long grain bright finish leather, having the door, cowl, coverings, etc. finished in a material to match. A special pattern taupe plush is used for the seats and backs and a plain plush of the same quality and color is employed for the body sides and headlining on the closed models.

Color schemes on the Master Six are similar in many respects to those on the smaller car. Both five passenger sedans and the two regular open models are finished the same as the Standard line. The four-passenger coupe and the seven-passenger sedan are done in lotus blue with striping to match, while the brougham sedan and country club coupe are finished in two-tone effect, employing Texas brown below the moulding and light Texas brown above. The two open sport models are offered with two duo-color options, the first being two-tone Buick blue with natural wheels and the second Texas brown with wheels to match. With the exception of the two five-passenger sedans upholstered in the same manner as the Standard

(*Continued on page 39*)

California Dealers Complain About Low Used Car Prices

New and Rebuilt Automobile Business Injured by Extremely Easy Time Payments

SAN FRANCISCO, July 25.—Dealers in new cars of all makes and in rebuilt used cars of the higher-priced models are complaining throughout California of the ruinously low prices at which used cars can be bought on time payments. It is possible now in Los Angeles, San Francisco, or practically any other of the larger cities in California, to buy a used car of 1922, 1923, or even 1924, model, for as low as $50 down and $20 a month. The total price on each of these cars is lower than it ever has been before, and the cars are being sold "as is," to be overhauled and rebuilt at an extra charge. if the buyer wishes, but otherwise just as they were received from the previous owner.

This condition applies largely to cars selling new at $1500 or less delivered on this coast. Dealers in "as-is" used cars have sprung up like mushrooms all over California, and are cutting noticeably into the sales of dealers in new cars in rebuilt used cars. The price-range on these cars, which are sold entirely at buyer's risk, runs from $100 to $300, and the current arrangement is 15 per cent down and the balance in 20 equal payments, with interest at 8 per cent.

Hundreds of these cars have been bought by comparatively low-salaried workmen and others, who make the first payment, possibly cover the first monthly payment, use the car for two months on vacation in the mountains or running it up and down the coast, and then return it to the vendor. This amounts merely to a constant turn-over of used cars, and, in addition to increasing the sales-resistance for new as well as rebuilt cars, keeps the market flooded with low-grade used cars.

One used-car dealer in Oakland sold the same car, for which he orginally paid $150, five times in the past year. His original price on the car was $300 on which he received $45 and $12.75. His second price also was $300, on which he was fortunate enough to get $45 and two months' payments, $25.50. His third sale was for $250 and he obtained $37.50 and $10.65. His fourth sale was for $200, on which he received $30 and $8.50, while his fifth sale was for $100 cash. Interest he collected is not included, but he had received approximately $315 net for a car which cost him $150, and the interest he garnered, probably around $20, paid for the costs of getting back the car in each instance. This is only an average example; there have been scores and hundreds of cases in which profits as high as 500 per cent have been made on one used car of good external appearance.

TRIANGULAR FERRY PLANNED

BERKELEY, Cal., July 25.—The Golden Gate Ferry Company has applied to the Berkeley city council for a 50-year franchise for the operation of automobile ferries between San Francisco, Berkeley and Sausalito, at the northern side of the Golden Gate, and thence back across the Gate to San Francisco. This triangular service would open both mainland areas of northern and eastern California to the San Francisco dealers and shorten distances both ways by something like 15 miles. The Golden Gate Company now operates the largest automobile ferries in the world.

PULITZER RACES OCT. 10

NEW YORK, July 25.—E. O. McDonnell, president of the New York 1925 Air Races, Inc., has announced that the national air races will be held at Mitchell Field, L. I., October 8, 9 and 10. The Pulitzer Trophy race will be the last day's feature event. Army air forces will participate and Major General Summerall, commanding the Second Corps Area, has pledged his cooperation. The present speed record for the Pulitzer Trophy is 243 miles an hour, but it is expected this will be bettered by more than twenty miles an hour by three planes being built by the Curtiss Co. On a straight course they may travel 300 miles an hour.

Nash Declares Extra Dividend Of $6.50 Per Common Shar

President Reports Net Income Near $3,000,000 More Than for Same Quarter Last Year

KENOSHA, Wis., July 25.—At a mee ing of the directors of The Nash Moto Company dividend action was taken the form of an extra dividend of $6.50 p share and a regular semi-annual divider of $3.50 per share on the common stoc of the company, payable August 1, 192 to holders of common stock of record the close of business July 20, 1925; and quarterly dividend of $1.75 per share the outstanding preferred stock of t company, payable August 1, 1925, to hol ers of preferred stock of record at t close of business July 20, 1925.

President C. W. Nash reported that t net income for the three months end May 31, 1925, after deducting expens of manufacturing, including depreciatio selling, and administrative expenses a local, state and federal taxes, amount to $4,193,850.11 as compared with $1,501 000.35 for the same period a year ago.

The value of sales for the three mont of this year shows an increase of 100 per cent over the corresponding quart of 1924.

25 Years Ago In the Automobile Industry
As Recorded In MOTOR AGE

(From MOTOR AGE of August 2, 1900)

Rain Interrupted the Meet

Charles S. Henshaw ran the first outdoor automobile tournament ever run in America on Thursday afternoon at Branford, Conn. The track was the half-mile dirt horse track belonging to Louis A. Fiske of New Haven, who backed Henshaw to the extent of $800 for the affair. The first day's races, which were somewhat of a success, consisted of the trial heats. There were about 1,500 people present at $1 a head and the day's sport was somewhat marred by the collapsing of a large tent used for exposition purposes injuring a few people. To wind up the day a heavy rain fell, which continued all the next day and the tourney was called off to some indefinite period.

New Buffalo Concern

Arrangements have been made by John R. Keim to devote a portion of his extensive plant at Buffalo to the manufacture of automobiles. The factory was formerly owned by the Spalding Machine Screw Co., and has been devoted principally to the production of cycles and cycle parts, and is one of the best equipped in America.

Derelictions Bring Fines

Springfield, Mass., July 30.—Millionaire owners of automobiles who are passing the summer at New England resorts have occupied valuable space in the newspapers the past week. Society h scarcely ceased to discuss the $15 fi which was imposed upon one of the Va derbilts for operating his automobile a higher rate of speed than a Massach setts constable approved of, when W liam H. Bradford, a millionaire who sur mers at Lenox, Mass., was summon into court for riding his automobile the sidewalk. Mr. Bradford's counsel e plained in court that the highway was such poor condition that he appropriat the sidewalk. The court decided th the saving to the tires of the automobi was worth $5.

May Not Cross Ferries

New York, July 30.—The Automobi Club of America Law Committee, which President Chamberlin is a mer ber, is now in correspondence wi United States Supervising Inspector Ge eral Dumont, with a view to induci him to modify his recent decision in t Jamestown (R. I.) Ferry Co. case which he held that vehicles using gas line directly or indirectly came und the ban of section 4472 of the U. S. R vised Statutes, forbidding the carryi of combustibles in steam or ferry boa run on navigable bodies of water. Und this strict ruling a gasoline vehicle steam vehicle using gasoline or fu could not cross a ferry.

Buick Announces New Models

(Continued from page 37)

ix bodies, all closed cars are finished in he interior with a rich mohair plush in olor to match the exterior.

On the two sport cars, the collapsible top s carried in nickelplated brackets which re used when the top is down. These rackets are carried loose in the cars and hen in use are inserted in holes at the op and back of the outer end of the seat rame.

Additional items of equipment included s standard on all cars on both chassis re: rear view mirror, windshield wipers, hose on the closed cars and the two port models being of the automatic type, owl or windshield ventilators, sun isors, transmission locks and door locks n all closed cars.

Heaters are provided only in the two oupes, seven passenger sedan and rougham sedan on the Master Six chas- is. In addition to being fitted on these odels, aluminum scuff plates, front nubbers and dash gasoline gages are lso supplied on the two sport cars.

Combination vanity and smoking sets re included on the Master Six four assenger coupe and seven passenger edan while a smoking set is carried on he back of the front seat on the rougham sedan. These three cars are lso provided with attractive braided ords to assist the passengers when ising from the rear seats. Cigar ighters are only supplied on the two port models.

Special ribbed rubber matting of new lesign and construction is used to cover he running boards on all models.

Radiator caps with attractive arms, notometer and lock are supplied on the ame cars as are equipped with the dash ype gasoline gage.

Gray Motors to Build Gas-Electric Drive Bus

NEW YORK, July 25.—Preparations re being made for the production of the Tilling-Stevens Gas-Electric Drive Bus, y the American National Omnibus Corp. f New York, as a result of the reorgani- ation of the Gray Motors Corp. of Detroit. It is understood that the Gray Motors plant will be utilized for bus roduction, along with the automobile ctivities of the company.

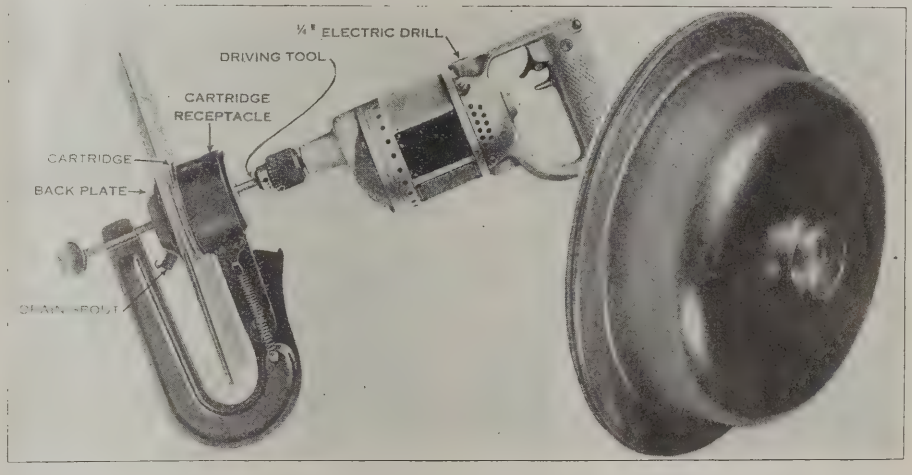
An official statement is expected from E. M. Howe, president of Gray Motors, in which the reorganization will be de- cribed in detail. Meanwhile it is learned at the New York offices of H. H. Mel- ille, president of the American National Omnibus Corp., that a number of the buses will be on display at the American Electric Railway Association Convention at Atlantic City, October 5-9, and that deliveries will commence November 1.

Three types of buses are under produc- ion—the single deck pay-enter city type; ully enclosed double deck city type, and super de luxe touring. They are being built under the patents of the Tilling-Stevens Motors, Ltd., of England.

Ignition Condensers

(Continued from page 14)

"The paper used is either glassine which is a crinkly waxed paper, or else soft paper is used, which is afterwards treated in a vacuum to draw out all moisture and then in hot wax to thoroughly fill up all spaces in the paper and give it great insulating strength, for the paper in the condenser must resist not merely the battery voltage but the inductive kick voltage of the primary winding which may be from 100 to 200 volts or more.



Testing Condensers

"If you wanted to test a spring, you would load it down and then release it to see if it would spring back in good shape. The condenser is tested in similar manner. First you load it electrically by means of the 110 volt test points. Then with the points still in contact with the condenser terminals you slide one along until it touches the other. This permits the charge in the condenser to get away, the two condenser terminals being shorted, and at the same time the lamp lights up. The sign of a good condenser is a snappy spark which makes a cracking sound like a small whip. Another way of testing is to remove the 110 volt points and then short the condenser terminals with some metal object as a screw driver blade. The trouble with the latter method is that a condenser which is slightly leaky (not shorted) will not hold its charge long enough to give the characteristic spark, although satisfactory when put into service."

DAKOTA STATIONS TO REOPEN

PIERRE, S. D. July 25.—At an emergency meeting of the state gasoline board it was decided to reply to the advance by the Standard Oil Co. of 1 cent a gallon on gasoline by reopening the state stations in Aberdeen, Brookings Huron, Madison, Mitchell and Rapid City, and starting new ones in Kennebec, Armour, Leola, Selby, Webster and Woonsocket. The old stations were closed only a few weeks ago, when their purpose was accomplished.

New Windshield Cutter

The set-up used in connection with drilling a hole through the windshield glass with the Fyrac method. Right, cartridge which contains grinding compound and water. The slot is for insertion of drill chuck

The Fyrac Manufacturing Company, makers of the Fyrac Night Guide, and the Clymer Manufacturing Company, manufacturers of the Clymer Safety Light, both of Rockford, Ill., have perfected a new and patented method of cutting a windshield, which consists of a cartridge placed against the windshield glass, the cartridge containing the windshield cutter, and the mixture of cutting compound, water and everything necessary to make the 2-inch hole through the glass. One of the cartridges is contained in each carton, which holds the light, and the cartridge, when used, is thrown away.

The new process is simple. The cartridge holder, a "u"-shaped tool, is adjusted on the windshield so that the cartridge receptacle is on the side from which the mechanic drills. The backplate is on the opposite side of windshield and is tightened to the glass by a thumbscrew. The driving tool is then inserted in slot in cartridge through the hole in back of the cartridge receptacle.

The end of driving tool is inserted in the chuck of a quarter-inch electric drill and the power turned on, with the result that a clean 2 inch hole is drilled in a few minutes. So thorough has been the work of devising this new process that even the escape for the used mixture of cutting compound and water is provided in a spout in the backplate on which hangs a tiny pail during the operation. A rubber pad within the backplate, by "the feel," tells the mechanic when the hole is cut.

Along Automobile Row

BALTIMORE.—Herbert M. Hartman, president of the Fidelity Motors Company, distributors, has announced the appointment of the Wienhold Motor Company, as sub-dealer in Chrysler and Maxwell cars. John T. Wienhold is president of the Wienhold Motor Co.

MILWAUKEE.—G. J. Zinke has been appointed retail salesmanager of the Milwaukee Flint Company according to an announcement just made by that company. Mr. Zinke has been proprietor of the Zinke Auto Co. of Cudahy, Wis., a Milwaukee suburb, for many years.

ST. LOUIS—Cleveland-Downer Motor Sales Co., Cleveland dealer has opened a new building at 5628 Gravois Ave. It was formerly located at 4618 Delmard Blvd. The Cleveland-Downey Co. will continue to handle the Cleveland in its new establishment and has also been granted a dealer franchise for the Chandler car by the St. Louis distributor, Lewis Automobile Co.

WATERLOO, Ia.—Frank L. Negus, formerly with the Central Iowa Motors Company in Des Moines, has been made manager of the service department of the Hupmobile agency here, succeeding Ray Dixon, advanced to the sales staff.

CHICAGO.—L. B. Massey of the Motor Transport Company of Minneapolis, has joined the sales force of the Diamond T Motor Car Company as district sales manager.

PORTLAND, Ore.—It is announced by officials of the company that the Elite Auto Repair Co., Chevrolet parts and service, has changed its name to the Bankhead & Walter, Inc., and is arranging for larger quarters on account of the press of business.

ASHEVILLE, N. C.—The new home of the Sawyer Motor Company, dealers in Dodge Brothers automobiles, is nearing completion. The new garage will have a concrete roof for day storage and total floor space is more than 45,000 square feet.

DESERONTO, Ont.—R. H. Raynor of Picton, Ont. has recently taken over the property and business of the Riggs Motor Sales. Riggs has been handling Jewetts, Studebakers and Paiges.

DALLAS, Tex.—The Ferguson Motors Company, Hudson-Essex dealers and distributors in Dallas and territory, has named W. J. Roberts wholesale manager. Mr. Roberts was previously associated with Adam E. Ferguson, president of the company, in the automobile business in Northern cities.

LOS ANGELES.—Charles G. Darrach, Jr., former wholesale manager of the Walter M. Brown Motors, Inc., Los Angeles, has joined the sales department of the W. P. Herbert Company, Southern California Chandler and Cleveland Six distributors.

DES MOINES, Ia.—L. B. Chase, since 1907 associated with the Des Moines Buick company, has severed his connections with the firm to become manager of the new American Gear company branch in Kansas City.

CHICAGO.—Lester Rich, formerly sales manager for the Bird-Sykes Company, Paige-Jewett dealers and distributors, has become retail sales manager of Community Motors, Inc., Oakland dealers.

CHARLOTTE, N. C.—Thomas L. Craig Motor Company, of Gastonia, N. C., has relinquished the Willys-Knight and Overland lines and has closed a contract with Hoppe Motors, Inc., distributors, for a Chrysler dealership.

ST. LOUIS.—Southwest Nash Motor Car Co., Nash distributor for the St. Louis district, has announced the appointment of the West Side Nash Co., a new organization as an authorized Nash dealer. William J. Wolff, formerly of the South Side Nash Company is president of West Side Nash.

TOLEDO.—The U. N. Auto Parts Co., has been chartered with a $20,000 capital to retail new and used autos, parts and accessories.

BALTIMORE.—The Shelton Garage, Inc., 2005 North Charles Street, Baltimore, has been incorporated with $50,000 capital stock to hire and store automobiles. The incorporators are Charles M. Green, Frank J. Rowe and Paul B. Mules.

CHICAGO.—Harry M. Reid has sold his interest in the Reid-Burton Motor Company, Ford agency, to Thomas W. Burton. The firm name will remain the same.

LOS ANGELES.—The Star Motor Company of California announces the appointment of The McLean Motor Sales Company as Star dealers in Glendale, Eagle Rock and Burbank. R. A. McLean is president of the company; L. V. Freeman, vice-president of the company; R. T. McLean, secretary.

DETROIT.—Hubert W. Roberts, formerly vocational director of the schools at Anderson, Ind., has resigned to become director of personnel at the Olds Motors Works under the direction of I. J. Reuter, president and general manager.

CINCINNATI.—Papers have been filed with the secretary of state, chartering the Vine & Clifton Auto Sales Co., with a capital stock of $50,000 to deal in motor vehicles and accessories.

LOUISVILLE.—Browder and Hoskins, Chevrolet dealers, have recently moved their used car department from 210 East Walnut Street to 125 West Chestnut Street, in the building formerly used by the Kentucky Overland Company as their used car department.

LINCOLN, Ill.—Marvin Richardson has sold his half interest in the Richardson Motor Company to his partner, John L. Gordon, who will continue the business alone. Temporarily, Mr. Richardson will remain as salesman. The firm will continue to distribute Studebaker cars in the Logan county territory.

BALTIMORE.—E. E. Starkey, who maintains a battery and electrical service station at 3401 Reisterstown Road, Baltimore, has opened a branch station at 2638 Pennsylvania Ave. William Linker, long experienced in this work, is in charge of the branch.

OZARK, ARK.—W. H. Mason has bought half interest in the Ozark Peoples garage.

MILWAUKEE.—Removal of the Scherer Automobile Company, formerly known as the Janesville Buick Company, from its old quarters to a large new garage has been completed. Gerald O. Scherer, manager of the Janesville Buick Company, will continue as manager of the firm under its new name.

CHARLOTTE, N. C.—W. A. Masterman, vice-president and general manager of the B. D. Heath Motor Company, distributor of the Hudson-Essex line of passenger cars and one of the important automotive trade establishments of this city, has resigned, it was announced.

BOSTON.—A new company formed here called the Stone Motors, Inc., to take over the selling rights of the Yellow Cab trucks, has leased salesrooms in part of the showroom vacated by the defunct Sterling Knight Motor Company of New England.

CHICAGO.—The Husky Wrench Com pany of Milwaukee has moved its Chicag office, formerly located at 189 N. Clar Street to 610 Sycamore Street, Milwaukee it is announced.

With the Associations

Plan Discount Elimination

LOS ANGELES, July 25.—The Los Angeles Automobile Trade Association is conducting an intensive educational campaign among its members to eliminate the "discount-to-customer" evil which has become increasingly prevalent throughout Southern California.

In a recent bulletin to members, the executive officers of the association declare that a condition created by the automotive merchant has brought the mind of the ordinary consumer of automobile supplies to a position where it is considered sacrilegious to pay the list price for anything purchased for an automobile.

"The plan," says the bulletin, "works about like this: A good customer comes into your place of business and makes a statement that he is about to have his car painted, buy a camping outfit, get some spotlights or purchase some piece of equipment which you do not carry in stock.

"Immediately, because of the profit which you have made from your transaction with this customer, you are overcome with generosity and insist that the customer use your purchase order and in that way obtain your discount to which, by your very action, you prove you are not entitled.

"It does not make any difference what line of business you are in, somebody is issuing a purchase order enabling the customer to obtain your very line of merchandise at a discount.

"This thing must be stopped. The place to stop it is where the order is issued. If you must issue an order to a customer, forget the profit you have made off of your previous transactions with him. Send your call boy with the order, get the merchandise and sell it at list."

Greensboro Picked for Meet

CHARLOTTE, N. C., July 25.—The fall meeting of the North Carolina Association of Gasoline and Tire Dealers will be held at Greensboro, October 20-21, it was announced here by President Keely Grice, on his return from a conference of association officers at Greensboro.

An exhibit of supplies and equipment for automotive service stations will be on display during the convention.

Officers of the association are in accord that "something must be done to prevent jacklegs from operating service stations," it was explained, and this will be one of the important matters to come before the October meeting.

Carolina Used Cars Lower

CHARLOTTE, N. C., July 25.—A total of 14,560 used automobiles were in the hands of dealers in North Carolina June 30, according to an announcement by the office here of the Carolina Motor Club after completion of a census. These cars were estimated to be worth $3,281,233.20.

The census was made under direction of H. A. Rouzer, of Salisbury, chairman of the committee on trade methods and policies of the North Carolina Automotive Trade Association.

The association's statement said there are "a few more than 1,100 automobile dealers in this state" and added that "the used car situation in this state is not such a critical one."

Washington Association Elects

WASHINGTON, July 25.—Mark Lansburgh, secretary of Lansburgh and Brother, was unanimously elected president of the Commercial Motor Vehicles Owners' Association at a meeting in the City Club this week. He succeeds William Jorg, manager of the Corby Baking Company, whose resignation, because of his inability at the present time to take care of the many details of the position was accepted. A standing committee to confer with the district commissioners on traffic regulations as relating to trucks was provided for after several members had cited instances where their business was interfered with.

Louisiana Club Organized

NEW ORLEANS, July 25.—The Automobile Club of Louisiana has been opened with temporary headquarters on Baronne Street, New Orleans. The charter, filed recently, shows the following officers: Nat W. Bond, attorney, president; J. C. Barnes, New Orleans Public Service, Inc., first vice-president; Dr. G. F. Roeling, physician and coroner of the parish of Orleans, second vice-president; A. B. Nicholas, real estate dealer and president of the Young Men's Business Club, treasurer; Edgar Boutwell, former manager of the Motor League of Louisiana, secretary.

Besides providing many services for its members, the club will devote itself to promotion of good roads and to advertising Louisiana and its growing number of highways. It will concern itself with traffic problems of the city and state and also with all legislation, state and national, affecting the ownership of motor cars, the development of highways and the solution of traffic problems.

Tudor Heads Roads Bureau

SAN FRANCISCO, July 25.—William M. Tudor has been appointed manager of the good roads bureau of the California Automobile Association, succeeding A. E. Loder, resigned, according to announcement by D. E. Watkins, secretary and general manager of the association. Mr. Loder has resigned to accept an executive position with the Caterpillar Tractor Company. Mr. Tudor has been in the employ of the association for the last eight years.

Tax Reduction Urged

CHARLOTTE, N. C., July 25.—A campaign looking to the general revision of the policies of the North Carolina state government involving the automobile manufacturing and sales industry and of the laws directly or indirectly governing the operation of motor vehicles was launched here today by the North Carolina Automotive Trade Association, in an address by C. W. Roberts, of Greensboro, secretary of the association.

Emphasis was given by Mr. Roberts, in his address before the membership of the Charlotte Automotive Merchants' Association and officers of the state association, to his demand for reduction of the burden of taxes imposed by state and federal governments on the automotive trade and manufacturing industries.

In connection with the association's efforts to obtain revision downward or repeal of state taxes, Mr. Roberts said "now is the time" to begin the campaign intended to create favorable sentiment among members of the legislature. A statewide sensation was expected to result from his formal declaration of favor for the election of W. N. Everett, North Carolina, secretary of state, as governor to succeed A. W. McLean.

The North Carolina legislature was criticised by Mr. Roberts for being the only body of its kind which has imposed a license tax on automobile manufacturers. This tax is $500 per year.

The federal government has "no reason for building up a great surplus to the credit of our nation," said Mr. Roberts. He pointed out that the federal government in 1924 collected a total of $160,028,000 in various taxes. The total of all taxes paid by the automotive manufacturing and selling industries in that year was estimated at $600,000,000, including federal, state, county and city taxes.

Regarding state taxes, Mr. Roberts said motor registrations in North Carolina have increased 35 times in the ten year-period ended with 1924, while "state taxes paid by motor car owners have been increased 100 times in that period."

Drive Against Taxes Planned

SAN FRANCISCO, July 18.—In the interests of public safety, the California State Automobile Association, with headquarters in this city, is heading the campaign in the west for the removal of the special war-time excise taxes on automobiles by the next session of Congress. These taxes are a definite burden on the upkeep of motor vehicles necessary to keep them in such running condition that they can be operated with the greatest degree of safety, according to the association, which charges that owing to the taxes many owners neglect proper maintenance of their cars. The total of these taxes last year was $158,000,000, all of which came out of the pockets of the motorists, according to the report.

Canadian Automobile Output Decreases 10 Per Cent in 1924

Closed Car Production Raises Above 1923 Figure but Open Models Drop 15 Per Cent

OTTAWA, July 25.—In 1924 the eleven automobile factories in Canada produced 98,245 passenger cars, 18,043 trucks and 16,172 chassis, a total of 132,460 cars with an aggregate selling value of $88,-240,418. This was a decrease of 10 per cent from the 1923 production of 147,202 cars valued at $96,614,176, according to a statement just issued by the dominion bureau of statistics at Ottawa. With a capital investment of $60,000,000 and using raw materials costing $64,000,000, the automobile industry employed 9,270 persons during 1924 and paid over $14,-000,000 in salaries and wages.

Production of closed cars increased to 31,041 from 27,209 in 1923, but the output of open cars dropped 15 per cent to 67,-204 in the same time. Production of trucks numbered 18,043 as against 19,226 in 1923. The average selling value of motor cars remained about the same as for 1923, this figure for passenger cars being $664 and for trucks $450.

Registration of passenegr cars in Canada numbered 573,975, of trucks 55,572, and of other motor vehicles 22,574, giving a total of 652,121 registrations in 1924 as compared with 586,850 in 1923.

Although production declined 10 per cent below the 1923 totals, the average number of wage-earners for 1924 was slightly higher at 7,867. In January there were 7,775 wage-earners employed; in May, the number reached a maximum of 8,819, and then declined to 7,487 in August and to 7,080 in December. Salaried workers numbered 1,403, making a total of 9,270 employes in 1924 as compared with 9,305 in the previous year.

Canada imported 8,344 passenger cars, 957 trucks, 27,371 engines, and automobile parts worth $15,175,108, giving an aggregate import value of $28,954,700 as compared with $32,081,064 in 1923. Exports included 12,772 trucks, 43,883 passenger cars, and parts valued at $4,992,-049 to a total value of $31,501,442, decrease of 6 millions from 1923.

Chevrolet Production to Equal Last Year's Figure by August

DETROIT, July 25.—At the rate of production now being maintained by Chevrolet, the total output for 1925 up to and including August 20 will exceed that for the entire year of 1924, R. H. Grant, general sales manager has announced.

Chevrolet production for last year was 305,303. For the first six months of the present year, the output reached 246,081, or 59,222 under the total for last year. This follows the establishing of successive production records for April, May and June.

Production for June amounted to 54,944, which was exceeded by only one month, that of Octber, 1923. Sales to dealers during the past month were 54,-725, with 24,654 unfilled retail orders being in dealers' hands at the end of the month.

According to Mr. Grant, the prospects for the second half of the year are as good as those for the past six months. A review of May Chevrolet passenger car sales showed them to be 233.6 per cent better than those for May, 1924. The truck sales for the same period were 297.6 per cent better than for the corresponding month of last year.

Coming Motor Events

Automobile Shows

Boston ..... Oct. 10-17
World's Rubber and Tropical Exposition.

Dallas, Tex. ..... Oct. 10-25
Annual Automobile Show, State Fair Automobile Building, under the auspices of the Dallas Automotive Trade Association. J. W. Connell, manager.

De Pere, Wis. ..... Aug. 31-Sept. 21
Annual Automobile Show under the auspices of the Automobile Division of the Green Bay Association of Commerce.

Fresno, Cal. ..... Sept. 28-Oct. 3
Fresno Motor Car Dealers Association. Fifteenth Annual Show in connection with Fresno District Fair.

Grand Rapids, Mich. ..... Sept. 7-12
Grand Rapids Automobile Dealers Association, Seventh Annual Show in connection with West Michigan Fair, Wm. T. Morrissey, manager.

Oklahoma City, Okla. ..... Sept. 26-Oct. 3
Annual State Fair and Exposition. Passenger cars and accessories.

Sacramento, Cal. ..... Sept. 5-13
Automobile Exhibits in Diamond Jubilee State Fair.

Shreveport, La. ..... Oct. 24-Nov. 8
Twentieth Annual State Fair showing passenger cars, trucks and tractors.

New York ..... Nov. 15-21
Twenty-first Annual Automobile Salon.

Wheeling W. Va. ..... Sept. 7-12
Wheeling Automobile Dealers Association, Eleventh Annual State Fair, Exposition Building.

White River Junction, Vt. ..... Sept. 15-18
Nineteenth Annual Twin State Fair. Passenger cars, trucks and accessories. F. L. Davis, manager.

Chicago ..... Jan. 30-Feb. 6
Twenty-sixth Annual National Automobile Show and Eleventh Annual Automobile Salon.

Danbury, Conn. ..... Oct. 5-10
Eighth annual fair, Danbury Fair Auto Building, under direction of Danbury Agricultural Society, passenger cars, trucks, tractors, accessories, etc., H. Lage, manager.

Boston ..... Oct. 10-17
World's Rubber and Tropical Exposition, Mechanics Hall, Chester I. Campbell, manager.

Chicago ..... Sept. 28-Oct. 3
Fourteenth annual Safety Congress and Exhibit, Rainbow Room, Hotel Winton, under direction of National Safety Council, A. M. Smith, business manager.

Salt Lake City ..... Oct. 1-7
Third annual Automobile Show and forty-seventh annual State Fair in Coliseum Building, Wm. D. Sutton, supervisor of Automobile Show.

Foreign Shows

Berlin, Germany ..... Nov. 26-Dec. 6
Annual Automobile Show in the Kaiserdamm.

Buenos Aires, Argentina ..... Oct. 3-13
Pan-American Road Congress.

London, England ..... Oct. 8-17
Olympia Passenger Car Show.

London, England ..... Oct. 29-Nov. 7
Annual Truck Show.

Races

Altoona, Pa. ..... Sept. 7

Charlotte, N. C. ..... Oct. 24

Fresno, CaCl. ..... Sept. 30

Laurel, Md. ..... Oct. 10
A. A. A. Race, Baltimore-Washington Speedway.

Los Angeles, Cal. ..... Nov. 26

Monza, Italy ..... Sept. 6
Italian Grand Prix Race.

Syracuse, N. Y. ..... Sept. 19

Salem, N. H. ..... Oct. 12

Conventions

Buenos Aires, Argentine ..... Oct. 3-13
Pan-American Road Congress.

Cleveland ..... Sept. 14-19
Annual Convention and Exposition of American Society for Steel Treating.

Cleveland ..... Sept. 15-16
S. A. E. production meeting and exhibition.

Des Moines, Ia. ..... Nov. 12-13
Automotive Merchants' Association Convention.

Everett, Wash. ..... Aug. 3-4
Annual state convention Washington Automotive Trades Association.

Montreal, Que. ..... Oct. 7-10
Fall convention of the Motor and Accessory Manufacturers Association.

Philadelphia ..... September
S. A. E. Automotive Transportation meeting.

Pittsburgh, Pa. ..... Oct. 12-14
Pennsylvania Automotive Association Convention.

St. Louis ..... Nov. 17-19
Annual Convention of National Tire Dealers' Association.

Eaglesmere Park, Pa. ..... Sept. 14-17
General meeting of the Automotive Electric Association.

Dodge Brothers Factory Will Be Enlarged to Raise Output

Five of Eight New Buildings Already Started—Production to be 1,500 Cars Daily

DETROIT, July 25.—A program of expansion that will increase the capacity of the Dodge Brothers, Inc., factory here from 1,100 to 1,500 cars daily has been launched, President F. J. Haynes has announced. Construction has already been started on five of the eight buildings planned with construction of the other three scheduled to start immediately.

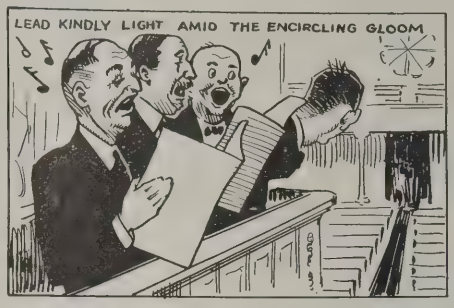
The cost of the expansion is estimated at approximately $8,000,000 and when completed will add several thousand workers to those already employed. The amount of square feet that will be allowed by the new additions will be around 750,000. It is expected that the program will be completed by January 1, 1926. The company's present intention is to go into full production as soon as possible.

A complete series of new buildings as large as many factories are being built on Lynch road. One building, 75x500 feet will house the heat treat department, another also 75x500 feet will house the heavy hammer shop, another 65x500 feet will take care of the light hammer shop. A die shop 100x312 will be erected. To supply power for these units, a large power plant equipped with the latest and most improved machinery will be built. Railway tracks are already being laid.

The largest of the additions to the main plant will be a six-story extension of plant No. 2, 100x462 feet and having a floor area of 282,000 square feet. The new forge department on Lynch road replaces a similar department in the main factory and the buildings which formerly housed it will make way for a five-story building 205x100 feet, which will be used for machining and storage purposes. What will be known as main plant No. 4, measuring 75x475 feet will join the machining and storage plant. It will also be five stories in height and will complete an L shape unit.

When Dodge Brothers first started operations in 1914, the company had only a few buildings with a total floor area of 20 acres. Today it consists of 110 acres and with the additions of the new buildings, the acreage will be brought to 130 acres, making the Dodge factory one of the largest in the world. The present buildings will be erected by the construction department of the company which has erected all the previous buildings of the factory.

World Survey of Traffic By Air Is Planned by U. S.



WASHINGTON, July 25.—A world economic survey of air transportation, the first to be undertaken in this or any other country, will be carried out jointly by the Department of Commerce and the American Engineering Council, it is announced by Secretary Hoover.

A committee of six, with J. Walter Drake, assistant secretary of commerce, as chairman, has been appointed to direct the work, which will be actively conducted by a field staff, of which Professor Joseph W. Roe, head of the Department of Industrial Engineering in New York University, vice chairman of the committee, is director.

The other members of the committee are: Dr. W. F. Durand, president of the American Society of Mechanical Engineers, New York; Prof. E. P. Warner, head of the aeronautical engineering course at the Massachusetts Institute of Technology; Luther K. Bell, Washington, traffic manager of the U. S. air mail and C. T. Ludington, Philadelphia, aviator.

SQUEEKS and RATTLES

THE LOST CHORD

"Church was out early last night, wasn't it?"

"Yes."

"What was the trouble?"

"Some one blew an auto horn outside and the male quartet was all that was left."

—West Virginia Moonshine.

It is said that six quarts of oil will cover a mile of sea. But have you ever let a sardine tin drop on your white flannel trousers at a picnic?

—Punch.

Why He Went Faster

"The officer is all wrong, Your Honor. I wasn't doing anything like sixty miles an hour."

"Were you watching the speedometer?"

"No, sir. I didn't need to. I wasn't in any hurry—I was just out for a spin. I wasn't going anywhere."

"Well, you're going somewhere now—Ten days."

—Huntington Motorist.

It is reported that Eddie Rickenbacker has made a fortune as a motor car manufacturer. Well, doesn't the ace always take the jack?

—Springfield Leader.

Built In Squeals

Maudie: "What's wrong with the car, it squeaks dreadfully."

Jimmie: "Can't be helped; there's pig iron in the axles."

—Columbia Jester.

Irresistible

Slick: "How do you get so many girls?"

Slicker: "Oh, I just sprinkle a little gasoline on my handkerchief."

—Punch Bowl.

Well Enough

He: "Now I want to show you how to change gears."

She: "Oh, Jack, let's not change them—they are just right as they are."

—Judge.

About his bier the mourners kneel: He was holding his cutie instead of the wheel.

—Who Bit You, 'Arry?

The fool and his money are soon parted. If only nature would arrange a similar alienation of the fool and his car.

—Associated Editors, Chicago.

Another version: Lafayette, we are hearing nothing.

—Arkansas Gazette.

A Helicopter enables you to go straight up but it doesn't sound that way.

—Arkansas Gazette.

A DEFERRED OPPORTUNITY

She: Don't you love driving on a night like this?

He: Yes, but I thought I would wait till we got farther out in the country.

—Oregon Owl.

SUSPEND CHRYSLER POLICIES

LOS ANGELES, July 25.—The California insurance department has ordered suspension of the Chrysler automobile insurance plan until an investigation reveals whether state laws have been met on the coverage.

WASHINGTON RECEIPTS UP

OLYMPIA, Wash., July 25.—Motor vehicle license receipts by the state for the year 1925 up to June 30 were not only more than $500,000 larger than for the same period last year, but are $134,072 more than for the entire year, 1924, as shown by the report just issued by W. G. Potts, state treasurer. Reports already aggregate $4,609,269.15, as against $4,176,783.56 up to June 30 last year, and $4,475,196.70 for the entire year 1924.

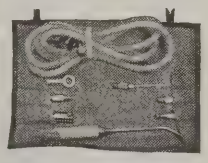
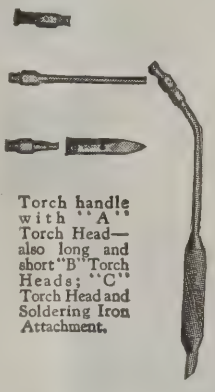
The Ideal Heat Outfit for the Garage or Repair Station

With this Prest-O-Lite 5-in-1 Outfit you can do any ordinary brazing, soldering, melting or fusing job quicker and better than ever before.



Four torch heads give you the exact flame you want for the work in hand. Temperature range accurately controlled. Handy soldering iron attachment. Heats in an instant and stays **hot** until the job is done.

You'll find this 5-in-1 the handiest "heat outfit" you ever used. It costs but $7.50, complete with rubber hose, wrench, etc. No pumping or generating. The 5-in-1 outfit operates on Prest-O-Lite Gas from handy Prest-O-Lite Tanks. A turn of the valve and it's ready for work.



Thirty-six big gas-producing plants supply thousands of Prest-O-Lite Exchange Stations located all over the country. You can always get a full tank for an empty one by paying a small amount for the gas only.

Ask about this splendid outfit at your nearest supply house —or write us for booklets.

The PREST-O-LITE CO., Inc.
INDIANAPOLIS, IND.
New York *Dept. J-8* San Francisco
In Canada: Prest-O-Lite Company of Canada, Ltd., Toronto, Ont.

The Prest-O-Lite **5-in-1** Outfit, packed complete in attractive canvas case.

Torch handle with "A" Torch Head—also long and short "B" Torch Heads; "C" Torch Head and Soldering Iron Attachment.

The **5-in-1** Outfit, rolled in a neat convenient kit.

Prest-O-Lite

The Prest-O-Lite Tank—the same kind that is used everywhere today for lighting heavy trucks.

"Sure, I PEEL 'em—I PEEL 'em for profit. Just take the old pocket knife, remove the layers of brass and the job is done. No filing. No trouble at all. You make an adjustment in half the time and the extra coin is extra profits. Throw the old file on the bench and PEEL 'em—

FOR PROFIT !"

A Shim for Every Make of Car—All Reliable Jobbers Sell 'em.

Vol. XLVIII August 6, 1925 No. 6

Summary and Index of Important Events in

This Week's Automotive News

Detailed Stories from* MOTOR AGE *Staff Writers and Special Correspondents Appear in News Section Beginning on Page 32

JULY one of best months in history of automotive industry. Sales slightly below June but ahead of last year. Dealers' stocks of 1925 models and used cars generally low. Page 32.

Alabama Automotive Trade Association meets in annual convention at Tuscaloosa. Merchandising methods and good roads are principal topics. Page 39.

Rochester, N. Y., reports sales of new cars in July slightly below June. Page 33.

Despite sensational price reductions by manufacturers, used car authorities are still optimistic over the future. Present used car situation considered very good. Page 42.

Salt Lake sales volume in July considered normal by dealers. Page 33.

Production of automobiles in the United States sets record for first six months of 1925. June largest month in history of the industry. Page 38.

Boston dealers report there has been no seasonal slump in their sales this year. Page 34.

Tommy Milton and Pete Kreis will drive their Duesenbergs in European speedway races this fall, but Peter de Paolo decides to stay in United States. Page 34.

July business in Louisiana is slightly under June volume but August is expected to witness year's greatest rush. Page 34.

Fifty more cities will receive dealerships for new Ajax Six following expansion of factory output. Page 32.

Earnings of the Gabriel Snubber Manufacturing Co. are three times dividend requirements in first six months of 1925. Page 38.

Quick period of recovery from sales slump of last six months is expected in Wisconsin, following greater volume in June and July than same months last year. Page 36.

Airplane reliability tour covering twelve cities to demonstrate utility and practicability of air commerce is planned by the Detroit Aviation Society. Page 36.

Congressman Davey of Ohio promises co-operation in effort to eliminate war excise taxes on automotive industry and believes action will be taken at the next session of Congress. Page 37.

Prospects for excellent Fall business are seen in Indiana as result of splendid farm conditions throughout state. Page 37.

British automotive authority tells of current state of industry in Europe before luncheon in his honor given by N. A. C. C. Progress in last three years in Great Britain cited. Page 43.

Manufacturers expect last six months of 1925 to continue the progress and increased volume of business started in the first half of the year. Page 35.

New Chrysler service plan claimed by officials to save owners 20 per cent of their maintenance costs. Page 36.

N. A. C. C. appoints President Erskine of Studebaker chairman of new insurance committee to investigate surety field. Page 35.

E. E. Haight, 17 years with MOTOR AGE, becomes head of new business publishing firm. Page 35.

In Next Week's Issue—Another Bill Fixit Story

Ralph Hamlin, who first started selling Franklins in Los Angeles in 1905

20 YEARS *Selling the Same Make Automobile*

Now Ralph Hamlin Is One of Los

By ROY H. COMPTON

TWENTY years ago Ralph Hamlin, of Los Angeles, received a telegram from H. H. Franklin offering him the agency for Franklin automobiles. The offer was accepted, cars shipped and received and ever since that day early in 1905, Mr. Hamlin has been the Franklin dealer. There may be several men in the country who are older as automobile dealers than Mr. Hamlin, but the number who have represented one line continuously as long as he cannot be large. Among Franklin distributors he is the first.

Mr. Hamlin's career as a dealer reads like a romance. Destiny may have had some part in shaping it but unquestionably Mr. Hamlin himself was chiefly responsible. Had he waited for opportunity to knock he might have been waiting still as there was no door on the little store in South Main street, Los Angeles, where as a youth he held forth in the bicycle sales and repair business in 1896. An iron grating across the front sufficed.

Mr. Hamlin is a self made man. Early in life he "went to work" and has been working ever since. When still in his teens he engaged in the bicycle repair business, but progress was slow. He sought to learn the reason by self analysis and came to the conclusion it was because nobody knew him. There were other men in the same line of endeavor, "old heads" at the game with impressive stores, big stocks and money to keep their names in the newspapers by advertising. Mr. Hamlin lacked the price of an "ad" so was passed up by the business offices, but managed to slip in at the back door. He entered through the news columns. He personally participated in every bicycle event that anybody would stage and when promoters were lacking he put them on himself. He became "known" and regarded himself as "made" from the bicycle riders' viewpoint in 1902 when he won the annual Los Angeles to Santa Monica race.

A Leader in Sports

His place became the chief source of bicycle news and he was one of the leaders on the sport pages of those days. Scarcely a day passed when his name was not in the papers. Business picked up and with it came profit. Mr. Hamlin had heard of power-propelled bicycles or motorcycles as they became known and he purchased an Orient having a 3½ h. p. Astor motor which was the first to be delivered west of the Rocky Mountains. His first motor vehicle agency was for the Orient buckboard in 1903.

There were few automobiles in Los Angeles in those days and what there were needed the almost constant attention of a mechanic to keep them running. Mr. Hamlin became interested as many who had known him in the bicycle business brought their cars to his place to see if he could fix them. Quite a few of the automobile owners soon became discouraged and discarded the vehicles or stored them away with old furniture in the barn. Mr. Hamlin started in buying these up one at a time, putting them in running condition and disposing of them. This represented his principal activity in 1905 when he obtained the Franklin agency.

Profiting by his bicycle experience and realizing the value of newspaper publicity he immediately began to get himself talked about in connection with the Franklin automobile. He had been the dealer only a few weeks when he took a little 12 h. p. Franklin runabout and established a new record from Los Angeles to San Francisco. Im-

Angeles' Prosperous Business Men

iediately a representative of a more powerful car lowered is Franklin record, so ten days after setting the first iark he again lowered it so decisively that Franklin was egarded as champion for some time.

From 1905 to 1912 Mr. Hamlin participated in about very automobile contest of any kind that was held in outhern California. Road races, dirt track events, hill imbs and all others found him an entrant. He climaxed is racing career by winning the famous Los Angeles-hoenix race in 1912. This was said to have been the ost severe test of endurance for men and cars ever held in this country. It was before the day of paved roads and the drivers had to fight their way across trackless deserts, stopping frequently to change tires, dig boulders from their paths or dislodge the car after it had hung up on a high center.

Mr. Hamlin at the wheel of an early Franklin with which he set a record for the run from Los Angeles to San Francisco in 1905. For years he took part in all runs and competitions in his territory

Takes a New Store

All of this competition had for Mr. Hamlin the single purpose of keeping his name before the public. Moreover the result was accomplished. In 1908 a new store on Olive street, which later became the automobile row of Los Angeles, was occupied. Five years later he removed to his new building built on Flower street three blocks west of Olive and competitors predicted his failure because he had left the row. In 1915 it was necessary to build an addition larger than the original structure and today his headquarters are on the eastern outskirts of the city's automotive center rather than the western.

Mr. Hamlin's grant of territory by the Franklin company did not include at that time all of the eleven counties now known as Southern California. There was another dealer in San Diego. Some years ago when the Holmes air-cooled car was put on the market this dealer preferred that agency to the Franklin. This gave Mr. Hamlin the opportunity he had longed for and he acquired the San Diego territory where he now maintains a branch operation. Other branches owned and operated by him are located in Hollywood and Pasadena. In addition to the Franklin he represents the Reo in San Diego and Pasadena. Although from time to time he has had other agencies, including the Rauch & Lang electric, Scripps-Booth and Selden truck, the Franklin always has been the mainstay of his business.

Although he retired from automobile racing thirteen years ago Mr. Hamlin never has refrained from being involved in some kind of competitive contest that would serve to keep his name and that of the Franklin automobile in the limelight. He was one of the early advocates of the famous Los Angeles-Yosemite Valley economy run which

Taking the Guess Out of Trouble Shooting

Equipment Gives Accurate Report on Motor Car Ills. Dealers Take Advantage of Institution for Reconditioning Used Cars

By B. M. IKERT

The automotive maintenance man who knows with certainty what and where the trouble is finds that his job of correcting it is greatly simplified. He saves time and he turns out a better repair job. He pleases the car owner and writes a recommendation for his own skill. If he is working on flat rate he increases his profits and is able to reduce prices to his customers. Not every automotive repair shop or service station can afford the extensive equipment required for the complete diagnosis made by the Automobile Testing Laboratory in Chicago, but even the smallest shop can work on the principle of intelligent diagnosis as the first step in automobile repairing. The more accurate the diagnosis the better will be the repair job.

REMOVING all guesswork from trouble shooting—that in a few words describes the work of the Automobile Testing Laboratory, 2615 Michigan avenue, Chicago.

This laboratory, which is in no way connected with any dealer establishment, repair shop or garage, hands the owner of a motor vehicle a record sheet after a test of such a vehicle has been made. This sheet gives an accurate diagnosis as to the condition of the various units, engine, transmission, axles, electric units, etc.

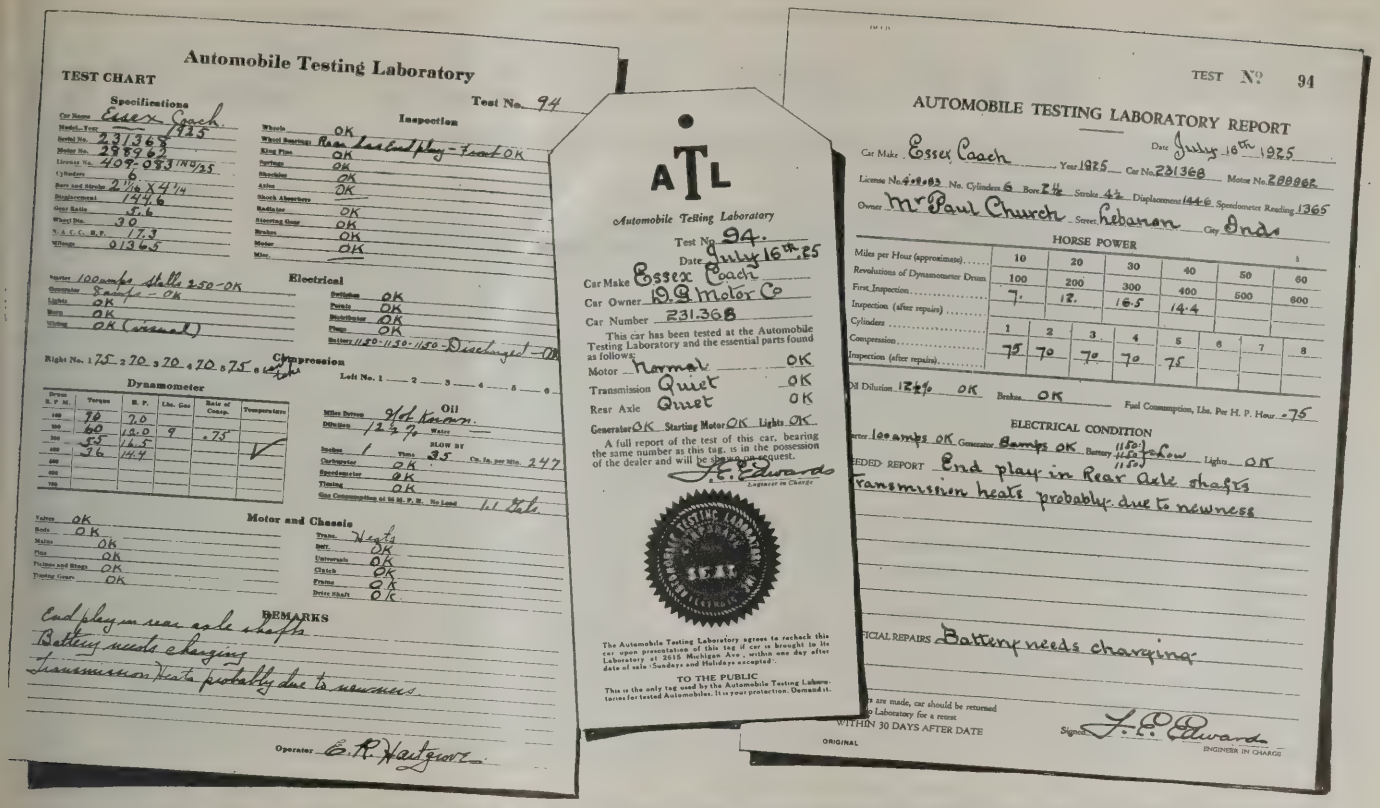
The record sheet in reality constitutes a work order, or prescription, to be executed by any service station or shop the car owner chooses. The laboratory does no repair work or adjusting. As the name implies, it is for testing work only and since it is not connected with any specific make of car, no partiality is shown. It is operated primarily to give an unbiased report of the condition of a car brought in for diagnosis.

The laboratory is in charge of Mr. F. E. Edwards, for years chairman of the technical committee of the American Automobile Association. Mr. Edwards has focused in this laboratory his many years of automotive testing work and the result is a line of equipment which leaves little to be desired for accurate and complete diagnosis or trouble shooting.

This laboratory has substituted the word "know" for "think." Instead of telling a customer they "think" the compression in his engine is poor, he is given the exact compression figures. There is no guesswork about the condition of the oil in the crankcase. The customer is given the dilution in percentage. He is told in exact figures how much fuel his engine consumes at 25 m.p.h. In short, there is a definite report about the entire car's condition.

Very few automobile dealers or repair shops can afford the equipment of the Automobile Testing Laboratory. Only with this equipment can one expect accurate reports. No doctor would attempt to tell the blood pressure of a patient without apparatus. Likewise no one can accurately tell the power output of an automobile engine without suitable means for measuring it.

To that end we find in this laboratory a General Electric 75 h.p. dynamometer to measure the engine power and



A car being tested on the dynamometer of the Automobile Testing Laboratory to measure the power output of the engine

torque. The rear wheels of the vehicle being tested are i contact with rotating drums in the floor, the drums i turn driving the dynamometer by which the output o the engine is measured.

In addition to the above some of the more importan apparatus includes flowmeters for testing fuel consump tion; blow-by meter, for testing the amount of the charg which escapes past the pistons into the crankcase; com pressionmeters, for testing cylinder compression; ampli fied stethoscope for diagnosing engine knocks and noises electric still, retort and condenser tubes for measurin the amount of oil dilution; ammeters, voltmeters micrometers, etc.

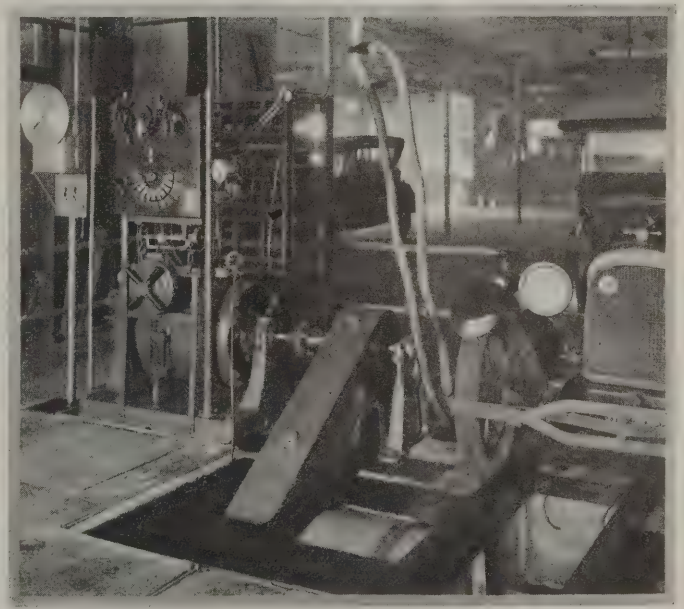
When a car comes in to be tested it first is given preliminary inspection as to the amount of play in th front axle king pins, wheel alignment, shackles, whee bearings, battery, wiring, switches, plugs, etc. The item listed on the test chart reproduced herwith show the com pleteness of the test.

The car is then placed on the dynamometer, means be ing provided for carrying off the exhaust gases. Th

Reproductions made from the record sheets of a car tested at the Automobile Testing Laboratory. In the center is the tag attached to a used car which has been given a clean bill of health by the laboratory.

carbureter is connected to a fuel line coming from the flow-meter and a sample of oil taken from the crankcase is placed in the retort of the still for a dilution test. The various engine tests are then made at car speeds equivalent to 10, 20, 30, 40, 50, and 60 m.p.h. depending on the ability of the car to attain these speeds.

After the tests the reports are made out as shown herewith. But the work does not stop here. Every test carries with it a re-check, whereby the owner of the car is entitled to bring back the car within 30 days to be tested again. This, then, is an absolute check as to whether or not the adjustments or repairs recommended in the first test have been properly made.



Used Cars Carry Check Tag

Many dealers are taking advantage of the laboratory in reconditioning used cars. By this means they are able to do the work needed to put a used car in shape for resale. Such cars carry a tag showing the laboratory has checked them and when bought the purchaser brings in the car for a re-check to show what the card says is true. This system has simplified the used car selling of various Chicago dealers.

The laboratory also is used for testing accessories. Inasmuch as the power output and fuel consumption accurately can be measured under conditions approximating those of the road, such devices as manifolds, carbureters, fuel saving apparatus, ignition devices, etc., can be tested. Here again, claims give way to facts because dynamometers and flowmeters tell but one story.

It is said to be the first institution of its kind that works for the general public. Nevertheless, dealers and fleet owners are taking advantage of it in various ways. The dealers use it to get the exact "low down" on a car. Or, if an irate customer thinks the service station of the dealer is trying to pile up a huge repair bill, the suggestion is made he take the car to the laboratory for testing. Many a dealer's repair order has been thus written from the report of the laboratory.

Those who contemplate selling certain accessories for which claims of all kinds are made take advantage of it. A representative of MOTOR AGE witnessed a test, for example, on a certain make of valve packing designed to prevent leakage around the valve stems. An engine was tested without the packing and then with the packing, the net result being an increase in power and better idling, as well as better fuel economy. Thus the man wishing to take on this packing had definite figures to show.

A close-up of the General Electric Co. 75 h.p. dyamometer used in the Automobile Testing Laboratory. This shows one of the drums sunk in the floor and on which the rear wheels of the car are placed. With apparatus like this it is possible to test a car at road speeds equal to 10, 20, 30 and more miles per hour

Some *Letters* to the *Editor*

Thinks Discounts Too Low

Corvallis, Ore.

To the Editor of MOTOR AGE:

As a small dealer and trying to keep my head above water, I read with interest every article I can on selling, profit, overhead, and like subjects.

It seems that nearly always the article goes on to tell of the various items of expense which go to make up that awful nightmare, "overhead" and of how to mark up goods to cover it, etc., without apparent regard for one thing and that is, most everything we have to sell is nationally advertised at a certain list price and we buy it at some discount, usually around 30 per cent from this list. Now, how in the world is a person going to mark this article so as to cover "overhead" with all the usual variations, and do it on the discount which is fixed by the manufacturer?

Understand, I am not trying to start an argument, I am seeking information. If overhead is so much and cannot be reduced and there is only so much discount allowed, I cannot figure where the real profit is.

I have been in the electrical contractor-dealer business and the same thing prevailed there. The trade journals were always putting out articles on how to figure costs and mark-ups and the salesman for the appliance companies and the washing machine companies would come and tell us how much money we could make selling their goods, when they would only offer a discount from nationally advertised list price, equal to what our overhead usually was, and which we could not reduce and still do business.

Volume and turnover are of course the main things, we all know that, but when they are somewhat limited what is a person going to do? Quit? Sometimes even that is hard to do without a great sacrifice.

I surely would be glad to get some light on this subject. It seems to be wrong some way. It would seem that it is the greatest encouragement for a dealer to handle so called "gyp" or "pirate" that could be found because of the low cost of this class of stuff, but it gives a dealer a living profit.

I would be glad to hear from you on this subject as I am vitally interested in it.

W. G. CUMMINGS,
Exide Battery Service.

German Automotive Conditions

Blenheim, Germany

Mr. B. M. Ikert,
Technical Editor,
Motor Age.

Dear Mr. Ikert:—

As a constant reader of Motor Age I am interested in articles appearing under your name and at the moment of writing I have before me a copy of Motor Age dated April 9 and have just read with interest "Tying up Equipment with Sales."

We operate a Ford Sales and Service Station. Our town, Blenheim, carries a population of 4,000 and is in the center of a farming community.

There are nine garages in addition to several "Back Door" mechanics so that it will be seen the motoring public are well catered to. Six of the garages have car agencies and competition is surprisingly keen—unfortunately not free from knocking. In one instance one of our friends makes a practice of carrying a Ford Rear Axle Shaft and Crown Wheel and we have naturally felt the knocks.

Going back to our own garage. We employ a staff of twelve made up of sales manager, clerical two, road men two, mechanics five, day floorman one, night floorman one, and we think it would be difficult to find a more united family than ours. This, of course, spells to a very large extent, success. We do not confine our servicing activities to Fords and have a very large following in most other makes. It is here we find the advantages of labor saving tools and on comparing our appliances with the chart shown by you on page 10 Motor Age, April 9, 1925, we are close in line with your majority. Comparatively with the chart mentioned we use the following:

Lathe—Yes.
Drill Press—No (Use a Portable Electric Drill).
Power Grinder—Yes.
Arbor Press—Yes.
Air Compressor—Yes.
Welding Outfit—No.
Cylinder Tool—Yes (K. R. Wilson boring machine for Fords).
Hoist—Yes.
Engine Stand—Yes.

No doubt you are a busy man but any time you have an opportunity of exchanging greetings we will be pleased to hear from you.

Perhaps we will have a chance of calling on you at some future date. In the meantime, we will continue to use Motor Age with profit and pleasure.

With kindest regard,

H. R. DIX & SONS, LTD.,
HERBERT R. DIX,
Central Garage.

A Warning

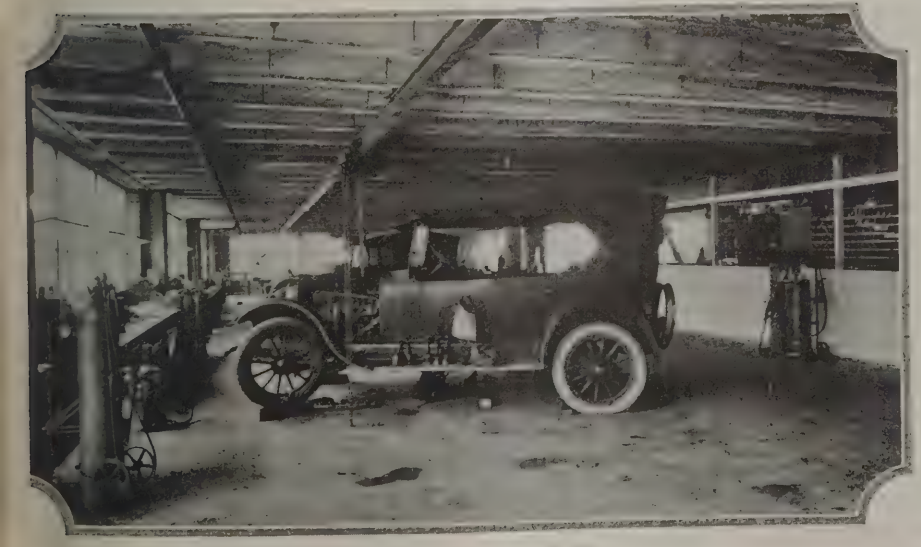
Wichita, Kans.

To the Editor of MOTOR AGE:

For the good of the automobile industry and those concerned I submit the following which might be well to publish:

On June 11, 1925, a man representing himself to be a salesman for a tire supply house drove up to my service station and presented samples of what he called Corduroy tires and persuaded me to put in a stock, fabrics 30x3 and cords 30x3½ and sizes in general use, mostly 30x3 and 30x3½, and tubes representing the amount of near $200, which would be shipped from their warehouse in Kansas City, Mo., immediately and they would stand all responsibility of fire and theft and give me six months to pay for them. At that time salesman would call and ship back to company all goods I had on hand and replenish with new stock which I would have to pay the return freight on.

They furnishing display signs, etc. and giving me a duplicate bill of my order out of a supposed to be "to-date" order book, and all was needed was a deposit of $26.50 for freight, but this would be deducted from my payment. I gave check which he said would be mailed with order to company.



A week passed and after inquiring several times about arrival of goods as freight here, I wrote company and my letter was returned "Unclaimed." So I have decided this is a complete swindle by this Mr. I. Benson, as he cashed check here by his own signature and if you cannot locate any firm by this name and address I think it would be of some help to expose this culprit's method to our fellowmen. L. G. DUTCHER.

Up-to-Minute Home of St. Louis Dealer

Picture above shows exterior view of he new sales and service building which recently was opened by the West side Buick Auto Company, of St. Louis t Kingshighway and McPherson street. t is a two-story brick structure, commodious and contains all modern features. Ground was broken for the building in September, 1924, the finishing touches being made early in April. The company moved into the new place rom its old location, 5023 Delmar avenue, on March 15. David E. Castles is resident of the company, while Waldo V. Wilson is vice-president.

The center picture offers a glimpse of the main showroom, 40 by 99 in dimensions. Its appointments and decorations are very attractive. The picture to the left shows the shop on the first floor for light service work and adjustments. The main shop for major maintenance work is on the second floor. There also is a used car show room and a parts department where replacement parts are stocked as well as other features.

Some Things to Observe in Using Pyroxylin Finishes

Constructing Building and Spray Booths to Lessen Fire Hazards. Storing the Materials. Heating the Building

By B. M. IKERT

THERE has been some agitation of late regarding the fire hazards created by the use of various enamels, lacquers and other finishes having nitrocellulose as a content. Most of these finishes are in the alcohol class having a low flash point and the hazard is similar to that of paints and varnishes in general.

Since pyroxlyn finishes are sprayed on and as the thinners used are highly volatile with quick drying characteristics of the finish itself, fire hazards in general can be greatly minimized by proper ventilation.

Some of the manufacturers of pyroxylin finishes caution their users when using the materials as regards fire while some manufacturers claim that there is no more danger in a paint shop with the new finishes than with the former paints and varnishes.

In the belief, however, that the motor car finishing institution might as well take no chances we publish herewith some of the things set forth in the report of the committee of The National Fire Protection Assn. or Manufacturing Risks and Special Hazards as to pyroxylin finishes.

Store in a Cabinet

If more than one day's supply of pyroxylin finish and thinner is kept in stock, it should be stored in a cabinet, tightly enclosed and made of sheet iron at least No. 18 U. S. gage in thickness and double walled with 1½ in. air space, or equivalent construction. Doors should be of construction equivalent to walls, provided with 3 point locks and kept closed when not in use; door sill should be raised at least 2 in. above bottom of cabinet. Cabinet should be vented 3 in. above the bottom and close to the top by a vent pipe having an area of not less than 10 sq. in. and made of metal not thinner than No. 22 U. S. gage with lapped seams and riveted joints; vent pipe should be kept at least 6 in. from combustible material, extend directly to outside air and terminate in a hood or shield.

Quantities of pyroxylin finish and thinner exceeding 50 gal. should be stored outside; or if inside, in a small storage and mixing room separated from the remainder of the shop by walls of material and construction as indicated below, but under no circumstances should storage inside a building exceed 250 gal.

Walls may be of the following construction and should be continuous from floor to ceiling and be securely anchored:

Reinforced concrete.

Brick.

Expanded metal lath encased in solid cement plaster not less than 2½ in. thick.

Gypsum or cement plaster at least ¾ in. thick on metal lath on each side of a stud partition.

Tile, gypsum or concrete block (cement plaster on each side to a thickness of ¼ in.)

In lieu of the foregoing any type of partition construction may be used which will afford one hour's protection.

Ceiling unless of fire resistive construction should be protected with cement of gypsum plaster on metal lath or its equivalent.

Walls in frame buildings should be protected with cement or gypsum plaster on metal lath or its equivalent as specified for ceilings.

Floors unless equal to 2-ply matched boards and free from cracks and other openings should be protected with 2 inches of concrete.

All openings should be protected with fire doors of approved automatic or self-closing type, suitable for use on openings in corridor or room partitions and conforming as to installation with the Class C requirements of the National Fire Protection Association's regulations for the Protection of Openings in Walls and Partitions Against Fire.

Artificial lighting should be restricted to electricity with installation in accordance with the requirements of the National Electric Code for extra hazardous locations.

As previously indicated adequate ventilation is of pronounced importance and care should be exercised to insure the installation of a system capable of completely removing the vapors and thereby preventing the accumulation of combustible mixtures.

Natural ventilation, such as ordinarily provided for oil and paint houses is preferable. Ducts should be of substantial metal construction extending above roof of building and terminating in an efficient suction creating device and having screened opening at floor level.

Thinner when obtained in metal drums should preferably be stored outside of building or in the above de-

---

G. J. NIKOLAS & COMPANY
1227 W. Van Buren Street
Chicago, Ill.

The Class Journal Co.,
5 S. Wabash Avenue,
Chicago, Ill.
Gentlemen:

Your letter of June 25th with attached reprint has been received and most very carefully read.

The article is well gotten up but we believe the equipment suggested is rather large for a small refinishing plant. Special containers for spraying, although very good where a large number of cars of the same color are being put through is not advisable for the average custom shop.

We note that you expect to establish flat rates for service station work. This, of course, is not in line with business principles, in our estimation. Supposing one man is very capable and turns out a high grade job, and another is incapable and turns out a poor job, due to nothing more than his own carelessness and negligence. Surely no one would want to pay as much for a job produced by the latter as by the former, would they?

We believe that great stress should be placed on the proper preparations on the work, before applying the lacquer. Results depend entirely upon this, more so than anything else.

—G. J. NIKOLAS & COMPANY.

scribed storage and mixing room. Mixing operations should preferably be carried on in the storage and mixing room, but mixing operations on a small scale can safely be effected in the spraying room or booth provided the amounts exposed are reduced to a minimum and the ventilating system is in operation.

Spraying should never be permitted in basement or below grade floor, of a building. If individual non-combustible spray booths are not used, spaces in which cars or other materials are refinished should be separated from the remainder of the shop by partitions of fire retardant construction such as wall board on wooden studding, cement or gypsum plaster on metal lath on wooden studding or wooden studding covered both sides with galvanized iron or its equivalent. Doors at openings in spray room partitions should be equal in fire resistance to the partitions and be of self-closing type or be installed so as to close automatically.

The ventilating system should be capable of effecting a complete change of air every three minutes and be provided for each spray booth or spraying room. Fans and exhaust outlets should be located several feet above the floor and discharge directly outside of building. Installation should be in accordance with the requirements of the National Fire Protection Association for Blower and Exhaust Systems for removal of flammable vapors.

If shop is so located that direct outside discharge cannot be obtained ducts should be run directly outside of building and to a safe point above roof. The fan is direct motor driven, the motor should be of the non-sparking induction type and shielded to prevent vapors or dust coming into direct contact with it. If fan is belt driven, the motor should preferably be located outside of room or at least at ceiling of room. Motor should never be placed directly beneath floor or spraying room. In general installation of all electrical equipment should be in accordance with the requirements of the National Electric Code for extra hazardous locations. This will also require switches, fuses and rheostats controlling ventilating fans, also switches and fuses in connection with the lighting system or equipment and including air compressors to be located outside of spray booth or room. Belts and fans should be electrically grounded in an effective manner in order to guard against static electricity. All wiring should be in metal conduit and lights protected by vapor-proof globes.

The use of open flames or spark producing devices in storage or mixing rooms, storage cabinets, spray booths, or rooms or in close proximity to same should be prohibited. For heating purposes only indirect systems such as steam, hot water or hot air should be employed. It is also important that spray booths or rooms be kept free from all unnecessary combustible material.

The material above was taken from the Report of the Committee on Manufacturing Risks and Special Hazards of the National Fire Protection Association, Boston, Mass., and some of the things set forth are subject to change before the final adoption of the report.

ALSO APPLIED LACQUER OVER OLD FINISH

New York.

To the Editor of Motor Age,

We received a copy of Motor Age of July 23 for which we thank you.

We note that on page 15 of the July 23rd issue of Motor Age, you have inserted a letter from the Sherwin-Williams Co., an extract of which reads:

"There are a number of expensive cars running in New York City today that have been on the road for two years and look practically as good as new that were finished with our Clear Binder and Binder Surfacer by our Mr. Saxe a couple of years ago."

In connection therewith, we advise that in April, 1924, the Holbrook-Hughes Corporation was organized and it succeeded The W. H. Hughes Co., Inc.

From the time of our incorporation in April, 1924, until January of this year, Mr. Arthur Saxe was employed by this corporation, prior to which he was for several years employed by The W. H. Hughes Co., Inc., whom we succeeded in April, 1924, and who then were and we still are manufacturing "Enamo" Pyroxylin Lacquers. During Mr. Saxe's connection with The W. R. Hughes Co., Inc., and the Holbrook-Hughes Corporation, many expensive cars were finished with our "Enamo" Pyroxylin Lacquers and Binder, manufactured and sold by us, and these cars are running in New York today.

As we know that it is your intention to publish interesting facts correctly, we are writing you as above. Always at your service.

HOLBROOK-HUGHES CORPORATION
Albert Farjeon, Vice-president.

New Air Yacht Christened

Marking what may be a new era in transportation, the Goodyear Tire & Rubber Company's new air yacht, "The Pilgrim," was christened recently at tow flying field, Akron, Ohio.

P. W. Litchfield and other officials of Goodyear believe that development of the air yacht has paved the way for future travel in the clouds, both by commercial and passenger craft.

"The Pilgrim" is driven by a 60 h. p. Lawrence radial motor. It consumes no more gasoline and oil than a high powered automobile, according to engineers. Maximum speed is about 65 miles an hour.

The little ship is the smallest blimp ever constructed, being one-fiftieth the size of the Los Angeles. It can be manufactured as cheaply as a high grade automobile, it is said.

The ship is 110 feet long, and the bag is 30 feet in diameter, holding 50,000 cubic feet of gas. Accommodations are arranged for four persons.

Invention of portable mooring masts, to which the small ships may be anchored is expected soon to bring about their general use, according to Mr. Litchfield.

"The Pilgrim" will be in command of J. N. Yolton, manager of aeronautical work at Goodyear, during tests and trips this summer. A. C. O'Neal will be motor mechanic.

The air meet at which "The Pilgrim" was christened was the preliminary event of Akron's centennial celebration week. Many army balloons and fliers took part.

All the tire manufacturing companies entered elaborate and artistic floats in the big parade.

A feature was the float of the Miller Rubber Co., representing a tropical beach scene, with bathing girls clad for the surf. It was mounted on a large truck, carrying three tons of water into which Miss Mary Porter, swimming champion, of Ohio, dived.

WATCH FOR HIM

ATLANTA, Ga., Aug. 1.—Jobbers and dealers in the automotive field over the Southeast are being requested to keep a sharp lookout for a man going under the name of Robert L. Grant, who recently organized at Birmingham a firm known as the Motor Service Clubs, Inc., with branches in several towns and cities throughout that state. Memberships were sold to automobile owners on the promise of a free wrecker service and a liberal discount on tires and other accessories. Grant recently disappeared leaving behind him, it is alleged, a trail of worthless checks.

Longer Chassis and New Bodies Feature Latest Jewett

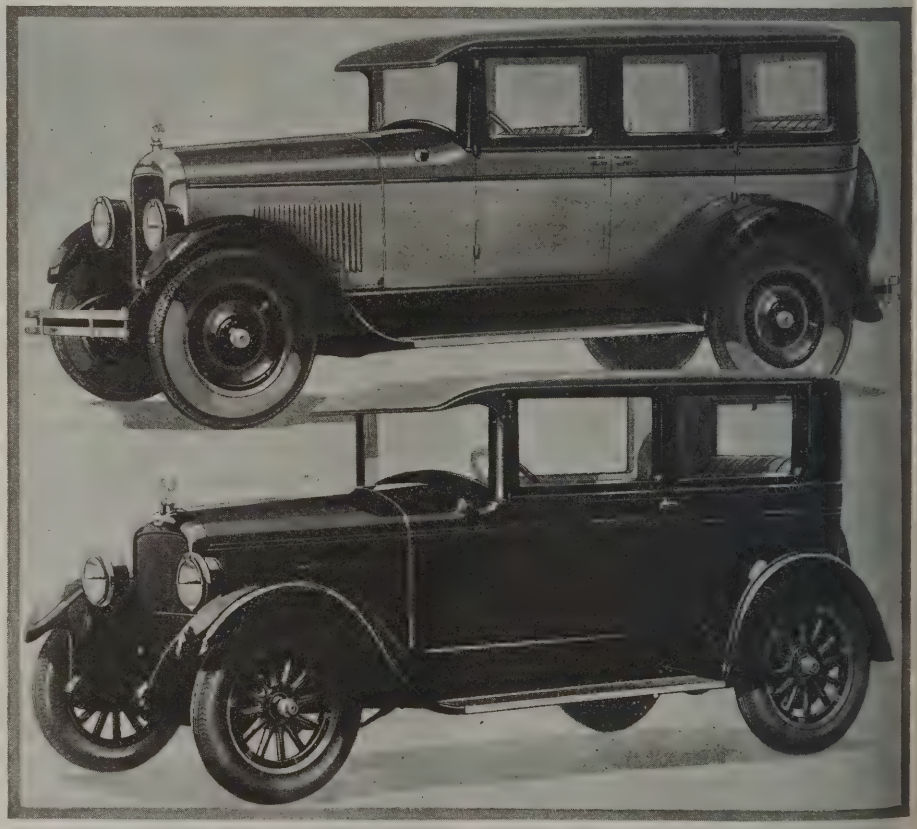
Adoption of Coincidental Lock on the Steering Gear and Fitting of an Air Cleaner Are Among the Changes Made—Price Reductions Ranging From $15 to $120 Announced

NEW bodies of improved design with more attractive color combinations and mounted on a longer wheelbase chassis, adoption of a coincidental lock on the steering gear, and several minor changes on the chassis including the fitting of an air cleaner, constiute the changes which are included in the latest series of the Jewett Six cars.

Compared with the previous standard equipped models, price reductions ranging from $15 to $120 are made, while five body styles instead of eight comprise the line. As announced by the Paige Detroit Motor Car Company, the new Jewett prices are as follows: DeLuxe roadster $1500; DeLuxe touring $1320; Standard coach $1245; DeLuxe coach $1400 and DeLuxe sedan $1680. While these prices represent the advertised list, all cars are factory equipped with the Paige-Lockheed four-wheel hydraulic brakes for which there is an additional charge of $40.

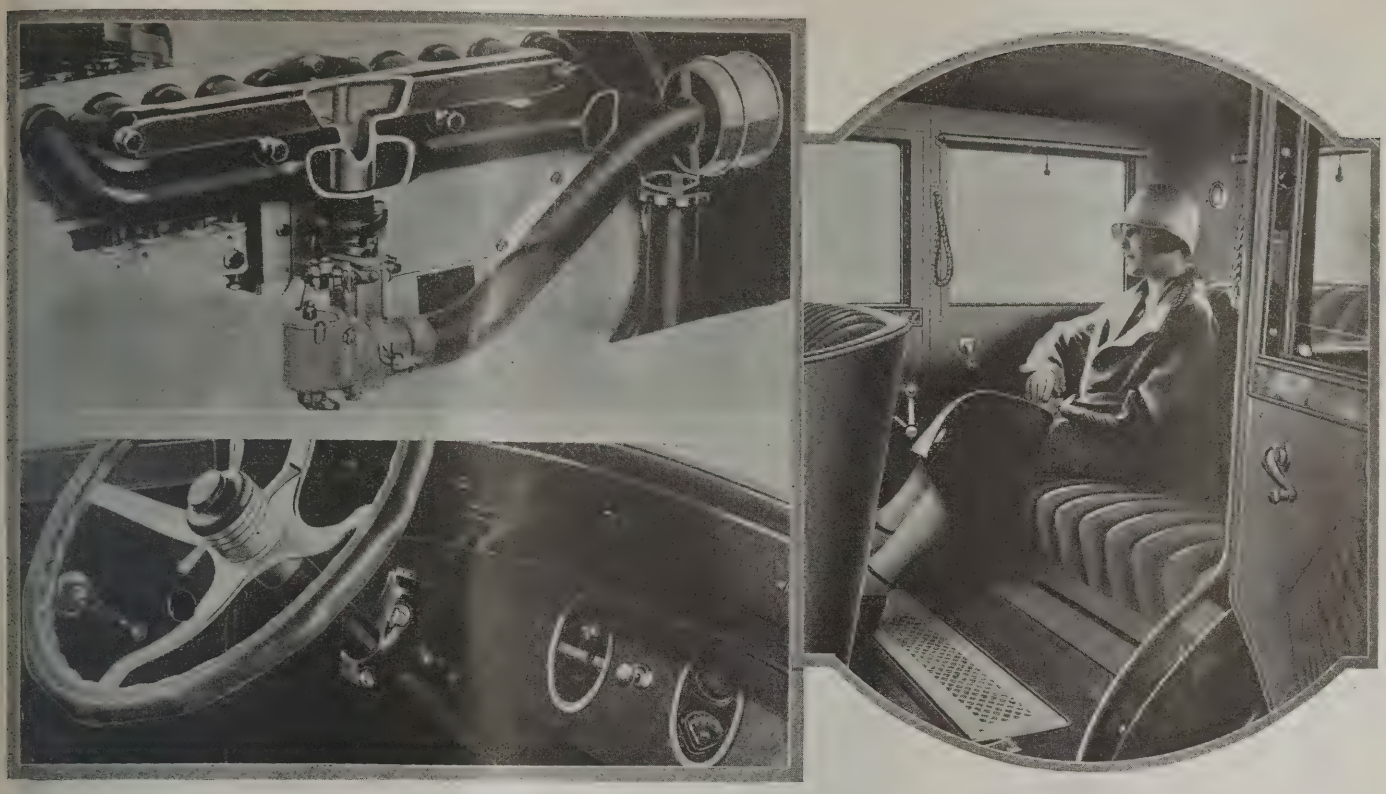
Increasing the wheelbase by 3 inches to 115 in. with corresponding lengthening of the propellor shaft, frame and running boards, has allowed the bodies to be made roomier and more comfortable, the additional space gained being added to the rear compartments. The new models form a striking contrast with the previous line because of their longer appearance, most noticeable in the cowl lines, built-in sun visors and more colorful finishes, the latter being in permanent lacquer as before. Both the sedan and roadster are finished in the popular two-tone design, while the other three models are of the single tone effect with jet black mouldings and tops.

Steering Gear Lock Provided



Greater protection from theft has been assured on the new models by the fitting of a "Hershey" coincidental lock which simultaneously locks the steering gear when the ignition switch is turned off. The steering gear is locked by a plunger which engages with the wheel shaft through the lock mounted on the column at the dash in which unit the switch mechanism is also embodied. To avoid locking the wheels when it is desired to switch off the ignition as in the case of descending steep hills, a small press stud is provided on the lock which enables the ignition circuit only to be opened, leaving the front wheels under control. A larger stud protected against accidental operation, locks the wheel and ignition.

An original and interesting feature on the new Jewetts to keep the front compartment free from engine heat in the summer time cold drafts in the winter and eliminate possible rattles, is the adopting of a ball and socket type of clutch and brake pedal action. This style of construction enables the pedal shanks to be fitted very closely to the front floor board, and also prevents the possibility of their binding.



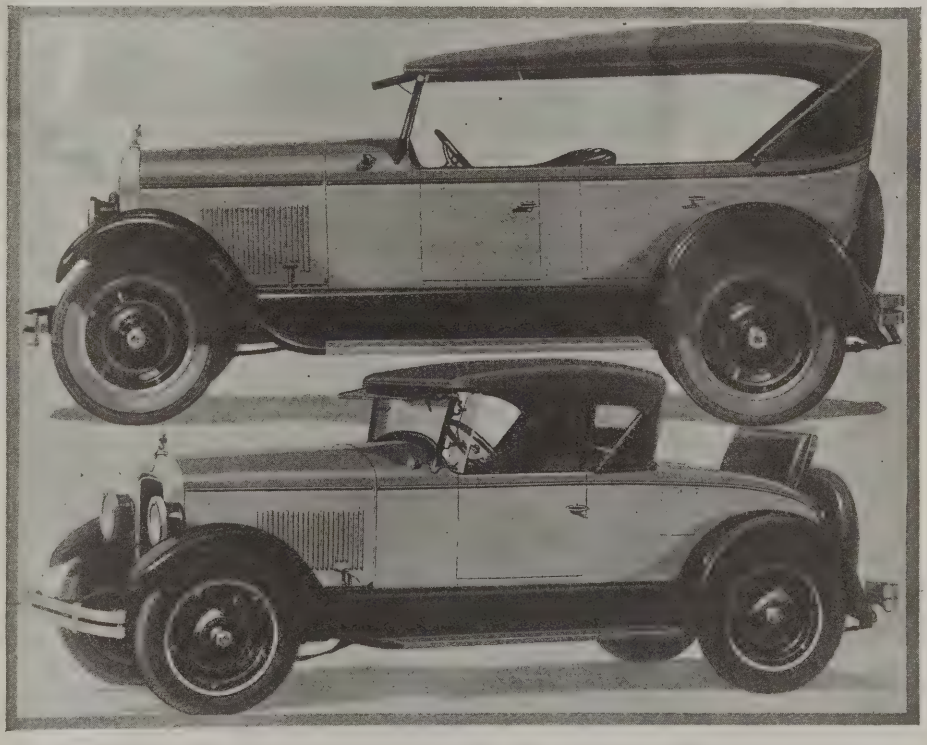
An Ireland and Matthews air cleaner of the inertia type and located just to the rear of the fan is now fitted to the carbureter intake on both the Paige and Jewett cars.

With the exception of a bigger and heavier counter-balanced crankshaft recently adopted on the Paige, no important changes have been made on either engines. On all body models now, the spare tire carrier is located at the rear and in this position adds very little to the overall length because the tire together with the rear quarter bumpers, with which the de luxe models are fitted, do not require as much room as the previous cars which were equipped with the full width type bumpers.

Single lamp headlights employing a bulb with two filaments, one of the latter as a dimmer, are now carried on a heavier and more substantial tie-rod. Where the headlights are attached to the fenders and tie-rod, a casting replaces a pressed steel connection previously used, also with this new style, the headlight wires are hidden from view and insured further protection from possible damage. To make the control of the lighting system more convenient for the driver, the switch has been removed from the dash board and is now mounted in the center of the steering wheel. Other improvements in the electrical system include the addition of parking cowl lamps to match the headlights and an indirectly

Two of the Jewett closed models, the DeLuxe sedan, top, and standard coach

Details of the new Jewett cars. At the top is the air cleaner installation and below it the instrument board layout and steering wheel. Right, rear compartment showing the additional room gained by increasing chassis length slightly



lighted panel on the dash, the latter being of finer design. Larger hub caps of sturdier construction and improved appearance are fitted on the new models.

More Room in Front Compartment

While the moving of the clutch and gearshift levers 3 in. farther forward has allowed considerably more room in the front compartment of all bodies, this change is particularly advantageous in the case of the coach models. Where traffic conditions make it inadvisable to leave the car on the left side, the driver can leave from the right door without disturbing any of the passengers, while, of course, it is possible for passengers to enter the rear compartment without troubling those in the front seat.

Among the body refinements of the enclosed models are the wing type inside door handles, which are very similar to those used on the Paige, a novel feature is the installing of ash trays in the arm rests of the sedan and the built-in visors over the windshields. Both the de luxe roadster and the de luxe sedan are finished in the same two-tone color style, the scheme being Arizona gray with a darker shade, Pueblo gray, above the belt moulding. A cordline stripe of Old Ivory extends below the moulding. The same color scheme is used on the de luxe touring and the de luxe coach, the finish being in Beige Brown and trimmed in ivory stripes set off with jet black moulding. The standard coach is offered in Bolling green finished also with ivory striping with black moulding. Jet black lacquer is employed for the tops of all closed cars while with the exception of the standard coach, all radiators are nickel plated.

Equipment on the de luxe models includes one spare tire with cover and rim; full bumpers front with quarter bumpers on rear; rear view mirror; combination stop and tail-light; automatic windshield wiper; and heaters in the closed cars. Excepting the standard coach which has artillery wheels, all cars are supplied with steel wheels as standard equipment.

Jewett open models consisting of the DeLuxe touring and DeLuxe roadster

European Used Car Plan

An unusual method of hanlding used cars is being successfully employed by one of the leading French dealers in American automobiles, according to the Automotive Division of the Department of Commerce.

When the prospective purchaser of a new car wishes to trade in his old, the dealer enters into a supplementary contract with him, by which it is agreed that in case the old car cannot be sold by the dealer at a fair price and within a specified time (usually two weeks), the purchase of the new car will not be consummated.

The "fair price" is arrived at by agreement between the dealer and the owner of the car to be traded in. Two special salesmen are employed by the dealer as "used car experts" and their efforts figure largely in the successful operation of the plan.

It is stated that not a single sale of a new car has been lost by this method, and that the dealer is always protected against accummulation of used car stocks. The dealer who evolved the plan based it upon seventeen years' experience in selling automobiles in Europe.

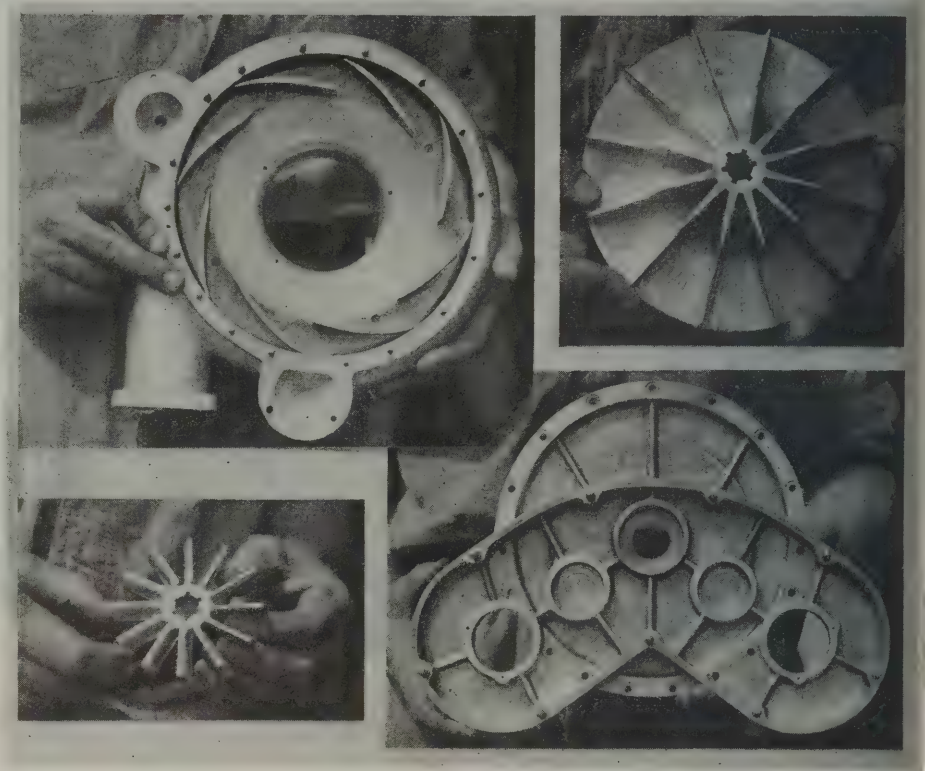
CODE OF ETHICS FOR MOTORISTS

WASHINGTON, July 31.—A committee of nationally prominent men to act as a drafting body for a Code of Motoring Ethics, being sponsored by the American Automobile Association, will be named in the near future, President Thomas P. Henry announces here. The code is designed as a standard of conduct for drivers of motor vehicles over here, and is looked forward to as one of the important features of A. A. A. activity in behalf of safety during the remainder of the 1925 season.

"What we need," says President Henry in explaining the need for the code, "is the establishment of an honor system on the roads. The promotion of such a system would be materially helped if there was in existence such a code of motoring ethics such as the American Automobile Association is now sponsoring. Nothing like it has ever been attempted before and there is every reason to believe that a few simple rules based on experience, common sense and common decency would receive an immediate response from the motorists of the country."

Sells Same Make of Automobile 20 Years

(*Continued from page* 11)



was won by a Franklin car in 1917 and again in 1919. He also was first to drive an automobile up the famous Mt. Wilson road. He participated in all the Franklin factory economy demonstration runs and today has a collection of silver trophies and medals symbolical of his various triumphs that is sufficient to stock a jewelry store.

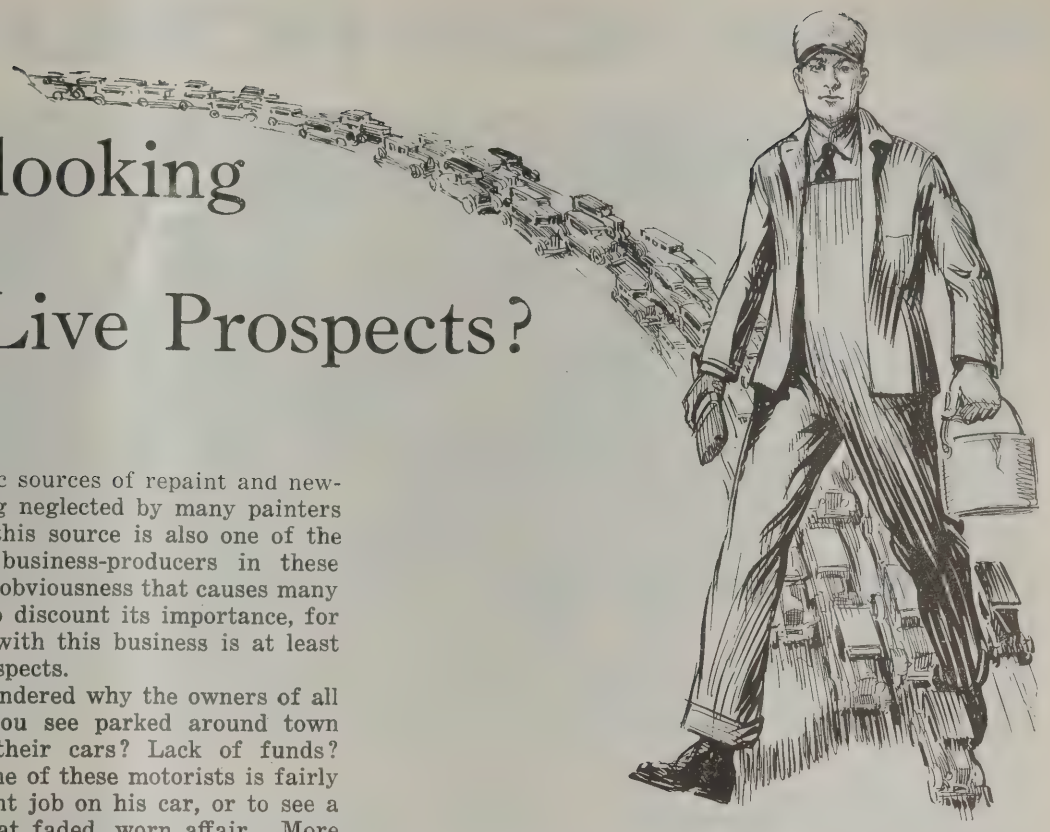
To provide further opportunities for newspaper publicity, in 1921 he placed a Franklin car exclusively at the disposal of his advertising department. This was known as the Franklin Camel. There have been two successors to this original car and it is probable that more newspaper space has been devoted to stories featuring these cars than any others in the United States.

Several years ago Mr. Hamlin inaugurated a type of advertising new to Los Angeles under the caption "Ralph Hamlin Says." Later the caption became "Franklin Talks by Ralph Hamlin." Each advertisement was a personal expression and usually featured by a picture of Mr. Hamlin and a reproduction of his signature. Other progressive business policies have featured his activities and in 1923 he won the national Franklin sales championship for dealers which was conducted on the basis of population served.

Today Mr. Hamlin is regarded as one of Los Angeles' best known and most representative business men. Never caring for politics or public offices he nevertheless has participated in practically all civic enterprises. He has been a consistent money maker as is shown by his rating with financial agencies. He is an exponent of the possibilities confronting automobile dealers who operate on strictly business methods and do not hide their light under a bushel. He has not sought the limelight but has done things which kept the rays turned in his direction.

Miller Supercharger

Many of our readers have been wondering just what the inside of a super-charger looks like and so we arranged to have these pictures taken of the components making up the supercharger on the Miller racing cars which ran at Indianapolis this year. At the upper left is shown the housing in which the impeller at the right revolves. The latter is made up with diffusing vanes which force the incoming air to the outside of the housing, where it is collected and sent to the carbureter air intake. Below at the left is the apparatus known as the entrance buckets, placed directly in the center of the housing ahead of the diffusing vanes The entrance buckets take in the air without shock. The cover to the housing is shown at the right below.



Gives Buyers Free Airplane Rides

Griffin Vance of the Used Car Exchange of Jack Neal Nash company, San Antonio, Texas, evolved another scheme which resulted in disposing of guaranteed used cars.

This time he gave every buyer of used cars a ride above the city of San Antonio in an airplane. In the ten days in which he tried out the plan he showed San Antonio from the air to 35 different persons, the majority of whom were women. That meant 35 used cars disposed of in ten days, and Mr. Vance says they were all sold on the lure of a prospective air trip. Each of the buyers demanded the air jaunt in connection with the purchase.

Mr. Vance declares the plan will be repeated from time to time. Besides selling 35 used cars in the ten days he found 70 prospects for new cars. Mr. Vance is an expert flier and personally conducted buyers on the air excursions.

Are You Overlooking Live Prospects?

ONE of the most prolific sources of repaint and new-top prospects is being neglected by many painters and trimmers. Yet this source is also one of the most obvious and certain business-producers in these lines! Perhaps it is its very obviousness that causes many otherwise competent firms to discount its importance, for nearly every one connected with this business is at least aware of this source of prospects.

Of course, you've often wondered why the owners of all these shabby automobiles you see parked around town don't take more pride in their cars? Lack of funds? Perhaps; but nearly every one of these motorists is fairly "itching" to have a new paint job on his car, or to see a neat new top in place of that faded, worn affair. More than anything, they need a timely and forceful "reminder" from some trimmer or painter. Once that smouldering desire for this badly needed renovating is awakened within the motorist's breast, he will have the work done.

Now, did you ever take a note-book and pencil and put in an hour or so making memorandums of the license numbers of these cars you see parked along the curb downtown? And did you then take or send this list down to the court house to find out the names of the owners—and, after that, get in touch with these people through letter or by telephone? If you have done all these things you know that it pays. If you have been putting it off, you have been passing up one of the most logical channels to increased business that you have access to.

Naturally, there are qualifying angles to this plan. First, there is the matter of selection. In listing these cars, it is well to eliminate the very old and out-of-date models, as the possibility of a successful appeal to the owners' pride is rather remote in connection with such cars.

Next, there is the kind of letter you will write to your selected prospects, if you write to them instead of using the telephone—and the letter is generally the more satisfactory. The other factors are: Following up your letter or call through further letters or solicitation, until you get a response or are reasonably well satisfied that further solicitation would be without result; interviewing those prospects who have responded to your letters; and giving the kind of service on those jobs you secure, that will cause the owners to advertise you favorably to their acquaintances.

Here is a form of letter that has proved effective. It can be re-written according to your requirements:

Dear Sir:

If magic were real and some of your choicest wishes could be granted, I'll bet that one of them would work out something like this: You'd step out of your front door the next sunny Sunday morning the weather man sends us, and see that car of your standing at the curb, all spick and span in a perfect, new dress of paint—ready to take your proud wife and tickled kiddies (or your best girl) out for a ride. (And a newly painted car always runs better anyway, you know!)

Well, the days of magic are not quite so remote after all. That wish can come true, and with surprising promptness and moderate outlay. We can completely refinish your car nicely in two days—or we can take ten days and turn out a super finish that will fairly dazzle you and that will be practically wear-proof.

Doggone. Now I'm all excited about that job myself. I can just see that——of yours all dressed up in a Super-Crystallite Finish that will make you as pleased as we will be to have turned out this job for you. You see, the boys in our shop are really artisans—skilled craftsmen who feel a glow of honest pride over every car that they refinish.

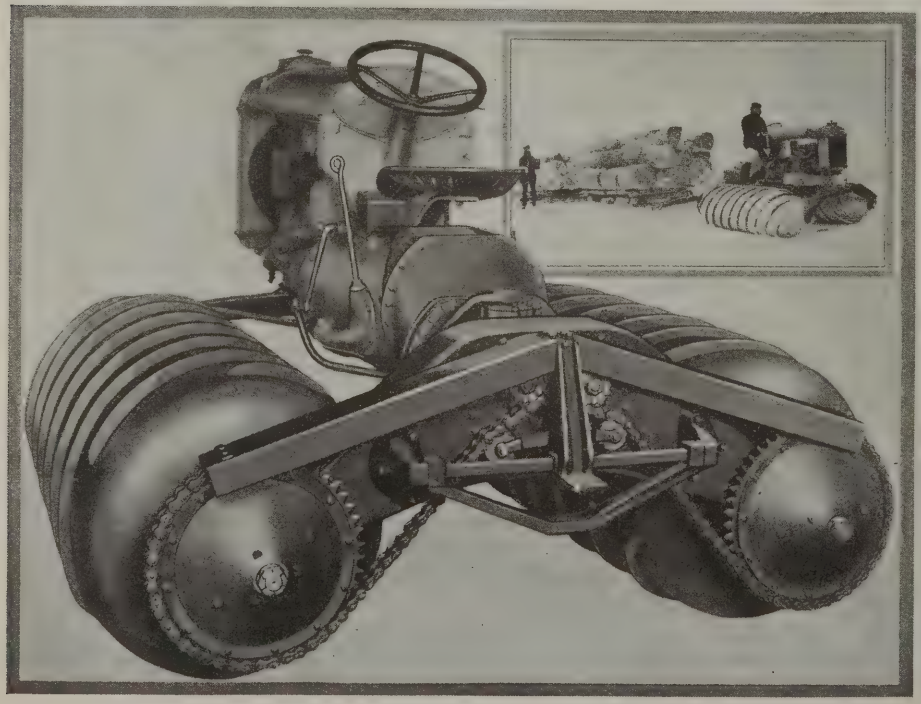
How about dropping in and talking this matter over with us? The writer, personally, will enjoy chatting with you about our different delightful tints and beautiful color-combination suggestions, as well as about our different processes of application. Come in and spend an interesting half-hour or so in our office and shops. Whether you decide to buy now or not, we shall enjoy telling and showing you how we do things here and just why our customers are our best boosters.

Make that wish come true. Drop in some day real soon and let's talk it over together.

Very truly yours,
SMITH & SMITH,
(Signature) TOM SMITH, *President.*

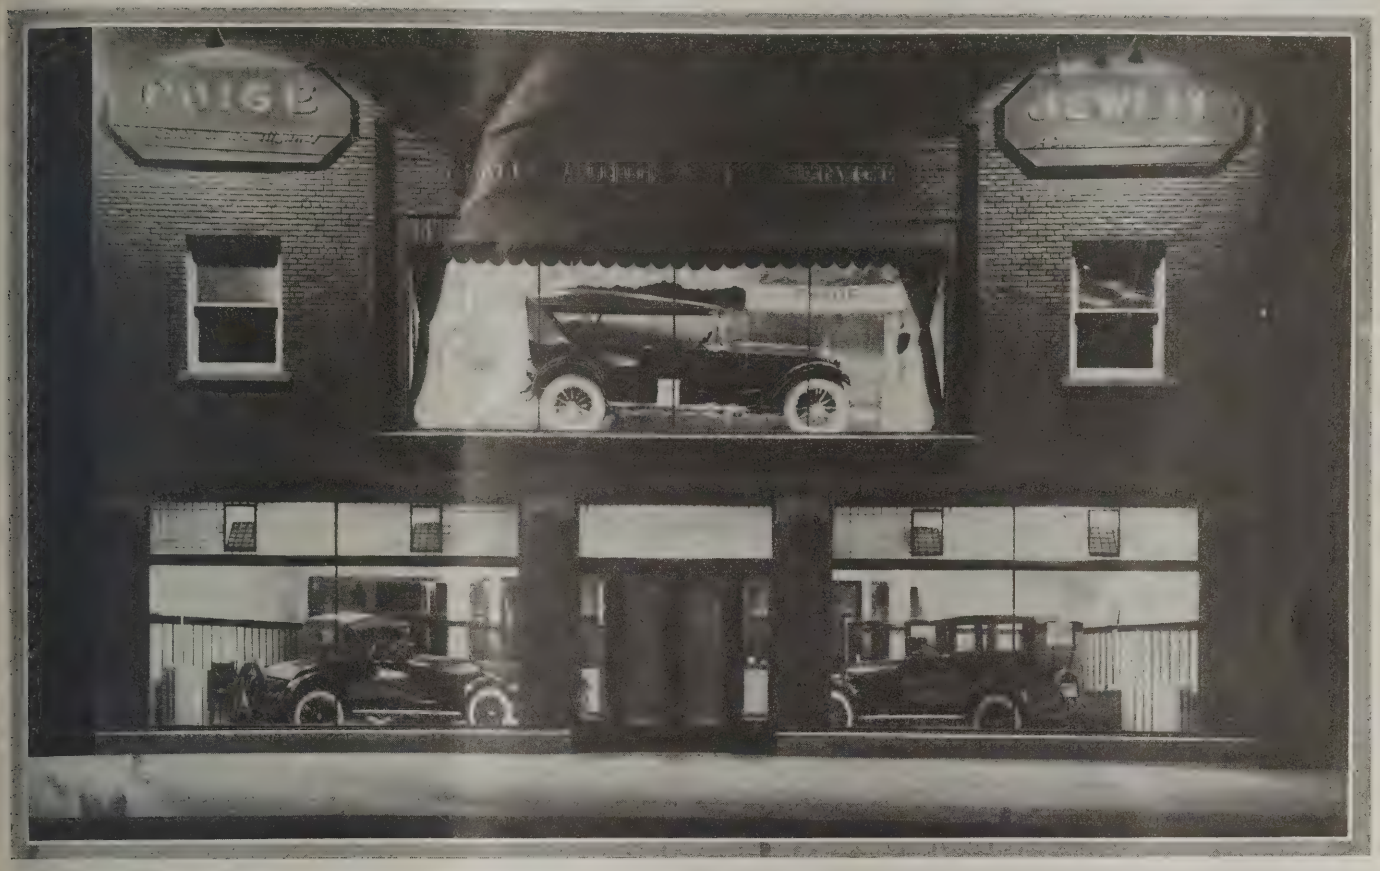
A second and third letter, each somewhat stronger than the preceding one, will frequently bring results where the first one did not. A simple card file of these prospects, with a memorandum of the dates the letters were sent out, make of car and other data, will prove a great help in connection with this business-getting plan.

But the important thing is to not neglect the excellent prospects that these shabby cars represent.

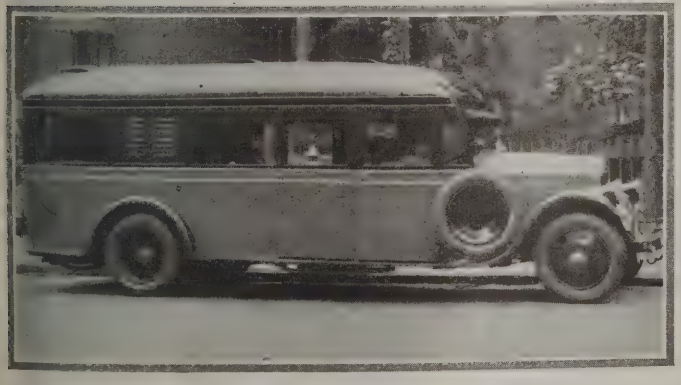


MOTOR AGE'S PICTURE PAGES

IN FAR OFF AUSTRALIA. The International Motor Show held at the Exhibition Buildings in Melbourne in May has been heralded as the most successful ever held in Australia. The attendance was 85,000. As only 55,000 are necessary to show a profit, the money from the extra admissions is pro rated among the exhibitors to reduce their expenses.



ANNIHILATORS OF SPACE. Air Mail Pilot Lloyd Bertaud is shown with the mail plane he uses in flying between Cleveland and New York, and his new Chandler Comrade Roadster, recently purchased from the Lake Shore Motors Co., Cleveland.



TO AID SNOW TRAVEL. Now comes the Snow-Motor, made by Snow-Motors, Inc., Detroit, designed to increase the scope of usefulness of the automobile by enabling it to travel through heavy snow. A standard Fordson tractor is used for motive power, and plans are being made to produced a motor which can be mounted on any standard make of automobile or truck up to 116 in. wheelbase. The Snow-Motor consists of two torpedo-shaped steel drums or cylinders to which spiral runners or "skates" are welded. These drums, which are chain driven, revolve in opposite directions. The spiral flanges engage positively with the snow or ice and, owing to the balanced thrust of one against the other, a straight course is possible, forward or reverse. Steering is effected by controlling the drive to one or the other of the drums. The idea of the motor is to dig itself out of the snow.

OF AUTOMOTIVE INTEREST

AN INTERESTING DISPLAY. A space on the second floor of the building used by Will F. Hitchcock, Lincoln, Neb., for an automobile sales and service station, has been turned into a large display window and one of the new models handled by the concern is on display day and night. This method of display has attracted considerable attention to the models shown.

ALL THE COMFORTS OF HOME. A traveling home, mounted on a Pierce-Arrow bus chassis, complete even with shower bath and radio, is to be the abode for the next three years of R. Connable, formerly managing director of the F. W. Woolworth Co. of Canada, who, with his family, will tour the United States and Canada, and part of the British Isles.

PRETTY SOFT FOR THE OWNERS. As a publicity stunt, the Willys-Overland Pacific Co., Los Angeles, sent out a crew of five negro boys, all dressed in white overalls, to go about the streets of the city each day for two weeks and shine up every Overland and Willys-Knight car they found parked. Each day a new street was selected and they traveled up one side and down the other with scratchless dusters and soft clean cloths.

Fitting Bearings for Splash and Pressure Systems

Q.—I would like some definite information on adjusting and fitting crankshaft and connecting rod bearings. I have done considerable of this work and yet there are many points on which I am in doubt. Would like information on the difference in design and construction of bearings, crankshafts and rods. Have talked to a great many so-called mechanics and no two of them agree or offer the same advice. What difference is there in allowing clearance in fitting rod bearings for circulating splash system and pressure feed oiling system. Which is given the most clearance? Is it considered proper practice, when fitting or adjusting a complete set of engine bearings to have the engine so stiff when finished that it has to be towed and thrown in gear to crank the engine. Should it not be possible with any engine, if the work is done properly, to start by hand cranking combined with help from the starting motor?

Proper fitting of main bearings begins with checking up the crankshaft to see that the journals are round and to see that the shaft is straight. With the shaft in good condition it should be first fitted to the upper halves of the main bearings, that is those portions which are normally a part of the cylinder block. If in fitting the shaft to the upper halves of the bearings it is found that the shaft touches at two or more bearings and does not make good contact at some other bearing then the mere tightening of the cap would result in springing the shaft, and an engine assembled in this way would soon develop a main bearing knock.

When main bearings are replaced, it is necessary to have them poured and then reamed with one type of bearing while with the replaceable type reaming may or may not be necessary. In some cases the bearings of the replaceable type are so accurately made that no additional work is required. However, should the shaft journals be undersize it necessitates having the shaft replaced. The difference in fitting bearings for splash lubrication and for pressure is that the former may be tightly fitted while with pressure lubrication it is necessary to leave from .002 inches to .003 inches clearance on the diameter. On main bearings a clearance of .002 inches is ample with the pressure lubrication system. Fitting connecting rods for a clearance of this nature is best accomplished by using a mandrel which is oversize just enough to allow for the clearance. The connecting rod when tightly fitted to the mandrel will then be the right size to operate on the crank pin.

The practice of fitting bearings very tightly so that the car must be towed in order to start the engine is a precaution taken to provide against looseness when the bearings have worn somewhat. There is not much question but what this is merely insurance against poor workmanship, although it is doubtless a wise precaution with ordinary methods of repairing. This method, however should never be applied to a car having pressure lubrication and if bearings were always perfectly fitted it would not be necessary with a splash lubrication system.

2.—In working on a Chevrolet 1923 model recently I noticed that the rods each had one more thin shim on the right or camshaft side of the rod than on the left. What is the reason for this?—Wisconsin Bearing Fitter.

There is no particular reason for having one more shim on one side than the other except that in fitting the bearings it is probable that this gave the proper fit while with a shim added to one side the bearing was a little loose and with the shim removed from each side the bearing was a little tight. Theoretically the shims should be the same on each side but practically we doubt if any difference would be noted, especially with very thin shims.

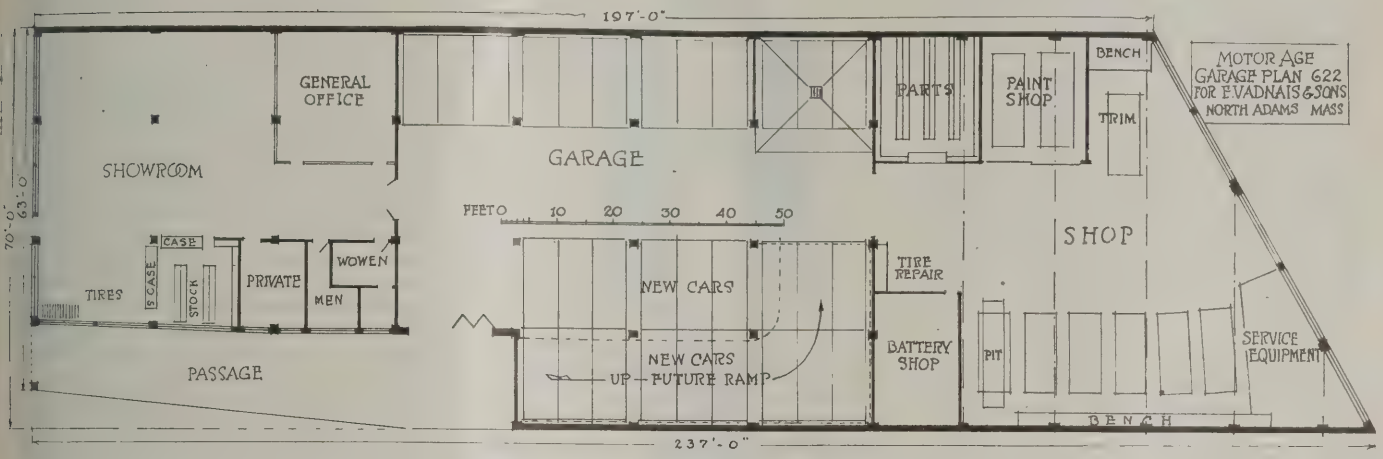
Regarding Eccentric Piston Rings

Q.—Please explain why Ford piston rings are made eccentric and not only why the Ford are, but also why other rings are made eccentric?—Carlos Farris, Tilford, Ky.

We can perhaps learn a lesson from considering the Indian and his bow and arrow. The arrow part of it does not enter into the discussion. The bow was made tapered with the heaviest part in the middle. This not only made the bow flexible but made the strength of the various sections such that there was no more tendency for it to break in the middle than at any other place. In considering the way the bow bends we must remember that the string pulls at the ends while one hand exerts a thrust in the middle. Accordingly there is the greatest breaking strain in the middle.



The strain, half way from the middle to either end is only half of what it is in the middle of the bow and the strain keeps decreasing the nearer we get to the ends. For the same reason the eccentric piston ring which is compressed by the cylinder walls will be strained more uniformly at various points in the ring and correspondingly will show a fairly uniform reaction or wall pressure.

Planning Your New Building

By TOM WILDER

The READERS CLEARING HOUSE

Dealer Wishes to Arrange for Addition of Second Story

The Shop End of Building Has a Trussed Roof Carrying Skylights to Insure Plenty of Light

Q.—We have a lot, a diagram of which is enclosed, on which we expect to erect a new one-story salesroom and service station for Buick and Chevrolet cars. The front end of the lot is 63 ft. wide and one-third of the way back there is a measurement of approximately 70 ft. This is the correct measurement as the lot runs wider in the back than in the front. The 10-ft. driveway is to be an open drive, but the front of the building might be extended to the end of the lot making practically a false front of 10-ft. which can be used for the driveway, if in your opinion this would be practical. The plan should include the following departments:

Salesroom, private office, general office, ladies' restroom, gentleman's restroom, parts department, tire, tube and battery department, upholstery department, service station, paint shop, wash stand for two cars and storage space for new cars. We thought of installing one of the new type oil burners for heat and ask your advice on the heat best suited for this building. Also advise us whether brick, cement brick, concrete blocks or tile and brick construction would be best suited for this building. The construction should be strong so that at any time we may add another story if occasion demands. — E. Vadnais & Sons, 62 Center street, North Adams, Mass.

We are still a little doubtful as to the exact shape of the lot, but have followed your instructions and if we have made a mistake we consider ourselves blameless. In this respect those wishing plans cannot be too careful to give us the exact proportions and dimensions of their lot and where irregularities are encountered, as in this lot a survey should be forwarded or at least a copy of one. A wrong shaped plot may throw the plan all out of proportion and make it impossible. Three or four feet difference in the width or length may spoil the whole layout.

Since you think you will be obliged to add another story to this building, it would be best to make it a permanent construction, building in the columns as they will need to be for the support of the second floor and, in fact, it might be well to add the permanent second floor, waterproofing it and using it for a roof. You will note that this construction extends back only about 150 ft. and that from this point to the river, we have a one-story trussed roof proposition which will be more serviceable for shop purposes. Later when you put on your second floor you will probably want to move the shop up to it, but this will not be necessary and it will rest with your personal opinion. If you do move your shop up this rear section would be good either for storage or would make an ideal used car display room, in case you handle many used cars.

We have shown by dotted line how a ramp could be applied to this building after the second floor is put on. This ramp would not interfere with the first floor layout except to the extent of storage of about six cars. The suggestion you make relative to extending the front of the building to include the passageway is a very good one but it would be well to leave this passage open in order to get light into the showroom and accessory department, in case another building should be put up next to you.

We would advise a thorough investigation regarding the cost of oil and coal based on their cost in your vicinity and their relative heat values. Oil runs about 21,000 B.t.u. per lb., while coal varies from 8,000 to 13,000 B.t.u. At 8c a gal., oil would cost $20 per ton but it has about double the heat of average to poor coal. If you install oil a boiler recommended for oil would be preferred to one built for coal.

Any of the building materials mentioned are suitable.

LEGAL QUESTIONS ANSWERED

By WELLINGTON GUSTIN
of the Chicago Bar

GARNISHMENT COURT PROCEDURE

Q.—Will you tell us how to put a lien on a car that has left the shop for about a month, and also how to garnishee a person to collect a repair bill?—C. D. Arledge, Arledge Bros., Urbana, Ill.

This lien for repairs arises with the making of the repairs. Under the statute the lien remains upon the car for a period of sixty days after delivery to the customer at which time it expires, unless within this period the repairman files a statement of his claim for a lien with his recorder of deeds. The statute sets out a form to be filled in by the lienor, giving the information required. This is too long to be given here, but your county recorder can direct you where to secure copies of this printed form.

A garnishment is strictly a court procedure and you will need an attorney to handle such a matter. Briefly, where a customer owes the garageman money, the garageman may get judgment and begin garnishment proceedings against any other person or persons found to owe the judment debtor. The court will then order the garnishee to turn money or property owing the judgment debtor to the satisfaction of the judgment, thereby releasing the garnishee of his obligation. In a few cases garnishment may be started without waiting for a judgment on the original claim of the judgment creditor.

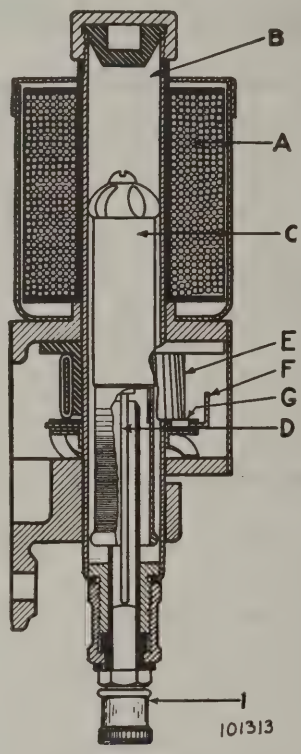
Clearing Up Electrical

EDITED BY A. H. PACKER

A Shorted Mercury Regulator

Q.—On an old Cole, with Delco mercury voltage control solonoid with N. T. C. (negative temperature co-efficient) wire, the solonoid gets hot. The resistance in it does not increase, hence the solonoid lifts the core the full height due to solonoid getting full current. It should keep the voltage down by lifting the required number of resistance coils out of the mercury bath. Now what is the material of this negative temperature co-efficient wire? Has it a trade name? I never got this kink straightened out and I read about it two years ago.—Chicago Subscriber.



We are showing an illustration of the mercury regulator to which you refer. The carbon filament of the old type carbon lamp has a negative temperature coefficient, but it is very difficult to get metal having such a co-efficient. Usually a mixture or alloy of two metals will have a lower co-efficient than either of the metals by themselves. A common resistance wire is known as Nichrome, presumably due to its having nickle and chromium in it. There are of course other resistance wires going by various names, but this one is perhaps the best known.

The reason for using wire having practically no change in its resistance as it gets hot is to keep the operation the same, with changes in temperature. If the plunger rises due to the attraction of the solenoid and the raising of the plunger does not regulate the current then the device is apparently shorted. This could be due to the two pools of mercury being shorted due to a leakage in the Bakelite tube which separates them or it could be due to a short in the resistance coil itself.

The path of the field current is from one pool of mercury through the resistance coil to the other pool and the higher it is lifted the more turns of this resistance coil are in the circuit. Another reason for using alloy wire of this kind is that it has a high resistance for a small piece of wire.

When a Ford Uses Special Ignition

Q.—Why do the Ford service men change the Red wire from the dash fuse block so it is in contact with the battery connection? We have a new starter type car that has an Atwater Kent ignition system on it. By changing the red wire leading to the switch box it connects direct to the storage battery leaving the magneto wire run up to the fuse block and end there. Our service man here said that if you leave the magneto connected to the switch it would tend to discharge the magnets. Is this true? Can a person use the magneto connection with the Atwater-Kent system or is it just a battery system. Why not sell the magneto on the flywheel if it cannot be used with the system.—Wild Brothers, Springfield, Mass.

In the old Delco mercury regulator the field current goes from one pool of mercury to the other through a partially submerged resistance coil

When any battery ignition system is installed on a Ford car the magneto is no longer required and the only part of the magneto which is still operating is the system of magnets which assists in circulating the oil. Under such circumstances it is possible to do away with the magneto coils and the magnets also. Under such circumstances it is necessary however to make provision to get additional oil to the front of the engine which can be done by using an additional oiling system together with double spools on the brass studs which formerly held the magnets to the flywheel. Anyone who wishes to may sell the magneto if he can find a purchaser.

The reason for changing the wire over is to make it possible for the driver of the car who does not know anything about electrical systems to have the engine operate no matter which way he turns the key. Actually he is operating on battery regardless of whether the key is turned to the Bat. or to the Mag. Position. It is true, as indicated by the mechanic referred to in your letter, that connecting the magneto in such a way as to get battery current to it will probably weaken the magnets as well as take current from the battery.

Does the Generator Charge A Full Battery?

Q.—Is it possible to overcharge a battery in a car by making long drives with the generator charging at normal rate? Also what action does the generator take when the battery is fully charged We have had several arguments regarding this question and would like to have your opinion.—One-One Battery Service, 1107 Sixteenth Ave., East Moline, Ill.

Batteries are rated in ampere hour capacity which in a lighting battery might be at a five ampere rate. For example if a battery will give out five amperes for sixteen hours it is known as an 80 ampere hour battery. If such a battery were 100 per cent efficient then it could be charged by putting in five amperes for 16 hours, but as the efficiency is not 100 per cent it might be necessary to put in five amperes for 20 hours. However, the charging is dependent on both the amperes and the time. Then if five amperes for 20 hours would charge the battery it could also be charged with a current of 10 amperes for 10 hours or a current for 20 amperes for five hours.

This is assuming of course that the current is not sufficient to overheat the battery. We believe that from the foregoing you can see that at the normal charging rate which is usually considered about 10 amperes it would be possible to overcharge a battery for it is only the current taken out which keeps a battery from overcharging. The condition of the battery is of course determined with a hydrometer and it will be found that in touring through the country the hydrometer reading will continue to rise until it gets up to 1,280 at which point it will gas and the gravity will probably rise no higher.

If for example the lights and starter should never be used and no current should ever be taken from the battery it would be possible to overcharge it even if the rate were down to two or three amperes, for we would be continually putting current in and never taking any out. In practice the commonly used type of current control or third brush regulation will actually charge the battery at a higher rate when it is fully charged than when it is discharged. This is due to the fact that the generator is connected to the battery and gets the battery voltage or a certain percentage of it across the shunt field. When the battery is in a discharged condition its voltage is about 6 and the shunt field voltage which would be about 2/3 with a third brush control would be about 4 volts. As the battery becomes charged its voltage rises to 7.5 and the field voltage will come up to about 5, or an increase of 25 per cent. For this reason the average generator does just the wrong thing and charges the battery more when it does not need the charge.

Trouble With Bill Fixit

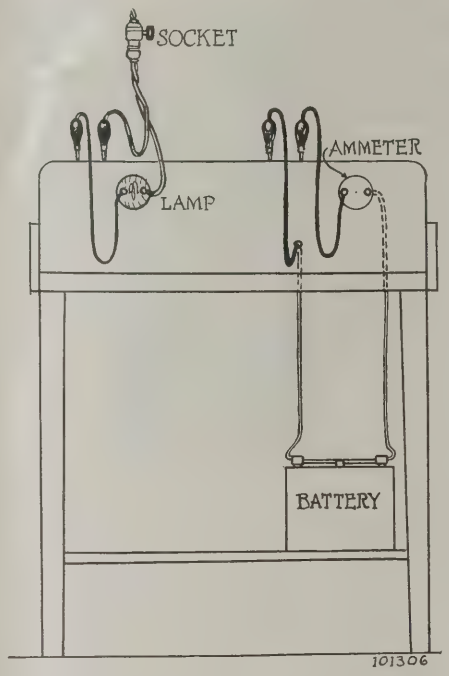
The READERS' CLEARING HOUSE

Adding Carbureter and Electrical Department

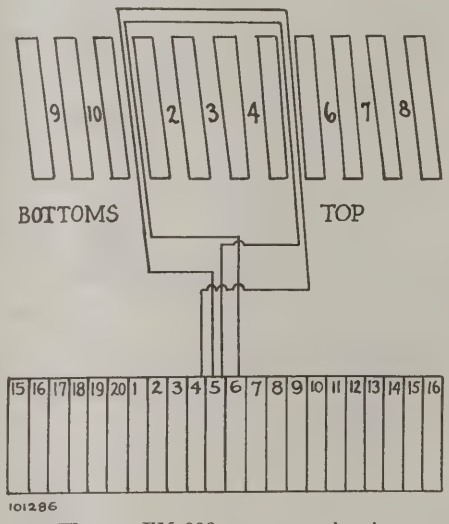
Q.—We would appreciate any charts ch as used for trouble shooting and flat tes. Also carbureter chart. In fact any formation you could give us would be preciated. We are mainly interested in e carbureter and electrical end of the me. Sometimes we do other work in njunction with our repair work. A all shop layout for electrical service ould be welcome, as we are just equip- ng our local shop.—Le'May Klobucher, r. Granite and Turner streets, Man- ester, N. H.

We are showing two illustrations, one which represents a work bench and e other a shop layout for electrical ork. The work bench is for an individ- l workman and is about 3 by 4 feet. It s sides to keep parts from getting lost d the intention is that one generator one starter will be worked on at a ne and taken apart and then assem- ed before any other work is done. At e back of the bench are two sets of st points, one operating through a mp on 110 volts, for locating grounds d the other operating on 6 volts rough an ammeter for testing out field indings and low resistance circuits.



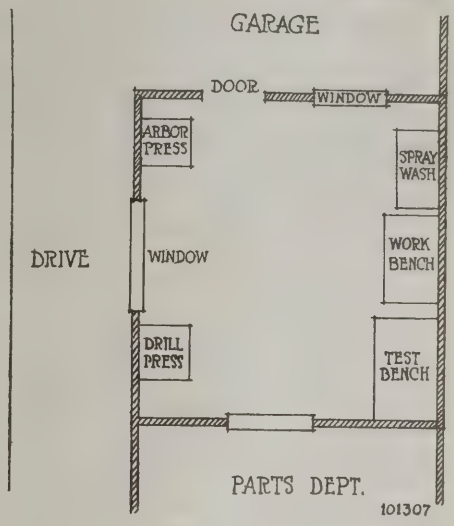
The shop layout is just of a general ature for we do not know that it would nform perfectly to your other shop re- uirements. If it is possible to locate the ectrical shop between the garage and e parts department, it is then easy for en to take the units from the cars to rn them over to the electrician and it is so easy for the electrician to get parts at he requires from the stockroom. lectrical flat rate articles were pub- shed in the June 12th, July 24th and ptember 18th, 1924 issues of MOTOR AGE d in the February 26th, 1925 issue of OTOR AGE. These issues however are t of print so that we are unable to pply you with copies.

It is possible however, that you can re- r to these issues in the public library d another suggestion is that you write r flat rate chart which is put out by the outhern California Automobile Dealers' ssociation, Los Angeles, California. lectrical trouble shooting charts were blished in connection with the May th, 1924 issue of MOTOR AGE.

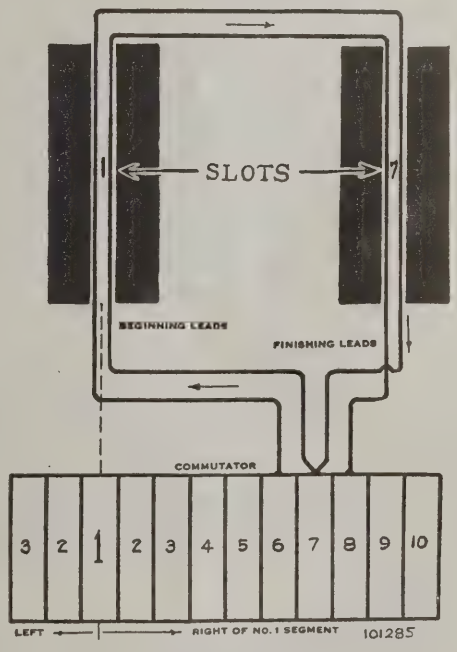


Remy and Wagner Armature Diagrams

Q.—Would like to have armature wind- g diagrams of E. M. 338 Wagner and 7 E. Remy generator.—Canada Sub- riber.



Both diagrams are published in accord- nce with your request. In the Remy rmature each coil contains six turns of o. 17 double cotton covered copper wire, here being two coils per slot wound to- ether, using wires of different color. his winding was used on 1920 and 1921



A separate bench for each man is best in the electriacl department

Sandwiched between the parts department and the garage—a good place for the electrical room

Remy 917E armature circuits

Anderson, 1920-21-22-23 Auburns, on 1923-24 Apperson, on 1922-23-24 Jewett, on 1922-23-24 Kissel, on 1923 Mitchell, on 1922-23-24 Oakland, on 1921-22 Paige, on 1921 Scripps Booth, on 1920-21-22-23-24 Studebaker, on 1923-24 Stutz.

On the Wagner armature there are two coils per slot, each coil consisting of nine turns of No. 17 double cotton covered copper wire. This winding is used on 1921-22 Studebaker cars, 1920-21 Nash cars. The Remy diagram is obtained through the courtesy of the Autolectric Publishing Company of San Francisco and the Wagner diagram through the courtesy of Charles L. Chittenden of Kansas City, Mo.

HEY, BUDDY, WHAT'S YOUR NAME?

The MOTOR AGE Clearing House has received a four-page letter from New Zealand, Australia or some such place and the writer does not give us his name, merely signed F. S. H. He hopes to see his answer in MOTOR AGE but as we do not answer anonymous letters he is probably hoping in vain. Moral: Sign your name.

LARD USED FOR TAR REMOVAL

We have found that if tar is greased with lard it will dissolve and not harm the finish of the car.—D. J. Mulvena, "Girl Mechanic," Alpena, Mich.

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

Flat Rates for Painting, Top and Trim Work

TOO often flat rate is something applied only to work on the mechanical units of a car and little or no thought is given toward the application of it on such work as painting, top and trim.

It is just as feasible to sell such work on a flat rate basis as valve grinding or rear axle work. It is true that in some cases it is difficult to determine exactly what has to be done or how much work is involved in repairing a top or refinishing a car.

Nevertheless, it would seem that much of this work could be handled exactly as was done when the prices for operations on the mechanical units were established for various makes of cars. Much naturally depends on the trouble shooter or the salesman who looks over the job and has to determine the amount of work involved.

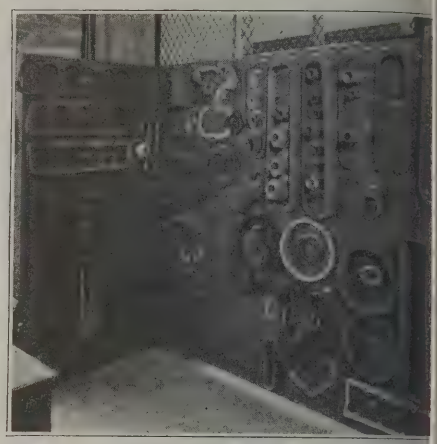
It was not so long ago that many said it was impossible to quote a flat price on overhauling a wrecked car, for example. Today however, there are any number of concerns who will quote a customer a flat price for handling such a job and the old excuse of "we don't know how much of a job it is going to be" no longer holds good. The flat rate operations have made it possible, under such conditions to take the job unit by unit and establish a total cost for overhauling that is fair to the customer and still insures a legitimate profit to the shop.

In a paint job certainly a flat price could be established, because the work of cleaning a chassis and body prior to painting has become pretty well standardized and likewise the application of the primer, undercoats and finishing coats are conventional operations on which definite time schedules and resultant flat rates can be established. Many paint shops are working on a flat rate basis for all work and since service of this kind is just as important as work on an engine or clutch, it is highly desirable.

Listing Parts Needed

Albuquerque, N. M.

To the Editor of MOTOR AGE:



We have been working flat rate on about 75 per cent of the jobs in our shop for about three years. At first we worked on flat rate for labor only and a short time ago we started to work flat rate material as well as labor, making the price for parts after the defective unit had been dismantled and completely inspected.

We find that it is impossible to list all the parts needed without some form or chart to check by, for instance on a complete motor overhaul they forgot to figure all the gaskets that are needed or the bearing shims or the ignition wire or the radiator hose, in fact, there are so many things that can be overlooked and are overlooked in quoting the complete price of the repairs before the work is done that it is a losing proposition to give the parts with the labor on a flat rate pric

We believe that somebody must prin or should print a form listing every pa that could be used on every make of ca giving each unit separate, so you coul go right down the chart and check every thing needed and nothing would b missed.

—A Reader.

We don't know of any company prin ing forms giving the engine items a named by you. No doubt many of ou readers are using such forms which the have had made up for their own purpose and if so MOTOR AGE'S Flat Rate Forum would be very glad to reproduce som of them on this page. There is no que tion but what it is quite a job to list a the parts likely to be needed on a jo such as an engine overhaul. Some o the motor car manufacturers in their fla rate manuals under various operation specify exactly what materials are nece sary and not only that but also state th tools needed for the work. The Olds mobile flat rate manual is a very goo example of this.

THINGS THAT HELP FLAT RATE

Very often a job is held up for some sma part such as a gasket. One of the best a surances a shop can have that the job wi get out on time is to see that there is a goo assortment of gaskets and washers.

Brake Lining Operations Explained

Monmouth, Ill.

To the Editor of MOTOR AGE:

I would like to have the Flat Rat Brake lining operations explained in th July 9th issue. The Chandler price fo the service brake comes to $11.75 and th emergency $19.00. Does this include th material? As I have just started up i business for myself I would like all th information I can get on the flat rat system.—H. L. Clark.

All of the prices given under the Brak Lining Operations in the July 9th issu of MOTOR AGE include the material. Tha is where the price of $11.75 is quoted fo relining the service brakes on a Chand ler; it includes the lining and other ma terial such as the rivets together wit the necessary work involved.

THE MARKET'S NEW OFFERINGS

Accessories—Equipment—Supplies

Combination Carrier-Bumperetts

N its Dodgette Combination Carrier and Bumperett the Bellevue Manufacturig Company, Bellevue, Ohio, believes it fers the trade an item that will sell ell to automobile tourists as well as ving a strong general appeal. The llevue outfits lengthen the Dodge thers car 12½ inches and can be proied for all semi-ellipitical spring cars. fits the coach, sedan, touring car or adster. The same model carrier fits all r models with either disc or wood eels. Trunk and platform jobs are id not to interfere with gas intake or ge. The attachment is bolted direct to e frame of the car, installation being complished in an hour or less. Shipng weight 146 pounds. No. 780 DB rrier, Bumperetts and No. 950 Trunk t at $60. No. 782 Carrier and Bumretts list at $26. The outfits are also ade for Essex, Ford and Chevrolet.

Bellevue's combination carrier and bumperett

Storm-King Windshield Cleaner

THE Storm-King Products Company, 216 Highland Building, Pittsburgh, ., is marketing the Storm-King Electric indshield Cleaner. The distributors ecommend this attachment to clean full ross the glass under any weather conction, giving the driver proper vision at l times. A feature is said to be its iform speed of operation, the speed beig always the same under various drivig conditions or when the car's engine stopped. At the same time it is said at the Storm-King requires only as uch current as is consumed by a dash parking light. Another interesting ing is the claim that the Storm-King's otor will operate perfectly when suberged in water, its construction makig it impervious to shortcircuiting by oisture. The device is easily installed d there is a size for every type of car. he price of $12.50.

Lincoln arms mascot

Capitalize National Advertising

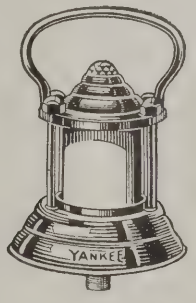
One way for the accessory merchant to add force to his local advertising is by coordinating such efforts with the national advertising of manufacturers whose products he features.

Watch the national publications especially for the manufacturer's heavy campaigns and tie in promptly with appropriate local display.

Through this plan the local advertisement gains advantage of interest created by the national campaign. The prospective purchaser who has seen the national advertisement is informed immediately where he can go in his home town to buy the particular equipment in question.

A southern accessory dealer features some nationally promoted product in each of his local insertions, following this lead with a list of other accessories he has for sale. He finds that the plan is profitable.

Storm King windshield cleaner



Lincoln Arms Mascot

FULLER-LUCE, Inc., 217 West 57th Street, New York, is distributor of the Lincoln Arms Mascot, a radiator ornament designed especially for the Lincoln car. The heraldic lion mounted on this device supports a shield bearing the Lincoln family coat-of-arms used by Abraham Lincoln's ancestors in England. Lists at $10.

Ship-Shape Parking Light

ONE of the new illumination units is the Ship-Shape Parking Light, introduced recently by the American Auto Lamp Company, of New York. It is a reproduction of the large signal lamps used on ocean going vessels. The lamp is 3¾ in. in height, the base being 2¾ in. in diameter. It is nickeled and has a center cylinder of frosted glass. Half the glass shows red to the rear and the other half, white, shows to the front. On top is an attractive green jewel. Price $1.75.

The same company is marketing a new and novel tail light lens, known as the

Ship-Shape Parking light

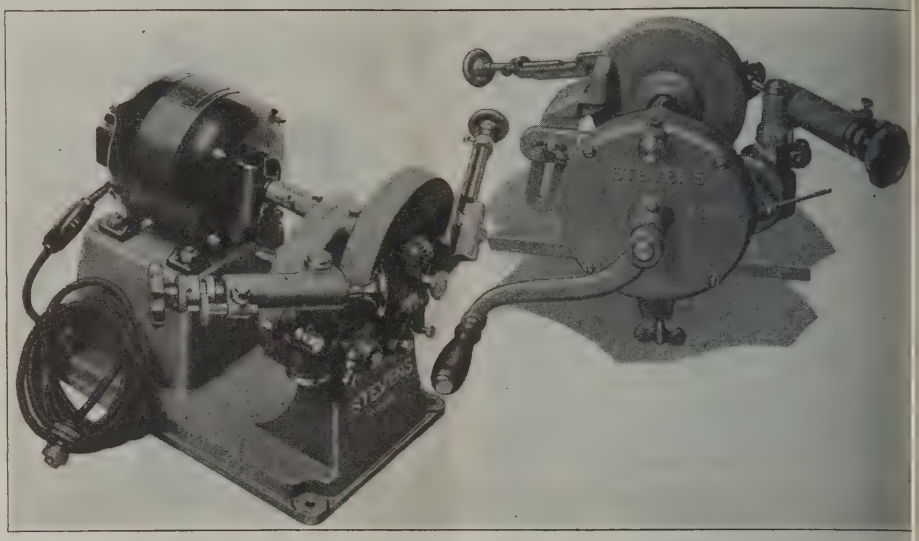
Yankee Refleks Lens. This has the appearance of the customary lens but on the inner surface are a number of small cones. The purpose of the cones, or prisms, is to receive the light from an oncoming headlamp and reflect it back to its source. The effect is that even if the tail-light is out the approaching car can see the car equipped with the Refleks Lens and avoid collision. This attachment is made in one piece, having no silver coating which the producers say abrasion and the elements remove. Price 30 cents.

Adjustable Tire Racks and Shelving

ADJUSTABLE tire racks and shelving are offered to automotive storekeepers by the Nichol-Straight Foundry Co., 319-323 Austin Ave., Chicago. The tire rack can be dismantled without demolishing it, being recommended by the makers for its adjustability and storage convenience and economy. Both the tire brackets and shelf arms are provided with removable caps which make it possible to remove, replace, raise or lower or add extra shelves without disturbing other shelves. The fittings for the tire racks and shelvings are interchangeable.

GETTING MORE OUT of the SHOP

Stevens Valve Face Grinder



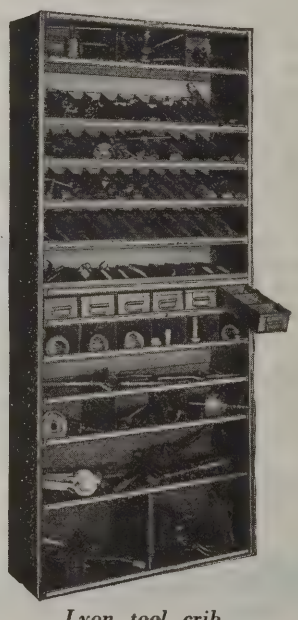
The Stevens valve face grinder made by Stevens & Company, 375 Broadway New York is made in two models, a motor-driven and hand driven type. The same grinding machine and attachments are used in both models and in the motor driven the handle is taken off and the main gear stud is directly coupled with a G-E motor while the grinder is clamped to the base just as it would be fastened to a bench. The handle can be quickly replaced and the grinder secured to a bench for hand driving.

The complete grinder includes an automatic valve chuck, adjustable to any size and angle, a drill holder for grinding drills, a general utility rest for sharpening all kinds of garage tools and an adjustable wheel dresser for the cutting wheel.

The valve chuck consists of an outer holder, an inner barrel and a split collet to grip the valve stem as the chucking handle is tightened. The valve is rotated automatically by the chuck which is worm-geared to the main drive and the feed is regulated by a small knurled screw. The valve revolves once to every 300 revolutions of the wheel.

The drill holder takes drill 1/8 in. to 5/8 in. and the drill is placed in a V slot between the index plate and the feed screw. The holder swivels and is swung as the drill is being ground.

Both hand and power driven machines are regularly equipped with a 6 in. diameter and 1 1/4 in. wheel and two collets one for valve stems 1/4 to 3/8 in. the other for stems 3/8 to 7/16 in. A larger size collet for 7/16 to 1/2 in. can be supplied on order. The motor driven machine is mounted on a substantial metal base and the wheel is driven directly by a one quarter horse power motor through a small universal joint. A 110 volt—60 cycle A. C. motor is regularly supplied. A D. C. motor costs $5.00 extra. Each motor carries 10 ft. of flexible cord with plug and switch. The machine is finished in baked gray enamel.

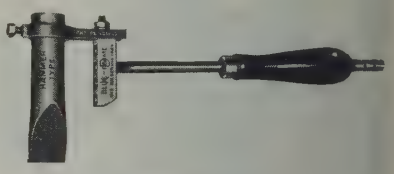


Stevens valve face grinder showing both the motor-driven and hand-driven equipment

Lyon Tool Crib

There are a good many tools in every repair shop that the mechanic does not keep in his tool box. Yet when he does need them, it is often necessary for him to look high and low before they are located.

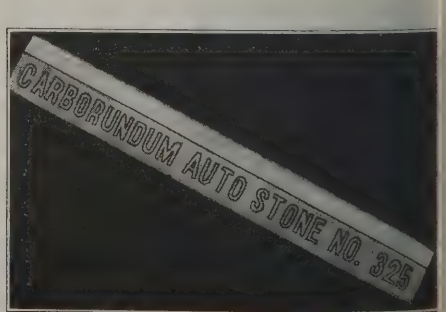
To avoid this waste of time, and to increase the efficiency of the repair department by providing a place for everything, the Lyon Tool Crib, made by the Lyon Metallic Mfg. Co., Aurora, Ill., was designed.



The Tool Crib is 84 in, high, 36 in wide, and 12 in, deep, the same size as all other Lyon auto parts control units. It is built entirely of steel, and finshed in durable olive-green enamel, baked on. Four of the thirteen shelves are sloping and fitted with half-height dividers for the storage of drills, taps, reamers, etc. Six steel boxes provide ample space for a large assortment of bolts, nuts, washers, and miscellaneous small parts. Several large shelves care for the larger tools, not only keeping them where they are easily obtainable, but off the floor and out of the way.

Lyon tool crib

The Blue Flame Soldering Irons



The K-D Manufacturing Co., Lancaster, Pa., has put on the market a new type of soldering iron the unique feature of which is the fact that the burner unit produces a blue flame without the introduction of air. In other words it burns gas just as it comes from the main and incidentally, produces an intense heat, it is stated. A flexible tube attached to the end of the soldering iron connects directly to the gas jet. The iron is called the Blue Flame and is made in several standard sizes some of which utilize from one to four burners. It is stated that the complete iron including the handle is not any larger or heavier than the average electric soldering iron.

Blue Flame soldering iron

Carborundum Auto-Stone

The Carborundum Auto-Stone made by The Carborundum Company, Niagara Falls, New York, can be used for cleaning up spark plug points, breaker points and wherever it is necessary to produce parallel surfaces for which heretofore a file has been used. It is a fine grit fast cutting stone and is furnished fitted with a durable metal holder to prevent breakage and is made just the right length and thickness to enable the user to handle it conveniently and efficiently. It is 4 in. long, 1/16 in. thick and 1/2 in. wide. The price is 50c.

A handy stone for touching up distributer points

EDITORIAL

Accurate Accounting Necessary

THERE comes a time when every business man knows whether or not he is making money. Lack f funds to pay for merchandise and meet the payroll, this condition occurs with any degree of frequency, evidence that the business is not making money. On ie other hand a condition that permits discounting of ills, prompt payment of all obligations, and regular istribution of dividends or profits indicates a prosper- us business.

There may be some merchants who for a time are nable to determine whether or not they are making profit, but this condition cannot long continue. What found more commonly, especially in the automotive ade, is the merchant who knows he is not making a rofit, or at least not a satisfactory profit, but who is nable to tell where or why his deficiency exists.

Proper accounting is the remedy for this condition. Vhen records of business transactions are kept with ufficient detail and accuracy the merchant knows all ie time where he stands with reference to profit and oss. And knowing this he is able at a moment's notice o take steps to correct an unprofitable condition.

The automobile dealer, garage man, repair shop oper- tor, accessory dealer, or other automotive merchant, an well afford to give time and thought to a careful udy and analysis of his accounting system and if it not so simple and clear that he can tell every day ist where his business stands he should not be satis- ed until he has made it so.

Business enterprise and capital investment deserve eir just recompense and the establishment that does pt produce a reasonable return for both these business ctors is not only a failure but is also a hindrance to her legitmate business institutions in its line.

The first duty of the automotive merchant is to make is business a profitable one, in order that it may con- nue as a useful institution of public service. To this nd a simple and accurate accounting system is ssential.

Get the Feminine Viewpoint

WHEN the industry was young the automobile com- monly was regarded as a vehicle of strictly he-man tility. The ladies, gentle things, could ride in them but te double-fisted male of the species had to assume the tremendous responsibility of operation. He was the listle-chinned person of that day who smoked black gars, banged away at ducks and quail with a double- rrel shotgun and—drove the motor vehicle.

The motor vehicle remains a device of he-man utility, tt not exclusively so, by a wide margin. Today we find many a feminine hand at the steering wheel and—importantly—we find that the feminine voice has much to do with the purchase of cars. The extent of feminine influence in this sphere of buying is developing constantly larger proportions.

Dealers who wish to flourish in business face the necessity of acquiring an intimate understanding of woman's automotive tastes and viewpoints. If the automobile merchant knows what they want and what they do not want he will be better prepared to present his case in a manner making for sales and profits.

The Cedar Point Meeting

CEDAR POINT, Sandusky, Ohio, will be the scene of an important gathering of tradesmen Aug. 6-7. It will be the first annual convention of the Ohio Council of the National Automobile Dealers' Association which has succeeded the old state trade association as the chief organization body in Ohio.

In assuming responsibility for trade organization in Ohio the N. A. D. A. is undertaking a program which should result in much benefit to Ohio's automotive merchants. The Cedar Point meeting will be replete with instructive talks and discussions. Ohio tradesmen who fail to attend will miss a rare opportunity to hear and be informed. The N. A. D. A. and the Ohio Council have gone the limit to make the Cedar Point convention a red letter period for all affiliates. The program is one of exceptionally good balance and covers points very vital to the autoomtive merchant's business.

Fear of Competition

MEN who are afraid to die often permit themselves to live—*with fear*.

At the same time living *with fear* is one way to hasten death—and this applies to the business of the automotive dealer.

Fear that a competitor will make a sale that he would like to make drives many a dealer to rashness. Catering to his *fear* the dealer sometimes enters into a trade-in bargain which yields no fair profit and slashes his own throat.

No aggressive, well managed retail organization has to accept unprofitable or inadequately compensating business in order to prosper. No establishment of any kind can continue to accept inadequately compensating business and *expect* to prosper, or even remain permanently in the fight.

Dealers who can banish false fears of competition are well off and on the right road. False fears serve the chief purpose of closing doors and putting up notices for the sheriff.

If the transaction will not pay—let competition have the business.

July One of Best Months in History

Whole of 1925 Expected By Many to Make Record

Stock of Old Models and Used Cars Reported Generally Low—Manufacturers Optimistic

NEW YORK, Aug. 5.—July was one of the best months the automobile and allied industries ever experienced. Sales were not as high as in June but they were better than the previous July, so much so that the prediction is already being made in some quarters that the whole of 1925 will set a new record.

The introduction of new models and the lowering of prices during the last week or two has produced the expected stimulus to the sale of the companies concerned, and an excellent volume of business for August is promised. More than the ordinary interest in new cars has been shown by the public.

Stocks in dealers' hands are in good condition and in only one or two spots in the South and West is any difficulty being experienced in keeping used cars moving. The number of old models on dealers' floors at this time is the lowest yet recorded.

A survey shows a majority of the manufacturers genuinely optimistic and making plans accordingly. Others are not so favorably placed. It might be said with reasonable exactness that the automobile manufacturers who were rushing production the first part of the year are still unable to catch up with orders except to a small degree. Some are still unable to make deliveries within two months.

There is quite a gap between the leaders and those farther down, whose production is now only about 60 to 70 per cent of capacity.

In parts, accessories and service equipment good business is reported, with New England and the Far West particularly strong. The touring season has been especially active in these sections and has had a naturally favorable reaction on sales by dealers and service stations.

On the whole, the sound condition of agriculture seems to be the predominant factor in the automotive situation. Farmers are buying automobiles and tractors as they never have before. They are getting good prices for crops, and crops have been large. This applies with particular force to the truck and fruit farmers of the south and west. General business, while showing the normal seasonal slackening, has yet been good enough to keep the urban population in the market for new and used cars.

The high average of sales is also probably due to some extent to the prevailing tendencies to introduce more liberal terms in the financing of transactions on the deferred payment plan.

Veteran Show Head Recovers

NEW YORK, Aug. 1.—Sam A. Miles, veteran show manager of the National Automobile Chamber of Commerce, is very much improved at his home in Christmas Cove, Maine, following an operation. He is again taking an active part in the plans for the New York and Chicago shows of next winter, and for the chamber's exhibit at the Sesquicentennial Exposition in Philadelphia next year.

50 More Cities to Have Dealership for Ajax 6

RACINE, Wis., Aug. 3.—Announcement is made that the new Nash-built Ajax Six is to be introduced and displayed in more than 50 additional metropolitan cities during August. Since the car was publicly announced May 27 distribution has been limited to Chicago, Milwaukee, Racine and Kenosha.

Among the points to be opened up early in August are: Salt Lake City, Seattle, Portland, Minneapolis, Spokane, Omaha, Kansas City, Dallas, San Antonio, San Francisco, Los Angeles, Oklahoma City, St. Louis, Hutchinson, Kans., New Orleans, Memphis, Atlanta, Salina, Springfield, Mo. El Paso, Independence, Kan., Indianapolis, Wichita, St. Joseph, Topeka, Cincinnati, Louisville, Easton, Philadelphia, Columbus, Toledo, Cleveland, Buffalo, Winnipeg, Pittsburgh, Detroit, Saginaw, Vancouver, Grand Rapids, Calgary, South Bend, Salisbury, Baltimore.

In speaking of the introductory plans for these added cities, George C. Hubbs, general sales manager of the Ajax Motors Company, said: "The reception accorded the Ajax in the four cities in its home territory will go down as one of the greatest ever given a new motor car. And the demand for deliveries set in motion on Ajax Six Inaugural Day is daily gaining volume. However, with factory production taking a strong trend upward we can now begin to carry out our contemplated nation-wide program of distribution. We are turning out five times as many cars in a day at the present time as we were seven weeks ago. Despite this increased output, we intend to adhere strictly to our policy of entering new territories only as we can follow the car's introduction with reasonably prompt deliveries."

COAST RADIO SHOW PLANNED

SAN FRANCISCO, Aug. 1.—The third annual Pacific Radio Exposition will be held in the Municipal Auditorium here August 22 to 28, inclusive. Special attention will be paid to the handling of radio equipment by automobile dealers.

New California Laws Aid in Selling of Accessories

Three New Statutes Now in Effect Materially Advance Volume of Equipment Business

SAN FRANCISCO, Aug. 1.—New laws affecting the use of passenger cars and commercial vehicles going into effect July 24, already have proved of material assistance in advancing sales of automotive equipment. With three night patrolmen working three nights a week in every county in California enforcing headlight regulations, the demand for adjustments, new headlights, new lenses, reflectors and headlight globes has been the heaviest in years.

The campaign opened July 1, and up to July 10, more than 10,000 citations for irregular headlights had been issued in the state, notwithstanding the fact that enforcement was virtually suspended on July 3, 4 and 5 due to heavy traffic over the holidays, and again for a few days during the Santa Barbara earthquake situation.

Another new law which has materially increased the equipment sales is that prohibiting the throwing from a vehicle of lighted matches, cigars, cigarettes or ashes. Violation of this law is defined as as misdemeanor, punishable with a fine of not more than $500, or a jail sentence of not more than six months, or by both such fine and imprisonment. The law applies not only to automobiles, but to street cars, railroad coaches and wagons. The result has been extensive sales of containers for cigars, cigarettes and matches for attachment to automobiles, smoking cars and the smoking compartments of street cars.

The law forbidding the carrying of baggage on an automobile projecting beyond the line of the hub caps on the left-hand side of the car has promoted the sale of luggage carriers to a point never before reached in this state. The law is particularly aimed at campers and automobile tourists whose tents and other equipment frequently project so far on the sides of the car as to make passage of two cars on a mountain road impossible.

NEW HUDSON DEALERS

NEW ORLEANS, Aug. 1.—Paul H. Maloney, president of the newly organized Maloney Motor Car Company, distributors of the Hudson and Essex lines in Southern Louisiana, announce the appointment of the following dealers:

Joseph E. Loeb, Morgan City, La.; J. E. Hollier, Lake Charles, La.; Franklin Garage, Franklin, La.; Frank Jumoville, Plaquemine, La.; Vermillion Garage, Abbeville, La.; Chambers Auto Sales Co., Hammond, La.; W. F. Simmons Auto Co., Bogalusa, La.

ales of New Cars Slacken Slightly in Rochester, N. Y.

Dealers Report Tendency on Part of Buyers to Get Away From Time Payments

ROCHESTER, N. Y., Aug. 1.—New car ales fell off somewhat during the past onth because of anticipation of new odels. The fact that operators licenses ust be renewed this month also served hold up sales somewhat. Used cars re continuing to sell in goodly numbers nd stocks on hand are lower than at ny time during the past year.

Dealers here report a tendency of late n the part of buyers to get away from me sales. While the movement in the irection has only started slightly they ope to see it gain momentum. They elieve that those buyers who are paying ore cash and taking less time to comlete their payments for cars are realizng their extended time payments often rove a serious drawback rather than a elp in the purchase and operation of car.

These buyers have found out that it a good deal harder to make time payents and at the same time meet the perating expense of their car, than it to pay cash or shorten their payments, nd thus have one of these heavy carrying charges off their hands. For the verage buyer the operating expense of car in itself is a heavy enough drain n the pocketbook without taking on me payments in addition.

Accessories, tires, replacement parts nd electrical equipment are moving in air shape, although stocks are rather arge at this time. This is due to the hore or less slack business conditions uring the hot months. August is exected to see a change for the better in ll lines of the automotive business here.

ig Sales Volume Causes Chevrolet Price Reduction

DETROIT, Aug. 1.—Announcement of rice reductions effective August1 on all losed Chevrolet models was made today y R. H. Grant, general sales manager.

The revised price list follows: Coupe educed $40 to $675; Coach reduced $40 o $695 and Sedan reduced $50 to $775.

The benefit of the price reduction also vill extend to more than 8,000 persons olding Chevrolet six per cent purchase ertificates for future delivery on closed odels. The payments and interest on he certificates now will attain the total f a down payment for delivery earlier han would have been the case under the ormer price schedule.

According to Mr. Grant, the record roduction and the phenomenal sale of hevrolet passenger cars enabled the ompany to reduce prices earlier than ad been contemplated.

Finds Stolen Car in Own Garage

OGDEN, Utah, Aug. 1.—After storing an automobile that the police held 38 days until they could find the owner, and just after the supposed owner had been found, the Ogden Motor Co. discovered that the car was its own property. The machine had been stolen, but its loss somehow overlooked until the numbers were checked up after officers said they had found the rightful owner. The company was permitted to keep the car, remitting the $6 due for storage.

General Parts Corp. Buys Haynes Automobile Plant

DETROIT, Aug. 1.—Purchase of the Haynes Automobile Company by the General Parts Corporation has been announced by the latter company here. If a survey to be started in the immediate future shows favorable prospects, manufacture of the Haynes automobile will be started under another name.

With the purchase came the leasing of the service department and grounds of the company. The transaction includes the purchase of the name Haynes, it is said, insofar as its service to products made by the company is concerned.

About 40 men will be employed in the service department with the additional possibility of the General Parts Corporation sending some of its other parts departments to Kokomo, Ind., where the Haynes service is located.

Olds Establishes Factory Branch in Chicago District

CHICAGO, Aug. 1.—A factory branch has been opened in Chicago by the Olds Motor Works, Lansing, Mich., in the plant of the W. V. Faunce Motor Company, Oldsmobile distributor for this territory. The business of the Faunce company was purchased in its entirety, the officials have announced, and dealerships will be handled direct by the new concern.

Oldsmobile business in Chicago and in the great western area served by Chicago has been steadily gaining. The expansion of business has resulted in a number of problems which have resulted in the decision on the part of both Mr. Faunce and the Oldsmobile officials that it would serve the best interests of the company to establish a factory branch here.

Mr. Faunce is also Oldsmobile distributor in the Pittsburgh district, where the W. V. Faunce Motor Company has been established for a number of years. He will continue his business there as formerly. C. H. Hurst has been named manager of the new Chicago factory branch and has already assumed his duties.

Sales Volumes in Salt Lake for July Considered Normal

Used Car Situation Causes Some Concern With Only Higher Priced Closed Models Being Sold

SALT LAKE CITY, Aug. 1.—The automobile business for July is so far regarded as normal. Registrations for new cars for June were 1,288 and trucks 141 compared with 1,659 and 195 trucks in May. In June last year there were 1,581 new cars registered and 186 trucks.

The high price of tires has boosted the vulcanizing business here, and the sale of new tires is unusually good.

Dealers say the new models are causing used cars to be placed on the market faster than they can be absorbed, and that the used car business is good only where bargains are offered. The report of the local public market for used cars maintain by six dealers is to the effect that business is good for cars $500 and up where honest values are offered. Some dealers are more cautious right now in the matter of accepting used cars of the "open" variety because they feel that the growth of the popularity of closed models is going to make it exceedingly difficult to move them except at a loss. This firm reports the closed car business as being 90 per cent of its sales.

The industrial situation is exceptionally good. The outlook for the fall is so promising that the Utah Bankers' Association fears the people will indulge in a spending orgy, and has proclaimed August 9 as Conservation Sunday. Speakers will urge sanity in buying, it is stated, and there is to be an attack on the time-payment plan of buying.

The farmers, who have suffered from crop failures or poor market conditions for the past few years, are specially favored this year. The situation for them is better than it has been for a long time. Fail prices are being received and they have an abundance of everything to place on the market. The sugar industry is in splendid shape.

Franklin Earns $3.90 Net On Common in 6 Months

SYRACUSE, N. Y., Aug. 1.—Net earnings of the H. H. Franklin Manufacturing Co., of this city for the six months ending June 30, after payment of preferred dividends amounted to $3.90 per share on common stock outstanding.

The financial report of the company shows net sales of $11,323,118.52 with manufacturing costs of $9,028,839.30, with a net profit of $1,369,703.56. The current assets of the company total $6,015,304.86, and current liabilities of $496,935.29.

The plant is working at full capacity and has orders ahead which assure capacity operation until late in the fall.

Milton and Kreis Decide to Drive in European Race

De Paolo Will Stay Home and Represent Duesenberg in All A. A. A. Meets in This Country

INDIANAPOLIS, Aug. 1.—Pete De Paolo has finally decided not to go to Europe with the team of Duesenberg cars to be led by Tommy Milton and Peter Kreis to take part in the Monza and other speedway races of the early fall. Stating that he intends to remain in America and take part in all A. A. A. events in competition for the Three A championship, De Paolo does not give other reasons for not going, in spite of the understanding that A. A. A. officials had finally agreed to credit him with all his earned points even if he went.

The two Duesenbergs which are to be campaigned in Italy and France are nearly ready for shipment. The four wheel brakes are fitted and the cars are to be shipped from Indianapolis August 4 and are due to sail for Genoa August 8.

A Duesenberg Victory picnic was given the Duesenberg drivers and factory workers yesterday at Broad Ripple Park, where De Paolo was master of ceremonies in honor of the team that will go across the pond to tussle for the world prize.

Two European cars have ten points each while the Duesenberg is said to hold seven points on this international honor. It is understood that the Monza speedway officials are offering the team very substantial appearance money for the trip, thus reversing form.

Mr. and Mrs. Milton and James McCracken, a companion of Milton's, will sail for Cherbourg, France, July 8, while Peter Kreis will sail with the cars on the Colombo, direct for Genoa on the same day. With Kreis will go his mechanician, James Kemp, and Gene Marsenac, a mechanician of the original Ballot invaders, later with Ralph De Palma and James Lee. With this pit crew the American invaders will have the best serviced team this country has sent across.

SHIP TRUCKS TO DENMARK

DETROIT, Aug. 1.—What is said to be the first motor trucks shipped direct from Detroit to Copenhagen, Denmark, left here July 25 on the S. S. Anders. The trucks are a shipment of Fisher fast freight one and one-half ton chassis from the Standard Motor Truck Company of this city and are being sent to their district in the Danish capital. Shipping by water, it is estimated, will save 48 per cent of the former cost besides a saving of three days in time.

INDIA SALES INCREASE

AKRON, Aug. 1.—An increase of 120 per cent in the sale of India tires in June, over June of 1924, has just been reported by the Uhl Rubber Co. of Visalia, Cal.

GRAY PRICES REDUCED

DETROIT, Aug. 1.—Price reductions, effective today, have been announced by the Gray Manufacturing Company (formerly Gray Motor Corporation) on the Gray touring, three-passenger coupe and sedan models. The new prices, which represent a considerable lowering of former ones, are as follows: Touring car, $595; coupe, $825; sedan, $845, f.o.b. Detroit and tax added. Balloon tires, artillery type wheels and combination stop and tail light have been added as standard equipment without additional cost on these models at the new prices.

Boston Dealers Report No "Seasonal" Slump This Year

Used Cars Cleaned Up and Business in Outside Districts Better Than Before

BOSTON, Aug. 1.—Motor car distributors and dealers in Boston report that July this year did not show the supposed "seasonal" slump, which in past years has been looked for and generally caused salesmen to drop into a rut. While sales have not kept going quite as fast as in some other months there were wavy spasms. Also the distributors say that business in the outside territories has been better, if anything.

July a year ago was unsettled because of a number of new announcements and rumors which this year have been minimized because of the general good tone to the sales.

The dealers have been checking up on the new car registrations, and while they find that for the first six months of this year compared to that same period of a year ago there has been somewhat of a drop, yet it is covered mostly by a few cars, some of which are no longer marketed here.

In the last month the dealers have been working successfully to clean up the used cars so that stocks on hand now with new models being announced will not have a tendency to slow up the activities of salesmen going after orders for the 1926 lines.

Tire sales are reported as being very good at retail, but the dealers as an average are not putting in so many orders at the new July prices. The accessory houses say that sales have been satisfactory.

NEW STABILATOR DEALERS

SYRACUSE, N. Y., Aug. 1.—The Syracuse Watson Stabilator Co., Inc., of this city has appointed eight dealers in the 14 counties which it controls. The new Stabilator dealers are: Hand & Garney Tire & Rubber Co. of Utica, J. B. Lang, Engine & Garage Co. of Ithaca, Frank Alexander of Auburn, Cortland Auto Supply Co. of Cortland, J. N. Benedict of Norwich, H. E. Clemens of Pulaski, K. J. Wendt of Rome, Uhlein Motor Storage Co. of Watertown.

July Business in Louisiana Is Slightly Under June Figure

Dealers Expect Rush to Come After Summer Vacation Season Is Over

NEW ORLEANS, Aug. 1.—Business for July in most automotive lines in Louisiana was quiet and slightly under the good record of June. The month has witnessed a remarkable amount of remodelling and repainting of both distributor and dealer places of business in New Orleans and other cities of Louisiana and Mississippi.

Automotive men are expecting a big rush of business after the summer vacation season. It is stated that a good many are waiting for the new models. There have been a number of new dealers appointed in both states; several lines of cars have also changed distributorships, there being a general movement in the direction of widening and strengthening the organizations in more than one instance.

Copious rains, except in some few sections of northern Mississippi, which continue dry, have made the truck and fruit crops of both Louisiana and Mississippi bring in millions of dollars. Othe crops are in good condition with promise of good returns on all except sugar, the price of which is forecast as low for the new crop.

Car registrations in both states for the first six months of the year exceeded by appreciable margins the same period of 1924. The increased use of trucks is one of the pronounced aspects of the trade. Much new road construction and the improvements of old highways is in progress in both states.

MEMPHIS SALES BETTER

MEMPHIS, Aug. 1.—July has been a good sales month with automobile and accessory concerns. Used car sales have been very brisk. August opens propitiously. Several fine rains have fallen. Cotton has jumped up several dollars a bale and crops in local territory look good. The Memphis Chamber of Commerce sent out the past week a visitation by auto cavalcade to a dozen towns in southeast Missouri. This party found good roads and good crops.

OVERLAND PRICES CUT

TOLEDO, O., Aug. 1.—Apropos of the figures for the first half of 1925 which showed an exceptional increase in production of the company over its peak half year, Willys-Overland announces a price reduction on the Six DeLuxe sedan. The new price is $1095 according to figures just released by Willys-Overland officials. The price cut on the Six DuLuxe sedan follows closely on the heels of the price reduction announcement on the Six Standard sedan which was recently slashed to its new price of $895.00 f.o.b. Toledo.

Manufacturers Expect Last Half to Continue Early Gain

July Is One of Best Months in History for Automobile Maker—Stocks Low to Receive New Models

DETROIT, Aug. 1.—July, from the standpoint of the automobile manufacturer, was one of the best months the industry has experienced. Buying, while not as heavy as that of June, was better than any previous July, so much so that many of the manufacturers are looking forward to the last six months to be as good as the first half of the year.

The used car situation also improved. Never in the history of the industry has the number of used cars on dealers' and distributors' hands throughout the country been smaller. The number of 1925 models at this time is the lowest yet recorded.

A survey shows a majority of the manufacturers genuinely optimistic and making plans along this line. Others are following the same trend but sales reports and indications which are available from time to time do not favor them. It might be said with reasonable exactness that the automobile manufacturers who were rushing production the first part of the year are still unable to catch up with orders except to a small degree. Some are still unable to make deliveries within two months.

This condition is apt to lead those in the industry to believe that the production will be greater than ever before. In this connection it must be remembered that there are only certain manufacturers that are enjoying near capacity output and that the others are producing from 60 to 70 per cent of their capacity output. The trend now shows that the same sales decline, the same decrease in production will take place this year as in the past, but not to the same extent.

The advent of the new models or the 1926 models has not caused the decline in buying that many expected. Reports received by the different manufacturers from their dealers and distributors show that their stock of 1925 cars on hand are the lowest in years and that the introduction of new lines has had no apparent effect on the buying.

Velie Refutes Story of Truck Department Sale

MOLINE, Ill., Aug. 1.—Referring to a news dispatch appearing recently in newspapers throughout the country to the effect that a motor truck company in Defiance, Ohio, has purchased the motor truck department of the Velie Manufacturing Company, Edwin McEwen, manager of the Velie Motors Corporation makes the statement that this report has no foundation in fact.

The Velie Motors Corporation has sold the Century Motor Truck Company of Defiance, Ohio, the remaining quantity of productive material left over from the truck manufacturing division of its business which was discontinued several years ago, but this sale involves no part of the Velie Motors Corporation Truck plant, or plant equipment, Mr. McEwen says.

"The Velie Motors Corporation still retains ample stocks of repair parts for the servicing of any truck product which was put out in the past, and will continue as heretofore to supply such service to owners of Velie trucks," he declared.

Chrysler Promises Owners Saving Through New Service

DETROIT, Aug. 1.—A saving of 20 per cent on the maintenance of their cars is promised Chrysler owners through the introduction of a new service plan, announced by R. C. Reichel, service manager.

Under the new plan, the factory will absorb the government tax and the freight transportation charges on all shipments of parts to dealers and distributors of 200 pounds and over. These parts will be retailed at prices to be listed at the factory, making it possible for the owner of a Chrysler car to purchase a certain part for the same price at any place in the United States.

Figures compiled by Mr. Reichel show that the saving to Chrysler owners in the maintenance of their cars will be approximately 20 per cent.

N.A.C.C. Appoints Insurance Committee for Investigation

A. R. Erskine, President of Studebaker Corp. Is Made Chairman of Body to Survey Field

NEW YORK, Aug. 1.—Marking another step in the campaign of the National Automobile Chamber of Commerce to bring down insurance rates, the board of directors at a meeting last week in Buffalo appointed A. R. Erskine, president of the Studebaker Corp., chairman of the insurance committee. Other members will be named in a few days, when a comprehensive survey of the insurance situation will be started.

The insurance projects launched by the Chrysler Corp., and the General Motors Corp., will be studied closely.

The reports on trade conditions at the meeting showed that although July business is rather slow, a brisk late summer and fall is expected with the coming out of new models. The manufacturers viewed with such satisfaction the results of the first half-year, particularly in the manner in which production had been kept in line with sales, with a consequent favorable effect on the dealers.

Discussion of the foreign trade situation developed the fact that the manufacturers generally are planning to broaden their overseas activities. They are confident of an increasingly large market.

E. E. Haight, 17 Years With MOTOR AGE, Heads New Business Publishing Firm

CHICAGO, Aug. 1.—E. E. Haight has resigned as business manager of MOTOR AGE, after a service of 17 years with the paper, in order to become president of a new publishing company which will publish three business papers in Chicago.

E. E. Haight

Mr. Haight began his work with MOTOR AGE in April, 1908, and his first duties were in connection with the advertising make-up department. In 1911 he became business manager, which position he continued to fill until July 31 this year. During much of this time he was also western manager of the Class Journal Co., now the Chilton Class Journal Co., publisher of MOTOR AGE, Automotive Industries, Motor World Wholesale, and other automotive business papers. He was also a director of the Chilton Class Journal Co.

The new company of which Mr. Haight is president takes over the publication of three business magazines which for a number of years have been well established in their respective fields. They are Concrete, a leading business paper of the cement and concrete industry; Building Materials, devoted to the construction industry, and the Cement Mill Edition of Concrete.

Mr. Haight has for many years been active in business paper affairs, both in Chicago and nationally, having been president of the Chicago Trade Press Association, and is now chairman of the Trade Practices Committee of the Associated Business Papers, Inc.

Quick Recovery Period Is Predicted for Wisconsin

Slump of Sales Checked in Cities and Country Districts Expected to Follow Soon

MILWAUKEE, Aug. 1.—A check in the sales slump and the beginnings of what distributors claim well be a period of quick recovery are the briught lights in the automobile situation in Wisconsin at this time. The slump referred to commenced early in the spring and since then new car sales have compared unfavorably with new car sales for the same period last year. Some months, such as May of this year showed a dropping off of more than 30 per cent in comparison with the same month in 1924.

June however staged a comeback and sales for the month were 8,755 or 219 more than the 8,536 sales for June, 1924. This gain is in line with predictions made earlier in the year when distributors pointed to June as the month when the turn in sales would show a balance in favor of this year.

Expectation that sales for the last six months of 1925 would be greater in volume than sales for the final six months of any of the past three years was voiced by one of the largest distributors in the Milwaukee territory. He based his prediction on the keen interest in motor cars now prevailing, the impetus given to sales by introduction of new models and announcement of price readjustments and satisfactory crop conditions throughout the United States. The latter element was pointed to particularly as being a source of encouragement.

In Ashland country which contains only one city of size, sales in June last year were 106 against this year's 90. Following are the 1924 June figures and those for June, 1925, in counties devoted mainly to agricultural and non-industrial pursuits: Barron, 122-105; Brown, 232-171; Buffalo, 81-43; Clark, 207-136; Marathon, 288-191.

Similarly counties like Milwaukee county, harboring the largest city in the state showed a gain for this June, the comparative figures being 1,996 for this June against 1,317 for last June or a 50 per cent increase. Dane county showed 1925 sales of 376 as against 1924 sales of 292 for the month of June and Sheboygan county, also devoted to industry and containing several cities of some size showed comparative figures of 219 and 183 in favor of June, 1925.

The situation is regarded very favorably by both distributors and dealers in Milwaukee and Wisconsin. It is felt that announcement of price cuts and model changes which had caused deferred buying among those interested in purchasing a car has ceased to constitute sales resistance and that hesitancy on this account is over. Time payments are being met promptly and the general credit situation is satisfactory.

MISSOURI HITS POLICIES

JEFFERSON CITY, Mo., Aug. 1.—State Superintendent of Insurance Hyde in a brief, but important ruling has held it unlawful and illegal for automobile manufacturers to issue, gratis, insurance policies with each car protecting holders against fire and theft. The commissioner takes the attitude that in issuing such policies the auto concerns become insurance corporations within the meaning of the Missouri statute. He said: "It is illegal for unauthorized persons or corporations to sell insurance or transact an insurance business in Missouri. The issuing of fire and theft insurance in connection with the sale of automobiles is transacting insurance business. Unauthorized persons or corporations guilty of selling insurance or transacting insurance business are doing so in violation of the laws and will be prosecuted." The Maxwell and Chrysler dealers were advertising and conducting business on this basis and are preparing to take legal steps to protect their right to continue such a sales plan.

General Motors Changes Some of Canada Personnel

OSHAWA, Ont., Aug. 1. — Several changes in personnel of the various sales organizations of General Motors of Canada, Ltd., at Oshawa, have recently been announced.

J. J. L'Ardiel who for the past two years has been assistant sales manager for the Chevrolet division has been appointed sales manager of Cadillac Motor Car Co. of Canada, Ltd., and of the Olds Motor Works of Canada, Ltd., duties to start immediately. Ross MacKinnon, general sales manager of Chevrolet Motor Co. of Canada, Ltd. has been put in charge of the sale and distribution of the Oakland line of cars in addition to his present duties.

Two new appointments have also been made in the Chevrolet sales department. E. R. Birchard becomes assistant to Mr. MacKinnon in charge of wholesale activities and car distribution, while E. W. Everson will be assistant to the sales manager in charge of sales promotion and retail sales development. Both Messrs. Birchard and Everson are well known in the automotive trade having, been with the Chevrolet Motor Company of Canada, Ltd., for some years.

WHITE PLANS EXPANSION

CLEVELAND, Aug. 1.—A complete rearrangement of the White Motor Co., plant in this city to be made while operations will be closed from August 22 to September 8. Increased production and greater economy in the use of floor space are promised as the result of the rearrangement of the entire factory layout and the installation of new machinery, says Thomas H. White, vice-president and general manager. Benefits will be reflected through the sales and service organizations in accellerating delivery.

Airplane Reliability Tour to Cover Twelve Cities Planned

Detroit Aviation Society Will Test Utility of Planes from Sept. 28 to Oct. 3

DETROIT, Aug. 1.—An inter-city airplane reliability tour, starting at Detroit and covering twelve cities from September 28 to October 3 has been decided upon by the Detroit Aviation Society. Details of the trip were not made public although the possibilities of making it an annual event were discussed. Reliability and utility of the present day commercial plane rather than the speed of the entrants will be the main considerations. The shortest hop will be 225 miles and the longest 400 miles.

Entries are assured from the Laird Airplane Company, the Travel Air Company, Stout Metal Airplane Company, Curtis Aeroplane and Motor Corporation, Glenn L. Martin Company, and A. A. H. Fokker Company. It is also considered likely that planes from the Boeing and Douglas companies on the Pacific Coast will be entered. Only commercial planes will be allowed in the trip.

A trophy will be offered by Edsel Ford to the machine winning the tour under whatever conditions are imposed by the rules committee. It is probable that other prizes of certificates of merits will be awarded to planes finishing with high percentages of reliability and performance.

An exposition of airplanes, airplane accessories, engines and other products connected with the industry will be conducted simultaneously with the meet, it was decided, with all manufacturers being invited to exhibit. The belief that the public wants to see the newest in airplane construction at close range just as new models of automobiles are objects of great public interest was expressed.

Following is the tentative schedule as planned:

September 28: Detroit, Fort Wayne, Chicago.
September 29: Chicago, Iowa City, Omaha.
September 30: Omaha, St. Joseph, Kansas City.
October 1: Kansas City, St. Louis.
October 2: St. Louis, Indianapolis.
October 3: Columbus, Cleveland, Detroit.

CANADIAN TIRES UP AGAIN

TORONTO, Aug. 1.—Prices of tires in all of the larger sizes have been advanced from 12 to 18 per cent, making the third increase since the month of June. The last increase was on June 24 when 10 per cent was placed on the prices of all tires and tubes. The smaller sizes in tires and tubes are unaffected by the latest increase. Tire and tube makers say the increase in the price of raw rubber to the high level is responsible for the advance.

Southern California Sales Ahead of July Last Year

Used Car Stocks Still at Unusually Low Points—Business Conditions Generally Good

LOS ANGELES, Aug. 1.—With few exceptions, confined largely to the low priced field, there has been a very healthy increase in sales during July throughout Southern California as compared with June sales. The impending advent of many new models, which were not presented to the Southern California market until the last week in July had a tendency to cause a temporary quietus in many quarters. Los Angeles distributors, however, are well pleased with the progress of sales this season and look for a continuation of increasingly good business.

Used car stocks remain at unusually low levels, with the exception of a comparatively few dealers who have been "forcing the market." Not for many years has there been such activity in the Los Angeles used car field as during recent months. Two of the largest Los Angeles distributors report that they broke all records in their used car department in the number of used cars sold.

Business conditions generally throughout Southern California are in excellent shape. Agriculturists particularly are reaping good returns. California is expected to produce the greatest crop of fruits and vegetables this year of any state in the country. Crop conditions are excellent and the prices offered growers are the highest for several seasons, particularly for oranges and lemons. These principal products of the Southland are bringing the growers double and in some cases three times the amount per box received for the 1924 crop.

The official registration figures for the first six months of 1925, just announced, afford interesting study. By registering an increase of 22 per cent in June throughout the state, following a similar increase in May, the volume of automobile sales this year has exceeded the first six months of last year by 1134 vehicles, with the remainder of the year looming up very favorably to beat the 1924 record.

California purchased a total of 94,242 passenger cars and 8,665 commercial cars during the six months, an increase statewide of 2 per cent in cars and 5 per cent in trucks. The combined sales of passenger cars and trucks in California in the first half of the year were 102,907, of which 56,195 were in the 11 Southern counties and 46,712 were in the Northern half.

Los Angeles and Southern California, slow to get away in the early part of the year, have displayed a satisfactory "comeback" in that the first six months sales of passenger cars are only 468 machines behind the same period of 1924.

Indiana Sees Prospects for Good Fall Business

INDIANAPOLIS, Aug. 1.—New car sales in Indiana have slowed distinctly from the middle of the month while the early part was less brisk than June. The prospects for a good business in many lines for August and later months is apparent for the city and state, because of splendid farm conditions in all parts of the state with a bumper corn crop and high priced hogs predicted.

Accessories and parts dealers report very good sales while tires have held up their end spasmodically as advance notice of changing prices have in many cases brought extra orders. Truck sales for larger units have advanced due to a large increase in inter-city hauling and dealers and branch houses are optimistic of continued brisk markets in various types of commercial vehicles.

Part of the slowing in new car sales is traced to the new models about to be brought out, and this waiting tendency has effected many lines which are not scheduled for changes but whose prospects desire to see the other new types before they pay for the new job. Even radio wholesalers are optimistic of splendid fall trade and some unusual plans to promote such sales are in the air. There are still rumors of some large used car stocks, but on the whole the used situation seems about as good as at any time during the season.

Congressman Sees Repeal Of Automobile War Taxes

Ohio Representative Believes Strong Public Representations Will Cause Action at Next Session

WASHINGTON, Aug. 1.—Belief that Congress can be prevailed upon to eliminate entirely the war excise tax on automobiles, tires and accessories if the automotive world creates a sufficiently active public interest was expressed here this week by Congressman Martin L. Davey of Ohio.

Congressman Davey is giving evidence that he is willing to do his share by sending out thousands of letters on the subject, attaching the set of resolutions which were adopted at the annual convention of the Ohio State Automobile Association June 20.

These resolutions "request and urge the United States senators and the representatives in the Congress of the United States from the state of Ohio to work and vote for the repeal of the federal excise taxes at the earliest possible date." Congressman Davey says:

"I am definitely opposed to a continuance of the war excise tax on automobiles, tires, and accessories."

25 Years Ago In the Automobile Industry
As Recorded In MOTOR AGE

(From MOTOR AGE of August 9,1900)

New York Automobile Co.

NEW YORK, Aug. 6.—After three months' test of their gasoline automobiles, the New York Automobile Co., Park Row building, expects to be able to begin the delivery of some types of vehicles early in October. The company was organized less than a month ago under the laws of New Jersey. The capital is $200,000, of which $85,000 is said to have been paid in.

Two factories have been secured by the company. One is located at Elizabeth, N. J., and is a two-story and basement brick building 48 by 130 ft., with an L 30 by 50 ft. Here the parts will be made and assembled. A five-story building 50 by 140 ft., on the corner of Fulton and Columbia streets, Brooklyn, will be used for completing and finishing the vehicles.

Looking for Buses

CLEVELAND, Aug. 6.—The Pinesville Automobile Co., organized some time ago by prominent Painesville business men to operate an automobile bus line between that town and surrounding villages, is in the market for several vehicles of large carrying capacity. Early last spring the company contracted with a large New York concern for a simple vehicle which was to be delivered during June, but after repeated promises of delivery the vehicle seems farther from completion than at the start.

Improved Duryea Three-Wheeler

The three-wheel Duryea phaeton weighs 650 lbs. and is strongly built. It has three-inch tries and 36-in. wheels, 1¼-in. spokes, large axle extending through both rear wheels, heavy driving chain of self-oiling pattern and powerful foot brake, which is said to act with sufficient force to slide the wheels in either direction.

The steering is effected by a single lever pivoted to the front edge of the seat, controlling the steering wheel without lost motion. The motor throttle and clutch shifters are operated by the same handle. Being between the riders this handle may be manipulated by either rider at will. A large proportion of the weight is on the driving wheels, insuring effective traction and easy steering.

A New Manufacturing Concern

CLEVELAND, Aug. 6.—The National American Cycle Co. of Akron is the latest bicycle manufacturing concern to take up the manufacture of automobiles. It is preparing a portion of its plant for this work and has completed a model vehicle of the gasoline type.

U. S. Automobile Production Sets Record in First Half

Total of 2,173,360 Cars and Trucks Made in Six Months—June Largest in History

NEW YORK, Aug. 1.—With an output of 2,173,360 cars and trucks during the first six months of 1925, the automobile industry of this country established a new record of manufacture. This total is 5.8 per cent over the corresponding period a year ago and 5 per cent ahead of the first half of 1923.

The June output of cars and trucks totals 402,696 which is the largest June in the history of the business.

Reports from the retail trade at the meeting of the directors of the National Automobile Chamber of Commerce held in Buffalo this week indicated that the activities of the industry are on a conservative basis. Both May and June totals of output were smaller than April. Good summer and fall business is looked for, but there is no disposition to anticipate this by large production programs. The output will be in response to actual demand.

The totals for the six months were as follows:

	1924	1925
January	324,546	241,068
February	376,326	287,215
March	393,423	377,247
April	384,267	439,117
May	321,554	420,017
June	254,075	402,696
	2,054,191	2,173,360

That 1925 will be the most productive year in the history of the automotive industry of this country was shown by a report discussed at the meeting of the National Automobile Chamber of Commerce. A report submitted by John N. Willys, president of the Willys-Overland company, and chairman of the chamber's committee on auto exportation, showed that the exportation of automotive vehicles from this country is steadily growing. In this report it was estimated that by the end of the year 500,000 cars and trucks will have been exported during 1925 as against 386,000 for 1924.

Plans for the World's Motor Transportation Congress were discussed. The congress will be held in New York January 9, 1926, in connection with the national automobile show and will attract thither representatives of all branches of the automotive industries from all parts of the world.

LICENSE PLATES CONTRACTED

NEW ORLEANS, La., Aug. 1.—Contracts for the 1926 license plates have been closed, according to C. F. Bailey, motor registrar in the office of the secretary of state in Baton Rouge. Plates in 1926 will be purchased by the state of Louisiana at a cost of 16 cents per pair delivered at Baton Rouge. An order for 200,000 pairs of plates was given, but will doubtless be increased before date of delivery. Sporty color combinations have been selected for the 1926 plates.

HUDSON-ESSEX SALES DOUBLE

DETROIT, Aug. 1.—With business 90 per cent greater for the first six months of the present year than the same period for 1924, Hudson-Essex dealers for Detroit and Wayne County predict that the sales mark for the present six months will show an even larger volume. Reports being received at the factory here indicate that this condition is the same throughout the country. The closed cars still continue to be about 90 per cent of the total output.

Gabriel Snubber Earnings 3 Times Dividend Requirement

CLEVELAND, Aug. 1.—The Gabriel Snubber Manufacturing Co., which recently was reorganized to permit Clevelanders and others to own capital stock, earned more than three times the dividend requirements in the first six months of 1925. Net earnings for the period were $770,200 or the equivalent of $7.70 a year on common stock, on which dividends at the rate of $2.50 per year are being paid.

Average net earnings of the company for the three year period from 1922 to 1924 were $5.81 a share while earnings for 1924 were equivalent to $5.43 a share. The year 1923 was the best year in the history of the automobile industry in this city, but if the present record is maintained, Gabriel's business in 1925 will exceed that for 1923 by at least $300,000.

This statement by this bumper company truly reflects conditions in the automobile business in this city. Manufacturers have set a new record for six months. Sales in Cleveland in the same period have increased 50 per cent over 1924 and about 30 per cent in excess of the previous banner year of 1923.

Sales of new cars in June, for instance, this year were 4,297 and of used cars 8,590. In 1923 the figures were 3,614 new cars and 6,714 used cars. More than 18,000 new cars have been sold here since the first of the year, while the used cars sales have amounted to 40,000.

NEW GARAGE HAS RAMPS

SAN FRANCISCO, July 25.—Con-Construction has commenced on a seven-story public garage, occupying the site of the old San Francisco Stock Exchange. J. Sheldon Potter, owner. The garage represents an investment of $350,000, and it is the first building of the kind to be erected in San Francisco employing the D'humy motor ramp system of ingress and egress. The entire building has been leased by N. E. North, proprietor of the adjoining Pearson garage for ten years. Plans for the building call for a series of ramps 36 feet long and 18 feet wide with a 13 per cent grade, from floor to floor, enabling cars to pass at any point and to travel through the building at a rate of 12 to 15 miles per hour. It is estimated that it will be possible to park a car on the seventh floor, or to bring it to the street from that floor, in one and one-half minutes.

St. Louis Automobile Output Doubles Value of Shoes Made

Boot Industry Loses First Place in Worth of Product Manufactured in Missouri City

ST. LOUIS, Aug. 1.—St. Louis has long been recognized as one of the chief shoe manufacturing centers of the country and almost any St. Louisan would unhesitatingly say that shoe manufacturing was the chief industry of his city. But a census of the Department of Commerce made public recently disclosed that in 1923 the value of automobiles turned out in St. Louis was more than double the value of the shoes made.

The department's figures, forming perhaps the only authenic census of St. Louis industry, are comparative with the last census which was 1921. The increase shown by the automobile industry was greater than any other in that period, nearly trebling, from $37,800,000 to $107,500,000. The number of workers in the industry is shown to be 3,043 and the amount of their pay $4,570,785. The shoe manufacturing industry, however, continues to employ more St. Louis workers than any other industry and to provide the city's largest industrial payrool.

The output of the shoe industry was $51,930,780; the number of workers 11,686 and the amount of their pay $12,860,899. These figures do not include shoes manufactured by St. Louis firms with factories in small Missouri and Illinois towns. The annual sales of St. Louis shoe companies exceed $110,000,000.

PRESENT WIDTH MAINTAINED

PARIS, July 15.—(By mail.)—Unable to find a suitable type of cross section which will hold down the speed of next year's racing cars to a reasonably safe limit, the International Sporting Commission this week decided to continue with the present minimum width of 31 inches.

Next year's European racing rules therefore will call for a maximum piston displacement of 91½ cubic inches, superchargers being allowed, a minimum weight of 1543 pounds, compared with the present weight of 1,433 pounds, and a minimum body width of 31 inches. While this width gives sufficient room for a two-seater body, only one man has to be carried.

JOHNSON DISTRICT MANAGER

INDIANAPOLIS, Aug. 1.—E. C. Johnson, who has been connected with the automobile industry since 1903 and who is widely known among automobile men throughout the United States, has been appointed district manager in the Southeastern territory for the Nordyke & Marmon Company. As a young man Mr. Johnson was with the White Company and since then has been associated in an official capacity with the Packard Motor Car Company, Reo Motor Car Company and others.

Alabama Tradesmen Meet In Tuscaloosa Convention

Merchandising Methods and Good Roads Feature Discussion at Mid-Summer Meet

TUSCALOOSA, Ala., Aug. 1.—Automotive dealers and distributors representing all branches of the industry in Alabama, with a number of visitors from outside the state, gathered in Tuscaloosa early last week for the semi-annual mid-summer convention of the Alabama Automotive Trades Association, which proved to be one of the most successful and one of the best attended meetings the organization has ever held. Approximately 200 dealers, distributors and salesmen were in attendance, including a number of visitors representing various manufacturing concerns in the north and east.

Merchandising methods and good roads comprised the keynote of the mid-summer session, the principal address being delivered by Arthur Mogge, merchandising director of the Automotive Equipment Association, who spoke at length on the work of this organization, and explained in detail successful merchandising methods to the visiting delegates. Mogge's address was illustrated with motion pictures showing the visiting dealers in tangible way what good merchandising methods will do for their business, an address that proved to be one of the most practical and helpful ever given before any gathering of the Alabama Automotive group, and one that profited every dealer and salesman present.

Kay Johnson, of Montgomery, Ala., chairman of the association's advisory committee set forth the advantages of co-operative associations of this nature as an aid to better automotive merchandising, stating that since the Alabama organization was first formed it has served to greatly improve and elevate the status of the automobile industry in that state.

Following Mr. Johnson's address Congressman W. A. Oliver of Tuscaloosa, spoke, praising the association for the excellent progress it has made in placing the automotive industry on a high plane in the state of Alabama.

One of the principal addresses was by Sidney Bowie, of Birmingham, who spoke on "Good Roads and How to Obtain Them". As the subject of good roads was one of the primary matters before the meeting, due to the fact that the Alabama association is conducting a concerted campaign for adequate good roads building and maintenance appropriations in Alabama, Mr. Bowie's talk was heard with considerable interest.

In addition to Mr. Mogge's illustrated talk other addresses during the first day of the meeting were by H. B. Mathews of New Orleans, Bob Hernandea of Birmingham, Henry Allen, of the Alabama State Tax Commission, and Louis Sevier of Birmingham, president of the Associated Industries of Alabama.

Mr. Mathews and Mr. Hernandea spoke mainly on merchandising topics pertaining to the automotive industry, while Mr. Savier discussed taxation matters as they affect the industry in the state of Alabama.

Following the addresses at the Monday session James Farley of Birmingham, secretary of the Alabama association, delivered his annual report, showing the organization not only to be in excellent condition, but experiencing a steady expansion and growth. He told of the many things helpful to the industry in Alabama and elsewhere that the association has accomplished the past year, and outlined plans of its activities for the coming year.

JAMES B. FARLEY,
Secretary of Alabama Automotive Trades Association

With the exception of the appointment of committees and similar business, Monday afternoon and Tuesday was given over very largely to entertainment, the delegates being taken on a long river trip on a steamer especially chartered for the purpose, returning late Tuesday evening.

President Brownell was authorized to appoint a committee to make a detailed study of good roads and taxation in Alabama, and the simplification of process of paying taxes on automobiles with possibly some changes in the certificates of title law. This committee will be appointed later on, and will make its report on its findings at the annual convention.

Relative to business conditions, dealers and distributors seemed in agreement that 1925 is going to prove a very prosperous year for the industry, and they were particularly optimistic over the outlook for late summer and fall business this year, which gives promise of being unusually good in all automotive lines.

Coast Dealer Sees Profit Only in Good Management

N. A. D. A. Vice-President Believes Efficient Methods of Selling Are Only Way to Better Business

SAN FRANCISCO, Aug. 1.—Profit in the business of automotive merchandising will come from efficient management more than from any other cause in the future, according to William L. Hughson, vice-president of the National Automobile Dealers' Association, and one of the leading dealers of San Francisco.

"Those dealers who are waiting for better times, instead of creating those better times, and who are looking for larger sales, instead of going out and making those larger sales, in the hope of automatically improving their profit situation without doing anything about it, will be among the missing when the 1926 dealer roll is called," said Mr. Hughson. "The good old days in the automobile-selling industry are gone forever. Dealers used to sit back in their chairs and wait for customers to throw orders over the transom, but new conditions, due to highly competitive methods in merchandising, have changed this once-happy condition. Profit in the automobile business henceforth will be derived from efficient management more than from any other cause. It will come from the elimination of waste, and the proper balancing of departmental relations between sales and expenses.

"Automobile dealers are learning today—generally for the first time—what expense-budgeting means. An automobile dealer should have his business so planned that he can tell at the start of the year approximately how much merchandise he will sell, how much profit he will make, and how much money he will have to spend to make this profit. Then he should permit this expense and no more, unless unexpected increases in sales justify an addition to the budget. The record of automobile-dealer mortality indicates that the dealers have just begun to realize the necessity of running their business, and not letting their business run them.

"The Cedar Point, Ohio, convention to be held in August will be an awakening to hundreds, if not thousands, of dealers, who have not carried business management into their places of business, when they learn what successful dealers throughout the United States are doing to correlate expenses, sales and profits."

NEW STUTZ DEALER

INDIANAPOLIS, Aug. 1.—The merchandising department of the Stutz Motor Car Company of America announces the appointment of a new dealer to add to the growing merchandising rolls of this company. The new dealer is A. T. Spinella of Dennison, Ohio.

Along Automobile Row

MONTREAL.—Hamilton Motors, Ltd., representing Rolls Royce cars, have moved their sales and service to the Westmouth Garage, 1040 St. Catherine St., West.

CINCINNATI.—The Mundew Convenient Tire Shop, Inc., has been chartered with an authorized capital of $20,000 to buy, sell and deal in auto tires and accessories.

DALLAS.—The Auto Company of Dallas has been incorporated. The capital stock is $10,000. Newton Flippen, C. Flippen and J. D. Pagitt are among the incorporatorse. The company handles Fords, Lincolns and Fordsons.

LOUISVILLE.—Frank L. Clifford has retired from the firm of Schwarz, Clifford and Scott, Ford dealers, and the company has incorporated under the same name with a capital stock of $100,000. The firm is now composed of John C. Schwarz, Lawrence S. Grauman and Robert A. Scott.

OAKLAND, Cal.—J. F. LaPlace of Chicago, has been added to the sales force of Bell & Body, Willys-Overland dealers in Oakland, according to announcement by Dean Mitchell, sales manager.

NEW ORLEANS.—Raoul A. Ledet, formerly service manager of the Motor Sales & Service, Inc., New Orleans, distributor of Maxwell and Chrysler cars, is now with the Watson-Ledet Motors, Inc., of Baton Rouge, Chrysler dealers.

LOS ANGELES.—The Sperl Motor Company, Southern California Rickenbacker distributors, announces the appointment of Miller & Trekell as Hollywood dealers for the Rickenbacker, with sales and service building at 6250 Hollywood Boulevard.

MILWAUKEE.—Brent L. Van Lent, Inc., Green Bay, Wis., has been appointed dealer for Willys-Overland products in that city. The Green Bay company is one of the largest and best-known automobile dealers in Wisconsin and has represented Ford and Chevrolet in the past.

BALTIMORE.—The Wilson-Nash Company has announced the appointment of the Highland Motor Sales Company, operated by Philip Wienecke & Sons, as agents for the Nash car.

ROCHESTER.—Rabe's Complete Auto Repair Works has been appointed by the Auto Spring Control Company, of Jamestown, N. Y., as western New York distributors for Two-way Hydraulic shock absorbers.

LOUISVILLE. — The Kennedy-Shrader Motor Company, Hudson and Essex subdealer under the Fidelity Motor Company, has increased its capital stock from $10,000 to $50,000.

SEATTLE, Wash.—W. T. J. Powers, for the last few years connected with the Keaton Tire & Rubber Company, has been appointed assistant manager at Seattle.

CHICAGO.—Victor C. P. Dreiske, for nine years with the Locomobile Company and for two years manager of the Chicago branch, is now western district manager for Rolls-Royce of America, Inc., with headquarters at the Chicago branch, 2512 S. Michigan Ave.

WILMINGTON, N. C.—Thomas D. Piner, Studebaker agent here, is building a new home for his business. Office, sales room, repair and parts departments and gas and oil station will be provided for in the new building.

LOUISVILLE.—The George Cole Motor Company, Ford dealers and exclusive Lincoln dealers of Nashville, Tenn., has been appointed exclusive Lincoln sales and service agents and authorized Ford dealers for Louisville. The organization is to succeed Schwarz, Clifford and Scott, former Lincoln dealers and the Don Prentiss Motor Company, Ford dealers.

CHICAGO. — The Votava Motor Sales, Franklin dealers, formerly at 1634 South Crawford avenue, has moved into new salesrooms and service station at 3831-33 Ogden avenue.

OAKLAND, Cal.—The F. A. Brinkman Company has purchased the interests of the East Bay Paige-Jewett Company, and is now the only authorized Paige-Jewett agency in Oakland. W. S. Wright has been appointed manager.

CINCINNATI, O. — The Famous Auto Supply Company, has been incorporated with a $40,000 capital to wholesale and retail automobile accessories.

MIAMI.—S. A. Ryan, president of the S. A. Ryan Motor Company, distributors of Lincoln and Ford Motor cars, has announced plans for a new $500,000 combined Lincoln and Ford display building, garage and service department and Ford assembling plant, to be built at once. When completed the building will be six stories in height and ultimately will include a complete Ford assembly plant.

DETROIT.—Utter & Son, East Lansing, Mich., dealers for Willys-Knight, Overland and Oldsmobile automobiles, are are erecting a garage and sales building near the proposed site of M-16 which is near the Lansing city limits. The building will be 66 by 110 feet and will be of a one-story brick construction.

BOSTON. — One of the most imposing structures given over to the motor industry has just been completed here and taken over by the Autocar Company of Ardmore, Penn., for a sales and service building. The top floor has 30,000 square feet. This will be devoted to service and parts. The second floor has 22,000 square feet and this will have the executive offices in the front and the rear section will take care of storage and used trucks. The first floor will be given over to salesrooms.

MEMPHIS.—The Gay Oil Co., of Little Rock, Ark., has purchased the Memphis Indian Refining Co., plant and oil station. T. J. Gay is president of the company. H. M. Gay will have charge of the Memphis division.

MINNEAPOLIS.—C. H. Dye, leaving the sales department of Anthony Motors, Inc., Minneapolis Packard distributors has been appointed manager of the Duluth branch of the D. A. Odell Motor Car Co., of Minneapolis, selling Pierce Arrow cars.

DETROIT.—O. I. Kreusser has been appointed engineer-in-charge of the General Motor Corporation's proving ground at Milford, Mich., succeeding F. M. Holden who recently joined the Oakland Motor Car Co.

CHARLOTTE, N. C.—B. D. Heath Motor Company of Charlotte has announced the appointment of G. S. Kerlin as retail dealer in Charlotte for the Hudson-Essex line. Mr. Kerlin has been associated with the Heath company's sales department.

DETROIT.—A. J. Nelson, for the past eight years connected with the sales department of the Walter T. Sewell Company, has been appointed sales manager. A branch office to effect the distribution of Sewell cushion wheels, with which the Dunlop line of truck tires will be handled jointly, was recently established.

LOS ANGELES.—Robert Galindo, widely known through many years' association in Los Angeles and San Francisco motor car merchandising, has been appointed sales manager of the Locomobile Company of California.

NEW ORLEANS.—The formal opening of the Anderson Motor Company, dealers in Chevrolet cars, took place in Hattiesburg, Miss., recently. The new company is under the direction of G. O. Anderson, who for the last four years has been assistant manager and treasurer of the Edwards-Butler Motor Company of Biloxi, and the Edwards Motor Company of Gulfport, Miss.

FLINT, Mich.—M. W. Estabrook, formerly of the sales department of the Flint Motor Company, is now assistant sales manager of the Duplex Truck Company, Lansing, Mich.

CLEVELAND.—P. L. Austin, who has been with Petersen Motors, Inc., Jordan distributors, since March 15, 1920, and who for the last two years has been retail sales manager, has been appointed manager of wholesale in charge of the Philadelphia metropolitan territory.

SAN FRANCISCO. — The Caterpillar Tractor Company of California, has moved its headquarters and offices from San Francisco to San Leandro, on the mainland side of San Francisco Bay, where the parent plant of the Best Tractor Company is located

AKRON, O.—Papers have been filed with the secretary of state, chartering the Akron Elcar Sales Company, with a capital of $5,000 to do a general agency and commission business in automobiles.

BOSTON. — G. E. Lyons, new district wholesale sales manager for the Auburn Motor Car Company, has placed agencies here during the week as follows: Providence, R. I., Providence Auburn Company; Spencer, Mass., Oscar De Longchamp; Lowell, Mass., Cheever Street Garage; Fairhaven, Vt., B. S. Hayes; Ludlow, Vt., Edward A. Lockwood.

CHICAGO.—DeHaven Brothers, Chandler and Cleveland dealers, have added the Franklin to their line and will operate a sales and service station at 4614-16 W. Washington Boulevard for Franklin exclusively.

CLEVELAND. — The Weldless Rolled Ring Company, of this city, has been acquired by the Transue-Williams Steel Forging Corporation of Alliance. Under the consolidation the Alliance company has acquired a new and considerably improved process for making rings and drive gears and other circular forgings.

MILWAUKEE. — Harry F. Krueger, prominent for years in motor circles here, has been appointed dealer for Star and Durant cars. The Krueger salesrooms have been remodeled and redecorated and the new machines placed on display in the showrooms.

COLUMBUS, O.—Renner Bros., who operated a sales agency for Davis cars on West Broad street, has given up that line and has organized the Columbus Auto Wrecking and Parts Company, occupying a new building at 1390 West Broad street. The company will carry a complete line of accessories and parts and operate a garage and service station.

MONTREAL.—A system whereby anyone who is able to drive a motor car can rent one at a moderate cost is being established here at 4280 St. Catherine street West and will be known as the "Drive Yourself Montreal Company." The firm here will be a part of the Hertz Drivurself System, Inc., which operates in all prominent cities of North America.

CHILLICOTHE, O. — The Chillicothe Nash Motors Co., has been chartered with an authorized capital of $20,000 to deal in autos and accessories.

SALT LAKE CITY. — The Davis Auto and Machine Company has been incorporated at Price, Utah, and will have a capital of $25,000. The company will do general garage work and auto repairing, and will be agent for the Chrysler car.

BALTIMORE.—Frank M. Radford, for 15 years prominently identified with the automobile trade in Baltimore, has become sales manager for the Motor Car Company. Willys-Overland dealers. Before bcoming associated with this business he was president of the State Motors, Inc., Chandler-Cleveland distributors. He also has been identified with the Haynes and Jordan cars.

CEDAR RAPIDS, Iowa.—H. D. Miller, manager of the Miller Buick Company, has disposed of his auto interests to the Bloom Motor Company of Chicago and will devote his time to his Angus breeding farms, for which he has been widely known among stockmen. The Bloom firm took over the agency August 1.

With the Associations

Tire Shops Close Nights

ST. LOUIS, Aug. 1.—At a recent meeting of the Associated Tire Dealers of St. Louis, a resolution was adopted to close establishments on Sundays, nights and holidays and to make a charge for all tire service. Only three members of the association had raised any objection to the resolution and none of them was represented at the meeting. A committee was appointed to confer with these members with a view to lining them up with the new policies.

Arthur G. Jennings, business manager of the association was instructed to sign up members to an agreement to bulk discarded tires and sell them as junk to the highest bidder. This system had been fully discussed at a previous meeting. A similar plan is used by members of the Ben Franklin Club, an organization of printing establishments in this city, for the salvaging of their scrap paper.

Sample poster stamps boosting the national convention of tire dealers to be held here in November were exhibited by A. P. Woehrle, president of the organization. They are to be affixed to the correspondence of tire dealers throguhout the country and are to be provided by the St. Louis Convention and Publicity Bureau.

Independents Organize

OAKLAND, Cal., Aug. 1.—Following fast upon the formation of the Independent Gasoline and Oil Dealers' Association in Oakland, other independent service-station operators have organized throughout northern and central California, from Redding as far south as San Francisco. Representatives from these local associations of independents held a well-attended convention in Sacramento recently, at which the following five subjects were discussed and acted upon:

"Business Honesty of the Independent Service Station Operator and How to Maintain It"; "Maintenance of Cleanly and Efficient Places of Business"; "Full Measures and Fair Dealing"; "Upholding of Prices and Policies Fixed by the Refiners"; and "The Wrong of Substitution." The independents pledged themselves to better business methods, the uphodling of refinery prices, and the barring of substitution of products in any form.

A. B. Morris has been chosen secretary-manager of the state association of independents, and a blue and white checkered flag has been adopted as the emblem of the organization.

Service Managers Meet

St. Louis, Aug. 1.—Carburetor adjustments and other automobile troubles were discussed at the monthly meeting of the Service Managers' Bureau of the St. Louis Automobile Dealers' Association held last week at Claridge Hotel. Seventy-six managers representing that many automobile concerns attended.

J. W. Miller of the Stewart-Warner Products Service Station, vice-president of the bureau, presided.

Frank Rietz, service manager of the Equipment Service Corporation of St. Louis, talked at length concerning the proper adjustment of carburetors of various makes of cars. Rietz answered many questions asked by managers concerning causes of carburetor troubles.

Ewell Smith, development engineer of the Manhattan Rubber Company discussed methods of brake lining manufacture and the reasons therefor. He also emphasized the necessity for care in brake adjustments.

Herman L. Schnure, president of the Schnure-Buick Co., one of the oldest automobile dealers in the city also spoke. He was introduced by Robert E. Lee, manager of the St. Louis Automobile Dealers' Association.

Cleveland Dealers to Meet

CLEVELAND, Aug. 1.—The fourth annual outing of members of the Cleveland Automobile Manufacturers' and Dealers' Association will be held at Ridgewood, August 4. The program includes a golf tournament with entrant selecting his own handicap and an indoor baseball tournament.

Carolina Meeting Sept. 7

CHARLOTTE, N. C., Aug. 1.—Directors of the North Carolina Automotive Trade Association, in special session here, voted to hold the annual meeting of the association at Wrightsville Beach, September 7-8. Preparation of the program was a task assigned a special committee from the directorate, with C. W. Roberts, of Greensboro, secretary of the association, acting as chairman. Several speakers of national prominence are expected to deliver addresses.

Wisehaupt Meets Tradesmen

BLOOMINGTON, Ill., July 25.—R. E. Wisehaupt, representing the National Automobile Dealers' Association, addressed the members of the Bloomington Automotive Trade Association, and their salesmen at the Association of Commerce recently, speaking upon the subject of salesmanship. He illustrated the difference between success and failure and suggested methods which would have a tendency to produce sales. The speaker pointed out the stiff competition that the motor car salesmen must contend with nowadays, and emphasized the importance of a thorough knowledge of the science of salesmanship and the psychological aspects. The speaker plans to deliver similar talks before all of the automobile dealers' associations of Illinois during the summer and fall months.

Truck Operators Join

NASHVILLE, Tenn., Aug. 1.—Truck operators at Nashville have formed an association, among the objects being to expand, promote and foster the general business of transportation of property by motor vehicles; to co-operate with the state, federal and municipal authorities to the end that motor carriers in Tennessee shall pay a just, equitable and fair proportion of taxes, but no more; to cultivate the good will of the public and to establish motor transportation in its estimation; to assist members in procuring liability, compensation and other insurance with the idea of making collective agreements; to affiliate with other similar bodies.

The officers of the new association are: E. C. Holland, Columbia, president; I. T. Watson, Franklin, first vice-president; M. M. Kirby, Hartsville, second vice-president; C. A. Williams, Nashville, secretary-treasurer.

The membership is composed of the following firms, operators in Middle Tennessee, southern Kentucky and north Alabama.

Jenkins and Kemp Transfer Co., Lebanon, Tenn.; Holland Transfer Co., Columbia, Tenn.; Bryson Truck Line Co., Murfreesboro, Tenn.; Kirby Transfer Co., Hartsville, Tenn.; W. C. Robinson, Smithville, Tenn.; McReynolds and Dunn Transfer Co., Scottsville, Ky.; Pate Transportation Co., Fayetteville, Tenn. and Huntsville, Ala.; Chas. Chockley, Shelbyville, Tenn.; Watson and Blackburn Transportation Co., Franklin, Tenn.; M. T. Hancock, Liberty, Tenn.; Yellow Truck Line, Springfield, Tenn.; Jones Transfer Co., Gallatin, Tenn.

Bus Owners Organize

WRIGHTSVILLE BEACH, N. C., Aug. 1.—The North Carolina Bus Owners' Association held its annual meeting here today, electing officers and discussing policies of the association.

New officers are: H. G. Bales, Goldsboro, president; L. F. Berhard, Greensboro, vice-president; Joel W. Wright, Gastonia, second vice-president; C. H. Best, Newton, third vice-president; J. W. Hester, Oxford, secretary-treasurer and attorney.

The new board of directors consists of: A. B. C. Kirk, Salisbury; W. H. Averett, Oxford; J. F. Martin, Wadesboro; L. A. Love, Charlotte; H A. Ragle, Asheville; T. C. Caudil, North Wilkesboro; R. O. Walters, Concord; H. F. Moore, High Point; M. E. Hart, Raleigh.

Charlotte was chosen as the next meeting place of the association, the meeting to take place the first Monday in July, next year.

Jewel W. Wright of Gastonia, was appointed state representative on the national directorate.

Optimism Still Prevails In Used Car Situation

Despite Price Reductions on New Models Authorities Expect Better Methods to Be Effective

DETROIT, Aug. 1.—Despite the sensational price reductions which have been made by the different car manufacturers and which several manufacturers are now contemplating, those who have made a close study of the used car situation are not pessimistic over the future.

On the contrary, they look for dealers and distributors to make more money during the coming season than they have this year. This also applies to the merchants who deal exclusively in used cars.

However, it will be the era of merchandising, with those merchants who study their problems the closest being the ones to reap the biggest gain. With this "era" will come better trained salesmen, better organization and ways that will enable the merchant to adapt himself more readily to the problems that confront his business.

Some of the manufacturers are inclined to believe that there are just two factors, one, the make of automobile and the man who sells it and second, the organization behind the car. They believe that there is only room for a certain number of cars and that those automobiles whose organizations do not strengthen their positions will be the ones to go "by the boards." Those who strengthen their positions will get the benefits.

To the dealers and distributors out in the field, they advocate better selling organizations, with the salesmen being trained in the best angles of salesmanship. For it will depend a good deal upon the salesmen as to whether his employer is able to sell his quota.

The reduction of prices which have been made and which will be made on different makes in the near future will enable the dealer, the distributor and the used car merchants to make better bargains. The day of one dealer getting a customer by giving him a higher price for his used car than another dealer has passed with a resulting tendency to stabilize the used car market.

WILSON FOUNDRY EXPANDS

PONTIAC, Mich., Aug. 1.—Purchase of the land, plant and equipment of the Michigan Drop Forge Co., by the Wilson Foundry and Machine Co., a subsidiary, is announced by D. R. Wilson, president of Wilson Foundry and Machine Co. The Wilson Foundry Company, makers of all engines for Willys-Knight and Overland cars will use the property for future expansion. The property, located next to the Wilson Co., consists of about five acres, the plant being completely equipped for drop forge work. It ceased operations about a year ago and since then has been idle.

Coming Motor Events

Automobile Shows

Boston ..... Oct. 10-17
World's Rubber and Tropical Exposition.

Dallas, Tex. ..... Oct. 10-25
Annual Automobile Show, State Fair Automobile Building, under the auspices of the Dallas Automotive Trade Association. J. W. Connell, manager.

WHITE DECLARES DIVIDEND

CLEVELAND, Aug. 1.—Directors of the White Motor Co., at their quarterly meeting declared a quarterly dividend of $1 per share, which is at the rate of 8 per cent a year. It is payable on September 30 to holders of stock on September 21. This is the thirty-ninth consecutive dividend of the company. For nearly 1 years there has not been a single passin of the quarterly dividend. Promotions o 16 men affecting as many officers of th White Co., have occurred since July Important changes also have been mad in the eastern region in the same perio Six men have been promoted to the man agement of different offices.

British Authority Tells of European Automotive State

Says Industry Has Grown 100 Per Cent in Last Three Years—Believes Duties Will Stand

NEW YORK, Aug. 1.—The current state of automotive business in Great Britain was described at a luncheon here this week by Col. Alfred Hacking, secretary of the Society of Motor Manufacturers and Traders of London, who is making a survey of the American automobile business.

The luncheon was given by the National Automobile Chamber of Commerce. Frederick J. Haynes, president of Dodge Bros. Inc., who presided, extended an invitation to British car and truck manufacturers to visit America at the time of the National Automobile Show and the World Motor Transport Congress in New York, January 9, 1926. He declared that the motor car had won its way to world-wide favor because it has proved a transportation necessity, and he predicted that it would prove a more potent force in bringing the people of the world together than the League of Nations.

Colonel Hacking said that the automobile was making striking progress in Great Britain, the business having grown 100 per cent in three years. Engineering opinion was about equally divided between preference for light high speed motors and heavier American type, but he thought there was no chance for a change in the present R. A. C. bore rating of engines.

He declared that the McKenna duties of 33 1/3 per cent on imported cars would be maintained for at least four years.

A reimposition of a gasoline tax Colonel Hacking thought unlikely, as the British authorities found difficulty with administering the levy.

With regard to the rubber situation, Colonel Hacking said there was little chance of a radical modification of the Stevenson restriction act, as many took the position that high rubber prices were greatly helping England to pay her war debt. But his association as well as others in allied fields had lodged emphatic protests against the present state of affairs. They are in favor of cheaper rubber.

Questioned regarding the time sales situation in England, Colonel Hacking said that about half the cars sold there now were on deferred payments. The sales are financed usually through subsidiaries of insurance companies, and the approved terms are 25 per cent down and the balance in twelve installments. "Most good concerns," he said, "did not approve of more liberal terms."

Among those at the luncheon were H. H. Rice, assistant to the president, General Motors Corp.; M. C. Reichert, export manager, Studebaker Corp. of America; A. L. Viles, general manager, Rubber Association of America; Coker Clarkson, general manager, Society of Automotive Engineers; Alferd Reeves, general manager, National Automobile Chamber of Commerce; Herman Deuster, secretary of the foreign trade committee of the Motor & Accessory Manufacturers Association; other representatives of manufacturers and associations, and editors of automotive trade publications.

SQUEEKS and RATTLES

NO AMATEUR

Kriss: Do you suppose that it will take long for your wife to learn how to drive the car?

Kross: It shouldn't! She had about ten years' experience driving me!

—Judge.

Lonely Enough

Sofia—Joe's awfully absent minded, isn't he?

Omar—Why?

Sofia—Why the other night he was driving his parents over a lonely road and they came to a particularly lonely spot, and before he knew it he had parked the car.

—Penn Punch Bowl.

Famous Last Words

I think that other car is going to slow down.

—Daily Palo Alto.

One Is Enough

"Have an accident?" asked the fellow who arrived at the scene of an automobile wreck too late to be of any help.

"No thanks," replied the victim, as he picked himself up, "I've just had one."

Dogless

"Mose, can you explain wireless telegraphy to me?"

"Yessuh, its like dis: If you-all had a long, long houn' dawg, an' he stretched from Cincinnaty to Cleveland, and you stept on his tail in Cincinnaty, he would howl in Cleveland. Dat am telegraphy. Only in wiahless you does de same thing without de dawg."

—Columbus Dispatch.

A Full Purse

When Mrs. A. T. Miller regained consciousness after lying for three hours pinned beneath her automobile here Saturday, she awakened to learn that in addition to physical injuries, she had suffered the loss of her pocketbook, containing $50, and a spotlight, spare tire and kit of tools.

—Hastings (Neb.) Tribune.

AN EXAMPLE

Mrs. Biggs—Let's go to California in our flivver.

Mr. Biggs—It's too far.

Mrs. Biggs—Why so? These peaches came all the way from California in a tin can.

—Fawcett Fraternity News.

E. H. Wilson Co. to Make Parts for Yellow Bodies

MOLINE, Ill., Aug. 1.—Parts for bodies for the Yellow Truck & Coach Manufacturing company will be made by the E. H. Wilson Manufacturing company (Moline Body corporation) it has been announced by E. H. Wilson, president.

The Moline company has received an order for parts for 1,000 bodies and plans for production are already under way. Jerome Javurek, production man for the Yellow Truck & Coach company is in Moline working with officials of the Wilson company on production plans.

The Wilson company, which has been working at full capacity for months, is building all the bodies for the Velie Motors Corporation of Moline and for the Stearns Automobile Company of Cleveland, Ohio, in addition to producing a considerable number for the Gardner Motor Car Company of St. Louis and for the Pierce-Arrow Motor Company of Buffalo, N. Y. Shipment to the Stearns company alone averages two carloads daily, according to Mr. Wilson.

NEW CLEVELAND DEALERS

CLEVELAND, Aug. 1.—The following dealers have been added to the organization of the Cleveland Automobile Company:

Harrisburg Chandler Cleveland Co., Harrisburg, Pa.; Leon A. Wylen, Philadelphia, W. A. Rutz, New Haven, Conn.; Irvington Auto Service, Portland, Ore.; Pakrose Service Station, Portland, Ore., and the Chandler Cleveland Agency, San Bernardino, Cal.

For Heavy Interurban Traffic

THIS new Miller-built Model 26-C, mounted on the new Studebaker M-184 Big Six chassis, especially designed for bus service, is ideal equipment for heavy inter-city traffic and feeder lines.

Although rated as a nineteen-passenger job, this bus will easily accommodate as many as twenty-two passengers. Inside dimensions are, length, 192 inches; width, 69 inches; height, 52 inches. The seats are four-passengers wide, with ample knee room between. Individual seats may be had if desired.

Here is a bus that combines smart appearance, economical, dependable operation and maximum passenger comfort—a bus that will increase business and profits for the operator.

Specifications, construction details, prices, etc., on this and other Miller-built bus models may be had from any Studebaker dealer, or from The A. J. Miller Company.

In Next Week's Issue—As the Editor Sees the Automobile Business

Experience of a Large Paint Shop With Pyroxylin Finishes

The Automobile Finishing Company of Detroit Uses Lacquer Finishes Almost Exclusively—Building Specially Constructed for Finishing Work—Novel Manner of Merchandising Paint Jobs

By B. M. IKERT

GIVEN the necessary equipment and sufficient working knowledge there is little chance for argument as to the success of pyroxylin finishes on motor cars. Although some new things are being found out about these finishes as time goes on, the experimental work is over and the job now is one of the shop adapting itself to the work.

Any paint shop which turns out good work has no difficulty with pyroxylin finishes and no doubt the majority of cars thus finished are a credit to the establishment. But many shops still have to learn something about merchandising their work, just as the automotive repair shops found out some time ago that it is perfectly possible to merchandize maintenance work of a strictly mechanical nature.

One of the best examples we have recently observed of where a paint shop not only turns out excellent work but merchandizes this profitably is the Automobile Finishing Company, 1839 East Grand boulevard, Detroit. If ever there is a fine example of what can be done to place motor car maintenance on a basis where it commands respect, it is this establishment.

The reason is not hard to find if you visit the place and talk with the owner, Mr. T. J. Gillam. First of all he is a practical painter, having at one time charge of the finishing department of a motor car factory whose production ran over 400 cars a day. He knows pigments, solvents, varnishes, lacquers and all the rest of the things connected with the application of the finish to a car. But on top of all this, he is a business man and to that end knows what it means to properly "sell" the work.

Let's see what he has done to make his business a success.

In the first place he decided a well conducted automobile painting establishment had no business in an alley or some out of the way place. He chose, therefore, a site in one of Detroit's best streets and built a structure especially suited to the needs of motor car painting. The building is 150 ft. long and 60 ft. wide, fire-proof, well lighted, with a finishing room and heating facilities that are the last word in equipment.

There are two entrances, one front and one rear. At the front also are the show room, finishing room, lavatory and office, as well as the finishing room where finish varnish work is done. At the extreme rear is the burn-off and wash rack department and directly opposite this the rack for holding tires and other parts taken from cars while they are being worked upon.

The stair way to the basement also is located here. In the basement is the boiler for producing steam and also the air compressor. The side walls are practically all glass and there is an unusual amount of light inside the

Someone said at one time if service and maintenance were to be placed on a business basis the work would have to be taken "out of the alley" and placed on the main street. It has happened and is happening every day. Here, for example, is the building of the Automobile Finishing Company, of Detroit, located on East Grand boulevard. It is a handsome building and in no way detracts from the appearance of the neighborhood

Several views taken in the building of the Automobile Finishing Company, Detroit. Two of them show the manner of cleaning the car with alkali and steam, the car being previously stripped of tires and fenders and placed on floor jacks. The ample capacity of the building is shown in one of the other views, while the remaining one is of the finishing room, wherein the final coat, striping, etc., is applied

building. A dressing room for the men is located in the basement.

Air lines extend along the wall on each side of the building and air outlets are placed at every other car stall. At the head of the air line is a pressure gage showing the pressure in the tank located in the basement. An air regulator for conditioning the air also is placed at the head of the line. At each air outlet is a drain to collect any water due to condensation in the pipe.

So much for this part of the equipment. No matter how costly the equipment, materials, pigments and processes, they mean little if knowledge of the craft is lacking. There must be a system and the work must be "sold" if customers are to be satisfied and a legitimate profit derived from the work.

And so we come to the methods of doing the work in this finishing shop. The best way to appreciate it is to follow a car through the establishment. Bear in mind this shop does only quality work, for it is on this class of work that its reputation has been built. The customer who wants "just a cheap little job" is turned away. A Ford painted in this shop gets the same high-class finish as the most expensive car. There is but one standard to which the establishment works and one of the things which Mr. Gillam constantly impresses on the minds of his workmen is that the quality of the work ranks above everything else. It cannot be "good enough". Mr. Gillam personally supervises the job on every car and having refinished motor cars, and carriages for over 20 years, nothing gets by his critical eye.

When a car comes in for refinishing the "check-in record" is made out. This is a sort of history card and serves a very useful purpose. Besides listing the usual items such as name of owner, make of car, license, specifications as to colors desired, etc., there is the speedometer reading, amount of fuel in tank, make of tires and spares, lights out of commission, vanity case fittings if any, condition of glass, radiator shutters and many similar items.

The reason for checking these things is simply this: it prevents misunderstanding when the customer calls for the car. The customer may swear up and down there were fittings in the vanity case when the car was brought in. Or, as one customer said before the system of checking-in the cars was adopted "I think you did a fine job of the work but I don't like the idea of using gasoline from my

(*Continued on page* 12)

Merchandising a repaint job. Here is shown the showroom of the Automobile Finishing Company of Detroit, wherein is placed the customer's car just before delivery. It is entirely separate from the other cars in the shop, which adds much dignity to the selling of the work

Ohio Council of N. A. D. A. Formally Launched

300 Dealers at Cedar Point Meeting Perfect Organization as a Division of National Association—Speakers Discuss Merchandising, Service and Legislation

Cedar Point, Ohio, Aug. 8.

MORE than 300 automobile dealers from all parts of Ohio met in two-day session at Cedar Point, inaugurating the Ohio Council of the National Automobile Dealers' Association.

This first general session of this newly organized state council was devoted to discussion of merchandising, service and legislative problems.

Speakers the first day were C. A. Vane of St. Louis, general manager of the N. A. D. A.; Chalmers Wilson, commissioner of motor vehicles of Ohio, and Attorney Frank X. Schaut of Cleveland, who discussed the legal phases of the industry in Ohio.

At the Thursday afternoon session the convention heard C. E. Gambill of Chicago, president of the N. A. D. A., and C. C. Hanch of Chicago, general manager of the National Association of Finance Companies, representing the time payment business of the automotive industry.

Speakers on Friday's program dealt with merchandising and sales work and included Edward Payton of Cleveland, Howard Wisehaupt of Cleveland, A. R. Kroh of Detroit, and Lynn M. Shaw of St. Louis.

The Ohio Council of the N. A. D. A. was formally launched by the election of the following governing board representing districts of the state: Warren Griffith, Toledo; G. G. G. Peckham, Cleveland; F. E. McClure, Akron; Frank Smith, Youngstown; Frank K. Boggs, Dayton; H. E. Coen, Columbus; C. A. Schick, Cambridge; J. W. Tarbill, Cincinnati, and R. A. Brehmer, Circleville.

Permanent headquarters of the council will be at Columbus.

Experience of a Large Paint Shop With Pyroxylin Finishes

(*Continued from page* 11)

tank". One man said, "I see you broke one of my door handles", and still another accused the shop of having used the car. Although these kind of customers are in the minority they must be dealt with and it is easy to see how the check-in record takes care of such situations.

This establishment even goes so far as to put exactly the same tire on the wheel from which it was taken, even as to the direction of travel. Every effort is made to return to the customer his car as received, excepting, of course, that the finish is new, as well as any changes ordered, such as nickel-plating certain parts, painting, monograms, striping and other things.

Having made the check-in record the car goes to the rear of the shop where the tires and fenders are taken off. No time is wasted on rusted fender bolts, as the heads are cut off and new bolts used in reassembly. It saves time and makes for a better job. The tires are stored for the time being and when again applied to the finished car the rims are given a coat of lead. This is done so that when the customer washes his car no rust will be washed down from the rim on the newly painted wheels. Certainly this is a good point for other shops to remember.

In taking off the tires and fenders, the car is placed on two quick acting floor jacks, so it can be rolled easily. It goes to the burn-off and wash rack where the old finish is completely removed (Mr. Gillam, by the way states the only satisfactory procedure with lacquer finishes is to completely remove the old finish on a car) and the chassis is cleaned with alkali and steam.

With the paint removed and the running gear cleaned the car is rolled to a stall along one of the sides of the building where it remains until finished, unless it goes to the finishing room for application of finish varnish, calling for a dust-proof room. The floor jacks are removed from under the car and it is placed on wood jacks. The quick acting floor jacks are too costly to remain idle under a car that remains in a certain place any length of time, hence the inexpensive wood horses or jacks.

Since we have in previous articles dealt with the application of pyroxylin finishes it becomes unnecessary to relate the various steps as done in this shop. We shall only mention that the work is most carefully done and reference to the high gloss on the car in the showroom illustrated herewith will testify to this. It is a lacquer finish.

While the car is going through the shop the fenders are sent out for re-enameling. The same is true of wire wheels and any such parts as lamps, radiator shells. etc., to be nickel-plated. Thus by the time the car itself has been finished these parts have returned and are ready for installation.

One of the outstanding features in connection with the work is the effort made to keep the characteristics of the car so that when it comes out of the shop it is practically a duplicate of the car as it came from the factory. A car may have, for example, a certain design on the lamp rim worked out in nickel plate and black. Some shops would refinish the lamp in an all-black and forget all about the design characteristic of the lamp. But not so in this shop. Even the small leather pads often placed at the extreme lower corner of a hood are kept intact or renewed, but not painted over to save time. Excepting for the tires, it is difficult for anyone to appreciate that a car refinished in this shop is other than a brand new one. Especially is this true if the car is a closed model. All new dust caps, for example, are placed on the tire valve stems, the instruments on the instrument board are gone over and all told the car is about as nearly a duplicate of the original factory job as it is possible to do so.

As a final good point in merchandizing this work, the car, when finished is rolled into the showroom where the customer can inspect it in much the same manner as he looks over a new car in the dealer's showroom. It is away from the other cars and surrounded by an atmosphere of orderliness and cleanliness. It makes a hit with the customer and marks a fine point in the selling of a repaint job.

The capacity of the establishment is about four cars per day and Mr. Gillman states that the work runs about 97 per cent pyroxylin finishes as against varnish jobs.

Speakers on Program at Ohio N.A.D.A. Meeting

Left to right, top row: Lynn M. Shaw, assistant general manager, N. A. D. A.; C. A. Vane, general manager, N. A. D. A.; A. C. Faeh, field manager, N. A. D. A. Second row, left to right: Edward Payton, market analyst; A. R. Kroh, sales promotion adviser, N. A. D. A. staff; C. E. Gambill, president, N. A. D. A. Bottom row: Harry T. Gardner, manager Cincinnati Dealers' Association; C. C. Hanch, general manager, National Association of Finance Companies; F. E. McClure, former president, Ohio Automobile Trade Association; and Howard J. Wisehaupt, merchandising specialist.

IGNITION TESTING on the Car

BILL FIXIT STORY NO. 9

PREVIOUS installments in this series by A. H. Packer were published March 19, April 2, April 16, May 7, May 21, June 18, July 9 and July 30, 1925.

SYNOPSIS: Bill Fixit's electrical trouble shooting men start on a trip in a Speedway car. They stop at various places along the way and at the Welsh mines are requested by Sandy, the foreman, to help out in fixing up a gasoline pumping engine. While there the money they had is stolen from the car, so they are forced to seek employment in Coal City with Jake Penders, the local electrician.

While at Jake's place a customer buys a tire, paying for it with a bill that Red afterwards recognizes as one stolen from them. Red goes after a job of wiring trouble that Jake had previously fallen down on, fixes it and then tells how it was done. At other times he explains electro-magnets, ignition principles, condenser construction and methods of testing.

The Red Head Has Occasion to Use His Knowledge of Trouble Shooting Under Harrowing Circumstances

By A. H. PACKER

THE Red Head snapped his trout fly into the whirlpool below the rapids and watched it spin around with the whirling waters. As he was about to retrieve the lure for another cast there was a faint noise in the shallow water behind him. Red half turned his head, but the turn was never completed. The sky changed from blue to yellow, then from yellow to red, while myriad toy balloons floated before his eyes.

When the Red Head's brain again began to function, he found himself lying in an evil smelling bunk, while through a haze of smoke and liquor fumes, there came to his singing ears the voices of quarreling men.

"Let 'im fix it, then turn 'im loose," said one.

"Fix what?" thought Red.

"Dump 'im down the dead mine shaft," said another, and Red's heart began to thump violently.

But saner counsel prevailed, much to Red's relief. It was trouble of some sort that Red was to fix. Through half closed eyes he saw a burly fellow in miner's garb coming toward him. A rough shake at first brought no response for Red thought it the part of wisdom to conceal the fact that he had been listening in. Then as the shaking continued Red opened his eyes.

"If yer know much about trouble shootin', now's the time to prove it if yer want to save yer neck," hissed the burly one.

* * * * *

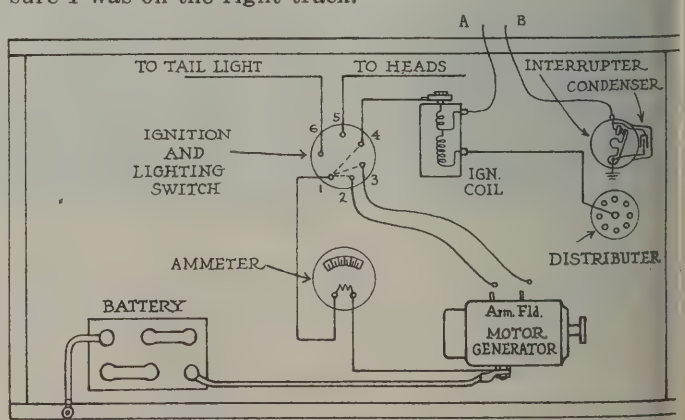
It was a very much relieved Valve Grinding Fiend that ran to the door of Jake Pender's garage as Red drove up, after his eventful fishing trip.

"You must of had good luck to stay away in the woods all night," remarked Valvy.

"Good luck, me eye," said Red, feeling of the back of his head, where a good sized lump was still in evidence, and then as Jake came out, Red told of the experience he had had.

Valvy was for going after the whole bunch with his twenty-two rifle without further delay, while Jake advocated calling the sheriff and getting out a posse, but Red advised against any hasty action.

"Better get in touch with Sandy on the quiet and see what he knows, then listen in each night with the long wave attachment and see what additional evidence we can get. If we hurry we may scare them away and if we go slow we may be able to trap the whole gang.



"But you didn't tell us how you were able to fix up their bus without any tools or anything," said Valvy. "What kind of car was it any way?"

"It looked like a truck," said Red. "But you should have seen the engine. A big brute, looked like an aviation engine and I bet that wagon could haul a ton of the stuff sixty miles or better.

"They told me they would turn me loose if I could make it run, seems like they had had trouble with it the night before and didn't dare get in touch with a legitimate service station, so they knocked me out when I wandered into their part of the country and figured they would get the job done no charge and without undue publicity.

"I got into the driver's seat to see what the ammeter would indicate and they bawled me out, said I wasn't there to take a ride but to get under the hood and get busy. Then I had to fuss around with the plugs and wires to make 'em think I was workin' and when they got tired watchin' I managed to see what the ammeter indicated.

"First I turned on the ignition switch to see what would happen. The ammeter showed ten amperes, so I knew that either there was a whale of an ignition current flowing or else that they had installed one of the Delco type motor generators. This proved to be the case. Then I decided to sketch the circuits as far as I could trace them to make sure I was on the right track.

Ignition circuits of the car the Red Head worked on in the ruffians' stronghold.

"After getting the heavy current reading I went back to the engine again and disconnected the two small wires on the motor generator so that the generator part of the machine would not take current when I was trying to check the ignition. Then I tried the switch again and watched the ammeter. This time there was no reading, at least it seemed that way. Then I tried it again to make sure.

An Oversight

"I thought I had the trouble, either in a broken wire or a burnt out ballast resistance on the coil, but I had forgotten, with all those roughnecks around, to look at the interrupter points. These happened to be open, which accounted for my getting no ammeter reading. When I closed the points by turning the engine over a bit, there was a reading of about six amperes, for the coil had to take care of eight cylinders which accounted for the rather heavy current draw.

"The next thing that occurred to me was the possibility of a shorted coil or burnt out condenser and I figured it was 'down the shaft for yours truly' if the coil was shot, and they wanted me to fix the job then and there. Luck was with me, though, for the condenser proved to be the trouble.

"It wasn't badly shot at that, for if it had been I could have easily seen a flicker of the ammeter hand when I turned the switch on and off, but in the dim light where I had to work I couldn't be sure. One of the birds wasn't quite as hard boiled as the rest and found a piece of wire for me; that was the only tool I was able to scare up, but it did the trick."

"And how were you able to use a piece of wire to find a leak that the meter didn't show?" Valvy wanted to know.

"The old tongue test," said Red. "It's a human voltmeter that every electrician has but few know how to use."

"I'm always afraid to put the wire in my mouth," said Valvy, "especially when its 110 volt current."

"Then you keep on bein' afraid, or I may have to ship you back to Bill Fixit in a big black box. The test is O.K. on 6 volts but would knock you cold on higher voltage. I tried it on 12 volts once and sure got a jolt.

"The wire A in my sketch was connected to the interrupter terminal, while the wire B was the one the fellow found for me. I connected it to the interrupter and brought the two ends of wire out from under the hood where I could put them on my tongue. At first I couldn't taste anything but dirty wire. Then I remembered I had turned the switch off. After snapping it on I got the test all right, a sort of acid taste, some say it's salty, but you can tell it without any trouble. If in doubt just turn the switch on and off while the wires are on your tongue.

"The next thing to do was to fix the trouble, and here again I would have had a mean job if the condenser had been in the coil or if it had been wax impregnated. Luckily for me it was in a little case at the outside of the interrupter and made of this stiff crinkly waxed paper. I think they call it glassine paper.

"I unrolled the condenser until I found a black hole burned through. On either side of this hole I put a piece of paper, rolled 'er up again, and that was that. When I got the wires connected again, and started up the engine the gang all let out a howl and the fellow who had found the wire for me nearly broke my back congratulating me with his brawny fist."

"Spose somethin' else had been wrong with the ignition system, you'd a bin out o' luck without your test outfit, wouldn't you," said Valvy.

"Well, that all depends," answered Red. "Meters are sure needed in the shop to make sure of each job, but in a pinch the meter on the car can be used, and in fact, just the way it's connected you can make a whole bunch of tests while sitting in the driver's seat and even before you lift the hood."

Jake thought this sounded a little fishy so the Red Head explained.

"There are several possible ammeter readings that we can get when turning on the ignition switch. With the Delco single unit system we disconnect the two small wires at the motor generator, while with other systems we just go ahead and test. That's the only difference in the case of the two different systems.

Best Method of Testing

"The best method of testing is to observe the ammeter reading when the ignition switch is on and the starter is cranking the engine. I'll make out a list of the possible readings and what they mean." And Red proceeded to tabulate the results of ignition tests that can be made in this way.

"The 5-ampere reading shows points stuck or some such condition which gives continuous current through the coil. A reading much higher shows a short in the circuit before we get as far as the coil. With no current flowing we have an open circuit, of course, and a test lamp or a piece of lamp cord can be used to locate this.

"The normal reading is a flickering indication of one or two amperes, but there is still the possibility of the condenser being either shorted or open, or of there being a puncture in the distributer arm, which lets the high tension spark leak away. The last test, for shorted condenser is made with the engine standing and points open, this being the test that can be checked with the tongue test I was telling you about."

Ignition Tests Made With Ammeter on the Car

Method of Testing	*Meter Reading*	*Nature of Trouble*
Ignition switch on and starter operating.	5	Points stuck. Interrupter shorted. Wire from coil to interrupter grounded.
Ignition switch on and starter operating.	Over 7 or off scale.	Ground between switch and coil.
Ignition switch on and starter operating.	None	Open in primary circuit.
Ignition switch on and starter operating.	1 to 2 unsteady.	Primary circuit normal. (Trouble might exist in condenser or high tension circuits)
Interrupter points open. Starter not operating. Ignition switch turned on and off.	Bare movement of needle.	Shorted Condenser.

Oldsmobile Offers More Power and Lower Bodies

Six Styles at Reduced Prices Constitute New Line. Engine Has Lighter Pistons, New Valve Arrangement and Other Changes

By LESLIE S. GILLETTE

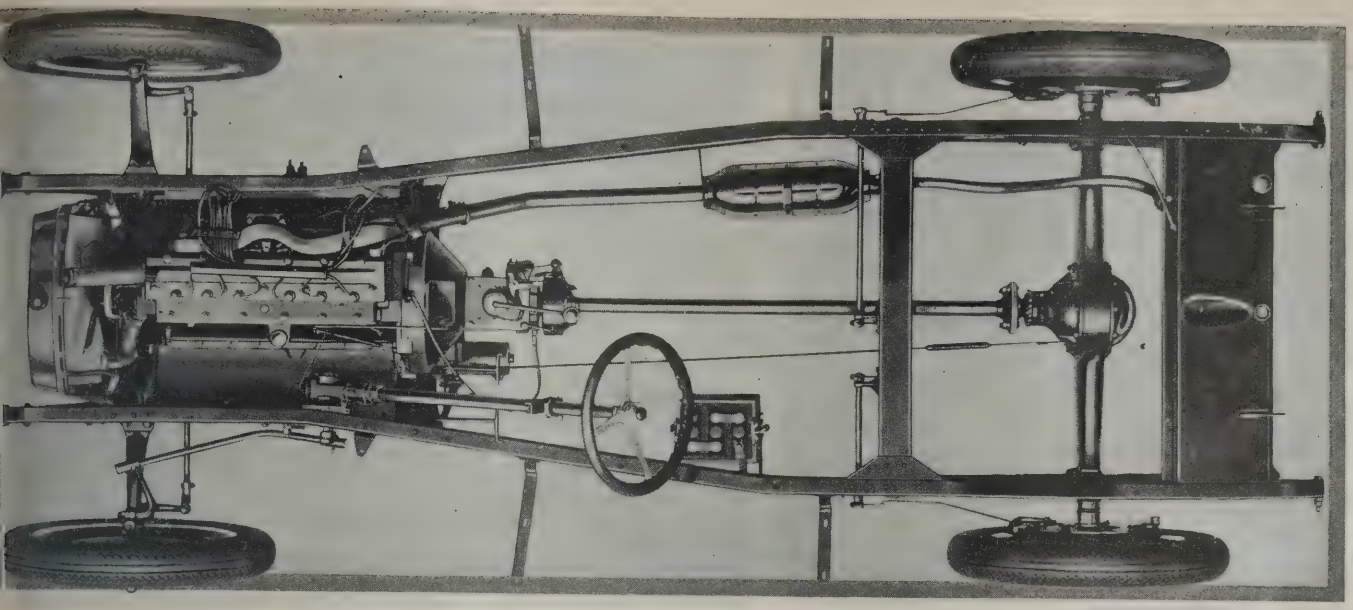
IN the new series of the Oldsmobile cars, the current trend toward lower prices, finer bodies, improved engine performance, numerous chassis refinements and reduced number of body models which has characterized each of the recent announcements by several of the car divisions of the General Motors Corporation, is again shown.

By concentrating production on three body styles with the choice of either standard or de luxe equipment, and improved quantity manufacturing methods, the Olds Motor Works has reduced prices ranging from $15 on the open cars to $260 on the sedans. Six models instead of ten which formerly comprised the line are priced as follows:

STANDARD:	
Touring	**$ 875**
Coach	**950**
Sedan	**1,025**
De LUXE:	
Touring	**$ 980**
Coach	**1,040**
Sedan	**1,115**

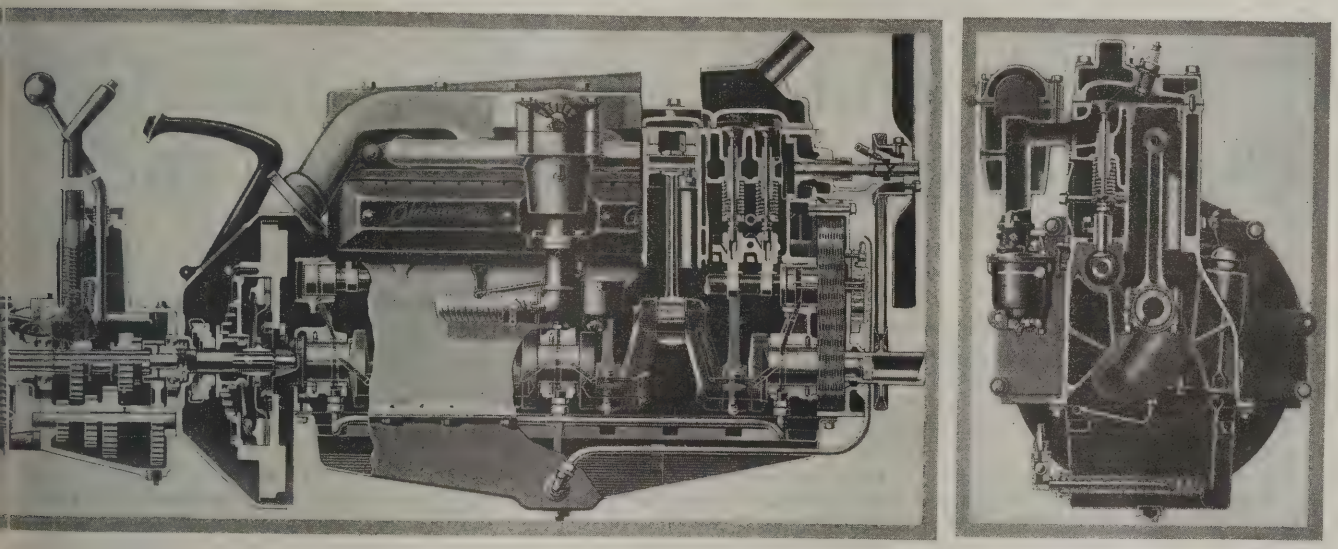
As in the case of the other recent reductions in price by the General Motors companies, the greatest cuts have been made on the closed cars. Comparing the touring model with the coach, the difference in price existing between these two cars is now only $75 as against $185 on the former line.

Changes in the springs, shackles and wheel dimensions, together with the new body lines, give the latest models a decidedly low hung appearance. The general appearance of the bodies is improved by slightly reducing the height of the roofs and the use of a moulding strip extending from the radiator entirely around the car while on the closed cars, this moulding accentuates the double belt effect which is now the popular vogue. Two color Duco finish with attractive and contrasting striping is used on all models, and the upholstery is a heavy cord plush on the closed styles and on the touring cars a genuine Spanish leather.



Without making any radical changes in the engine except the adoption of a chain drive at the front end in place of the former combination gear layout, the power output of the engine has been increased over 12 per cent by alterations in the valve mechanism, reduction in piston weight, more effective piston ring arrangement and improvements in the oiling system.

Substituting a Morse chain for the triangular front end drive instead of the helical gears has necessitated minor changes in the crankshaft and camshaft to accommodate the sprocket mountings with corresponding changes in the front end cover and cylinder block. Chain adjustment is accomplished through radical movement of the generator which has elongated slots in its support flange and an accessible adjusting screw and lock nut.



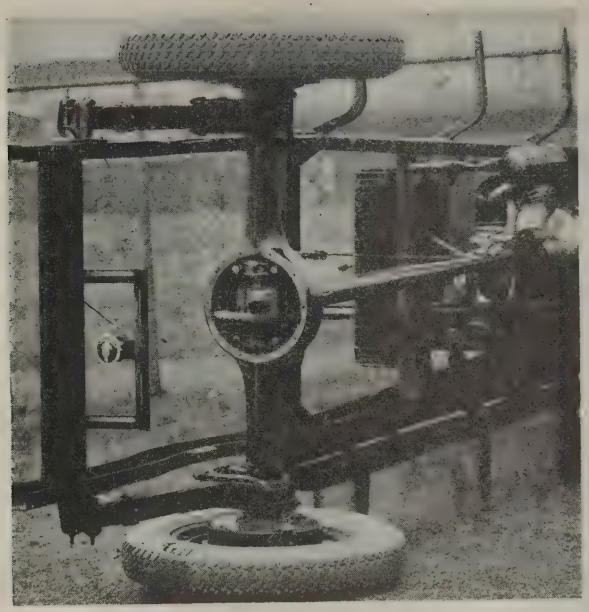
To the important changes in the valve mechanism may be credited most of the increased power that the new engines are developing. By enlarging the diameter of the inlet valve head from $1\frac{5}{8}$ in.

Oldsmobile Six touring car, standard coach and sedan which sell respectively for $875, $950 and $1,025

Oldsmobile Six chassis in which many refinements have been made

Two cross-sectional views of the Oldsmobile Six engine, in which a rearrangement of the valve mechanism has resulted in an increase of power. The oiling system also has been changed

½ in., not only is the engine able to rw in a heavier charge of vapor, re- ing in greater power strokes, but the ufacturing and service problems ae been simplified as both inlet and xaust are of the same size and con- equently now interchangeable. Length- g the valve lift by 1/32 in. and in- rasing the rate of the valve opening ae been obtained by changes in the ai contours which are now nearly e:ed.



addition to the revisions made at nefront end, the center and rear bear- g of the camshaft, instead of being f onze as used on the previous models, re now of cast iron and correspond it the front bearing which has been f his material for some considerable m. Concurrent with these changes, all eadings have been made removable he the diameter of the center bearing ournal has been increased to $1\frac{13}{16}$ in. hevalve lifter bracket, which supports six lifters in a nest, has been simplified through the elimination of two locking screws formerly employed in retaining the bracket to the upper portion of the crankcase so that the new bracket is held by the remaining three screws which enter the cylinder block base.

Besides the changes on account of the employing of a chain drive front end, the oil return grooves on the rear end of the crankshaft have been shortened to prevent entrance of dirt into the oil pan, while the oil outlets in the crank-pins are moved from the inner to the outer side of the pins to accelerate the flow of oil to the cylinders. Including the changes at the front end, the crank-case has been altered to provide a better seal against dirt working into the rear main crankshaft bearing by improving the design of the oil fling pocket. Because of the reverse rotation of the gears due to the adoption of the chain drive, several changes have been made in the oil pump which is now considerably more effective. The location of the pump itself has in no way been altered and is still carried on the outside of the timing chain cover.

Through careful design, the weight of the cast iron pistons has been reduced from approximately 16 ozs. to 14 ozs. Three step-type joint compression rings of $\frac{3}{16}$ in. width formerly employed are now replaced by two ⅛ in. rings with a third or lower combination oil regulating and compression ring of $\frac{3}{16}$ in. width. The functioning of the wider ring is supplemented by a series of holes drilled through the piston behind the ring. Although the total length of the piston has not been changed, the use of two narrow compression rings has reduced the depth of the land portion of the piston, leaving a proportionately longer skirt.

Other changes include reducing the

Chevrolet Announces Passenger Car Changes and New One-Ton Truck

By LESLIE S. GILLETTE

IN ADDITION to several improvements on the passenger car models following closely the recent price reductions ranging from $40 to $50 on the closed cars, the Chevrolet Motor Co. also announces this week a new 1-ton general purpose truck chassis.

Changes in the passenger car models are confined to improving the method of mounting the headlights, redesigning and strengthening of the radiator and engine splash pans, the placing of the throttle and spark controls on the dash, new colors on the open models, new upholstery on the large closed cars and several other changes.

On the new truck chassis which lists at $550 and supersedes the previous Utility Express model, a heavier frame on a longer wheelbase is employed carrying semi-elliptic springs all round, a half-floating spiral bevel rear axle of entirely new design and large heavy duty tires. The radiator, engine, clutch and transmission are the same as used on the passenger car chassis.

Referring to the car chassis, the changes include the carrying of the headlights on a heavy tubular steel tie-rod placed between the front fenders instead of being secured to the fenders themselves as previously, which allows a more rigid mounting, easier adjustment and eliminates the necessity for left and right lights. This arrangement also serves as an additional brace for the fenders and provides a convenient place for carrying the license plate. The headlights are of new construction employing a more simple method of locking the lens rim by means of a clamping screw at the lowest point of the rim.

Below the radiator, a slight outward crowning effect is given to the splasher to provide extra stiffness. An interior reinforced plate is now employed between the radiator core and the shell which together with the channel brace running from either side of the shell and a heavier larger diameter tie-rod between the cowl and the radiator has resulted in a much more rigid mounting. In addition heavier and stronger hinges are employed on the hood. Besides strengthening and redesigning the engine side pans, the latter are now secured on three sides only leaving a space of approximately ⅜ in. between the outer edge of the pan and the side of the engine. As the pans are no longer attached to the engine, it is possible now to drop the oil pan without disturbing the side shields which also makes for easy and more simple service operations.

Improved Appearance

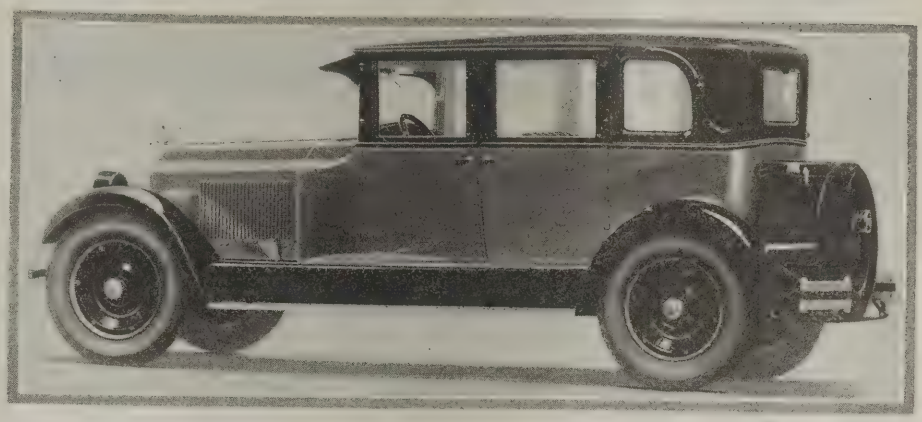
By removing the throttle and park controls from below the steering wheel and placing them in the same fitting which clamps the steering column to the dash, a more simple arrangement as well as improved appearance has been obtained. The levers are of neat design and short dimensions, and in their closed or retarded positions both point upwards. A walnut finish steering wheel with notched finger grips on the inner diameter replaces the former plain mahogany type. In the center of the spider of the new wheel, an aluminum hub is now employed, while the horn button has its retainer also of aluminum to match the hub. To make for easier changing of the gears, the gear lever has been lengthened by 3 in.

Doubtless the most noticeable change on the new cars is the finishing of the open models which is now in Duco gun metal gray. The upholstery is a gray leather fabric to match while the gray inside top lining combines with the upholstery. Also slight changes have been made in the rubber mats. In the closed models, a more luxurious grade of upholstery is now employed. Instead of a fine broadcloth material on the coach, a finer grade of corduroy is used while on the sedan a superior type of velour to that on the previous models is employed. Finally in place of the vibrator type horn, a motor driven Klaxon, model H, warning device is now used.

Continuing to be known as the Utility Express model, the new one ton truck chassis is specially designed for general service and can be equipped with a number of bodies strictly developed for the Chevrolet chassis.

In place of the quarter-elliptic springs used on the front axle, 36 in. by 1¾ in., semi-elliptic springs are fitted, while those on the rear axle are of the same type as formerly except that they are 1¾ in. longer. In conjunction with the longer wheelbase which has been increased from 120 in. to 124 in., the fran

(Continued on page 39)



New Five-Passenger DeLuxe Sedan Announced by Paige

A NEW De-luxe five-passenger sedan listing at $2,395, the lowest priced sedan ever mounted on the Paige 1-inch chassis, is announced by the ige Detroit Motor Car Company.

Coincidental with the showing of the w body model, Lockheed hydraulic ur-wheel brakes are standard equipent on all Paiges, without extra arge. An air cleaner is now fitted to e carburetor intake while a new counbalanced crankshaft, weighing 105 unds, adds appreciably to the smoothss and power of the engine, it is ated.

The chief distinguishing feature of the w sedan are the "D"-shaped windows the rear quarters with landau braces, ur doors each 28⅞ in. wide and an ameled metal trunk mounted at the ar.

Exterior finish is in Cobalt blue having aw color striping with the belt moulding and upper body section in black. ld backed mohair upholstery covers e seats and serves also for the head ing. The front seat which is 46½ in. de and the rear 47½ in., have in each se a depth of 19½ in. Built-in arm ts add to the comfort of the rear seat

Paige five-passenger DeLuxe sedan, showing the D-shaped rear windows and landau irons

passengers while silken ropes at the rear doors facilitate entrance and exit for women passengers. Ample tonneau room is provided by having a clearance of 21½ in. between the front and rear seats.

A windshield of the one-piece type, metal sun visor, cowl ventilator as well as a complete set of shock absorbers are provided. Standard equipment includes the following, five 33 by 6.75 balloon tires, four-wheel brakes, nickeled radiator shell, full front bumper with quarters at the rear, automatic windshield cleaner, rear view mirror, motometer, flush type heater, transmission lock and stop light. Included in the regular instruments carried on the instrument board is an electrically wound clock and a gasoline gage.

Oldsmobile Offers More Power and Lower Bodies

(Continued from Page 17)

tch pedal pressure so that the pressre on pedal pad now ranges between 2 lbs. and 30 lbs., making for softer dal action and easier operation. At e same time the clutch release operas on a special patent graphite bearig which is self lubricating, noiseless d requires no attention. Also the gear ift lever has been lengthened 4 in. and e fulcrum point lowered 1¼ in. to proe easier shifting.

Lower center of gravity for the car d improved riding comfort have been ained by shortening the spring ckles by ½ in., reducing the camber the springs and smaller diameter eels, the last mentioned carrying 30 4.75 in. tires in place of the former e of 31 by 4.75 in. The rear springs all models are ⅜ in. shorter from e center line of the axle to the rear ing eye and the leaf spring gage on e chassis for the sedan models has en slightly increased. These changes e resulted in a total drop in frame ght of ⅞ in. in relation to the road.

To provide greater rigidity for the frme, the wide flat pressed channel mmber forward of the engine is replced by a tubular cross member which eeves the engine of practically all tains through the weaving of the frne. The only other changes on the ssis are the shortening of the steerin column by 1 in. to give more comfortable driving position for the driver and a simplified rearrangement of the controls at the base of the steering post.

In addition to the lines of the new bodies, the general appearance of the cars has been changed by carrying the hood louvres in a vertical position instead of at an angle and the employing of new fenders of enlarged crown, increased width and deeper lips. The rear fenders as well as the wheel housings have been lowered by ½ in.

On the open models only one strip of moulding is used, this strip extending from the radiator entirely around the body. Above the moulding, a moleskin gray is employed, blending with the general color of the car which is an attractive shade of Russia brown. Red striping is used just under the belt line, on the hood louvres and on the spokes of the artillery wheels.

All closed bodies are enhanced by a panel or belt 4½ in. wide and formed by two beadings which run from the cowl around the body, the lower moulding extending on to the radiator. One inch has been taken from the overall height by lowering the roof, which does not in any way affect the amount of head room in the interior. Doors of the sedan have been widened by $1\frac{3}{16}$ in. while those on the coach have been widened by 3½ in. Further, the inside overall length of the latter model is longer by 1½ in. while the front seats of all closed cars have been tilted back at a slightly greater angle.

Front frame cross member on the Oldsmobile Six

Both coach models are finished in Buckingham gray Duco with black Duco employed on the upper body panels. A fine green striping sets off the panel, hood and wheels. Aquamarine blue with white striping and black upper structure is the 5 color scheme on the sedans. Heavy cord upholstery of a neutral shade is employed for the upholstery on the closed cars.

De luxe or sport models are regularly equipped with disk wheels, trunk rack, black enameled trunk, luggage rails, bumpers, kick plates, motometer, rear view mirror, spot light, etc. The sport touring has windshield wings, and natural wood wheels are optional. The equipment on the "standard" models is the same as previously employed except that on the sedan and including the de luxe sedan a K-S Telegage is mounted on the dash for showing the amount of fuel in the tank.

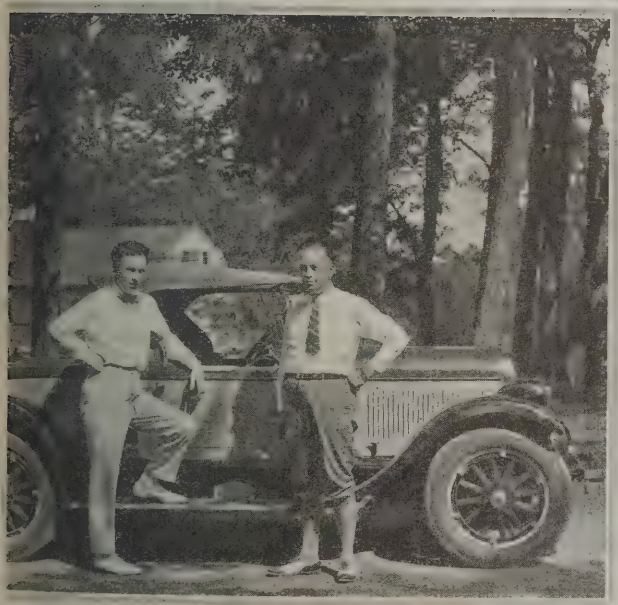
MOTOR AGE'S PICTURE PAGES

A CAMPER'S EDEN. Camping display window used by the St. Louis branch of the Willys-Overland Co. A large department store in the city co-operated with the automobile people in the decoration to mutual advantage.

AID IN RESCUE WORK: Motor equipment rendered valiant service in dislodging debris to permit searching the ruins following the Santa Barbara, Cal., earthquake. Because of their speed, trucks proved superior. From the ruins of the San Marcos building shown two bodies and an injured woman were removed



THIS MADE 'EM RUBBER. Below is shown the principal float of the Firestone Tire & Rubber Co. in the industrial parade held in Akron, Ohio, recently. This 50-ft. display, drawn by tractor, is a replica of a section of the company's rubber plantation near Monrovia, Liberia, West Coast of Africa. It depicts actual foliage and vegetation, the huts of the natives, the laborers themselves and the overseer inspecting the tappings.

OF AUTOMOTIVE INTEREST

A NIFTY DISPLAY. At first glance this might be taken for the interior of a foreign showroom, judging from the lines of the automobile. However, it is one of the new Franklin sport type roadsters which were shown extensively during July. Dealers throughout the country have reported a goodly number of prospects.

TALKING IT OVER. Thomas Meighan, screen star in Paramount pictures, has had a special model car built for his wife. He is shown at the left with Walter P. Chrysler, motor car manufacturer. They are friends and neighbors at Great Neck, Long Island.

CHILDREN AS SALES INFLUENCE: Conrad Welling, sales manager of the Ernest J. Krause Motor Car Co., St. Louis Moon dealer, believes in interesting children as an aid to sales on the ground that they exercise more influence over their parents than is generally believed. Below is shown a parade he staged, led by a miniature Moon car, designed especially to appeal to children.

Questions and Answers on Dealers' Problems

BUILDING ^ ELECTRICAL ^ FLAT RATES
SHOP ^ LEGAL ^ PAINT & TRIM ^ ACCOUNTING

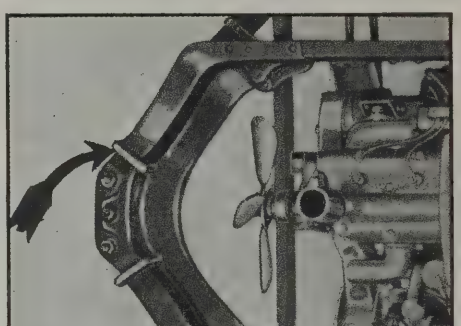
Bent Frame Produces Shimmy

Q.—Inform me what the cause is of wheel shimmy on a model 91 Overland sedan. Every time the car hits a bump or gets out of the track it starts to shake and will do so until you pull it quick to one side or the other.—George Kleim, Worthington, Ia.

We have been advised by the local Willys-Overland maintenance station that a frequent cause of wheel shimmy is a bent front frame connection. The connection referred to is in reality the front frame cross member, as indicated at Fig. 224.

If after you have removed the mud or splash pan in front and have checked frame as O. K., then inspect the king bolt bushings and all ball and socket joints in the steering mechanism. All excessive clearance and back lash must be removed from these parts in order to damp out the oscillations that produce the shimmy.

TIMING IN DEGREES AND INCHES



Q.—Give operation necessary for replacing the chain on a late model Hudson and Essex sixes. How much piston travel would there be per degree in an Essex six? The exhaust valve closes 8 degrees after center and I cannot get at the flywheel to measure it accurately.

We regret that we cannot give you the exact procedure on removal of the chain but believe that after you have removed the radiator that you will be able to discern the next step to take in order to get at the chain and remove it. Although we have no definite figures covering the valve timing you will find that on an engine with a flywheel of 12 to 16 inches in diameter and with a connecting rod of average length that 8 degrees will equal from 1/64 to 1/16 of an inch on piston travel past top dead center. If you will set the exhaust valve so that it closes when the piston is not more than 1/32 of an inch past top dead center and if with this piston setting the chain will mesh without turning the camshaft or piston you will have the correct timing. In other words one tooth of the chain will so effect the piston travel that it will be very noticeable.

RAISING COMPRESSION TO 100 POUNDS

Q.—How much higher should the top of the piston be in a Chevrolet 490 to increase the compression to 100 pounds. J. F. Miller, Service Manager, Edgewood Automobile Co., Edgewood, Texas.

We estimate the compression at present as being 65 pounds which with a stroke of four inches gives a space above the piston of about 1.14 inches. On the basis of 100 pounds compression we have a compression raito of approximately 7 which gives a necessary space above the piston of .67 inches. Subtracting .67 from

The Overland front spring is attached to the cross member

1.14 inches we have .47 inches or approximately ½-inch which the height of the piston will have to be increased in order to get 100 pounds compression. As this calculation is entirely theoretical would suggest your checking up with the measurements of the engine to see if any interference is encountered and to see if the figures are approximately correct.

The Readers' Clearing House

THIS department is conducted to assist dealers and maintenance station executives in the solution of their problems.

All questions are answered direct by letter, so the name and address should be given in full. This saves waiting for the answer to be published, which sometimes occurs several weeks late, depending upon the space available.

Readers' names will not be published with articles, if a request to this effect is received with the letter.

Inquiries not of general interest will be answered by personal letter only. Emergency questions will be replied to by letter or telegram.

Also state whether a permanent file of MOTOR AGE is kept, for many times inquiries of an identical nature have been made and these are answered by reference to previous issues.

Addresses of business firms will not be published in this department but will be supplied by letter.

Technical questions answered by B. M. Ikert, P. L. Dumas and A. H. Packer; Legal, by Wellington Gustin; Paint, by G. King Franklin Architectural, by Tom Wilder; Tires, by a Practical Tire Man; General Business questions, by MOTOR AGE organization in conference.

Knock in Loose Valve Assembly

I would like to offer our experience o a similar case of a knock on a Studebake light six with reference to the story i MOTOR AGE under the heading "Last Re sort in Locating Knock," which appeare in the November 20, 1924, issue on pag 28. We found this sort of a knock to b one of the valve rocker arm assemblie The bolts work loose and allow rocke arm casting to work with the motion o the valves and knock. These assemblie are bolted to cylinder block over the cam shaft and cannot be noticed by the ey when they are a little loose and yet loos enough to cause a knock.—Billy Hesc Classon Machine Shop, Santa Fe, Ne Mexico.

Mr. Hesch's contribution is of value fo readers who have had trouble in determir ing the cause of abnormal engine noise We are passing on this experience to ot readers with thanks to the contributor.

BABBITTING AN ALUMINUM CRANKCASE

Q.—We tried to pour babbitt in a aluminum crankcase for bearings and w noticed air pockets seem to form und the babbitt. When machining the bearin these holes are uncovered and appear t be larger underneath than they are on th surface. In pouring babbitt in steel ca the work turned out all right.—Trouble

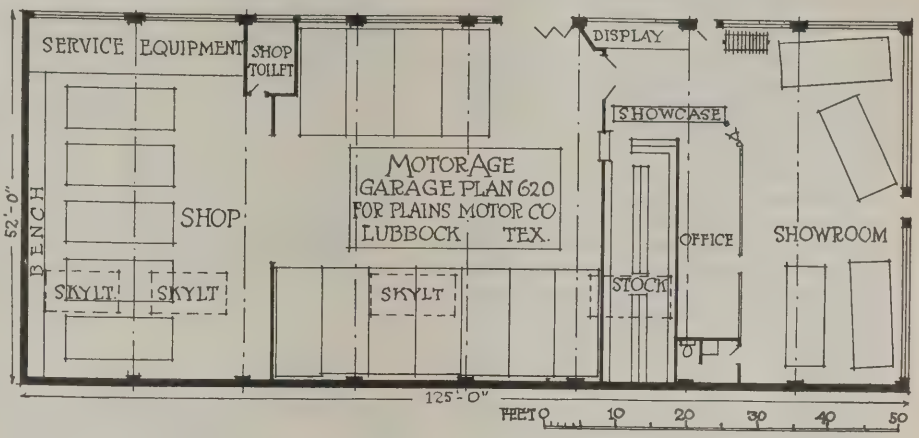
One possibility is that when you tri to pour the babbitt in the aluminium th you had the babbitt too hot. We assun that you are familiar with the test ma with a pine stick, the stick being insert in the melted babbitt and the temperatu being considered o. k. when the stick ju begins to char. Another possibility that the aluminum is slightly porous a contains moisture. It would be well pre-heat the crankcase if possible to a proximately the temperature at which t babbitt is poured. If the temperature at least above the boiling point of wat it will drive off any moisture whi otherwise would tend to produce bubbl in the babbitt.

TO GET MORE STEAM OUT OF TH COLE

Q—How much would be safe to remo from the cylinder head of the 1920 C Eight to increase the compression ra so as to speed up the engine. We w informed that 3/64 inch would be corre This seems such a small amount that wondered if we understood correctly. also wondered if it would pay to ha this done, as the amount to be remov seemed so small.—Richard E. Saunde Charlton, Mass.

We believe that the figure given about correct. If too much metal is moved the compression will be so hi that trouble will be experienced w detonation and possibly with blowing cylinder head gaskets.

Planning Your New Building



By TOM WILDER

The READERS CLEARING HOUSE

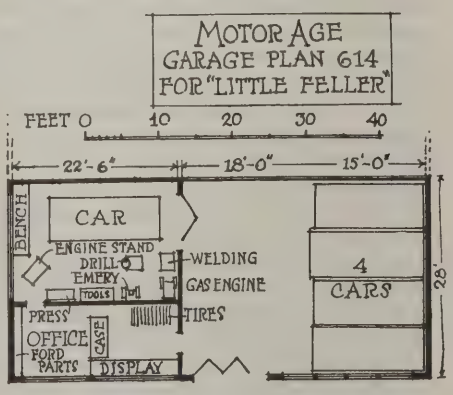
A Sales and Service Building With No Space Wasted

Q.—We are at this time planning construction of a building 52 by 125 ft. We would appreciate very much any suggestion which you may see fit to give us regarding the arrangement of shop to better service for the Chrysler and Maxwell automobiles. This will be a one-story building, built on the northeast corner of the block facing the east, with main entrance to shop on the north.

We would appreciate any suggestions which you may see fit to give us regarding the equipment needed to properly service cars. Should you have a plan that would be adaptable to this lot, we would be very glad to have you forward it to us. This 52 by 125 lot will also include our salesrooms, office, parts rooms, storage and service department.—Plains Motor Company, Lubbock, Texas.

We consider this a very well balanced plan which could be used most anywhere for a medium sized sales and service building

The plan we have prepared for your sales and service building is quite ordinary, and, in fact, any change from this general layout would be hard to make with a lot of this size. You might reverse positions of your shop and garage and if you were in a northern state we might recommend this as being easier to heat, because it would be more centralized and therefore easier to operate in the winter. In Texas, however, the heat problem need not be considered and it is better to have the garage separate the sales department from the service, even though it is not a great separation. It may be argued that in this plan the stock room is too far from the shop. While this is true, in an organization of this size, it would not be advisable to have two stock rooms and it is better to have one stock under the supervision of some person who handles accessory and parts sales and acts as stockkeeper, than to have a stock for sales and one for shop also with no supervision over the latter. At most a mechanic would not have to walk more than 75 ft. to get a part from the stock window, and this is not as great a distance as is sometimes encountered in large shops where the stock room is in the center.



Regarding the equipment needed for your shop, this will be found on pages 19, 20 and 21 of the Chrysler flat rate book. It would be a good plan to supply one of the car spaces shown in our plan of the shop with a pit suitably arranged for crankcase work, greasing and oil draining, and for the fitting of bearings. It will of course be an advantage if the rear wall is so situated on the alley that windows can be installed and light obtained from this side, but if this is not the case, skylights should be installed to make up for the deficiency and it would be as well to install the ones we have indicated whether there are windows or not.

The roof of this building should be carried on trusses as indicated to avoid the use of columns and posts.

PLANS FOR A ONE-MAN SHOP

Q.—I must build a new garage and shop. Have looked through several years of old MOTOR AGES, but cannot find any thing as small as I want. I want a one man shop with storage room for 4 or 6 cars, shop to be partitioned off for one car and tools. Press, drill, engine stand bench, floor stand grinder and gas engine for power. If you have floor plan that would help out "little feller" it would be appreciated.—Little Feller.

We have assumed that although you are small now, you expect to grow, and have laid out your plans with this in view. Also, as you have given us no definite lot size, we have not been bound by any definite proportion. By making the broad side of the building toward the front with the car entrance in the middle, you can have storage at one end of this building and your one car shop and office at the other, leaving a space 18 feet wide just inside the door for quick service, tire changes and so forth.

This building is laid out with a view to future expansion

Later, as you need more room, the building can be extended toward the rear, giving space for another car in the shop or for more storage, or both, as the case demands.

When building the room over this building, it would be well to support it on the end wall and on the shop partition, so that if the back wall is moved the roof will not be disturbed.

Install as many windows as you can on both sides of the shop. A small skylight over the section containing the machine tools would help out a lot.

LIEN IS LOST

Q.—I would like some legal information as to how I can collect a bill for repairs done on a car last July (1924). Part of this bill has been paid in small payments. Can I place a lien on this car, or must I have it in my possession to do so?—John Monroe, Allentown, Pa.

You have lost your lien on the car in question. Having parted with possession on promise of payment, the lien at common law does not arise again by its coming into your possession again, nor do additional repairs by you give you a lien that would include the old charges for repairs. The common law lien as you have there is good only by retaining possession of the repaired article.

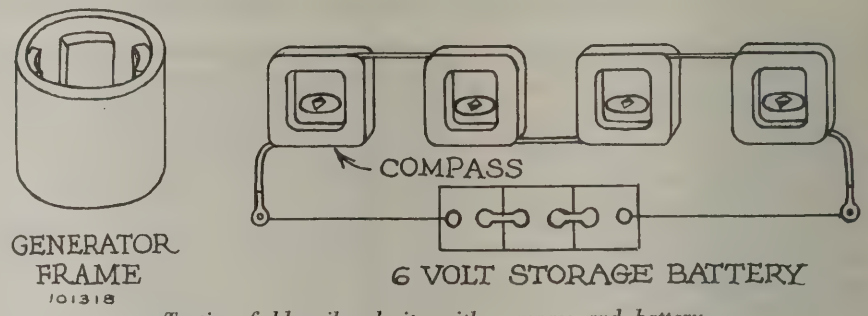
COUPONS BOOST BUSINESS

A novel plan for increasing sales recently was put into operation in Nashville, Tenn., by the Automobile Electric Service Co., Inc., wherein the company offered a coupon with each purchase of five gallons of gasoline entitling the holder to one free battery recharge. The coupons were good from May 1, 1925, until May 1, 1926, and it is said that the scheme materially helped business.

Clearing Up Electrical

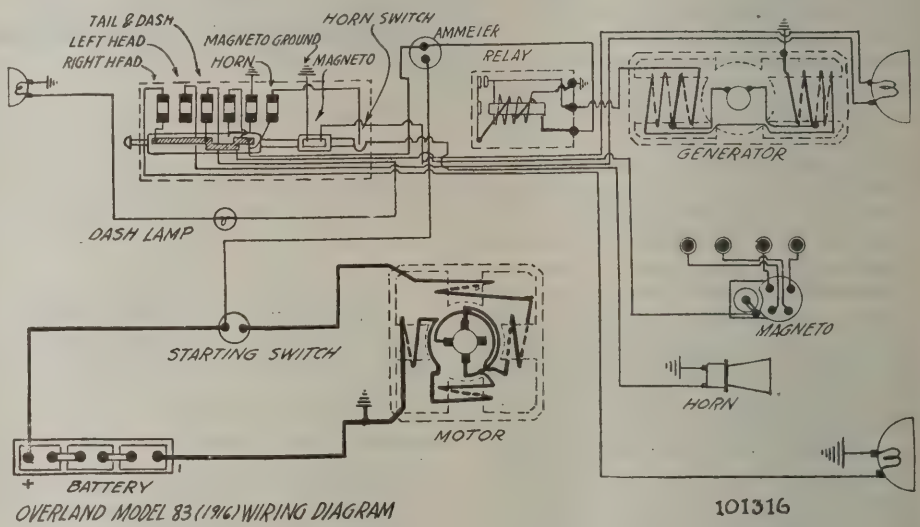
The READERS' CLEARING HOUSE

EDITED BY A. H. PACKER



Correct Connection for Fields

Q.—Please explain method of putting field coils in a generator. Is there any particular way that the north or south pole should be located.—Montana Subscriber.



In tracing around the field frame of a generator the magnetic poles should be alternately north and south. As this polarity is determined by the field coil it is essential that the field coils be properly applied. It is possible to make a mistake and get a field coil in wrong when applying only one coil or when putting in a new set of coils. Assume for example that we have a generator with four poles and when the field coils are removed they have the general appearance shown in the illustration. If a whole new set is taken out of stock and put in a generator, it is advisable to test the polarity. A battery may be connected as indicated and a magnetic compass used at the center of each coil.

The coils are stood up on edge in making this test and the compass is held horizontal. In the center of one coil the needle should point in one direction and in the center of the next coil it should point in exactly the opposite direction. It should reverse at each coil. In case only one coil is replaced it is necessary to make the same test to make sure that the coil is not reversed.

If the poles are alternately north and south, but the coils are on wrong so that the north poles are found where the south should be, then it will be found that the machine will only generate when driven in the wrong direction. This condition can be corrected by reversing the field leads after the coils are installed, if it is not easy to replace the coils on the proper poles.

Testing field coil polarity with compass and battery.

Internal circuits of the Autolite G. D. generator are shown in this diagram.

Sticking Brushes in Motor Generator

Q.—On the new Northeast starter generator on Dodge Brothers cars we find that the third brush forms a coating of some kind on its face which insulates it from the commutator. We take sand paper and touch up the surface of the brush which makes contact with the commutator and this corrects the condition. It only charges two or three days, however, and then the job must be done over again. We tried changing brushes and found it necessary to try two or three brushes, before we found one that would keep on working. What we want to know is, can we put something on the commutator (say Sperm oil), to keep the brush in contact or is there some certain make or kind of brush that will cure the trouble. Sand papering the commutator does not help.

On recent Dodge Brothers starter generators known as model GA, a box type brush holder has been used. With this type of holder carbon dust rubbed off of the bottom of the brush by the action of the commutator is thrown up between the brush and the holder and, combined with a slight amount of oil from the bearings, makes a paste which sticks the brush in the holder. This can be remedied by removing the brush and lightly sand papering the sides of it, so as to make it fit freely in the holder. The condition as you describe it, however, is one which we usually attribute to excessive lubrication which permits oil to work out of the bearings and get on the commutator.

This oil is then soaked up by the brushes and forms an insulating film between the brush and commutator. Sand papering removes the film but then additional oil works out of the brush and the film soon forms again. The first condition mentioned with box type brush holder has been overcome by a change in brush holder where guides support the brush and leave space for carbon dust so that there is no tendency for brush to jam and fail to touch the commutator. The suggestion of using oil on the commutator is working in just the wrong direction for oil is an insulator and causes the trouble you are trying to overcome. If the brushes are free in their holders and do not get full of oil, we believe you will have no trouble.

Q.—We would also like to know the speed of the generator when the car is traveling 20 miles per hour.—Marx & Stampa, Cedarburg, Wis.

At 20 miles per hour the generator armature is rotating 2860 r.p.m. This data is figured on the basis of 32-inch wheels, rear axle ratio of 4.54 and motor generator speed three times engine speed.

TAKE THE CURRENT AS IT COMES

Q.—Supply wiring diagram showing external and internal circuits of the model G.D.—two brush—Autolite generator, also method of regulation.—John H. Wilson, 672 35th steet, Oakland, Calif.

The diagram is published at Fig. 101316 in accordance with your request. Regulation is by means of a reverse series winding in the generator. This system of regulation does not permit of any adjustment.

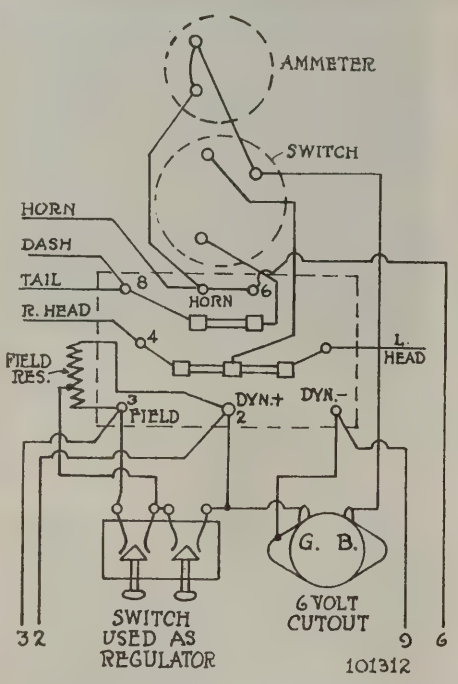
Trouble With Bill Fixit

EDITED BY A. H. PACKER

The READERS CLEARING HOUSE

Replacing Old Regulator On Maxwell

Q.—As subscribers to your magazine, Motor Age, we would ask if you could supply us with wiring diagram which will show how an ordinary generator cut-out could be used to replace the cutout on the back of the switch panel of the 1917 Maxwell. — Motordrome Limited, 10131 103rd street, Edmonton, Alta, Canada.



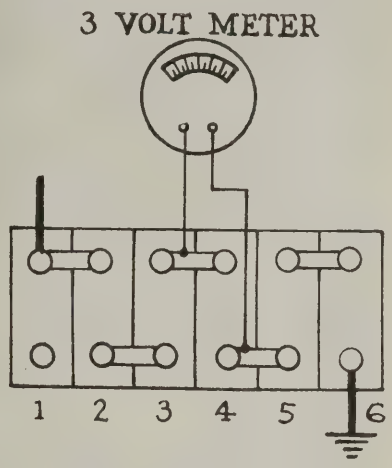
We are showing a diagram in which the combination regulator and cutout which is regular equipment on this Maxwell car has been replaced by a two-gang lighting switch and a conventional 6-volt cutout. There is no change required in the wiring of the car, the only change being needed at the instrument panel. If the field resistance coil is in good condition it may be connected across the two-gang lighting switch as shown and a connection, tapped in one-third of the way from one end of the coil, should be made to the center point on the regulating switch.

If this coil is not in good condition then a resistance of iron wire such as stove pipe wire may be wound up and the portion across one part of the switch should be twice as long as the portion across the other part. The 6-volt cutout should not have its base plate grounded except by means of a connecting wire which goes to the dyn.-terminal. From this terminal the No. 9 wire goes to a grounding contact which is operated in connection with the regular starting switch so that the base plate of the cut-out is grounded when the engine is running normally, but the ground connection is broken while starting.

The No. 3 and No. 2 wires run to the generator field terminal and positive generator brush terminal as formerly and the No. 6 wire goes to the battery connection on the starter switch, as formerly. In operating a car with this system it would be desirable to have both buttons of the regulating switch pushed in and then pull out either button or both in order to regulate the charging current. This means that the ammeter indication would have to be watched more closely than with the automatic type of regulator.

Measuring Battery Cell Voltage

Q.—State if a battery with one or two bad cells will cause interference on the electrical system of a 1919 Maxwell car using a straight 12 volt battery. This seems to be my present trouble as the generator has been overhauled twice and two new panels installed in less than a year's time. The generator goes bunk in a short time. I have no available 12 volt battery to try out and the present battery is in good shape as far as satisfactory service is concerned.



Simplified regulator for 1917 Maxwell

The battery charges up o. k. in twenty-four hours from outside current and retains its charge a reasonable length of time without getting current from the car generator. The battery man states there is a bad cell in the battery. I am of the opinion that a battery will very easily affect the generator and cause trouble on the 1919 Maxwell with combination reverse series field and vibrating regular unit. Is this possible?—Sidney Topness, Taylors Falls, Minn.

We believe that the battery man is mistaken about a cell being in bad shape for if a battery will operate the starter it is usually O. K. If the battery man has any equipment at all, he will have a voltmeter with a scale of 3 volts and we would suggest your having him make the test indicated in the illustration. You do not have to take the battery out of the car. Merely connect the voltmeter across one cell at a time and step on the starting button. Take the voltage at all 6 cells.

As shown in the illustration the meter is measuring the voltage of cell No. 4. The voltage should be about 2 before you step on the starter button and should not drop lower than 1.8 if the battery is fully charged, while starting motor is being operated. A variation of .1 or .2 volts would be nothing to worry about, but if any cell shows a voltage around 1.1 volts or 1.2 volts or lower, it indicates serious trouble in that cell.

We doubt, however, whether any condition in the battery which would not affect the starting motor would cause any trouble in the generating system.

Testing individual battery cells while starter current flows

Using Magneto As Battery Charger

Q.—Is it possible or practical to charge batteries from the Ford magneto after making alterations or additions to the magneto?—R. F. Ogden, Great Mills, Md.

It is impossible to practically revise the Ford magneto for use as a battery charger. This magneto delivers alternating current and in order to convert it to a D. C. machine, it will be necessary to provide a commutator which would run the expense way beyond the price of a machine built for the purpose.

Q.—Would two sets of magnets and two magneto coils hooked up in series produce 32 volts at a given speed?

The output characteristics of a single magneto are 8 to 24 volts. You could secure 32 volts by hooking two Ford magnetos in series providing you have the second one exactly synchronized with the first one. In other words, it will be necessary to have the connecting shaft carefully machined so that the relation of the magnet to the field coil on one magneto will be in exactly the same relative position on the second one. This latter synchronization is necessary due to the fact that the current is alternating with 16 oscillations per revolution, and if one magneto should be delivering its peak at a certain time and the other one not, they would neutralize each other and no current would flow.

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

What Flat Rate Did For One Concern

FROM a loss in the service department of $215 in the first three months of 1923 to a profit of $243 in January, February, and March of 1924—this is the record of an automobile company in Galveston, Texas, according to George K. Marshall, manager of the concern. The gain is due to the installation of the flat rate system for running the business, including both the customers and the mechanics, Mr. Marshall told the convention of automobile dealers which was held in Austin, Texas, a short time ago.

"We have always given our service department a great amount of thought and study in an effort to avoid losses each year, but we had no success until we installed the flat rate to mechanics," he said.

"The first experiment decreased losses, but still the service department was thought a necessary evil. In this experiment, instead of charging each customer a different price for work because of negligence or because of little knowledge of the business, pains have been taken to maintain the same price for all. To do this it is necessary to estimate the cost of working per hour and then to know from experience how long a given job takes. With this knowledge it is easy to keep the flat rate for customers."

It was the second experiment that brought the deciding results. In 1925 instead of salaries, it was decided to pay each mechanic 40 cents out of every dollar for the actual work that he did. Success was astounding, Mr. Marshall said. Two men can now do the work of four men of the old system—and they do it efficiently and well. Realizing that the mechanics might unduly rush the work, the originator of the plan made the rule that if a job is so badly done as to merit complaints from the customer, the laborer has to do the work over without charge and without pay. This insures good work.

One man who formerly received $25 a week, now often draws checks for $50 a week. "Even if we wanted to, we would not return to the old salary basis, because the employees would refuse to do so," Mr. Marshall said.

The company of which Mr. Marshall is manager does a $250,000 business a year, including both the service sales and new car sales department. Forty per cent of the gains from the service department goes to the mechanic; of the remaining, 50 per cent is used for operating expenses—rent, salary of the foreman, power, light, office equipment, incidentals—and 8 per cent is profits to the service business.

THINGS THAT HELP FLAT RATE

Flat rate operations for straightening front axle I beams call for special equipment. Here are shown two husky vises holding the axle while it is being straightened with a large pipe wrench. The steel bars in the yokes are used for sighting across to line them up.

Tools for Flat Rate

Houston, Texas.

To the Editor of Motor Age:

I have been in business repairing cars for several years and have come to the conclusion that I ought to place my business on a flat rate system. I have a pretty good line of equipment, but would like some information on the things you think a small shop ought to have. I have a lathe, drill press, grinder and cylinder boring machine as well as a good assortment of hand tools. What ought I concentrate on?—K. V. S.

When you say you have a good assortment of hand tools, we presume you mean such things as wrenches, sockets, etc., which no doubt are invaluable in any kind of automotive repair work.

We would suggest, however, that you make sure to get as many as possible of the special wrenches and devices for rendering maintenance work on certain makes of cars. For example, there are many wheel pullers, gear and sprocket pullers, bushing drivers, etc., which are most useful when it comes to working on certain makes of cars.

Really after all, unless you are doing a general line of repair work such pieces of equipment as a lathe are not as useful as the smaller tools. In flat rate work one of the most essential things is to be able to tear down and reassemble a job in the shortest time possible. That is why certain wrenches or pullers are to be preferred when it comes to selecting tools for a shop doing its work on a flat rate basis. A complete set of socket wrenches, S wrenches and other open end wrenches are probably the first things you ought to check up on. See that you have sizes from the smallest bolt to the largest and select them well, that is, make sure they are of good quality.

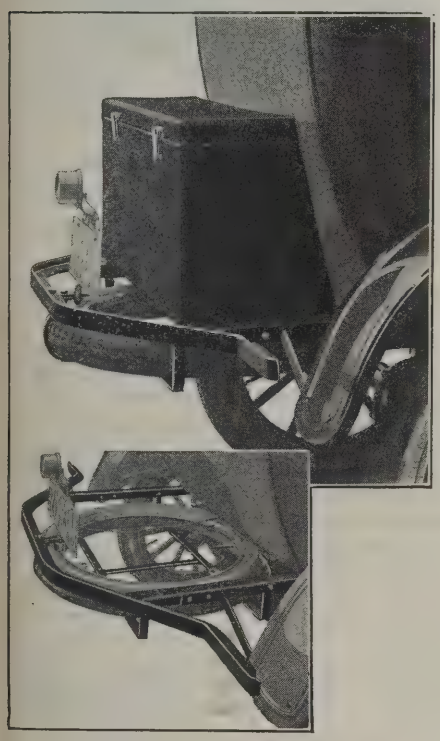
THE MARKET'S NEW OFFERINGS



Accessories—Equipment—Supplies

Halladay Fender Guard

DESIGNED to give deep cushioning action when struck from any angle and giving complete fender protection in the fact that they extend the full width of the fenders the Halladay Fender Guard is offered to the trade by the Biflex Corporation, of Waukegan, Ill. These fender guards are held rigidly to the frame by especially secure fastening. Curved-back ends prevent hooking or engaging other objects at close quarters. The fender guards are said to be as light as protection requirements will permit without a heavy cross bar. List prices range from $17.50 to $19.50, depending on the car for which the guards are ordered.

New Halladay fender guard

Marquette Trunk

(Cut Shown Above)

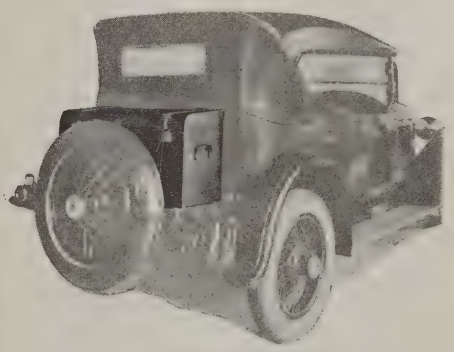
A TRUNK providing commodious luggage room and which combines with a tire holder, fender brace and bumper, all in the same equipment, has been placed on the market lately by the Marquette Manufacturing Company, St. Paul, Minn. It is for Fords. Besides adding to the appearance of the car the equipment protects the vehicle against rear collision damage. The Marquette Trunk is of steel construction, with two locks of nickle-plated brass, equipped with toggle pressure catches. A cover arrester holds the cover wide open but away from the body of the car, thus preventing scratches. The trunk is 36 in. long, 16 in. high with width at top 9½ in. and width at bottom 15 in. One model fits all Ford cars. List price No. T-1 is $29.50.

Don't Trust Memory for Store's Wants

Stocks in an accessory store can not be kept up efficiently without maintaining a record of the store's "wants."

It is surprising how often you run across small accessory dealers who, instead of jotting down a "want" the minute a depletion is noticed, try to carry the "want" in their heads.

Every accessory store should keep up attentively a "want" record so there will be no slip-ups on items for which there is likely to be demand. "If you have not got it you certainly can't sell it"—is something to remember. If the clerk who notices the depletion is too busy at the moment to run back to the "Want" record he should make a memorandum in some form which later could be transferred to the regular "Want" record.



Majestic clutch control

Stefco Motor Luggage

STEFCO MOTOR LUGGAGE, made by the George V. Steffens Company, St. Louis, Mo. have been so standardized that the manufacturers can meet all requirements of the trade, according to a company announcement. Six grades and models of rear deck trunks at six different prices which can be furnished without cases, with one case or with two cases—listing from $20 to $50—are offered. These six grades or models are made in 40 sizes. For cars not equipped with trunk decks and where the owner desires to carry luggage in the rear the company carries in stock 16 sizes of racks which can be put on without special drilling and which provide for spare tire carriers now on such cars. Each of these racks will accommodate any of the six models of rear trunks.

In addition to racks, only, the company furnishes complete assemblies—for the rear of all Ford models, Chevrolet 1925, all Essex models and all Dodge Brothers models—consisting of trunk rack, tire carrier attachment, fender guards and trunk. List, $35 to $60. The company also offers Fender Trunks complete with suit cases, storm covers and the attaching devices. These units do not interfere with entrance into the car. Prices from $35 to $75. A Custom Built Department is maintained to meet any peculiar wants of the market.

Stefco Model C rear trunk

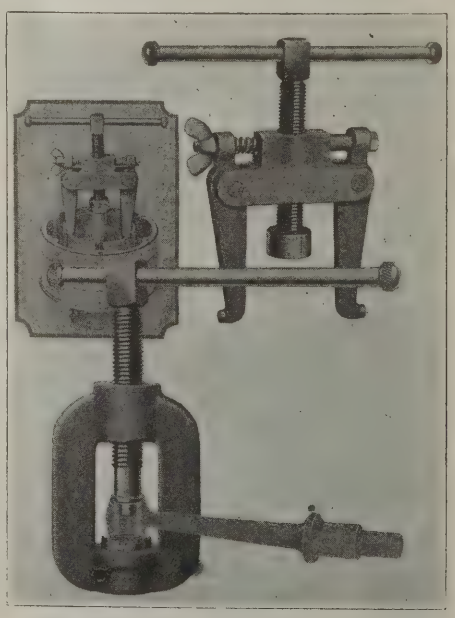
Majestic Clutch Control

SIMPLIFICATION of pedal operation for drivers of Ford cars is declared to be attainable through use of the Majestic Clutch Control, which is being produced by the Majestic Engineering and Manufacturing Company, 206 Amsterdam avenue, New York. This is a device which automatically throws the Ford clutch into neutral when the foot brake is partially applied, making it unnecessary to throw the clutch into neutral with the other foot. The control is said to prevent engine stalling, eliminate excessive wear of transmission gears and add longevity to the transmission bands. It does not interfere with regular Ford equipment or floor boards and installation requires only a wrench and screwdriver. Price $3.50.

GETTING MORE OUT of the SHOP

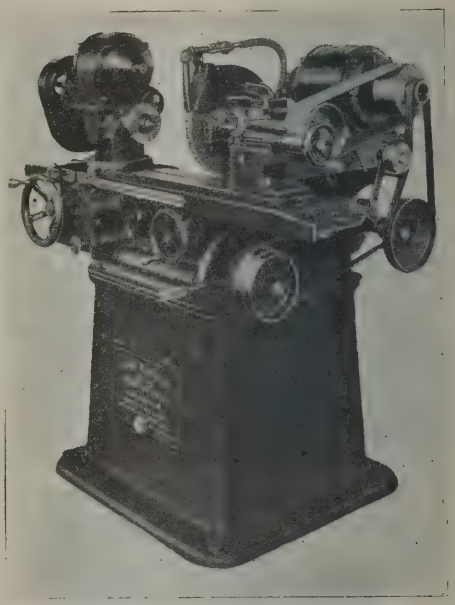
New Piston Grinding Machine

Following a policy of building production stamina into service and maintenance equipment, the Van Norman Machine Tool Company of Springfield, Mass., has developed a new piston grinding machine, the No. 96, which is considerably heavier than its predecesser, the No. 2 Re-li-o grinder. Individual electric motor drive for the grinding wheel spindle and headstock is retained although the first motor also drives the table traversing mechanism. In the case of the new machine, the motor sizes have been increased so that a one-h.p. motor drives the grinding wheel while ½-h.p. drives the headstock. A swivelled tool holder is placed alongside the grinding wheel and arranged that pistons in stock sizes can be turned preliminary to the finish grinding operation.



In addition to handling pistons, the new machine will grind piston pins, shafts of reasonable length and many other classes of cylindrical grinding. Like production machines, the new grinder is fitted with a cooling pump and mechanical feed which is controlled by stops. In addition to these features, the work head spindle, the wheel spindle and table slides and feeding mechanism are designed to the same standards that control the production machines made by the same company. The automatic feed mechanism allows for six changes in speed ranging from two to 18 in. per min. in either direction. As shown the machine requires a floor space of 64 in. by 40 in. and is completely self contained. While this machine is designed primarily to fulfill the requirements of the maintenance and regrinding shop, the makers assert that it is fully capable of handling parts on a production basis.

As an adjunct to the grinder or rather the process of grinding replacement pistons to the size required by the cylinder bore of an individual engine, the same company has also developed a device known as the Kor-ek-tor. In this device a cast iron frame carries a cutter head on its base which is lined up with a weighted center mounted in an overhanging arm at the top. The upper center is free to move up and down in order to accommodate pistons of varying lengths while the distance between the center of the cutter head at the bottom and the frame is sufficient to accommodate pistons of more than 6 in. dia. The cutters are set an included angle of 60 deg. which corresponds to the angle of the centers on the grinder.



In the ordinary course of events, pistons which have been rough machined and then stored for some time are subject to some distortion which throws them out of round and affects the grinder set-up. Where the Kor-ek-tor is used, these pistons are first placed in this device. The weighted upper center is placed in the center hole in the piston head and the weight at the top provides sufficient downward pressure for the proper contact of the cutters at the bottom. The operator then gives the piston one or two turns which is sufficient to provide a center bearing at the bottom of the piston. Due to the length and angularity of the cutters, pistons ranging from motor cycle sizes to the largest truck sizes can be handled with equal ease. Only a narrow land inside of the counterbore at the bottom of the skirt is machined to form the centering surface.

Van Norman Kor-ek-tor, in which pistons in stock sizes are centered prior to the replacement turning and grinding operations

Above: Stevens transmission clutch drum puller; below Force-out for use on steering arm bushings.

Van Norman No. 96 piston grinder which is self-contained and designed to meet needs of the maintenance and regrinding shop although capable of being used as a production tool

Stevens' Transmission Clutch Drum Puller

The transmission clutch drum puller is made for the Ford transmission and regardless of how much pressure is applied, the device cannot slip, it is stated, because the thumb screw spreads the jaws so the pins are engaged securely in the holes provided in the drum. A swivel cup washer on the lower end of the pressure screw fits over the end of the shaft and consequently there is no chance of slipping and injuring the latter. For ordinary work the long handle gives sufficient leverage, but where the drum is unusually tight the large wrench can be applied to the squared portion of the pressure screws. It is made by Stevens & Co., 375 Broadway, New York.

The Stevens steering arm force-out is made with a hardened steel pilot screw at the lower end which quickly forces the bushing out through the aperture below. A sliding handle provides sufficient leverage, but for a particularly obstinate bushing in the steering arm a wrench can be used on the head of the hardened steel pilot screw. The tool is made for the Ford steering arm bushing.

N. T. D. A. CARDS ISSUED

NEW YORK, Aug. 8.—Traveling identification and courtesy cards have been issued to National Tire Dealers' Association members who in turn present them to their customers. The idea back of the cards is that when a member dealer's customers are touring and have cause to make a tire replacement or secure service they can go with confidence to N. T. D. A. member.

EDITORIAL

Association Activities

AMONG the legitimate activities of a trade association is that of warning its members against the imposters and swindlers who, from time to time, prey upon its members. The automotive industry is an unusually attractive field for the confidence men who go about the country garnering dishonest dollars. The fakers who prey upon this industry are by no means confined to any one type.

Among the more common are the organizers of this or that type of automobile club or tourists' service. These men sell signs and maps at fancy prices and assert that the purchaser will immediately begin to pile up wealth from the tourist trade that will be thrown his way. Disillusionment usually follows. Just remember, Mr. Dealer, that the legitimate and well known map publishers of the country furnish complete road maps of every state at reasonable prices and that the motor traveler usually stops where night or fatigue overtakes him.

Another type of swindler working in the automobile field is the man who wants to give his check for the purchase of a new car and appears to have the best kind of credit references. He usually is clever enough to fix up his credentials to suit himself and too clever to be caught.

Then there is the counterfeit salesman who goes about offering desirable merchandise at an extraordinary discount. He may be identified by the fact that he usually demands and gets a substantial deposit on the orders he signs up, thereby ending the transaction unless the police are able to overtake him in the next town.

Trade associations should be constantly on the alert to warn their members and the whole trade against the depredations of these wolves.

When Prices Go Down

THE present condition in the automotive industry, which may be described as one of falling prices for cars, requires intelligent administration by the dealer. Prices are not being reduced radically, it is true, but nevertheless enough to affect the money volume on a given number of sales. It is this reduction of volume on a given number of sales that requires the attention of the dealer lest his profits be thereby curtailed. It is logical to assume that lower prices will result in more sales, and the progressive dealer will make the most of the argument, but it is not safe to assume that profits will be taken care of automatically. These are times for the dealer to carefully watch and control his business in order that he may enjoy a well-earned profit.

And these are times when more than ever before the automotive merchant should cultivate those other avenues of profit that are open to him—accessories, supplies, tires, maintenance and radio. It is surprising how quickly volume accumulates in the sale of articles of comparatively small unit value. The good dealer readily adapts his business to prevailing conditions and makes certain the continuance of his profits.

Now Is the Time

IF you are ever going to make a success of your business now is the time to do it. Not next year, two years from now or five years hence. But this month, this week, today. The rules of success are always the same and if you apply them today with any degree of success, no matter how moderate, and continue to apply them, your success will grow next year and from year to year. One cannot be a failure today and a success tomorrow from the same formula of business conduct. If you are a failure today you must find the flaw in your business code and correct it before you can expect to achieve the goal of success.

Your business is as productive of success as any other. Do not lay your failure to the line of business you are engaged in, unless you are definitely convinced that you are not suited for this business. Then it is your own fault, not that of the industry. Other men have achieved success in the automotive business. Others will continue to make fortunes out of it. If you expect to succeed, now is the time to begin.

United States Highways

A COMMITTEE representing the Good Roads Bureau of the United States and the highway commissions of the various states has decided upon 70 routes that are to be designated as United States Highways and to be uniformly marked and maintained throughout their length. This will be of very great advantage to the motor traveler, who, in order to get to his destination, has to pass through several states. It means that if he uses one of the United States highways he will follow the same number, the same markings, the same warning signs from beginning to end.

This is significant of the growing importance of private transportation by automobile over the public highways of the United States. It is recognition of the national character of this travel as opposed to the purely local travel that was once the sole function of the motor vehicle.

We hope this movement will have a more far-reaching effect to the end that traffic regulations in the various states and municipalities may be co-ordinated and made more nearly uniform. There is no doubt of the great need of such uniformity. The motor traveler today is constantly menaced by local regulations that it is impossible for him to know about. And there is no reason why a single set of regulations uniform throughout the country could not be successfully applied. Unless the states voluntarily get together on this as they have done in the designation of through highways, the time will come when the magnitude of interstate travel by motor car will demand that Congress take a hand in its regulation on a national basis.

U. S. May Take Action in Rubber Crisis

Hoover Expected to Fall In Line With Kellogg Note

Department of Commerce About to Ask Renewal of Conversations With Britain Over Releases

WASHINGTON, Aug. 8.—Herbert Hoover, secretary of Commerce, is expected to take an active part in the rubber situation this week. After studying the latest developments, it is anticipated that the secretary will cause the renewal of conversations with the British authorities with reference to the amount of crude rubber releases permitted under the Stevenson restriction act.

Despite American protests transmitted through the State Department to Ambassador Houghton in London, the British authorities restricted the amount of the release due for the quarter beginning August 1 to 10 per cent, or half the amount desired by American manufacturers.

It is understood that British producers gave assurance two years ago that the Stevenson plan would be flexible to safeguard the United States from any shortage. Mr. Hoover is expected to recall this point to British attention and to emphasize the conviction of American manufacturers that they are better able than the British to judge their needs for crude.

The Department of Commerce is conducting surveys of possible new fields for rubber production by American interests. The report covering the Philippines is due next week.

Goodrich Buys Rubber Ace Patents and Selling Rights

AKRON, O., Aug. 8.—The B. F. Goodrich Rubber Co. has purchased the patents, manufacturing and sales rights of Rubber Ace puncture proof pneumatic inner tube, and will manufacture and market this as a Goodrich product in the future. As soon as sufficient production can be secured in the Goodrich plants at Akron, Rubber Ace will be distributed through all Goodrich branches throughout the country.

Rubber Ace is not a new product, having been made, sold and used for more than five years. It is a patented sponge rubber inner tire, made of pure rubber and air. Instead of being in one container, the air is blown into the tire in millions of little cells. The inner tire is made in two sections—the main unit conforming to the shape of the tire, and a wedge. The wedge provides the proper fit in the casing under proper compression. The Rubber Ace then acts much the same as the usual inner tube under correct air pressure.

Would Have Gas Tax Replace License Fee

LANSING, Aug. 8.—As a solution for the state's financial problem, Secretary of State Charles J. DeLand has suggested the increase of from two to three cents in the tax on gasoline and the elimination of the yearly automobile tax.

In place of the latter, Secretary DeLand suggests a nominal license fee of from $3 to $5 for the life of the car. A substantial license plate which would endure for the life of the car would be furnished while $1 would be charged for each transfer of the license when the car changed owners.

The advantage of this would be the doing away with the annual rush to obtain licenses and would allow the department of state to do away with the 80 odd branches it now operates, making a saving of thousands of dollars annually for department overhead. A considerable sum would be raised the first year but after that only the new passenger cars would be required to pay the fee.

JORDAN REDUCES PRICES

CLEVELAND, Aug. 8.—Announcement is made by the Jordan Motor Car Company, Inc., of a $300 reduction in price of its eight cylinder models. New prices effective Aug. 11 are as follows:

Five passenger touring car	$2,275
Playboy	2,275
Victoria	2,475
Brougham	2,575
Friendly Three	2,575
Sedan—five passenger	2,675
Sedan—seven passenger	2,925

The reduced prices are due to increased production and the most successful six months period of selling in the history of the Jordan Company.

Paige-Detroit Earnings Show $351,094 Gain

DETROIT, Aug. 8.—Paige-Detroit Motor Car Company's net profit for the six months ending June 30, before taxes, amounted to $2,208,094.26, a gain of $351,094.26 over the same period for 1924.

This includes profits of the branches and compares with profits of $1,857,000 for the same six month period last year.

The company's total cash assets as of June 30 were $16,574,087.05, of which $5,142,978.73 is cash. A total of 24,002 Paige and Jewett cars were sold during the first six months, company officials said.

Boillot Drives Peugeot to Win French Touring Prize

Inaugural Race at New Montlhery Road Circuit Entered by All Classes

PARIS, July 21—(By mail).—Driving a sleeve valve Peugeot with a Weymann sedan body, Andre Boillot made the fastest time in the French Touring Grand Prix, which was the first race to be held on the new 7.7 mile road circuit at Montlhery, near Paris. The cars in this class had to cover a distance of 652 miles with a gasoline allowance at the rate of 10.7 miles to the American gallon, all the fuel being aboard at the start, and had to have ballast equivalent to six passengers.

As it started in the race, the car weighed 6,173 pounds. Boillot drove the entire distance without leaving the steering wheel, his time being 12 hours 12 min. 39 1/5 sec., or an average of 53.4 miles an hour. An Austrian Steyr, also with a Weymann fabric leather sedan body, finished second, and Louis Rigal on a sleeve valve Peugeot with the same type of body, was third.

The Austrian Steyrs, which appeared to be faster than the Peugeots, were held back throughout the race with deflated tires. Michelin clincher bead balloons with the bead held down by an internal extensible duralumin band were used.

In the five-passenger car class, three Cottin-Desgouttes were the only competitors. All three finished, the average speed of the winner being 53.1 miles an hour, on a gasoline allowance at the rate of 13.1 miles to the gallon. One of the Cottin Desgouttes lost its lubricating oil and the last 30 miles were covered with water as the only lubricant. These cars had dry sump lubrication.

In the 2-seater class, in which the distance of 590 miles had to be covered with a gasoline allowance of 19.6 miles per American gallon, a new type of straight-eight Bugatti with roller bearings, captured the first four places and averaged 52.6 miles an hour. The drivers were Constantini, Pierre de Vizcaya, Foresti and Jules Goux. The only other car to finish in this class was one of the racing 91½-inch Darracq's with touring equipment driven by Ledu, which, however, ran out of gasoline a mile from the finish. The driver pushed it over the line. Three Mathis cars were eliminated in this class by reason of defective water connections, and a couple of E. H. P.'s ran out of gas.

From a spectacular standpoint the opening of the new Montlhery track and road circuit, the construction of which has cost $2,500,000 was a dead failure.

Coast Tire and Rubber Co. Is Again in Good Condition

Board of Directors Named After Reorganization Last Year is Re-elected by Stockholders

OAKLAND, Cal., Aug. 8.—The Coast Tire and Rubber Company, whose reorganization after the filing of several suits against officials and directors was effected June 30, 1924, shows excellent financial condition in a report just rendered. This statement was made at the annual meeting of the stockholders at the factory in Oakland with complete representation present from Los Angeles, San Francisco, Oakland, Fresno, Lodi, Sacramento, Santa Rosa, Santa Cruz and Picific Grove.

After a full review of the financial reconstruction of the company the stockholders unanimously approved the year's work and re-elected the board of directors, consisting of J. C. Hughes, president; L. S. Budo, vice-president; E. H. Russell, secretary, and F. E. Miller, O. B. Caldwell and J. A. Silvera. Unanimous vote of confidence and thanks was extended to these men who rescued the corporation from what appeared to be disaster, and have since put it on its feet.

Willys-Knight and Overland Price Reductions Announced

TOLEDO, Aug. 10.—Reduction in the price of Willys-Knight Model 65, the 6-cylinder model and Overland Model 91, effective today, were announced by John N. Willys, president of the Willys-Overland Company.

New prices follow:

Willys-Knight Model 65, touring, $1,195, reduced $100; coupe, $1,395, reduced $100; coupe sedan, $1,395, same reduction; sedan, $1,450, reduced $125; brougham, $1,595, reduced $100.

Willys-Knight Six, touring car, $1,750, reduced $95; roadster, $1,750, reduced $95; coupe, $2,195, reduced $150; coupe-sedan, $2,095, reduced $50; sedan, $2,295, reduced $200; brougham, $2,095, reduced $200.

Overland Model 91 De Luxe sedan, $695, reduced $20; standard sedan, $645, reduced $10; coupe, $625, reduced $10.

Prices of the standard sedan and the De Luxe sedan of the Overland 6-cylinder class were recently lowered.

NEW HUPP DEALERS

DETROIT, Aug. 8.—New dealers added during the last two months by the Hupp Motor Car Corporation include:

Lester M. Brackett, Colebrooke, N. H.; United Motor Sales Co., Greensboro, N. C.; Jern Auto Sales, Chicago, Ill.; Tony Mantelli, Trinidad, Colo.; Braga Auto Co., Iowa Falls, Iowa; Cecil H Lewis, Marengo, Iowa; A. E. Britton, Peru, Ind.; M. & D. Motor Co., Iola, Kan.; W. P. Thorne, Linneus, Mo.; Tourist Garage, London, Ky.; Chambers Motor Co., Owensboro, Ky.; D. C. Knapp, Scobey, Mont.; F. Y. Conner, Tuskeegee, Ala.; McGuire-Baldwin Motor Co., Holdenville, Okla.; Germantown Motor Sales Co., Philadelphia, Pa.; Chas. W. Walker, Ellensburg, Wash.; Carl James, Clearwater, Fla.; G. H. Bates, Plant City, Fla.; Parker & Dunn, Augusta, Ga.; J. D. Welsh, Jr., Horseshoe Bend, Idaho; E. M. Hargis, Nampa, Idaho; J. B. Standley, Huntsville, Texas; Miss Minnie Porter Harris, Key West, Fla.; H. Klausman, Wadena, Minn.; Chas. Abbott Motor Co., Pensacola, Fla.; Saline Motor Sales Co., Harrisburg, Ill.; Robert Templeman, Aurelia, Iowa; G. V. Hudson & H. N. Durrance, Sebring, Fla.

A Good Prospect But a Poor Ad

McPHERSON, Kan., Aug. 8.—This town claims the distinction of having a record breaking motor car owner. Helmer Ek, music dealer, in the past nine years has owned sixty-three cars, representing thirty-six different makes.

Only three times has he owned more than one car at a time. He has never owned the same car longer than five months, and six of the cars he had in his possesion less than twenty-four hours before they were either sodl or traded.

He says that he is looking for the ideal car and when he finds it he will stop his trading, buying and selling.

NEW SALES TAX PROPOSAL BEFORE GEORGIA LEGISLATURE

ATLANTA, Ga., Aug. 8.— A sales tax plan that would cost the business men of this state hundreds of thousands of dollars a year and that would affect every branch of the automotive industry, has been introduced before the Georgia State Legislature, now holding its first biennial session in Atlanta.

If the measure is passed every firm, corporation and agent doing business in Georgia will be required to register, and pay a ½ per cent sales tax, or consumption tax, based on actual gross sales. The only redeeming feature of the new measure, from the standpoint of dealers, is the fact that it would take the place of all ad valorem taxes now imposed on behalf of the state. But the sales tax would cost considerably more than do the latter taxes. Furthermore, penalties are provided for failure to keep accurate records of sales so that returns can be made to the state.

Dealers, through their various associations, including the Atlanta Automobile Association, are vigorously opposing the measure.

A bill also has been introduced to fix the amount of the tax on gasoline in the state of Georgia at 5 cents per gallon, more than double the present tax.

A. A. A. PICKS GRAVELLE

INDIANAPOLIS, Aug. 8. — Medos Gravelle of the Gravelle Pictorial News Service has been appointed official photographer for the contest board of the American Automobile Association, it is announced here.

Louisville Dealers Report Satisfactory July Business

New Car Sales Slightly Below June But Much Better Than Same Month Last Year

LOUISVILLE, Aug. 8.—A satisfactory volume of business for July is reported by the majority of distributors and dealers. New car sales are slightly below figures but more cars have been sold than in the same month of last year. A few dealers are experiencing difficulty in making deliveries and while this restricts sales to some extent the prevailing opinion indicates that these deferred sales will be made up later in the year. Open car sales, especially roadsters, are gaining.

Careful buying of used cars continues to aid dealers in moving the used cars more rapidly and will likely enable dealers to show a larger net profit. Used cars are selling better than last year although a few dealers are having difficulty in moving them. Good results have been obtained by dealers advertising that all used cars sold by them are backed solidly by the firm, one concern going so far as to guarantee twelve months or 10,000 miles of satisfactory service. Dealers are giving the used car more attention than ever before and results are generally gratifying.

Rural reports show that farmers are buying more than in 1924 and the gradual improvement of agricultural conditions indicates a period of better business throughout the state.

Re-possessions are low. Collections are slightly better. Tire and accessory dealers and parts jobbers expect the present brisk sales to continue. Truck sales are good.

ATLANTA TIRE SALES RAISE

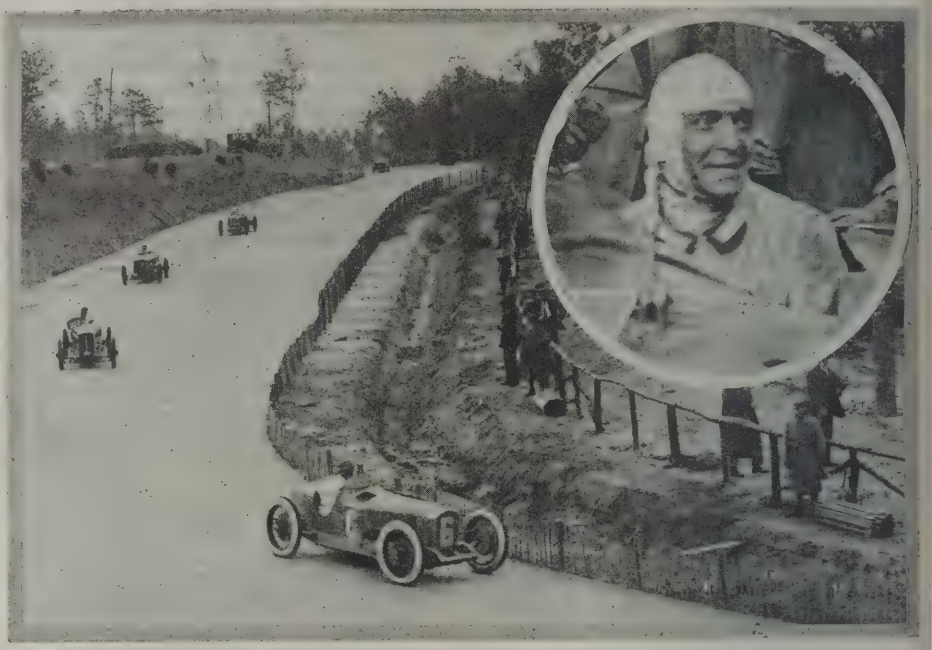
ATLANTA. Aug. 8. — Tire jobbers in Atlanta advise that advancing tire prices, and the fact that prices appear practically certain to advance still higher, is causing another influx of buying by the retail tire dealers throughout this section, and considerable advance buying also by motor car owners, particularly companies operating truck and car fleets. The dealer trades, in fact, are buying on a more extensive basis than in several weeks past, and are accumulating fairly large stocks in anticipation of the advancing market.

NEW GARDNER MODELS

ST. LOUIS, Aug. 8.—Celebrating the fiftieth anniversary of the begining of the Gardner organization, the Gardner Motor Company, Inc., announces the introduction of a Sedan on both 6 and 8 cylinder lines, which is called their "50th Anniversary Sedan." The 6-cylinder model lists at $1595 and the 8-cylinder model at $1995.

Benoist's Delage Wins French Grand Prix

PARIS, July 28, (by mail)—Robert Benoist, piloting a 12-cylinder supercharged Delage, won the annual French Grand Prix 621-mile race here Sunday, at an average speed of 69.7 miles per hour. Louis Wagner was second on a similar car, 7 min. 46 sec. behind the winner; Count Masetti was third on a six-cylinder supercharged Sunbeam, and five straight-eight non-supercharged Bugattis took the following positions, the orders of the drivers being Constantini, Jules Goux, Fernand de Vizcaya, Pierre de Vizcaya, and Foresti. The winner received $7,500 cash; the second took $1,500, and the third man $1,000.



The race was held on the new Montlhery track and specially constructed road circuit measuring 7.7 miles round, in which a capital of $2,500,000 is involved, but owing to defective organization the attendance was poor and the gate receipts did not exceed $39,000.

Antonio Ascari on a straight-eight supercharged Alfa Romeo set the pace and let the field for 169 miles, his average for this distance, including one stop for gas and a change of tires, being 76.2 miles an hour. During the twenty-third lap, while having a lead of 2 min. 42 sec. on his companion Campari and 4 min. 37 sec. over a Delage which was third, Ascari overturned and died two hours later from his injuries.

The accident happened on a long, easy left-hand bend, which the car was taking at nearly 120 miles an hour. Light garden fencing had been placed on the inside of the bend; beyond this there were 8 feet of soft earth, then a ditch and a steep banking with railings on the top of the banking to hold the spectators back. Ascari took the corner so close that he flicked the fencing twice with his left rear hub cap, then in trying to straighten out began to scoop up the fencing between his left front wheel and his frame member. The car turned over twice, finally settling on its wheels with steering and tires intact.

It is now realized that light fencing around the course served no useful purpose, and was a danger to the drivers. With a wall hub-cap high this accident doubtless would not have happened. After the death of Ascari the two other Alfa Romeo cars were withdrawn when half distance had been covered, and Campari had the lead by 2 min. 13 sec.

Antonio Ascari, who was 36 years of age, was a successful automobile dealer in northern Italy. Starting life as a mechanic, he acquired a considerable fortune in business and took up racing after the war. Last year he won the Italian Grand Prix at Monza, at an average of 98.7 miles an hour, and the same year was forced out of the European Grand Prix at Lyons, when he was leading and had only one lap to go. In June he won the European Grand Prix at Spa, Belgium.

Lower left shows light garden fencing like that on the turn where Ascari met his death. He was traveling at 120 miles an hour when his hub cap flicked this fencing, causing the Alfa-Romeo with which he won the Grand Prix d'Europe at Spa Belgium, to turn over twice. Ascari died on the way to the hospital. Upper right shows Robert Benoist, driver of the Delage which won the race

Considering that 500 miles were insufficient to test men and machines, the Automobile Club of France this year increased the distance to 621 miles. This only fatigued the public without being any greater test for the cars, for all machines in at 500 miles went through to the end. The Alfa Romeos proved that they were the fastest, Ascari's maximum speed over the straightway being 134 miles an hour; Campari, on the second Alfa Romeo, showed 132.2 miles an hour, and the fastest other car was Benoist's Delage at 131.4 miles an hour. Ascari set up the first lap record at an average of 80.1 miles an hour, but this was beaten later by Divo on a Delage with an average of 80.3 miles an hour.

There was little mechanical trouble in the race. Segrave's Sunbeam went out with a broken inlet valve, and Conelli's Sunbeam was withdrawn with a broken servo brake. Divo's Delage went out with one of its two superchargers broken. These were the only three to drop out with mechanical defects. The Bugattis were the only cars to run without a supercharger, they were at least 12 miles an hour slower than the Alfa Romeos and the Delages, but they developed no trouble and ran with great regularity. Rain towards the end of the race made the task easier for the slower cars.

The winning Delage was the most distinctive of the competing cars in having 12-cylinders in a V, the engine being treated as a double six, with the two blocks of cylinders staggered in relation to one another to allow of the connecting rods being mounted side by side on the crankpin. A seven bearing circular web crankshaft was used. Rollers were employed for the crankshaft and the connecting rods, and the twenty-two pinions in the timing gear housing were mounted on ball bearings.

As the result of this race Delage and Alfa Romeo are placed on an equality for the world championship with 6 points each, Duesenberg being second with 7 points. If Duesenberg wins the Italian Grand Prix at Monza on September 6, the firm would secure the championship, carrying with it a cash prize of $5,000. This trophy is based on the make of the car and not on the driver. The Italian Grand Prix at Monza is the final qualifying event for the championship, but in case of a dead heat a final will be run off over a distance of 120 miles within the following 48 hours.

RADIO CONVENTION PLANNED

INDIANAPOLIS, Aug. 8.—The Gibson Company, wholesaler of automotive supplies, replacement parts and radio will stage a radio sales convention for retailers in this territory who sell radio or are interested in radio as a possible additional line. The meeting to be held August 18 will have several speakers who will talk on radio selling. Much of this information has never before been offered to dealers in such a dealers' convention.

Ford's Bid for 200 U. S. Board Ships Is Accepted

Chairman O'Connor Declares Vessels Sold for $1,706,000—Next Highest Bid $1,370,000

WASHINGTON, Aug. 8.—Acceptance of the cash bid of Henry Ford of $1,706,000 for 200 steel vessels of the United States Shipping Board was formally announced here this week by Chairman O'Connor. The vessels are to be dismantled and scrapped, including all engines, boilers and auxiliaries. The next highest bid received for these vessels was $1,370,000, which gave the right to the bidder to resell the engines, boilers and auxiliaries.

Calling attention to the trips he made to Detroit for the purpose of interesting Mr. Ford in buying some of the board's ships for general cargo operation, Chairman O'Connor in a statement, says:

"Mr. Ford's announcement that he proposes to buy ships and make a bid for ocean trade is most welcome news. The importance of this announcement can be measured only by the scale and success of his operation."

Mr. O'Connor says that the recent public attention to the scrapping of ships "was due largely to a bid for 200 ships recently made by Ford, and today accepted by the board."

"The keen public interest recently displayed in American shipping," opens the O'Connor statement which told of Ford's successful bid, "seems to show that the propaganda of foreign ship owners has been defeated by American common sense, and that this country will maintain its determination that an absolutely essential part of its business equipment as well as for national defense is a fleet of merchant ships.

"To best maintain this fleet is needed the money making incentive of private ownership, and we are attempting as rapidly as possible to get our ships out of the hands of American tax-payers, and into the hands of American private owners."

Martin-Parry "Safetibus" For Ford Chassis Ready

YORK, Pa., Aug. 8.—Beautiful lines and maximum comfort and safety characterize the new "Safetibus" now in production by Martin-Parry Corporation, commercial body builders. The "Safetibus" is designed for the Ford ton chassis, equipped with the Martin-Parry extension, which provides the required 146-inch wheelbase, semi-elliptic springs, and the Hotchkiss drive.

By mounting the body very low on the chassis, a low center of gravity has been maintained, assuring complete safety and giving a low coach effect. Yet there is a full 57-inch head room inside from floor to roof.

The "Safetibus" has been designed either for school purposes or for use as a general bus. The capacity is 25 children or 18 adults, not including the driver.

The cowl and windshield are standard Ford sedan type, while a sun visor affords extra protection to the driver. Large windows furnish perfect vision and ventilation to the occupants, with cowl and built-in rear ventilators also provided. The windows are double strength plate glass, and can be lowered into the sides of the body completely out of sight. Retail price is $800 F. O. B. York.

BUSES SERVE ANOTHER TOWN

NEW ORLEANS, Aug. 8.—The city of Meridian, Mississippi, has voted to substitute motor buses for street cars, 1,157 to 316. Meridian is the second Mississippi city to take similar action within a month, the city of Hattiesburg coming to the same decision recently. The street cars have already been superceded by the buses in Hattiesburg. It is expected that other cities, served by the Mississippi Power Company, a corporation servicing Hattiesburg Meridian and other South Mississippi cities with electric current, will change from trolleys to buses soon. The power company is in perfect agreement with the substitution, controlling the bus lines as they are put on.

Motoring Public Accepts New Models Approvingly

Many Who Planned to Defer Purchase Until Next Year, Now Giving Their Orders

DETROIT, Aug. 8.—The motoring public's acceptance of the new passenger models that have been offered during the past week has served to bear out the prediction made earlier in the season that the remainder of the present year will be the best in the history of the industry.

The new racy lines and the unusually attractive values have caught popular favor and orders are being taken from those who did not plan on buying a car until another year. This one field which has been considered impossible has at last fallen before the automobile salesman.

Deliveries are not being delayed any unusual length of time. The factories are gradually catching up in their production to the point where it is nearly equal to the sales demand. Within a month production and sales will be equal and from there on the production will be according to the sales demand.

Closed cars are still the big favorite with roadsters receiving a surprisingly large attention. Touring car orders are about on the same proportion as in the past.

25 Years Ago In the Automobile Industry
As Recorded In MOTOR AGE

(From MOTOR AGE of August 16, 1900)

New York Automobile Show

NEW YORK, Aug. 13.—Every foot of space for the automobile show at Madison Square Garden has been taken, including all the space in the restaurant which has been added. In this room there will be an exhibition set aside for an exhibition of motor vehicle racing machines.

Vanderbilt Gets a Locomobile

"Willie" K. Vanderbilt has just had added to his motor vehicle stable one of the new model Locomobiles. It was a present from his wife. He had hitherto been using one of the old model Locomobiles.

Swiss Automobile Regulations

The use of motor vehicles in Switzerland is to be regulated by new ordinances, which have lately gone into force. No motor vehicle can be put in use before being first thoroughly tested by a technical commission and declared fit for use by such commission. Furthermore, the motorman must be regularly licensed. Thirdly, every vehicle is to be equipped with two lamps, one of which must be provided with white, the other with green glass. Lastly, every motor vehicle must be provided with a plate, distinctly bearing the name and address of the owner. It is remarkable that the ordinances in question contain no clause regulating the speed to be maintained in driving.

Trade in Cleveland

CLEVELAND, Aug. 13.—A number of the material manufacturers of this city that have been prominent in the manufacture of cycle material are now actively engaged in furnishing material for the automobile industry, and almost without exception it seems to be the opinion that the new line is rapidly developing into an industry that will eclipse and in a measure take the place of the old.

Charleston Exposition

Automobile manufacturers will have no lack or opportunity to display their productions at expositions in American cities within the next year or two. Buffalo and St. Louis expositions are in prospect and have been widely heralded. Attention is also called to the exposition to be held at Charleston, S. C., from December 1, 1901, to May 1, 1902, which will be given under the name of the Interstate and West Indian Exposition. The promoters of this show say that it offers an exceptional opportunity for automobile manufacturers to place their various vehicles before the people of the South. It is hoped to have every department of the automobile industry represented.

Motor Wheel Corp. Earns $1,935,396 in First Half

Second Quarter Shows Increase in Business Making Net Income About $2 a Share

LANSING, Aug. 8.—Net earnings amounting to $1,935,396.04 for the first six months of 1925 are reported by the Motor Wheel Corporation in a statement of earnings just released. This amount added to the surplus account makes the surplus of the corporation at the close of business June 30 $5,614,328.40 or about $10 per share on the basis of 500,000 shares of outstanding, non-par stock.

The reports show an increase in earnings for the past three months as compared to the first quarter. Earnings for the first quarter were under $1.50. On a basis of 550,000 shares, the net income for the entire half-year figures amount to about $3.52 per share or about $2 for the second quarter.

Income from the sale of wheels, stampings, etc., totaled $1,991,333.30 for the six months just ended. Interest earned and income from investments adds $124,184.32 to this figure which is also increased by the sale of $513,252 worth of treasury stock. Deductions for various expenses, losses and provisions for taxes amount to $693,373.58, leaving the net income of $1,935,396.04.

From this figure deductions are made of dividends already paid, including $366,837.40 on common and $65,702 on preferred, leaving $1,514,663.43 to be added to the surplus of $4,099,564.98 as of January 1 for the reading of June 30.

Increase of 30 Per Cent in California Sales Reported

SAN FRANCISCO, Aug. 8.—Due to varied causes the business of merchandising automobiles and equipment in central and northern California showed a considerable increase for July over that of June. The gain for June over May was an average of 20 per cent, while that of July over June amounted to better than 30 per cent.

Reductions in prices on several models, lower first payments and longer terms on the balance, a drop in interest rates charged by some of the larger banks, and the annual influx of money for the fruit and vegetable crops were the principal causes of the increase in the sales of new cars. The same reasons, with a greater reduction in total price, worked for the benefit of the used car business, and both "as-is" and rebuilt used cars are now moving at a better rate in central and northern California than they have been for two years.

Fruit and vegetable crops, the fisheries, and the lumber production brought more money into central and northern California this year than for any of the past three years, and the development of paved highways all over the state put a great deal of this into automobiles.

FORD SALES CONTEST

DETROIT, Aug. 8.—Approximately 31,000 Ford salesmen in the United States in addition to 600 roadmen from the 35 domestic branches are in the midst of a 60-day sales campaign. When the finish is reached on August 20, several thousand dollars in prizes will be awarded to salesmen in various parts of the United States. In Detroit, the dealers have arranged special contests for the salesmen. A prize of $1,000 will go to the winner with the title of city champion. Similar honors will also go to the winner of the national title.

Industrial Construction Sets Record in South

ATLANTA, Aug. 8.—Definite figures pertaining to industrial construction in the south during June are now available, the total projects in the automotive field alone for the first six months of the year reaching 1,075, establishing the largest six months' record in the history of this industry in the south. This includes new companies formed in the automobile dealer, accessory, tire and independent garage field, and new construction of any important nature by automotive concerns in these same fields.

Particularly have distributor firms been active in the construction of sales buildings and service stations, these projects entailing an investment of several million dollars. Atlanta, Miami and Jacksonville lead the individual cities in this respect.

In the motor bus end of the industry, including new bus companies formed and bus terminal construction, the total for the first six months exceeded 50 projects, and an additional bus mileage of about 30 per cent compared with the mileage at the end of 1924.

NEW MARMON MODEL

INDIANAPOLIS, Aug. 8.—The Nordyke & Marmon Company, has announced the addition of a 4-passenger 2-door Victoria Coupe, to the new Marmon series. This model lists at $3,295. The body is finished in two-tone duco, and broadcloth upholstery is used. The equipment includes six balloon tires, shock absorbers, front and rear bumpers, cowl lights, motometer, sun visor, automatic windshield wiper, cowl ventilator, rear view mirror, rear traffic signal, dash gasoline gauge, clock, and ignition, spare tire, door and gearset locks.

PAIGE MOVES OFFICES

DETROIT, Aug. 8.—Completion of the executive building of the Paige-Detroit Motor Car Company at the West Warren avenue plant and its recent occupation marks the first change to be made in the administration office's location of the company in 13 years. The new executive building which lies along the front of the different factory units, houses all offices and experimental department of the company. Behind it is a new engineering building where all experimental work is completed.

Toledo Expects August Sales to Show 25 Per Cent Increase

July Much Better Than Last Year and Stocks of New and Used Cars Are Low

TOLEDO, Aug. 8.—Automotive dealers here feel that the general tone of their business is exceptionally fine for this period of the year. Dealers are not overstocked with new or used cars and the new models and prices announced in recent weeks have been a stimulus to considerable buying in all lines.

July has yielded much better business than last year and many dealers believe that August will show at least a 25 per cent gain over the same month last year.

Used car sales are beginning to show a slackening but are still keeping stocks at normal.

Accessory dealers declare their goods are moving well and look for very good turnover in the next month or two.

The public is buying tires only when necessary. They have refused to be stampeded by the rapid rise in prices and consistent talk of higher prices. Dealers are carrying large stocks purchased in anticipation of the rising market but are getting just a normal run of business.

Manufacturers have noted a quickening of demand in the last few weeks and employment has increased.

Money conditions are favorable to time purchases and there is plenty of credit available for dealers and manufacturers.

Farm conditions are showing improvement over last year and indications are that farm buying power will be greatly strengthened in this territory this fall and winter.

Texas Leads U. S. in Federal Aid Road Mileage for Year

AUSTIN, Tex., Aug. 8.—Of the total of 14,032 miles of designated Federal aid highway in the United States completed during the fiscal year ended June 30, 1925, Texas led all other states with a total of 784 miles, according to official announcement from Washington.

South Dakota was second with a total of 458 miles and Illinois third with 431 miles. The notable record which Texas made last fiscal year in this respect promises to be far exceeded this year. It is stated by Frank Lanham, chairman of the State Highway Commission, that there are under construction at this time 1,280 miles of first class designated highway, all of which should be completed during the current fiscal year.

The cost of constructing this 1,200 miles of highway will be approximately $20,000,000 including federal, state and county funds, Lanham said. In addition to this sum there will be expended during the year about $6,000,000 for maintenance of the roads already finished. Texas has a total of 12,948 miles of first class highway, according to Mr. Lanham.

Fisher to Begin Quantity Production of Bus Bodies

Most of Orders Expected From New Yellow Truck & Coach Manufacturing Co.

DETROIT, Aug. 8.—Quantity production of bus bodies in Detroit will shortly be undertaken by the Fisher Body Corporation following its purchase of the Buick plant located at Western and Michigan avenues in this city. The plant now has a ground area of 40 acres and more than 500,000 square feet of floor space, and will be enlarged as condition require.

Should orders materialize for which William A. Fisher, president of the Fisher Body Corporations, has started negotiation, Detroit will become the center of the bus body building industry in this country. Most of the orders are expected to come from the Yellow Truck and Coach Manufacturing Company. Several bus bodies have already been built for this company.

Negotiations leading to the purchase of the Buick plant has been under way for some time but final action was delayed until Fisher engineers and officials had assured themselves of certain problems entering into the manufacture of bus bodies which are different from those encountered in the building of passenger car bodies.

In a statement issued regarding the purchase, Mr. Fisher said, "Upon finding the conditions entering into the manufacture of bus bodies, the Fisher Body Corporation immediately began an intensive study by experts of the engineering, operating, economic, manufacturing, standardization problems and as a result is now entering the field on a production scale that was unbelievable a few months ago.

"This is possible only because of the close working arrangements existing between the Fisher Body and the Yellow Coach due to the acquisition of a majority of the latter common stock by General Motors."

Prohibitive Tariff Stops Sale of Fords in Germany

MONTREAL, Aug. 8.—There is no sale for Ford cars or others of that type in Germany at the present time, as what almost amounts to an embargo is set up by the government in order to enable manufacturers of small cars in that country to put out a cheap car, which will be able to hold its own against cheap foreign cars, according to A. Nagle, continental European manager of the Ford Company, who has arrived here.

There is a very large sale in other countries on the continent for the Ford car, which is assembled in Manchester, Antwerp, Bordeaux, or Copenhagen. Business in Switzerland he reported particularly good and also in Holland, as so many cars are "bootlegged" across the border by some method.

The European output, said Mr. Nagle, amounts to almost 700 cars a day, which is an increase of 100 per cent in the last year. Antwerp is an excellent position for assembling parts for a car, as it is only two hours from Holland and five from Germany, so when the embargo is raised it will be possible to send cars to the best and richest portion of Germany.

Club Service Given Through Dealers

DETROIT, Aug. 8.—Through an arrangement entered into by the Ford Motor Company and the Detroit Automobile Club, the 34 Ford dealer branches in the Greater Detroit area become direct representative of the club and their sales and service establishments become direct road service, road information and membership stations of the club.

Under the new arrangements all future emergency road service calls on Ford passenger cars and trucks will be dispatched to Ford dealer stations and standard Ford service will be rendered on the road. Present members of the club who are Ford owners and those joining through any of the Ford stations can in the future call the club office and be towed, if necessary, or receive service from the nearest Ford station free of charge.

In the various Ford dealer showrooms, there will be maps, guides and road information of the club which will be distributed free to Ford member owners. The same service now rendered to club owners will also be available to those joining through the Ford stations.

St. Louis Dealers' Parade Opens Ford Display Week

ST. LOUIS, Aug. 8.—Ford dealers here held a parade almost a half a mile long recently to open the Ford commercial display week which was a part of a nation-wide plan.

All Ford dealers in the citly, in addition to the factory branch, were represented in the parade and all the exhibits called attention to some particular feature of the dealer's establishment.

The Johnson Automobile Company's vehicle carried a banner "The Oldest Ford Dealer," Bilgere's car bore the inscription "Steer to Bilgere," chambers Long Co. advertised their downtown location while the Price Company exhibit was a Ford Roadster equipped with the recently devised pickup body with the announcement "A Truck by Day, a Roadster by Night."

Similar parades were held by all Ford dealers throughout the district during the week.

1925 Models and Used Car Stocks Are Low in St. Louis

Lull is Felt in Sales of New Automobiles Because of Appearance of 1926 Types

ST. LOUIS, Aug. 8.—There has been a lull in new car sales here during the past month due in a large measure to the yearly policy of prospective customers to wait for the presentation of new models by some of the large companies before buying. However those companies which do not put out a new line each year have not slowed up to any extent.

Dealers have been concentrating their efforts on the sale of used cars and those 1925 models which remained on hand to clear their floors for the 1926 models. In these efforts they have been signally succssful. Most companies have few 1925 models on hand now and their used car stocks are low, ready to take care of the expected increase in the number of used cars on hand which will come when the new car sales jump ahead with the arrival of 1926 models.

Factories here are going along on a normal production basis.

Accessory men are all well pleased with the volume of sales which is well ahead of last year and with every prospect of good business for the balance of this year at least.

Tire men have not yet felt the effects of the increase in tire prices. However they are skeptical about the future. They feel that their business is good at this time because of the fact that consumers are buying for present needs to keep from paying higher prices which they have been warned are coming. Dealers therefore feel that there may be a depression shortly.

Collections remain good and apparently there is plenty of money.

Velie Sales Increase Believed Due to Farmers' Prosperity

MOLINE, Ill., Aug. 8.—Evidence of increased prosperity on the farmers' part is seen in the business handled by the Velie Motors Corporation, according to a statement made here by Edwin McEwen, manager of the Velie plant.

"Our sales within a radius of 150 miles of the factory have shown a steady increase and new dealers are being established almost daily in towns where automobile representation has been lacking for years," Mr. McEwen states.

"For several months past Velie business has shown an increase each month over the corresponding month of last year. Present indications are that in July we will exceed July of 1924 by at least 100 per cent. Thirty-three of our total deliveries the first fifteen days of July were drive-aways."

Ford Obtains Property Near Boston for Plant Expansion

New Factory Will Employ About 2,500 Workers to Assemble Minimum of 500 Cars a Day

SOMERVILLE, Mass., Aug. 8.—The Ford Motor Company is now is possession of the property that it has been negotiating for the Boston & Maine Railroad since the latter company sought to increase its freight business through offering a large slice of vacant land for sale. The deed has been recorded at the Middlesex Registry of Deeds in East Cambridge and it shows that the area conveyed to the Ford Motor Company is 31.4 acres.

While the title was under examination by the attorneys Mayor John M. Webster of Somerville has been active in forwarding the plans by having streets laid out and widened, relocating the drainage pipes, etc., so that there would be no delay when the Ford Motor Company was ready to begin its building operations.

The plant will front on Middlesex avenue and on the north will be bounded by the Mystic river which will give the Ford steamers access to it for bringing cargo here and shipping abroad. That was one thing that the Ford people were anxious to get. The present plans are to assemble here a minimum of 500 cars a day and furnish employment for approximately 2,500 workmen.

This will give the Boston & Maine Railroad, which has arranged for a siding right to the plant, a large extra tonnage incoming and outgoing. It has been estimated that the plant when fully completed will cost about $4,000,000 and have an ultimate capacity of 1,000 cars a day. The use of the present assembly plant at Cambridge when the new one has been finished has not been determined.

The new plan is only about four miles from the heart of Boston. In fact Somerville adjoins that part of Boston known as Charlestown where Bunker Hill is located, and the Mystic river rolls past the hill on the way to Somerville. From Charlestown to the new Ford plant is only about a mile.

NEW MARTIN-PARRY BRANCH

YORK, Pa., Aug. 8.—Martin-Parry Corporation, commercial body builders, announces that negotiations have been completed by which it has taken over the Johnson Body Company of Phoenix, Arizona, and from this time will operate it as a Martin-Parry Branch.

COAST REGISTRATIONS UP

OAKLAND, Cal., Aug. 8.—A total of 19,833 passenger cars and trucks were sold in California in June, 1925. This is an increase of 344 sales over those of May, 1925, and is a fair indication of the steadily improving sales of automotive vehicles throughout the state.

UTAH STOPS POLICIES

SALT LAKE CITY, Aug. 8.—State Insurance Commissioner McQuarrie has forbidden the selling of automobile insurance with a car. A manufacturer outside the state wanted to sell a policy with a car, claiming that it could be done cheaper than through an insurance company in the regular way. The commissioner said that the company chosen by the automobile company to carry the risk had not been admitted to do business in Utah, and that this alone would prohibit the operation of the plan in this state. He said, also, that all insurance organizations, except life, must have a local agent who can countersign the policies. Another objection was that the automobile company plan did not provide for the issue of a policy, whereas the state insurance law required that the insurance department examine the contracts of all underwriting concerns before they do business in the state and approve of them.

Seiberling Rubber Plans Program of Expansion

AKRON, O., Aug. 8.—Contract has been awarded by the Seiberling Rubber Co. for construction of a new building, which will enable a production increase of nearly 50 per cent in tires and tubes.

The building, 150x240 feet, will cost more than $200,000. It will be used for curing, stripping and finishing. About 500 additional workers are to be employed, upon completion of the building.

This will be the first large expansion program undertaken by the Seiberling Co. since F. A. Seiberling, its president, purchased the old Portage Rubber Co. four years ago. It was made necessary, according to officials, because of the rapid growth of the company in the last few years. For some time production has been behind orders, due to insufficient factory floor space and machinery.

Sales of the company for July were approximately $1,500,000, as compared with $1,000,000 for June. Total sales for the year are expected to be in excess of $12,000,000, which will be the largest in the company's history.

Hayes Wheel Co. Declares Extra Quarterly Dividends

JACKSON, Mich., Aug. 8.—Two extra quarterly dividends of 25 cents a share were declared at a meeting of the board of directors of the Hayes Wheel Company, which will continue for the rest of the year. The regular dividend of 75 cents a share was declared. The stock is now on a $4 basis. It was announced that the cash balance of the company of $2,000,000 and that the ratio of assets to liabilities of 8 to 1 are the largest in the history of the company. Outstanding bonds of the company have been reduced $700,000 since the first of the year to $500,000, their present figure.

Fall Business Prospects Are Brighter in Iowa

New Models Disturb Sales Somewhat But July Volume Expected to Equal Last Year

DES MOINES, Iowa, Aug. 8.—The automobile business of Iowa continues at a steady pace, with bright prospects for fall business. The introduction of new models has had a distrubing effect on buyers, causing a slight slackening in sales, but the July volume is expected to equal that of last year. The business from rural districts continues to be better than that turned in from the cities and distributors expect this condition to be unchanged during the next few months. Crop prospects are excellent, a factor which has greatly influenced country buyers.

Used car stocks are lower than usual. There are comparatively few good used cars in the hands of Iowa dealers. The movement of used stuff has been good. Few dealers and distributors have been overstocked with 1925 models; such distributors as have already displayed 1926 models report that few 1925 models remain in stock.

The financial aspect of the trade is good. Re-possessions on time payment paper have been few. One finance company operating in the state reports that only four re-possessions have been necessary in the last ten months.

Tire stock at the branches and distributors are exceptionally low. Dealers, on the other hand, have stocked liberally in anticipation of further advences. It is probably that some dealers are overstocked. The tire trade has enjoyed a very good business, brought about by the advancing prices.

The first of July ushered in poor accessory business but the last fifteen days have noted a remarkable improvement in accessory buying. Radio business continues to be very dull, although jobbers and dealers alike look forward to very good business this fall and winter.

VANE HEADS CAMPAIGN

NEW YORK, Aug. 8.—Alfred Reeves, general manager of the National Automobile Chamber of Commerce, and C. A. Vane, general manager of the National Automobile Dealers Association, met recently in Chicago to discuss the joint meetings for dealer education to be conducted by the two organizations beginning in the fall. The details of the progress were left to Mr. Vane.

NOYES NAMED RECEIVER

BOSTON, Aug. 8.—Judge Lowell, in the United States District Court, has appointed President Frank V. Noyes, of the Arlington National Bank, receiver for the Northway Motors Company and the banker qualified in $10,000 bond.

Joseph J. Cole, Founder of Cole Motor Car Co. Dead

Pioneer Carriage Builder Planned Trip Around World With Mrs. Cole—Ill Three Days

INDIANAPOLIS, Aug. 8.—Joseph J. Cole, president of the Cole Motor Car Company, and one of the pioneer automobile manufacturers of Indianapolis, died here last night following a three-day heart attack.

Though he has been in ill health for two years, his condition did not become critical until three days ago. With Mrs. Cole he had planned a two-year trip around the world to start in July, but the trip was delayed because of the death of his mother.

For more than 35 years prior to his entrance into the automotive industry, Mr. Cole had been associated with the carriage business. He was a native of Indiana, born in Connersville, March, 1869. He came to Indianapolis when a young man to enter the old Parry Manufacturing Company, makers of carriages and road carts.

He later was connected with the Moon Carriage Company, of St. Louis, as sales manager and later as secretary of the company. In 1904 he founded in Indianapolis the Cole Carriage Company and in 1908 he built the first motor car of this make. The next year the company was changed to the Cole Motor Car Company with Mr. Cole as president, which place he held up to the time of the death.

Mr. Cole is survived by his wife, his son, Joseph J. Cole, Jr., and a sister, Mrs. E. D. Filby.

North Pole Trapper Buys Ford Car

FORD CITY, Ont., Aug. 8.—Again the automobile is going to invade territory in which it has never been seen before. This time it will be well inside the Artic Circle and where the Eskimos are found in plentiful numbers.

J. Harris, a trapper, who works within the shadow of the North Pole, purchased a Ford car while, with his Eskimo wife and three children, he was on a recent visit to Herb Lake, Manitoba. He will take the car back with him to be used in his trading.

Before arriving at his destination, Mr. Harris will have removed the engine from the car, attached it to a collapsible boat and will have sailed and been propelled by gasoline engine over 200 miles of open water. Arriving on the other side, he will replace the engine, then replace the front wheels with skids and continue the journey.

Financing Charge Reduction Is Made by General Motors

NEW YORK, Aug. 8.—Reductions in the financing charge to installment purchasers of General Motors cars, including Chevrolet, Oldsmobile, Oakland, Buick and Cadillac, became effective August 1 and were announced through the General Motors Acceptance Corp.

The amount of these reductions was described as substantial, and Alfred P. Sloan, Jr., president of General Motors Corp., said that they are tantamount to reductions of the delivered prices of the entire General Motors line. This was apparent, he added, because the important thing to the purchaser is the final delivered price, and the financing charge is part of that price in the majority of sales.

The financing charge reduction adds to the advantage won by time purchasers of Chevrolet, Buick and Cadillac cars in the recent announcements of price reductions on those makes.

The financing rates of General Motors Acceptance Corp., added to the cash delivered price, now constitutes the standard time sales price to the purchasers of General Motors cars.

Chevrolet Changes Radiator Design

(*Continued from page* 18)

has been considerably strengthened by employing a channel section of 6 in. deep instead fo 5 in. deep as previously.

Particular attention has been paid to the service and maintenance operations in the designing of the semi-floating rear axle. It is so constructed, as well as the frame, that it is not necessary to unload the chassis when it is desired to overhaul the rear axle, it being possible to withdraw the complete differential carrier in unit with the third member assembly. An extra large cover plate facilitates operation and allows for easy adjustment and inspection. The housing is of the one-piece pressed steel banjo type having large heavy duty New Departure annular bearings all round. Extra heavy spiral cut bevel driving gears provide a ratio of 5.43 to 1 which together with the ample tire size allows a high road speed to be maintained. As on the previous model, the service brake is of the external contracting type and acts with the internal expanding emergency brake on 12 in. drums. Both brakes are fitted with self-centering and equalizing devices.

Mounted on hickory twelve-spoked artillery wheels with steel felloes and demountable rims, the rear tires are of the 30 by 5 in. size while the standard equipment on the front is 30 by 3½ in. For an additional charge of $35, 30 by 5 in. tires with corresponding wheels are offered to replace those on the front axle, the latter being of the same type as used on the car chassis.

On account of the changes, the weight of the chassis with gas, water and oil is now 2030 lbs. as compared with 1950 lbs. on the previous series. All truck chasis are regularly fitted with the following equipment at no extra charge, generator, starter and electric lights connected to a storage battery; special combination dash and instrument panel equipped with ammeter, oil gage, speedmeter and choke control; motor hood, front and rear fenders; running boards with shields running the entire length; license holders, extra rims, tire carrier and complete tool kit. Alemite chassis lubrication system is employed as before.

THE TWO MANAGERS

Alfred Hacking, left, and Alfred Reeves, general manager of the National Automobile Chamber of Commerce. Mr. Hacking is secretary of the Motor Manufacturers and Traders of London, the N. A. C. C. of Great Britain. He was recently the guest of honor at a banquet given by the N. A. C. C. in New York

Along Automobile Row

MINNEAPOLIS.—George L. Wilson, Duluth, Minn., formerly of the Pioneer Auto Company, selling Buick cars, has been named to distribute Studebaker cars with headquarters at 326 East Superior street.

SALT LAKE CITY.—The R. T. Mitchell Company of Ogden has been appointed agent for the Star. The company will have the exclusive agency for the cars in northern Utah outside of Cache County. Walter Ross, formerly of the Read-Ross-Payne Company of Ogden will be manager of the Star sales department.

LYNN, Mass.—Alfred H. Sowers, who formed the Lynn Motor Company a year ago to handle the Chrysler-Maxwell line, has sold out his interest to his partner and is considering entering the real estate field in Florida in the near future.

OAKLAND, Cal.—George W. Glazier has been appointed manager of the uptown store of Cochran & Celli, oldest Chevrolet dealers in Alameda County.

CLEVELAND. — Walter Zimmerman, whose early training in the automotive field was in Hamburg, Manchester, Brussels and Valencia, has joined the factory sales staff of the Peerless Motor Car Company, for the purpose of making a survey of present and prospective domestic and export business. He has been engaged in the automobile industry in this country since 1904.

NEW ORLEANS.—John S. Dobbs, for 14 years a Ford dealer at Quitman, Miss., has obtained the Chevrolet contract for Clark county. The new company has been incorporated under the name of John S. Dobbs, Inc., with headquarters in Quitman.

WILMINGTON, Del.—A new company, known as the Automobile Sales Company, has been formed here and taken over from from the Fess-Hughes Company, the agency for the state of Delaware for the sale of Pierce-Arrow cars, trucks and buses. This agency has heretofore been a loyal branch of the Foss-Hughes Company, with headquarters at Tenth and French streets, which will be continued as the headquarters of the Automobile Sales Company.

YOUNGSTOWN, O.—The Bartram White Truck Company has been chartered with an authorized capital of $50,000 to buy, sell and deal in trucks and parts.

PORTLAND, Ore.—Chase Garfield Motor Company has recently been formed here to handle the distribution of Chrysler cars throughout Oregon, northern California and southern Washington counties. The new distributor has appointed 77 subdealers throughout the territory and given orders for an intensive sales campaign at the reduced prices put in effect.

MEMPHIS—R. B. Deal, service manager, H. S. Kirkland, shop foreman, and A. C. Huebner, inspector, of the Memphis branch of the Buick Motor Company recent visited the factory.

SIOUX CITY, Ia.—The Greenlease Motor Company, Kansas City, Mo., has purchased the J. R. Hansen Cadillac agency here. A. R. Williams, present manager of the Hansen company will manage the branch.

MARIETTA, O.—R. A. Morrison, who, for many years was with the American Lead Pencil Company, Hoboken, N. J., has been placed in charge of all research work at the laboratories of the North Western Chemical Company here.

SPRINGFIELD, Ill.—J. E. Dearmin, for two and a half years with the Sangamon Cadillac Co., here, has resigned as president and general manager of that agency to become associated with the Moseley Motor Company of Springfield, as Lincoln car sales and service department chief.

PORTLAND, Ore.—Lee O'Hanlan and S. S. Berry have formed the firm of Berry & O'Hanlan, to handle Overland cars.

OAKLAND, Cal.—The Willys-Overland Pacific Company has purchased a tract of 88,000 square feet at East Fourteenth street and Fifty-seventh avenue, and will erect thereon immediately a new assembly and distribution plant, according to announcement by James Hawk, vice-president of the corporation. The structure will house the general offices of the company, which are to be moved to Oakland from their present location in San Francisco, as well as a distributing plant and a warehouse.

COLUMBIA, Mo.—W. B. Palmer and L. H. Wegener have purchased the business of the Brown Overland Company from Fred Brown and will henceforth be the Columbia dealers in Overland cars.

MEMPHIS.—Along with the arrival of the new series of Oakland cars in Memphis, Jotham Baker, of Jotham C. Baker, Inc., Memphis dealer, announces the removal of the company's quarters to 265-269 Madison avenue. This location was formerly known as the Lyric Garage. A modern and well lighted service department is included.

ATLANTA.—The Atlanta branch of the Durant Motor Co., according to J. Elmo Green, district sales manager, has recently appointed Robert C. Smith as manager of the retail department. Mr. Smith has been identified with the Atlanta branch of the company for the past three years.

CHICAGO.—The Jones Gear Company, manufacturers of automotive gears, will move its plant from Chicago to Benton Harbor in the near future, it is announced by the company. At Benton Harbor the company will occupy a large two-story factory building formerly used by the Baker-Vawter Company.

GREENFIELD, Mass.—H. Purrington has acquired the Auto Service Station at 451 Federal street. Accessories are sold in connection with the repair business.

CHARLOTTE, N. C.—The Kriner Motor Car Company, of Greensboro, N. C., has obtained the agency in that city for the Flint motor car line.

Sioux City, Ia.—The Ryal Miller Chevrolet Co. has purchased the Chevrolet agency at Norfolk, Neb. B. F. Knuth of Sioux City will manage the branch.

MINNEAPOLIS.—The Arrowhead Motors, Inc., will sell Chrysler cars in Duluth territory. A new home has been opened at 526 East First street with two floors and basement.

CHICAGO.—The Sterling Auto Devices Company has moved from its present location at 207 South Green Street, to a new and larger home at 2016 West Lake Street.

ST. LOUIS.—Wilson Motor Car Co., Paige and Jewett distributor in the St. Louis district, announces the appointment of the Atlas Auto Repair Co., 4831-35 Easton avenue as an authorized Paige and Jewett dealer.

MONTREAL.—P. R. Norton, who has been manager of the local branch of the Studebaker Corporation of Canada, Ltd., has been transferred to the company's New York office. He has been succeeded in Montreal by Malcolm Le Mieux, who has been engaged in the sale of the Studebaker car since 1918.

PITTSFIELD, Mass.—Peter Selikowitz has purchased Sully's Tire Shop at 100 Woodlawn avenue.

CHARLOTTE, N. C.—R. H. Beasley, for four years holder of an important position in the sales organization of the Ford Motor Company's branch at Charlotte, has resigned to become director of the sales and service departments of the Sanders Motor Company, authorized Ford dealers, of Raleigh, N. C.

CHICAGO.—James L. Campbell, former sales manager for the Wills Sainte Claire Company of Illinois, has taken charge of the Wills Sainte Claire interests in northern Ohio with headquarters at Cleveland.

DES MOINES.—T. B. Bartholomew, Keokuk, Iowa, has resigned as director of the Iowa Automotive Merchants' Association. H. E. Hade of the H. E. Hade Motor Co., Ft. Madison, Ia., was appointed to the post held by Mr. Bartholomew.

ST. LOUIS.—A new dealer company styled the Hildebrand-Tobin Motor Company has been organized to handle the Flint car and has opened sales and service quarters at 4437-39 Manchester avenue.

DULUTH.—The Pioneer Auto Co. succeeds G. L. Wilson as territory dealer in Buick cars. Henry L. Howe is to be manager. He has been cashier of the company five years. H. S. Werger is proprietor.

NEW ORLEANS.—Leo G. Ford, formerly with the Chevrolet factory as field representative, has joined the New Orleans Chevrolet Sales Company as assistant to Sales Manager Backer.

MINNEAPOLIS.—J. C. VanAlen of the national service department of the Willard Battery Co., has been appointed manager of the Minneapolis branch. He succeeds L. E. Horton, who goes into the radio sales division.

BERKELEY, Cal.—A fifty-year lease on a tract of city-owned property on the Berkeley waterfront, has been granted to the Golden Gate Ferry Company by the Berkeley city council. This land is to be used as a terminal for the proposed triangular automobile ferry service between Berkeley, on the east side of San Francisco Bay, Sausalito on the northwest, and San Francisco on the southeast.

SPRINGFIELD, Mass.—Motor Tire Sales Co. has opened a store at 348 Worthington street. E. C. Davis, formerly New England district manager for the Powertown Tire Corp., manages the new concern.

PORTLAND, Ore.—John K. Leander Company of this city has appointed 33 dealers to handle Studebaker sales throughout the states of Oregon, Washington and Idaho.

COLUMBUS, O.—The Stanton Motors, Inc., 841 North High stret, Columbus, Ohio, have been appointed distributors for the Chrysler 4 and Chrysler 6 in Columbus and central Ohio. The firm, headed by A. T. Stanton, recently opened its new show rooom and service station.

DETROIT.—E. A. Bowman, president of E. A. Bowman, Inc., distributors of automobile accessories, has appointed the Stenger Bumper Service of Detroit as his authorized service stations to cover central and north Detroit. The appointment is the forerunner of a system by which Mr. Bowman eventually hopes to cover all Detroit.

SYRACUSE, N. Y.—Le Roy Casper, Inc., has been made distributor for Lincoln cars in Onondaga, Oswego, Cortland and Madison counties and in the city of Sherrill, Oneida county. This restores to the Casper concern the Lincoln distribution which it held before Ford took over the company.

KOKOMO, Ind.—The Kokomo Machine Company, which has been engaged in automobile repair and machine work here for several years, has been purchased by Emery Brookings, of South Bend, Ind. The new owner has announced that he will enlarge the scope of the business by adding a line of supply parts.

CHICAGO.—Bruce K. Steele, associated with the Franklin factory for a number of years, has been appointed manager of the Chicago branch of the Locomobile Company.

With the Associations

D'Ettel Heads Tradesmen

OAKLAND, Cal., Aug. 8.—Robert W. Martland, organizer of the California Automobile Trade Association, and secretary-manager of that organization since its formation, has resigned. Arthur D'Ettel, secretary-manager of the San Francisco Automobile Trade Association for several years, has been appointed to the position. Headquarters of the association have been removed to 472 McAllister street, San Francisco.

Martland organized the California Automobile Trade Association in 1916, and it reached its greatest membership, 3,000, and its greatest influence in 1922. In the following year dissension broke out among the managers of the locals, and in 1923 and 1924 a number of the locals in the counties of southern California withdrew from the state association. For the last nine years, the C. A. T. A. has saved its members thousands of dollars in legislative activities alone, and the better class of garage and repair men feel that this work should be continued to prevent the passage of a great deal of unwise and inimical legislation in this field.

George R. Murphy, of San Francisco, president of the C. A. T. A., has issued a letter announcing the resignation of Mr. Martland, and the appointment of Mr. D'Ettel, in which he said:

"A definite program, requiring fully two years to work out, is planned by the executive board. It is comprehensive, broad in its scope, and its principal aim is the automatic help to your business through the contributions and assistance of a number of experts, in addition to the solution of any problem which may arise. Our slogan is 'Protection for the Members of the Association; Clean Methods of Merchandising and Business Progress.'"

Booklet Demand Heavy

CHICAGO, Aug. 8.—The booklet called "Stock Records Used By Some A. E. A. Jobbers" recently prepared by the merchandising department of the Automotive Equipment Association has proved to be very popular. The demand for the booklet has been so great that the initial supply was exhausted within a few weeks, and a second printing was necessary. The second edition is now being distributed and according to Arthur R. Mogge, merchandising director of the A. E. A., it looks as if the supply will again be exhausted.

Since Dr. M. T. Copeland, director of the bureau of business research of Harvard University delivered his address at the A. E. A. convention at Colorado Springs on the subject "The Cost of Doing Business" many jobbers have written the A. E. A. for information relative to stock control.

A. A. A. Plans Safety Drive

WASHINGTON, Aug. 8.—A campaign to encourage safer motoring through the promotion of better driving by means of contests, competitions and tests may be among the near-future activities of the American Automobile Association. Officials of the organization, in making the announcement, declared lack of proper understanding of cars and their operation is a fundamental reason for the inability of the nation to make greater progress with its safety problem.

"The fight against accidents," says President Thomas P. Henry, "is nothing more nor less than a fight against ignorance. American automobiles today would be as far behind the times as are many American drivers had the manufacturers not been willing to combat ignorance through putting their cars on the race track."

Mr. Henry states that several American cities now hold annual driving exhibitions and that these have met with instant approval for the reason that they have been invariably followed by improvements in local safety conditions.

Cylinder Grinders Meet

BIRMINGHAM, Aug. 8.—Representatives from eight states attended the meeting of the Southern Automotive Cylinder Grinders Association which met in Birmingham late in July. The meeting was an enthusiastic one and the following officers were elected:

A. Jones of Chattanooga, president; D. J. DeGroppe of Atlanta, vice-president, and Starley White of Arkansas, secretary. Members of the board of directors will be chosen by the officers at an executive committee meeting, and at the same time it was voted to settle the date and place of the next convention.

One of the most important features of the meeting was the change in the by-laws which permits parts jobbers and machinery dealers to become associate members of the organization.

The Southern Automotive Cylinder Grinders Association is an organization made up of automotive repair men from Alabama, Mississippi, Georgia, Florida, Arkansas, Texas, Tennessee and Louisiana. Approximately 150 delegates attended the meeting.

Contributions Forbidden

CHICAGO, Aug. 8.—The Chicago Automobile Trade Association has taken action whereby its members are forbidden to contribute money, buy advertising space in year books, folders, dance programs, labor publications and other bulletins without the indorsement of the association. Members have been asked to telephone the association's office whenever solicited for any purpose.

Another Sales School Planned

TOLEDO, Aug. 8.—Another school for salesmen will probably be put on during October by the Toledo Automotive Trades Association following the lines of the one which was held a few weeks ago.

Out of a total of 43 applicants who took the examinations at the conclusion of the school, ten were secured as actual salesmen by members of the association.

This is considered a very fair return on the investment in a new plan to add fresh blood to the ranks of automobile salespeople in Toledo.

Sunday Closing Tried

CHARLOTTE, N. C., Aug. 8.—With few exceptions, Charlotte's gasoline and oil filling stations have adopted the policy of remaining closed on Sunday, according to an announcement by Keeley A. Grice, president of the Charlotte Automotive Service Association, which promoted this movement. Mr. Grice, who is president of the North Carolina Gas and Tire Dealers' Association, indicated he expected this movement to spread rapidly throughout this state. He forecast that, within six months, relatively few filling stations in the larger towns would remain open on Sundays. The principal purpose of the movement, Mr. Grice said, is to provide better working conditions for the stations' employes.

The eight large combination gasoline stations and storage places here will continue to remain open on Sundays. These will provide for the emergency needs of residents and meet the demands of tourists and transients.

In connection with the Sunday closing movement, the 45 stations adopting the policy inaugurated a campaign of newspaper publicity and through banners at the stations, urging the public to "buy your gasoline, oil and tires before Saturday night."

The "experiment" here will be tried for three months, and, at the expiration of that period the station operators expect to know fully the attitude of the public. Unless there is an unanticipated public opposition, the policy will be continued indefinitely, Mr. Grice said.

Bus Survey Planned

BOSTON, Aug. 8.—The Boston Chamber of Commerce, through its committee on public utilities and civic bureau, is to conduct a comprehensive survey of the motor bus situation in Massachusetts, particularly as to its effect upon business and also in regard to its competition with steam and electric railway lines. The Chamber wishes to learn if the bus is a genuine economic aid, and if it will lead to a more co-ordinated and cheaper system of transportation in metropolitan Boston. Every phase will be covered including railway transportation.

New Models Cause Slight Slackening in Kansas City

Demand from Outlying Districts, However, Is Good and Prospects Plentiful

KANSAS CITY, Aug. 8.—Passenger cars have been selling slightly slower during the month of July in this city, with only a very small decrease in volume of sales, but distributors report demand from the outlying districts to be as great if not slightly greater than in June. Prospective buyers are said to be plentiful in this section, especially for the new models.

Stocks of used cars are lower than previously and are said to be moving very well. This is attributed to the policy of making trades so that a used car may be offered at nearer its actual money value, and to the fact that several of the local dealers have recently made special efforts at closing out their entire stocks of used cars.

Credit is very easy. One of the dealers in the $2,000 class, who refuses nearly 50 per cent of his prospective buyers because of their doubtful ability to pay for the cars, says that the great majority of them are later sold by other companies in this city and their paper accepted willingly by the bankers.

Parts and accessories are on a good substantial basis of normalcy, said to be about equal to the volume in June.

A slight decline in the demand for motor trucks, though not very noticeable, has been reported by several dealers.

The outlook for August is regarded by virtually all local dealers to be unusually bright, since they attribute the present slowness to the public expectancy over the new models which will be offered soon, and they think that August will see the market upon a more substantial and normal basis.

NEW DURANT DEALERS

NEW YORK, Aug. 8.—The following automobile merchants have recently taken over the sale of Star and Durant products:

Bankers' Investment Company, Brighton, Colo.; Denver Motors Company, Denver; Standard Garage, Nashville, Ill.; Paul Isringhausen, Fielding, Ill.; Henry C. Lewis, Carrollton, Ill.; Canady Brothers, Wapella, Ill.; Long Auto Company, Creston, Ia.; Bohning Garage, Hanover, Kas.; Auto Inn, Clay Center, Kas.; Crescent Motor Company, Bowling Green, Ky.; H. B. Schmidt, Wabasha, Minn.; Frank Voss, Garage, Loose Creek, Mo.; Chadron Motors Company, Chadron, Neb.; H. L. Swanson, Hastings, Neb.; Sprague & Sutton, Sussex, N. J.; Newman & Moore, Hempstead, Long Island, N. Y.; F. W. Terry, Atlanta, N. Y.; Dow & Sonnhalter, Massillon, O.

Log Cabin Garage, Oklahoma City; R. B. Stevens, Marlow, Okla.; Watson Motor Sales, Erie, Pa.; Miller & Chapman, Marble Falls, Tex.; Roberts Motor Company, Hale Center, Tex.; H. L. Bonner Motor Company, Vernon, Tex.; The Canyon Garage, Logan, Utah; Ray Fitzgerald, Draper, Utah; Gleason Service Company, Mondovi, Wis.; Larralde Motor Company, Tampico, Tamaulipas, Mexico.

Coming Motor Events

Automobile Shows

Dallas, Tex. ..... Oct. 10-25
Annual Automobile Show, State Fair Automobile Building, under the auspices of the Dallas Automotive Trade Association. J. W. Connell, manager.

De Pere, Wis. ..... Aug. 31-Sept. 21
Annual Automobile Show under the auspices of the Automobile Division of the Green Bay Association of Commerce.

Fresno, Cal. ..... Sept. 28-Oct. 3
Fresno Motor Car Dealers Association. Fifteenth Annual Show in connection with Fresno District Fair.

Grand Rapids, Mich. ..... Sept. 7-12
Grand Rapids Automobile Dealers Association, Seventh Annual Show in connection with West Michigan Fair, Wm. T. Morrissey, manager.

Oklahoma City, Okla. ..... Sept. 26-Oct. 3
Annual State Fair and Exposition. Passenger cars and accessories.

Automobile Exhibits in Diamond Jubilee State Fair.

Shreveport, La. ..... Oct. 24-Nov. 8
Twentieth Annual State Fair showing passenger cars, trucks and tractors.

New York ..... Nov. 15-21
Twenty-first Annual Automobile Salon.

Wheeling W. Va. ..... Sept. 7-12
Wheeling Automobile Dealers Association, Eleventh Annual State Fair, Exposition Building.

White River Junction, Vt. ..... Sept. 15-18
Nineteenth Annual Twin State Fair. Passenger cars, trucks and accessories. F. L. Davis, manager.

Chicago ..... Jan. 30-Feb. 6
Twenty-sixth Annual National Automobile Show and Eleventh Annual Automobile Salon.

Danbury, Conn. ..... Oct. 5-10
Eighth annual fair, Danbury Fair Auto Building, under direction of Danbury Agricultural Society, passenger cars, trucks, tractors, accessories, etc., H. Lage, manager.

Boston ..... Oct. 10-17
World's Rubber and Tropical Exposition, Mechanics Hall, Chester I. Campbell, manager.

Chicago ..... Sept. 28-Oct. 3
Fourteenth annual Safety Congress and Exhibit, Rainbow Room, Hotel Winton, under direction of National Safety Council, A. M. Smith, business manager.

Salt Lake City ..... Oct. 1-7
Third annual Automobile Show and forty-seventh annual State Fair in Coliseum Building, Wm. D. Sutton, supervisor of Automobile Show.

San Francisco ..... Aug. 22-28
Third annual Pacific Radio Exposition in Municipal Auditorium.

Boston ..... Aug. 12-17
Annual radio show in Mechanics' Building. Shelton Fairbanks, manager.

New York ..... Sept. 18-19
Meeting of National Battery Manufacturers' Association at Commodore Hotel.

Foreign Shows

Berlin, Germany ..... Nov. 26-Dec. 6
Annual Automobile Show in the Kaiserdamm.

Buenos Aires, Argentina ..... Oct. 3-13
Pan-American Road Congress.

London, England ..... Oct. 8-17
Olympia Passenger Car Show.

London, England ..... Oct. 29-Nov. 7
Annual Truck Show.

Races

Altoona, Pa. ..... Sept. 7

Charlotte, N. C. ..... Nov. 11

Fresno, Cal. ..... Oct. 3

Laurel, Md. ..... Oct. 10
A. A. A. Race, Baltimore-Washington Speedway.

Los Angeles, Cal. ..... Nov. 26

Monza, Italy ..... Sept. 6
Italian Grand Prix Race.

Syracuse, N. Y. ..... Sept. 19

Salem, N. H. ..... Oct. 12

Rockingham ..... Oct. 17

Baltimore ..... Oct. 24

Conventions

Buenos Aires, Argentine ..... Oct. 3-13
Pan-American Road Congress.

Cleveland ..... Sept. 14-19
Annual Convention and Exposition of American Society for Steel Treating.

Cleveland ..... Sept. 15-16
S. A. E. production meeting and exhibition.

Des Moines, Ia. ..... Nov. 12-13
Automotive Merchants' Association Convention.

Fall convention of the Motor and Accessory Manufacturers Association.

Philadelphia ..... September
S. A. E. Automotive Transportation meeting.

Pittsburgh, Pa. ..... Oct. 12-14
Pennsylvania Automotive Association Convention.

St. Louis ..... Nov. 17-19
Annual Convention of National Tire Dealers' Association.

Eaglesmere Park, Pa. ..... Sept. 14-17
General meeting of the Automotive Electric Association.

Wrightsville Beach, N. C. ..... Sept. 7-8
Annual meeting of the North Carolina Automotive Trades Association.

Montreal ..... Oct. 13-14
Convention of the National Association of Automobile Insurance Companies.

Ford Motor Co. Does Record July Business in All Divisions

Domestic Sales of Cars and Trucks Beat Year Ago by 6,182—Lincoln Deliveries Also Up

DETROIT, Aug. 8.—During the month just ended the Ford Motor Company did a record business in every division, it was today announced at the Highland Park general offices. Domestic sales of Ford cars and trucks totaled 167,626 in July, exceeding by 6,182 those of a year ago, sales of Fordson tractors were more than 3,300 greater than last year and 207 more Lincoln cars were delivered to customers during the month than in the previous July.

On the basis of branch reports received early in July the company anticipated an increased volume of business and while it predicted that summer buying would rise to a higher level than usual, the demand for all Ford products during the month exceeded expectations.

The outlook is for increasing business in August.

One of the chief indications of this appears in agricultural sections of the country, where farmers are coming into the market in rapidly growing numbers. Evidence of this is found in the remarkable sales of Fordson tractors during July.

NEW CHEVROLET DEALERS

NEW ORLEANS, Aug. 8.—Felix Doran, Jr., sales manager of the Chevrolet Motor Company, 424 Hibernia Bank Bldg., New Orleans, distributing zonal headquarters for the Chevrolet line in Louisiana and Mississippi, announces a big expansion activity for Chevrolet cars in Mississippi, the following dealerships having recently been awarded:

Martin-Newton Motor Co., Bay Springs, Miss.; Robinson-Quailes Motor Co., Scooba, Miss.; Gavin-Chevrolet Co., Laurel, Miss.; Anderson-Chevrolet Co., Hattiesburg, Miss.; Motor Service Co., Lake, Miss.; McMullen-Chevrolet Co., Hickory, Miss.; Joyner-Hannah-Chevrolet Co., Forest, Miss.; Busby-Smith-Chevrolet Co., Waynesboro, Miss.; Biloxi-Chevrolet Co., Biloxi, Miss.; Z. Z. Chapman, Monticello, Miss.; Hubbard & Buford, Utica, Miss.; John S. Dobbs, Inc., Quitman, Miss.

Chrysler Brings Action in Wisconsin Insurance Case

MADISON, Wis., Aug. 8.—Two separate actions against Insurance Commissioner W. Stanley Smith of Wisconsin have been launched in federal court by Chrysler motor firms to restrain him from interfering with a system of car insurance instituted by the company. The action is the outgrowah of the commissioner's pronouncement several weeks ago that the Chrysler insurance plan was not legal in Wisconsin and that sales of any Chrysler cars with the insurance feature as part of the sales contract would prompt him to "take action."

One of the two actions now institutaed is that of the Clark Motor Co. of Milwaukee, and the other is by the Chrysler Corporation. The Clark organization distributes Chryslers in Wisconsin. The firms have obtained a temporary injunction restraining Commissioner Smith from interfering with the insurance system pending a hearing in federal court at Superior, on the demand for a permanent injunction, on August 22.

Three federal judges will hear the application for making the injunction permanent, at that time. They are Claude Z. Luce, Evan A. Evans and F. A. Geiger.

SQUEEKS and RATTLES

MODERN DANGERS

"Good heavens, man! What is the matter with your face? Were you in a motor smash?"

"No, I was being shaved by a lady barber when a mouse ran across the floor!"

—Passing Show.

In a short time those of us who jump straight up in the air to dodge one of Henry's flivvers will be in danger of being bit by one of Henry's fliers.

—Omaha Bee.

In Bible times the devil got into hogs, and that may explain why some cars need all the road.

—Peru (Ind.) Tribune.

Lady Visitor—That parrot has a rare vocabulary. Was he trained in a repair shop?

Sweet Girl Graduate—No, we girls brought him from college.

SWING LOW, SWEET CHARIOT

A junk shop near a railroad crossing in New Jersey bears this admonition to motorists:

GO AHEAD, TAKE A CHANCE. WE'LL BUY YOUR CAR.

—Life.

THEN IT BOLTED

Exasperated Teacher — "This class room gets along about as smoothly as a second-hand Ford."

Student—"Yes, it has a Crank in front and a lot of Nuts behind."

—Collegiate Wit.

FIFTY-TWO per cent of the people in Des Moines own homes. The other forty-eight have chauffeurs.

—Grinnell Malteaser.

Teacher—If a farmer sold 1,476 bushels of wheat at $1.89 per bushel, what would he get?

Scholar—A new automobile.

The Girl (archly): "Did I ever show you where I was tattooed?"

The Boy (naively): "No."

The Girl: "Well, we can drive around that way."

—Brown Jug.

APOPLEXY

What's the matter—engine trouble?" "Nope! Heart trouble."

—DePauw Yellow Crab.

New England Section of Hertz Drivurself Opened

BOSTON, Aug. 8.—The New England section of the Hertz Drivurself System has been organized here with Robert J. Langden, of Hartford, Conn., as chairman. A corporation has been formed under the name of the Drivurself Corporation of New England, and the first sub-division to operate here will have its offices at 1358 Commonwealth Avenue, and the cars will be garaged in the Three Fields Garage.

The officers of this company are J. P. Kent, president and general manager; F. F. Bryant, vice-president, and John B. Clapp, secretary. These men with Elmer E. Clapp and Ernest R. Sharp, comprise the directors. They are all Boston men. The entire city of Boston will be dotted with Hertz stations within the next 10 days.

W. F. Fielder, manager of the Chicago Hertz System, came to Boston to help in the formation of the Eastern division, and it was arranged to have another meeting on September 12 at Worcester. Hartford, Pittsfield, Worcester and Providence have been organized and the chain will be extended to other large New England cities in a short time.

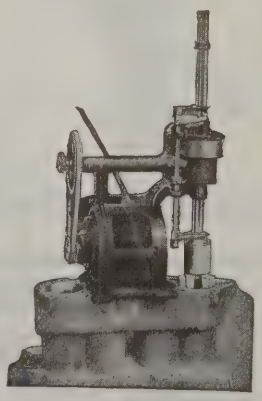
One STORM HONE will do all your honing

Did you ever stop to think what you are getting in a Storm Hone for $35.00?

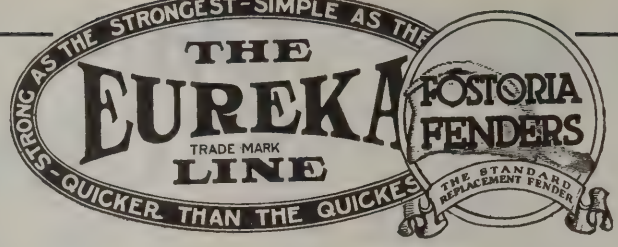
It enables you to do any and all sizes, from 2¾" up to 8". This will take care of all the automotive and tractor cylinders now in use.



The Storm Hone is built strong, heavy and self-centering. It is equipped with large stones 1" wide and ¾" thick, which will easily out-last two or three sets of ½" stones. Extra stones $2.00 per set.

One single spring is used that exerts equal pressure against each stone for all diameters. The hone is instantly adjusted to any size cylinder, and will correct all cylinder wear that is practical to correct by honing.

If a cylinder is worn out-of-square by bent connecting rod or tilted piston, it cannot be corrected by the honing method. Even though it may be finished straight and round, the cylinder will still remain out-of-square with the crank shaft. For information on how to correct all kinds of cylinder wear, write for our booklet "FACTS." It's free.



Storm Automatic Honing Machine

The Storm Automatic Honing Machine is the ideal equipment for operating the Storm Hone. It is provided with an automatic feed which feeds the Hone up and down in the cylinder at an even rate. Produces a "Mirror Like" and "Gun Barrel" finish. The self-centering action of the hone is strong enough to hold the machine without clamping the block.

STORM

MANUFACTURING COMPANY, INC.
406-A Sixth Ave. So.
MINNEAPOLIS, MINN.

Uniting Two Well-Known Trade Marks

IT is with great pleasure that we announce our purchase of the business of the Ashland Mfg. Co. of Ashland, Ohio, manufacturers of the well-known Eureka line of pumps and jacks.

The Eureka is a substantial, well-built, fairly-priced line and one that has enjoyed a steady sale for many years.

We will put behind the Eureka line the same quality ideals, the same manufacturing facilities, the same square deal merchandising policy that have meant bigger profits for all who are selling Fostoria Fenders.

The good friends of the old Eureka line as well as all other jobbers and dealers who are interested in a good substantial line of pumps and jacks are invited to write us for prices and discounts.

THE FOSTORIA PRESSED STEEL COMPANY

Succeeding the Ashland Mfg. Co.

THEY SELL TO FARMERS

W. H. Taylor

Scientific Analysis of Territory and Thorough Cataloging of Prospects Marks Methodical Start of Successful Campaign by California Dealers.

By ROY ALDEN

AVERAGE monthly sales for a full year of 19 new Willys-Knight and Overland cars, and 16 used cars, by a dealer located in a town of 6,000 people, and with a total population of less than 32,000 in the entire county.

Such is the achievement of the Overland Motor Sales Company of Oxnard, California, owned and operated by W. H. Taylor and C. S. Bobo, two of the leading small town automotive merchants in the West. Oxnard is a typical small town. It has no boom features. Nor does it have any unusual abundance of wealth-producing factors. Citrus fruit growing and general agriculture comprise the major productive activities of the community. These partners, when starting two years ago to build up a healthy permanent volume of business, had a territory to work that held approximately the same opportunities as presented to the average small town automotive merchant.

Scientific analysis of the territory, efficient cataloging of prospects, and systematic direction of sales activity, explains the uniform merchandising success of these Southern California dealers.

A year and a half ago the Oxnard dealers took a complete census of every automobile in the entire territory surrounding that little city. The census called for a description of the make and model of each car, and also included the occupation of the owner. If a farmer, the crops to which his acreage was planted were described. Lodge affiliations and hobbies were also noted when this information was obtainable.

No Selling During Survey

"In undertaking the survey," explains Mr. Taylor, "we assigned salesmen to cover certain territories. They were instructed only to gather the desired information and not to make any attempet to sell or to directly ascertain whether a prospect was in the market for a car. The census takers would frankly inform those called upon that they represented our firm and explained the object of their questions was the preparation of a map and accompanying data that would show the development in the use of the automobile in this county. Incidentally, we did prepare the map which is still in use in our sales room. This map shows the location of every car owned in our territory.

"We met with virtually no resistance in making our survey, which took nearly a month to complete. We arbitrarily set aside three hours a day when each salesman had to confine all his activities to this work. After our census takers had called on every farmer and every resident in our entire selling area and obtained the information sought, we then redistributed the territories and started our actual prospect finding campaign. By redistributing, I mean that the salesman who originally took the census in one district was not sent back into the same district. Rather, he was given another district where another salesman had worked on the census. It is quite apparent that it would be difficult in many cases for a salesman to get a proper audience when he originally presented himself solely as an automobile census taker, and then reappeared a few days or a week or two later with a direct selling mission. At least it was our experience that the switch in districts was the better plan.

"We did not consider the census as a direct canvass for prospects. Of course, it was indirectly, but it was designed to provide a basis for subsequent effort in this direction. In entering upon the second phase of our territorial analysis, our salesmen, working different districts as explained, made seconds calls on every resident.

A Car A Day

C. S. Bobo

"After this thorough canvass for prospects, we were able to systematically catalog our prospects, because we had full information on every car owner or prospective owner in our territory that had been personally obtained.

"On the second call of a salesman, we were able to tell whether the person visited was an immediate or future prospect for one of the cars we have for sale, or whether he should be crossed off our lists.

Weeding Out Process

"The prospects were weeded out from the non-prospects, individual cards being prepared for the former, and the latter listed alphabetically on a list for reference purposes. All information of value was written on the prospect cards. For instance, one farmer-prospect may have most of his acreage planted to walnuts and he will be selling his crop in the fall, when he will receive in cash the major returns for his year's labors. If he can be considered a prospect we then know from this information when he may be expected to be ready for the purchase of a new car. We also know when the time approaches for our salesman to cultivate him at regular intervals. If the prices are good on walnuts, our salesmen will emphasize in a casual way during his calls the excellent position of the walnut market. Building optimism, not directly or bluntly, but very casually, is an important qualification for successful selling with farmers.

"It required some investment and it took considerable time to make our census and prospect canvass, but it gave us a complete knowledge of our territory and armed us with the necessary information to properly direct our sales activity. We read a lot these days in the national automotive trade journals about the importance of proper sales direction—that the main contributing reason in many failures can be traced to the inefficiency of sales activity due to lack of direction. We believe that this matter of efficient sales direction is as important in the smaller community as it is in the large city. In our territory we cover a lot of ground, as far as 35 miles in some directions.

"If we did not have our prospects cataloged, but allowed our salesmen to operate largely 'on their own'—self-directed, so to speak—we could not expect to make the sales that we do. As it is, we scan the prospects a salesman has listed for the day. From the information gained from our census, we know all that should be known about the prospect, and we can discuss the calls with the salesmen. If there is anything the salesman should know about the market for certain products, such as beans, beets, lemons, apricots, walnuts, or other products that a prospect grows, he is given that information.

"Most of our business is with the farmers and we make it a point to keep thoroughly posted on all news and market information of interest to farmers, so our salesmen can talk on subjects that are close to them.

"When a salesman has ready access to full advance information on a prospect, it is only natural that he is going to make a much better presentation of his merchandise than he would if he were uninformed.

"As our territory is no different in important particulars from any other small town territory, I believe any small town dealer will find an investment in a thorough survey of his sales area will bring him substantial results. It should be borne in mind, however, that records such as we keep would soon lose their usefulness if they were not kept up to date. We check all sales from the registrations and

As the Editor Sees the Automobile Business

Random Observations on Sales and Service

By SAM SHELTON

PROGRESS by the State of Missouri in the construction of highways is about the most encouraging development the automotive industry can point to this summer. Paved roads across the Show-Me state will boost transcontinental motor travel as nothing else can. The gateway to the Southwest and much of the West lies through Missouri. St. Louis and Kansas City are the keys. These two great metropolitan cities soon will be connected by two paved highways. And St. Louis already, thanks to Illinois, is at the terminal of several boulevards connecting with all points on the Atlantic Coast from Washington northward.

Striking southwest from Chicago I found it an easy matter this summer to penetrate the Missouri Ozarks as far as Springfield in two days of fairly diligent driving. St. Louis is easily made between an early breakfast and the evening dinner. About the same time is required for the somewhat shorter trip from St. Louis to Springfield if the road is dry, as I found it.

But not much longer will Missouri mud be the terror of transcontinental tourists. While I was in Missouri the State opened a new stretch of about 10 miles of modern concrete road in Webster County on the crest of the Ozarks. This is part of State Highway No. 14 leading from St. Louis to Springfield and Joplin and thence to the great Southwest and on to the Pacific Coast by way of El Paso.

On Highway No. 17 leading north from Cabool to Rolla I found a modern gravel road under construction. After grading and ditching was done earth shoulders were thrown up on either side. The space of about 30 feet between the shoulders was being filled to the depth of a foot or more with creek gravel. It is hard driving while loose but a wonderful road after it is packed. Between Rolla and Lebanon on Highway No. 14 is a wonderful stretch of completed gravel road.

But Missouri's road building enterprise is not confined to these highways leading southwest. In fact the cross-state highways connecting St. Louis and Kansas City are being pushed with great rapidity. Plans contemplate the completion of one of those, with concrete surface practically all the way, within a year, and the other will be finished soon thereafter.

This highway activity is bringing about an awakening in the automotive trade in Missouri and other Mississippi Valley states. I have noticed that where paved highways go an improved automotive trade soon follows. Paved roads tend to lift up the motor car sales and maintenance industry and put it on more progressive and profitable basis than prevails where muddy and neglected roads are the daily trial of those who strive to make the best of modern transportation methods.

Unfortunately the business men of some towns through which state highways run are not appreciative enough of what the state is doing for them to cooperate to the extent of improving the city streets to make them somewhere near as good as the state roads. The trade of tourists may not mean anything to such business men, but it is certain that most motor car travelers will not spend any more than they have to in towns that offer them the discourtesy of rough, muddy or dusty, unpaved streets over the route of the state roads. Between Chicago and St. Louis are two such unappreciative towns that I would not spend a nickel in if I could avoid it. But their streets are so rough that unless one drives cautiously he is likely to break a spring or blow out a tire and thus be compelled to patronize business men who get all they can but give nothing.

Such towns are the exception. Most towns favored by state highways have enough pride and enterprise to improve their own streets, especially those followed by the tourists, on a par with the highways. Progressive automobile dealers can well afford to take the leadership in such improvements. In most towns the automobile dealers and garagemen are among the first to recognize the advantages that come to them from being on the route of state highways. This advantage is due not merely to tourist travel, but also to the increased use of motor vehicles locally because of the splendid roads provided for business and recreational travel.

The improved public highway continues to be, as it has always been, the world's greatest salesman of motor vehicles.

COMMONSENSE!

By

JAMES EDWARD HUNGERFORD

He wasn't an ANGEL, and sprouted no wings,
Nor was he a "hard-slugging he-man;"
He lived in a world of "just COMMONPLACE things,"
And wrought no more wonders than WE can!
He USED what he had—just his plain COMMONSENSE,
And HONESTY, "GET-UP," and HUSTLE,
And that's HOW he hurdled the big SUCCESS fence,
And landed on TOP, in the tussle!

Just one of those fellows who laugh at defeat,
And nothing could "faze" him, or "floor" him;
Whatever he tackled, he wouldn't be beat—
Dame Fortune, she couldn't ignore him!
He stayed on the job when most men would have quit,
And seasoned himself to "rough-faring,"
And proved he was "GAME"—a "go-getter" with GRIT,
Who wouldn't be DOWNED by despairing!

He suffered HIS share in the world of "hard knocks,"
And sometimes succumbed in the scuffle;
Oftimes he was shipwrecked, and cast "on the rocks,"
And beaten, and "lost in the shuffle;"
But always he'd wrest himself out of the wreck—
To hardships he never would knuckle;
Though trouble submerged him clear up to the neck,
He'd grin, and COME BACK, with a chuckle!

Direction of American Car Design Reflected in New Models

Study of 1926 Offerings Shows Tendencies Toward Greater Operation Economies as Well as Improved Efficiency and Attractiveness

By P. M. HELDT

NOW that announcements of new models have been made by about a dozen companies prominent in the industry, it is possible to form an idea as to the lines along which automobile design is progressing. Some of the changes made naturally are of a minor character and incidental to other more important alterations, but nevertheless certain definite tendencies are discernible.

There are apparently four factors that have influenced the changes which have been made, or at least a great many of them.

The first is the prevailing downward trend of prices, particularly at certain ranges in the price scale, which has dictated economy and the elimination of unnecessarily expensive features.

The second is the demand for reduced servicing cost, particularly during the first few years of a car's life. This is evidently the factor responsible for the rather widespread adoption of air cleaners and oil cleaners, of improved oiling systems and other features tending to prevent premature wear of certain parts.

Keen merchandising conceptions can be seen in the practices of American passenger car manufacturers as revealed in a study of the new models brought out this year under the stamp of 1926.

While the cars are being made to sell in a highly competitive market and while lower prices tend to emphasize this condition American car producers are not letting down on mechanical efficiency or beauty in body design. On the contrary they continue to go ahead, giving the automobile buyer a bigger dollar's worth than ever before.

A third factor has been the desire to improve the appearance of the cars, it being realized that the appeal of the outline and of the color scheme has great weight in swaying the decision of a customer who may be wavering between several competing makes.

On many cars the radiator shell design has been revised with a view to strengthening this appeal, and many new color schemes and features of body style have been evolved.

On a good many cars also the horsepower output of the engines has been increased, either by refinements in design or by increasing the piston displacement. The object in view in thus increasing the available horsepower is evidently to increase the possible acceleration or what is commonly referred to as the "performance."

There is certainly no evidence that American designers are following the lead of their European confreres and cutting down the piston displacement to save on taxes and fuel. Buick, Chrysler and Rickenbacker have increased the piston displacement of their engines, Buick of both models, while a number of other makers have endeavored to increase the output by increasing the valve opening area, enlarging the carbureter size, smoothening and straightening the inlet passage and lightening the reciprocating parts.

Torsional vibration of crankshafts seems to be still a source of considerable trouble, if one may judge from the fact that in a number of instances the crankshaft diameter has been materially increased, in the Chrysler, for instance, from 1⅞ to 2¼ in., which gives an increase in torsional strength of 73 per cent, as compared with an area (and presumably in explosion and inertia forces of less than 9 per cent.) In one case a small front flywheel has been added to check torsional vibration while in the case of the Oakland an entirely new type of harmonic balancer has been applied, the exact principle of which has not yet been made public. The general increase in engine speeds naturally has a tendency to bring the critical speeds of the crankshafts within the operating range of the engines and calls for the use of devices of this kind.

This is the first time in a good many years that important changes have been made in the Cadillac engine and advantage has been taken of the occasion to incorporate in it with a number of features such as the turbulence head which have been worked out on other General Motors Products.

Since the majority of the General Motors makers have joined the ranks of air cleaner users which previously included Franklin, Chrysler, Rickenbacker and Willys-Knight, the position of that accessory has been signally strengthened, and it will probably not be many years until it will be regular equipment on practically all cars of medium and high grade, at least.

Along with the air cleaner the oil cleaner seems to be gaining in popularity. Of course, for a long time, engines have been provided with oil strainers which were supposed to remove all solid particles from the oil before it entered the pump, but since the straining surface is generally of rather limited area and the oil gets very viscous in cold weather, it was necessary to use rather coarse mesh gauze, which is not very effective in removing the finer particles of gritty material. A system in which the oil is forced through the straining medium by the pressure of the pump, instead of being drawn through, should be by its suction an important improvement.

In clutches the tendency seems to be still toward the single plate type, which can be made with a minimum of spinning weight and therefore facilitates gear shifting. This type of clutch also has advantages from the viewpoints of weight and manufacturing cost.

For a number of years transmissions have been contracting in size, until the gearbox on the average six or eight-in-line is an almost insignificent extension of the crankcase, but it seems that the practical limit in that direction has been reached and perhaps even surpassed, for among the cars of which descriptions have been printed recently there were at least two in which the face widths of the gears have been increased.

Experiences of a Small Shop With Pyroxylin Finishes

Automobile Dealer in Small Iowa Town Finds Motor Car Painting Profitable Addition to Round Out His Line of Automotive Maintenance

By B. M. IKERT

PAINTING 50 cars a year as a side line in a town of 2,000 people is quite an achievement.

That is precisely what is happening in a small town in Iowa. It is happening largely for two reasons.

First, the automotive dealer about whom this story is written appreciates maintenance on the finish of a motor vehicle is quite as important as overhauling the power plant of such a vehicle—and just as profitable.

Secondly, lacquer finishes, with their ease of application, quick drying characteristics and lasting qualities have caused a right about face in the painting of automobiles and put it within the grasp of every dealer who wants to sell 100 per cent service and maintenance on motor vehicles.

The dealer who is on the road to sell 50 paint jobs this year along with his other repair business is Louis Shuh, Buick representative in Dewitt, Iowa.

Like most dealers in small towns he must sell service and maintenance on all makes of cars, otherwise his shop could not keep busy. To make this possible, his is a well-equipped shop and fitted out to almost any kind of repair job, even to cylinder regrinding.

Possibilities in Refinishing Work

But the interesting part of this dealer's business is he has not confined it to selling motor vehicles and repair work only. He saw the possibilities of selling his customers refinishing work on their cars.

He saw the possibilities of moving his used cars more readily when dressed up in a pleasing combination of color newly applied.

He felt it wrong to tell a customer he could overhaul the engine and rear axle of his car, but that the customer must go elsewhere to have the car repainted.

After all, the finish of a car is something anyone notices long before a piston slap gets too noisy and what appeals to the eye very often can be sold much more readily than an intricate repair job, which is all Greek to the customer.

It's easier to say "Mr. Smith, your car needs repainting," than it is to tell him about the condition of his engine. Mr. Smith does not know as a rule what it means to remove shims from bearings, to install oversize wrist pins, or lap in new rings. But he does know and can see that his car looks shabby and can visualize it in a new coat of paint. That is one reason why dealers like Mr. Shuh have little difficulty in selling paint jobs.

Naturally, it takes more than that to sell the work and keep it sold. Refinishing motor cars, whether done with lacquer or varnish calls for skill and if there is any place where poor workmanship will soon manifest itself it is on a paint job.

A mechanic might get away with a poor job of adjusting a rear axle and hide considerable of his work within the housings of a clutch or axle, but not so with the car painter. His work is always visible for inspection. His materials must be the best, his equipment adequate and he must have a thorough knowledge of the craft.

Hence the first thing Mr. Shuh did after deciding to add refinishing to his other branches of service and maintenance, was to hire a first class motor car painter.

At the present time very little work is done in the paint shop of Mr. Shuh's establishment, but this is the off season, so to speak. His shop was quite busy last spring and prospects are for a busy season this fall and winter. Mr. Shuh states people in his part of the country do not like to do without their cars for a week or so at this time of the year and consequently he does not look for much refinishing work until this fall. At that time his painter will rejoin the organization.

There is nothing pretentious about the paint shop and the work is done in a rather small room adjoining the main building. However, the room has good facilities for ventilation and the light is all that could be desired. Since he can get along with the services of one painter a small room is adequate for the work. There are two guns for spraying, one used for the undercoats and the other for the finishing coats. In addition there are such fixtures as an air pressure regulator and an air conditioner for removing all traces of oil and moisture from the air line. The air compressor used for the general shop also furnishes the air for the spray guns.

Above all, Mr. Shuh insists on quality work. To this end he takes no chances with the old finish on a car. All of this is removed and the new finish applied from the bare metal up. The shop has found the use of an alkali solution satisfactory for removing the old finish.

In doing this the necessary precautions are taken, of course, to see that all traces of the paint remover are removed from the metal. As has often been said, the preparation of the car for painting, especially with pyroxylin finishes, is the most important operation, as the finished job depends almost entirely upon this preliminary work. Although there are various ways to protect the

Louis Shuh and two of his mechanics.

Before this year is up the dealer who operates this establishment in a town of 2000 will have repainted 50 cars with pyroxylin finishes

windows and other parts of a closed car prior to the spraying operations, it seems the application of paper with gummed tape is the most popular. It is used in Mr. Shuh's paint shop.

He carries in stock an ample supply of paint materials and by means of a special chart is able to duplicate practically any color. Cadillac may have a certain gray and Hupmobile a brown, for example, and these Mr. Shuh's shop is able to duplicate exactly. The makers of the paint material supply the necessary instructions to properly mix the materials to secure specified colors. Thus far, Mr. Shuh has found his customers preferring gray-greens and dark colors.

There is probably nothing which detracts so much from an otherwise good paint job on a motor car as dented and rusted hub caps and other parts usually finished in nickel or some other bright metal. Consequently this shop tries so far as possible to sell the car owner a set of new hub caps and similar parts, which, when applied to the newly painted car enhance the effect and in reality make the car appear like a new one. It has been Mr. Shuh's experience that usually a car owner who has his car repainted is not hard to sell on the idea of new hub caps and such defaced parts which the eye readily catches by virtue of contrast with the new finish on the body and wheels.

Probably one of the most outstanding reasons why this dealer is successful in this small Iowa town is because he is a good mechanic aside from a good business man. Although he does not pass himself off as an automobile painter, he does know how the work ought to be done. He is business man enough to appreciate the fact every car his paint shop turns out is advertising for him and he cannot, therefore, use inferior materials or poor workmanship. Every job must sell the next one.

He thinks dealers are overlooking a good bet if they are not refinishing cars in their establishments, and especially used cars they have on the floor. It is not always necessary to take off all the old paint on a used car as some mighty fine jobs have been turned out by shops using the old undercoats.

It is entirely possible for the paint shops in the larger cities to sell their customers a high class job which runs into considerable money, but it is quite a different problem with the dealer in the small town. His customers are different. They are not always so exacting and if they are assured of a reasonably good looking and lasting paint job at moderate cost, that's what they are willing to pay for.

But almost every time a paint shop puts a pyroxylin finish over the old coats, it takes a chance. To be absolutely on the safe side all the old finish should come off. That's why you find men like Mr. Shuh selling their customers on a quality job, rather than on a job about which there is some doubt as to its lasting qualities.

The paint department of Mr. Shuh's establishment rounds out his business. Thus, in addition to being able to sell service and maintenance on car finishes, he also does a general line of machine work, welding, cylinder grinding and storage battery work. Normally he has four mechanics and one painter.

Gardner Six Anniversary sedan, a four-door model, listing at $1,595 f. o. b. St. Louis. It is the lowest priced Gardner closed model ever built. Mohair upholstery is used and all windows are of plate glass operated by rotary lifts. Satin finished hardware is used throughout. All instruments, including a gasoline gage and heat indicator, are grouped under a single glass panel on the dash and indirectly lighted

Storage Space for 2,000 Cars

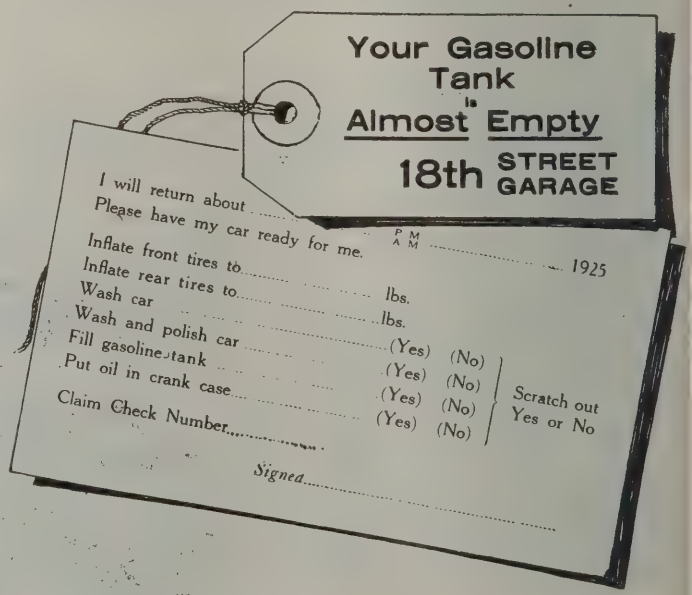
Eighteenth street garage at St. Louis which houses 2,000 cars

And Service for Sale at a Profit

COVERING a square block, with 266,000 square feet of flour space, the new Eighteenth Street Garage was recently opened in St. Louis with storage space for 2,000 cars.

But this huge institution is not merely a motor car stable—it is a merchandising institution where extensive service for car owners is sold at a profit.

The building is bounded by Eighteenth, Seventeenth, Chestnut and Pine Streets, and is two blocks from the Union Station and within a few blocks of the downtown business district. It is four stories high on the Eighteenth Street side and two stories high on the Seventeenth Street side where the ground elevation is considerably higher than at Eighteenth Street. A number of stores, including some devoted to automotive merchandise, occupy the front part of the ground floor.



The garage service includes washing and polishing, inflation of tires, and gasoline and oil. Cars stored are always inspected and those found with gasoline tank less than one-fourth full are tagged to call the owner's attention to this condition and to the fact that he can replenish his supply at the filling station as he drives out.

When a car is stored by a traveling salesman or other person for a considerable time the owner is provided with an addressed and stamped postal card with blanks to be filled out to notify the garage when he will call for the car and what he wants done to it. This enables the garage to have the car ready for immediate delivery in condition to start on a long drive.

Storage rates in this garage are 50 cents for overnight and 25 cents for the day hours.

The accessibility to the business district is a strong inducement to those who drive to work to park their cars in this garage during the day. The small amount charged for storage also is a factor which has made for increased profits for the garage.

The proprietors are strong exponents of the doctrine that distinctive service makes for satisfied customers and incidentally increased balances at the bank.

Owner is supplied with this card to mail to notify garage when he will call for his car; the tag is attached to steering wheel of car whose fuel tank is less than one-fourth full

Bring on Your Used Cars!

Dealers in the Nation's Capital are "Bulls" on This Market

WASHINGTON'S used car market is enjoying excellent health, thank you!

No magic panaceas have been developed and registered in the nearby Patent Office for the exclusive use of automotive dealers in the District of Columbia.

Instead, they're simply applying sound business principles to the handling of one of the trade's bugbears.

One of the most prominent and successful dealers, Raphael Semmes, president of the Semmes Motor Company, says, "There's no difference between the used car business and the new car business that I can discover. We're making both pay us a net profit.

"As a matter of fact," he continued, "we can't get enough used cars today. Right now there isn't a used open car in our place."

The company's used car department is operated in connection with the service department, occupying a six-story garage building some two or three dozen blocks away from the new car salesrooms on Connecticut avenue.

And the president of the company makes his headquarters with the used car end of the business!

"We're buying used Dodge Brothers cars on the open market where we can get them in," he added. "On the street, or from anyone who brings one in to sell. If he doesn't want to trade it on a new car we are willing to buy it anyway.

"The answer is that we take them at our figure or not at all. Some owners, after getting our appraisal, which job by the way, is all done by one man, think they can sell the cars themselves to greater advantage. We're also willing to have them do that.

"But we tell them frankly in the first place that we intend to make a profit on the handling of every used car we take in, figuring on a basis of 20 per cent, less cost of reconditioning, deducted from the price at which we think the car will sell readily. The net amount is what the owner receives in cash or credit, as he prefers. Of course, we make a mistake once in a while and get one in bad shape."

Here another question popped up. "How do you keep up the volume of new car sales then, if any considerable proportion of the owners think your trade-in allowance is too low?"

Mr. Semmes smiled as he replied, "Our new car sales since the first of January have been 25 per cent in excess of the same period last year. Last month, only 16 per cent of those sales involved trade-ins. We thoroughly sell the prospect first on the new car. The next step is to convince the buyer that he must take the depreciation on his old car—not the dealer. Our salesmen thought that was a little stiff at first but now they're for it.

"And one more thing about our used cars. We're not selling any more 'as is' cars. If they're not worth reconditioning and putting our reputation behind, then we send them down to auction."

Another thing Mr. Semmes does because it later brings back his used car buyers as new car prospects. He writes a personal letter to every one of them after they are in possession of the car. In this letter the president of the company expresses the hope that the car will be entirely satisfactory and if it is not, invites the owner to come back and tell him so. "And once in a while they do," he said, "but it certainly is worth it."

Another veteran in the car selling business in Washington is the Lambert-Hudson Motor Company, handling Hudson and Essex.

Here the policy pervading the organization is "Buy them right and sell them quick" to paraphrase the slogan of the National Automobile Dealers Association.

All cars are sold strictly "as is" and the buyer so advised. The policy is justified, Mr. Lambert believes, because it puts in the hands of the used car buyer the vehicle he wants at the lowest possible price. Later, if he wishes to do so, he can add repairs and equipment as he may desire—many times doing the job himself.

Used cars never get a chance to accumulate in the extensive two-story garage and showroom maintained exclusively for used cars.

If a car remains without a buyer for two or three months, Mr. Lambert concludes there is something wrong with either the car or the price—and his remedy lies in the price.

Right now nearly every car coming in goes out again on the same day or the day following. Should any car prove a sticker up to the absolute four-month limit, a price is made which moves it. If a loss is inevitable, this company does not believe in prolonging it.

The same man appraises all cars offered. If the owner disagrees with the value set but wants a new Hudson or Essex, his old car is held at his price for 30 days. If it doesn't move then, the company's appraisal price is placed on the car as the sale price and it moves.

Two men sell used cars on full time. Both new and used cars are sold by the other salesmen. But they do not sell indiscriminately, for the simple reason that the salesmen do the financing—indorsing the buyer's notes. They're naturally cautious of credit risks! Down pay-

(*Continued on page 19*)

WASHINGTON, D. C., is one of the cities where dealers are getting down to bedrock business principles in handling the resale problem.

Here is an article which presents sidelights on how some of the progressive merchants in the national capital have been doing it.

No startling discoveries were revealed by the investigation of their practices, no magic wands were waved—no voodoo doctor has been on the job there. Their stories, substantially alike, simply tell of the application of practical business policies and demonstrates that practical business policies have paid.

It is worth noting that these dealers have kept their used cars moving from the first of the season. And some complain they can't get enough used cars.

In speaking of the used car business one Washington dealer says:

"The answer is that we take them at our figure or not at all. Some owners, after getting our appraisal . . . think they can sell the cars themselves to greater advantage. We're also willing to have them do that.

"But we tell them frankly in the first place that we intend to make a profit on the handling of every used car we take in, figuring on a basis of 20 per cent, less cost of reconditioning deducted from the price at which we think the car will sell readily. The net amount is what the owner receives in cash or credit, as he prefers."

LESS VOLUME *But MORE Profit* In the Tire Business

Los Angeles Merchant Deliberately Gave Up Half of His Business and Started Building Anew on a Money-Making Basis

TO sacrifice net profits in order to obtain greater volume is to invite ultimate disaster. F. J. Pullen of the Pullen Tire & Rubber Company of Los Angeles had this fact indelibly impressed upon him several months ago. Mr. Pullen has been engaged in the tire sales and tire repair business in Southern California for seven years. He built up a gross volume of nearly $70,000, but he found he was not drawing down the net profits he expected. He called in an auditor to go over his books and study his business. A few days later the auditor told him that, by improperly distributing his costs, he was actually losing money on 90 per cent of the sales that had been made to corporations. In other words, Mr. Pullen's corporation business, which represented fully half of his total volume, was transacted at a loss.

Investment of Hard Work

Many years' hard work had been invested in building up the trade among the large fleet operators in Los Angeles, but Mr. Pullen determined that he would voluntarily give it up. He was competing against exclusive distributors and factory branches, and he decided it was impossible to obtain an increased price for his merchandise. So he dictated letters to his many corporation customers, in which he explained that he had been handling their business at a loss and that he intended to discontinue it. He thanked them for their patronage and suggested that they seek other connections with some other tire house. When the last letter was in the mails, Mr. Pullen had relinquished about $35,000 worth of gross business—but he was also releasing the cause of an unhealthy situation in his establishment.

Today, he is doing about half the business he formerly handled, and yet he is making more net profit. He now caters only to the retail trade, and has gone in extensively for tire repair business. He has cut down his overhead and operating expenses, and has installed an efficient cost analysis system which shows him every month just where he stands.

"I am thoroughly convinced that volume is the most meaningless thing in the automotive business," said Mr. Pullen. "If every tire dealer would stick to a profit-producing basis of mark-up on his goods, and would not go madly on the quest for big volume, the tire business would certainly be in a much healthier condition than it is today. Where would other retail institutions get off if they practiced such slipshod methods in doing business as is common with many tire houses in every community? I can talk frankly on this subject because I used these slipshod methods. I was chasing the rainbow for big volume, just like the others. And I was kidding myself in the belief that I was building up a nice big business, just like many others. But that auditor I called in gave me a new perspective. I looked at my business on the books, rather than at the activity that was taking place in my establishment. And in so looking, I discovered a lot of things that I did not know existed.

"After deciding to give up the unprofitable corporation business, I moved my establishment and centered my efforts exclusively in developing the retail trade. And today we are making net profits from every tire sale and every tire repair job because we know our cost of doing business. We no longer are in the market for big volume, unless that big volume can be won with an established return in the way of net profits. We have learned the wisdom of turning away trade that is not attractive."

Mr. Pullen's new shop is equipped throughout with the very latest facilities for quick and efficient tire repair work. About 40 per cent of his total volume is now represented in retreading, vulcanizing and general tire repair. The other 60 per cent is in the sale of new tires.

Another change in business policy made by Mr. Pullen when he determined to place his establishment on a thoroughly efficient basis was to discontinue the practice of credit extension. During one year when he catered to the corporation business he lost $600 as a result of three bankruptcies among his customers. Now he has no credit losses because he makes no exceptions to his "no-credit" policy.

(*Continued on page* 19)

Two examples of post cards used by Mr. Pullen to bring in profitable tire business. He makes his repair department not only produce a profit but also cultivate customers for new tire sales.

They Sell to Farmers—A Car A Day

(Continued from page 11)

if there are any sales of farm property or any changes in the status of our prospects we so indicate it on our cards. In this way we know that our records are accurate all the time."

Four salesmen are employed by the Oxnard dealer, and all work on a straight salary with bonus given for exceeding quotas assigned, The salesmen own their own cars and are allowed a straight $20 a month for operating expenses.

"We have found the salary is the best basis of compensation for salesmen in the small town," says Mr. Taylor. "When we tried straight commission, we had a big turnover in our sales force. Since we switched to the salary with bonus, we keep our salesmen and we have good producers. With salary-paid salesmen greater co-operation is obtainable all the way around. We frequently advise a salesman to release a certain prospect and give him to another man for various reasons. For instance, one salesman may make three or four different calls on a certain farmer but has been unable to sell him. Yet the salesman feels confident that the man is still a prospect. He is satisfied the farmer actually has the desire and the money to buy a car. The salesman in reality may have convinced the prospect that his car fits his needs, but the prospect has said 'No' so many times that his pride simply won't let him say 'Yes.' Now, then, we recognize this bit of sales psychology, and we never discard a prospect until after we have sent another salesman for a final call. Many are the instances where the new salesman making the final call on a prospect will get the order, where the four or five calls of the other salesman failed—failed because the prospect's pride refused to let him yield from a negative to an affirmative attitude, although he was really sold by the first man."

Free Inspection Service

Every purchaser of a new car is urged to have two free inspections after delivery, one at 500 miles and the other at 1,000 miles. As evidence of the sincerity of the dealer to have the cars of their customers broken in right, Mr. Taylor says he sends out a service wagon whenever an owner reports he cannot drive into town himself. The service car tows in the owner's machine for the inspection and delivers it back to the customer.

Bring on Your Used Cars

(Continued from page 17)

ments of 30 per cent to 40 per cent are always required, with the balance payable in ten months.

Stepping to another price class, the same questions about used car disturbances were put to Rudolph Jose, president of the Washington Cadillac Company—also of long and excellent standing as a veteran dealer.

"Our chief difficulty is in getting people to realize that we're selling other than used Cadillacs and cars of similar price. Naturally we have nearly all kinds of cars offered in trade, but the average used car buyer doesn't appreciate that fact."

Pointing to a couple of Cadillac cars two or three years old but in excellent condition, he continued, "We recondition all of them now that warrant it and there is the result. We have many customers who come in and buy a car like that, use it for a year or two and then buy a new one.

"Another curious thing is that some of our new car prospects turn out to be used car purchasers."

Careful credit investigation plays almast as large a part in used car sales of the Washington Cadillac Company as does actual selling. Long time payments are granted only where there is sound credit and good reason for giving them, as sometimes happens when the car represents the owner's business.

That the "junk" car is the greatest "bug" in the used car business today is the belief of the head of the Justice Motor Company, handling Willys-Knight and Overland cars.

"We have less trouble buying in at the right price, the car for which we allow around $500 or $600, than we do with the car which is six or seven years old and worth but $50 or $75," Mr. Justice said.

Views quite similar to the foregoing were expressed by other dealers interviewed.

Less Volume But More Profit in the Tire Business

(Continued from page 18)

"We lost very few customers when we went on a strictly cash basis," says Mr. Pullen. "It is not difficult to get the money when a sale is made. If the customers know you allow credit privileges, they will in many instances take advantage of it, but when they are informed that sales are made only for cash, it is not offensive to them, because they realize the wisdom of this policy in the conduct of their own business."

Mr. Pullen offers free tire inspection, and also gives free wheel service. He does not give any further guarantee on new tires than that which the manufacturer advertises. On retreads he gives a guarantee of 5,000 miles, and he guarantees section work done at his shop to outlast the tire.

He has sufficient space in his new establishment to service seven cars at a time, with ample parking space for seven others without congestion.

Mr. Pullen keeps a close check on the frequency of visits of his regular customers in order to acquaint himself with those who apparently are giving their patronage elsewhere. To all customers who have not come in for any service after two months, he sends a card carrying an illustration of a Chinese, with the heading, "Long Time No See—How Come?"

Mr. Pullen personally receives nearly all the customers who drive in his establishment. Inasmuch as his business bears his name, he believes it of advantage to impress his personality upon the customer.

"I used to think that price was the dominating factor that swung business to a tire house, or keep it away, but I have completely discarded all ideas along that line," he says. "Of course, there are a large number of automobile owners who make purchases only on the basis of price, but there is a mighty large field of owners to be cultivated who respond to the quality and service appeal. And by efficiently catering to these owners, a tire house can make reasonable net profits."

Marmon Has New Four-Passenger Victoria Coupe

THE Victoria Coupe for four passengers has just been announced by Nordyke & Marmon Company, Indianapolis, Ind. Ample leg room has been provided without sacrificing a sociable seating arrangement or in any way giving an appearance of bulkiness to the car.

As in other models of the Series 74 line, the sun visor on the Victoria Coupe is a continuation of the top line. The windshield is in one piece, giving an ample view in all directions and insuring safety. The rear quarter is in black rough-grained leather with landau irons on each side. Distinctive type rear quarter windows have been provided with provision made for lowering the right rear quarter glass. The glass in the two doors lowers flush with the sills.

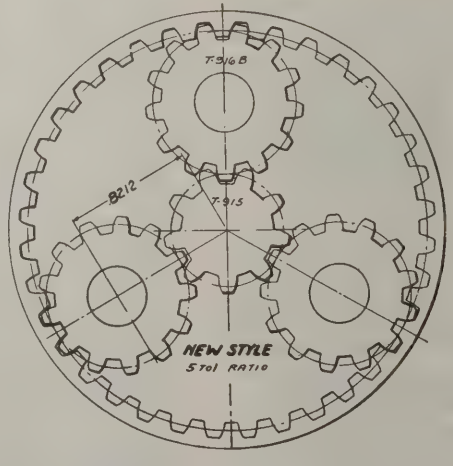
The driver's seat can be reached from either side of the car and to the right and a few inches to the rear of it is a comfortably upholstered seat for two passengers. Directly in the rear of the driver's seat is a storage compartment for small parcels. An auxiliary seat, is located to the right of the driver's seat and folds snugly under the cowl when not in use.

Ample storage space has been provided. In addition to the parcel compartment in the interior of the car, there is a large rear deck compartment suitable for carrying luggage, sports equipments etc. An attractive feature for golfers is a golf bag compartment of generous proportions in the left corner of the rear deck which extends beneath the seat and is so constructed that the golf bag and sticks can be carried safely without interfering with the use of the rear deck for other storage purposes.

The Victoria Coupe is upholstered in broadcloth of a pin stripe, brown pattern. Three color combinations of Duco are offered.

Marmon Victoria Coupe, a four-passenger model mounted on the Series 74 chassis

New Type Ford Transmission Bands Simplify Replacement



New type transmission bands simplifying replacements and steering gears of 5 to 1 ratio making for easier steering are now fitted on Ford cars and trucks.

It is no longer necessary to remove the transmission cover to change the new type of bands as a detachable ear on one side allows the bands to be withdrawn and replaced through the transmission cover door. The ear is held in place by means of studs in the ear slots, the shoulder of the ear snapping over the end of the brake band, holding it securely in place.

To remove the ear, it is only necessary to insert a tool which is made by bending over the end of a screwdriver one quarter of an inch, through the end of the ear into the square hole in the end of the brake band, lifting up on the tool and forcing the band down and the ear back. After the nuts, washers and springs have been removed from the pedal shafts, the reverse and brake pedals should be pulled out as far as possible, removing the ears as explained. The bands may then be withdrawn from the right side permitting them to follow close to the cover to prevent their distortion.

New transmission bands now used on Fords

The 5 to 1 gears replacing the 4 to 1 gears of the Ford steering gear

Where a car is equipped with the old type of bands, the transmission cover must be removed. The slow speed shaft must be cut off about 7/8 in. from the shoulder and a new type slow speed adjusting screw installed.

Steering gears of 5 to 1 ratio, which were originally installed only in cars equipped with balloon tires, are now being used on all cars regardless of tire equipment. A new steering wheel, 17 in in diameter is used with the new steering gears which together with the increased ratio adds materially to the steering control. The gears used in the new 5 to 1 steering gear are not interchangeable with the old 4 to 1 type and it is very important that mechanics be apprised of the difference of the gears of the two ratios to prevent accidents due to locking.

AUBURN ADDS MODELS

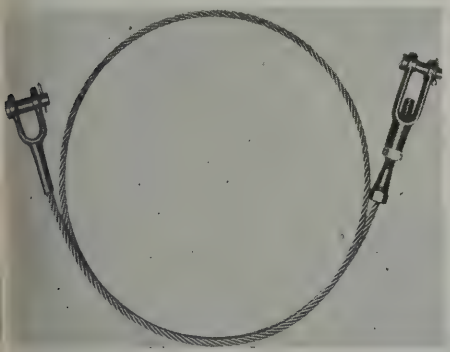
AUBURN, Ind., Aug. 15.—The Auburn Automobile Company has announced the addition of touring cars to both its 6-66 and 8-88 lines. The 6-cylinder touring car is priced at $1,395 and the 8-cylinder touring at $1,995. The equipment on both models includes sun visor, windshield wings, front and rear bumpers, spare tire and cover, and motometer. The finish is a two-tone lacquer and genuine leather upholstery is used.

Seifert convertible seat for automobiles, showing how the back of the front seat is lowered to bring it in alignment with the rear seat cushion. The support for the rear seat cushion also is tipped slightly forward to form a pillow-like structure

Seifert Convertible Automobile Seat

A RATHER novel seat construction for motor cars in which the seat back of the forward seat is so built that it can be readily placed in alignment with the seat proper thereby converting the interior of the vehicle into a sleeping compartment, has been designed and patented by Henry Seifert, 7035 Greenview avenue, Chicago.

The design of the seat is such that it can be applied to a single front seat or to the folding chair type of seat commonly furnished in closed cars. In the latter case it is therefore possible to make one half of the car interior into a sleeping compartment or the entire interior at will.



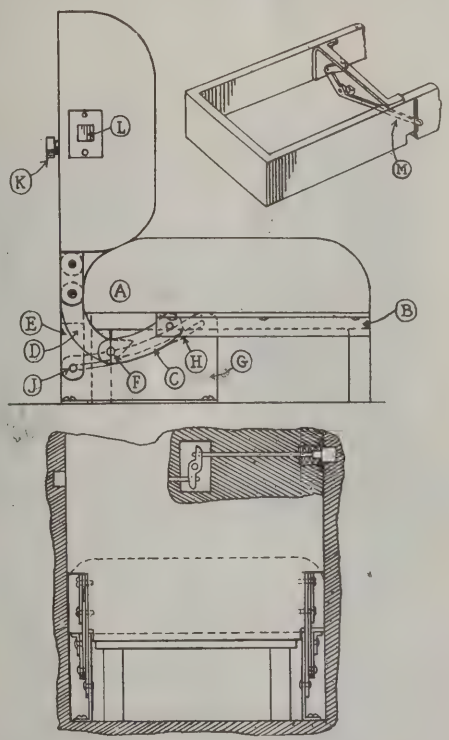
The general layout is shown in the cross sectional views in which A represents lugs supporting the front edge of the seat. Extending along each side of the seat is a bar B and pivotally connected to the inner end of each bar are the curved links C, the outer end of which is connected to D. Parallel bars E extend down the back of the seat and the end of the links D opposite its connection at F with the links C is connected to the bar E at each side of the seat back.

Below the seat and on each side is an angular plate G the vertical flange of which has a slot H cut into it for the pin J in which the latter rides. These two guides determine the position of the seat when it is folded back.

In the back of the seat is a knob K which actuates a spring catch L on each side of the seat. The catches normally engage in recesses cut into the pillar for the doors of the car or wherever they may be conveniently placed. Whenever it is desired to lower the seat backs it is only necessary to release the catches with the knob and drop the backs, during which process the pins J traveling in the slots move the links C and D toward each other.

The rear seat of the car is loosely mounted in order that it might be raised or lowered to provide a pillow-like structure. Adjustment of this is accomplished by a lever M placed in the seat riser. Moving the lever down raises the seat.

The Seifert convertible seat has been brought out particularly to meet what seems to be a more or less increasing demand on the part of the motoring public for a quickly convertible seating arrangement whereby the car may be used for sleeping purposes. The construction is said in no way to interfere with the conventional looks or seating arrangement of a car.



Tru-loc fittings attached to Tru-lay wire rope to be used for operating brakes on motor vehicles

New Cable and Fittings for Motor Car Brakes

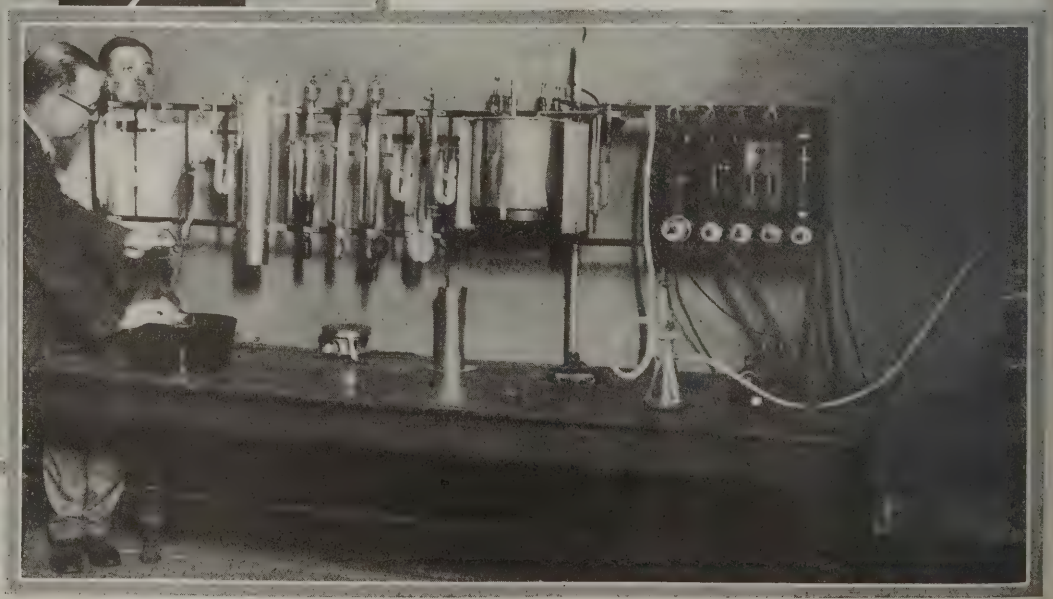
New possibilities in cable for automobile brakes exist in the new Tru-lay wire rope and Tru-loc fittings developed by the American Cable Company, New York.

The new brake cable represents a basic change in wire rope making. Each wire and strand is preformed to the exact shape it must assume in the finished rope. Because of this new principle, the wire and strands resist unstranding. The new rope has greater stability and retains its length and diameter better under normal loads.

The new Tru-loc fittings are mechanically applied. They are in the form of a steel sleeve slipped over the unseized end of the rope, a mechanical process flowing the metal down upon the rope. The cable is supplied in correct lengths ready to install for each make of car with fittings especially designed for the brakes in question.

Sectional view of the Seifert convertible seat, showing the general layout of the brackets and sliding members. The reference letters are referred to in the text

PLANE USES NEW FUEL

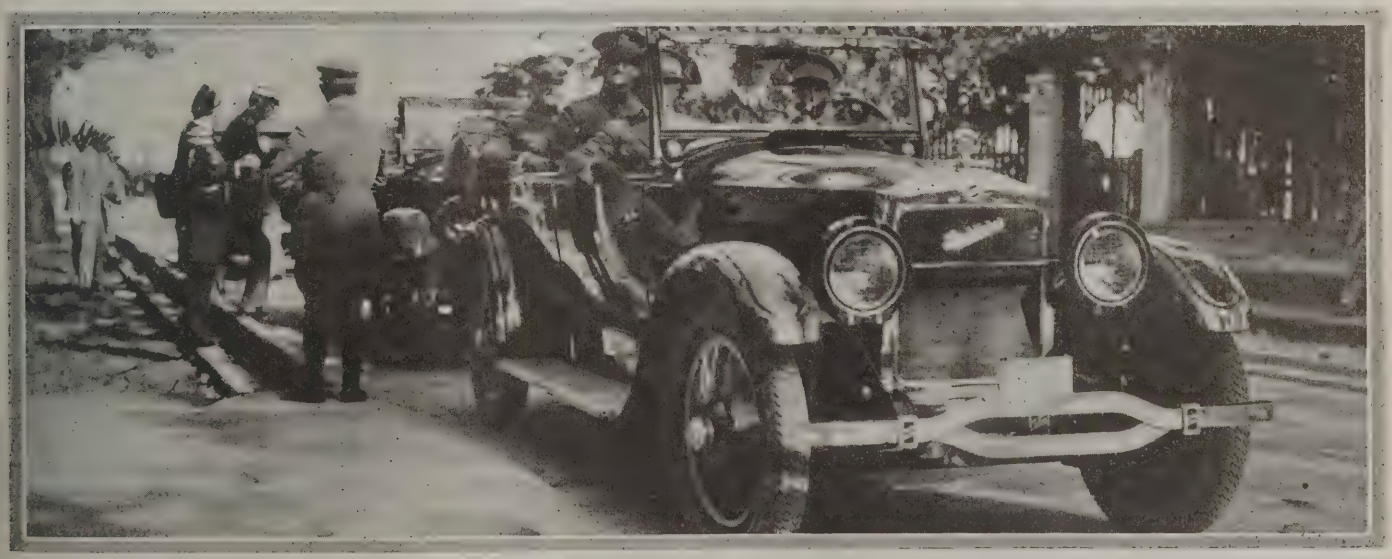


SPOKANE, Wash., Aug. 15.—Lieutenant Nick Mamer, 116th Observation Squadron, National Guard, and a government forest patrol flyer, recently flew a biplane from Spokane to Wallace, Idaho, a distance of 90 miles, in one hour, using an alcohol-base fuel made from cull apples and potatoes. A factory has started production of this fuel here.

MOTOR AGE'S PICTURE PAGES

COMPLETE NON-STOP TRIP. The photograph shows Lieut. Leigh Wade, one of the Army Round-the-World fliers, with his companion, Linton Wells, as they shook hands in the midst of a great crowd at Broadway and 57th street, New York, at the finish of their record non-stop automobile trip across the country from Los Angeles. A Packard eight was used.

AIR TESTED FOR CARBON MONOXIDE. Frederick Kenney, chief chemist, New York City, and Frank Gottisch, working on apparatus they will use to test air on Fifth avenue to determine amount of carbon monoxide discharged from motor exhausts.



OF AUTOMOTIVE INTEREST

THEY KNOW BEANS. In a motor sales contest recently the side that lost was required to feed the winners with turkey, while they themselves were to eat an entire meal of beans. Members of the sales force of the William L. Hughson Co., San Francisco, won. The losers were the sales force of Bert Moeller, Inc., Sacremento. Nine different kinds of beans were served.

FORSAKES THE MOVIES. Beverley H. Baird, movie double, who has given up that profession after hurting her knee, now operates a gasoline station and is shown fixing one of the many cars that come to her place.

REPRESENTS U. S. At the celebration of the 100th anniversary of the battle of Ayacucho held at Lima, Peru, were special missions from many countries. Gen. Pershing represented the United States, and is shown with part of his staff in the Studebaker which was placed at his disposal.

Questions and Answers on Dealers' Problems

BUILDING ▲ ELECTRICAL ▲ FLAT RATES
SHOP ▲ LEGAL ▲ PAINT & TRIM ▲ ACCOUNTING

From Brakes to Wiring

Q—I would appreciate it if you could answer the following questions in regard to a 1917 model 22-73 Mercer sport touring. The brake, that is the service brake on the back of the transmission was relined and it now has a grinding, rattling noise when the brake is applied and the car is in gear, but when put in neutral and applied when coasting it is quiet.—A. F. Thedorff, 1727 Orange Avenue, Long Beach, Calif.

The noise in the brake is due either to looseness of the transmission main shaft or to backlash some place in the rear axle. Our guess is that the trouble is in the transmission which should be examined carefully and all abnormal up and down and end play removed by adjustment or replacement of bearings.

Q—Where is the adjustment of the hand brakes?

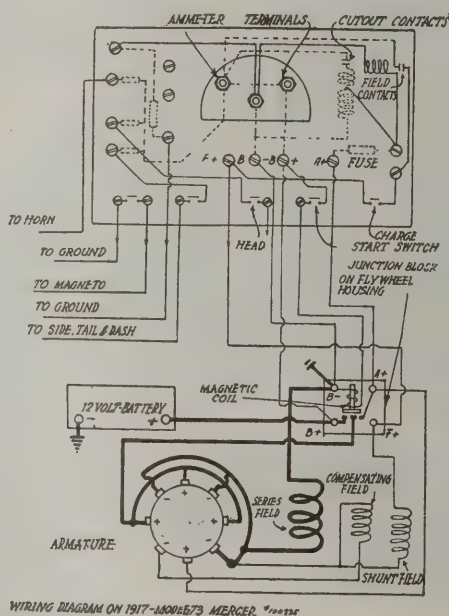
For ordinary adjustment a wing nut is provided which is accessible by removing the front floor boards. In other words the wing nut is mounted at the forward end of the hand brake pull rods. If equalization of the brakes is necessary loosen the lock nut on the ends of the two rods which extend from the rocker shaft to the brake levers. Then turn rods which are provided with right and left hand threads until both brakes have same tension. Then tighten lock nut.

Q—What method is used to prevent the oil from passing through the rear main bearing?

We are of the opinion that the original provision consisted of an oil slinger with a return groove in the bearing babbitt. We have been told from unofficial sources that regrooving of the bearing babbitt is necessary in order to secure a leak proof bearing, and for further details regarding the method of curing this trouble we would advise that you communicate with the manufacturers of the car, The Mercer Motor Company, Trenton, New Jersey, or with the local Mercer agent in your town.

Q—How is the motor timed in regard to valves and magneto?

Timing for Series 4



Although we do not have figures concerning the 22-73 the timing for the series 4 which is fundamentally the same is as follows: Inlet opens 5 degrees after upper dead center, and exhaust valve closes 15 degrees after upper dead center. The magneto should be set so that when the controls are in full retard position the points will just start to open when the piston is on top dead center. The recommended exhaust tappet clearance is .006 and for the inlet .004 to .005.

Q—What road speed is this car good for and how fast does the motor turn up? Also gear ratio?

We cannot give you a definite estimate of the speed of any individual car but basing the general run of this model with the average gear ratio and with conditions ideal it should show 70 miles per hour. The engine will turn up to as much as 3100 revolutions per minute approximately. There were four rear axle ratios furnished by the Mercer Company as follows: 2.76 to 1, 3.22 to 1, 3.62 to 1 and 3.78 to 1. We are of the opinion that the 2.76 and the 3.22 were the ratios used on the touring and sport touring.

Q—What size full balloon tires would you recommend for this car?

Either a 21 by 6.20 or a 21 by 6.75. In either case the standing diameter of the wheels will be so near to the original

Wiring of 1917 Mercer Model 22-73

that no noticeable difference will be found in the speedometer reading as regard miles per hour and miles traveled. As this car is powerful it probably would pay you to install the 6 ply type of balloon tire.

Q—Would the steering apparatus have to be changed? It does not steer any too easy now on the road but when the front end is raised up it seems to turn free enough.

The installation of balloon tires will no doubt increase the resistance for steering at low car speed and when parking. For straightaway driving on the road and touring speeds there will be no great difference. The ideal condition would be to increase the ratio between the steering wheel and the road wheel. For further information regarding this we would refer you to the manufacturers of the car or the local maintenance station.

Q—The generator quit working and the lights have given some trouble. In order to check up on this will you kindly supply wiring diagram?

The diagram requested is shown on this page.

Fitting of Piston Rings

Q.—What is the correct way to turn, grind and fit piston rings and is it necessary for them to be eccentric.—A. W. Taberner, 31 Jackson Street, St. Hilda, Melbourne, Victoria, Australia.

This is not a job that should be undertaken by a mechanic in a garage, for the making of piston rings is a business requiring extensive equipment. Both eccentric and concentric rings are on the market and many makes of each type are available. The piston ring should be a good sliding fit in the ring groove in the piston and it should have no appreciable up and down play nor should it bind when rotated. It should also be fit to the proper cylinder so that there is a certain gap at the end. In a Ford for example the lower ring will have a gap of approximately .003 inches, the center gap will be approximately .006 inches and the gap in the upper ring approximately .009 inches.

A Peculiar Knock

Q. I came in contact with a Willys Knight car which had a peculiar knock in the engine. I examined all main, big end and wrist pin bearings, also pistons and rings and all are in good shape. I think the knock must be in the valve arrangement. Kindly explain how to remedy this.

In Knight engines a condition is likely to be encountered which is not experienced in working on poppet valve engines. This is in connection with the head sealing ring which is a ring about one inch wide located in the extension of the cylinder head which fits inside the inner sleeve. When this ring wears loose in the groove the inner sleeve will cause it to move up and down and make a peculiar noise or knock.

A remedy which is applicable when sufficient care is used is to remove the cylinder head in question and carefully peen the portion of the cylinder head both above and below the ring. This will force the material of the head in so as to make the groove narrower and make the ring fit better. It is obvious that this work must be carefully done or the ring will bind in the groove; also if the fit is obtained by striking the head at only a few places the ring will be held due to a few high spots and will soon wear loose again.

Q.—Supply wiring diagram of a 1923 Jewett.

This diagram will be sent you by separate letter.

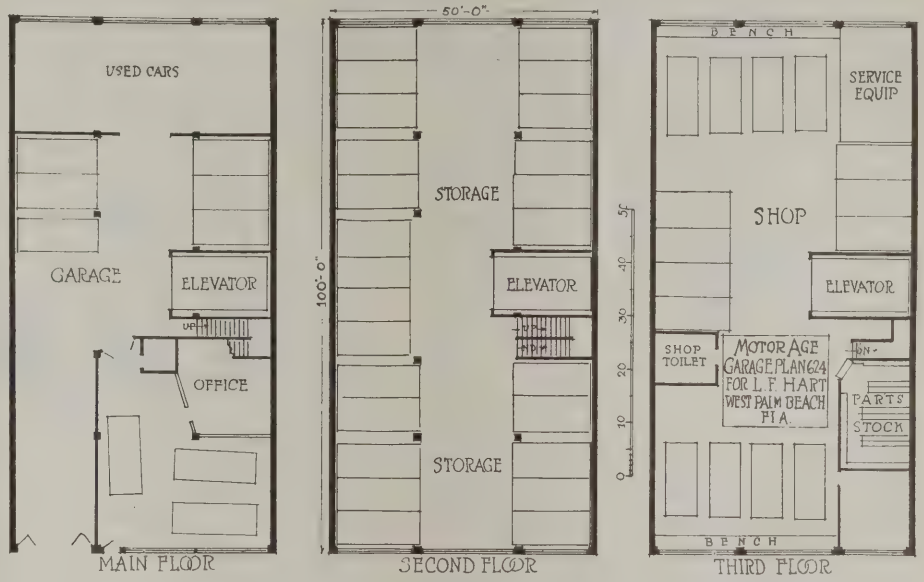
Planning Your New Building

By TOM WILDER

The READERS' CLEARING HOUSE

Land Should Be Very Valuable to Warrant Three-Story Building

Q. I am erecting a three-story building on a lot fifty feet wide facing main thoroughfare extending back one hundred feet. Want first floor devoted to showroom, offices, stock room with balance of space used for cars and storage. Entrance on left side within building. Elevator in left rear corner and would like to have second floor devoted entirely to shop, third floor for new car and dead storage. L. F. Hart, West Palm Beach, Fla.



We are sorry that your lot is not a little wider than 50 ft. for while 50 ft. is a fairly good width for a one-story building, with the attendant complication involved in a three-story building, arrangement cannot be quite so good. If the lot were even on a corner, it would be more desirable or if it were 10 or 15 ft. wider you could install a ramp instead of an elevator and this would add greatly to the speed and ease of handling cars. The position we have given the elevator is much more economical of space than the one you suggest and we believe it is just as convenient. The second floor is by all means, the worst place in the building for the shop so we have located it on the third floor, where it can have plenty of light from skylights and since the roof will probably be supported by trusses, there will be no columns to interfere with car movement.

We have shown columns supporting the floor above on the first and second floors, but these could be done away with by the use of heavy girders. The expense of the building, however, would be considerably greater, although we believe the expense would be justified.

The worst feature of the plan in our estimation, is the limited garage space on the main floor. This could be increased by moving the used car showroom, to the front part of the second floor where it could be made of better proportion, and where it would have a better location in relation to the office and new car showroom being directly at the head of the stairs.

In laying out the shop floor we have considered the forward end as being the best place for minor repairs, while more extensive operations might be handled in the rear section, where the major part of the service equipment and machinery necessary for this work is installed. The small room in front of the parts department may be adapted to almost any use such as battery repair, electrical repair welding, in fact anything that seems to be necessary in the line of cars you handle. The man operating this room or his helper, might act as stockkeeper issuing parts to the shop or to customers.

If the used car showroom were moved to the second floor the parts department might be accommodated on the main floor back of the elevator with a dumbwaiter to supply the shop, but this would necessitate a special stock keeper and should be determined by the volume of your parts sales. If the sales are light we would prefer the third floor location.

Even With an Elevator a 50-foot Lot is Rather Cramped. If the Elevator is Turned Lengthwise it Fills Too Much Space

Removal of Clutch Springs

Q.—Again I wish to praise MOTOR AGE for the limitless amount of practical information I have received from the Clearing House. I also wish to express gratitude which I feel for same. I have taken the liberty to ask the following questions. Are the transmissions and clutches interchangeable on a 1919 and 1922 Cole?—Richard E. Saunders, Charlton, Mass.

According to information supplied by the local Cole maintenance organization, the 1919 and 1922 clutch and transmission are interchangeable.

Q.—How are the clutch springs removed? They seem to be difficult. Give any information necessary to accomplish No. 1 question.

Clutch springs are anchored by means of a cupped washer and a grooved key similar to the method of locking used on engine valve stems. As the springs are not very stiff it is possible to compress them by hand, push the cup washer forward and remove the locking washer, which will allow removal of the spring. The transmission and clutch assembly are removed in the same manner as you would remove any other assembly.

It is, of course, first necessary to disconnect the front end of the universal joint and the various brake rods and the transmission shifting lever. When this is done and the bell housing bolts removed and the clutch springs removed it is very easy to withdraw the entire assembly.

Q.—How much would be safe to remove from the cylinder head to increase compression, as you last advised me. This is on a 1922 Cole, serial number 61420.

We would advise removal of 3/64 of an inch from the head.

Q.—The 1919 car in question has the serial No. 55542, and the 1922 car has the serial number 61420. Are these cars of the year I have stated according to serial numbers.

According to our records Cole car bearing serial No. 61420 is a 1920 model. The car bearing serial number 55542 is a 1919 model.

DATA ON COMPRESSION RATIOS

Q.—What is the compression ratio of the 1924 Chevrolet?—Chas. W. Ralstin, 1049 Hosbrook St., Indianapolis, Indiana.

4.3 to 1.

Q.—How high could the compression ratio be raised safely in a stock car?

Approximately 5 to 1.

Q.—How much metal would have to be milled off the block to obtain a ratio of 5 to 1? 6 to 1?

Enough metal should be removed so that the volume of the space above the piston at top center be exactly 1/5 of the total volume when the piston is at bottom center. With regard to raising the ratio to 6 to 1 it is necessary to bring the ratio to 16 2/3 to 100 or 1/6.

Q.—What would be the approximate cost?

The cost of the work after the engine has been brought to the planer or milling machine should not be over $10.

Q.—Would increased compression give greater gas mileage?

Theoretically, yes. In practice we can not state.

Q.—Would the stock cooling system prove adequate in cooling the engine?

We cannot state definitely.

Clearing Up Electrical

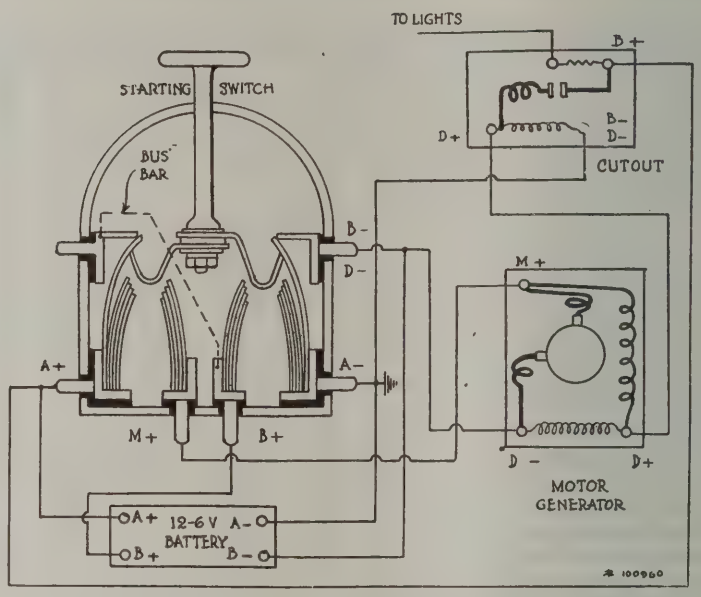
The READERS CLEARING HOUSE

EDITED BY A. H. PACKER

North East Motor Generator Circuits

Q.—Show a sketch of the internal circuits and connections of the North East motor generator used on 1915-1916 Dodge Brothers cars. This motor generator has a cutout and regulator in it. We have one of these machines in our shop and it will not open the battery circuit when the engine stops, but keeps right on drawing current from the battery until the battery lead is disconnected. The cutout seems to act normally and the wires do not seem to be burnt in any way. It will not help to put paper between the regular points and between the contact points. As soon as the battery is connected the generator will start to draw current and operates as a motor with the chain off. The starting switch cables are disconnected.—Leaf Mountain Garage, Clitherall, Minn.

The first thing to do would be to carefully check the connections and make sure they are correct, for under some circumstances, improper connection may make the machine operate as a motor. When you are sure that these connections are correct, it would be well to disconnect the two medium heavy wires shown connected to the cutout. One of these is attached to terminal A and the other at terminal C.

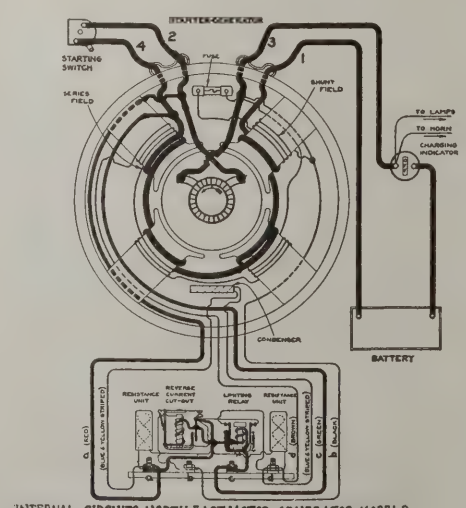


If you disconnect these and find this overcomes the trouble it shows that there is a short circuit in the cutout or in the regulator. With correct connections we have the No. 3 battery wire going to the left hand main brush, but we have the No. 1 battery wire going through the series field, but making no connection with the other brush until either the starting switch is closed or the cutout points are operated. It is therefore easy to see that if these connections are correct there must be something completing the circuit of the No. 1 battery wire to the right hand brush. One way of locating trouble of this sort is to disconnect the various parts of the circuit and then use 110 volt test points to see if any portions are connected which should not be.

For example, with the wires removed from the A and B regulator terminals you could put the 110 volt points on these terminals, and the lamp should not light up. The lower contact of the cutout should be insulated from the upper one and if this insulation is defective, it would cause the condition you describe. Additional information on this system was given on page 52 of November 6th, 1924, issue of MOTOR AGE, the same diagram being shown at that time.

AN OLD TIME SERIES PARALLEL CIRCUIT

Q.—Please send us a wiring diagram for Model 5 Dort, 1915. We have copies of MOTOR AGE since January 1st, 1924.—Auto Wrecking Company, Gatesville, Tex.



This is a diagram worth keeping so we are publishing it at the top of this page.

Splitdorf series parallel switch used on several old-time cars

To Make the Machine Generate Higher Voltage

Q.—We have a 60-volt 33 ampere Imperial Electric Co. compound wound generator. This machine is driven by a 5-h.p. motor at a speed of 2500 r.p.m. The rated speed of the generator is 2250. We desire to obtain 100 to 110 volts with this machine. We are using it for charging batteries and lighting purposes. Due to irregular current supply from the local power plant the voltage output often gets below the battery current, causing a reversal of polarity. The cutout in the charging line does not work fast enough to prevent this. We have overcome this by cutting out the series winding and running the generator as a straight shunt machine. The present shunt field coils are coupled in series. What effect would it have on the output to couple them in parallel? Can the voltage be raised by winding more wire on the present shunt field coils? Room for this would be available by removing the present series winding from the pole pieces.—Lyells & May Auto Co., Cascade, Idaho.

INTERNAL CIRCUITS NORTH EAST MOTOR GENERATOR MODEL D 1915-16 DODGE

We believe that you can increase the output of this machine by adding as many additional turns to the shunt field coils as the space permits. This means that space made available by removing the series winding will be filled up with additional shunt turns. You will then find that the resistance is considerably higher than at present and that it will be preferable to connecting the fields in parallel. If there are four field poles there will be two pairs of poles in series and these two pairs will be in parallel, so that the field current divides and half of it goes through one pair of coils and the other half through the other pair of coils. We assume that at present there is just one path and that all four field coils are connected in series. Without knowing the magnetic characteristics of the machine it is impossible to state exactly what will happen, but we believe this will give you approximately what you want.

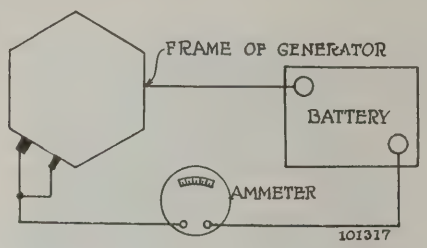
Eccentric Commutator will Make Generator Cut Out

Q.—What causes a North East generator from a 1919 model Dodge Brothers car to reduce the charging rate to zero and cut out entirely when the car gains a speed of 30 miles per hour? The armature was out of round, and we had it trued up and new brushes put in.—Reckelberg Garage, Luxemburg, Wis.



You may have turned the commutator without seeing that the surfaces on which the inner bearing races are supported were turning concentrically. This would mean that while the commutator would be turned round, it would run out of true. This would have the effect of throwing the brushes off of the commutator at high speed. Who ever did the machining on this commutator will know whether he first checked up the bearing races to see whether they turned concentrically or not. A recommended procedure is to turn these armatures by using the bearings themselves, as the centers of rotation, but this makes a complicated machining job.

If this is not the trouble, then there is doubtless trouble in the armature which only shows up at high speed when centrifugal force throws the wires outward and possibly produces a short circuit. Another possibility is that there is intermittent trouble such as a ground in the rocker ring or brushes which only shows up when the engine is rotating and vibrating. To test the armature you can run the machine on a test bench without any current in the shunt field winding. Then a delicate voltmeter can be connected to the two main brushes and the voltage should increase in exact proportion to the increase in speed. If at some speed the voltage suddenly drops off it will show either armature trouble or an eccentric condition which is throwing the brushes from the commutator.

If the trouble is due to eccentricity you can probably check by removing the commutator cover and pressing on the brushes with the fingers, to see if it again causes the machine to generate. This can be done with the car standing still and the engine running at a speed which is the equivalent of 30 miles per hour.

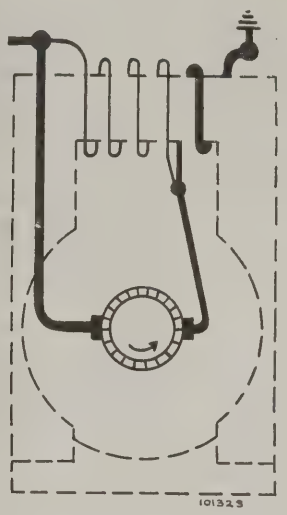
Another possibility is that when the armature was turned it was poorly undercut so that portions of the mica extend up to the surface of the commutator and cause the brushes to make poor contact. Poor spring tension would also cause the brushes to make erratic contact with the commutator.

In putting in new brushes it is essential to get those of the right grade, and it is also necessary to have them correctly installed. The yellow ones which contain the most copper are the main brushes while the black one is the third brush.

Connections for Maxwell generator used in charging radio batteries

The Connection Must Be Right

Q.—We have a Simms-Huff Motor generator that we purchased second hand and wish to use for charging 6-volt radio or automobile type batteries. It will not generate any current but runs very nicely as a motor when connected to a storage battery. Could you suggest the nature of the trouble?—Willard Griswold, Duplainville, Wis.



We are showing an illustration of a circuit that we think will be effectual in enabling you to charge a battery from the Simms-Huff motor generator. There are two terminals on this machine, as we understand it, one being connected to three brushes and the other being connected to the field. As you are operating without a regulator you will need to connect these two terminals together and then run a connection to one side of an ammeter. The rest of the circuit is evident from the sketch . The machine should run as a motor when connected in this way and you should then drive it in the same direction only faster.

When running as a motor the ammeter should show discharge, that is with the needle going to one side of the scale, and as you increase the speed by driving the generator the needle should come over to the other side of the ammeter scale, showing that you are getting charging current to the battery. You probably connected one battery post to one generator terminal and the other battery post to the other generator terminal. This operates the machine as a series motor, but it will not generate when connected this way.

Armature and Field Burnt Up—Otherwise Normal

Q.—I am having trouble with an Autolite model G. A. generator used on a model 89-6 Willys Overland. This generator seemed to quit while on the road without any excess heat, but on examination it appeared to be pretty well charred, so I decided to have the armature rewound, but it did not do any good, so I opened the field and found it charred and burnt pretty badly, so I rewound the field myself using wire the same size from another generator. This wire seemed to be all right and while I did not count the turns I put in about the same amount, but did not get any results. Now I would like to have your opinion on this generator and also would like to have an internal wiring diagram of the machine.

The shunt field may be shorted as I used enameled wire and some of the enamel chipped off. The generator seems to build up a small amount at times, but not enough to operate the cutout. It works as a motor and runs at a fair rate of speed.—Clarence Long, Kenton, O.

Circuits of Autolite G A. generator

We are showing a diagram of the internal connections of this machine. It has both a shunt and a reverse series winding, although it would operate as a straight shunt machine except that there would be no regulation and it would send out too much current at high speed. The shunt field should draw about 1.4 amperes on 6 volts and you can make this test to see if the field is badly shorted or not. A slight short in the field winding would do no harm as it merely draws a little extra current and cuts out a few turns, but gives approximately the same number of ampere turns. We would say that if the field current is less than 2 amperes, that the machine should generate.

You should drive it as a generator in the same direction that it runs as a motor. One possibility is that you are driving it the wrong way or that the shunt field is wound in the wrong direction. Winding the shunt field the wrong way may be corrected by reversing the leads at the ends of the coil. In addition to possible trouble in the field it is possible that the armature has been incorrectly wound and if you do not correct the condition readily would suggest your getting in touch with an authorized electrical service station. You should also test the shunt field to see if it is grounded.

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

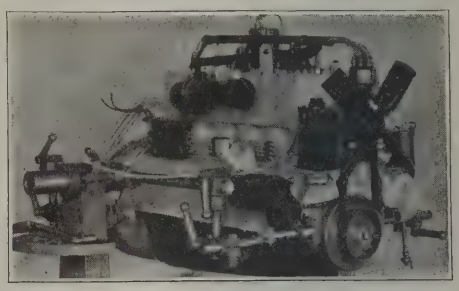
Trend of Small Town Dealer Is for Fixed Prices on Repairs

ONE of the most gratifying things to be observed at the present time is the general trend even on the part of small town dealers and shops to the flat rate system of selling maintenance work.

Only the other day the owner of a shop, who by the way handles the Studebaker car, when asked if he sells all his repair work on other makes of cars at a flat rate price, replied "Wherever possible."

Being located in a small town he naturally must work on all makes of cars to make his shop pay and since he is able to quote Studebaker owners contract prices for all work he naturally seeks to extend this to customers driving other makes of cars.

They used to say flat rates could not be established in a shop doing a general line of repair work, but this idea is rapidly becoming discarded since too many shops have shown it can be done —and at a profit.



With all the available material to be had from factories and other sources there is little reason why any shop should hold off on the adoption of flat rate. We can divide present day cars into several groups such as the eight in line, V-type eights, the sixes, fours and then with a few makes likes Franklin, Ford and Reo which have certain constructions peculiar to them only, figure out methods and prices that will accurately be in keeping with the nature of any kind of operation done on all the various makes.

We have received letters showing dealers and repairmen using Motor Age's Flat Rate Manual are having excellent results with the schedules given therein, which surely would seem to indicate that flat rate is possible on all cars regardless of the make.

Too Much Bookkeeping?

A subscriber who requests we do not publish his name says he thinks there is too much "red tape" in connection with the flat rate system, and his customers for the most part are willing to accept a maximum estimate on the work he does.

About all we can say to this is that nothing worth while ever was done without effort. Flat rate does mean system and bookkeeping and it has been the total absence of this in the past which forced a good many men out of business. The manufacturers of motor cars have done most of the work when it comes to compiling facts and figures for the assistance of those engaged in the maintenance of motor vehicles and it seems there is little excuse for any shop nowadays to attempt to sell its work on any other than a flat rate basis.

THINGS THAT HELP FLAT RATE

When engines are to be entirely overhauled or certain units taken apart, it usually is best to remove the engine from the frame of the car and place it in an engine stand. Such a stand allows the mechanic to hold the engine at any position desired and infinitely is better than trying to do the work on the floor.

Practically all car makers have a flat system or are compiling them and all the dealer or maintenance man has to do is adapt them to his conditions. Ordinary multiplication and division is about all that is needed. MOTOR AGE's Flat Rate Manual tells how to do this.

The maximum estimate plan is at best a guess and the more we eliminate guesswork both as to the nature of the work involved and the price thereof, the better.

Flat Rate or Fixed Price System

Rochester, N. Y.

To the Editor of MOTOR AGE:

I note in various issues of MOTOR AGE that you refer to the flat rate system also as the fixed price system. It seems to me it woud be a good plan if the industry adopted one or the other name. —Fred V. Miller.

It is true the work of selling service and maintenance at a definite figure has been commonly referred to as the flat rate system and fixed price system. They mean the same thing although probably the expression fixed price is more indicative that a definite charge is made for the work. It would be interesting to hear what other readers have to say about this.

Likes Flat Rate Manual

Groesbeck, Texas.

To the Editor of MOTOR AGE:

Please find enclosed money order for 50c to cover charge for one flat rate manual. We think it a fine thing and are adopting that plan.

—P. M. Dillingham.

FLAT RATES ON HUDSON-ESSEX

REAR AXLE AND DIFFERENTIAL OPERATIONS

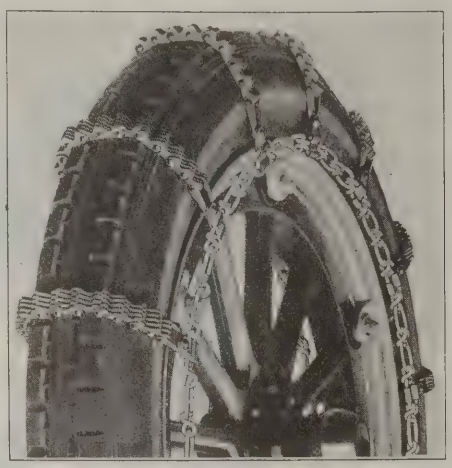
Manufacturer's Official Designation		Time Hudson	Essex 4	Essex 6
D- 1	**General Rear Axle Overhaul. Includes inspection and replacement or adjustment of all necessary parts. Use this operation when it is necessary to replace housing assembly or to remove housing for riveting or welding seams**	8½	8½	8½
D- 2	**Renew Ring Gear, Pinion Gear, Bearings and Cups. Replace ring gear, pinion gear, bearings and bearing cups, if necessary. Lubricate pinion bearings and differential housing**	6	6	6
D- 3	**Adjust Rear Exle Gears Without Removing Gear Set Assembly. Aujust pinion and ring gear**	2	2	2
D- 4	**Renew Pinion Gear and Pinion Bearings. Does not include operations on ring gear, differential or differential bearings. Lubricate pinion bearings and differential housings**	5	5	3½
D- 5	**Remove End Play in Rear Axle Pinion. Remove end play in rear axle pinion by adjustment only**	½	½	½
D- 6	**Tighten Rear Wheels on Axle Shafts**	½	½	½
D- 7	**Renew Differential Carrier Gear Set Assembly. Remove old carrier from rear axle housing, assemble new carrier to housing and lubricate**	2½	2½	2½
D- 8	**Adjust End Play in Axle Shafts and Renew Felt Washers, Axle Shafts, Adjusting Nuts and Bearings, if necessary**	1	1	1
D- 9	**Renew Rear Wheel and Inspect Axle Shafts. Replace shaft if bent and adjust end play**	1¼	1¼	1¼
D-10	**Renew Axle Shaft**	1	1	1
D-11	**Tighten Rear Axle "U" Bolts**	½	½	½
D-12	**Frozen Wheels. Add "A" to the above operation numbers and add additional time**	½	½	½

THE MARKET'S NEW OFFERINGS

Accessories—Equipment—Supplies

Eveready Windshield Cleaner

ADVANCED mechanical features are said to be found in the Eveready (Type "B" Improved) Automatic Windshield Cleaner which is being manufactured by the Apex Electric Manufacturing Company, 1410-20 W. 59th street, Chicago. A special feature claimed for this contrivance enables the driver to lock the wiping arm in any position desired. The cleaner operates from suction of the vehicle's engine, connection being made at the intake manifold or vacuum tank. The wiping arm locks up in a corner so it cannot jar down in vision when not in use. It can be operated by hand in an emergency. The instrument comes complete with necessary fittings. Each shipping carton contains 10. Price, black finish $3.50; nickle finish $4.50.



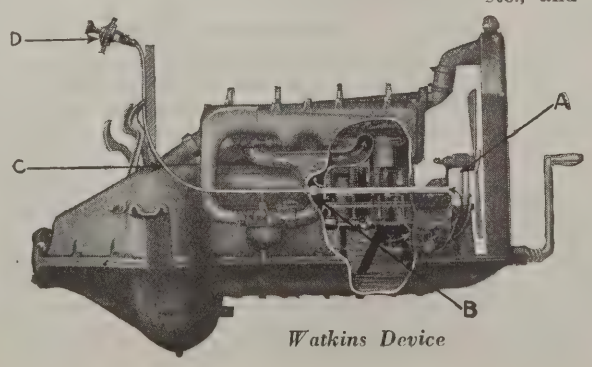
Eveready Windshield Cleaner

Watkins Device

INCREASED gasoline mileage and less crank case oil dilution are claimed for The Watkins Device which is made by the M. & M. Co., Cleveland, Ohio. It consists of a cap at A, installed over the oil filler opening in which is collected the unburned vapors which pass by the pistons into the crank case. These are drawn through a brass tube to the valve at B, which leads the vapors back into the intake manifold. A button, D, on the instrument board controls this valve through a flexible connection, "C."

The valve is opened by pulling the button and it can be regulated to feed as much or little of the vapor to the engine as is desired. By utilizing these vapors which would otherwise be lost, it is claimed that extra mileage is gained. Also that it prevents these vapors from mixing with the crank case oil and diluting it.

Installation is said to be simple and not to require more than half an hour. A $\frac{7}{16}$ in. hole must be drilled in the intake manifold and a hole through the dash to take the flexible control. Its installation does not interfere with filling the crank case with oil in the usual manner. At present it is made only for Fords. Price $5.

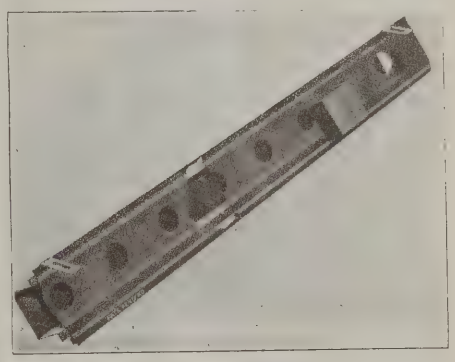


Tiger Claw Chain

Keeping Up Contact With Buyers

"Owner satisfaction" is getting to be an important term in automobile selling. Keeping up contact with owners is getting to be an important part of the motor vehicle merchant's operations.

In some instances automobile dealers assign special men to keep in touch with owners, not primarily as salesmen, but to inquire as to the owner's satisfaction with the car he has bought. This interest pleases the owner and in many instances leads to further business with him.



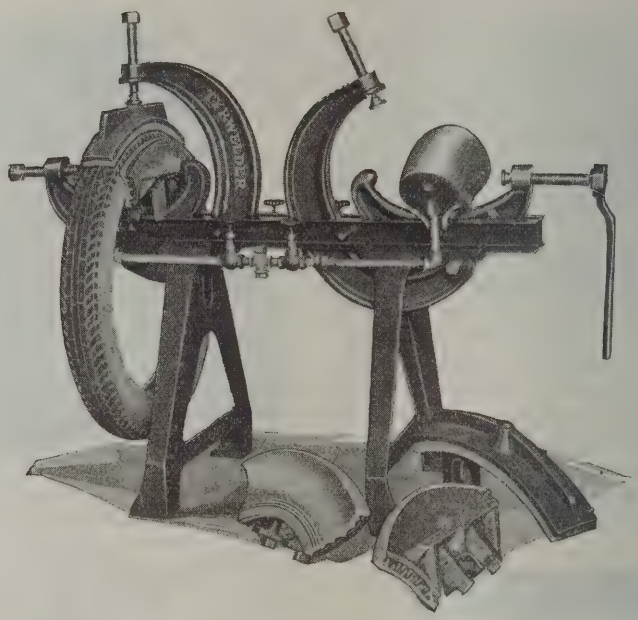
The buyer of an accessory will appreciate it if the accessory dealer or one of his employes would call him up to see if the device he has bought is giving satisfaction. A personal visit and chat, if possible, would not be amiss. This manifestation of interest will capture the confidence of the buyer in a way to bring him back to the store. In addition to that the new contact, itself, might result in an additional sale.

Watkins Device

Tiger Claw Chains

ONE of the latest additions to the market's tire chain offerings is the Tiger Claw Chain which is being produced by the Universal Skid-Less Chain Company, of Niles, Michigan. Slipping or sliding in any direction is said to be impossible when these chains are used because of the corrugated cross links which provide hundreds of points of gripping contact with the surface of the road. Another distinctive feature stressed by the manufacturers is the smooth under-surface of the chain which prevents it from bruising or gouging the tire. Tiger Claw Chains are made in all sizes for both standard and balloon tires. The manufacturers declare there is seldom any necessity for replacing the cross chains, the entire device being able to withstand much heavy wear. Prices for these chains now range from $7 per pair to $13 per pair. It is stated that the list will shortly undergo slight readjustment.

Spon Auto Ventilator

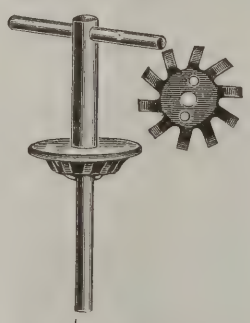


(Cut shown above.)

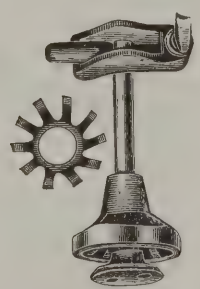
A VENTILATOR for closed cars is offered to the trade by the Lewis Manufacturing Co., Inc., 210 Orchard avenue, Sharon, Pa. It is known as the Spon Auto Ventilator. It is claimed that the Spon equipment will permit of free cirulation of air within the car without setting up drafts, that it will keep windows from frosting and steaming in cold or rainy weather, that it will not admit rain, snow or sleet and that it will serve as a receptacle for cigar ashes, matches etc., and thus contribute to cleanliness within the vehicle. This ventilator is made of high grade sheet metal attractively finished and enameled and it is said it can be put into position in three minutes without special tools. It is made for all makes and sizes of cars. Price for doors up to 27½ in. wide is $1.50; above that width, $1.75. West of the Mississippi add 25 to the above prices.

GETTING MORE OUT of the SHOP

Tyrewelder



To facilitate balloon and heavy duty truck tires a machine called the Tyrewelder has been developed. It is equipped with three steel plates attached to which are rubber studded cushions. The section in the tire to be repaired is placed over a central steam arm or core. By means of heavy steel clamps and powerful screws, these three rubber cushioned plates press downward and inward on the tire thus holding the repaired section to be vulcanized snugly in contact with the central steam arm. This welds the repair to the tire so that it actually becomes a part of it. The cure is accomplished quickly for the heat is applied directly to the raw portion to be cured rather than having to pass through the tread and outer section first. The resilient rubber cushions take up every inequality of any shaped bead, sidewall or tread of any tire. It eliminates entirely the use of air bags, rubber impression pads, etc. The Tyrewelder is marketed by the Akron Tyrewelder Company, subsidiary of the Akron Equipment Company, Akron, Ohio.



Tyrewelder

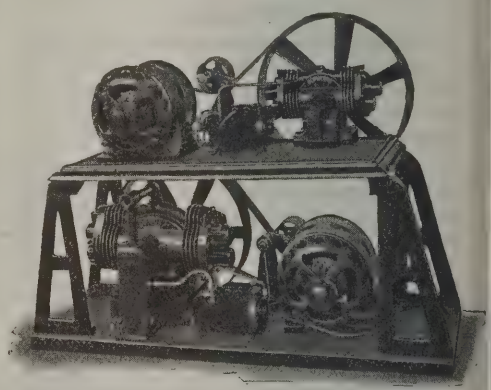
Spraker Valve Seat Reamer and Valve Refacer

The Spraker valve seat reamer and valve facer are so constructed that the cutting of the metal is made with a scraping effect, making chattering impossible, it is stated. The blades can be removed and reground with little effort and can be replaced at a slight cost. The curved blades give two cutting edges and the concave cutters naturally give a convex seat. They are made in two sizes, one being 1½ in. for Fords and any 1½ in. valve seat, and the other, 1 21/32 in. suitable for the Fordson engine valves or other valves of the same size. The price complete for the smaller size is $1.25 and for the larger size, $1.50. Extra blades cost 30 cents each. The tool is made by the Spraker Mfg. Co., Indianapolis, Ind.

Spraker valve reamer

Spraker valve refacer

The purpose of this page is to help the shopman keep up with opportunities for time saving and added profits through the medium of new working facilities. If you own a shop do not neglect to read this page weekly. You will find here many valuable suggestions.



New Weed Sturdy Pliers

The new Weed Sturdy Pliers recently placed on the market by the American Chain Company are especially designed for general garage, service station and taxicab uses as well as for the private car owner who does his own tinkering. They are drop forged and very rugged. They may be used in repairing passenger car tire chains to open and close hooks when installing new cross chains. They are also equipped with a wire-cutting device and measure 16 in. in length and weigh, in carton, 3¼ lbs.

Dunning Compressor

The Dunning Compressor Company of Holmesburg, Philadelphia, who manufacture a unique two cylinder air compressor that has but three moving parts, is now building a special unit for the oil and gasoline trade.

The top section is for tires and general purposes, the pump working at 150 lbs. pressure.

Dunning Air Compressor built for oil and gasoline stations

The bottom section is for a gas system where large volume is required for air lift systems.

Both units are fully automatic, noiseless in operation, and are operated with two 1/2 h. p. motors.

Weed pliers

EDITORIAL

Now We Can Go Ahead

FOR years we have been startled from time to time by the dire predictions of Professor Somebodyorother that the crude oil supply of the country was rapidly being exhausted and that in a few years there wouldn't be any gasoline left to run our automobiles. Then there was talk of this or that substitute fuel that could be produced in the laboratory for a cent or two a gallon.

But we went on running our increasing number of motor vehicles with gasoline. And it appears that we will continue to do so for some years to come.

A Committee of Eleven appointed by the American Petroleum Institute has just made a complete study of the available petroleum resources of the United States and the probable demand for the next 50 years and has published a detailed report that holds little encouragement for the promoter who expects to get rich making a substitute motor fuel—at least for many years to come.

Here two significant paragraphs from this committee's report:

1. There is no immediate danger of the exhaustion of the petroleum reserves of the United States.

2. It is reasonable to assume that a sufficient supply of oil will be available for national defense and for essential uses in the United States beyond the time when science will limit the demand by developing more efficient use of, or substitutes for, oil, or will displace use as a source of power by harnessing a natural energy.

So let's get down to business and keep on making, selling and operating motor vehicles.

Roadsters

WHILE closed cars continue to enjoy the lion's ratio of demand over open cars there is one open unit which has been holding up remarkably well in sales. This is the roadster.

Reports from the trade indicate most pleasing sales of roadsters while factories are giving considerable productive attention to this particular body. In many quarters surprise at the roadster's activity is expressed.

The roadster does not compete with the coach and sedan so extensively as does the touring car. It serves many distinctive purposes which give it certain sales outlets practically to itself. Then it can be curtained more quickly than the touring car—again reducing the force of closed car competition.

Handsome and snappy designs in roadster bodies doubtless have stimulated these sales, but the big contributing factor has been this model's great utility. The roadster is a handy vehicle well answering particular needs of many motor car users.

The Obligation to Make Money

THE man who is engaged in any useful business is under a moral obligation to make money. This may seem inconsistent with the principle of competition and the ever-present demand of the public to be served at the lowest possible cost. Yet it is an indisputable fact.

A useful business is one that renders a service to the public. It fills a need or a desire of the consumer more conveniently, more promptly and more economically than this need or desire can be satisfied in any other way. A business cannot continue to render this service unless it is operated at a profit. If it is an unprofitable enterprise it soon falls by the way and its wreckage carries financial injury far beyond its own confines. The business that is economically operated and at the same time makes a reasonable profit is the one that deserves the patronage of the public, because it is the one that will continue to render a regular and useful service to the public.

There Must Be Progress

SEVERAL years ago MOTOR AGE announced in its news columns the appearance of an automobile at the National Shows with a fabric-covered body. Since then we have heard very little of any further developments along the line of pioneering indicated by that event. Now, however, one of the oldest motor car manufacturers has placed on the market a car which has a body finished with that type of fabric.

The fabric body as mounted today does not closely resemble the early experimental models. In the present-day adaptation of this material the hood is left with its conventional metal covering and metal fenders are retained. But the rest of the body is covered with fabric which is said to possess the advantages of being durable, easily cleaned, easily repaired, light, noiseless and attractive in appearance.

The public will be the judge of this type of passenger car finish. What the public decrees will be accepted by the manufacturers. But we have no way of knowing the verdict of the public until the article is offered to it. Then it speaks quickly. To test out public opinion is a function of the manufacturers, and the more we have of such testing the more progress will there be in the automotive industry.

Price Cuts Greatly Stimulate Business

Production and Sales Both At Highest Levels of Year

Bus and Truck Builders Especially Fortunate Because Demand Precludes Need of Reductions

NEW YORK, Aug. 19.—Bargain hunters are thronging the automobile salesrooms these days. The wave of price cutting has undoubtedly stimulated business, and with the lower price in most instances have come new models in attractive colors and body designs well calculated to catch the fancy of the prospective purchaser.

Both production and sales are running at the highest level of the industry for this time of year. There has been little, if any, over-production so far, and dealers' stocks are in excellent condition, with some of them complaining of inability to obtain sufficient numbers of the new cars. The used car situation is not quite so favorable, since lower prices on the new models have had the effect of making the used cars harder to dispose of without reductions.

Bus and truck manufacturers are in even better condition than the car makers, since the demand for their products has been so great there was no need for price cuts. Parts and accessories manufacturers are sharing in the general prosperity, a compilation by *Automotive Industries* showing that profits in this end of the business increased in the first six months of 1925 an average of 89 per cent over the corresponding period of last year.

Profits for car manufacturers are not likely to be as great during the last half of the year as they were in the first, as they are now feeling perhaps the fiercest competition they have ever known. The price cuts, however, are not as damaging financially as they might appear, as notable economies in production have been introduced in most instances. The feeling is that no further reductions will be made, except in two or three possible cases.

A great deal of attention is being directed to foreign sales, as opportunities for the export of American cars were never better. Cuba has launched a $300,000,000 road building project that should mnea large sales of American cars. Germany has abandoned its restrictions on automobiles, which limited manufacturers to four cars a month, and replaced them with a tariff which, while high, will permit American makers to compete.

Committee Is Appointed to Plan Standard Parts Show

DETROIT, Aug. 15.—Announcement of a committee to arrange for the annual convention and show of the National Standard Parts Association was made here today by C. B. Fraser, secretary of the Association. The date of the convention is November 5 to 7, inclusive, and it will be held in Chicago. It will be opened to manufacturers and jobbers and nonmembers by special invitation.

The personnel of the various committees for the show which was placed in the hands of the show committee follows: President, A. T. Haugh, chairman, King Quality Products Company, Inc., Buffalo, N. Y.; Manufacturers, Chas. W. Moffett, Warren Gear Products Company, Warren, Pa., D. W. Rodgers, Federal-Mogul Corporation, Detroit; Jobbers, C. J. Pierson, P-D Auto Parts, Inc., Meriden, Conn., W. E. Mills, Auto Parts Company, St. Louis, Mo.

The show committee had divided its work among various committees as follows: Publicity, T. R. Walton, chairman, James Motor Valve Company, Detroit, C. J. Parks, American Piston & Machine Company, Detroit; Entertainment, J. G. Winterfeldt, chairman, Well-Ever Chicago Sales Company, Chicago, Ill., C. B. Fraser, secretary of the association.

The invitation and attendance committee is composed of D. W. Rodger as chairman, and secretary C. B. Fraser, Garland Ames of the Timing Gear Corp., Chicago, sergeant-at-arms,

University Offers Traffic Course

WASHINGTON, Aug. 15. — A course in traffic, unique in university circles, is being conducted here by Dr. F. A. Moss, professor of psychology at George Washington University. The course is conducted as a seminar, and is open only to graduate students.

Dr. Moss is preparing a series of lectures, some of which have dealt with the analysis of the psychological factor of automobile driving, causes of accidents, the element of emotional stability of drivers, and the use of psychological tests to determine a person's capacity to drive.

Professor Moss, who conceived this course in traffic, is secretary of the Hoover committee on causes of accidents, and on one of the district advisory committees. He has recently devised a series of tests to be given to automobile drivers. The course is proving so valuable that Professor Moss is contemplating conducting it next year.

Mexican Highway Building Will be Started at Once

Carolina Engineer to Have Direct Charge Under Commission of Three Government Officials

LAREDO, Tex., Aug. 15.—Construction of Mexico's system of modern highways will be under the direction of a National Highway Commission of three members selected by President Plutarco Elias Calles, according to Charles M. Upham state highway engineer of North Carolina, who was recently appointed consulting highway engineer of Mexico. Mr Upham passed through here on his way home from a visit to Mexico City where he conferred with government officials.

"A tax of 6 cents per gallon on gasoline, and a graduating tax on tobacco will provide the finances," he said. "The commission now has about $500,000 per month available from this source. This is expected to increase to about $12,000,000 per year.

"In my first official report to the Mexican government submitted August 3, I recommended that we begin work at once on the road between the Mexico City and Pueblo, a distance of 72 miles, and also on the road between the capital and Pachuca, 54 miles. This work was contracted to Byrne Brothers of Chicago, at an estimated cost of $2,286,950, or, about $18,100 per mile.

"Local conditions made an immediate start on these two stretches feasible. Surveying and aerial photographic work on the other links will be carried forward at once, the first work to be on the Laredo-Mexico City line.

"The abundance of local material of almost every kind, and also the ample and cheap labor makes vast economies in construction possible. The main highway arteries will be fashioned after the standard American type, about 19 feet wide and of varying construction to meet the traffic demands.

"I recommended that about $300,000 worth of road building machinery be purchased at once. This will all be of the most modern, portable type, and should be available in the next month for work to start."

MOON SALES INCREASE

ST. LOUIS, Aug. 15.—Sales of Moon cars in July were 59 per cent higher than in July, 1924, according to Frederick H. Rengers, general sales manager of the Moon Motor Car Co. Shipments were well distributed over the seven body styles of the Moon cars. On nearly every day of the month there were at the factory a number of dealers asking for cars and in many cases these dealers brought from two to five assistants with them in order to drive away the cars they had on order rather than have them shipped

Paris American Car Show Now Definitely Abandoned

Project, if Carried Out, Would Cause Disqualification in National Show of All Who Participate

PARIS, Aug. 1. — (By Mail) — The French automobile industry having decided against a show this year, persistent rumors are circulating in Paris to the effect that dealers in American cars will organize their own exhibition in the French capital. Traced to its source, it appears that this project originated with the European branch of General Motors, but it has been definitely abandoned, for it would cause those taking part in it to be disqualified from the official French show.

Henri Cezanne, general manager of the Paris Salon, stated that no public exhibition of any kind will be tolerated; an exception, however, will be made for used car shows, providing they do not last more than four days. Dealers at Lille announce a show for the Fall, but manufacturers have been warned that if they take part in it they will not be allowed to exhibit in the Grand Palais in 1926.

M. Boehr, who holds the Chrysler concession for France, is completing an exhibition hall, declared to have cost 8,000,000 francs, and will inaugurate it in early October with a public show of all makes of cars. The hall, which is the biggest and most luxurious in the world devoted to the automobile industry, has a floor space measuring 200 feet by 165 feet with perfect roof lighting and no pillars, and above it are four closed tennis courts with rubber floors. After the October show this hall will be used as an automobile showroom. The building adjoins the St. Didier garage of which Baehr is the owner, and is being fitted up in a most luxurious manner. Offices surround the main hall; there is a gallery for storage; bathrooms, showers, an American bar and private salons are provided.

Various French makers are considering the possibiblity of inviting their dealers to Paris at the time the show is usually held. The main difficulty is that French dealers generally have the agency for several makes, and if any manufacturer took the initative of inviting his dealers to Paris the other makers would get all advantages without any cost. Joint action among manufacturers is impossible for this would be considered equivalent to a public show and would be disapproved by the Paris show management.

Production of Hannum Gear Expected Within 90 Days

MILWAUKEE, Wis., Aug. 15.—Actual production within 90 days, of the Hannum steering gear, is announced by George H. Hannum, president and general manager of the newly re-organized Hannum Manufacturing Company of Milwaukee.

The Hannum Manufacturing Company has taken over the property of the Lavine Gear Company. In addition to continuing to service all former products of the Lavine Gear Company, the Hannum Manufacturing Company is engaged in rearranging its factory and machinery for the production of the Hannum gear, a gear especially designed to take care of the additional demands of balloon tires upon the steering assembly.

The present plans are being so worked out that additional factory space on the adjacent land to the present plant can be swung into production without interfering with the present factory.

The officers of the new organization are: George H. Hannum, president and general manager; T. R. Johnson, Vice president and sales manager; Herman Uihlein, chairman of the board; Arthur Westfall, secretary and treasurer; Arthur Groth, assistant secretary and treasurer. The first four named above, together with Walter Malotte, form the board of directors.

Nash Gives Camp Lodge to Boys

MILWAUKEE, Aug. 15.—C. W. Nash, president of the Nash Motors Company, is donor of Nash Lodge, recently erected at Camp Manitowish in northern Wisconsin by the state Y. M. C. A. The lodge is a big one, 128 feet long and 32 feet wide, with floor space exceeding 7,000 square feet. Mr. Nash presented the building for use by the boys of the state with this thought:

"I believe that the greatest good you can do for America, in addition to what you are doing, is to use these boys' camps to bring together boys of all denominations. If I were to start out today to map out a work that I should wish to accomplish before I die, it would be to bring into close association, all religious organizations of this great world."

BRIGGS EARNS $2.04 SHARE

DETROIT, Aug. 15.—Briggs Manufacturing Co. reports for the first half year, after depreciation, taxes, etc., net income of $4,067,265, equivalent to $2.04 per share earned on 1,999,688 shares outstanding after recapitalization. Second quarter earnings were $1,678,449, compared with $2,388,816 in the first quarter. According to W. O. Briggs, president, earnings for the two quarters reflect the expense of radical changes in body manufacturing. Replacement of wood by steel parts necessitated additional plants and equipment. Larger earnings are expected in the last half and body units manufactured in the first six months were in excess of those manufactured last year.

General Motors Denies Plan to Produce "Miracle Engine"

Authorities Discredit Reports of Discovery of New Fuel, Said to Revolutionize Industry

NEW YORK, Aug. 15.—Sensational news dispatches concerning a "new" synthetic fuel termed synthol, and assertions that it is to be produced by General Motors and other du Pont interests in cooperation with the Standard Oil Co., are discredited by authoritative sources here. Officials of the Standard Oil Co. of New Jersey deny that they have any intention of marketing a new synthetic fuel, while President Alfred T. Sloan, Jr., of the General Motors Corp. characterizes the statements that his company is to make the fuel and a new high compression engine giving double the power for the same weight as being ridiculous on their face and without the slightest foundation.

Both General Motors and Standard Oil officials still are interested in ethyl gasoline and still are awaiting the report of the Surgeon General in respect to the effect upon the public health of the use of this fuel, but this is in no way related to the fuel termed synthol, the manufacture of which is said to be covered by German patents turned over to the Chemical Foundation by the alien property custodian and recently "discovered" by a government chemist engaged in preparing a Department of Commerce circular about Methyl alcohol.

A legal fight over the processes has been impending for some time between the Germans and American interests, but with the discovery of the secrets of the key patent here, legal authorities say there is no doubt to the American rights.

The thirteen patents were among 4,500 seized during the war by the alien property custodian and turned over to the Government-formed Chemical Foundation Inc., for licensing to American manufacturers. They cost the foundation a lump sum of $250,000 or at the rate of $50 each.

Prices Reduced by Dodge Brothers From $10 to $60

DETROIT, Aug. 17.—Due to increased production a reduction of from $10 to $60 in the price of all models, with the exception of the roadster and chassis, was announced today by Dodge Brothers, Inc. The new prices follow:

Standard Models

Touring	$ 875
Coupe	960
"B" Sedan	1,045
"A" Sedan	1,195
Coach	1,035
Panel Commercial	960
Stream Line Commercial	885

Special Models

Touring	$ 975
Coupe	1,060
"B" Sedan	1,145
"A" Sedan	1,380
Coach	1,135

Treasury Amends Excise Tax on Automobile Parts

New Ruling Removes Levy on Accessories When Used by Makers of Other Than Motor Cars.

WASHINGTON, Aug. 13.—The Treasury Department this week issued amended excise tax regulations covering automobile and motorcycle parts and accessories, which exempt from taxation these accessories when used with other commercial articles. The new regulations, which are retroactive to July 3, 1924, make a drastic change in the administration of excise taxes on automobile parts, as heretofore some accessories, such as spark plugs, were taxed as automobile parts whether used on automobiles or boats.

The amended regulations provide that the last paragraph of Article 16, Regulation 47, 1924 edition, are to read as follows:

"Parts or accessories for automobile chassis, automobile bodies and motorcycles primarily adapted for use on or in connection therewith when sold by the manufacturer thereof and used for any other purpose are not taxable provided the purchaser files with his order a statement that such parts or accessories are to be used on or in connection with another article of commerce not enumerated in sub-divisions (1), (2), or (3) of section 600 and further provide that the parts or accessories are used according to the certificate.

"For example, a self starter primarily adapted for use on an automobile, if sold to a manufacturer of motor boats, such manufacturer stating in his order that it is to be used in the manufacture of a motor boat and not upon an automobile, is not taxable provided it be used in accordance with the certificate."

New Types Reflect Design Trend

(*Continued from page* 13)

The application of gear grinding to transmission gears after hardening has lagged a long way behind the development of practical gear grinders, but gradually the practice seems to spread. To the several firms having adopted it in the past there has now been added the Chrysler Motor Corp., which grinds all of the gears in its transmission that are likely to be troublesome from the noise standpoint. In this connection it is interesting to note that Chrysler has changed from the stub tooth, in general use in transmission gears, to the full depth tooth, thus confirming the assertion which has been made by a number of investigators that the full depth tooth is decidedly more quiet, if other things are equal.

Few changes in connection with brakes are mentioned in the descriptions of new models. Those who have been using four wheel brakes continue to fit them, in most cases without alteration, while those who still maintain these brakes are not necessary on their particular models do not seem inclined to alter their position. The period of feverish activity in brake development seems to be past. In one case application of the brakes is rendered easier by giving the rear brakes a greater wrap.

Changes in body lines, in trimmings, color schemes and items of body equipment are numerous and in spite of a few instances where the chief consideration evidently has been a lowering of manufacturing cost, it is undoubtedly true that the 1926 car will be an all around improvement over that of any previous year.

Nevada Bans Free Tourist Camps

SAN FRANCISCO, Aug. 15.—Abandonment of free automobile camps by practically every town in the state is announced by the Highway Commission of Nevada. Nominal charges are being imposed in all the municipal camps which formerly were free, in an effort to do away with the abuses of the camps encountered under the free system. Nevada officials say that the free camps were not patronized by a desirable element of motorists; that they attracted petty criminals, who used the camps as centers from which to prey on the communities; and that a number of persons found in these camps eventually became public charges on the state and the communities. Reno led the way last year in abolishing its free municipal camps and the other cities of Nevada followed this year.

Stutz Production in July Is Ahead of June Record

INDIANAPOLIS, Aug. 15.—Stutz Motor Car Company of America, from records recently completed, announces that its July production and shipments were 380 per cent of last year's mark, and this big gain was made in spite of the fact that the first three days of the month were given over to completion of an inventory started in late June, and the holiday of July Fourth also caused another productionless day.

The July output and shipment figures also beat the record established in June and the present month activity forecasts that August production will at least approach last month's mark.

The records made by the plant and the sales organization throughout the land for the 1925 season have surpassed all expectations and tentative schedules laid out when Fredrick E. Moskovics took over active management of the Stutz company this spring.

Philippines Seen as Future Source of Rubber for U. S

Secretary Hoover Believes Abou 70,000 Tons of Raw Product Could Be Grown at Present

WASHINGTON, Aug. 15.—The Philip pine Islands, with a potential rubbe production of 70,000 tons annually, ma be the answer to the British Rubbe monopoly, which controls a big portio of the world's supply of this raw ma terial, the Department of Commerce an nounced here this week.

A survey directed by Secretary of Com merce Hoover indicates that condition in the Philippines are more favorabl to cultivation of rubber than those i Sumatra and Malaya, now the princi pal producing centers of the world American manufacturers consume nearly 350,000 tons of raw rubber las year, paying prices virtually dictated b the British monopoly. Officials declare that the potential Philippine outpu would put a "big dent" in the foreig supply control.

The report of the commission investi gating conditions in the islands declare that "foreign" capital is required fo the establishment of plantations. Thi capital is, of course, available in th United States where bankers are carry ing more than $10,000,000,000 invested i foreign enterprise.

"Regarding soil, topography and ac cessibility there are large areas in th Philippines that if utilized for rubbe production, would be superior to th lands now generally available for new plantations in Sumatra and Malaya," th report said.

"With a population of more than 10, 000,000 in the islands it is believed tha the more congested provinces togethe with local labor, might furnish a suffi cient force to produce 70,000 tons o rubber yearly."

Members of the commission feel tha steps might be taken by the governmen to encourage natives to plant rubber with their annual crops. Such a plan, it was explained, would be in harmony with the present land policy of the Philip pine government, helping to solve the problem of inducing the so-called caingin farmer to become a permanent land holder. If carried out officials say it would increase the productive wealth o the islands.

"The capital cost of bringing European owned rubber plantations into bearing in the Middle East averages $250 an acre," the report declared. "In the Philippines incomplete figures indicate a cost of from $100 to $200 an acre."

Officials said that production costs in plantations financed and managed by American interests might be considerably lower in view of the more efficient methods common to industry of this country. Labor conditions likewise are better in the Philippines than in other eastern centers, the report said.

Extra Space Is Provided for Automobile Salon This Year

Over 110 Cars With Custom Bodies Will Be Shown—Added Room Allows 34 Additional Entries

NEW YORK, Aug. 15.—To meet the demand for space to exhibitor motor cars de luxe at the Twenty-first Annual Automobile Salon, arrangements have been made to show 24 more cars than has heretofore been possible at the Commodore, New York, where this exhibition has been held for many years. The cutting of a new doorway from the main ball room has made available a suite of large private reception rooms and in addition there will be an overflow exhibit of or more cars downstairs in the hotel's main lobby.

The forthcoming Automobile Salon, the date of which is November 15 to 21, will include by a wide margin the largest exclusive exhibit of fine motor cars ever staged anywhere in the world. There will be more than 110 individual cars, each mounting a specially designed and built custom body.

Six nations, France, Italy, Belgium, England, Germany, and the United States, will be represented among the exhibits, which are: Amilcar, Brewster, Cunningham, Duesenberg, Isotta-Fraschini, Mercedes, Minerva, Renault, and Rolls Royce; exhibited by coachmakers, Cadillac, Franklin, Lincoln, Locomobile, Marmon, Packard, Pierce-Arrow, and Wills Sainte Claire. Special coachwork exhibits will be made by Brewster, Brunn, Derham, de Causse, Dietrich, Fisher, Fleetwood, Hollbrook, Judkins, Le Baron, Locke, Merrimac, Rollston and Willoughby.

Of hardly secondary interest will be the equally complete showing of the latest developments in body finishes, upholstery, equipment, and accessories. An outstanding feature will be the improvements in chassis engineering as found in the latest models of the worlds leading makers of high priced cars. Thus a record brbeaking attendance of motorists and of executives and engineers from the entire automobile industry seems assured.

New Car Registrations in Iowa Ahead of Last Year

DES MOINES, Ia., Aug. 8.—Registrations of new cars in Iowa for the first six months of 1925 totaled 41,927, or 4,628 greater than the 37,299 which were registered during the same period of 1924. May was the only month which showed a registration less than the corresponding month of last year.

Registrations by months follow:

For 1925—January, 3,348; February, 3,579; March, 5,285; April, 12,956; May, 10,368; June, 6,391. Total—41,927.

For 1924—January, 2,240; February, 2,611; March, 3,010; April, 11,888; May, 11,525; June, 6,025. Total—37,299.

Registrations in Polk county were slightly below last year. During the first six months of 1924, 2,768 new cars were registered, compared to the 2,766 registered this year during the same period. Truck registrations during the first six months were 212. During the same period last year, 252 new trucks were purchased in Polk county.

Used Essex Axle Court Feature

MILWAUKEE, Aug. 15.—A matter of $50 to $80 difference in the price of the rear axle of a used Essex car saved Durbin D. Rosedale, deputy sheriff of South Milwaukee from being bound over to municipal court on a charge of manslaughter. The charge was dismissed by Judge Page when it was shown that the rear end of a used Essex car is valued at from $70 to $100.

Rosedale shot and killed Edward Drutkowski when he caught the youth and another young man removing the rear axle of a wrecked Essex automobile. Relatives of the slain boy insisted upon the arrest of Rosedale.

The state's contention was that Drutkowski at worst was caught committing only a misdemeanor, petit larceny, and that no officer was justified in such a case. The defense argued that Drutkowski's offense was larceny, a felony which justified the shooting. Theft of anything more than $20 is larceny in Wisconsin.

Peerless Announces Price Reductions on Both Lines

CLEVELAND, Aug. 15.—The following price reductions on Peerless eights and sixes have been announced by Edward Ver Linden, president and general manager of the Peerless Motor Car Co.

Peerless Equiposed Eight

	Old Price	New Price
Four-passenger Phaeton	$2,945	$2,845
Seven-passenger Phaeton	2,990	2,895
Four-passenger Victoria	3,545	3,245
Five-passenger Coupe	3,595	3,295
Five-passenger Sedan	3,895	3,495
Seven-passenger Sedan	3,995	3,595
Limousine	4,195	3,795

Peerless Six

	Old Price	New Price
Five-Passenger Phaeton	$1,895	$1,895
Seven-passenger Phaeton	1,995	------
Sport Roadster	2,285	2,195
Five-passenger Coupe	2,495	2,295
Five-passenger Sedan	2,565	2,395
Seven-passenger Sedan	2,765	2,595
Limousine	2,925	2,695

LEWIS PLANNING MOTORS

LOS ANGELES, Aug. 15.—Dave Lewis, racing driver who placed a Junior Eight Special second in the 1925 Indianapolis speedway classic, arrived last week in Los Angeles and is associated with Harry Miller in working out plans for the new 91-cubic-inch racing motors that are shortly to be offered to speed fans the world over.

Ford Completes Purchase Of Stout Airplane Assets

No Quantity Production Planned As Yet But Planes Will Be Used to Connect Plants

DETROIT, Aug. 15.—By completing the purchase of the Stout Metal Airplane Company today at a figure estimated to involve $1,000,000, Henry Ford has added to the resources of his organization the latest and fastest mode of transportation. Operating as he does his own railroad and steamship lines, the airplane will fulfill certain requirements with which the other lines of travel are unable to cope.

Henry Ford is not expected to commence upon quantity production of the metal planes, but will continue to build the machines for the purpose of providing closer contact with the various assembly plants and the main offices. In this manner it is planned eventually to have a network of air routes which will link every assembly plant with Detroit and at the same time cover practically the entire country.

At the present time the airplanes operating daily between Detroit and the Chicago and Cleveland plants are employed in transporting official mail and certain small parts used in the assembly of the Ford cars such as headlights and other electrical equipment, tools, body parts, etc. Even with the precision of latest assembly methods, there are occasions when costly tie-ups arise through delays in receiving certain materials. By using air transportation the Ford Company will be able to ship to any of its assembly plants the necessary material, thereby relieving the situation and enabling production to be continued with little loss of time.

On July 31, the Ford Motor Company became a manufacturer of airplanes by purchasing all stock and assets of the Stout Metal Airplane Company. The building of the Stout monoplanes will henceforth be carried on by the Stout Metal Airplane division of the Ford Motor Company and operations will be continued at the Ford Airport, Dearborn, as formerly where four planes have already been built and others are under construction.

William B. Stout, who developed the present model after 15 years of experimentation, remains in charge of the plane manufacture, while the personnel of engineers, mechanics and pilots has also been retained. The association of the Stout Company with the Ford organization began less than 12 months ago when on completion of the airplane factory building at the Ford Airport, Henry Ford and Edsel Ford contributed to the development of the Stout plane, of which only one of the present type existed.

While Mr. Henry Ford has evinced a technical interest in airplanes, his enthusiasm has been confined to the engineering problems involved.

Federal Reserve Sees More Than Normal Sales Volume

Entire Industry Declared in Report to Be Showing Greater Activity Than Year Ago

WASHINGTON, Aug. 15.—The Federal Reserve Board in its August bulletin just made public here reports that "the automobile industry is enjoying continued activity at a fairly high rate."

"Production during June," continues the board's official resume of the automobile industry's standing, "although slightly less than in April and May, was greater than in the corresponding month of previous years, and the total output for the first six months of the year also established a new high record.

"About 350,000 passenger cars were produced in the United States during June, as compared with a maximum of 376,000 in April and with 214,000 in June, 1924. Truck production declined from 41,000 in May to 36,000 in June, but exceeded figures for any month of last year. Reports from the industry in July indicate further seasonal declines in production schedules; buyers are apapparently waiting for the new models which are expected on the market soon.

"Shipments of automobiles in June were less than in May, but much larger than a year before. Certain large manufacturers, reporting to the Federal Reserve Bank of Chicago, indicated that their sales to dealers and dealers' sales to users during June were approximately equal to each other, whereas in April and May and in June of last year dealers received more cars than they sold. Wholesale distribution, according to certain Middle Western dealers, was less in June than in May, but more than double that for June, 1924. Retail sales increased as compared with both of the months with which comparisons were given. Stocks of cars held by dealers decreased.

"Crude rubber has continued its sharp price advance, and during July spot quotations reached $1.20 a pound, as compared with about 20 cents a year earlier. Rather large reductions occurred later in the month. Imports continue to be large. Advances in tire prices, following previous increases on May 1 and June 1, were announced on July 1 and again on July 18. These prices are now about 35 or 40 per cent higher than in April. Production and shipments of pneumatic tires during June attained new high records, and stocks which were on March 31 at the maximum ever recorded were reduced on June 30 to an amount smaller than that of a year earlier."

OIL CO. GIVES DINNER

SPOKANE, Wash., Aug. 15.—A dinner and entertainment for 100 of its customers, the first of its kind given in Spokane, was tendered here recently by the Wesco Oil company to independent service station men and wholesalers. O. W. Schultz, president, was the host.

Buffalo Offered 5-cent Fare System of Buses

BUFFALO, Aug. 15.—Ernest M. Howe, president of the Gray Manufacturing Co. of Detroit, has proposed to establish a city-wide bus system in Buffalo on a 5-cent fare basis allowing transfers. The city council is considering the offer.

Howe proposes to place 100 Tilling-Stevens type buses on the streets at any time his proposition is approved. These buses, manufactured at his Detroit plant, are the same type used in London, Australia and South Africa.

He explained that he is able to operate the buses on the low basis of return owing to the fact that they are operated by combined gas and electric motive power and require little maintenance expenditure. He claims that the bus will operate more than 100,000 miles without having to be housed for repairs. He added that the average gear-driven bus is useless after 300,000 miles.

Street car fare in Buffalo is 8 cents, or two for 15 cents. The trolley company also operates three bus lines charging a 10-cent fare. Howe agreed to meet the New York state public service commission regulations. He also offered to post a bond of $150,000 to guarantee his good faith.

July Sets Another Record For Apperson Co. Business

Sales Volume Beats June Mark and Shows 225 Per Cent Advance Over January

KOKOMO, Ind., Aug. 15.—Celebrating the first anniversary of the factory reorganization of last July, the Apperson Automobile Company established a second record breaking sales mark in successive months with the close of July business.

Previously, the June, 1925 sales had exceeded all totals for any month of the year.

Sales for July, however, were greater than June, and 225 per cent above the mark of January—the month in which the new Apperson line was introduced. The mounting sales curve of this now strongly-entrenched manufacturing company is shown by the fact that while each succeeding month of the year showed healthy advances, June's increase was 219 per cent over the January figure and July went 225 per cent over.

In addition to the heavily increased sales in July, the month closed with an increase of 13 per cent in unfilled orders over the record June.

25 Years Ago In the Automobile Industry
As Recorded In MOTOR AGE

(From MOTOR AGE *of August 23, 1900)*

Gasoline on Ferries

NEW YORK, Aug. 20.—President Chamberlain of the Automobile Club of America is overrun with correspondence from all over the country on the question of the United States laws in reference to the carrying of gasoline on vessels plying on waters inside government jurisdiction. It has been held that a gasoline vehicle violates this prohibition. Mr. Chamberlain has been in correspondence with the Secretary of the Treasury with a view to securing some modification of the application of the law and the establishment of special regulations for vehicles employing gasoline for motive power or fuel. He says, however, that there is little chance of getting relief except through a special act of congress.

One-Hour Motorcycle Championship

PARIS, Aug. 9.—The Motorcycle-tricycle championship for one hour was run at Lille on the fifth inst. The starters were Beconnais, Fossier, Demster, Vasseur, Loste, Cabaillot, Bathiat, and Louis. * * * After a number of accidents, among which Beconnais was the only one to escape, the race was finished. The forty kilometers were ridden in 41:45 and the fifty in 52:36 3/5. At the end of the hour Beconnais has covered the 57½ kilometers, nearly three kilometers ahead of Loste, who, in turn, was nearly a kilometer ahead of Demester.

New Mackay Steam Carriages

BOSTON, Mass., Aug. 20.—Twenty-five of the new Mackay steam carriages have been turned out at the factory of the Stanley Mfg. Co., Lawrence, Mass. They have all been built to special order and several of them have been shipped to Europe.

They are all heavily built carriages, weighing about 1,650 lbs., against 700 lbs. average weight of the ordinary steam runabout. Their retail price is $1,800.

The Mackay carriages have several notable features. The gasoline tank is immersed in the water tank. The engine is simple or compound and has a superheating device.

The Chicago Automobile Club

The Chicago Automobile Club has been organized with 33 members and already enough more applications have been received to swell the active list to 40. Among its objects, as stated in the constitution, are the promotion of an organization or club composed in whole or part of persons owning self-propelled passenger vehicles for personal or private use; to afford a means of recording the experiences of members and others using motor vehicles or automobiles and to promote original investigation in the development of motor carriages.

Chemical Society Told Army Has New Type Truck Engine

Radical Changes Giving More Power With Less Fuel Consumption Said to be Features

LOS ANGELES, Aug. 15.—That the United States Army has developed a motor truck engine embodying radical changes from the usual type of internal combustion motor, which is reported to be able to deliver an increase of 28 per cent in power with a decrease of 20 per cent in fuel consumption, was the report given to the national convention of the American Chemical Society, in session in Los Angeles.

The convention was told that this motor was developed to meet the recently perfected ethyl gasoline, and will not use the standard fuel. With the specially treated gasoline it will outclass anything in its reach and will climb hills and pull exceedingly heavy loads with surprising ease, engineers say.

The new motor was developed at Camp Holabird, Md., by Arthur W. Harrington, chief engineer of the Motor Transport Division, Q. M. C. and other army engineers. The exact nature of the fuel to be used in this motor was not disclosed at the convention. It is known, however, that the gasoline intended for the motor is of the type treated with tetraethyl-lead. Only one fifteen-hundredth part of this chemical is added to the ordinary gasoline. One quart was used to treat 500 gallons of fuel, with such success that the army men interested in the test predicted eventual overthrow of present standards of motor construction, Chief Harrington declared.

The motor was built of parts used in government Class B. trucks. To outward appearance it is exactly like the old type of truck, but internally it has been redesigned to work under pressure terrifically greater than the usual motor is required to withstand.

A statement by Dr. T. A. Boyd of the General Motors Research Laboratory at Dayton, O., on the subject of chemical research on automobile fuels, was made public by the American Chemical Society at the convention in connection with the development of the new type of motor.

If the chemists are able to develop a fuel that will increase the useful store of energy in the gasoline being burned by the motor from 3 to 5 per cent to approximately 10 per cent, the saving to motorists would mean an average of $50 a year per registered vehicle, Dr. Boyd declared.

The search of the chemists for such a fuel was partly rewarded, Dr. Boyd stated, in the perfection of the ethyl gas. Ethyl gas, he explained, is gasoline to which has been added a small fraction of 1 per cent of a synthetic oil containing a metallic component, which serves the purpose of combustion governor.

Another discussion at the American Chemical Society's national convention which will be of interest to the automotive industry was led by Dr. Harrison Howe, of Washington, editor of Industrial and Engineering Chemistry, the official organ of the society.

"Methanol, a new form of fuel developed by the Germans, may take the place of gasoline in time," said Dr. Howe. "This field, which is derived from elements that are among the most abundant in nature, possesses all the properties of wood alcohol, which is distilled from different kinds of wood, and may be used for the same purposes. About the only respect in which it differs is that it does not have the characteristic odor of wood alcohol.

"The Germans are carefully keeping the formula for methanol to themselves and are producing large quantities of it, exporting a good deal to this country."

Dr. Howe predicted that American chemists will eventually learn the secret and that the new fuel may some day become popular as a power producer.

A. A. A. Sanctions 102 Races

WASHINGTON, Aug. 15.—A total of 102 automobile races were sanctioned by the Contest Board of the American Automobile Association during 1924, it is announced. These covered speedway and dirt track events as well as hill climbing, reliability and endurance tests. During 1924 the Board distributed $332,433 in prize money to the knights of the "Roaring Road" with 560 racing drivers and 335 racing cars registered.

Marseilles Picked for Site of Next Year's Grand Prix

PARIS, July 28.—(By mail.)—Miramas track, near Marseilles, will be the scene of next year's French Grand Prix race, the probable date being June 28. This event will be open to 91½ inch cars with super-chargers, having two-seater bodies of 31 inches width, but with the driver only aboard and a minimum weight of 1,543 pounds. These rules will apply to all the big European races.

The present European rule calling for two seats side by side is giving dissatisfaction among firms indulging in racing. Just before the French Grand Prix, Bugatti threatened to withdraw all his cars because of the official interpretation of the rule regarding two-seater bodies. All difficulties could be overcome by merely requiring a minimum width without any stipulation as to the number of seats.

It is reported that the Fiat and Delage companies are working on 91½ inch two-stroke super-charged racing engines, which will be entered in all important events next year. The Fiat racing department refuses to make any statement regarding its plans.

Peerless Turns First Quarter Loss to Gain in Second Period

Sales Increases Run Far Ahead of Those of Industry As Whole—August Seen As Big Month

CLEVELAND, Aug. 15.—The Peerless Motor Car, of this city, turned a loss of $280,514 in the first quarter of the present year into a profit of $327,234 in the second quarter, and at the same time paid off $1,000,000 in bank loans in the first six months of 1925. A small six cylinder car is to be added on October to the present line of sixes and eights. These are the important points in a report just issued by the company.

Since February a steady, month by month gain in Peerless sales has been accomplished. While retail trade, as a whole, has been running 13 per cent above last year during the last month Peerless sales have been practically doubled, according to Charles A. Tucker, sales manager. Not only has there been a big increase at the principal distributing points, but there also has been marked interest in the Peerless franchise, more than 90 new distributors and dealers having been added during the last five months.

June sales were 75 per cent higher than in the same month last year. In July they were 154 per cent greater than in July, 1924. Orders on hand for August indicate clearly that Peerless will continue to operate at a far greater increase over the preceding year than the industry as a whole, says Tucker.

These sales conditions are reflected in the six months statement. Net profits of the company for the half year after $86,774 depreciation were $46,719, but earnings in the second quarter which was the first three months period to really reflect the efforts of the present management, were at the annual rate of $6 per share on 228,589 shares of common stock. The company has no bonds or preferred stock.

In addition to paying off $1,000,000 to the banks, the balance sheet shows $996,715 in cash. On December 31, the company had $728,225 in cash, but owed $418,287, so there has been an actual gain of $1,686,777 in cash.

1,015,100 CARS TITLED

CHICAGO, Aug. 15.—Statistics compiled from the records of the automobile department of the secretary of state's office, show that from January 1 to July 15, there were 1,015,190 registration licenses issued to passenger automobiles in Illinois. In addition there were registrations issued to 4,332 dealers, 5,449 motorcycles, and 146,114 trucks, making a grand total registration of 1,171,085. The total revenue received by the department during this period was $12,110,777.03.

A. P. I. Report Denies Belief In Exhaustion of Oil Supply

Survey Submitted to Conservation Board Shows Unexploited Stores Sufficient for Years

NEW YORK, Aug. 15.—A reassuring report as to the supply of petroleum in the United States prepared by a committee of eleven of the directors of the American Petroleum Institute was transmitted to the federal oil conservation board at Washington yesterday by J. Edgar Pew, president of the institute.

The report states it is reasonable to assume that the oil resources of the United States, including oil from wells, shale, coal and lignites, assure the country of a sufficient supply of motor fuel and lubricants for the national defense and for essential uses beyond the time when science will limit the demand by developing more efficient use of, or substitute for oil, or will displace its use as a source of power by harnessing a natural energy.

The 300 page report prepared after a country-wide and prolonged survey by many operators and by experts and scientists within and without the industry embraces estimates of the future supply of and demand for petroleum and contains conclusions of far reaching importance to the country. The conclusions negative the idea that there is imminent danger of the exhaustion of the petroleum reserves of the United States. The report estimates petroleum recoverable by present methods of flowing and pumping from existing wells, and acreage thus proven, to be 5,300,000,000 barrels and that after pumping and flowing cease there will remain in the area now producing and proven 26,000,000,000 barrels of oil, a considerable portion of which can be recovered by improved and known processes.

The report indicates that the major oil reserves of the United States lie in some 1,100,000,000 acres of land underlain by sedimentary rocks and not fully explored, in which geology indicates oil is possible. With extended search, new supplies will be found therein. In addition the report states that improved methods of deep drilling, the limit of which has not been reached, will disclose in many areas deposits not hitherto available. It is pointed out that the nation has an additional reserve in the vast deposits of oil shale, coal and lignites from all of which liquid fuel and lubricants may be extracted if and when the cost of recovery is justified by the price of these products. It is stated that these deposits are so huge that they promise, under conservative estimates, an almost unlimited supply.

CHRYSLER SALES HEADS NAMED

DETROIT, Aug. 15.—Appointment of three directors of sales and two assistant directors has been announced by J. E. Fields, vice-president in charge of sales for the Chrysler Corporation. The resignations of John J. Plath and Arthur T. Stanton as directors of sales to become Chrysler distributors at Miami, Fla., and Columbus, Ohio, were announced. The new directors are Joseph W. Frazer whose principal cities are New York, Detroit, Minneapolis, St. Louis and Dallas; J. L. Justice whose principal cities are Chicago, Philadelphia, New Orleans, Portland, Ore., Cleveland. His assistant will be John McArdle, formerly head of the car order division, and Henry T. Myers, formerly with the Studebaker corporation, whose principal cities are Boston, Pittsburgh, Atlanta, Kansas City, Mo., and San Francisco. His assistant will be S. W. Monroe, formerly supervisor of sales for the Chrysler Corporation in the Boston district.

FRENCH TIRES RAISE

PARIS, July 29.—(By mail.)—French tire manufacturers today announced an increase of 35 per cent on tubes and 27 per cent on casings, to go into effect immediately. This measure had to be taken, it is declared, on account of the shortage of rubber and the consequent increase in cost. Michelin is of the opinion that the price of raw rubber will drop before the end of the year, and that, as a consequence, tires will be reduced.

NEW VELIE DEALERS

MOLINE, Ill., Aug. 15.—The following have been named dealers by the Velie Motors Corp.:

Petaluma Velie Company, Petaluma, Cal.; Lyter's Garage, Harrisburg, Pa.; Grover C. Taggart, E. St. Louis, Ill.; Henry's Garage, Wilmington, N. C.; Leslie B. Harriman, Gorham, N. H.; R. E. Twite, New Albin, Ia.; J. W. Hook, Grays Lake, Ill.; P. C. Sacchi, Arcata, Cal.; Smith Brothers, Lemon Springs, N. C.

Ford Truck and Tractor Sales Rise During July

DETROIT, Aug. 15.—Sale of Ford one-ton trucks and Fordsons for the first 20 days of July were 30 and 43 per cent greater than for the same period a year ago, reports received at the Ford factory from Ford dealers throughout the country show.

Sales of the one-ton truck amounted to 12,168 during the 20-day period, an increase of approximately 3,650 over the first 20 days of July, 1924. Fordson sales numbered 3,664, or approximately 1,575 more than for the same period last year.

The greater portion of the truck sales covered industrial installations but there also was a noticeable increase in deliveries in rural sections where harvesting of crops is under way or just beginning. The increase in the number of Fordson sales indicates that the farmers are coming into the buying market in larger numbers.

Increased Sales Cause Cut In Studebaker's List Price

Financial Report Shows Business Volume Jumped 48 Per Cent In Second Quarter

SOUTH BEND, Ind., Aug. 15.—Greatly increased sales resulting in economies of production, have caused reductions in prices on all Studebaker models, it is announced by officials of the Studebaker Corporation of America.

The financial report for the second quarter shows that sales increased 48 per cent over the corresponding period of 1924. It is believed that July sales will show a gain of 200 per cent over July last year.

The new prices announced by the company are:

Standard Six Models

	New Price	Old Price	Saving
Country Club Coupe	$1295	$1345	$ 50
Coach	1195	1295	100
Sedan	1495	1595	100

Special Six Models

Duplex-Roadster	$1395	$1450	$ 55
Sport Roadster	1595	1645	50
Duplex-Phaeton	1445	1495	50
Coach	1445	1595	150
Brougham	1695	1795	100
Victoria	1750	1895	145
Sedan	1805	2045	150

Big Six Models

Duplex-Phaeton	$1795	$1875	$ 80
Coupe	2045	2450	405
Brougham	2195	2575	380
Sedan	2245	2575	330
Berline	2325	2650	325

Moline Tractor Plant to Be Used by I. H. C. as Warehouse

MOLINE, ILL., Aug. 15.—Although industrial and banking circles here last week circulated apparently well authenticated stories that the International Harvester company was to purchase the tractor plant in Rock Island, owned by the Moline Plow company, now the Moline Implement Co., Alex Legge, president of the International, said that only negotiations were under way for the deal and that the plant is to be utilized as a warehouse.

Industrial circles, however, had been informed that the International was going to rehabilitate the plant which had been closed down two years and reopen the production operation. The plant has a storage space of 425,000 square feet and has been on the market since the Moline Plow under its reorganization adopted a policy of severance of all outside units and non-profitable lines. At one time it was a center of production activity but under the agricultural implement depression became a liability.

Mr. Legge announced that under his plan the factory will be an assembly warehouse to handle distribution in this territory. Parts are to be shipped in in carload lots, assembled and reshipped to north and west territory.

Willys-Overland Production In First Half Sets Record

President of Company Believes Business Is Due to Complete Line of Cars Produced

TOLEDO, Aug. 15.—With production of 109,394 cars in the first six months of the present year the Willys-Overland Co. of this city has broken all records for a similar period in the history of the company.

This is more than 10,550 cars increase over the first six months of 1924 and is within 40,000 of the entire 1924 production.

President John N. Willys attributed the big business of this year so far to the complete line of cars produced, the response from dealers, and the reception from the public of new models and new ideas in the line.

"Despite the ugly rumors of the early spring months that agriculture, our basic industry, forecast an unusually small yield in all crops of importance, the retail organization found that never had business been better," declared President Willys.

"Our car shipments the first six months of 1925 absorbed practically our entire output, and throughout this period we found that despite our sincere attempts to bring production schedules up to the insistent demand of the dealers for more cars, we could not build them fast enough.

"We were constantly behind on our deliveries, and our production still is below our orders in hand.

"I am firmly convinced, not only from our own sales and production records, but from the generally firm tone of business conditions that 1925 will see the 'bumper' year in the automobile industry."

NEW RECORDS IN MILWAUKEE

MILWAUKEE, Aug. 15.—Automobiles and accessories continue to be the most active in Milwaukee's industrial and business circles, according to analysis of business conditions for mid-summer completed by Robert Wittig, Milwaukee manager for R. G. Dun & Co. The investigation indicates that the automobile industry in both its manufacturing and retail end is setting new records in Milwaukee.

FORD CHANGES RADIATOR

DETROIT, Aug. 15.—The Ford Motor Company of Canada, Ltd., is now equipping all closed cars with nickel plated radiators and radiator aprons. The change was designed to give a better finish to the car and is in line with the company's policy of altering the car to meet with the demands of the public. While the new radiator has only been on the market a short time, the manner in which it has been received by automobile owners is taken by officials of the company to mean that its advent will be a popular one.

Car Hazard Less Than Rail

WASHINGTON, Aug. 15.—Statistics proving that the railway hazard on a mileage basis is nine times greater than the automobile hazard were made public here this week by the American Automobile Association.

That the hazard on a mileage basis as between trains and automobiles is correctly stated will be seen from the following figures: In 1923, the last year for which complete figures are available, railway accidents accounted for 6,922 deaths and 56,464 injuries, a total of 63,386 killed and injured. The total train mileage, freight and passenger, for 1923 was 1,191,397,000, showing that in round numbers there was one accident for every 18,000 miles.

In the same year the accidents in which motor vehicles figured accounted for 17,000 deaths and 500,000 injured, a total of 517,000. The total motor vehicle mileage for the year is estimated at 85,000,000,000 miles. This would mean one motor vehicle accident for every 160,000 miles. Thus on a mileage basis the railway hazard is nine times greater than the automobile hazard.

Illinois Registrations Jump 32 Per Cent During July

CHICAGO, Aug. 15.—Registration statistics covering new passenger cars in Illinois during July reveal that there was a gain of 32 per cent in the total as compared with the preceding month. This is not surprising in view of the fact that many people usually wait until July 1 before registering in order to take advantage of the semi-annual fee.

The most pronounced advance was in the medium price class with a jump of 37 per cent; Fords were 31 per cent ahead of June, while low-priced cars (excluding Fords) and the high-priced vehicles scored gains of 26 and 25 per cent respectively.

Following are the detailed figures for the first seven months of 1925:

Mon.	Fords	Low, ex. Fords	Med.	High*	Total
Jan.	4,060	2,275	5,748	808	12,891
Feb.	3,424	1,718	4,977	612	10,731
Mar.	5,714	2,729	6,416	784	15,643
April	9,010	3,755	8,801	861	22,427
May	8,751	3,644	8,014	899	21,308
June	6,473	3,400	6,383	828	17,084
July	8,499	4,305	8,787	1,035	22,626
Total	45,931	21,826	49,126	5,827	122,710

*Includes miscellaneous cars not named.

The foregoing statistics were compiled from figures furnished to MOTOR AGE by Robinson's Advertising Service, Springfield, Ill.

Rickenbacker Output Makes Big Increase in First Half

Shipments Now at Rate of 70 Daily—Total Expected to Double Last Year

DETROIT, Aug. 15.—Rickenbacker Motor Car Company during the first half of 1925, shipped 6,100 automobiles as compared to 5,412 for 1924.

Shipments are at the rate of 70 daily which, with present indications and prospects will make between 12,000 and 15,000 for the year. Last year the total was 7,187.

Production is also on the increase 1,450 being the July output. In February it was 700, this number being gradually increased until the present time. July output will be the largest this year.

Hudson-Essex is now operating on a schedule of 865 Essex and 425 Hudson cars daily. July production was close to 30,000. Factory enlargements now being made will enable the output to be 1,500 and later 2,000.

July shipments of cars reached 27,000 and with indications pointing to 30,000 for August. The company probably will report sales of 87,000 for the quarter ending August 31.

The increased output is due to the building of the new Hudson-Essex body plant of the company. The building will be one of the most modern of its kind and will be especially designed for the production of Hudson-Essex cars. The company will continue to take the present output of the Briggs Manufacturing Company which is now building its bodies.

WILLS SAINTE CLAIRE DEALERS

MARYSVILLE, Mich., Aug.15.—Dealers who have recently taken on the Wills Sainte Claire line are:

W. P. G. Motor Company, Atlantic City, N. J.; Ayer and Ayer, Inc., Worcester, Mass.; Wills Sainte Claire Company of Greensburg, Greensburg, Pa.

OVERLAND MEETING HELD

QUINCY, Ill., Aug. 15.—Distributers of the Overland car in the western Illinois and northern Missouri territory, assembled here recently. About 25 counties were represented. W. O. Kiracofe of St. Louis, branch manager; O. S. McKinney, wholesale manager; Frank Whyte, sales promotion manager; W. T. Warner, zone supervisor; and T. S. Duby of the wholesale department, were among the factory representatives present. Reports were received from the various districts represented concerning the business for the first half of the year, and the prospects for the fall and winter. With the prospects for a bumper crop of corn, and wheat and oats threshing yields far above expectations, an era of agricultural prosperity seems certain in this section, and the dealers who assembled here felt encouraged over the outlook for the remaining months of the year.

Along Automobile Row

SAN ANTONIO, Tex.—The Crawford Motor Company, Ford and Lincoln dealers, has occupied its new $200,000 home at 209-517 West Houston street. The building is two and one-half stories high and houses 38,000 square feet of space. In addition to usual spaces for accessories and parts, shops and sales departments, the company has installed a used car department on the roof of the building.

GREENWOOD, Miss.—G. M. McDavid of Memphis, and W. R. Moore of Cleveland, composing the Moore-McDavid Company, have secured the Buick agency for the Greenwood territory.

OTTAWA, Ill.—Dayton Keith of Chicago and L. S. Putnam and W. G. Putnam, both of Ottawa, have organized the Putnam Chevrolet Company of this city. Capital stock has been fixed at $10,000.

DeQUEEN, Mo.—The Stringfellow Motor Company of this place, local Ford dealer, has been purchased by W. L. Davies, who will continue the business under the name of the Davies Motor Company.

MILWAUKEE.—The Alemite Lubricator Co. of Wisconsin has moved to new and larger quarters at 582-584 Jefferson street, the former home of the Harry E. Weber, Inc., wholesale automotive supply dealers. One of the finest lubricating service stations in Wisconsin will feature the new home of the Alemite organization.

ATLANTA.—The semi-annual conference of dealers, distributors and salesmen in the southeastern territory for the United States Rubber Co. was held in Atlanta at the Biltmore Hotel the latter part of July, and merchandising plans of the company outlined for the fall and winter months.

CHICAGO.—R. B. (Dick) Thornton, who has been associated with the automobile industry for a number of years, first as a member of the transportation division during the World War, then in the distribution of automobiles with J. W. Leavitt of San Francisco, as assistant sales manager of Durant Motors, vice-president and general manager of the W. C. Auble Motor Co., territory man for C. E. Gambill, Hupp distributor of Chicago, then manager of the Studebaker branch at Cleveland, has become manager of the Chicago branch of the Peerless Motor Car Company.

PALMER, Mass.—Michael Cavanaugh, formerly of Sullivan's Garage, has opened a salesroom for the Hudson and Essex in the Madura Block.

DETROIT.—The Universal Parts Company of Lansing, Michigan, recently completed remodeling and enlarging its quarters to permit the taking care of its increased business. It recently installed a complete line of Republic gears and other accessories.

NEW ORLEANS.—G. G. Chambers, formerly Durant factory representative and now president of the Chambers Auto Sales Co., Inc., Star dealers in Hammond, La., has extended the activities of his company to include the agency for Star and Durant cars in Baton Rouge, La., by taking over the Nordyke Motor Co., Inc., of the capital city.

MINNEAPOLIS.—Manager W. V. Harrington of the Harrington Motor Car Co., Minneapolis, has appointed the A. E. Arney Co., International Falls, Minn., to handle the Hupmobile in that territory. The company had the agency several years ago under Duluth, Minn., management.

NEW ORLEANS.—The Hoffman Schiro Motor Car Co., 1615 Canal street, distributors for the Chandler announced recently the appointment, as associate dealer, of F. A. Ahrens, Inc., 720 Carondelet street, New Orleans.

HOLYOKE, Mass.—J. Allen McGarry has been appointed sales manager of the Barnes Motor Sales Co., Chrysler dealer. He formerly held a similar position with the Pickup Motor Co.

MONTREAL.—L. E. Robin, of Robin Freres, 3845 Park avenue, announces that he has acquired the local representation for the Diana 8, a new car manufactured by the Moon Motor Car Co., for the Diana Motors Company.

ST. LOUIS.—The Merchants Tire & Battery Co. has moved from 1111 North Twelfth street to 2710 Washington boulevard. The old location will be used as a garage for passenger cars and trucks.

SPOKANE, Wash.—George L. Bryan and I. M. Logsbon, until recently with the March-Strickle Company in Spokane, have begun business as the Walla Walla Nash Company at Walla Walla, Wash., and will handle a complete line of 1926 Nash and Ajax cars.

DETROIT.—Victor H. Findlay is the new manager of the Genesee-Durant Company, Flint, Michigan. He succeeds W. S. Cook. Previous to being associated with Durant Motor Corporation, Mr. Findlay was associated with the Studebaker Corporation.

MINNEAPOLIS.—R. L. Stevens of Detroit, manager of service for the United Motors, Inc., is superintending opening of new quarters for the Minneapolis branch at 28 Tenth street S. The company will move from 10 Tenth street S., a few doors to double its space. G. E. Hall is manager of the branch.

DES MOINES.—The Harris Auto Supply Co. has opened a branch at Omaha. A location at 2112 Harney street has been leased for salesroom and warehouse. R. B. Hammill will be in charge of the Omaha branch.

CLEVELAND, O.—Papers have been filed with the secretary of state, chartering the Northeast Ignition Co., with a $10,000 capital to do a general automotive ignition and repair business.

CHARLOTTE, N. C.—Charlotte Hudson Company has been organized at Charlotte to engage in the retail sale of Hudson and Essex motor cars. B. D. Heath Motor Company, of Charlotte, distributor for this territory, will maintain its retail department.

ATLANTA.—The Kant-Grab Manufacturing Co., of Nashville, Tenn., manufacturers of accessories, announces the recent appointment of R. D. Murray as a member of the company's traveling sales forces. Mr. Murray has been an accessory salesman calling on the retail trades in the Southeast for some years.

MILWAUKEE.—Jack Weiner, president of the West Point Garage & Sales Co. of Milwaukee, has announced that in future his company will handle Overland and Willys-Knight motor cars exclusively.

LANSING, Mich.—A. J. Shaw, sales manager of the Duplex Truck Company, announces the appointment of M. W. Estabrook as assistant sales manager. Prior to becoming associated with the Duplex company Mr. Estabrook was connected with the sales department of the Flint Motor Company, in charge of advertising sales promotion and publicity.

SPRINGFIELD, Mass.—New York Tire Jobbers has opened a store at 326 Dwight street. C. Pallot is manager.

CHICAGO.—The Mar Tan Motor Manufacturing Co. has purchased a plant in Milwaukee, formerly owned by the Milwaukee Timer Co. This addition will give the Mar Tan Motor Manufacturing Co. much needed space, enabling it to handle business which could not be accepted at the old factory.

LIMA, O.—Gramm & Kincaid Motors, Inc., has opened up exclusive export offices in charge of William Paul Neth at 44 Whitehall street, 6 State street, Station P, New York City.

DETROIT.—A. J. Walter has resigned his position as retail sales manager of the Reo Michigan Sales, Inc., to enter the automobile insurance field representing the Motor Insurance Exchange of Detroit in Lansing.

SPOKANE, Wash.—The Western Auto Supply company's branch in this city has moved to new quarters upon the completion of a new building in the heart of the business district. The company occupies the lower floor of the structure, which have been fitted out especially for the display of automobile accessories.

MOLINE, Ill.—Arthur O. Roberts, assistant advertising manager of the Velie Motors corporation for the past year, has resigned this position and has joined the advertising staff of the Miller Rubber Company, Akron, Ohio, as a copy writer. Mr. Roberts was succeeded by Max H. Romig, formerly advertising manager with the Barnard & Leas Manufacturing Company of Moline, makers of milling supplies.

CARTHAGE, Mo.—H. E. Stevens of Joplin has been appointed manager of the Jamison-Weise company's Hudson-Essex sales and service establishment.

DETROIT.—Milton D. Straus has been appointed assistant to the president of the Gray Manufacturing Company (formerly the Gray Motor Corporation). Mr. Straus will be in charge of sales, advertising and service for the passenger car division of the business.

KANSAS CITY, Mo.—Joseph F. Reed, for five years of the sales force of the Tate Motor Company, has become sales manager of the Mapel Engineering Company, 416 North Third Street, which manufactures gasoline gages for automobiles and filling stations and oil burners for homes.

MILWAUKEE.—The Foyer Motor Co. of Milwaukee, Buick dealers, is erecting a $20,000 salesroom and garage at 891 Teutonia avenue.

CHICAGO.—H. L. Gillette has joined the Chicago branch of the Federal Motor Truck Company as sales manager. He has resigned as manager of the GMC truck branch in Milwaukee.

ROCKFORD, Ill.—The contract has been let for a new garage for the Velie Motor Company at the corner of Oak and May streets to cost $30,000.

NORWOOD, O.—Papers have been filed with the secretary of state chartering the Economy Chevrolet Sales Co., with an authorized capital of $35,000 to buy, sell and service automobiles and accessories.

SPOKANE, Wash.—C. W. Wells, president of the Wells Chevrolet company, announces plans have been prepared for two-story building and the remodeling of the present quarters, to be completed early in October. Leases on the properties and the cost of buildings involve an investment of upward of $126,000.

DELAVAN, Wis.—G. A. Oldenburg, J. E. Ralston and F. W. Oldenburg have organized the S-L Chevrolet Sales Co. here with capitalization of $25,000. In addition to dealing in Chevrolets they will conduct a general garage business.

NASHVILLE, Tenn.—H. C. Miller, Jr., who formerly owned the Auto Painting & Supply Co. of Nashville, sold his interest in the business recently and joined the Imperial Motor Car Co. of Nashville, as a salesman. The Imperial company distributes the Hudson and Essex line in part of the Tennessee territory.

CHICAGO.—C. C. Goodwyn is now sales manager for the Chicago Packard branch, succeeding R. E. Macduff, whose assistant he was. Mr. Macduff has become eastern district manager.

PALMER, Mass.—W. C. Moulton has been appointed Ford dealer and has opened an establishment in South Main street.

With the Associations

Parts Association Program

DETROIT, Aug. 15.—A program to include a standardized system of bookkeeping, inventory and accounting for parts jobbers members of the National Standard Parts Association was adopted by the merchandising committee of the association at its recent meeting in this city.

Besides serving the individual members and helping them to keep a better check on their store supplies, the system will serve as an aid for the association in gathering data which the association intends to use in its educational campaigns.

A convention and product show to be held in Chicago November 5 to 7 was decided upon by the board of directors. The show will be a regular exhibition of standard products and will be for members only and those outside of the association who receive invitations. One of the nights will be open to those not belonging to the association.

T. B. Blackiston, member of the board of directors and chairman of the merchandising committee, tendered his resignation and was succeeded on the board by D. W. Rogers of the Federal Mogul Corporation and by Sim T. Moe who is the new chairman of the merchandising committee.

Pennsylvania Meet Planned

HARRISBURG, Pa., Aug. 15.—A get together meeting of all the secretaries and officials of all the local city and county automotive associations in Pennsylvania, will take place during the fifth annual Business Congress and Frolic of the P. A. A. in Pittsburgh, Oct. 12, 13 and 14.

Talks by managers of many dealer organizations will be heard and a round table discussion of local association problems of attendance, benefits, activities, shows and so on will take place.

These meetings will take place at the luncheon table both days of the convention and during the opening forum hour on Monday.

St. Louis Outing Held

ST. LOUIS, Aug. 15.—More than 1,500 persons attended the eighth annual steamboat excursion of the Automobile Dealers' Association on the steamer J. S. recently.

There were 33 automobile dealers represented and every accessory house with a membership in the accessory association used tickets.

Ft. Worth Salesmen Elect

FORT WORTH, Tex., Aug. 15.—Officers of the Fort Worth Automotive Salesmanship Association elected at the regular meeting are: Jack Harvey, president; Tom Lewis, secretary-treasurer; Bob Logan, vice president. The directors are Ned Boswell, Ike Sidebottom, George Ringler and H. E. Knight.

Used Car Show Planned

CHICAGO, Aug. 15.—Details of the seventh annual used automobile show, under the direction of the Chicago Automobile Trade Association, are now being drafted. The show will be held at the Coliseum, October 10 to 17. These dates originally were scheduled for the enclosed car show, plans for which have been abandoned, because sanction could not be obtained from the National Automobile Chamber of Commerce.

It is believed that the show will prove more stimulating than usual, because of the time of year in which it will be held. On former occasions the exhibit has been held early in the summer.

The first used car show was held by the Chicago Automobile Trade Association in 1917 and it has been held each year since that time except in 1919 and last year. The public has been accustomed to automobile shows in the fall of the year and the exhibition this year is expected to afford dealers an unusual opportunity to move their stock when the market normally is dull.

The last exhibtion was a profitable one for the exhibitors. Nearly $500,000 worth of business was done during the week. The stringent regulations imposed by the inspectors of the show upon the exhibitors have given the public confidence in the worth of the cars shown. These conditions will again be imposed this fall.

Knapp Leaves Iowa Body

DES MOINES, Ia., Aug. 15.—A. J. Knapp, who for the past six years has been identified with the Iowa Automotive Merchants' Association, has resigned his position as secretary-manager, his resignation to take effect September 1. Mr. Knapp is resigning from association work to associate himself with a large development project at West Palm Beach, Florida, where he will make his home.

Starting with the Iowa association at its inception in May, 1919, Mr. Knapp has seen it grow in number of membership and strength to become a power in the state. He was founder of the Motor Trades Bulletin, the official publication of the I. A. M. A., which has been of great help in diffusing information to the automotive trade of Iowa.

It is probable that Mr. Knapp's successor will be elected at the quarterly meeting of the board of directors, to be held at Waterloo, Ia., on August 20.

Tradesmen Celebrate

SPRINGFIELD, O. Aug. 15.—Members of the Springfield Automobile Trades Association, composed of dealers, salesmen and mechanics, enjoyed an outing at Bryan park near Clifton. The outing started with a parade showing the various cars handled after which their party headed for Bryan park.

Ohio Association Elects

COLUMBUS, O., Aug. 15.—A revamping and reorganization of the Ohio Automotive Equipment Association took place at a meeting of 16 wholesalers in Ohio at Columbus, recently. The organization has been existant for about six years but recently its activities were much limited and the leaders believed that strong organization should be made to cope with the many problems besetting the industry.

A committee on membership consisting of Otto Berger of the Julian-Bantlin Co., Cincinnati; Cecil Walker of the Hardware Supply Co., of Akron and Curtis Sohl of the Griswold-Sohl Co., Columbus, was named to secure all eligible firms as members. This committee started out at once on its membership campaign.

A resolution was adopted to co-operate with the Ohio division of the National Automobile Dealers' Association. A motion was adopted asking the A. E. A. to assign a field secretary to Ohio to have charge of activities in the Buckeye State.

It was decided to hold four meetings yearly and the next will be on October 15 and 16, the place to be selected later by the officers.

Officers elected were: C. E. Justus of the Justus & Parker Co., Columbus, president; T. C. Deardorff of the Toledo Rubber Co., Toledo, vice president; C. H. York of the York Supply Co., Greenville, secretary and Curtis Sohl of the Griswold-Sohl Co., Columbus, treasurer.

Fight Parking Restrictions

LOS ANGELES, Aug. 15.—The Los Angeles Motor Car Dealers' Association has been conducting a determined campaign to bring about a revision of the drastic parking laws which have been in effect here for several months. The association has lined up the support of the entire business community in its fight and victory is in sight. Los Angeles business men declare that different surveys made by their firms conclusively proved that patrons who come in automobiles purchase more than five times as much in value as do customers who come by street cars or foot.

The resolutions adopted by the motor car dealers and the Downtown Business Men's Association set forth the doctrine that the automobile is a potent factor in the production of business and recommend that the business community stand behind any serious movement for the construction of parking garages in the central district as an additional step toward increasing parking facilities.

The Downtown Business Men's Association further went on record as being in favor of either cooperative effort or the use of private capital in the construction of such parking garages.

System of National Roads, Touching All States, Planned

More Than 70 Trunk Highways to Connect Every Capital, Included in Project

WASHINGTON, Aug. 15.—A system of interstate roads, known as United States highways, and touching every state capital, was agreed upon here at a session of the joint board on interstate highways. Final approval is to be given by the board, upon which they will be numbered and charted.

More than 70 roads are included in the system, forming a network over the entire United States. Thirty arterial routes were designated to traverse the country east and west, north and south, reaching virtually every point of historic and scenic interest.

Eight of the roads cross the Rocky mountains and extend across the continent; nine originate along the Gulf coast and terminate in Canada; another starts in northern Idaho and ends at Charleston, S. C., while one begins on the Pacific Coast and ends in southern Florida. One route runs the entire length of New England; another starts in Texas and runs across the Southwest and up the Pacific Coast to Canada.

The joint board consists of representatives of the U. S. Bureau of Public Roads and representative state highway officials, appointed at the suggestion of the American Association of State Highway Officials by the Secretary of Agriculture last February 25.

The first meeting of the board was held here on April 20 at which time tentative recommendations were made with respect to the color and form of direction and warning signs.

Hudson-Essex Holds Sales Congress in Los Angeles

LOS ANGELES, Aug. 15.—A Hudson-Essex sales congress, attended by dealers from all parts of Southern California and Arizona was recently held in the headquarters of Walter M. Murphy Company, distributors, on the occasion of the visit here of Harry G. Moock, promotion sales manager of the Hudson Motor Car Company.

Moock pictured the "car of the future" as a low-hung, closed car, more graceful than machines of the past and steadier on the road.

"Once we needed big wheels and high-hung bodies," said Moock, "but with better roads, cars are coming down. People want easy riding in their cars and in the motor car business the public is boss.

"The coming cars will be hung low. The ideal car of the future will be a closed car; more reliable, more economical, simple in design, useful under all conditions, quiet and smooth running. This will apply to cars in general."

Coming Motor Events

Automobile Shows

Dallas, Tex.—Oct. 10-25
Annual Automobile Show, State Fair Automobile Building, under the auspices of the Dallas Automotive Trade Association. J. W. Connell, manager.

De Pere, Wis.—Aug. 31-Sept. 21
Annual Automobile Show under the auspices of the Automobile Division of the Green Bay Association of Commerce.

General meeting of the Automotive Electric Association.

Wrightsville Beach, N. C.—Sept. 7-8
Annual meeting of the North Carolina Automotive Trades Association.

Montreal—Oct. 13-14
Convention of the National Association of Automobile Insurance Companies.

Contracts Sent Out For Annual A. E. A. Exhibit

Show Will be Held at Coliseum in Chicago, Nov. 9-14 in Connection With Yearly Convention.

CHICAGO, Aug. 17.—Contracts have been sent out for the seventh annual exhibit of the Automotive Equipment Association which will be held at the Coliseum in Chicago, November 9 to 14, inclusive.

Assignment of space to the various applicants whose contracts have been accepted will be made at the Congress Hotel, Chicago, at 10 a. m., Thursday, September 24.

This year's A. E. A. show, which will be held in connection with the association's annual convention, will be conducted under practically the same rules as last year. The show is exclusively for the trade and admittance will be by ticket or invitation. Tickets are issued to all jobber members of the A. E. A. and their salesmen, and invitations will be sent to a selected list of automotive wholesalers outside the A. E. A. membership. This list has to have the approval of the association. The exhibitors will be the manufacturing members of the A. E. A.

This year a special effort is being made to have a large attendance of automotive distributors and wholesalers from foreign countries. About 1,500 invitations were sent out to the trade in countries other than the United States and Canada early this summer. For several years there has been a growing interest in the A. E. A. show on the part of foreign automotive merchants and it is the belief of the association members that this exhibit can be used to create a large export trade for automotive manufacturers.

Paige Sales and Net Income Set High Mark in 6 Months

DETROIT, Aug. 15.—Both in sales volume and in net income, the Paige-Detroit Motor Car Company achieved new high marks for the half year ending June 30.

The sale of Paige Jewett cars totalled 24,002, representing a net sales total of $38,077,326.66. The cost of selling was $33,512,887.58. The net income after deducting general expenses, miscellaneous charges and federal income tax was $1,892,979.18.

This amount is further reduced by deducting $77,770, the amount paid in two quarterly dividends on the outstanding 7 per cent preferred. The owners of common stock of record June 30 also received a 10 per cent dividend distributed July 15.

After transferring net income for the first half of 1925 to the balance of $7,516,992.12, representing common stock and surplus as of December 31, 1924, to which was added $35,676.89, derived from adjustment of federal income tax for 1924, and $2,542.41 received in liquidation of the Paige-Ohio Company of Toledo the total was increased to $9,448,173.60. From this was appropriated $442,270 paid in cash dividend on preferred and common stock, leaving a balance of $9,005,903.60 as the equity of holders of 616,000 shares of no par value common stock as of June 30th.

SQUEEKS and RATTLES

DARE-DEVIL

"Is she a good driver."
"I should say so. She's already driven four husbands quite crazy."
—London Mail.

Experience de Luxe

Charlotte—What kind of a car has Tom?

Martyne—A pray-as-you-enter!

If the majority really ruled, the locomotives would have to stop at the crossings for the flivvers.
—Arkansas Gazette.

Jack and Jill
Sped up a hill.
A curve up there was sharp.
The car upset;
Jack's rolling yet;
Jill's playing on a harp.
—University Life.

Policeman (producing notebook)—Name, please.

Motorist—Aloysius Alastair Cholmondeley Cyprian—

Policeman (putting book away)—Well, don't let me catch you again.
—Punch.

"My sister's like a radio program."
"How's that?"
"Anybody can pick her up."
—Western Weekly.

Revenge!

Motorist—That man I ran over is the meanest man in town.

Friend—Why?

"He puts tacks in his pockets when he crosses the street."
—Judge.

Here lies the remains of a radio fan,
Now mourned by his many relations;
He went to a powder mill, smoking his pipe,
And was picked up by twenty-one stations.
—Williams Purple Cow.

In Derby, after a narrow escape from being knocked down by a motor car, a dumb man suddenly regained his speech. We learn that a golfer who was passing at the time turned very pale and hurried on.
—London Opinion.

THE DECOY

First Bandit—Slowin' down, ain't he?
Second Bandit—Of course.
—American Legion Weekly.

New Board Race Track Is Being Built at Salem, N. H.

BOSTON, Aug. 15.—New England is going to have a board track that will rival the one at Culver City, and it is to be ready in September so that a race will be assured Saturday, October 17. It is to be built at Salem, N. H., just over the Massachusetts line where a race, held July 4, was won by Ralph De Palma.

Nearly 50,000 went to that race, and the promoters, among them Jack Le Cain, the former racing star, saw the possibilities of speedway events and gave orders for the board track. Work on it started this week and it will cost more than $100,000.

Le Cain has been assured that all the star drivers will compete and that the race will count in the points for the American championship.

CUNNINGHAM GOES TO EUROPE

DETROIT, Aug. 15.—Harry L. Cunningham, secretary-treasurer of Rickenbacker Motor Company, sailed last week for Europe where he will study market conditions for American cars in general and Rickenbacker in particular. Mr. Cunningham was one of the first men in the industry to visit Europe several years ago and has to his credit the establishment of branch houses in Europe for two of the largest automobile manufacturers in the industry. On his trip which is purely business, he will visit France, Germany, Belgium, Holland, England and possibly Czechoslovakia, which latter country is second only to Germany in it's ability to buy and insistence on American-made cars.

THERE'S NOTHING LIKE AIR for Shock Absorption

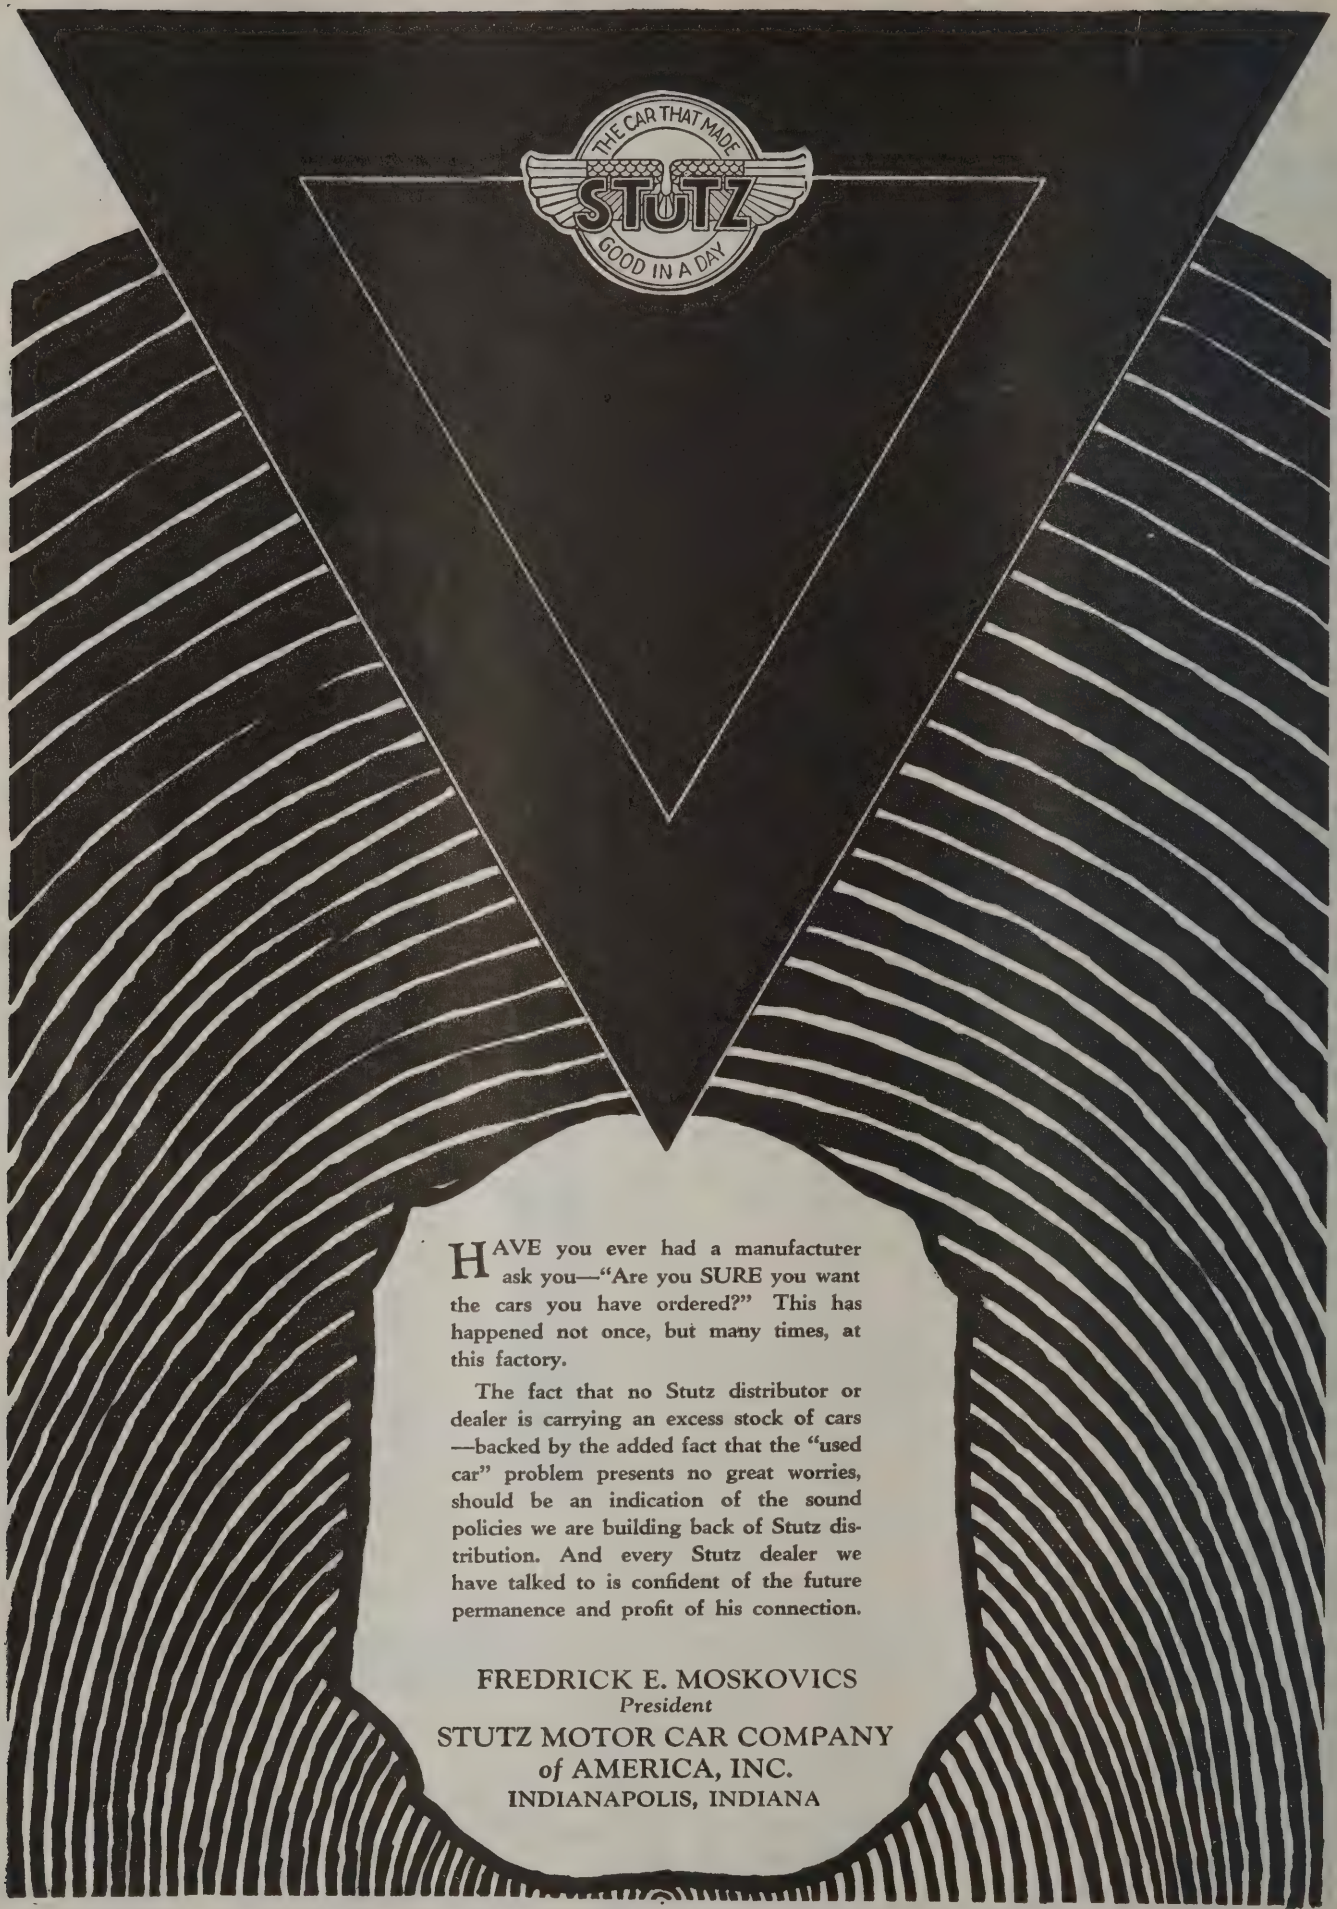
WESTINGHOUSE AIR SPRINGS

Westinghouse Air Springs have, for fifteen years, proven that *Air Suspension* not only gives remarkably smooth riding, but prevents road shocks from reaching the frame and body. The piston, to which one end of the leaf spring is attached, acts directly on a chamber of compressed air which insulates the rest of the car from shocks and vibrations.

The new Junior and Midway Westinghouse Air Springs are made for cars up to 3,000 and 4,000 lbs. respectively.

They are installed with brackets integral with the standard fittings of the car, are interchangeable with new car brackets and easier to install.

The Air Springs and fittings for attachment are supplied direct to dealers and service stations on a wholesale basis. There is a *large margin of profit* for *you.* Selling and installing them means real money.



Westinghouse Air Springs are the finest known device for shock elimination.

Let us send you full information and wholesale prices at once.

HAVE you ever had a manufacturer ask you—"Are you SURE you want the cars you have ordered?" This has happened not once, but many times, at this factory.

The fact that no Stutz distributor or dealer is carrying an excess stock of cars —backed by the added fact that the "used car" problem presents no great worries, should be an indication of the sound policies we are building back of Stutz distribution. And every Stutz dealer we have talked to is confident of the future permanence and profit of his connection.

"ANYWHERE ANY TIME"

Builds Big

TIRE BUSINESS

Ford Dealer Who Develops Huge Trade in Casings and Tubes Trains Salesmen to Sell by the Set

By A. W. ROE

GROWING from a small beginning to what is easily one of the largest tire retailing establishments in the South in the short period of nine years is the record of the Adams Tire Service of Mobile, Alabama. By concentrating unusual efforts on service, Adams has developed a business that covers the city of Mobile, the county of Mobile and the surrounding environs.

Adams is here, there and everywhere in this territory, at all hours of the day and the night.

"Anywhere—Anytime," is a slogan that Adams has capitalized and made into more than a mere catchword. "As near as the nearest telephone," might be another motto of this company, for the arms of its service reach far and wide over the area it serves.

Back of Adams Tire Service are men of vision who are responsible for laying the foundation stones of the business and the erection of a superstructure of service that is unique in the annals of tire retailing.

Nine years ago, L. G. Adams, who has held the Ford agency in Mobile since 1912 and who has developed it from a "hole in the wall" in a rented show room in an unpromising location to a quarter-of-a-million dollar home on Government street, Mobile's fashionable thoroughfare, looked about him and decided to launch a small tire business.

He put in a small stock of 30x3½ tires in the already mentioned "hole in the wall." From this insignificant origin has grown a business the stock of which now represents an investment of $60,000 in tires alone, housed, not in the three-story plant of the Ford company, but just across the street from it in a plant that provides something new in tire retailing establishments.

To Have Six Tire Stations

In addition, the Adams Tire Service operates three substations in and near Mobile and will add soon two other sub-stations, making six in all, given over to the ramifications of the tire business.

To Mr. Adams, himself, belongs the credit for seeing the opportunities and shaping the bigger policies of the now extensive business, and to J. W. Lord, manager, who has been at the helm of the tire service's craft for the last eight years, belong the credit, as Mr. Adams says, of looking after the countless details and advertising so that "Anywhere—Anytime" has become a slogan associated indissolubly with the name of the "Adams Tire Service" in the minds of the motoring public of Mobile and vicinity.

L. G. Adams, president of the Adams Motor Company and the Adams Tire Service, Mobile, Ala., who has developed one of the largest tire retailing businesses in the country

After coming to the then infant business Mr. Lord first put his house in order by departmentizing each division of it. Then he looked around for new avenues through which to reach the public. Complete night service had already been installed, but the manager saw that in order to make further expansion feasible it was necessary to go out into the highways and byways, to speak biblically, and comb them for trade.

Elaborate Publicity Program

Thus it was that he turned to a rather elaborate system of publicity, including newspaper advertising, billboards and direct mail. The company is running at the present time ten, 50-foot bulletins, one, 100-foot board and one, 150-foot board, said to be the biggest and longest billboard in Southern Alabama. The messages on these boards are changed frequently; they are never allowed to grow stale, but "service" is the word that is played up on all of them. Mr. Lord considers the slogan, "Anywhere—Anytime," which is printed conspicuously on every tire cover the company sells as being the best publicity the company has ever used.

Then it was that Mr. Lord educated his salesmen to sell tires by the set. The salesmen were instructed in

View of parent plant of the Adams Tire Service, showing awning-covered "terminals" in the rear

the gentle art of suggestion. Just as automobile dealers have profited by the policy of selling the car fully equipped with accessories, Mr. Lord has found that his innovation of re-tiring the car all round has a permanent place in the sales end of the business.

The passage in 1923 of a city ordinance, prohibiting the giving of Sunday tire service by any establishment within the city limits of Mobile, furnished the occasion for the opening of tire station Number Two, located about three miles from the heart of the city. Although the ordinance was repealed soon after its passage, station Number Two had already established its right to live and caused the company to think of putting in other sub-stations.

After Wholesale Patronage

Consequently, station Number Three was set up to capture wholesale and commercial business in the shipping area of the city. In May of 1924, station Number Four was opened on the Cedar Point road, about three miles from the city, and it has prospered because it catches business from baseball, tourist and outing enthusiasts. Two other stations are to be opened soon, making five sub-stations that the Adams organization will operate in conjunction with the parent station on Government street.

With this network of tire stations the Adams Tire Service is now able to give more efficient and quicker service than would be possible if all tires went out from the parent station. Each station is equipped with a complete stock of tires, and has its own service trucks, operated by skilled tire men.

J. W. Lord, manager of the Adams Tire Service

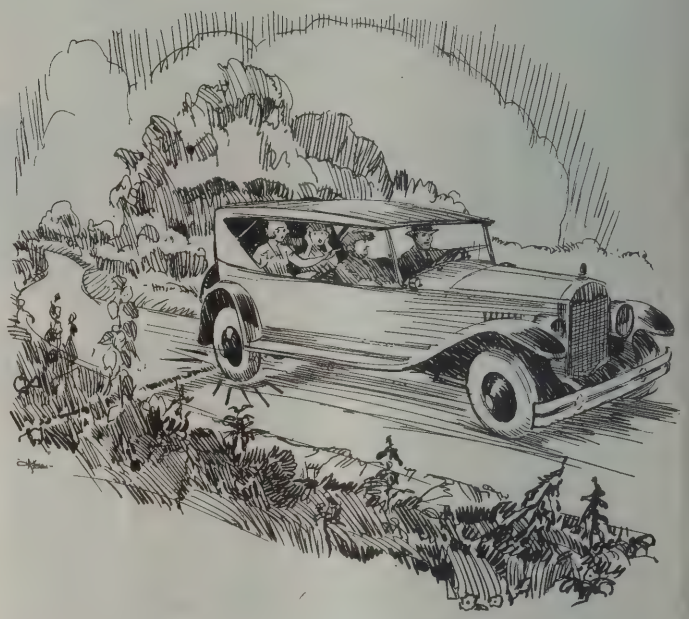
"We now employ an effective relay system," Mr. Lord said. "It works something like this. If a customer, stalled on the road, 'phones in here at Station Number One and tells us he has a flat, we ascertain from him exactly where he is being detained and the make and size of tire that he needs. Then we consult our map and find out which station he is nearest and 'phone the manager of that station to take the job in hand.

Free Tire Service Anywhere

"We give free tire service to our customers even though they be as many as 50 miles from our main station. If a man buys his casings or tubes from us we give him service on them. We mean by this that if he is one or 50 miles from our place of business, we will go to him and put an extra tire on his wheel without charge, bring in his flat and repair it, charging for the job only the amount that is necessary for repairing the tube, which is usually about 50 cents.

"Each station operates as a separate unit, and each has always shown a profit. Each station sells gas, and if a man is out of gas, upon request we have five gallons delivered to him free of charge no matter whether he has been our customer previously or not. He usually *is* after we make one such delivery. We have delivered gas as far as 45 miles."

Adams has been selling tires on terms for three years and has had marked success with this plan, direct mail being the main agency through which the company calls the attention of desirable accounts to the time-payment plan.



Mr. Adams keeps a unit record of the number of tires each salesman sells. Various prizes are offered, usually monthly, to stimulate efforts among the salesmen. Prizes and conditions are changed often to avoid monotony. One month the big prize went to the man who took off the greatest number of competitors' tires and replaced them with Adams's.

The parent tire station on Government street is the last word in convenience and attractiveness. The front is built of tile brick of two colors, so attractively arranged as to appeal to women, many of whom patronize the station. From the entrance on Government street, cars drive through to the service station in the rear. Instead of this being in a covered shed, where the fumes and heat would make the place almost unbearable for workmen and patrons, the company has erected five awnings that extend out from the stock rooms very much like the fingers of a big railroad terminal. The entire floor space of 11,760 square feet is concreted. The place presents a very genteel appearance and an orderliness that appals to the most discriminating class of trade. As many as 28 cars can be serviced at the same time without undue crowding.

The tire service employs 57 persons and has 15 service trucks engaged in road service work.

BIG BUSINESS—*LITTLE OVERHEAD*

Novel Installation Yard Recommended in Connection With the Sale of Bosch Shock Absorbers Costs Little and Has Big Possibilities

HARWOOD was pleased with himself, not that this was anything out of the ordinary, but this time he was especially pleased. Two weeks ago he had bought a new car, one of America's finest, everyone said so, even the wife, so there could be no question about it. Harwood thought of its beautiful lines, its sturdy power plant, its comfortable cushions. Yes he would do it. Would invite the boss and his wife out to the cottage at the lake to spend the week end. But alas for the plans of mice and men.

All had gone well until Harwood started to take a short cut. The boss was with him, up in front, while the ladies rode in back. Then came the darkest hour. Across the road stretched a ditch, a left-over scar of some buried pipe, filled, 'tis true, but a bad job at that. Harwood saw it, but too late. The flexible rear springs bent under the blow, then released their pent up energy, as the best of springs will do, and two shrieks penetrated the woods, as two bobbed heads struck the top.

The event was not serious, no harm had been done, but for Harwood the day was spoiled, the effect he had hoped to create with the new car had been marred. He was one of a million prospects, one of several million who yearly buy new cars, and demand the maximum that balloon tires, well designed springs and shock absorbers can afford. All but the latter were there and these would be added the first time Harwood came to a place where shock absorber installation was being done in a businesslike manner.

Derebey, who runs this snappy appearing electrical station, was quick to grab this new profit producing idea

Help Shock Absorber Sales

"Experiences of this sort," I was told by the Bosch sales manager, "are the things that make it easy to sell shock absorbers, and with an outdoor installation system, that everybody can see, it makes things still easier." And the method of outdoor installation which was started at the two large stations in Springfield, Mass., and at Chicago have not only justified their own existance but have shown the possibilities of similar profitable business for the dealers and specialized shops in the smaller communities.

Overhead expense is the thing which makes the profits fade away. There may be a substantial discount on a tire, a battery or a spotlight, but if the cost of the building, the management and a hundred and one other items eat up all the margin, then the boss himself finds it hard to eat.

In practically every shop there is a man used as a helper, or in a minor mechanical capacity. Such a man can be trained to make shock absorber installations, for with the Bosch system detailed instructions are provided covering each make and model, while special fittings and a cleverly designed universal type of bracket make it possible to handle all jobs with three types of equipment, an initial order of ten sets being enough for the dealer to start on. The adjustable feature also helps in the original installation as well as making it simple to adapt one type to balloon or cord tire equipment and to varying load requirements.

In the smaller communities and even in most large ones, it is often possible to get the use of a vacant lot adjoining or near the dealer's place of business, and the arrangement of this space can be made so attractive that the appearance alone is of great advertising value.

Profitable Side Lines

Specialized electrical stations are finding that side lines such as this one can be profitably handled, not because they require electrical trouble shooters, but because they add one more item which can be sold with no appreciable increase in the overhead.

One typical illustration of an up-and-doing electrical shop is the Albany Park Battery Station, located on the northwest side of Chicago and owned and operated by Chester H. Derebey.

This service station is official representative for Exide batteries, Stromberg carbureters, American Bosch, Delco, Remy, Klaxon, Gray and Davis, Briggs and Stratton, Atwater Kent and Connecticut, these accounts having been obtained due to the up-to-date business methods employed.

For example, Mr. Derebey was one of the first in his territory to install a constant potential charging system. He early put into effect the *charge-for-service* idea in connection with his battery work. He has an addressograph and a mimeographing machine for getting out advertising matter to the prospects in his territory.

Is it any wonder that he was quick to grasp the outdoor installation idea to bring more sheckles into the treasury?

But wanting to get the reason back of his adoption of the idea, I said, "How does it happen that you, as an electrical specialist, take on this mechanical line?"

Registration Plan Is Effective

And Derebey said: "That's easy. First, you have to do a pile of electrical work to make as much from the labor as you do in putting on a forty dollar set of shock absorbers. That's one thing. Then, being electrical specialists, we find the registration plan the best thing that ever happened for bringing business our way. When a man buys a car with Bosch equipment, his name is given to the Bosch branch, a card is filled out and we get a copy.

"The car purchaser comes to us for service and inspection of his electrical equipment, sees our installation facilities, hits a bump or two and the rest is easy. We have an ignition man, a carbureter man and two battery men. One of the latter does the shock absorber installation work —that's his job. When we are rushed on shock absorbers we can go easy on battery repairs for they will wait. It only means letting a customer have his rental battery a few days longer in rush periods."

In the case of the Albany Park Battery Station, no mechanical work or greasing is done on cars and it was found necessary to put up a sign which would make this clear. Where dealers in small towns would have such an installation rack, however, it could be worked in very well with washing and greasing, while the rack could also be used in connection with mechanical work such as bearing adjustment.

A Business Getter

Cars having shock absorbers installed at the Chicago branch

Outdoor installation yard of the American Bosch Magneto Corporation in Chicago

Aids to Quick Engine Starting

RICHNESS of the air-fuel mixture determines the number of revolutions that must be made by an automobile engine before an explosion is obtained, said J. O. Eisinger, of the Bureau of Standards, in a paper delivered at the semi-annual meeting of the Society of Automotive Engineers. Various other factors also affect the time for starting the engine, as determined by a series of tests conducted at the bureau.

Less fuel is used in starting if the mixture is comparatively rich, but the primary advantage to the driver is that it gets the engine started more quickly on a cold morning. The more volatile the fuel used, the more quickly the engine can be started, and aviation gasoline gave better results than commercial motor fuel.

The problem of starting in cold weather depends to a large extent on the temperature of the charge and the degree of vaporization of the fuel. The quantity required for starting may be very different for different water jacket temperatures. More complete vaporization and quicker starting result from a decrease in throttle opening or by choking, which reduces the pressure in the intake system; choking gives somewhat better results than throttling. The use of ½-inch throttle and choke orifices greatly reduced the starting time.

The experiments also indicated that, from the standpoint of starting, it is desirable to locate the carbureter jet so that the fuel will need to be lifted the least distance vertically by the air stream and that the jet of fuel should not be obstructed. More fuel reaches the cylinders in a given time, and the engine starting time is considerably reduced, for a given rate of fuel flow, when the jet discharges vertically upward and a small jet orifice is used, because the fuel stream has a greater velocity and rises to a greater height. Moderate spark advance also greatly aids in quick engine starting, an advance of about 35 degrees giving a much shorter starting time than an advance of 10 degrees and somewhat shorter time than advances of 50 or 80 degrees.

What About Radio?

RADIO merchandise is being retailed through many automotive establishments. Among these automotive establishments are to be found accessory stores, battery and electrical shops, garages, and automobile dealers who do a general business in new and used cars and supplies and equipment of all kinds.

Automotive jobbers in many sections of the country are becoming the wholesale distributors of radio products and it is only natural that to a considerable extent they would seek outlets for this merchandise through the same channels that they have been associated with in the distribution of automotive merchandise.

And yet there are some automotive merchants who stand definitely opposed to engaging in the radio business in conjunction with their automotive business. There are others who right now are actively engaged in putting in radio departments, and still others who are found to be giving serious thought to the matter.

What should the automotive merchant do about radio?

Does the radio business naturally fit in with the automobile business?

Is radio merchandising a profitable business?

Can the automotive merchant sell radio without neglecting his automotive business?

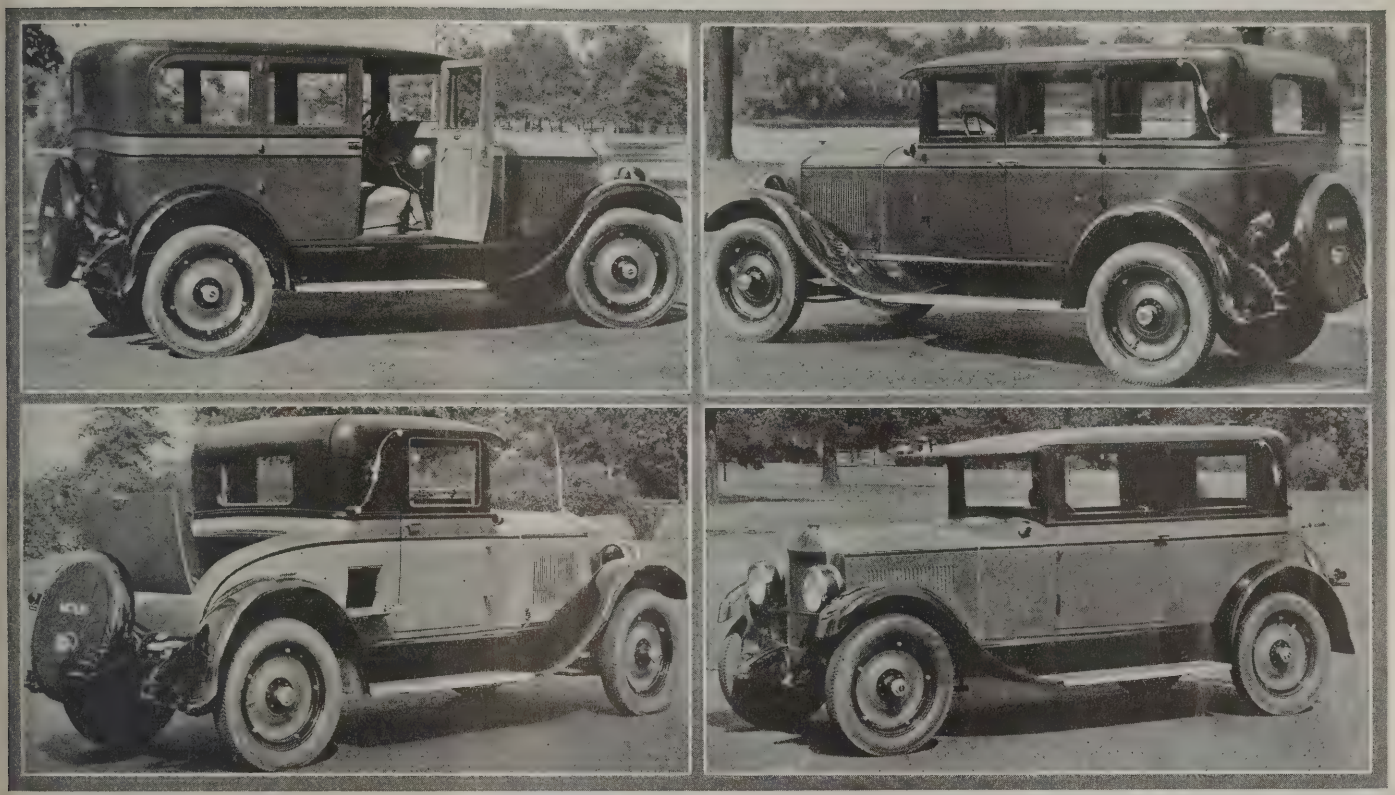
These are some of the questions that occur to every automotive merchant who gives the least thought to the radio business.

Such questions as these cannot be answered with theoretical discussions. The answers must come from the experiences of dealers who have tried the radio business.

Therefore, MOTOR AGE will open its columns to a full discussion of this subject by dealers who have had experience in selling radio. We want car dealers, garage men accessory dealers, battery and electrical shops to tell us fully and freely just what their experience with radio has been. If they approve of radio as a sales field for the automotive merchant we want them to say so and tell why. If they disapprove we also want to know the reasons.

From the letters of dealers who have had experience with radio, MOTOR AGE editors will prepare articles summing up and discussing all the phases of the radio business and quoting from the experience of individual dealers. Names of dealers, however, will not be published if a request is made that they not be, but all letters to receive consideration must bear the signature of the writer.

Please address letters to the Editor of MOTOR AGE, 5 South Wabash avenue, Chicago, Ill.



Watch next week's issue for the first article on "What About Radio?"

Tell Your Radio Experience to Motor Age

If as an automotive merchant you have had experience in selling radio merchandise, please tell MOTOR AGE about it. What you have learned may be of great help to a fellow dealer. Information contained in letters from dealers will be made the basis of articles to be published in MOTOR AGE on the subject, "What About Radio?" The more letters we get the better the articles will be. Send your letter to the Editor of MOTOR AGE, 5 South Wabash Ave., Chicago, Ill.

More About Radio in Next Week's Motor Age

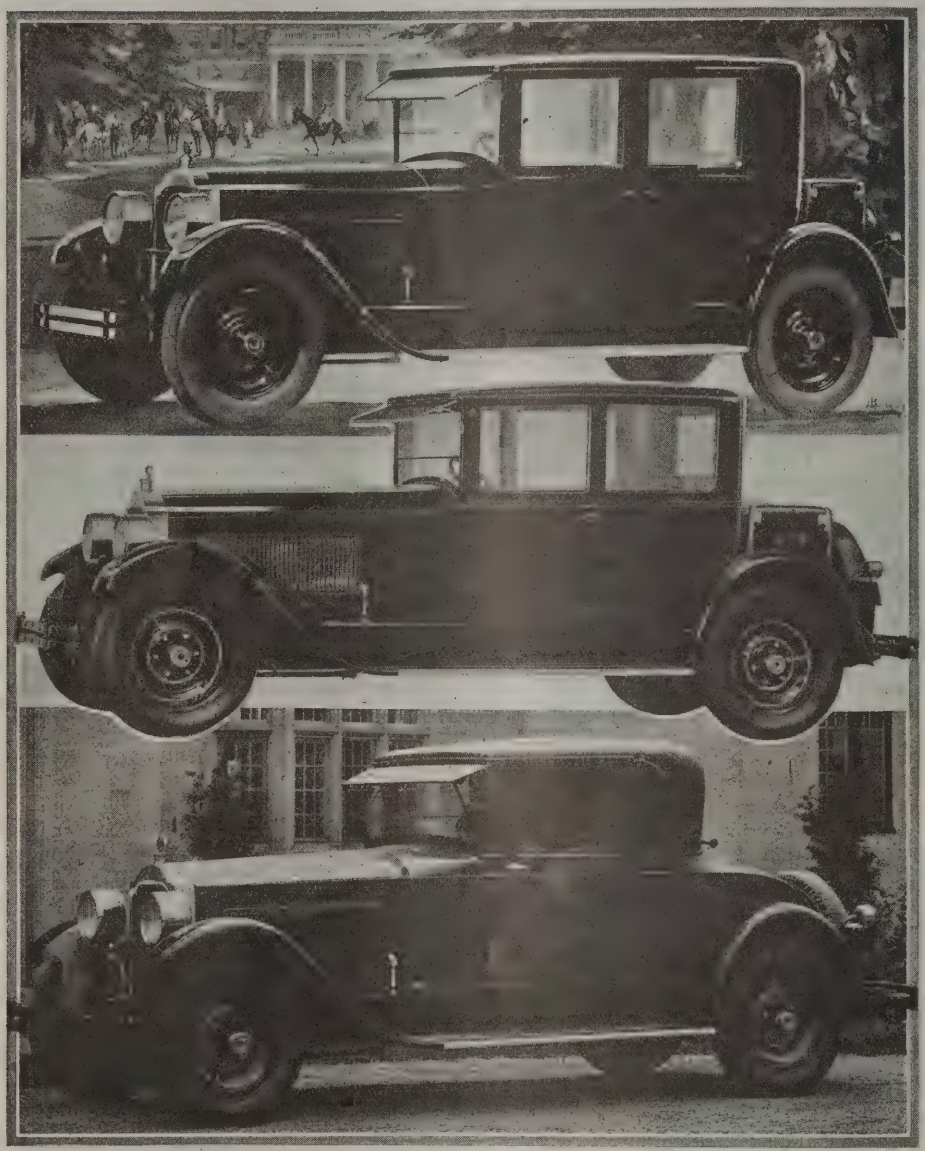
Refinements Adding to Comfort and Appearance in Moon Models for 1926

Group of four Moon models for 1926. Top, left to right, three-quarter view of the Deluxe four-door sedan and the standard sedan. Below, left to right, the cabriolet roadster and the coach DeLuxe

IN the Moon cars for 1926 the basic lines of the car have been retained in keeping with the new day engineering policy now preferred in the automotive industry. The Moon Motor Car Company has for several years advocated and had in effect this policy of eliminating the yearly model idea in the cars this company manufactures. Changes in the Moon cars consist in reality of the refinements which have been incorporated in the cars to add to their roominess and comfort and to their appearance.

The shape of the radiator shell of the Moon cars for 1926 has been improved by deepening the radiator so that both the shell and the radiator have a much better appearance. The fenders have a deeper crown and an increase of 1 in. in width while the substitution of moulding for the raised center panel has added much to the appearance of the fenders. The front fenders are made much longer and with a longer and more graceful sweep, which lends a European effect to the fenders. The running board is much shorter and wider, necessitated by the change in the fender length.

All chassis sheet metal has been redesigned and a tank cover has been added



(Continued on page 42)

Packard Adds Four Passenger Coupe, Club Sedan and Holbrook Coupe

Former Two Are Mounted on Both Six and Eight Cylinder Chassis While Latter Is Available on the Eight Only—Roominess Features New Bodies

Three of the New Body Models on the Packard Eight Chassis, Top to Bottom, Five-Passenger Club-Sedan, Four-Passenger Coupe and Holbrook Two-Passenger Coupe

A NEW four passenger coupe and a five passenger club sedan together with a new special Holbrook coupe now are being offered by the Packard Motor Car Company. The four passenger coupe and the club sedan are mounted on both the six and eight chassis while the Holbrook coupe is offered only on the eight chassis.

The four passenger coupes and the club sedans both have large decks at the rear with attractive railings and each carries a large water and dustproof metal trunk.

The club sedan is mounted on the 133 in. wheelbase six cylinder chassis and on the 143 in. wheelbase eight chassis. The price of the Packard Six club sedan is $2725 while the price of the Eight club sedan is $4890.

Dimensions of the club sedan body are alike for both the six and eight chassis. The six is upholstered and trimmed in the same material as other of the six cylinder enclosed cars. The same options of paint, trim and upholstering for all Packard eight cylinder cars are given on the new eight club sedan.

The trunks on both six and eight club sedans give unusual storage room for parcels or provide a place for several suit cases or traveling cases. They are 44⅜ inches long, 19⅜ inches deep and 15½ inches wide.

Roomy Rear Seats

The rear seats are 49 in. wide, giving ample room for three persons and have the deep upholstering and springs together with the comfortable contours and width and height of cushions that mark other Packard enclosed cars. Two hassocks made of the same material as the carpets are provided for foot rests. The ample leg room in the rear seat is made even greater by cutting away the back of the front seat at the bottom for additional toe room. Four wide doors give access to both front and rear seats independently of each other. The front seat has a width of 46 in. and is of the same upholstering as the rear seat. Curtains for the rear windows are carried on concealed rollers.

The four passenger coupe in the six cylinder line is mounted on the 126 in. wheelbase chassis and the 136 in. wheelbase chassis is used for the eight coupe. Paint, upholstering and trimming on both these cars is the same as that on other Packard enclosed models, with the same distinctions between six and eight cars and the same options on the eight.

The driver's seat is set a little ahead of the two-passenger seat across the rest of the rear of the body. To the left of the rear seat is a parcel compartment with an opening in the top 8¾ by 17¾ in. The doors have the same opening as in the seven passenger sedan bodies.

The fourth seat which folds back under the cowling when not in use has deep spring upholstering and is 17¾ by 17⅝ in. The driver's seat also is quite large with a seat cushion 22 in. wide by 17⅝ in. deep. The back measures 23½ in. across. The two passenger seat is 39 in. wide and 21 in. deep. Curtains on concealed rollers are provided for the rear windows.

Rear Deck Trunks

Trunks carried on the rear decks of the coupes are considerably larger than those on the club sedans but are of the same materials and construction. They are 44⅜ in. long, 21½ in. wide and have a depth of 19⅜ in. They are fastened securely to the large deck in the same manner as that employed on the club sedans and in a like manner are readily removable.

The six coupe is listed at $2585 and

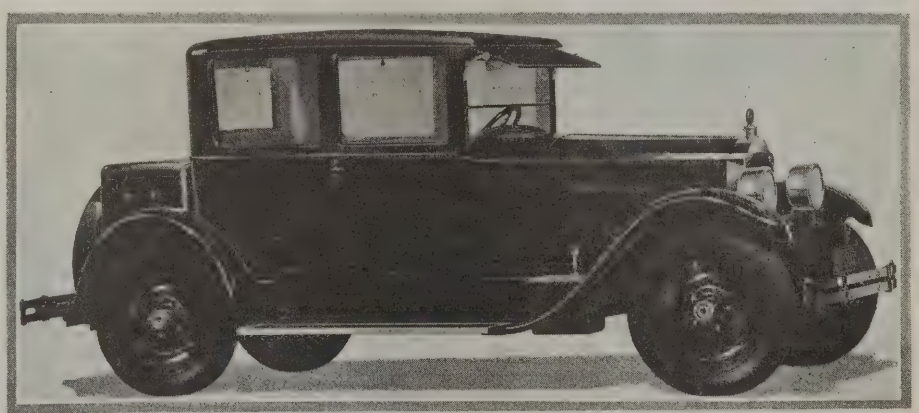
the eight coupe at $4650. Equipment on both coupes and both club sedans is the same as that on other enclosed models, including snubbers on the six and stabilators on the eight, bumpers front and rear built into the chassis, motometer, dash gasoline gauge, rear view mirrors, automatic windshield cleaner, cigar lighter on dash, cowl ventilators, sun visors and a vanity case on the coupe.

The new Holbrook coupe, an attractive addition to the Packard array is mounted on the 136 in. wheelbase chassis; it is a two passenger car, complete with full equipment listing at $5775.

There is an exceptionally large amount of space for stowing luggage in the rear deck in a compartment, access to which is obtained through a hinged dust and water proof door set into the deck. Another compartment 10 in. wide and extending practically the width of the body is located just behind the seat.

Through special design and construction the three piece "vacuum" type windshield with which this car is fitted allowed an almost unrestricted view forward while its appearance enhances the particular style of car.

Equipment is the same on the Holbrook coupe as on other Packard eight closed cars and the same options are given on painting, trimming and upholstering.



New Models, Lower Prices Aid Sales

SAN FRANCISCO, Aug. 22.—The last week in July and the first week in August might well have been called "New Car Fortnight" in San Francisco, for the motoring public within that period got its first glimpse of the new models of some dozen makes of passenger cars. This inspiring show, coupled with price reductions in most lines, makes the first two weeks of August look like a record for this month in San Francisco territory. Certainly the month will be far ahead of the same period last year.

Among the new models shown were seven new Moons, featuring the coach de luxe; the new Chandlers, in which the Comrade Roadster and paneled radiator design attracted much attention; sixteen types of Buicks, master six and standard six chasses; new Nash models, with the Ajax Six, in two body styles, five-passenger touring model and five-passenger sedan; the new Diana, produced by Moon; new Star models, and the latest Oakland Six.

Packard Four-Door Five Passenger Club Sedan Mounted on the Six-Cylinder Chassis. The Top View Shows the Comfortable Contour of the Seats

New Four-Passenger Coupe Mounted on the Packard Six Chassis. The Trunk at the Rear Is Metal and Exceptionally Roomy

DEVELOP STEAM MOTOR

COLUMBUS, O., Aug. 22.— Papers have been filed chartering the Universal Steam Motors Co., of Columbus with an authorized capital of $100,000 to develop a rotary steam engine for motor cars. The incorporators are Harry C. Dunning of Chicago, the inventor; B. L. Thuma, A. F. Wise, E. C. Neidlander and Carl D. Preston. Mr. Dunning has worked for six years perfecting the engine which uses kerosene as fuel. It is a six cylinder engine and great power is claimed for the invention. One of the engines invented by Mr. Dunning is on display in the lobby of the new Neil House. For the time being working models for the purpose of producing the engines in quantities will be made. It has not been decided where the factory will be locataed.

The New Buick Electrical System

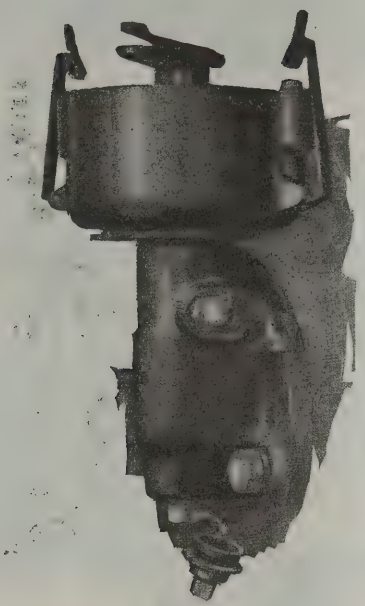


Fig. 4
Ignition unit showing timing adjusting screw and cap

Two-Unit Delco Electrical System, Used for the First Time on This Car, Contains Details of Interest to the Shop Electrician

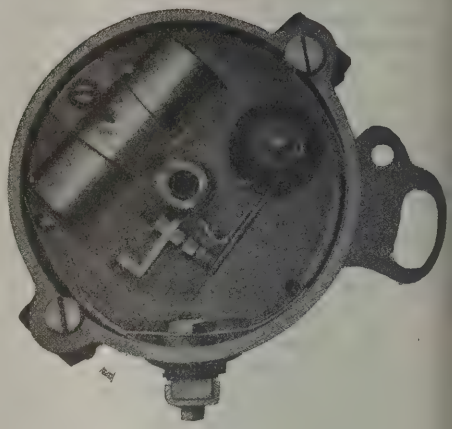

Fig. 3
Interrupter showing breaker point adjustment and replacable condenser

FOR more than ten years automotive electricians have been familiar with the Delco type of motor generator used on Buick cars. Now a change has been made as described in the July 30, 1925 issue of MOTOR AGE and the forehanded trouble shooter will file away for future reference all information he can get on the new system.

In Fig. 1, the electrical circuits are shown for the Master Six, the circuits for the Standard Six being the same except that there is no tonneau light and no pillar light. The starting circuits are conventional in that the live battery terminal is connected to the starter switch. The switch, however, is mounted directly on the starting motor as shown more in detail in Fig. 2.

On the starting motor shaft is a pinion which is brought into mesh with the flywheel ring gear by the operation of the starter pedal. After the pinion has been brought into mesh further motion of the starting mechanism operates the starting switch. This construction makes it practically impossible to put any strain on the ends of the flywheel or pinion teeth, for it is only after meshing has been completed that the starting circuit is closed. In Fig. 2, it will be seen that a roller clutch is incorporated in the starting motor so as to prevent damage to the armature in case the driver of the car does not release the starting pedal as soon as the engine starts.

Referring again to the wiring diagram at Fig. 1, it will be seen that from the live starting switch terminal a connection comes to the ammeter and from the other ammeter terminal connections go to the generator cutout and to the No. 1 terminal of the lighting and ignition switch. Turning on the ignition allows current to flow through the ammeter to the coil and here we have a departure from the old motor generator system, for the ignition can now be checked up by means of the ammeter current without the necessity of disconnecting the two small wires from the motor generator. The operation of the lights is similar to that on other Buick cars except that the dimmer switch is a separate unit, controlled by a lever at the center of the steering wheel.

This switch serves to send current to either one of the two filaments in the head lamp bulb, these bulbs being the new Mazda type No. 1110 which have two bright filaments, one used for normal driving and the other to deflect the normal light beams in a downward direction when passing other vehicles. The ignition circuit is conventional, the interrupter being equipped with a condenser easily replaceable should occasion require. The generator is of the third brush type and carries the ignition unit. The interrupter construction is shown at Fig. 3 and the ignition unit mounting and location of the timing adjusting screw is shown at Fig. 4.

Ignition

The ignition is timed by fully advancing the spark lever on the steering wheel The valve cover is then removed, so that the valve action may be noticed. The engine is then turned over by hand until the intake valve in the No. 1 cylinder closes. The rotation of the engine is then continued until the 17-degree mark on the flywheel rim is in line with the mark on the edge of the opening in the flywheel housing, as shown in Fig. 5. It is then necessary to take off the dis-

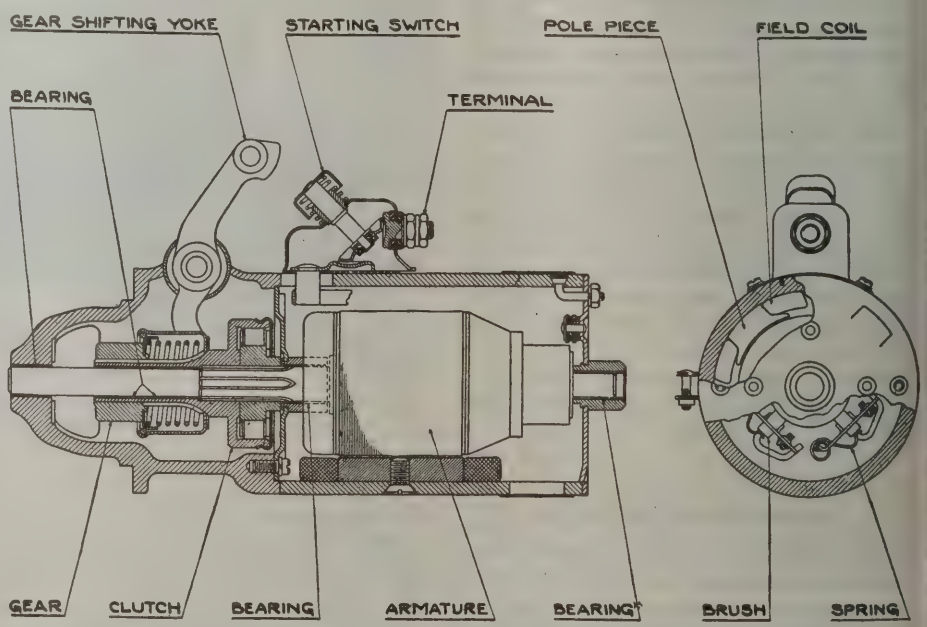

Fig. 2—Sectional view of Delco starting motor used on Buick

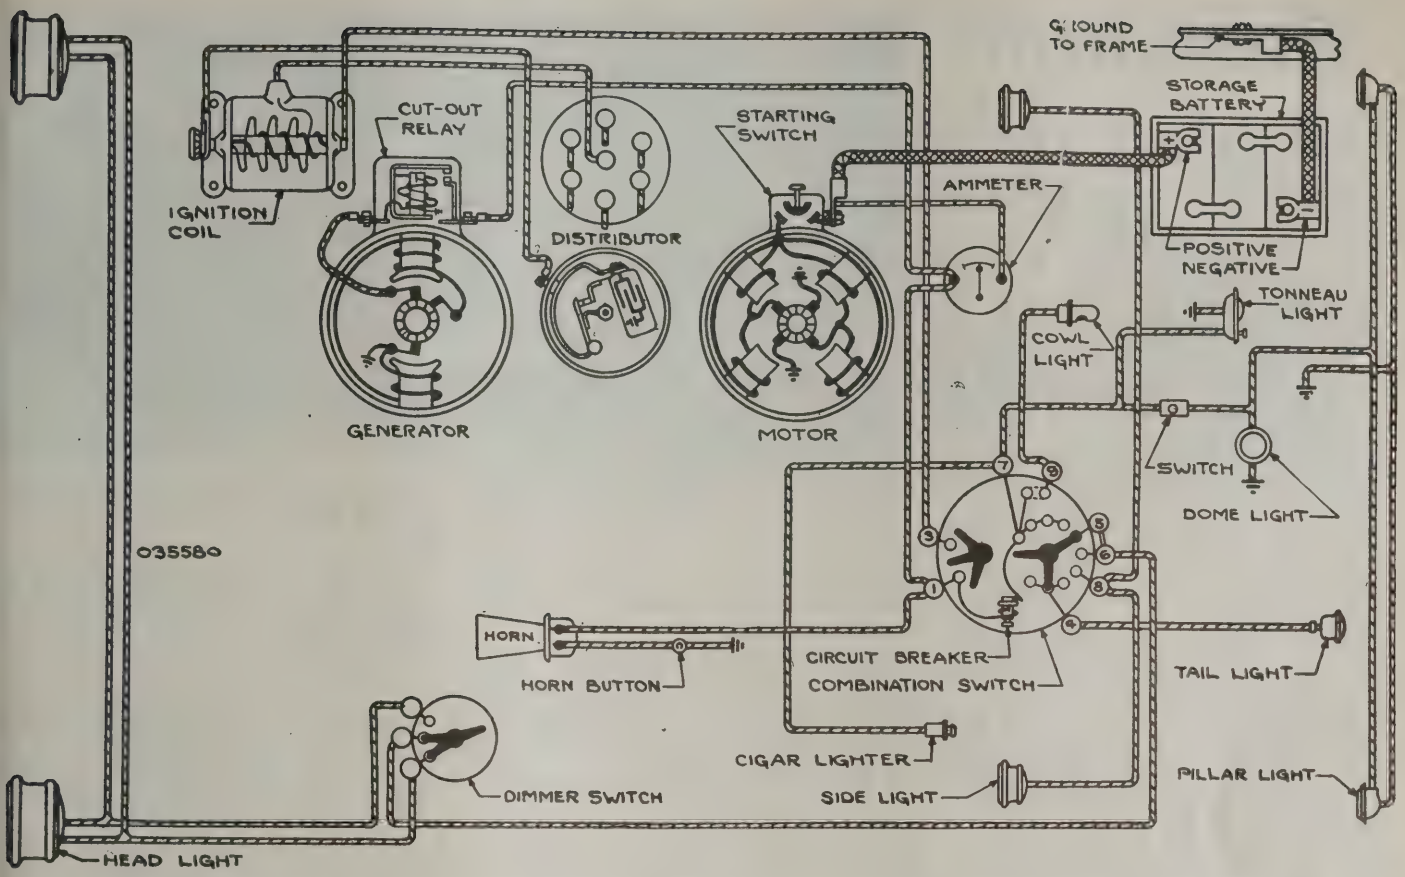

Fig. 1—1926 wiring diagram for Buick Master Six (Standard Six the same but no tonneau or pillar lights used).

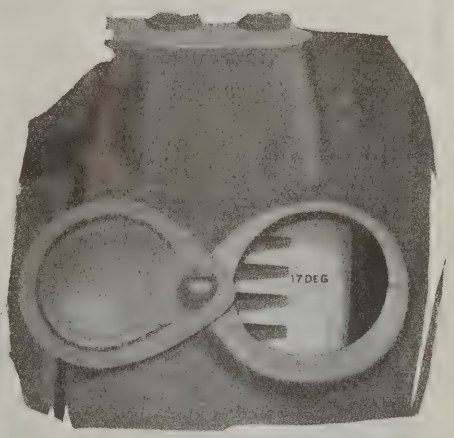
tributer head and remove the hex cap at bottom of distributer housing as shown at Fig. 4. The timing adjusting screw with the hex head at the lower end of the distributer shaft is then loosened so that the rotor turns freely. Then turn the rotor until the breaker arm is on the nose of the cam and adjust the breaker points to .020 inches. Set the rotor in a position approximately on the No. 1 contact button and tighten timing adjusting screw slightly, so that rotor does not turn freely. Turn rotor backward until the contacts are just closing on the front side of No. 1 lobe of cam. Turn rotor forward to take out movement of automatic advance. Hold rotor in this position by hand while completely tightening the adjusting screw at the bottom of the distributer. Replace the hex cap and the distributer head. The spark plugs should have a gap of .025 in. The firing order is 1-4-2-6-3-5.

Lubrication of the generator is taken care of by means of an oiler which requires a few drops of engine oil every 500 miles. This oiler is at the rear of the generator. A Zerk connection is provided on the distributer housing and should receive attention every 500 miles. The track in the distributer head should be greased with a small amount of vaseline jelly two or three times during the first 2,000 miles of driving. The track will then become glazed and thereafter it is only necessary to wipe out the distributer head with a clean cloth. A small amount of vaseline jelly should be applied to the surface of the breaker cam each 1,000 miles.



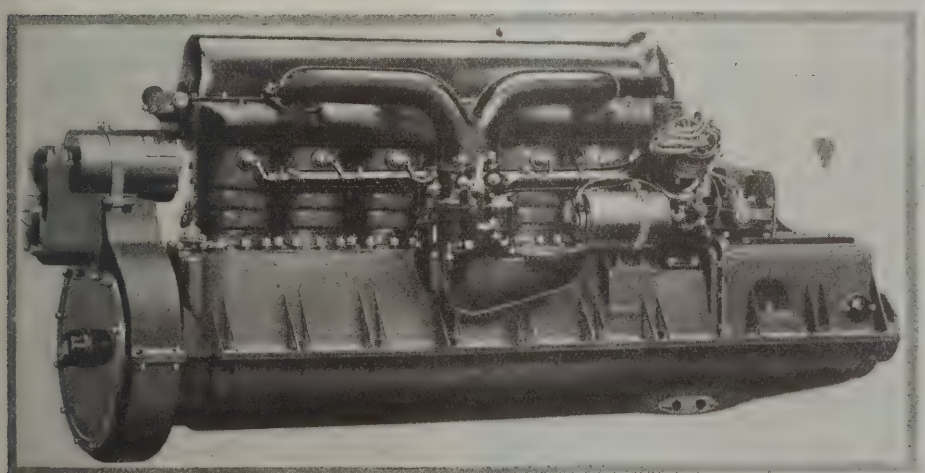


Fig. 5
Flywheel setting for timing ignition in advance position

Marine Engine Now Being Produced by the Packard Motor Car Co., Detroit. This Engine was Developed From the Company's Model 1500 Aviation Engine and Develops 260 h. p. at 2500 r. p. m. The Six Cylinder Engine Sells For $6,000 and the Twelve-Cylinder For $12,000

Brougham Added by Velie

Velie Brougham Which Is Mounted on the Standard Chassis and Has a Rather Novel Arrangement of the Belt Line Moulding

VELIE Motor Corp., Moline, Ill., has added a new body type, to be known as the brougham, to its regular line. The brougham has four doors and accommodates five passengers. A single moulding extending from the radiator shell joins a double moulding at the cowl, giving a pleasing stream line effect. Body finish is of two-tone Duco, while the fenders are brilliant black. The upper back is finished in black leatherette in contrast to the gun metal gray of the body below the moulding. A curved visor, a continuation of the roof line; cowl lights, full nickel radiator shell and four-barrel radiator, lend a distinctive appearance to the car.

Upholstery is of gray corduroy with velour trimming. Rear quarter windows are operated by Clement single lift regulators, door windows by regulators of the Dura four-turn type. The windsheld is of the one-piece, ventilating type. Doors are provided with Eastman chain door stops.

Instruments are grouped in a glass covered satin silver oval panel, giving the instrument board a clean cut appearance. This panel is illuminated by a cleverly concealed lamp, contained within the panel itself. The ignition switch is located at the left of the steering post in balance with the choke plunger to the right of the post. All light controls are operated by a lever located on the steering post along with the gas and spark control levers, all of which are of the finger type.

The new Velie brougham body is mounted on the standard Velie chassis. Standard equipment includes full 6 in. balloon tires and Lockheed hydraulic four-wheel brakes, has rear view mirror and automatic windshield wiper.

Construction Details of Apperson All-Weather Glove Finish Body

ADDITIONAL details are available at this time, concerning the Apperson all-weather glove finish fabric body construction recently announced and described in the July 16 issue of MOTOR AGE.

Fabric body construction necessitates a strong framework, built of selected hardwood, properly dried, carefully machined, and carefully glued and screwed together, with generous forged irons at all points where strength is required. This is very similar to the regular type of construction sheet steel bodies.

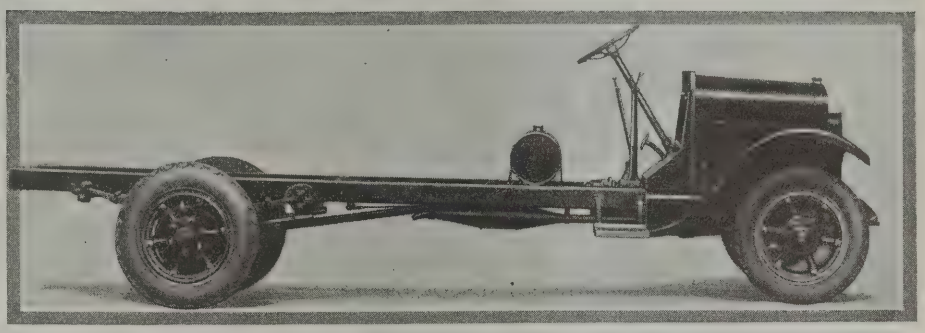
Interior of the Apperson All-Weather Glove Finish fabric coupe roadster. Part of the fabric on the body panel is visible

However, instead of covering this prepared framework with sheet metal, as has heretofore been customary since the abandonment of wood panels on automobile bodies, Apperson uses a covering of expanded steel similar to that used in reinforcing concrete. This metal lath is set in rabbets and securely nailed.

Over this wood framework covered with expanded steel, is stretched one layer of cotton sheeting and a heavy layer of cotton wadding, which is then covered by stretching a piece of canvas tightly over both. This is then covered with "Meritas" leather cloth, a material made especially for this purpose and is different from the ordinary imitation leather in that it is two-ply or laminated fabric bonded with special oil cement, making a waterproof covering. This Meritas cloth coating is very hard and will retain its lustre almost indefinitely, it is stated.

There are many points in favor of this type of construction, the Apperson company states. It is equally as strong as sheet metal; it is quiet, reducing to a minimum all interior rumbles, and eliminates rattles or squeaks.

It retains its lustre under all climatic conditions—dust and mud do not mar the surface, it can be wiped off with a damp cloth without impairing the finish. In event of accident the damaged portion can be replaced very quickly by replacing the damaged panel with a new section of material. To facilitate this operation, the panels are applied in sections joined together with semi-concealed moulding.



New 2-Ton Federal Truck With Knight Engine Announced

PROMPTED by the success of the Knight-engined one-ton truck, the Federal Motor Truck Company has just produced a new two-ton Federal-Knight listing at $1650.

Besides incorporating the sleeve-valve engine and other modern features such as a full floating rear axle and full pneumatic tire equipment not found in the former one and a half to two ton truck manufactured by this company, the new model is capable of handling loads up to 4000 pounds in excess of body weight at a constant high road speed. A standard wheelbase length of 144 inches allows a loading space back of the seat amounting to 119 inches, while for special work a 156-inch wheelbase chassis can be supplied. The weight of the standard chassis is 3,000 pounds.

From the 3 5/8 by 4 1/2 in. bore and stroke Knight sleeve valve engine of 21 rated h. p., drive to the gearset is through a 10 in. single plate Borg and Beck clutch and a three-speed gearset.

A two-piece tubular propeller shaft with three metal type universals connects the powerplant with the Timken heavy duty, full floating, bevel gear rear axle providing a standard gear ratio of 6 3/7 to 1. The differential is carried on heavy tapered roller bearings inside the pressed steel housing which is fitted with two axle bearing mountings on each side. In line with the policy of the Federal Truck Company, this model also can be supplied with a worm drive rear axle if desired.

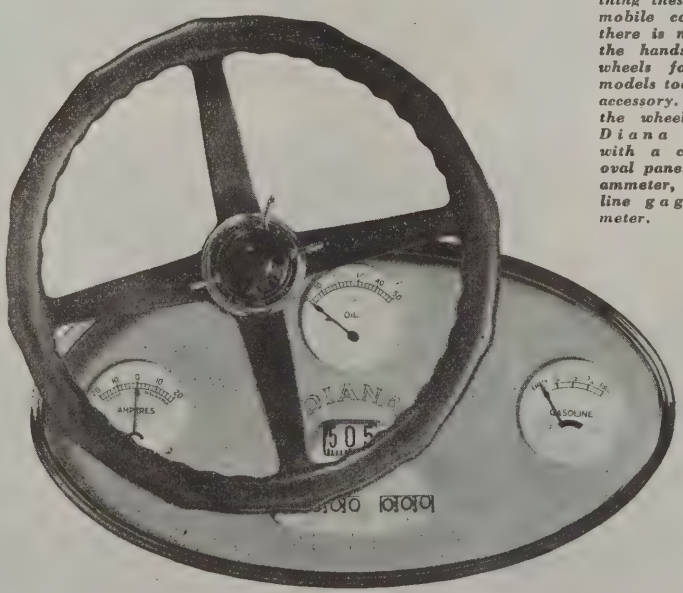
Side view of the Federal 2-ton chassis, equipped with the Knight sleeve valve engine and which lists at $1,650

Both service and emergency brakes which operate on the rear wheels are of the internal expanding type and operate on 16 in. dia. drums having a face 2 1/4 in. wide. The front springs are 38 by 2 1/4 in. while those on the rear are 52 by 2 1/2 in.

Mounted on six spoke cast steel wheels with demountable rims, standard tire equipment includes 30 by 5 in. pneumatic cords on the front with 32 by 6 in. on the rear. For a slight additional charge oversize are also available while if desired solid tires can be had if a worm type of drive is ordered.

Fuel is fed to the thermo-syphon cooled engine by a vacuum tank from a 15 gallon cylindrical tank mounted on the chassis frame under the seat position. Standard equipment includes hood, front fenders and step, dash and toe boards, Alemite chassis lubrication system, oil pressure gage, speedometer and tools. Included in the electrical system are generator, starter with Bendix drive, motor driven horn, head and tail lamps, ammeter, and heavy truck type 18-plate battery.

LACQUER SHOP NEAR FINISH



TOLEDO, Aug. 22.—The plant of the new Poly-Arts Spray Shop, Inc., capitalized at $100,000, now being built on Detroit avenue, is rapidly nearing completion. Preliminary operations have already been started. The company will put into operation the new spray guns of the DeVilbiss Manufacturing Co. for applying lacquer finishes to automobiles and other articles. Temporary plant is in the old Ames-Bonner Brush Co. building in West Toledo. Isaac Kinsey, Jr., son of the late Isaac Kinsey, who was long a leader in affairs at the Willys-Overland plant, is president of the new company.

WILLYS BUILDS IN OAKLAND

OAKLAND, Cal., Aug. 22.—Ground has been broken and construction started on the first unit of the large distributing plant to be built here for Willys-Overland, Inc. The new building, covering 88,000 square feet of floor space, is to be ready for occupancy October 1. It will be of brick, reinforced concrete and steel, of the latest "sawtooth," all-daylight construction.

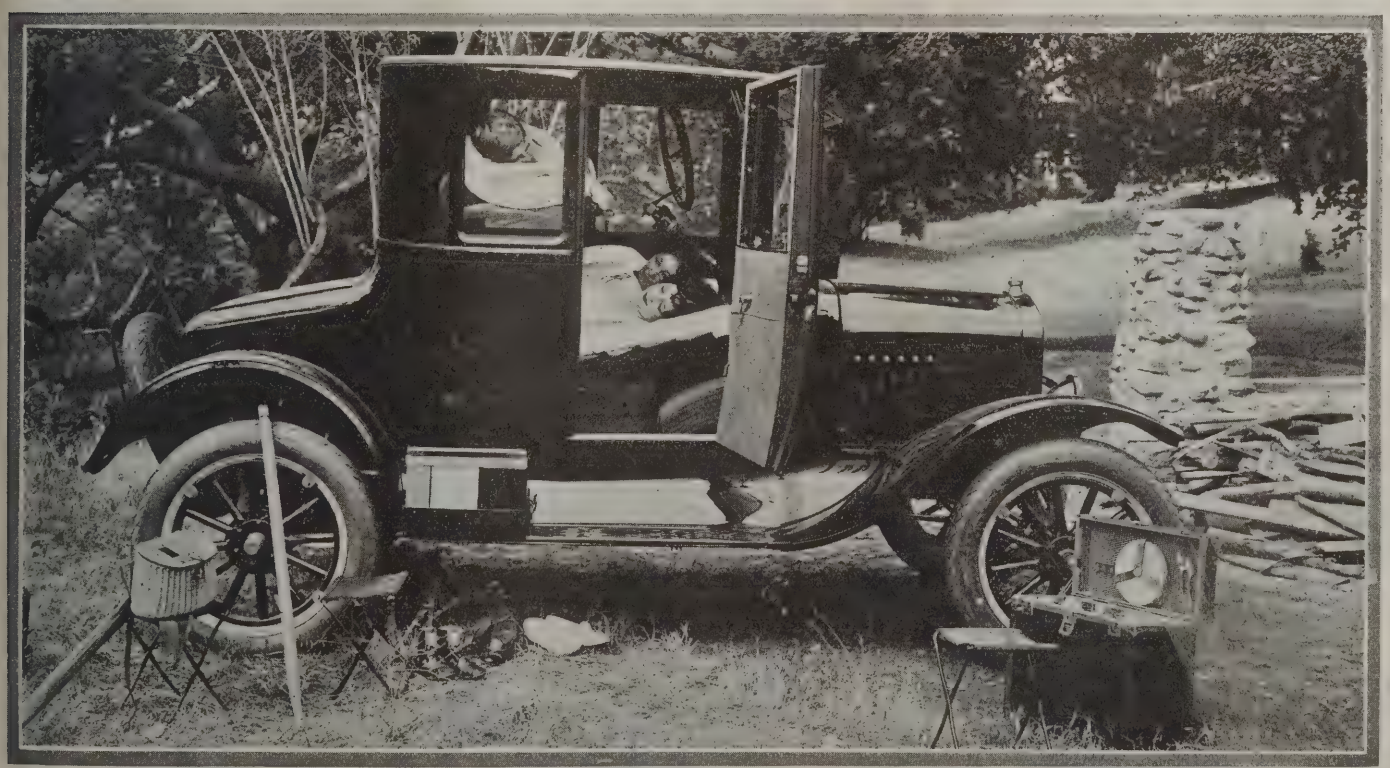
Diana 8 Wheel and Dash Layout

The all-wood steering wheel seems to be the thing these days in automobile construction and there is no denying that the handsome walnut wheels found on many models today are a fitting accessory. At the left is the wheel used on the Diana Eight, together with a close-up of the oval panel containing the ammeter, oil gage, gasoline gage and speedometer.

MOTOR AGE'S PICTURE PAGES

SCHOOL DAYS. Safety Zone Crossing in Washington, D. C., where pedestrians are taught the Three R's in crossing street.

OVER THE LEFT FIELD FENCE. Gov. Fuller, of Massachusetts, swings mighty bat in ball game during Boston automobile dealers' clambake. The picture above shows one good reason why people attend clambakes. Gov. Fuller, incidentally is a Packard distributor and the big to-do pictured here was held at his summer home, Rye Beach, N. H.



OF AUTOMOTIVE INTEREST

FREE WATER—YES. Concrete drinking fountain helps draw business for gasoline station near Sacramento.

ALL LIT UP. Boston traffic officer equipped with signal light strapped to his hand. The light is operated on a small storage battery

ALL THERE BUT THE PORTER. These are not Pullman berths. On the contrary the picture shows how a Ford coupe can be turned into a camping bedroom by using a development manufactured by the Price Coupe and Auto Bed Co. of Los Angeles. The "upper berth" is big enough for a child. Two sleep below.

The READERS' CLEARING HOUSE

Questions and Answers on Dealers' Problems

BUILDING ▪ ELECTRICAL ▪ FLAT RATES
SHOP ▪ LEGAL ▪ PAINT & TRIM ▪ ACCOUNTING

Rear Axle Gear Ratio on a Dodge Brothers Car

Q.—I would like to know what would be the gear ratio of a Dodge Brothers car carrying a fifty tooth ring gear and a twelve tooth pinion gear, using a 28 by 4 wheel and tire?

The size of the tire is not considered when determining the rear axle gear ratio. In the case of a fifty and twelve arrangement the ratio would be 4 1/6 to 1 or 4.16 to 1.

2.—Also what would be the gear ratio using a 3 to 1 ring gear and pinion using a 28 by 4 tire and wheel?

The ratio would be 3 to 1.

3.—I also would like to know how many revolutions per minute would a Dodge Brothers motor have to turn over to drive the car 90 miles per hour?

Assuming a 4.16 to 1 ratio the engine would have to turn over 4100 revolutions per minute approximately to do 90 miles per hour. Assuming a 3 to 1 ratio the theoretical engine speed necessary to make 90 miles per hour would be 3275 revolutions per minute.

4.—What would be the best gear ratio to use on a Dodge Brothers tuned up for racing on a half-mile dirt track?

The best ratio is determined only by actual try out. We would suggest that it be not lower than 3 7/8 to 1 and not higher than 4¼ to 1.

5.—I would like to have a diagram for attaching an oil pump to a force feed oiling system on a Dodge Brothers car that you published some time previous in MOTOR AGE. Would pay for issue containing this diagram as I have looked through MOTOR AGES and cannot find this issue.

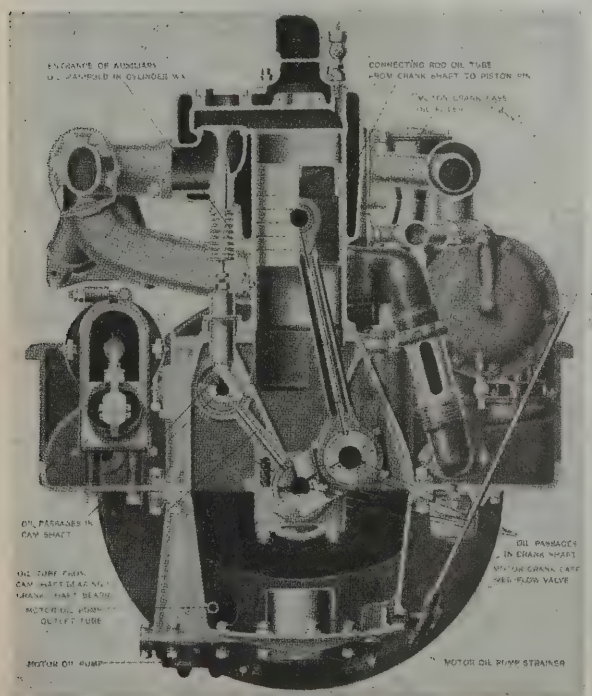
The issue in question does not cover installation of an oil pump as it was assumed that the reader would use the regular eccentric pump used on the stock Dodge Brothers car. The diagram showed a method of connecting the system after the crankshaft has been drilled. We are sending you the page from the issue mentioned which contains the diagram and directions.

6.—I would like to know also what speed does a magneto turn over in relation to the motor speed.

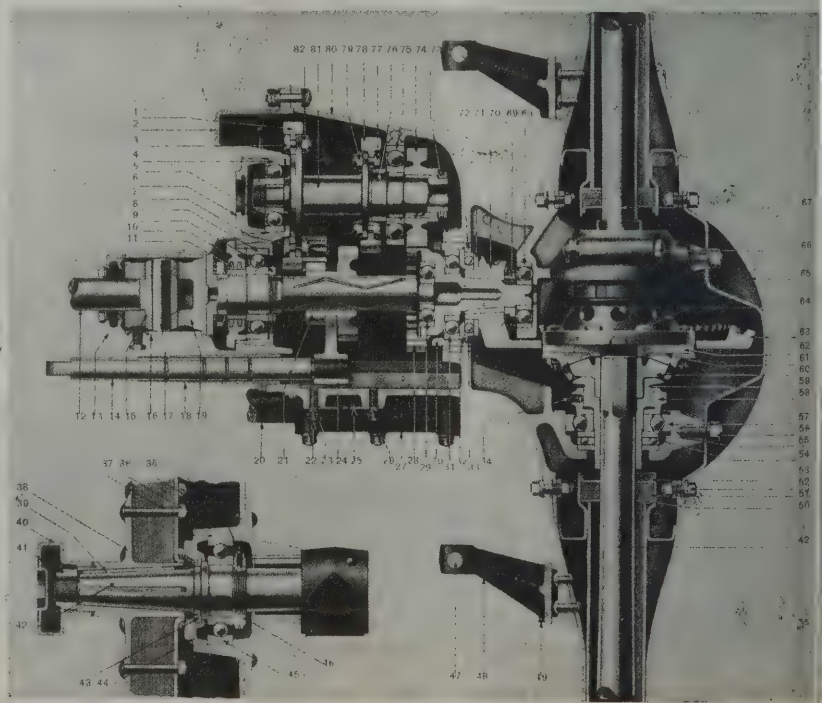
On a four-cylinder engine using conventional two spark magneto the magneto armature turns at crankshaft speed. On the six cylinder one and one-half times crankshaft speed and on an eight cylinder, twice crankshaft speed. This ratio is necessary because the number of sparks required per revolution will be one-half of the number of cylinders and as the magneto delivers two sparks per revolution the ratio must be so arranged that the magneto will deliver a spark to one-half the number of cylinders at each revolution of the crankshaft.

7.—At what speed does battery turn over in relation to motor speed?

Your question is not clear, but we assume you refer to the relative speed of a battery ignition system camshaft in which case the camshaft always travels at one-half crankshaft speed.



8.—Does a breaker shaft turn over any faster in a magneto than it does in a battery ignition system?—Merle Nelson, 329 Reynolds street, Springfield, Ill.



On four cycle engines used in motor cars the armature of the magneto turns faster than the camshaft or armature shaft of a battery ignition system.

A 1914 PACKARD FOR TOWING

Q.—Could you furnish me with details of the 1914 Packard six rear axle and transmission, also details of the engine as I think one of these cars would make a splendid tow car.—Robert H. Ludington, 597½ Dundas street, Woodstock, Ont., Canada.

The transmission being mounted on the rear axle, we are showing a cross sectional view which gives details of both units. We are also showing an end sectional view of the engine which indicates the path of the oil in the lubrication system. Oil is pumped to the hollow camshaft which acts as a distributing manifold. The oil is then distributed to the main bearings and through the crankshaft to the connecting rod bearings. Oil ducts in the connecting rods then carry oil to the piston pins.

Planning Your New Building

By TOM WILDER

The READERS CLEARING HOUSE

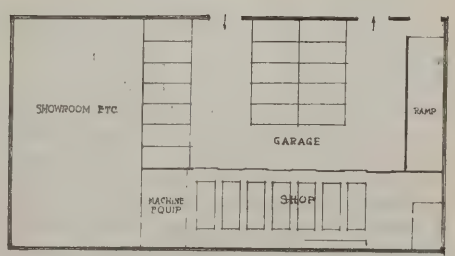
Front Entrance to a Building on a Corner is Waste

Q. Kindly furnish us with plans for a building to be put on a lot 75 by 140 corner location. The front of the 75 foot space will be the main entrance, in other words it is from this direction that the general flow of traffic comes.

The showroom, offices, parts stock and accessories should be handled in the space as outlined in our rough sketch. We wish to provide space for showing about five cars. The accessory and parts department are not to be slighted, as we go into that quite extensively. The shop works about four men regularly. This building will have a full basement, with a ramp from the rear. Wash rack in basement. No boiler room will be required as the building will have city heat. All the space which will be available without crowding too much will be used for storage. Fleck Motor Sales Co., Bismarck, N. D.

There is a great waste of space in this building caused by the entrance on the main street. Since it is on the corner, we see no reason why you should not use the side street as a means of getting to your garage and shop, giving over the whole of the frontage to showrooms, offices, and accessory sales. It is true that this drive-through idea with an entrance on the main street and an exit on the side street is very nice, but when we consider that about half of the length of the building and 15 feet of the width is given over to passage that might just as well occur in the side street, it would seem that some more economical use of the space would be preferred.

There is one advantage, however, in the layout we have made and that is that the shop, showroom, offices, etc., are all in one compact group where heating will be much easier and better than if the shop were separated from the rest. With this arrangement all the rest of the building is practically storage space and need not be heated above 40 or 50 degrees at any time.



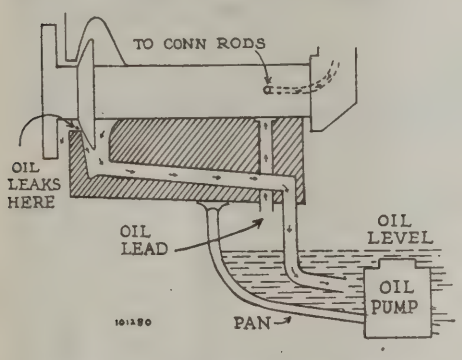
In the small sketch you will note that we have made an entrance on the side street directly into the garage, but have left the exit the way we have arranged it in the large sketch. The shop is along the back wall and in order to save space a series of sliding doors are arranged just back of the car spaces. This makes a very good arrangement and we believe would be quite a space saver for you.

The Small Sketch Shows One Method of Eliminating a Front Entrance as Laid Out in Our Large Plan

Why the Bearing Burns Out

Q. Adivse why the rear main bearing on a Chevrolet model 490 persists in burning out. We have had new main bearings put in this car twice and the rear main bearing will burn out in a day or so. We understand that the front and rear main bearings are oiled by splash system and the center main bearing is oiled by pressure. Advise if it would do any good to bore a hole and groove the upper portion of the rear main bearing. Advise the proper way to install rear main bearings in this motor to prevent the rear main bearing from burning out. Motor Inn Garage, Leeds, N. Dak.

Your mistake is apparently in failing to drill out a hole in the rear main bearing to coincide with the oil hole in the cylinder block. If you will examine the rear main bearing closely you will find that there is a sort of funnel construction in the casting just above the bearing which is intended to catch oil and feed it through a hole to the crankshaft. Accordingly the bearing should have a hole in it to register with this funnel and there should also be grooves cut in typical criss-cross fashion, so as to feed oil to all parts of the shaft.



The bearing cap also has a hole and is also grooved. The front main bearing is constructed in similar fashion. It might also be well to check the crankshaft to see that it is not sprung, although failure to connect up the bearing with the lubrication passage doubtless accounts for the experience you have had. The use of a line reamer for finishing up the main bearings after they have been cast is a part of the recommended procedure, and together with straight shaft should give satisfaction.

The READERS CLEARING HOUSE — Defeating Old Man Wear and Tear

Persistent Leak at Rear Main

Q.—We sent you an inquiry by night letter in regard to an Oakland which throws oil through the rear main bearing and received a reply suggesting the use of an oil drain pipe. We installed a pipe in accordance with your suggestion but it did not improve the condition. We are sending you a diagram of this bearing and would like additional information if possible.—McKenney Garage, R. No. 5, South Tacoma, Wash.

We are publishing your sketch so that other MOTOR AGE readers will have a chance to see what you have done and to write you direct if they have any suggestions. We assume that there is no connection between the oil pipe which carries oil to the main bearing and the one which is used for a drain. These appear to cross each other in your sketch, but we assume that they do not connect. If there should be a connection it would be easy to see how oil would be forced in the wrong direction. With the force feed system connected at the front of the bearing and excessive oil leaking out of the rear of the bearing it apparently shows a poor fit of the bearing to the crankshaft.

Reader's sketch showing steps taken to prevent oil leak

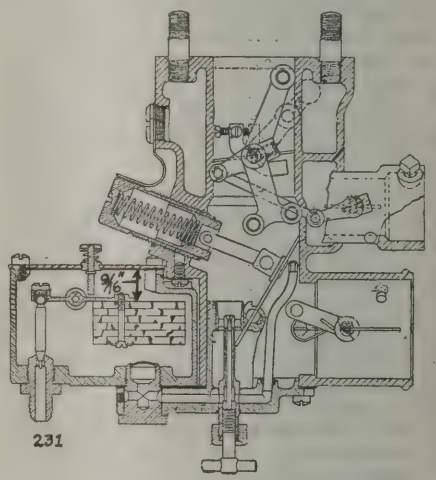
In making a thorough check it would be well to see if the crankshaft is straight and that the rear journal is not eccentric. Any appreciable amount of eccentricity will tend to enlarge the bearing so that oil will flow in excessive amounts toward the rear. In fitting the shaft to the bearing it is first fitted to the upper half and checked by the use of Prussian blue and then the bearing cap should be fitted in like manner until you have a very nearly 100 per cent bearing surface.

As a tight fit is not permissible with pressure lubrication it is even more desirable to use a mandrel made .0015 to .002 in. greater in diameter than the rear journal of the crankshaft. A chance for leakage always exists where the rear main bearing cap makes contact with the upper half of the bearing. On some cars babbitt lined shims are used which butt up against the shaft to prevent leakage along the crack between the shaft and the upper part of the bearing. It is certain that if any appreciable amount of oil leaks from the rear of the bearing that oil is rapidly flowing along the shaft or else that the drain is insufficient to take care of it.

Another possibility that occurs to us is excessive leakage of explosion pressure past the pistons which maintains pressure in the crankcase and prevents the oil drain functioning.

Now and Then a Miss

Q. We are having considerable trouble with a 1925 Maxwell Sedan with mileage of 450. After running from six to ten miles or when the engine gets thoroughly warmed up the motor starts to miss on Nos. 2 and 3, not regularly but intermittently, sometimes every 50 yards and then 100 and then 200 yards. Have changed plugs, coil, carbureter, vacuum tank and distributer. The engine runs well when cold and until it gets hot. Have had head off and touched up the valves, checked the valve stems also the seat, for clearance. Also checked the wiring for loose connection. Can you offer a solution or suggest a remedy? C. D. Robbins, 48 Smith street, Winnipeg, Man. Canada.



We would recommend your checking the spark when the engine has become heated to the point where missing occurs. You can remove a wire from a plug and hold it about 3/16 inch from the engine and run the engine at about the speed at which missing is noticed. Listen to the spark, using a tube of brown paper rolled up if necessary with one end held to your ear and the other end held near the spark. If the missing is found to be due to the spark failing every now and then, it is possible that there is a poor connection in the ignition switch.

A poor connection in the ignition switch can sometimes be detected by having the interrupter points touching and turning on the switch and watching the ammeter. The hand should show a steady discharge, but if the needle flickers it indicates a poor connection somewhere in the circuit. High resistance is sometimes encountered where the ignition unit sets in the socket of the engine. This does not usually give trouble on new cars but sometimes on old cars where the grease and dirt form an insulating film and prevent the ignition unit being well grounded. As the condition occurs when the engine gets hot it is possible that the clearance between the valves and tappets is not sufficient, and this should be checked when the engine is warmed up. It is also possible that a valve stem sticks when hot. You might get some idea of the condition by cranking the engine by hand so as to feel the compression when the engine is hot. Another possibility is that there is an air leak in cylinders No. 2 and 3 when the intake manifold is at a high temperature. This could be checked by squirting gasoline on the intake manifold gasket.

Alloy Steel Stands High Temperature

Q.—In regard to burnt valves on a Maxwell car want to tell you that your remedy proved a success. I reamed out the valve guides just enough to remove all foreign matter and enlarged the oiling holes in the crankcase one-eighth of an inch which proved to be the remedy on this car. Now I have one more question. I understand there is a valve on the market that the manufacturers claim will stand twice the heat without warping that the ordinary valves do. Would you recommend these valves for cars that are inclined to burn their valves. What company makes these valves.—A Reader.

It is contrary to the policy of MOTOR AGE to recommend any particular item of automotive equipment. It is possible, however, that you refer to certain valves which are made of alloy steel, which material would stand a high temperature. Names of concerns making alloy steel valves will be given by separate letter.

Marvel carbureter on 1916 Oakland

Using Ammeter Shunt

Q.—When a 0-16 voltmeter is connected to a 100 ampere shunt and the needle is on the figure 2 what is the proper reading.

This does not mean anything as a voltmeter is not supposed to be used with a shunt.

When a 0-100 millivoltmeter is connected the same way and the needle points to figure 2 what is the proper reading.—Charles Tuckfeld, North Branch, N. Y.

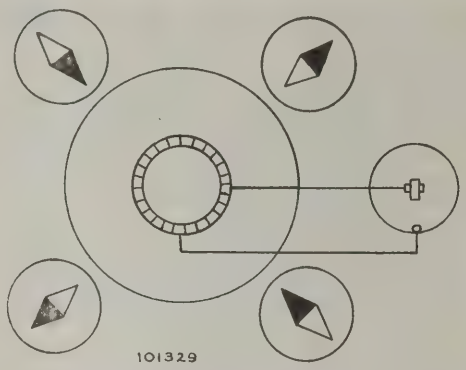
If the ammeter shunt is designed to be used with the millivoltmeter then it means that 100 amperes flowing through the shunt will cause the millivoltmeter to read full scale deflection. Accordingly with the needle at the 100 point it means 100 amperes flowing through the shunt and with the needle at the figure 2 on the scale it would mean 2 amperes flowing through the shunt.

Clearing Up Electrical Troubles

EDITED BY A. H. PACKER

The READERS CLEARING HOUSE

Testing for Reversed Coils in Rewound Armatures



Q. We are having trouble in re-winding the Auto-Lite G. P. No. 2116 armature as used on the Overland four. The trouble we have here, the armatures when in the generator cuts in too slow or starts to charge at too high a speed. The cut in should be from 450 to 500 r. p. m. and the best we can get is 700 r. p. m. As far as we know we are winding it the same as the new armatures are wound, and we have checked the armatures several times, but cannot locate the trouble. Supply armature diagram and give possible causes of this trouble. We would like to have this information at once as we have discontinued winding until we find a remedy.

If you have any books with diagrams of the armature winding of all various types of armatures, please state the price. B. J. Holtcamp, 222 S. Locust street, Centralia, Ill.

We are showing the armature winding diagram for the Auto-Lite generator armature No. G. P. 2116, this information being obtained from the Universal Armature Winding Manual. Additional sources of supply on armature winding diagrams will be given by separate letter. The coils are wound clockwise, there being six turns of No. 17 single cotton covered enameled copper wire in each coil. There are two coils per slot wound together using wires of different colors. In order to clear the generator frame the winding must not project more than ¾ in. beyond the core. The last coil is the dead coil used to balance the armature only. The ends of this coil should be taped up and buried.

The most likely cause of trouble is incorrect winding and the diagram should help you on this. After the armature is wound, it may be desirable to check up to see that you have no reversed coils and that the magnetic poles are in the proper place. We are showing one showing one sketch which illustrates a method of checking for a reversed coil. Either one cell of a storage battery or a dry cell is used and connections are made to opposite ends of the same coil. You could start in by connecting from commutator bar No. 4 to commutator bar No. 14 which would give one of the coils. Most of the current would flow through this coil so that if the armature stood on end and a compass is moved around the armature, you will find a strong magnetic pole in one place.

Then the connection from the dry cell or storage cell should be shifted one bar, so that you next check from No. 3 to No. 15 bar. The polarity of the coil should be the same as the previous one as indicated by the same end of the compass needle being attracted. The points of attraction will be the same for coils in the same slot, but will shift the distance of one slot on the third test which would be from bar No. 2 to bar No. 16. In this

Compass test on armature to check commutator connections

way the connections to the commutator willl be shifted one bar at a time and the compass moved around as the test is continued. The same end of the compass needle should point toward the armature all the way around.

The other test is made by connecting a dry cell or one cell of a storage battery to positions on the commutator corresponding to the brush positions when the armature is in use. If the compass indication is weak it is possible to use more dry cells or more storage cells in series. The compass when moved around the armature will now show four magnetic poles and if the point of connection of the battery is considered as being the equivalent of the brush position, then the compass indications should point to a place on the armature corresponding to the neutral zone between the magnetic field poles. This will show that the armature is correctly connected so as to have the main brushes on neutral. About the only other possible reason for having the machine cut in late would be that insufficient number of turns are used in the armature, or that the armature has been turned down so that there is too large a gap betweeen it and the field poles. In case the armature at some time or other had rubbed on the field poles it is possible that the laminations are shorted due to the edges being burred over. This would result in overheating after the armature is put in service.

Testing the rewound armature for a reversed coil

SHORT CIRCUIT BETWEEN TWO SEGMENTS

Q.—I am a steady reader of MOTOR AGE and find your questions and answers very interesting and helpful. I had a Ford come into the shop the other day which would run all right with the switch on the battery position. Whenever the switch was turned to the magneto position, however, it would lag and pound. The other mechanic and myself had an argument as to the cause of the trouble. He said it was due to the valves and I was almost certain it was in the commutator so I removed the commutator and found it in bad condition with a fine strip of one of the segments across No. 1 and No 2 points. After installing a new commutator it worked fine. Why did it work on the battery side and fail to work on the magneto without moving the spark lever in either direction?—S. C. Thomas, c/o Automotive Repair Co., 7001 Kelly boulevard, Pittsburgh, Penn.

The voltage of the battery current is approximately constant while the voltage from the magneto is not only alternating instead of direct but it also varies with the speed. From what you say we assume there was a sort of short circuit between two of the segments. It is possible that this connection was not perfect and that when operating on 6 volts it did not act like a short circuit. The Ford magneto on the other hand develops a higher voltage, which may have sent enough current through the short circuit to cause trouble.

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

Monthly Operations at a Flat Price

IT IS, of course, perfectly possible to sell car owners on the general application of the flat rate system, but the one big point many dealer establishments and shops in general are overlooking is the selling at a fixed price a monthly inspection and adjustment service. Such a group of operations when properly selected constitute what often is called "Preventative Service" and simply means that if these things regularly are done by the dealer to the customer's car, such a car will perform better over longer periods of use before major service or repair operations are necessary.

The public is motor-wise enough to know that cars cannot operate indefinitely without attention of some kind. Carbureters have to be adjusted; tappets must be taken up occasionally; strainers will get clogged and must be cleaned; the water gets low in the battery; brakes need adjusting and body squeaks will occur.

Although the makers of motor cars have made it much easier for the car owner to perform some of the more simple service operations, most owners are not systematic in their work and would rather spend a few dollars letting the dealer's service department or some shop do the work. It's a messy job to fill differentials and universals no matter how you look at it and not a car owner who would not rather have someone else do the job for him.

Weak on Merchandising

The trouble has been that that too few automotive establishments have properly merchandised such service. A car owner gets the idea he must pay quite a price for such operations as he ordinarily performs himself, but if his attention is called to a definite price covering certain jobs on his car he is pretty apt to have the work done at the service station or garage rather than attempt it himself.

Just the other day a car owner cited a case to us. He said he did a little work on his car which a service station could have done in a few minutes but which took him about an hour. On top of this he ruined a $4 white shirt, so all told the job cost him considerably more than it would had he taken it to the service station. He made the remark that had he been told or seen advertised a flat price for the job in question he surely would have never attempted it.

Often a car owner starts to lubricate his car, that is, fill the differential, transmission, etc., and then finds out he either has not the kind of lubricant necessary, a gun for forcing it in, or other work which he did not figure on manifests itself. Then the car goes to the service station, where it should have gone in the first place.

All of this suggests a schedule of operations which every dealer or shop can get up and sell at a flat price to car owners. It may not cover all makes, as it will be more on some cars and less on others. For example, one Chicago dealer recommends that the following service is necessary each month for the good performance and economic upkeep of the car he sells. If contracted for the service costs $9 per month and includes:

1—Tuning engine.

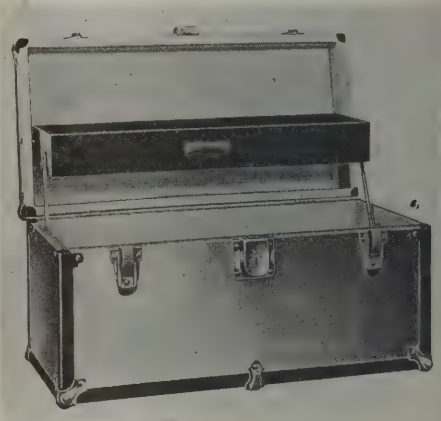
Adjust tappets; adjust carbureter; adjust ignition; adjust water pump; adjust oil pump; adjust fan belt; adjust manifold; clean plugs; clean commutators; clean vacuum tank; clean strainer to carbureter.

2—Adjust brakes.

3—Grease and oil (grease and oil included).

4—Adjust steering.

5—Align wheels



6—Inflate tires.

7—Inspect battery.

8—Adjust shackles.

9—Tighten body bolts.

10—Take out rattles and squeaks.

THINGS THAT HELP FLATE RATE

A place for everything and everything in its place works out just as well in using flat rate as anywhere else. A tool chest for each mechanic insures an orderly shop and makes possible finding a tool when necessary. If a tool is kept in a certain place a mechanic always knows where to find it and anything which saves time is a decided asset in using flat rate.

MOTOR AGE'S FLAT RATE FORUM

No. 28

FLAT RATES FOR RICKENBACKER

REAR AXLE OPERATIONS

Manufacturer's Official Designation		Time
D-1	General Overhaul of Rear Axle	7½ hrs.
D-2	Renewing Pinion Carrier	4½ hrs.
D-3	Renewing of Ring Gear and Pinion	6 hrs.
D-4	Renew Differential Gear and Spider	4½ hrs.
D-5	Adjust End Play, Back Lash, Renew Hub Felt and Retainer, Axle Shaft and Bearings	3 hrs.
D-6	Renew Rear Axle Housing	9 hrs.
D-7	Renew Rear Wheel (each includes)	1 hr.
D-8	Remove End Play in Rear Axle Pinion	1 hr.
D-9	Renewing Rear Axle Differential Carrier Gasket	2½ hrs.

Using Flat Rate Manual

Pittsburgh, Pa.

To the Editor of MOTOR AGE:

Would you kindly send us by parcel post, C. O. D., three copies of MOTOR AGE's post, Flat Rate Manual as printed in your magazine of April 30, 1925. We have been using this guide continuously since its issue, and have had remarkable success with it.

Yours for "Flat Rate"
Automotive Repair Company.

QUEBEC CLAIMS BEST ROADS

QUEBEC, August 22.—Check-up of provincial roads by Government officers recently shows that 6,000 miles of improved highways throughout the province of Quebec provide farmers with the quickest and best transportation facilities to be found anywhere in the world. Over $35,000,000 has been spent by the highways department during the past five years, and $6,000,000 more is being spent in 1925 to insure pre-eminence as the tourist paradise in eastern North America. Good roads, historic mementoes and scenic beauties are being held out to the world as Quebec's main attractions.

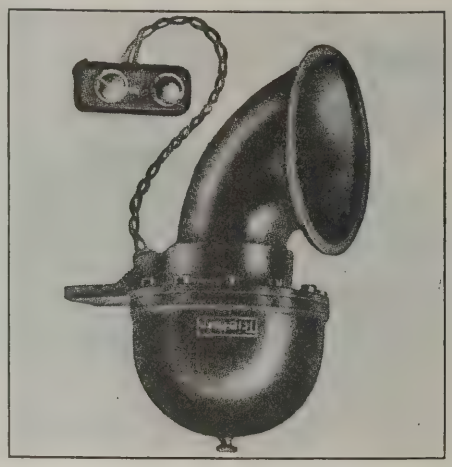
THE MARKET'S NEW OFFERINGS

Accessories—Equipment—Supplies

Rear Fender Bumper for Fords

AN accessory which is said to be constructed along practical and scientific lines for long efficient service is found in the No. 09 Rear Fender Bumper for Fords, offered to the trade by the Kentucky Wagon Manufacturing Company, Louisville, Ky. In construction this bumper is similar to the company's earlier product, the No. 08 "KYW" Medium Balloon Fender Bumper except that the No. 09 has special Ford connections. The manufacturers say it is rigid and firm, yet resilient, having good design and adding to the appearance of Ford cars. The No. 09 lists at $14. The company makes a number of other bumper models and will gladly furnish details to any dealer applying for information.

Fender bumper for Fords



Nestler's Tube Compound

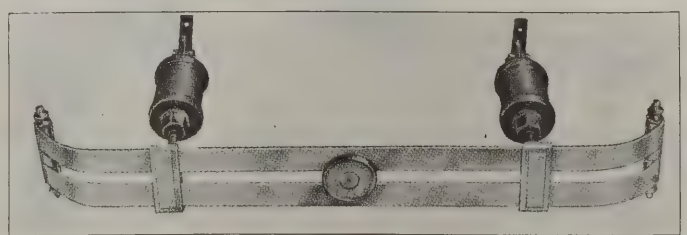
THE Nestler Rubber Fusing Company, 245 West 55th Street. New York has brought out a self-sealing compound for use in the inner tube. The compound is injected into the tube through the valve stem and is effective, it is claimed, in instantly sealing holes not larger than 1/8 in. in size as well as comenting porous places and leaks around the valve. Injection is accomplished with a hand pump after removing the valve inside. The makers guarantee the produce not to injure tire, tube or valve while it will not loosen patches. The substance comes packed in two sizes of cans, a one pint size for 4½ and 5 in. tires, retailing for $1 and a half-pint size for 3½ and 4 in. tires, retailing for 55 cents.

Dains Nu-Matic Bumper

ACCESSORY dealers will observe a departure from the more conventional bumper practice in the Dains Nu-Matic Bumper which recently was placed on the market. This is a product of the Dains Nu-Matic Bumper Company which has offices at 628 Main Street, Peoria and a plant also at that address.

The outstanding feature of the Dains bumper is its air and oil cylinders which provide what is said to be unusual cushioning service. It has an oscillating vibrating tubular shock frame with sufficient flexibility to absorb shocks from heaviest impacts. The device is made in three sizes, for the light car, the heavy car for trucks and buses and can be used on any car made.

Tria Horn



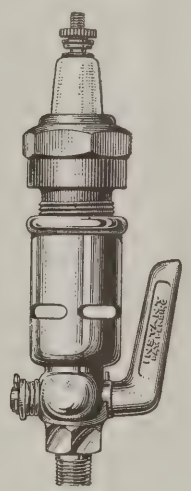
Bouncing Balloons Are Not Enough

A striking advertisement issued by one of the large agencies conveys the thought that there is a difference between the "clever" ad and the "selling" ad.

The same might be said of the "clever" window display and the "selling" window display.

Not long ago an accessory merchant who deals in tires sought to attract attention by putting in the window a number of toy balloons which were kept moving with electric fans. A sign said something about balloon tires but the comment was drab, offering no especial appeal, and the balloon tires in the window only suggested that they were balloon tires.

One purpose of the show window display is to attract attention. This accomplished its next shot is to capture buying interest. The public is aware that the trade sells balloon tires but it does not know what especial buying benefits can be found at some particular store. The clever window display even, should have tie-ups stressing these benefits.



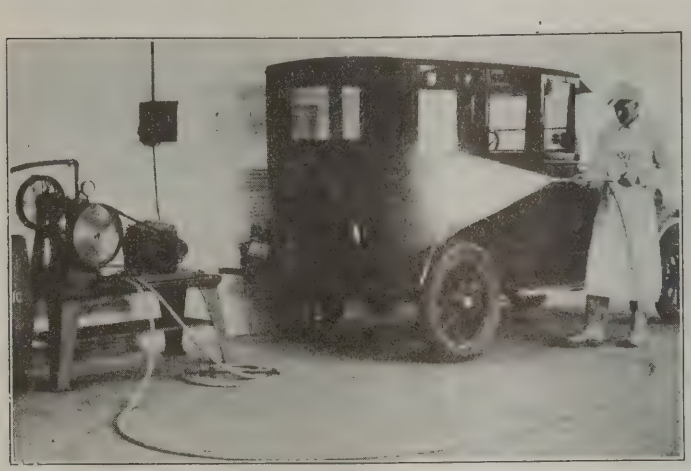
Dains' Nu-Matic bumper

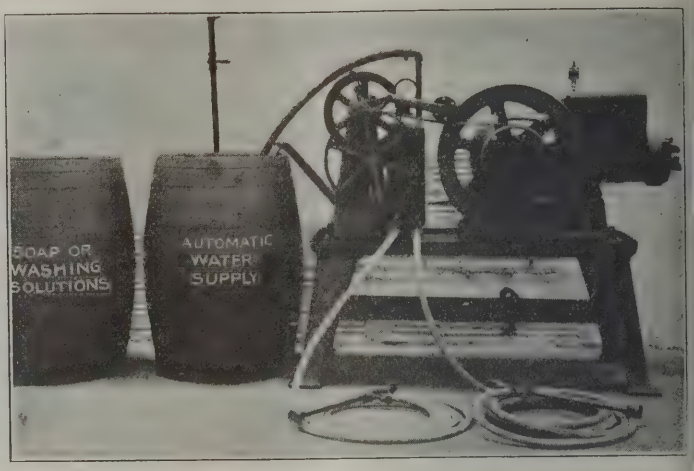
The Tria Horn

THE Tria Horn which is made in Berlin, Germany, is being distributed in the United States by Isotta Fraschini, with offices at 785 Fifth avenue, New York, and a western distributing establishment at 2427 South Michigan avenue, Chicago. Orders for the horns are received at either of these addresses. This is a horn which is said to be especially well designed to give long service and produce a far-reaching pleasing double tone fog horn sound. It mounts to best advantage on the dashboard under the engine hood, the distributors furnishing full installation instructions. List price $38.

Instant Spark Plug Cleaner

AN interesting automotive product is found in the Instant Spark Plug Cleaner which recently has been placed on the market by The Trindl Company, 2917 S. Wabash avenue, Chicago. Twenty seconds is all the time necessary, it is stated, for this device to clean a spark





plug regardless of how badly it is fouled. The feat is accomplished without soiling the owner's hands. The cleaner is installed permanently in one of the petcock holes of the engine. For engines not having petcocks a special adapter is provided at a cost of 30 cents. The cleaner lists at $2.50.

AC Air Cleaner for Dodge

AC SPARK PLUG CO., is now furnishing AC Air Cleaners, complete with all attachments, for the 1920 to 1925 models of Dodge Brothers cars and Graham Brothers trucks. A retail price of $7 has been placed on the installations.

GETTING MORE OUT of the SHOP

Here Is Shown the Set-Up for the Speed-Spra. It Can Be Driven by Electric Motor or Gasoline Engine. Among its Features Is the Exceptional Fineness of the Spray

Speed-Spra For Washing Motor Car

Since it is being generally realized that a clean car is easier to work upon and that one of the most important steps in the refinishing of cars is the cleaning of them prior to painting, apparatus for cleaning chassis and bodies is being developed to quite an extent.

One of the most recent additions in this line is the washing apparatus known as the Speed-Spra, made by the Hayes Pump & Planter Co., Galva, Ill. To better understand how the Speed Spra works it must be understood it is driven by a 3 h. p. electric motor or engine, and delivers through the "Velvet-Spra" gun operated by the washer a broad, soft, soaking spray, or a strong, driving spray for use on the under side of fenders, chassis, etc.

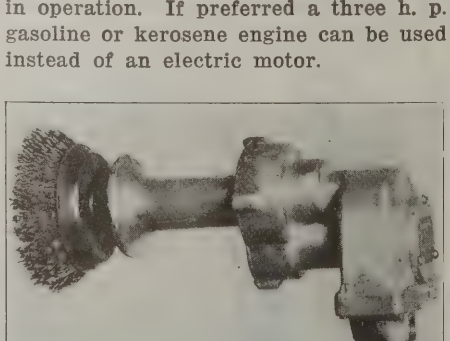
In operation, the washer turns on the broad Velvet-Spra and goes over the entire car, soaking it thoroughly. That takes only 1 or 2 min. Then, turning the handle of the Velvet-Spra gun to the driving spray, he starts work on fenders, wheels and springs.

The feature of this washing apparatus is the exceptional fineness of the spray. It causes the water to penetrate caked dirt and grease-soaked dirt so the latter falls off in chunks and in a demonstration to a representative of Motor Age a car was washed in less than 20 min.

In the Speed-Spra, cold water is drawn from a supply barrel into the pump, placed under pressure and forced through a length of hose into the Velvet-Spra gun. There are no compressed air or mixing tanks, nor valves to operate. The pump itself is automatic, regulating its own pressure, and keeping the pressure constant, whether one or two leads are in operation.

With a quarter turn of the handle of the gun, the stream can be changed from a driving, cleansing spray, to a broad, soft, soaking flushing spray, or shut off altogether.

One of the outstanding advantages of the Speed-Spra is the automatic by-pass or governor, which maintains even pressure, and returns any surplus water or solution to the supply. When the gun is turned off, the water flows back into the supply barrel, and the motor or engine idles, consuming not more than 5 per cent of the current required when the gun is operating.



Another feature is that it is not dependent on city water pressure. A supply barrel, provided with an automatic float, furnishes the water. When the water level drops, the water flows in from the tap. When it is full, it shuts off automatically.

The apparatus requires floor space only 2 ft. by 5 ft., exclusive of the barrel. It can be placed anywhere, and can be installed by simply connecting the barrel with a water tap, and the motor to the electric circuit.

Uses Cold Water

An extra barrel may be utilized to contain soap or washing solution. It is operated by a three h. p. electric motor. An automatic control cuts down the motor to idling speed when the gun is not in operation. If preferred a three h. p. gasoline or kerosene engine can be used instead of an electric motor.

The prices of the Speed-Spra vary from $300 without the electric motor or gasoline engine to $515 for the No. 5 machine which is fitted with a direct current, 115 to 230 voltage electric motor. Two 25 ft. lengths of high pressure lead hose are furnished with the outfit.

Standard Turbine Air Motor for use with wire brushes, grinders, etc.

The Air Motor

The Standard Turbine Corp., Scio, New York has brought out a device known as the Air Motor to be used in connection with a wire brush for scaling paint from motor vehicles, in connection with grinding wheels and other similar operations in the automotive shop.

The Air Motor is said to be ideal for the above purposes, principally on account of its light weight and consequent ease of handling. The turbine consists of a wheel operating at a speed of 12,000 r. p. m. mounted on ball bearings and geared to the low speed shaft operating the wire brush.

The low speed shaft is laid in a long sleeve bearing and arranged also with a ball thrust bearing to take up any thrust imposed in applying the brush. The air is admitted to the turbine wheel by means of a valve operated by a trigger. The turbine wheel itself consists of a small steel forging tested to a maximum speed of 100,000 r. p. m. The bearings are grease lubricated, the grease connections being arranged for the Alemite system. The exhaust is through the center of the low speed shaft, assisting in keeping the brush clean.

The standing torque of the motor is greater for equivalent air consumption than any reciprocating motor it is said. The no-load speed of the motor is always such as to be less than one-third of the tested safe speed of the wheel. The motor has an all-aluminum casing and its total weight is 9½ lbs. without the brush, about 11 lbs. with the brush. The motor is free from vibration.

EDITORIAL

Why Radio Appeals

MERCHANTS who sell radio equipment do so with the natural expectation of making a profit. Many automotive merchants have taken up this line of business and some have made a profit and some have not. Those who have not made a profit usually attribute their failure to the price cutting carnival that we have observed in so many places where radio is sold. The fact that the radio business was so new and so much progress in design being made from day to day was largely responsible for the lack of stability in prices.

Still we find more and more automotive merchants putting in stocks of radio merchandise. Thus far radio is largely a fall and winter business. The automobile business in most sections of the country still falls off to some extent in these very same months, despite the many commendable efforts that have been made to keep the level up. It is the desire to supplement their automotive business with a line that will keep up the sales volume and profit production through the winter months that has led many dealers to engage in selling radio.

The average automotive dealer who takes on radio does not permit this supplementary line to interfere with his automotive business. He organizes his establishment so that he can give the right kind of attention to radio without in the least neglecting his automotive business. Many of his radio customers come from the ranks of the car owners that he already has contact with, and in many cases radio sales are made while the car is in the shop.

If the automobile dealer has his business so organized that he can sell radio without interfering with his automotive sales, and if he finds that his radio business returns him a profit that helps him to maintain a better establishment the year round, then he is justified in going into it. It is for him to determine. Certainly it would not appeal to him if there were no opportunity for profit in it.

Be Optimistic

AS September approaches the great industrial and financial leaders of the nation are predicting a period of unusual business development and progress. All summer the automobile business has been good and it has continued at a brisk rate later in the season than usual. There has been and there continues to be a quantity demand for automotive transportation. If general business continues to improve as the captains of industry predict, it should result in a tendency for the automotive business to remain at a higher level than is usual for the fall and winter months.

There is a lesson in this for the dealer. Be optimistic. Be conservation on the side of good business. Don't become hysterical and start trading wild for any kind of old used cars simply for the sake of making immediate sales. Let good judgment prevail. It looks now as if there will be plenty of profitable business for the automotive industry. Why run your head off looking for unprofitable business?

Let the Public Know

IF the millions of motor vehicles in operation had the little attentions and adjustments they are in need of today to make them perform infinitely better, a vast amount of profitable business would immediately accrue to the automotive sales and service places.

Millions of hours of profitable labor would be sold and cash registers would swell with hundreds of thousands of dollars received from comparatively small merchandise sales.

One reason that this business does not come into the service stations and sales rooms today is that no effort is made to bring it in. The public doesn't know that a small replacement or adjustment that might cost only 50 cents or a dollar would make so great an improvement in the performance of an automobile. Or if the car owner does know what his vehicle needs he may put off having it done because he does not know how cheaply it can be done. No one has ever told him.

A case in point is a man who for a year had been planning to replace his spark plug leads and terminals. He was confident this replacement would give him more dependable and reliable service from his car. He had no idea what such a service should cost, but from past experiences with other repairs he had visions of a bill that might total many dollars. Se he thought he would do the job himself when he got time. So he went along a year or more in the constant dread that some day his ignition circuit would fail him and he would be stalled on the road.

Finally he got to the point of stopping at a service station for the express purpose of purchasing the necessary insulated wire and the new terminals. He casually told the proprietor what he wanted to do and asked him how long it would take the service station to do the job. He was surprised when the answer was about a half hour. Immediately he gave instructions for the shop to go ahead with the job and in a half hour he had his car back with the job done skillfully by an expert at a cost very little more than the materials alone would have amounted to. And the car owner was saved a dirty and trying job that probably would have been none too well done when he got through with it.

There are literally millions of little jobs like this, or of a similar nature, that should be done on the automobiles running the highways every day. But the service stations are making no effort to get this business. They are not telling the public how cheaply these jobs can be done and what satisfaction comes from them. It is a vast field and one that will yield dollar profit to the service station and tremendous satisfaction to the car owners.

Automotive Production Remains High

Trend of Output Pointing Down in Factory Centers

Builders Working Now Largely to Care for Unfilled Orders—Progress in This Direction Good

DETROIT, Aug. 22.—While production in several of the different automobile factories in the Greater Detroit area is still at nearly full capacity, yet the trend of the manufacturing output is pointing down.

Perhaps the best indication of this is the fact that orders for the various makes of passenger cars are not as easy to obtain now as they have been in the past. This is true, not only of those which have enjoyed normal outputs, but also of those makes which have done record businesses.

The output now is being used to catch up with the orders that have been on the books for some time. Some companies are making remarkable progress in this direction and have made great inroads into their unfilled orders. Those companies that have been doing a normal business are letting their orders control their production.

When the time arrives when the unfilled orders are no longer on the books, it is almost a foregone conclusion that the output will take a big drop and will continue on its way down until the annual rush starts again in the spring, because it is regarded as certain that the different manufacturers will control their output by the demands placed on them by their dealers and branches.

While it is only a matter of speculation, yet the coming months may see production drop to an unusually low figure for reasons mentioned above. And then again it may not, for the manufacturers wishing to maintain sales lines devoid of radical ups and downs may govern their production accordingly. As yet it is too early to predict just what course will be followed, except that production will drop.

RUBBER SURVEY STARTED

WASHINGTON, Aug. 22.—A survey of the consumption of crude rubber in the United States during the first seven months of the present year is underway by officials of the rubber division of the Department of Commerce, it was announced here this week. Questionnaires sent out by the division requesting statistics are just beginning to trickle into headquarters here and it is not expected that complete figures will be ready for several weeks. Officials admit that those already in hand indicate there has been no decrease in consumption of rubber and none is to be expected despite the high prevailing price of rubber.

CLOSED CAR SHOW PLANNED

LOS ANGELES, Aug. 22.—The Los Angeles Motor Car Dealers' Association has definitely decided to hold a Closed Car Salon this fall, either in the last week of October or the first week in November, according to an announcement by Secretary Burt Roberts. The exhibition will be staged in the Biltmore Hotel. Each distributor will be permitted to exhibit only one closed job of each make of car he handles. It is necessary to make this limitation owing to the amount of display space available at the hotel. There will be no admission charge, the show being financed by a flat assessment against the exhibitors, which is expected to amount of approximately $175 each. The show this year will run five days as against three days last year.

CONTEST OFFICE MOVES

WASHINGTON, Aug. 24.—The office of the Contest Board of the American Automobile Association has been moved from Franklin, Pa., to the general headquarters of the A. A. A. in Washington. The Contest Board has charge of sanctioning and supervising all races and contests held under the auspices of the A. A. A.

PIONEER DEALER DIES

ATLANTA, Ga., Aug. 22.—Ben W. Holt, who, with Fred Rawlings, was formerly Georgia state distributor of the Cadillac, and who was one of the pioneers in the automobile business in the Southwest, died at his home in Saundersville, Ga., a few days ago.

CHEVROLET CUP AWARDED

BALTIMORE, Aug. 22.—A gold cup awarded monthly by the Baltimore Chevrolet Dealers' Association to the ranking salesman, was awarded last week to R. W. Wilson, of the Stallings-Ripple Chevrolet Sales Company, for his work performed during July. It was the second month the award was made, the first recipient being L. C. Weller, of the M-M-T Motor Company, for being the ranking salesman in June.

Willys Sees Production of 25,000 Cars in September

TOLEDO, Aug. 22.—Increase in business for September is predicted by John N. Willys, president of the Willys-Overland Co., upon his return from abroad and after a survey of conditions as he found them here.

He estimates production in September for his company will be 25,000 cars which is considerably more than is being made this month.

Last week production schedules were narrowed down by the factory and some men laid off. It is believed that this is only temporary and due largely to the immediate effect of the price changes.

Firestone Nears Completion Of Plan to Grow Rubber

Lease of 1,000,000 Acres in Liberia Is Virtually Ratified by Government Official

AKRON, O., Aug. 22.—Harvey S. Firestone, president of the Firestone Tire and Rubber Co., has virtually completed negotiations with the Liberian Government for the leasing of 1,000,000 acres of rubber plantation land in the African republic.

Edwin Barclay, Secretary of State of Liberia, was in Akron to work out final details of the transactions. He arranged for a long time lease on the property. This is expected to be approved as soon as he returns to that country.

After receiving assurance from Secretary Barclay that officials of Liberia were ready to approve his proposition, Mr. Firestone announced that he will place under cultivation the entire million acre tract. He is planning to send a large force of men there to prepare the land for growing rubber trees. This marks the first effort of an American manufacturer to grow rubber on such a large scale, although the question has been agitated for years.

Mr. Firestone has long been interested in projects for American rubber factories growing their own rubber, and has waged a strenuous fight against the British monopoly of the rubber producing industry.

Three-quarters of the acreage of all the rubber plantations in the world are now controlled directly or indirectly by Great Britain. Most of the remaining supply of rubber is produced by the Dutch. America, the largest consumer of rubber in the world, has controlled until now only a small percentage of the total acreage of rubber producing plantations.

It is learned on good authority here that a $100,000,000 corporation will shortly be formed to operate the Liberian plantation on a gigantic scale, which will assure American manufacturers of an adequate future supply of rubber. Mr. Firestone predicts that Akron will not only be the center of the manufacturing world but will become also the headquarters of the rubber growing industry of America. This would be brought about, he indicated, through the formation of a mammoth corporation, designed to grow rubber in foreign countries, financed by American capital.

"The National Automobile Chamber of Commerce estimates that 1,500,000 more planted acres of rubber trees are needed if the supply is to meet the demand within the next few years," Mr. Firestone said.

Delayed Buying Seen as One Cause of Sudden Sales Rise

Many Believe Prospective Buyers Waited Until After New Models Appeared

DETROIT, Aug. 22.—The recent increase in the number of automobile sales made throughout the country is not entirely attributed to the bringing out of new models.

There are those who believe that the price reductions and the new models are responsible for the phenomenal increase reported by dealers and distributors within the past ten days. But opposed to them in this particular belief are those who contend that the recent buying is nothing more than delayed buying, buying which should have been done two months ago.

Those who hold to this opinion express themselves this way: The motoring public, especially those who were most likely to buy passenger cars knew two months ago that new models would be on the market before long. They preferred to wait until the time when the new models put in their appearance. When they did they bought. This buying could have taken place two months previously. Now it is easy enough for salesmanagers to say that the price reductions and the bringing out of the new models has caused the increase but then the drop in the sales, although the industry as a whole showed increases, previous to their coming out was nothing more than a reservoir out of which the present sales record was to come.

In answering these arguments, it is pointed out that the sales for May and June were above those of past years and that the recent increases are simply an answer of the public as regards the bargains the various manufacturers offered. As for the people not buying until the new models came out, that was true only to a small percentage, as they claim this tendency was not as noticeable this year as in the past.

NEW CHRYSLER DEALERS

CHARLOTTE, N. C., Aug. 22.—Signing of a number of contracts with automobile concerns in this territory, which will act as Chrysler dealers, was announced by W. T. Hoppe, president of Hoppe Motors, Inc., recently organized and designated distributor for the Chrysler line. The newly-signed Chrysler dealers included Franklin Sales Company, Aberdeen, N. C.; Frazer Motor Company, Chester, S. C.; Lutterloh-Shuler Motor Co., Fayetteville, N. C.; Thomas L. Craig, Gastonia, N. C.; Williamson Motor Co., Lumberton, N. C.; Craig Motor Co., Lancaster, S. C.; L. T. Lineberger, Lincolnton, N. C.; Jarrett & Hamilton, Spencer, N. C.; B. B. Higgins Motor Co., Shelby, N. C.; Nance Motor Co., Troy, N. C.; J. Ray Barkalow, well-known in automotive trade circles in this territory, is in charge of wholesale sales for this company.

Hitching Posts Gone in Pilgrim City

PLYMOUTH, Mass., Aug. 22.—In this historic little town where stands the famous Plymouth Rock, at the spot the Pilgrims landed, the last relic of the horse age has passed. Workmen have started throughout the town and begun removing the last of the old hitching posts where residents and visitors tied old Dobbin while on business, sightseeing or at worship. The selectmen decided that the posts, particularly those in Town Square, interfered with the parking of motor cars and the spaces were ordered levelled off. And Capt. Myles Standish, from his high perch on the monument a little to the North near the coast seemed to be smiling as the work went on.

Hudson-Essex Prices Are Cut from $55 to $100

DETROIT, Aug. 22.—New price reductions on Essex and Hudson models have been announced here. The amounts range from $55 to $100. New prices, showing amount of reduction in each case, are:

	New Price	Old Price	Reduction
Essex			
Coach	$795	$850	$55
Hudson			
Coach	$1195	$1250	$55
Brougham	1495	1595	100
7-Passenger Sedan	1695	1795	100

O. J. GUDE DIES

NEW YORK, Aug. 22.—O. J. Gude, advertising man, died at Bad Nauheim, Germany, recently, and his body is being brought here for burial. He was co-defendant with the Ford Motor Co., John Wanamaker, Panhard & Lavassor and others in the Selden patent suits filed in 1903.

WILL STUDY U. S. ROADS

NEW YORK, Aug. 22.—Sir Henry W. Maybury, British minister of transport, is due here tomorrow. He will study American road systems, with particular reference to methods of construction. A delegation of automobile men will meet him at the pier and a lunch or dinner is to be given in his honor in a week or two, by the National Automobile Chamber of Commerce.

KERBY JOINS DURANT, LTD.

TORONTO, Aug. 22.—Roy D. Kerby has severed his connection with General Motors to go to Durant Motors of Canada, Ltd., as sales manager, filling the position made vacant by the death of R. D. McKellar. Mr. Kerby in linking up with the Durant organization has renewed a previous association with R. H. Mulch, general manager of Durant, as both held executive positions with General Motors of Canada.

Good Management Will Be Theme of M.A.M.A. Meeting

Toronto Convention in October Will Hear Speakers From All Divisions of Industry

NEW YORK, Aug. 22.—Information for executives is the foundation on which the Motor and Accessory Manufacturers' Association is building the program for the annual fall convention, to be held in Montreal in October. The general theme will be "Good Management," and the addresses and discussions of a four-day session will be devoted to fundamentals and experiences in management in all divisions of the automotive equipment manufacturing industry.

There will be subjects of particular interest to general merchandising and credit executives, but the entire program is being worked out in such a way that all sessions will have features of value for men in all divisions of manufacturing management, the association announces.

The convention speakers will include a number of nationally known business authorities and several others with wide reputations, particularly in the automotive field. Merle Thorpe, editor of *Nation's Business*, published by the Chamber of Commerce of the United States, is among the speakers from whom acceptances have been received. Others will be E. P. Chalfont of the Gill Manufacturing Co., president of the M. & A. M. A.; W. T. Morris of the American Chain Co., president of Automotive Equipment Association; T. M. Simpson, secretary of the Continental Motors Corp.; F. E. Titus, vice-president of the B. F. Goodrich Co., and W. E. Wissler of the Herring Motor Co., automotive equipment wholesaler in Des Moines, Iowa. Other speakers are under consideration by the program committee.

Separate sessions will be devoted to general management, merchandising management and credit management.

The program is being developed by a committee headed by B. M. Asch, president of Asch & Co., in co-operation with the association staff, headed by M. L. Heminway, general manager.

Production in July Marks New High Level for Period

WASHINGTON, Aug. 22.—July production of motor vehicles totaled 397,094, a new high record for the month. This compares with 402,848 in June, 1925, and 270,935 in July, 1924. The figures are for the United States and Canada, trucks included. July passenger car output was 357,883 and truck output 39,211, a gain over June for commercial vehicles, when the figure was 38,042.

The total production for the first seven months of the current year, it is shown by the Department of Commerce figures, was 2,570,610, against 2,325,496 for the corresponding period of 1924.

Midwestern Radio Dealers Meet With Gibson Company

Nebraska Buick Salesmen Also Hear of Potential Profits in Session at Lincoln

INDIANAPOLIS, Aug. 22.—The Gibson Company, automotive wholesalers, staged here one of the most effective and intensive meetings ever held in this city in its dealers' Radio Sales Educational meeting which in a few hours condensed a highly instructive and helpful sales course on radio to about 240 radio dealers and interested merchants of Indiana, Ohio and Illinois. The meeting was staged under the direction of J. M. Bloch, secretary of the Gibson Company and the active manager of the concern; E. M. Gass, manager of the Radio Department of the company; and A. H. Webber, merchandising manager of the company, who also acted as the meeting chairman.

The second floor of the big Gibson Building was transformed into a meeting room with a very complete display of radio sets and parts and batteries and power units. On the same floor where the dealers and interested merchants gathered informally in the morning was a large space set aside for the luncheon which the company served to all its guests.

Among the speakers were Frederick Bremier, assistant manager of the cemmercial research department of the Curtis Publishing Co., who epitomized the finding of the extensive radio merchandising research made by the Curtis company some time ago. He showed why merchants of Indiana, Ohio and Illinois can look for sales of from one to one and a half million sets in this territory and showed that there is the country a potential market for the sale of 15,000,000 sets.

R. M. Klein, general manager and Harry E. Sherwin, sales manager of the F. A. D. Andrea Company, makers of FADA, which the Gibson Company distributes in 70 Indiana, five Ohion and 13 Illinois counties gave complete descriptions of the qualities of this type and the merchandising and commercial policies of the concern which have been effective in the protection of the jobbers and dealers.

NEBRASKA BUICK DEALERS STUDY RADIO

LINCOLN, Neb., Aug. 24.—That the opportunities for substantial profit in the merchandising of radio products are becoming widely appreciaated by automobile dealers, particularly throughout Nebraska and the west, was evidenced by the enthusiasm shown by the Nebraska Buick salesmen and dealers who attended the meeting of dealers held by the Nebraska-Buick Company in Lincoln, recently. At this meeting the newest models of the Music Master line were shown.

A similar meeting was held at Omaha, which was attended by a large number of present and prospective dealers in that territory. At this meeting it was brought out that more and more automobile dealers who handle the better class of cars are being granted the Music Master Franchise.

Present at these meetings were C. L. Carper, Vice President, Nebraska Buick Auto Company; Fred D. Williams, General Sales Manager, Music Master Corporation; L. A. Dunn and C. A. Brinston of the Zenith Radio Corporation; Robert W. Porter of the Thompson Radio Corporation; Allen Williams, northwest manager of Music Master Corporation, and H. N. McMenimen of the Music Master home office at Philadelphia.

Sunday Contract Not Binding

MILWAUKEE, Aug. 22.—A contract for the purchase of an automobile, made on Sunday, although otherwise dated, is not binding and cannot be enforced, Judge A. J. Braun told Louis Karlic in civil court in Milwaukee. Karlic was suing L. R. Shainck for $100 for the balance due him on an automobile. Karlic had purchased a second hand car, valued at $230, from Shainck and paid him $150 down on it. The deal took place on a Sunday but the contract was dated Monday. Mrs. Karlic did not approve of the transaction and the car was returned. Shainck gave Karlic $50 and told him he would pay the remainder when the car was sold. In the meantime the car was wrecked. The plaintiff's attorney brought out the fact that the original transaction took place on Sunday, whereupon the case was dismissed.

July Hupp Sales Break All Previous Records for Period

DETROIT, Aug. 22.—July sales of automobiles by the Hupp Motor Car Company broke all previous records for the same period. According to O. C. Hutchinson, general sales manager, it was one of the three largest months in the history of the company. Compared to July 1924, the sales for last month were 59 per cent higher with the sales volume in dollars registering an even larger increase, due to the eight cylinder car.

The records for the June and July sales of this year, Mr. Hutchison said, were 76 per cent better than those for the same months last year.

Factory shipments of Hupmobile eights to distributors reached the highest total they have yet attained, surpassing the June record by 400 cars and doubling that of May. Heavy production is being maintained this month in an effort to catch up with the sales stimulus brought about by reductions at the beginning of the season.

N.A.D.A. Finds Most Sales Of Today Are Replacements

Two, Three and Four Transactions Generally Necessary Before Original Investment Is Obtained

ST. LOUIS, Aug. 22.—Two, three and four sales are generally necessary for an automobile dealer to finish a transaction begun with the sale of a new car, according to studies that have been made by the National Automobile Dealers' Association. One exceptional case showed 47 transactions before the dealer was able to clear himself of his entire original investment in an old car he had accepted as part payment in the delivery of a new car.

In studies which the N. A. D. A. has been carrying on for the last four years, it was brought to light that the number of new car sales influenced by the old car was steadily increasing until in 1924 it had reached more than 70 per cent for all lines of cars. Some low priced cars of large sales volume had a much lower ratio, in some stataes as low as 10 per cent of the new car sales were made on the basis of trading an old car. In the higher priced classes, hundreds of dealers were doing a 100 per cent trading business.

These factors reveal with considerable certainty that the new car sales field of today and future years is more and more restricted to a replacement business.

Willys-Overland Makes 1926 Distribution Plans

SAN FRANCISCO, Aug. 22.—General plans for the 1926 distribution and sales programs for the Overland and Willys-Knight organizations in central and northern California in particular and the entire Pacific coast in general, were laid at a meeting held in the Hotel Whitcomb here.

Among the scores of distributors of and dealers in these cars attending the two-day meeting were: Carroll J. Rogers, chief supervisor of Willys-Overland, Inc.; S. Robert Swiss of the United States Advertising Corporation, Toledo; L. E. Longfellow, manager of the car order depaprtment; H. C. Macaire, California supervisor of sales; J. W. Hawk, manager San Francisco branch, Willys-Overland Pacific Company; L. J. McCracken, manager Los Angeles branch; J. H. Alfred, Portland and Seattle, Pacific Northwest manager; Arch Browning, distributor, Salt Lake City; H. H. Hotchkiss, distributor, Phoenix, Ariz.; G. H. Bryant, special Pacific coast representative of the United States Advertising Corporation, and every distributor of the Overland and Willys-Knight for all of California.

The meeting was the eighth of a series of nine zone meetings planned to cover all of the United States, the last one being in Seatttle. Analysis of the past six months' sales showed material gain over 1924.

Yellow Cab-General Motors Merger Effective Sept. 1

Majority of Stockholders Vote for Consolidation Plan in Meeting at Portland, Me.

CHICAGO, August 22.—Announcement has been made by John Hertz that operation of the Yellow Cab Manufacturing Co. and the truck division of General Motors Corp. under the name of the Yellow Truck & Coach Manufacturing Co., will be effective September 1. Mr. Hertz will be chairman of the board of directors of the new company.

Stockholders representing 490,000 shares of the 600,000 shares of the Yellow Cab Manufacturing Co. stock outstanding, voted for the merger which was negotiated by Hertz.

The truck division of General Motors will be acquired by Yellow Cab Manufacturing Co. through stock ownership of 500,000 shares of the Yellow Cab stock, par value at $10 a share. The truck business which is being taken over, was valued at $16,000,000 on April 30, 1925.

Meeting in Portland, Me., stockholders also have authorized the board to issue and distribute 150,000 shares of preferred stock, par value at $15,000,000, to be paid as a stock dividend pro-rata to holders of the 600,000 shares of Class B stock of the Yellow Cab Manufacturing Co.

The board of directors will be increased from thirteen to twenty-one. A change was authorzied in the capital stock by retiring $575,000 class A stock and by adding 200,000 of preferred stock of the par value of $100 a share and 1,000,000 shares of common stock of the par value of $10 a share.

Hupp Produces 10,000 Eights in Seven Months

DETROIT, Aug. 22.—Hupmobile has produced its ten-thousandth eight, a five passenger sedan which was completed at the factory here last week. Its production is said to be a record in that the 10,000 cars were produced within seven months of its first announcement.

Production for the present month has been set at 2,000 eights, which if reached will surpass that of the largest previous months in the eight cylinder division.

According to O. C. Hutchinson, general sales manager, "the record achieved by the Hupp organization in producing 10,000 eights in a little over seven months following its first announcement has never been approached by a builder of fine motor cars. It represents a public demand for more than $20,000,000 worth of Hupmobile eights."

Velie July Business Shows Large Increase Over 1924

MOLINE, Aug. 22.—Velie Motors Corporation reports a 69 per cent increase in July shipments over July of last year. Company officials say that Velie business for the last ten months has shown a sizable increase over corresponding months of a year ago and predict that August shipments will exceed those of August 1924 by approximately 100 per cent. They report that on August 10 unfilled shipping orders on hand for August exceeded shipments for the entire month of August, 1924, by 45 per cent.

Business for the 12 months ending August 31 will, it is said, show an increase of nearly 40 per cent over the like preceding period and will represent the largest similar period for Velie since the war boom.

Velie has discontinued manufacture of the Phaeton but will continue to build the Club Phaeton.

C. W. Hadden, General Sales Manager for Velie, is visiting Velie distributors at Mountain states and Pacific Coast points during August.

Venice Forced to Build Roads

VENICE, Aug. 12.—(By Mail).—Centuries of romantic isolation enjoyed by the city of Venice as an island, will be only memories because the automobile has forced authorities to consider plans for a highway between Venice and Padua.

The gondolas have been the single means of travel between Venice and the rest of Italy, except the railroad which crosses the lagoon on a pontoon bridge.

Definite plans for the highway have been completed and are in the hands of government authorities who are responsible for a decision. Indications are that the road will be authorized.

KEENE GOES TO COAST

CLEVELAND, Aug. 22.—The Swan Carburetor Company announces the transfer of C. F. Keene from the Kansas City territory to the Pacific Coast territory, where he will act as district manager for the Perfection Heater & Mfg. Co. and its subsidiary, the Swan Carburetor Company. Mr. Keene, during his automobile racing days, spent many years on the Pacific Coast and built and raced various cars.

NASH SETS RECORD

MILWAUKEE, Aug. 22. — Fifty-one Nash cars were delivered at retail in Milwaukee during the week of August 2, setting a new record for the Nash sales company, and besting by 50 per cent the highest number of Nash cars ever delivered in any one week previously. A most wonderful reception has been accorded the new special six and advanced six since their introduction late in July, according to officials of the Nash Sales Co. One of the big Nash selling points in Milwaukee is the saving of from $30 to $60 on freight effected because of the location of the plant in Milwaukee.

California Dealers Charge Jobbers With Lax Methods

Tradesmen Declare Manufacturers Also Responsible in Increase of "Fly-by-Nights"

LOS ANGELES, August 22.—An indictment of what is described as "reckless credit extension" by many manufacturers and distribution of automotive equipment, accessories and replacement parts, is presented in a bulletin recently issued by the Southern California Automotive Dealers' Association and the Los Angeles Automobile Trade Association. It is held by the executive officers of these bodies that established automotive businesses are being disrupted by the ease with which irresponsible individuals can obtain equipment and merchandise, and continue in business, without possessing the requisite capital to justify the credit allowed them.

The associations charge that there is a veritable army of fly-by-night operators of automotive establishments of various kinds who get started in the automotive business, and stay in it for periods of varying duration by "the extension of credit entirely unwarranted, and by the apparent willingness of competitors of the distributor or manufacturer who opened the account to continue holding the sack just as soon as the account proves itself worthless to the party originally financing it."

"In summing up the situation," says the bulletin, "we are brought face to face with the realization that somebody does pay these bills, and then to the painful realization that the manufacturer, distributor or jobber who fosters and assists these accounts is actually in competition with his customer who discounts regularly. This matter cannot be looked at in any other way.

"A manufacturer, distributor or jobber opening an account which is not in a position to finance itself for at least 90 days, and who extends credit to a concern which has proved by its past record that it is not able to discount its bills, is actually in competition with his choicest customer, the man who does discount promptly. And the time is coming when the automotive merchant who is seriously engaged in erecting a business in the automotive industry will be compelled to ask the manufacturers, distributors and jobbers of the commodities which he handles just who they want to do business with—the fly-by-nighter, the cut-throat artist, the discount salesman, the here-today-gone-tomorrow dealer, or the responsible merchant with an established reputation. Nobody can compel the manufacturers, distributors and jobbers to adopt sane business methods in respect to credit extension, but the responsible automotive merchant can most assuredy convince them that they must make their choice as to which class of trade they want to do business with."

Rental Agents Meet to Map Out Plan to Protect Public

All Who Hire and Misuse Cars in Any Way Will Be Placed on Operators' Black List

SPRINGFIELD, Ill., Aug. 22.—That by renting motor cars to irresponsible persons, Illinois hire-a-car dealers are arming such individuals with potential death dealing weapons, is the contention of States Attorney J. A. Fullenwider of Sangamon county. He called a meeting here of the central Illinois rental agency proprietors in order to map out a plan for the protection of themselves and the public.

Upon the suggestion of the public prosecutor, a complete rogues gallery will be opened which will blacklist all persons who have mishandled a rented car. Through it, a person who has driven a hired car to the risk of the owner of the machine, as well as endangering other drivers, cars and pedestrians, will be unable to rent a machine from any agency in the state.

That the majority of cases of damage caused by rented automobiles is credited to minors, is regarded as an argument towards preventing the rental of public cars to any one under 21 years of age. Contracts entered into with minors are void, and an attempt will be made to prevent minors from executing such contracts with rental automobile dealers.

That the need of regulation in the hired car field is great, is the opinion of the state's attorney and police department here. Reports of accidents in which rented machines are involved, are increasing throughout Illinois and, in numerous instances, the drivers were not financially able to meet obligations resulting when the machine they were handling collided with that of another.

By the means of state and national rules and regulations, the public will be protected to a greater degree than has been the case in the past, as well as the proprietors of the establishments which supply "drive it yourself" cars, and which have become very numerous of late years.

FORD TO SCRAP SHIPS

DETROIT, Aug. 22.—Within a month the first of the 149 lake ships included in the fleet recently obtained by Henry Ford from the U. S. Shipping Board, will arrive in the River Rouge. A force of men will commence cutting the 1,500 tons of steel in each of the vessels. The "scrapping" process will require eighteen months, it is estimated.

WILLS SAINTE CLAIRE DEALERS

MARYSVILLE, Mich., Aug. 22. — Dealers who have recently taken on the Wills Sainte Claire line are: Marksman Auto Company, Fall River, Mass., Humphries Motor Company, Inc., Sharon Hill, Pa., Blasky & Pruitt, West Palm Beach, Fla.

SPOKANE SEES AJAX

SPOKANE, Aug. 22.—More than 4,000 persons inspected the Ajax car in Spokane during the premier showing early in August, in the display rooms of the Spokane Nash Motor Company, Spokane's distributors, according to Joseph Bain, sales manager of the company. "We are greatly pleased with the way the newest addition to motordom has been accepted in Spokane," said Mr. Bain. "We sold 14 cars in less than a week. All but one were sedans."

TO PRODUCE HOLYOKE TIRE

HOLYOKE, Mass., Aug. 22.—The New England Tire & Rubber Company is working out plans for reorganization to again produce the Holyoke tire. L. A. Laporte, who became president just before the company went into receivership last spring, is working hard to put it upon an operating basis again. He stated that the company hopes to resume production again by September 15 or October 1. Plans for a reorganization contemplate a new company incorporated under Massachusetts laws with a capitalization of $825,000. This company will take over the liabilities of the old company. A line of balloon tires will be produced as well as the Holyoke Chainess Tread.

OHIO REGISTRATIONS UP

COLUMBUS, O., Aug. 22.—Ohio motorists, in addition to paying more than $2,000,000 in gasoline taxes since March, have also paid almost $1,000,000 more for auto tags so far this year than they paid during the entire year of 1924, according to Thad H. Brown, secretary of state. Secretary Brown's report shows $12,636,702 paid for tags up to July 31. This is $2,146,793 more than they paid during the same period last year. It is also $939,474 more than the entire sum of last year. Receipts for the last five years have shown a steady increase from $4,682,064 for the first seven months of 1920.

SEEKS STUTZ STOCK

NEW YORK, Aug. 22.—Stockholders of Stutz Motor Car Co. have been asked to release 10 per cent of their holdings within ten days after February 15, 1927, in order to provide an option of one tenth of the capital stock to be sold to F. E. Moskovics, president. Directors agreed to this rather than increase the capital when Mr. Moskovics stipulated that he be permitted to buy 10 per cent of the stock. Stockholders will receive $10 a share.

N. A. D. A. MEET IN MOBILE

MOBILE, Ala., Aug. 22.—The Mobile Chamber of Commerce has announced that the city of Mobile has been selected for the holding of an automobile trade congress by the National Automobile Dealers' Association, the date for the congress being Thursday, Nov. 5, 1925. This meeting, which is one of several the N. A. D. A. is holding throughout the country, will bring together about 100 representative dealers in the Alabama, Mississippi and Florida territory.

U. S. Bureau Denies Alcohol Must Have High Compression

Fuel Allows But Does Not Require Higher Ratio—Needle Valve Opening Must Be Larger

WASHINGTON, Aug. 22.—The Bureau of Standards, in a statement just issued here, corrects the erroneous statements made recently that a high compression ratio is necessary in alcohol as a fuel for internal-combustion engines.

"That this is not true," says the statement, "is fortunate, as manufacturers would be very loath to alter their engines in such fashion as to render them unsuitable for operation with gasoline.

"The fact is that alcohol permits, but does not require, the employment of a much higher compression ratio than gasoline. Should alcohol or other fuels of equal antiknock value become generally available compression ratios could be increased, and as a consequence higher efficiencies could be attained. In the meantime the chief advantage to be derived from the use of an antiknock fuel is that it permits satisfatcory operation with an engine too badly carbonized for satisfactory operation with gasoline.

"The use of alcohol does require larger metering jets or a larger needle valve opening in the carburetor. This is necessary both for the reason that alcohol is more viscous than gasoline and because a much richer mixture of alcohol and air is required for complete combustion than of gasoline and air. Fortunately this change can be made ordinarily with little difficulty."

UNIFORM GASOLINE SIGNS

MILWAUKEE, Aug. 22.—Gasoline filling stations in Wisconsin are to be provided with uniform signs for the display of their gasoline prices, the department of markets of the state has announced. The department amended its order requiring gasoline price publicity when oil jobbers at a joint hearing approved of the uniform sign system. All filling stations will be provided with a standard type of frame for their price signs which are required under the publicity order to prevent unfair competition by secret discounts or rebates. The uniformity of posting is intended to make easier the projected rigid state supervision.

EDMUND & JONES EARNINGS

DETROIT, Aug. 22.—For the first half year Edmund & Jones Corp. reports $2,573,729 sales with $191,046 net earnings equivalent to $4.26 per share on common before preferred sinking fund. Common dividend was increased from $2 to $3 per share, payable quarterly. The directors authorized sale of 10,000 shares unissued common giving rights to common stockholders of record Aug. 14 to subscribe for one share of new for each four of old common owned at $26 per share, rights expiring Aug. 31.

N. A. D. A. Will Start Series of Sales Congresses in September

Used Car Plans and Dealer Profits Will Be Subjects Before Dealers in 21 Cities

ST. LOUIS, Aug. 22.—A series of sales congresses is to be conducted by the National Automobile Dealers' Association during September. The dates given out for the various cities in the first announcement are:

Des Moines, Iowa, Sept. 9.
Peoria, Ill., Sept. 10.
Ft. Wayne, Ind., Sept. 11.
Buffalo, N. Y., Sept. 14.
Lockport, Sept. 15.
Niagara Falls, Sept. 15.
Batavia, Sept. 16.
Canandaigua, Sept. 16.
Rochester, Sept. 17.
Syracuse, Sept. 18.
Utica, Sept. 21.
Schenectady, Sept. 21.
Albany, Sept. 22.
Poughkeepsie, Sept. 23.
Kingston, Sept. 23.
New York, Sept. 24.
Brooklyn, Sept. 25.
New Haven, Sept. 28.
Bridgeport, Sept. 28.
Hartford, Sept. 29.
Boston, Sept. 30.

Sales plans, used car plans and dealer profits will be discussed in all the programs, all of which will be identical as far as topics to be discussed are concerned.

Under the head of sales plans national authorities will discuss the best methods for training salesmen to follow definite sales plans and how successful sales plans are built and developed. Market analyses from the standpoint of successful methods used by prosperous dealers and distributors also will be discussed.

Automobile dealers throughout the country lost 8.2 cents for every dollar of car sales on used cars during 1924. This was about one cent less than the losses in 1923. The N. A. D. A. has conducted a campaign of education on the used car situation for four years which has been largely responsible for the reduction in used car losses. In 1922 dealers throughout the country lost $126,000,000 on used cars and in 1924 they lost $40,000,000. How this great reduction in used car losses was brought about and what plans are afoot to still further reduce losses will be discussed at the forthcoming sales congresses.

How successful dealers are able to make 5 per cent net profit will be another interesting item on the programs.

Speakers and details of the various programs have not as yet been announced but the N. A. D. A. announcement of the campaign says that while all the meetings will have the same subjects, not all the speakers will appear at all of the cities.

All the congresses are being arranged in co-operation with local associations and dealer committees. Dealers who wish to attend are urged to see the president or secretary of their local association for information concerning the time and place of the meeting in their vicinity.

Police Learn to Repair Fords

NEW YORK, Aug. 22.—To give the motorized police of New York City an intimate knowledge of the construction and operation of the 722 Ford cars recently purchased by the city, a special Ford school has been established by the New York Police Academy at Thirty-fourth street and Lexington avenue. More than 2,800 police sergeants and patrolmen detailed to the motor division of the police force are enrolled in the Ford school in a course which completely covers every phase of the Ford engine, electrical, clutch and drive system.

"Fords are rapidly taking over the important features of the police department's patrol work," Police Inspector John J. Noonan explains, "and it is our intention to make every officer as familiar with his Ford as he is with his revolver."

Sixty especially selected men of the division, in addition to their week's instruction in the Ford school of the Police Academy, spent a week in the Ford Motor Company plant at Kearny, N. J., to learn Ford methods in shop work and construction. They will have charge of the precinct police garages.

DEALERS CLOSE SUNDAYS

SPOKANE, Wash, Aug. 22.—Automobile dealers of Spokane, through the Spokane Automobile Chamber of Commerce, have ruled against Sunday opening, and as a result all showrooms will be closed here in the future. Lack of business resulting from Sunday opening and sentiment against a seven-day week for employes led to the move.

HOOD HOLDS CONVENTION

BOSTON, Aug. 22.—The Hood Rubber Company held the biggest convention in its career here the past week when men from all over the country were present with the factory executives and workers going into all details of the rubber business. There were more than 200 branch managers alone in attendance. The convention was under the direction of T. R. Stearns. L. Lawrence Muench was in charge of the sessions on production; W. W. Duncan, general sales manager, had charge of the sales promotion meetings; A. R. Howell directed the discussions on advertising policies. The delegates were housed at Nantasket Beach instead of in Boston, and there were dinner parties and entertainments each evening, ending with a banquet at Pemberton Inn, where the principal address was delivered by President F. C. Hood. He gave facts and figures to substantiate his statement that the Hood Rubber Company was enjoying the most prosperous year in all its history.

A. A. A. Pushes Campaign to Remove War Excise Taxes

President Henry Shows There Are Four Times as Many Paying Car Levies as Income Tithes

WASHINGTON, Aug. 22.—Calling attention to the fact that there are four times as many people paying excise taxes on automobiles and parts as there are people paying income taxes, a statement broadcast from the national headquarters of the American Automobile Association this week emphasizes that any program for the reduction of national taxation in the forthcoming session of Congress must take cognizance first and foremost of the burden that the continued excise tax places on the motorists of the country.

"With a surplus of $350,000,000 in sight for the fiscal year 1926," President Thomas P. Henry of the A. A. A. declares, "it stands to reason that the special tax imposed on motorists as a class by the government can be removed without risking a deficit in federal finances."

The A. A. A. statements called on all motorists to urge their representatives in Congress to support the repeal of the excise tax. It pointed out that the total excise tax paid by motorists on automobiles and parts for the fiscal year ending June 30, 1925, was $122,742,440.29. This total is based on the figures of the Internal Revenue Bureau and is equivalent to $29.00 per motor vehicle. The total tax paid by motorists in 1924 including federal, state and municipal taxes amounted to $555,028,548.00.

"The motor vehicle excise tax," President Henry continues in the statement, "is essentially unsound. Even as a war measure it was unsound to base the tax on the assumption that the automobile is a luxury. Ninety per cent of all cars are used more or less for business purposes, while more than 60 per cent of the total passenger car mileage is strictly for business use.

"The tax is discriminatory in its effect on both an instrument of commerce and a commodity."

FINNISH DEALER VISITS MOON

ST. LOUIS, Aug. 22.—Frejvid Borg, managing director in the Motor Kompaniet at Helsingfore, Moon distributors for Finland, has just arrived in St. Louis for a several week's conference at the factory. Borg, a progressive type of the younger business man of Finland, was shown about the city by Edmund H. Serrano, director of exports for the Moon Motor Car Company and expressed his amazement at the size of the automobile industry here. Borg expressed keen interest in the various manufacturing operations through which the Moon car passes from the raw product to the finished job and was particularly impressed with the inspection to which every Moon part is subjected before being incorporated in the car itself.

European Bars Against U. S. Automobiles Being Lowered

N. A. C. C. Official Sees Great Improvement in Export Situation During Trip

NEW YORK, Aug. 22.—Legislative bars to American automobile sales in Europe are being lowered in several important instances, George F. Bauer, secretary of the foreign trade committee of the National Automobile Chamber of Commerce, said on his return from a three months trip to the continent.

Germany is preparing to replace the present license system, which has virtually excluded American cars, with a tariff arrangement under which sales in considerable volume may be expected, Mr. Bauer reported. Early action on this program is looked for.

Austria may follow the lead of Germany and there is even hope that France may decide to reduce the current tariff if reciprocal action is taken by the United States, Mr. Bauer said. He found that the lowering of the Finland tariff, which discriminated against American imports, has greatly stimulated sales there.

"Customs restrictions and lack of financing facilities are the principal restraining factors in the foreign field today," said Mr. Bauer. "The people for the most part want automobiles and will buy them if prices and terms are right. Progress is being made toward admitting American cars on a basis that permits fair competition, but a great deal still remains to be done along these lines, and in the way of extending credit facilities,

"In Germany for instance, interest rates are 10 to 12 per cent, and there is no credit available for financing dealers or retail sales. As soon as the European nations lay aside their petty jealousies and establish themselves on a basis that will inspire the confidence of investors, capital should be made available for automotive transactions.

"Only in Sweden and Denmark did there seem plenty of money for financing sales, and the terms, it must be said, were hardly sound. In many instances only 10 per cent cash was required and the balance spread over two or three years.

MARMON CHANGES OPEN CARS

INDIANAPOLIS, Aug. 22.—Nordyke & Marmon Company announces that it has added considerable equipment and refinement to its five passenger phaeton, and to its seven passenger touring car and raised the prices of each of these open vehicles to $3,295, the same price as the vehicles in the standard closed car line. Among the equipment and accessories added to the phaeton and touring cars are fender mirrors, top boot, tonneau cover or boot, and nickeled rear vision mirrors, with nickeled windshield frame and other refinements of finish.

DEERE RAISES DIVIDEND

MOLINE, ILL., Aug. 22.—Deere & Co., which has maintained a preferred stock dividend without interruption since its incorporation in 1868 but was forced in 1921 to cut its rate to 3 per cent and has since gradually increased it, this week placed the stock on its customary 7 per cent basis, the directors at the same time authorizing the payment and retirement of the outstanding portion of the $10,000,000 gold note issue of 1921. The notes are to be paid from receipts from inventory liquidation and not from any profit earned by the company. The action on $14.25 accumulated back dividends of the preferred stock has not been determined but the directors say it will be paid "as rapidly as circumstances permit." The gold notes to the extent of $2,500,000 have been previously retired, leaving $7,500,000 to be called in at this time.

CAPITAL TO VIEW AJAX

WASHINGTON, Aug. 22.—The new Ajax will be formally introduced to the Washington public in the near future, it was announced here this week by E. M. Wallace of the Wallace Motor Co., Washington Ajax distributor, located at 1709 L street, northwest. "Opinion throughout the industry and among those who have opportunity to view the car," says Mr. Wallace, "unhesitatingly pronounce the new Ajax the crowning achievement of C. W. Nash."

NEW GARDNER DEALERS

ST. LOUIS, Aug. 22.—Dealers recently added to the organization of the Gardner Motor Co. follow:

Lukavsky Motor Co., Los Angeles; Lyndale Auto Service, Minneapolis; J. A. Davidson, Oxnard, Cal.; Ventura Motor Co., Ventura, Cal.; Frank E. Todd, Sheridan, Wyo.; Sible Motor Sales, Mount Vernon, Wash.; Kaufman Motor Sales, Chicago, Ill.; E. A. Moberly, Carlsbad, N. M.; Smith Automotive Co., Oregon, Wis.; Dunn & Gillis, Minneapolis; Hancock Square Garage, Quincy, Mass.

FREEMAN JOINS GARDNER

ST. LOUIS, Aug. 22.—C. L. Freeman, who has been identified with some of the most important automobile builders in America during the last 10 years, has joined the Gardner Motor Company, Inc., as assistant general manager. Mr. Freeman is a highly trained technical expert who has served many famous motor car builders in the capacity of consulting engineer. Just prior to joining Gardner, he designed and engineered one of the outstanding motor car successes of recent years.

OAKLAND BRANCH SOLD

DALLAS, Tex., Aug. 22.—The Oakland factory branch at Dallas has been sold to F. L. Toepperwin according to announcement of C. W. Matheson, vice-president of the Oakland Motor Company who was here this week. Paul A. Stevenson, formerly manager of the branch, is made district manager for all Texas except the Panhandle section,

Sales Executive Sees Big Change in Buying Habits

Pierce-Arrow Manager Believes Seasonal Business Curves Rapidly Being Leveled

BUFFALO, Aug. 22.—Back from a 9,000-mile trip through the United States to observe business conditions in the automobile industry, L. E. Corcoran, general sales manager of the Pierce-Arrow Motor Car Company, declared today that the motor car buying habits of the public have undergone a pronounced change.

"In contrast with former years, automobile sales this year have continued at high levels during the summer months," said Mr. Corcoran. "This is one of the several evidences that the unhealthy condition of peak buying activity in spring and fall, and sales stagnation in mid-winter and mid-summer, is rapidly being wiped out.

"Buyers in increasing numbers are coming to the conclusion that it is just as sensible to buy in one month as it is in another, regardless of the season. The habit of buying in the spring is a heritage from the old days when there were few closed cars and automobiles were suitable only for fair weather driving. The ability of manufacturers to produce all-season closed cars at prices close to those of open models has changed all this.

"The habit of buying in early fall was the result of the uneconomic practice of some makers of announcing radical changes and new models in mid-summer. The more stable manufacturers for several years have been pursuing the sound policy of continuously making gradual improvement and refinements without announcing yearly models. Buyers of cars built under such a policy know that they will not be subjected to artificial depreciation losses and therefore do not hesitate to buy in any month of the year."

WISCONSIN PLATES PLACED

MILWAUKEE, Aug. 22.—An order for 650,000 automobile license plates for the year 1926 has been placed with the Wisconsin state prison plant at Waupun, Wis., by Fred R. Zimmerman, secretary of state, whose department is in charge of auto registration. The color of the 1926 plate will be black numerals on a cream background. Normal demand for automobile plates is about 600,000, Mr. Zimmerman announces, but increased registration for 1926 is indicated in the present automobile sales situation, he believes. For the first half of the year 1925, during which most of the registration takes place, there were registered 541,927 automobiles, records in Zimmerman's office show. He estimates that the total number of 1925 registrations will reach 606,900, making this year a record year.

Auburn Declares 100 Pct. Stock Dividend on Common

Capital Is Increased to $1,500,000—Unfilled Orders Said to Be Heaviest in History

AUBURN, Ind., Aug. 22.—At a special meeting of the stockholders of the Auburn Automobile Company a stock dividend was declared of 100 per cent on the common stock of $25 par value, increasing the capital of Auburn from $750,000 to $1,500,000.

E. L. Cord, vice-president and general manager, who has just recently bought out the former control, in his report to stockholders advised that unfilled orders on the books of the Auburn Automobile Company were the greatest in the history of the company.

"Earnings for July approximated $1.50 per share on the new capitalization of 60,000 shares after setting up a reserve for taxes and estimated earnings for the month of August will approximate $2.25 per share", stated Mr. Cord.

"Within the last year the Auburn Automobile Company has retired $500,000 in preferred stock and is in exceptionally nice position. In the past twelve months we have not used any credit whatsoever, having had sufficient working capital to operate our business.

"We anticipate that the complete year of 1925 will far exceed the best year that Auburn ever had in both numbers of cars and earnings."

Immediately following the stockholders' meeting the directors had a special meeting and voted the issue of the stock dividend and authorized the payment of a quarterly dividend of seventy-five cents per share payable October 1 to stock of record September 20.

The resignation of F. B. Hitchcock as a director was accepted and L. B. Manning was elected to complete that portion of his unexpired term.

FAGEOL EARNINGS HIGH

OAKLAND, Cal., Aug. 22.—Books of the Fageol Motor Company, of this city, opened to the public early in August, showed that the corporation during the first half of 1925 earned more than $300,000 in net profits, or nearly six times the preferred dividend requirements for the entire year. The company earned approximately 36 per cent on its preferred stock, or at the rate of 72 per cent a year, while the earnings on its common stock were at the rate of 13½ per cent or 27 per cent a year. The company is paying no dividend on the common stock, but is building up a surplus to enable it to strengthen its position as a manufacturer. Inasmuch, however, as the preferred stock divided amounts to only $57,000, while the company earned at the rate of $2.70 on its common stock of $10 par, it is apparent that a healthy dividend could be paid on the common. At the end of July, the Fageol factory here was working at capacity production on motor stages and trucks.

1909 Packard Is Still "Asset"

WASHINGTON, Aug. 22.—After 500,000 miles travel a 1909 Packard is listed among the assets of an automobile mechanic in bankruptcy court here. He admits that he has changed tires.

Automobile Club experts figure that the car has averaged 85 miles a day for sixteen years, or the equivalent of twenty trips around the equator. The old machine will be sold to satisfy creditors at an appraised value of $25.

NEW MARMON DEALERS

INDIANAPOLIS Aug. 22.—Nordyke & Marmon Company sales department announces that it has closed 12 new dealer arrangements in nine states in recent days thus keeping up the extension of dealer organization which has been going on rapidly for more than a year. The new Marmon dealers are:

Whieldon Motors Co., New Castle, Pa.; Hall Motors, Santa Anna, Cal.; Reo Motor Sales, Decatur, Ill.; Thompson Marmon Service Co., Chicago; Washington Auto Co., Yakima, Wash.; James P. Marchington, Newport, R. I.; Flint Marmon Sales, Pontiac, Mich.; Marmon South Side Sales & Service Co., Chicago; Coleman & Nelson, Williamsport, Pa.; Luckett & Major, Madison, Ind.; Stephens Bergen Motor Co., Inc., Hackensack, N. J.; Franklin Sales & Service Co., Wilmington, Del. Four new associate dealers have also been appointed; Schmidt & Blackford, Charleston, Ill.; James A. Smith, El Paso, Ill.; Lacon Auto Service, Lacon, Ill., and Campbell & Todd, Lewiston, Ill.

PIKE'S PEAK CLIMB SEPT. 7

COLORADO SPRINGS, Aug. 22.—The seventh annual Pike's Peak Hill Climb race contest, the biggest competition of the kind in the United States, will be held as usual on Labor Day, Sept. 7. The races are held under the rules and with the sanction of the contest board of the American Automobile Association. Spencer Penrose has given a new trophy that will be contested for annually; the cup a mammoth silver bowl of unique design is, aside from its intrinsic value, a grand prize, being more than one hundred years old and purchased by Mr. Penrose in England.

NEW AUBURN DEALERS

AUBURN, Ind., Aug. 22.—New distributors and dealers who hove recently been added to the Auburn organization include:

Joseph Twomey, Inc., West Roxbury, Mass.; South Hills Auburn Co., Mt. Lebanon, Pa.; M. E. Eaker, Clarion, Pa.; Jones Motor Car Co., Throop, Pa.; S. E. Marcott, De Pere, Wis.; Harry Koons Motor Sales, Bellefontaine, Ohio; Lund & Ramsey (Los Altos Garage), Los Altos, Calif.; J. H. MacIntosh, Sacramento, Calif.; Brunson W. French, Hollywood, Calif.; Barnesboro Body Co., Barnesboro, Pa.; Auburn Sales Co., Sharpsville, Pa.; Providence Auburn Co., Providence, R. I.; E. G. Gauntt, Fort Wayne, Ind.; A. E. Sworm, Sanborn, New York; Smith Amos Corp., Homstead, Fla.; C. W. Sahl & Co., Modesto, Calif.; J. P. Strom, 1221 MacDonald Ave., Richmond, Calif.; Siemon Motor Co., Greensburg, Pa.

Over 100,000 Essex Cars Produced Thus Far in 1925

Output to Date 15 Per Cent More Than Entire Number Built During 1924, Says Official

DETROIT, Aug. 22.—Upwards of 100,000 Essex cars have been manufactured so far in 1925, the first six cylinder car to attain that number, according to one of the Hudson officials who also stated that this number was 15 per cent more than the entire number of Essex built during 1924.

With production on a volume basis it seems likely that the output for 1925 will see twice as many Essex cars built as for all of last year, despite the fact that 1924 was considered a remarkably successful Essex year.

Not only has the sale been phenomenal in the United States but the demand is also brisk in Great Britain, the Continent and in the various colonial fields. In Canada, the Essex demand has been almost twice as great as in this country.

"This unusual measure of success", said a Hudson official", is all the more remarkable because no new model was introduced, and because more than 95 per cent of Essex business has been centered in the coach model, a type of car which Essex created and named. Essex business has been consistently good with no spurts or let-downs."

BOSTON PLANS RADIO SHOW

BOSTON, Aug. 22.—Boston's annual radio show will be held at Mechanic's Building during the week of October 12 and already space has been sold to a number of the big battery companies who have gone into the radio field, as well as some of the autoombile accessory corporations. It will be the fourth show and this year Boston newspapers will feature it extensively.

HAWAIIAN BUSINESS GOOD

SAN FRANCISCO, Aug. 22.—White Truck business done in the Hawaiian Islands for the first half of 1925 was the largest ever done there by this company, according to G. A. Urquhart, vice-president of the White Company, who recently returned from a visit to Walter Beall, formerly of San Francisco, and now general manager for the Schuman Carriage Company of Honolulu, White truck distributors for Hawaii.

FORD CONTROL DENIED

DETROIT, Aug. 22.—Referring to a report published in the New York Morning World recently which stated that Henry Ford had indirect control of the Hudson Motor Car Co., A. Barit, secretary of the company, speaking officially told MOTOR AGE: "The statement that Ford is indirectly in control of the Hudson Motor Car Company is absolutely false. Such rumors have been afloat for a year and a half and have been denied before. There is absolutely nothing to it."

Along Automobile Row

DETROIT.—Schiesel and Crump, 8057 Gratiot avenue, Woodward Motor Sales, 3945 Woodward avenue, Goodwill Motor Co., 8442 Twelfth street and Savage Sales and Service, 815 West Grand boulevard, have been appointed associate dealers for the Oakland line in Detroit.

MINNEAPOLIS.—T. S. Hoff, wholesale representative of the Minneapolis branch of Willys-Overland, Inc., at Fargo, N. D., has been transferred to the Minneapolis headquarters to become sales promotion manager. H. C. Albers, from the Minneapolis Flint branch, will succeed him in Fargo.

LA SALLE, Ill.—The Putnam-Hibbens Motor Car Company has been organized here by S. C. Hibbens, L. S. Putnam and Dayton Keith. Capital stock has been fixed at $15,000. A garage and sales agency have been opened at 944 First street. The company will distribute the Chevrolet car.

OAKLAND, Cal.—The Lawrence-Rand Company has been appointed Lincoln dealers for the eastern side of San Francisco Bay, according to announcement by the Lincoln Division of the Ford Motor Company. The new firm is composed of H. M. Lawrence, Ford dealer in Oakland for several years, and C. D. Rand of San Francisco, who has handled several high grade cars there.

MILWAUKEE.—Stader Auto Sales Co. has been formed here by O. Stader, formerly an auto dealer at Oconomowoc, Wis., D. W. Weart and A. A. Goulin. The new organization will deal in Rickenbacker cars, according to announcement by the Chidester-Frint, Inc., distributors for Rickenbacker in Wisconsin.

SPRINGFIELD, Ill.—The United Tire & Radio Stores Company, 77 West Washington street, Chicago, has been granted articles of incorporation by the secretary of state. The capital stock has been fixed at 400 shares of no par value. The company will distribute motor vehicle accessories and radio outfits.

CHICAGO.—A. J. Banta has been made assistant general manager of the General Motors Truck Company, Pontiac, Mich. He was formerly Locomobile branch manager in Chicago, was with Maxwell at the Chalmers factory, and then Chicago manager for Maxwell-Chalmers. He recently resigned as sales manager for Rickenbacker.

MOLINE.—The Dean Motor company announces that it will devote its entire time and energy to the sale and service of the Velie automobiles exclusively in its territory here.

SPOKANE, Wash.—Introduction of the Diana straight eight in Spokane was undertaken last week by the Rice Motor company, a concern distributing the Moon car. New quarters were taken on automobile row and a special opening display, including the living Diana, was put on for the first day.

NEW ORLEANS.—The Donnell-Williams Motor Co., dealers in Willys-Knight and Overland cars, opened in Greenville, Miss., recently. O. O. Donnell of Leland, Miss., is president, and W. J. Williams, formerly of Pine Bluff, Ark., is vice-president.

CHICAGO.—The Chevrolet Motor Co., distributors for Chicago, has moved from Automobile Row and is now established in offices in the Wrigley Building, 410 North Michigan avenue.

FREEPORT, Ill.—Charles O. Cromwell, with offices at 2230 First National Bank Building, Detroit, has been appointed Detroit representative, covering auxiliary heads made by the Hoefer Mfg. Co. of this city.

CHICAGO.—J. P. Marks is the newly established Chicago wholesale manager for Durant Motors. He was formerly head of the Durant Chicago branch, where he has been succeeded by J. S. Mitchell.

COLUMBUS, O.—The U-Drive-It-Co., now located at 102 East Spring street, Columbus, has started the erection of a modern garage and storage building at 20 E. State street, in which will be housed the concern after about Sept. 15, when the building will probably be completed. The structure is 70x100 feet and will be two stories high. Foundations are designed to carry two additional stories.

SPRINGFIELD, Mass.—R. S. Davey has assumed the position of advertising manager of the American Bosch Magneto Corporation, replacing G. W. Sherin, recently resigned, officials of the company have announced.

SPOKANE.—Bearing & Rim Supply Company, Spokane, and Wire Wheel & Service Company, Portland, Ore., Budd wheel distributors in western Washington and Portland, respectively, announce that they have expanded their businesses to take on four new rim lines, those being Firestone, Hayes, Kelsey and Jackson.

DES MOINES, Ia.—Studebaker dealers and factory officials met in the Hotel Fort Des Moines last week and discussed the new models and the company's recently inaugurated "one-profit" manufacturing program. Factory representatives present included C. A. Vance, F. E. Kennedy, E. J. Dieckoff, L. O. Nicodemus and G. L. William of Lord & Thomas. L. B. Van Hoesen, manager of the Sheriff Motor Company, local agents, handled preliminary arrangements for the session.

CHICAGO.—B. W. Ruark, for the last three years field secretary of the Automotive Equipment Association, has been made assistant to Commissioner Webster at the association headquarters here and in the future will devote the most of his time to the work of administering the affairs of the association.

LANSING.—D. S. Eddins, general sales manager, Olds Motor Works, announces the appointment of Harold S. Wier as assistant general sales manager of the company. In April, 1919, Mr. Wier joined the sales staff of the Chevrolet Motor Company, serving first in the capacity of factory representative and advancing rapidly to the position of branch manager. Mr. Wier succeeds Leon G. Dodge, who has been placed in charge of the new Oldsmobile wholesale branch in New York City.

ST. LOUIS.—Earnest J. Krause, president of the Earnest J. Krause Motor Car Co., has announced the election of Ralph W. Page to the vice-presidency of the company. The company handles the Moon and the Rolls-Royce cars.

ELGIN, Ill.—Emil Jenny and his sons Emil and George, have closed a deal for the sale of the Jenny Motor Company to R. S. Lord and William Graf. The new owners have changed the name to the L. & C. Chevrolet Company. Lord has been employed by the Jennys as manager for a number of years, while Graf was shop foreman.

PEORIA, Ill.—The Cass Motor Company, of which Cass J. Heintzman is principal owner, has been appointed distributor for the Flint car in Peoria and neighboring counties. Fifteen associate dealers have been named for Peoria and adjoining counties to handle the same line.

DETROIT, Mich.—The Puritan Autoparts Co., which for more than 20 years has been located at the corner of Lafayette and Tenth streets, has moved from that location to new headquarters at 2520-2530 Grand River avenue.

DES MOINES.—P. L. Holt of Oklahoma City has succeeded F. S. Reinhardt as assistant manager of the Ford Motor Co.'s local branch.

BURLINGTON, Ia.—Paul Augsburger, manager of the A. & E. Motor Co., Chevrolet agent in this territory, has leased the building formerly occupied by the Barton Motor Co., and will move immediately.

ROCKFORD, Ill.—Fritz Nelson, manager of the Velie garage, announces plans for a new sales and service plant at a cost of $30,000. The present Velie garage will become a repair department and storage unit for the new building, which will be completed in the fall.

BOSTON.—The Kelly-Springfield Truck Co. has just moved from 594 Commonwealth avenue to new quarters at 750 Commonwealth avenue.

CINCINNATI.—A. G. Wood of the Wood Motor Co. has announced that William P. Duffy has joined his sales force, selling Moon Six and Diana Eight cars.

LANSING, Mich.—Lorenz Bros., Buick representatives in Lansing, have opened a branch sales and service station at St. Johns which will be in charge of Fred A. Culley. All of the lighter repair work will be done at St. Johns with the heavier repair work being done at the Lorenz plant in Lansing.

BOSTON.—J. S. Harrington, Inc., Springfield distributor for Hudson and Essex, has just placed a sub-agency in that city with Henry's Inc.

CHICAGO.—George F. Bates has stepped from assistant Chicago branch manager of the Diamond T Motor Car Company, builders of trucks, to corporation sales representative of the organization, working out of the general offices and factory at 4517 West Twenty-sixth street.

ATLANTA.—Sam J. Keith, a salesman in the automobile accessory department of the Keith-Simmons Co. of Nashville, Tenn., calling on the city trade there for some time, recently took on a larger territory, the company has announced, and is now also calling on the dealer trade in the adjacent Nashville territory of central Tennessee.

GREAT BARRINGTON, Mass.—More than 1,000 persons attended the opening of John T. Harper's new garage, one of the best equipped in this part of the state. Among them was W. C. Sills, president of the Sills Chevrolet Co. of Boston. General Motors Acceptance Corp. and the Goodyear Tire & Rubber Co. sent representatives. Electrical and floral displays made effective settings for the various models of Chevrolet and Oldsmobiles.

CHICAGO.—The Ray F. Mudd Motor Company, Lincoln and Ford dealer, has completed and opened its new sales and service rooms at 133-141 Madison street, Oak Park, which will become the new headquarters of the company. C. P. Townsend has been appointed manager.

ATLANTA.—Harry Sommers, Inc., distributors of the Packard and the Chrysler line in the Atlanta territory, announce the recent appointment of Tom Hardeman as retail sales manager of the Chrysler department. Joel Davis is in charge of the wholesale department.

WHEATON, Ill.—The Wheaton Auto Sales, Inc., has obtained a site for a Ford agency show room and service station. Duke Durfree will be manager for the company, which is conducting agencies in Naperville and Plainfield, also.

MILWAUKEE.—The Johnson Motor Car Co. of Fond du Lac, Wis., has moved from its former location to new quarters in the garage building at South Limits formerly operated by Fred W. Albright. The company is Studebaker dealer for Fond du Lac. It plans a new building at the Albright location, part of which will be devoted to a gasoline and service station.

CHICAGO.—Harry P. Branstetter of Chicago, state distributor for Kissel, headed a delegation of fifteen dealers of Illinois to the factory at Hartford, Wis., recently. Officials of the Kissel company met the dealers at the train in Milwaukee and the remainder of the distance was covered by automobile.

DETROIT.—Woodin & Barnes Co. of Flint, Michigan, Cadillac and GMC truck dealers, have been appointed Oakland dealers for their territory.

With the Associations

Washington Plans Show

WASHINGTON, Aug. 22.—Announcement that plans for the 1926 automobile show which will open here at the Washington Auditorium on January 30, 1926, are complete was made here this week by Rudolph Jose, chairman of the show committee, at regular monthly meeting of the Washington Automotive Trade Association.

E. F. Hallock, manager of the manufacturers' division of the Vacuum Oil Company of New York City, addressed the automotive men at the meeting on "Oil." Mr. Hallock illustrated his talk with lantern slides, showing statistics on the value of oil as a means of lubrication. He said it was important to use the right grade and the right grade at the right time of the year to get best results.

Atlanta Investigates Opinion

ATLANTA, Ga., Aug. 22.—To determine what the automobile owning public, the dealers and others identified with the industry think of the proposed motor title and registration law now before the Georgia legislature, the Atlanta Automobile Association during the early part of August sent a questionnaire to thousands of owners and dealers throughout the state, and reports that replies indicate owners and dealers both are overwhelmingly in favor of the law.

Briefly, this bill provides for the issuance of a certificate of ownership, this certificate to be transferred when the car is resold, similar to a law now in affect in several other states. It is being sponsored by the Atlanta Automobile Association.

Relative to the sales tax bill, it is proposed now to tax wholesalers and manufacturers one mill; retailers two and one-half mills, with the first $500 gross sales exempted. This bill, if passed, would affect every branch of the automotive business, and it is therefore being vigorously opposed by dealers and distributors through the Atlanta Automobile Association, who contend it would place too heavy a burden on them.

An effort to reduce the capital stock tax from $1,000 to $400 maximum also is being made, another measure which would affect nearly all branches of the automotive industry, particularly outside accessory and parts firms doing business in Georgia. Several such companies have discontinued carrying stocks in Georgia because of the cost occasioned by the present capital stock tax.

Golf Features Outing

WASHINGTON, Aug. 22.—Golf matches and a program of athletic events featured the annual outing of the Washington Automotive Trade Association held at the Beaver Dam Golf Club. The entertainment followed a beef steak dinner.

Membership Growing Steadily

KANSAS CITY, Aug. 22.—The membership of the Kansas City Automotive Trades Association has doubled during 1925, in spite of the fact that all members in arrears for their dues have been dropped from the list. The "live" members are adding to their number by inviting guests to their meetings—there were thirty-nine in attendance at the last meeting—and co-operating with the paid secretary of the association in soliciting new members. The last man on the job secured three new applications, and a new man goes with the secretary each day.

The jobbers have practically all joined the association, and are assisting in making the members into better merchants by giving them all the assistance in their power. George Lockeridge, of the Kansas City Auto Supply company spoke at the last meeting on "Service Problems of the Service Man and the Jobber," and there was a lively discussion on how the jobber can help to meet the demands of the garage men in case of "hurry-up" calls.

The present membership of 100 is to be increased to 150 before the end of the year if present plans are realized.

While the work of the association is largely educational, yet the different committees, under the direction of President George W. Arnold, are working out some practical problems in the city.

"Back-lot garages," which are really public garages, and should be taxed as such, and the parking of cars on the streets without lights, and other matters which if rightly regulated would increase the business of the authorized garage man, are being investigated. The big problem of getting all members to study costs, and regulate their business on a cost plus basis, is in the program for the association, as outlined by President Arnold.

Tradesmen Hold Outing

DES MOINES, Ia., Aug. 22.—Two thousand automotive men of this city and their families attended the annual outing at Coney Island and the auto park contained 600 machines of the dealers and distributors. The motor trades bureau of the Chamber of Commerce, headed by C. G. VanVliet, secretary, arranged the event, which continued all afternoon and well into the evening. Automotive business places were closed at noon and the Scotch Highland band of the Ford Motor company and the Herring Motor company band entertained the crowds at an afternoon concert. A special edition of the Des Moines Register greeted the picnickers with full details of their outing. The dance music was furnished by the Manbeck Motor Sales company orchestra.

Exhibit With Merchants

ATLANTA, Aug. 15.—Several of the automotive jobbers in Atlanta handling accessories will take an active part this year in the annual Fall Buyers' Week, to be held under the direction of the Atlanta Merchants & Manufacturers' Association, Monday, August 17 to Saturday, August 22. Accessory distributors cooperating with other jobbers will keep a majority of their salesmen in the house during the week to handle visiting trade, these including the King Hardware Co., the Beck & Gregg Hardware Co., and the Crumley-Sharpe Hardware Co.

The association has been recently conducting a campaign among southern dealers urging them to buy more often and in small quantities as the best means of securing rapid turnover and increased profits, but at the same time to buy in large enough quantity to avoid the hand-to-mouth policy. Officials of the campaign state that it has accomplished very good results, for it has included a series of printed booklets distributed to all dealers in the district, giving the experiences of successful dealers who have practiced these policies as taken out of their own experiences.

An invitation has been extended to all southern dealers to visit the Atlanta markets during the progress of Buyer's Week.

Court Decision Cited

ST. LOUIS, Aug. 22.—When the Supreme Court of the United States in a recent decision defined good will as "The disposition of a pleased customer to return to the place where he has been well treated," Robert E. Lee, manager of the St. Louis Automobile Dealers' Association, lost no time in sending a card to all members of the association, quoting the decision of the court and admonishing the members that the automobile trade should study this kind of law.

A. A. A. Names Californians

SAN FRANCISCO, Aug. 22.—P. J. Walker of Oakland, Cal., a director of the California State Automobile Association, has been named vice-president of the American Automobile Association. Percy E. Towne of San Francisco, also a director in the state organization, has been elected to the board of directors of the A. A. A. Both men are past presidents of the California State Automobile Association.

Sunday Closing Probed

CHICAGO, Aug. 22.—The Chicago Automobile Trade Association has sent a questionnaire to all its members seeking an opinion on the question of closing evenings and Sundays.

Coming Motor Events

Automobile Shows

Dallas, Tex.—Oct. 10-25
Annual Automobile Show, State Fair Automobile Building, under the auspices of the Dallas Automotive Trade Association. J. W. Connell, manager.

De Pere, Wis.—Aug. 31-Sept. 21
Annual Automobile Show under the auspices of the Automobile Division of the Green Bay Association of Commerce.

Fresno, Cal.—Sept. 28-Oct. 3
Fresno Motor Car Dealers Association. Fifteenth Annual Show in connection with Fresno District Fair.

Grand Rapids, Mich.—Sept. 7-12
Grand Rapids Automobile Dealers Association, Seventh Annual Show in connection with West Michigan Fair, Wm. T. Morrissey, manager.

Oklahoma City, Okla.—Sept. 26-Oct. 3
Annual State Fair and Exposition. Passenger cars and accessories.

Sacramento, Cal.—Sept. 5-13
Automobile Exhibits in Diamond Jubilee State Fair.

Shreveport, La.—Oct. 24-Nov. 8
Twentieth Annual State Fair showing passenger cars, trucks and tractors.

New York—Nov. 15-21
Twenty-first Annual Automobile Salon.

Wheeling W. Va.—Sept. 7-12
Wheeling Automobile Dealers Association, Eleventh Annual State Fair, Exposition Building.

White River Junction, Vt.—Sept. 15-18
Nineteenth Annual Twin State Fair. Passenger cars, trucks and accessories. F. L. Davis, manager

Chicago—Oct. 10-17
Seventh annual Used Automobile Show under auspices of Chicago Automobile Trade Association, at Coliseum.

Chicago—Nov. 5-7
Annual show in connection with convention of National Standard Parts Association, Coliseum.

Chicago—Nov. 9-14
Seventh annual exhibit of the Automotive Equipment Association at Coliseum, in connection with annual convention.

Chicago—Jan. 30-Feb. 6
Twenty-sixth Annual National Automobile Show and Eleventh Annual Automobile Salon.

Danbury, Conn.—Oct. 5-10
Eighth annual fair, Danbury Fair Auto Building, under direction of Danbury Agricultural Society, passenger cars, trucks, tractors, accessories, etc., H. Lage, manager.

Boston—Oct. 10-17
World's Rubber and Tropical Exposition, Mechanics Hall, Chester I. Campbell, manager.

Chicago—Sept. 28-Oct. 3
Fourteenth annual Safety Congress and Exhibit, Rainbow Room, Hotel Winton, under direction of National Safety Council, A. M. Smith, business manager.

Salt Lake City—Oct. 1-7
Third annual Automobile Show and forty-seventh annual State Fair in Coliseum Building, Wm. D. Sutton, supervisor of Automobile Show.

Boston—Oct. 12-17
Annual radio show in Mechanics' Building. Shelton Fairbanks, manager.

Newark, N. J.—Jan. 15-22
Nineteenth annual Automobile Show under auspices of New Jersey Automobile Exhibition Co., Chamber of Commerce Building.

New York—Sept. 18-19
Meeting of National Battery Manufacturers' Association at Commodore Hotel.

New York—Jan. 9-15
National Automobile Show in Grand Central Palace.

Races

Altoona, Pa.	Sept. 7
Charlotte, N. C.	Nov. 11
Fresno, Cal.	Oct. 3
Los Angeles, Cal.	Nov. 26
Monza, Italy	Sept. 6
Italian Grand Prix Race.	
Syracuse, N. Y.	Sept. 19
Rockingham	Oct. 17
Baltimore	Oct. 24

Conventions

Buenos Aires, Argentine—Oct. 3-13
Pan-American Road Congress.

Cleveland—Sept. 14-19
Annual Convention and Exposition of American Society for Steel Treating.

Cleveland—Sept. 15-16
S. A. E. production meeting and exhibition.

Des Moines, Ia.—Nov. 12-13
Automotive Merchants' Association Convention.

Montreal, Que.—Oct. 7-10
Fall convention of the Motor and Accessory Manufacturers Association.

Philadelphia—September
S. A. E. Automotive Transportation meeting.

Pittsburgh, Pa.—Oct. 12-14
Pennsylvania Automotive Association Convention.

St. Louis—Nov. 17-19
Annual Convention of National Tire Dealers' Association.

Eaglesmere Park, Pa.—Sept. 14-17
General meeting of the Automotive Electric Association.

Wrightsville Beach, N. C.—Sept. 7-8
Annual meeting of the North Carolina Automotive Trades Association.

Montreal—Oct. 13-14
Convention of the National Association of Automobile Insurance Companies.

New York—Jan. 11-13
Second World Motor Congress, under auspices of National Automobile Chamber of Commerce.

Foreign Shows

Berlin, Germany—Nov. 26-Dec. 6
Annual Automobile Show in the Kaiserdamm.

Buenos Aires, Argentina—Oct. 3-13
Pan-American Road Congress.

London, England—Oct. 8-17
Olympia Passenger Car Show.

London, England—Oct. 29-Nov. 7
Annual Truck Show.

Indiana S. A. E. Committee Meets to Plan for Fall

INDIANAPOLIS, Aug. 22.—The meetings and papers committee of the Indiana Section, S. A. E., held its first meeting this week to plan its fall meetings and papers. Fredrick E. Moskovics, president of Stutz, has accepted the chairmanship of the committee and in the conference on the year's work were George T. Briggs, sales manager of Wheeler-Schebler Co., section chairman; Raymond F. Buckley, chief engineer of Robt. I. Hassler, Inc., secretary; Wm. Guy Wall and Fred Duesenberg, both of whom have served on the meeting and papers committee of the section; C. A. Trask, treasurer of the section, and O. C. Berry, former section chairman.

The schedule mapped out calls for a series of meetings beginning in October and a definite subject has already been assigned to all but two meetings of the year.

Final announcement of the fall schedule with meeting subjects will be made by the middle of September, by which time the noted speakers tagged by the committee will have time to accept the honors which he live "Hoosier" committee has thrust on them.

GERMAN DEAL DENIED

NEW YORK, Aug. 22.—Rumors in the financial district that an American automobile company is negotiating for control of the Aga Motor Works, Germany, the Stinnes property that has lately been in difficulties ,could not be confirmed. General Motors specificallp denied that their company was interested in the reported deal. It is known the Aga and other German companies have been offered to American firms, but apparently without result.

Moon Announces Refinements

(*Continued from Page* 15)

which conceals the gasoline tank and the rear frame horns, giving a much neater appearance to the rear of the car.

Mouldings have been entirely eliminated on all the roadster models of the Moon cars for 1926, which gives the car a distinctive European effect. This effect is achieved by offsetting the body panels at approximately the same location formerly occupied by a moulding. this offset eventually works itself over the cowl and hood and forms an arrow head, with its apex at the rear end of the radiator shell. The arrow, however, is not terminated abruptly at this point but spreads out into a ¾-in. moulding running down the front edge of the hood, thus giving a neat and distinctive appearance at this point.

The upper portion forming the offset panel is given a darker color of the two tone color combination, while a contrasting stripe is applied at the meeting point of the two colors.

The body of the Moon roadster for 1926 is roomier both in the front and in the rear compartments and numerous refinements such as an entirely removable top have been incorporated. In general the other models of the Moon cars for 1926 are being changed to conform in thought with the roadster models.

America Invites World to Second Transport Congress

Sales, Advertising and Service Methods Are to Be Principal Topics at Meeting

NEW YORK, Aug. 22.—Invitations are being mailed to all countries of the globe inviting automobile men everywhere to attend the second World Motor Transport Congress which will be held in New York January 11-13, 1926, during the National Automobile Show.

Assurances of participation have already been received from 50 countries speaking 16 different languages.

The National Automobile Chamber of Commerce is the host on this occasion which is a continuation of the first congress held at Detroit in May, 1924.

The economics and utility of motor transport were he chief topics at the first conference. This time emphasis is to be placed on sales, advertising, and service methods.

During the first five months of this year there were 228,537 American cars and trucks shipped to 101 countries and colonies of the globe, a record far exceeding any previous mark in the export business. It is felt that most parts of the world have passed the preliminary stages in motor transportation and are ready to study up-to-date selling methods.

The congress is to be conducted on the basis of exchange of experiences. The American manufacturers hope to learn a great deal from visitors from abroad and in return they will provide complete exhibits of the way in which motor transportation is merchandised in this country.

The meeting is to be an open one to dealers, manufacturers, engineers and others in foreign countries who are interested in the American automobile industry. Special invitations are being sent to delegates who attended in 1924.

Nash Motors Co. Expects Record Business in August

KENOSHA, Wis., Aug. 22. — Nash Motors in July did three times the business of the same month a year ago. Added to this, it is pointed out by the company officials that increased production because of the heavy demand will make August, in point of both production and sales, the greatest month the company has ever experienced.

"In spite of a definite schedule for greatly increased production in August at both the Kenosha and Milwaukee plants," said E. H. McCarty, general sales manager, "orders already on hand are greatly in excess of the August production schedule. In fact, at this time these orders are 30 per cent greater than production possibilities and this figure will be increased each day as additional orders for August delivery are received by the factory."

SQUEEKS and RATTLES

TOO EFFECTIVE

Jones, who makes a point of padlocking his new car by the front wheel to a lamp-post, realizes the justice of the maker's claim that the spare wheel with which it is fitted "can be fixed by anyone in two minutes."

—Punch.

Cars—metics

"Was your wife injured or the car damaged in the collision?"

"Oh, nothing to speak of—just a little paint chipped off."

—Motor West.

Leap for Life

"These aeroplanes are getting more dangerous than ever."

"Someone killed?"

"No, but I see a chap got married in one yesterday."

—Bulletin, Sydney.

A girl can be gay in a little coupe:
In a taxicab she can be jolly,
But the girl worth while
Is the girl who can smile
When you take her home on a trolley.

—Yale Record.

Wheel-barrows?

"So you come from America, the place where they make all the cars?"

"Yes. But I would have you know that we make other things besides cars in America."

"I know. I've ridden in them."

—Manchester Evening News.

Judging by the divorce records the girls nowadays are being married with demountable wedding rings.

—Judge.

Ed (in motor car)—This controls the brake. It is put on quickly in case of emergency.

Co-ed—Oh, I see. Something like a kimono?

—U. S. Pointer.

A dentist recently gave a wireless talk. I understand that he commenced by making the usual assurance that it wouldn't hurt a bit.

—Passing Show.

THEN CAME THE AVALANCHE

Sympathetic Onlooker—If it's your cap you're looking for, it's hanging on the radiator.

—The Tatler.

STINNES IS HARD HIT

BERLIN, Aug. 12.—(By Mail)—Edmund Stinnes, oldest son of the late Hugo Stinnes, has found it impossible to meet the payroll of the Aga Motor Works, in Berlin requiring 100,000 marks. The plant employs 2,000 persons and is reported to be on the verge of a shutdown. Stinnes is said to have asked the Prussian government for 3,000,000 marks credit. The tie-up of money is the result of a controversy between Stinnes and the Berlin banks. The Aga plant builds a small type of automobile which has a good market in Germany. Production averaged 500 cars a month.

Hacking Sees Great Market In British Isles for U. S. Cars

TOLEDO, Aug. 22.—That the coming market for commercial cars in the British Isles furnishes a greater opportunity for American manufacturers than the passenger car market was the opinion expressed here by Col. Alfred Hacking, secretary of the Motor Manufacturers' & Traders' society of London, at a luncheon tendered him at the Toledo Club last Thursday by John N. Willys, president of the Willys-Overland Co.

Sir William Letts, managing director of Willys-Overland-Crossley, Ltd., and other Overland officials were present at the luncheon.

Hackling declared that tariff restrictions and the specifications demanded by the British public differing as they do so much from American types were against the development of trade in those lines but left almost an open field for the commercial car.

He visited the Willys-Overland plant while here. Marvelous roads of the midwestern states and labor-saving machinery in automobile plants were two of the things Colonel Hacking was most impressed with on his trip.

NEW AUTOMOBILE LACQUER

NEW YORK, August 22.—The Zeller Lacquer Mfg. Co. has announced that it is now producing a lacquer for automobile finishing. This lacquer is sold under the trade name of "Auto Zellac."

Night view of Franklin Motor Car Co. of St. Louis. A "slicked up" place like this always attracts attention

A Spic and Span Establishment from Top to Bottom Will Serve Notice on the Public That Automotive Merchandise and Service Will Be Sold This Winter

By SAM SHELTON

A "SLICKED UP" store is one thing the automotive merchant can depend on to help make his business better this winter and fall. Nothing attracts trade in any line of merchandising quite so much as cleanliness, orderliness, freshness and a general appearance of careful selection and arrangement of merchandise.

This has been an unusually busy summer in the automotive trade. More cars have been sold than ever before. The volume of maintenance work has been great, and of course the demand for supplies of all kinds has kept pace with the increased use of motor vehicles. As a result thousands of automotive establishments throughout the country have been rushed with work and sales from morning to night.

Under such conditions it was not always possible to keep the store or shop in the orderly appearance that the proprietor might have desired. Customers come first. Merchandise must be sold when it is wanted and repair work can be 100 per cent satisfactory only if delivered when promised. With the growth of business that developed this summer many establishments found their space and equipment were not adequate for the business they were called on to do. And yet it was imperative that they make the best of the situation and go on serving the car owning public with as little delay and interruption as possible.

It is natural that in this press of business, sales rooms may have been allowed to become untidy, stocks disarranged and depleted, windows not as transparent as they should be, walls dimmed, shops somewhat disorderly and inefficient, and the general surroundings unattractive. In a business such as this where the demands of the customers reach so pronounced a peak in the summer months it is almost impossible to so organize the establishment with help and equipment as to keep things in spic and span shape at all times.

It is no discredit to the automotive establishment that right now it shows the signs of a busy summer. The high pressure activity of a few months must necessarily leave its signs. Business has been good. Day by day it has required the undivided attention of all available help.

The Winter Slump in Business

But the time is near when there will be a natural tendency for the volume of automotive business to decline. It should not fall off seriously. The establishments of good standing can go right on playing the cash register through the winter, but business won't come as easily as in the summer. Progressive automotive merchants have done much to take the winter slump out of their business, but still there is a seasonal decline that is inevitably associated with a restricted use of motor vehicles in cold weather.

The problem of the automotive merchant is how to go on doing business as nearly as possible on the same level as in the summer. The ideal condition would be a year around business with no great seasonal fluctuations downward.

One way to promote business this fall and winter is to "slick up" now. We doubt if there is an automotive store in the country that would not be better for the application

of a good "slick up" program between now and the first cold days. Although the place may be run with the greatest of care, the daily routine needs checking up. The same methodical program day after day becomes monotonous and permits one to overlook many little things that the visitor catches at a glance.

The "slicked up" store will be a real sales incentive. It will attract attention at a time when public interest is likely to be waning. It will hold the interest of men and women because it is different. It will invite customers in and it will encourage both sales and service business.

More Outside Competition

As cold weather approaches the automotive business will have more active competition from other businesses. The appeal to the public to spend its money on other merchandise will be stronger and more likely to succeed than in the summer.

Other forms of recreation will compete with the automobile and unless the motor car dealer constantly keeps his product before the people there is danger that they will spend some of the money for idle amusements that could easily have been held for motoring.

The holidays will soon be here and with them all manner of alluring merchandise will be offered to well financed buyers. It is expedient that the automotive trade should not permit itself to be effaced from public consideration at this time, but should continue to receive the patronage it deserves on account of the utility, convenience and satisfaction that can be derived from the many forms of automotive merchandise.

A "slicked up" store will help to keep public attention fixed on automotive products and service. A store that is overhauled, inside and out, made scrupulously clean, and redecorated, draws the notice of every person who passes near it. Such a process of "slicking up" is a sign of progressiveness. It indicates a successful institution in which the public has confidence. It says as plainly as words that the proprietor expects his business to go right on and has no intention of drawing into his shell until spring comes again.

To "slick up" now is equivalent to serving notice to the public that the automobile business is a business for the winter as well as the summer. And the public receiving this notice will react by going ahead and buying automotive products. To neglect the store now and let cobwebs and dust obscure the windows, trash and rubbish accumulate, walls and ceiling remain dingy and dark, and shop stand in disorder, is the same as saying to the public that we are through doing business for this year; that the only merchandise on hand is left over stuff; that we are making no effort to get business. And nothing more than that sort of attitude is needed to steer the consuming public clear away from the automotive store and into any one of dozens of other establishments that are beating drums and blowing horns to attract attention to their spotless floors and shiny shelves.

The woman is an important buyer in the automotive markets of today. Her influence is increasing constantly. She is assuming more and more responsibility for the care of the family car. She buys supplies and equipment and frequently she attends to having repairs and adjustments made. The average woman dislikes any signs of disorder or lack of cleanliness. She is much impressed by the appearance of a store and she can't be convinced that it is necessary for an automotive store or shop to be grimy and dirty. You may be sure that the women drivers in your community are watching and appraising your establishment largely on its appearance.

The "slick up" job should be thoroughly done. A clean shave and a fresh collar won't help much if your shoes are run down at the heels and in need of shining. Let the "slick up" process extend from roof to basement and from front sidewalk to back alley. It might be well to systematize the job and go at it somewhat in this order:

First, give the sales room a thorough overhauling.

Second, do the same to the shop.

Third, put the stock of merchandise in spic and span condition compatible with the freshened appearance of the sales room.

Fourth, look after the exterior and front of the building, the approaches, grounds and general setting to make sure they give the right sort of impression from the outside. Many more people see the outside of your building than will ever see the inside.

Here is a definite program of constructive work that it will pay to start on right now. If carried out thoroughly it will prove a remarkable stimulant to the personnel of the establishment and will increase efficiency from top to bottom. Its effect on keeping up the volume of sales will many times pay for its comparatively moderate cost.

Other articles to follow in subsequent issues of MOTOR AGE will give definite suggestions and details for carrying out this "slick up" program.

THIS STORE INVITES CUSTOMERS

A clean, attractive looking automotive store such as this one at Alhambra, Cal., will help sell automotive merchandise this winter.

Some Simple Tests *for* ENGINETIMING

The Red Head Explains Electrical Pitfalls Encountered in Mechanical Overhaul and How to Avoid Them

By A. H. PACKER

BILL FIXIT STORY No. 10

PREVIOUS installments in this series by A. H. Packer were published March 19, April 2, April 16, May 7, May 21, June 18, July 9, July 30 and August 13, 1925.

SYNOPSIS: Bill Fixit's electrical trouble shooting men start on a trip in a Speedway car. They stop at various places along the way and at the Welsh mines are requested by Sandy, the foreman, to help out in fixing up a gasoline pumping engine. While there the money they had is stolen from the car, so they are forced to seek employment in Coal City with Jake Penders, the local electrician.

While at Jake's place a customer buys a tire, paying for it with a bill that Red afterwards recognizes as one stolen from them. Red goes after a job of wiring trouble that Jake had previously fallen down on, fixes it and then tells how it was done. At other times he explains electro-magnets, ignition principles, condenser construction and testing and a systematic method of shooting ignition trouble on the car.

THR-R-R-R-BAM, Thr-r-r-bam, Thr-r-r-bam! The normal purr of a smooth running engine was broken by a crashing muffler noise at each second revolution. The Red Head looked up from the magneto on which he was working and went forward to see what Jake and Valvy were doing. It was the finish of a top overhaul job on a six cylinder engine, where all possible work had been done on the engine without taking it from the frame.

Valves had been ground, main bearings taken up and new pistons and rings fitted. Jake had superintended the work using Valvy as helper and electrician. Now it looked as if a real trouble shooter might be needed, so Red came forward to see what help he could give without at the same time giving offense.

"How 'bout the wiring?", Red wanted to know. But both Valvy and Jake declared it was exactly the same as when the car came in, so it must be all right. Red saw it was no time for argument, decided to let them sweat a little longer and went back to his magneto job.

From the front of the shop came voices in consultation.

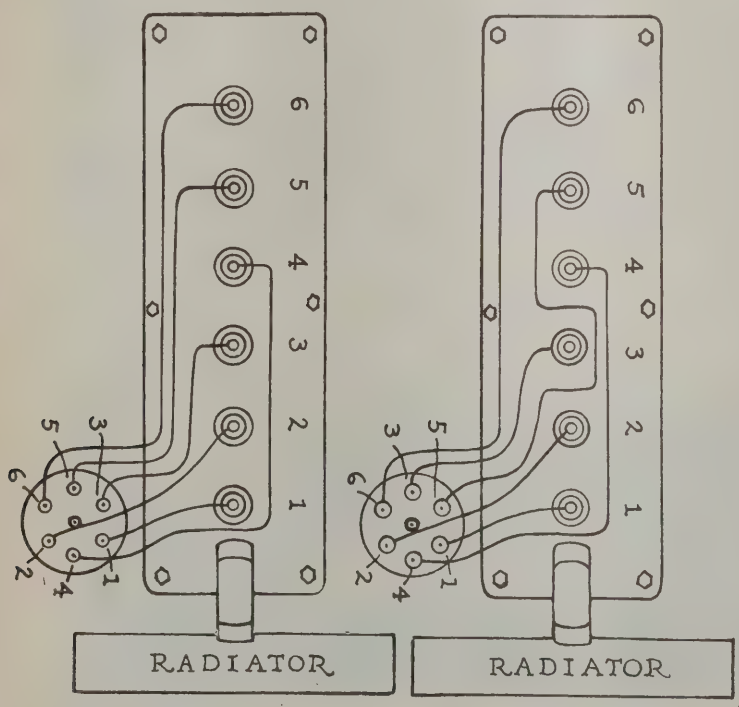

Fig. 1
Jake and Valvy swore that the spark plug wires were connected this way when the car came in

Fig. 2
The way the spark plug wires should have been connected

New plugs were tried, then some high test gas, but the same uneven running persisted. Finally Jake gave up. "All right perfesser, come show a couple o' dumbells what's wrong, will you?", Jake called back to Red, who gladly dropped his work to lend a hand.

"Let's look at the valves," said Red.

"Oh, I know they're alright," said Jake. "I checked those myself."

"I don't mean tappet clearance," said Red. "I want to see the order in which they operate so I can tell the cylinder firing order.

"That's a new one on me," said Jake. "I thought you had to get it from some place it was stamped on the cylinder block."

"That's all right if it's there, but on this old crate they didn't have enough foresight to do that to help out a poor grease hound."

"Well, how can you tell from the valves?" Jake wanted to know.

"They work in the same order in which the cylinders fire. You could hardly fire a gun before it was loaded and the same thing applies to the cylinders. You depend on the valves to take care of loading the cylinders with fuel, so the order in which they fill up and compress the gas is also the firing order.

"That sounds easy," said Valvy, "but wait till you try to watch those valves, even with the engine turning slowly, and see what chance you have to keep track of them."

Inlet and Exhaust Valves

"You try to watch them all at once," said Red. "The thing to do is to first look at the inlet and exhaust manifolds and figure which valves are inlet and which exhaust. Then watch only one set. That gives only four to keep track of on a four cylinder engine, or six on this six cylinder job.

"The order is probably 1, 5, 3, 6, 2, 4, or 1, 4, 2, 6, 3, 5, but it will do no harm for you fellows to see how the order is found without making any guesses. You are both too good at the guessing end of the business already. I'll turn the engine and you fellows watch the inlet valves, paying no attention to the others."

Red turned the crank slowly until both Valvy and Jake saw the No. 1 inlet valve move up. They both agreed on No. 4 as being next but for the third valve, Jake said it was No. 2 and Valvy said No. 3, so Red turned the crank to get No. 1 again and they started over, taking it still slower so as to make no mistake.

Finally when the job had been checked two or three

times, all agreed that 1, 4, 2, 6, 3, 5, was the correct firing order, so the next thing to do was to check the spark plug wires. Red looked carefully at the layout the way Jake and Valvy had it (Fig. 1) and remarked, "Looks to me as if two wires are swapped. Tracing around from No. 1 we are all right until we get to the last two high tension terminals on the distributor cap. Instead of 1, 4, 2, 6, 3, 5, (Fig. 2) you have it 1, 4, 2, 6, 5, 3.

"That means you are firing the No. 3 cylinder 120 degrees too late while the No. 5 cylinder gets its spark 120 degrees too early. Where the spark is late it may not fire the gas at all and may send the raw fuel out into the exhaust pipe and muffler to be fired there when flame comes in from one of the other cylinders. If it does fire at times it will do so just an instant before the exhaust valve opens and there will be no appreciable power developed in that cylinder.

When Compression Is Low

"In the cylinder where the spark occurs 120 degrees early, the piston is just starting up on compression. If the gas fires at all it will give a weak kick in the wrong direction, not enough to stop the engine, but enough to give jerky operation, or it may not fire at all for gas not compressed is not very combustible."

"You seem to be right about it," said Jake. "But what gets me is that I could swear those wires were that way when the car was brought in."

"Perhaps that was most of the trouble," said Red. "You may have overhauled the engine to overcome trouble that was really due to the wires being on wrong. If you are wise you will keep it dark. The job you did is a good one and will make the car O. K. for a good many thousand miles, but the owner would raise a fuss if he knew what had caused him to have the work done at this time."

"That method of watching the valves would be a mean one in the case of a Vee eight engine," suggested Valvy.

"Yes," said Red, "It would be a little harder with an engine of that kind, but there are other ways of finding the firing order. For example, you can open the compression cocks and stuff little paper wads in them. Then turn the engine over by hand and see the order in which they are blown out by the compression. That also gives the firing order.

"Then you can check by removing spark plugs and holding your thumb over the spark plug openings, one at a time to verify the order obtained with the paper wads. The compression stroke will make it possible to hold the air with the thumb, then release it on first one cylinder and then another."

"And are there any other ways that the ignition system is likely to get your goat when you overhaul the engine?" the Valve Grinding Fiend wanted to know.

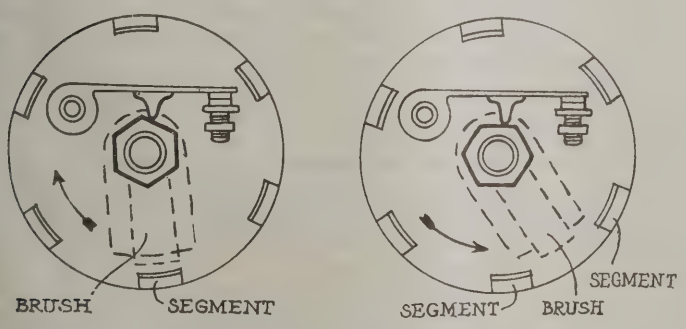

Fig. 4

Left: Distributor brush is in line with a segment when the interrupter points open. Right: With wrong rotation or wrong arm the brush is in between segments and trouble is sure to result

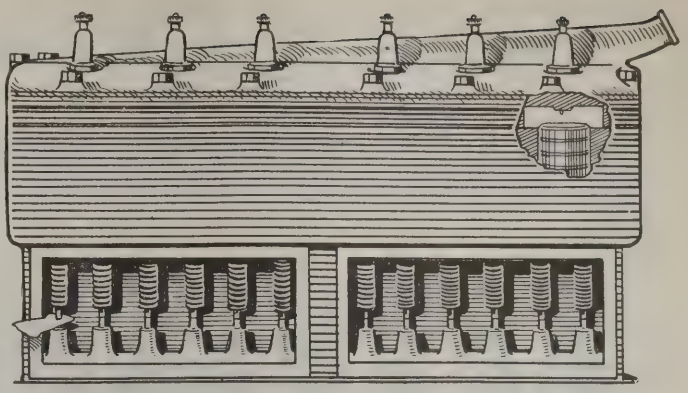

Fig. 3

Using the closing of the No. 6 exhaust valve to give the approximate firing point for the No. 1 cylinder

Other Goat Getters

"Yes, one or two others," said Red. The timing is likely to bother the man who does not watch it, or who does not know how to check the timing just before the job is ready to run. Here again the valves can in most cases be used advantageously, because the ignition contacts should just open to produce a spark when the piston is at the top of the compression stroke, and on most engines the exhaust valve closes and the inlet opens at about top dead center."

"How does that help?" said Jake. "It would sure be wrong to have the spark just when the intake valve opens. You would fire right back into the intake manifold and carbureter."

"You didn't let me go far enough," said Red. "The position of the flywheel and crank is the same, but the ignition point and the point where the exhaust valve closes and the inlet opens are one revolution from each other. On a one cylinder engine you could find this point and then turn the crank one revolution, but on the four or six cylinder job it is still easier, for the exhaust valve on the last cylinder is just closing when the firing point is reached on the front cylinder (Fig. 3).

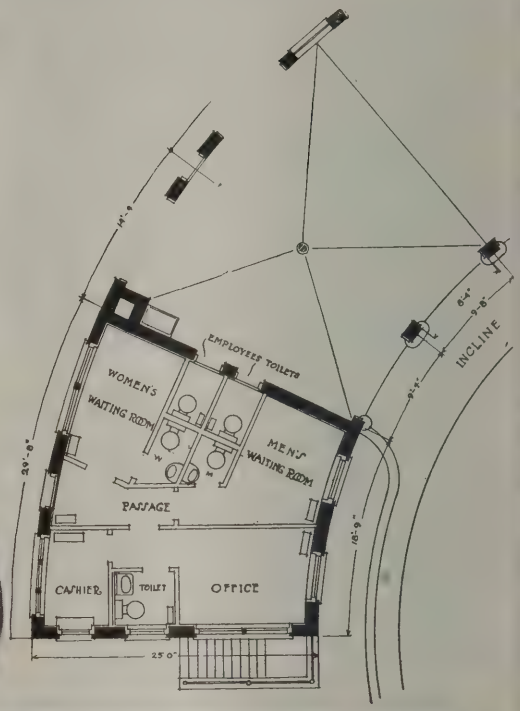
"To get it more accurately you can of course check with the piston position or by marks on the flywheel. Usually removing a plug makes it possible to see or feel the piston while taking up the floor boards and removing an inspection cover on the flywheel housing makes the mark available for this purpose."

"Looks like you've got to check the electrical system, even when you do mechanical work," sighed Valvy. "It's sure gettin' to be a hard life."

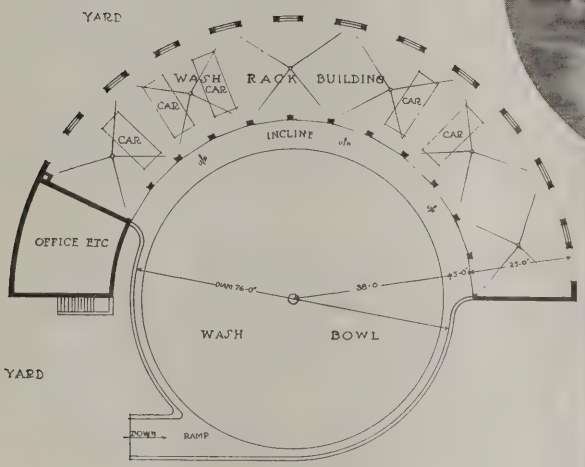
"That all depends," said Red. "If you know your stuff, it just gives you the edge on the other fellow and if not you work on the same basis, putterin' around with this and that and wasting a lot of time instead of checking systematically and knowing exactly what you are doing."

"And are there any other things to check after working on the engine?" Jake wanted to know. "I've done a lot of mechanical work but never had a systematic way of checking things up when the job would not start or run right."

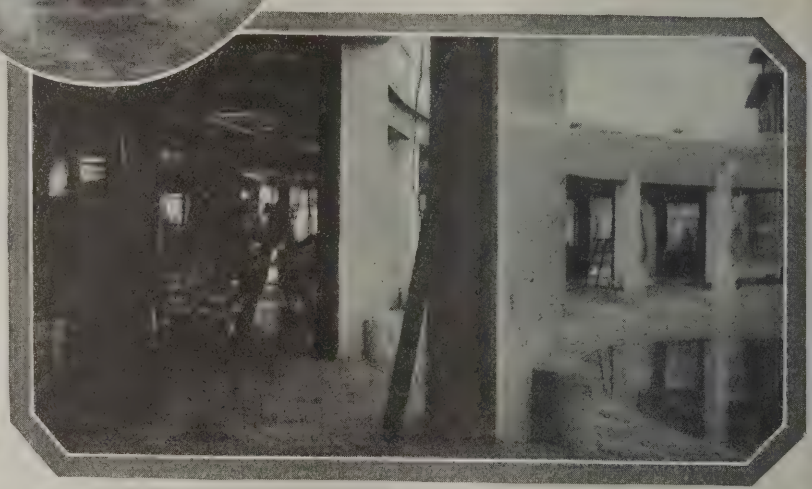
"The best of us get stuck at times," Red admitted, "and yet there are just a few essentials that absolutely guarantee the engine running.



"Suppose for example that we have an explosive gasoline mixture in the cylinder, that we have it compressed, that a spark capable of igniting it is available, that the



(*Continued on page* 17)



Washing Cars in a "Wash Bowl"

At the top is shown the wash bowl; the two diagrams indicate the layout of the plant and in the center a car making the round while below are shown the drying and polishing stalls

A CAR washing plant with a "pull" or in other words, one that furnishes its own publicity, is located in Chicago on Michigan Avenue at 42nd Street.

Here in plain view of the thousands of motorists passing hourly the promoters have erected a completely equipped and modern building . The layout resembles a railway round house in form but instead of the turntable that occupies the center of the roundhouse circle, there is a huge bowl 78 ft. in diameter filled with water to a depth of 12 to 15 inches.

When a car is to be washed it is driven down a short ramp into the water and around the bowl from 5 to 12 times according to whether it is fairly clean or very dirty; the driving being done half in one direction and half in another so that the wheels will throw the water both ways on the under surfaces and running gear.

The operation rinses all the loose dirt and mud off of the running gear but it does more than that, for the car makes so much fuss splashing around and throwing water in every direction that it advertises the business very effectively. On a busy day there sometimes will be more than a hundred people stopping to watch the fun and there is always a group of 15 to 50 onlookers.

After the soaking and rinsing are complete the car is driven into one of the stalls of the roundhouse where it is attacked by attendants with hose, soap and sponges and who finish the job by hand in the usual way.

This plant is unusual in that it cost $40,000 and is for that reason very complete. There are waiting rooms for both men and women and an office below.

Water is piped around through the semi-circle of stalls through a 3 in. main directly overhead and in the center. The heating coil is also overhead and continuous but placed towards the outer side of the circle.

The 12 wash stands enclosed in the roundhouse are provided with 6 stationary wash tubs with wringers attached, so that the men of each two stands are provided with means of keeping their chamois and sponges clean. Hot water from a 750 gal. Weil McLain tank heater is always available in any quantity.

Vacuum cleaning equipment consists of an Arco-Wand truck outfit of high power and efficiency.

Are You Going to Stay in Business?

If That Is Your Idea You Had Better Give Real Attention to the Collection of Outstanding Accounts. That Is Where a Large Part of the Automotive Merchant's Profits Are Often Found

FIVE of our supposedly good accounts have gone into bankruptcy since our last issue. We have listed them, called on them personally and asked them plainly, what was the matter? Every man said, "We couldn't or didn't collect outstanding accounts." Say, that's ringing pretty close home to every Garage Man and Repair Shop Proprietor.

Are you going out of business or are you going to get out and collect your bills receivable? What are you waiting for? Do you think October will be easier to get a settlement than August? Do you think they will pay better if you wait until the repair gets antique? Perhaps you are waiting until he sells or trades in the repaired car.

Say, just figure out your chances of collecting after he has passed the car along. Then again, don't you want this customer's business? He isn't going to patronize you if he owes you money. Don't ask him for it and drive him away from your shop and let it go at that. Stick right to it until you get it, for asking him has done more harm than if you had torn his page from your book of reasons for bankruptcy.

You are too busy? Think it over. You have $2,000 worth of accounts you wish were cash and you are too busy to call once every third day or at least once a week on every one of them. One forenoon a week for four weeks put religiously or profanely at coaxing money out of that list will get $1,200.00 of the $2,000.00. That's $300 per forenoon for your time.

What job have you got for tomorrow forenoon that will net you $300? When he gives you a stand-off of a future date be there at the date and hour set. If he was kidding you as to future promise show him you were serious and it will cure him of setting meaningless future dates.

You say, "I will send a boy or the office girl." Remember you tried that before in a few cases. How did you come out? It's better than not sending at all but try sending the boss once. It looks as if you meant business then. Leave the boy and the office girl in the shop and you go out this time and keep everlastingly after it until you get returns. No matter how hard you work tomorrow forenoon collecting you will work four times as hard to get it if you wait four weeks from tomorrow morning and then go. Also, how about his business for the next four weeks during which period he does not patronize you because he owes you money. You have been promising yourself you would get after these collections as soon as the farmers' crops commenced to cash. All right. Can you think of any week better than this one for the farmer to cash in on his summer crops?

Think it over. You are going out of business if you don't collect your outstanding accounts.

A Good Tip from Whip's Tips

Good sound advice for the automotive merchant who wants to remain in business is contained in the accompanying article taken from Aug. 15 issue of Whip's Tips, an interesting and instructive house organ published by Whipple's, automotive wholesalers, at Binghampton, N. Y.

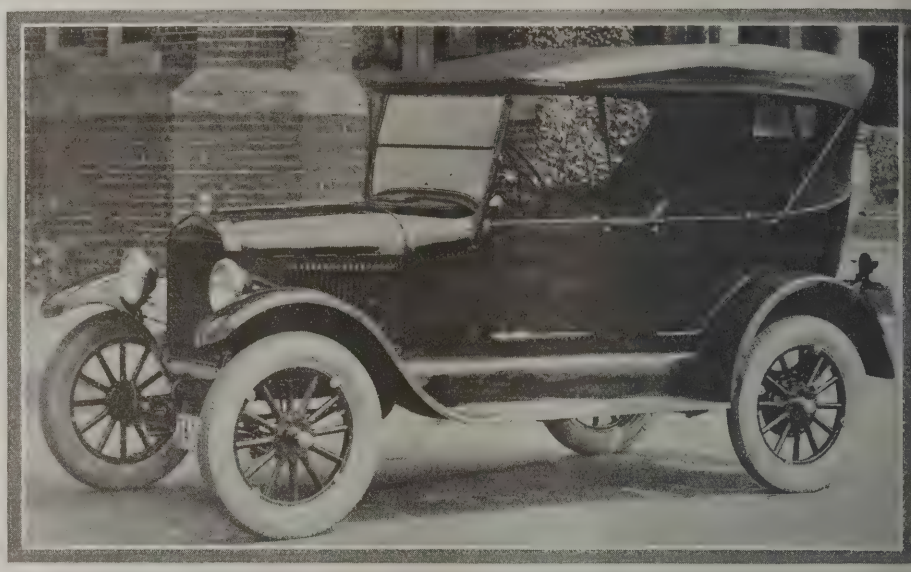
Ford Changes Include Lower Chassis and Longer Bodies

Runabout and Touring Car Finished in Black, but Closed Models Have Bright Colors; Brake Dimensions Increased and Larger Fenders Fitted; Fuel Tank Now in Cowl; No Changes in Price

BODY changes and chassis refinements more pronounced than any made since the adoption of the Model T chassis in 1908 were announced this week by the Ford Motor Co. With the announcement came the statement that there would be no change in present prices.

Outstanding features of the improvements in both open and enclosed types are lower and longer, all-steel bodies on a chassis which has been reduced 1½ in. in height; complete new design in most body types; a change from black to green and maroon in the closed cars; larger, lower fenders; newly designed seats and larger and more powerful brakes.

The composite wood framework and steel panel construction is retained in the Fordor body.



The increased length of the improved models is still further accentuated by the new body lines in combination with a higher radiator and a redesigned cowl. The radiator is ⅝ in. higher. Wide crown fenders are hung close to the wheels.

While the runabout and touring car remain in black, the closed bodies are finished in colors and have nickeled radiators. The coupe and Tudor bodies are in deep channel green while the Fordor is finished in Windsor maroon. Greater comfort is provided for driver and passengers in both open and closed cars by larger compartments, more deeply cushioned seats and greater leg room. In all models except the Fordor, the gasoline tank is under the cowl and is filled through a filler hidden from sight by a cover similar in appearance to a cowl ventilator. One-piece windshields and narrower pillars in the Tudor and coupe give greater visibility and ventilation.

Driving comfort has been increased by lower seats, improved back rests and lower steering wheel. Brake and clutch pedals are wider and more conveniently spaced. The open models now have a door at the left of the driver, and side curtains, held secure by rods, open with the doors. Cord tires are standard equipment on all models.

At the main offices of the company it was stated that production of the new line is under way in all assembly plants throughout the country and improved cars are being sent to dealers for showing.

The reduction of 1½ in. in the chassis height has been effected without materially decreasing the road clearance by lowering the crown of the springs one inch and by raising the front wheel spindles ½ in. on the spindle bodies.

The new Ford touring car, with 4 doors and body which is 4 1/2 in. lower from top to road and 3 1/2 in. longer. Note modern streamline effect and dummy cowl ventilator which serves as opening into fuel tank

The coil box has been removed from the dash and now is mounted on the left-hand side of the engine. The fan has been raised and the adjustment for belt tension improved. The fan bracket is now an integral part of the cylinder head outlet and is provided with an eccentric adjustment.

One of the most important improvements is in the brakes. The transmission brake band has been increased from 1⅛ to 1¾ in. in width. All transmission bands now have removable ears to facilitate replacement and hardened steel shoes have been placed over the clutch casing keys to prevent wear.

Brake drums at the rear axle have been increased to 11 in. in diameter from 8 in., and the width has been increased from 1$\frac{5}{32}$ to 1½ in. The brake shoes now are covered with an asbestos composition material eliminating the old method in which braking was effected by direct contact of cast iron shoes.

Pedals Have Flanges

The brake and clutch pedals in addition to having wider surfaces and being spaced farther apart, have been provided with flanges at the side to prevent slippage of the driver's foot.

In all models except the Fordor, the steering wheel has been dropped three inches for greater ease of driving as the seats have been moved back and lowered. The steering wheel on all models is 1[illegible] in. in diameter and the steering gear reduction is 5 to 1.

The new gas tank location under the cowl, which is used in all models except the Fordor, feeds gasoline to the carbureter at an abrupt angle and insures fuel supply even on the steepest grades. A large trough and overflow pipe has been provided at the filler to carry any spillage directly to the ground. This change places the sediment bulb on the tank under the hood in a readily accessible position. Adequate separation of the fuel tank from the engine is provided by the dash.

The new crown fenders, in addition to being wider and larger, extend further down front and rear to afford better protection against splashing. The running boards on all models are wider and nearer to the ground.

Standard accessory equipment on all closed cars includes windshield wiper, rear view mirror, windshield visor and dash light. The dome light is continued in the Fordor and windshield wipers are supplied on the open models.

On the Tudor and coupe, the windshield is a one-piece design opening forward. A passageway at the base of the shield directs ventilation downward into the front compartment when the windshield is slightly opened. The open mod-

els have a double ventilating type of windshield, both halves opening, and the Fordor shield has been redesigned to conform with the new cowl. The lower half of the windshield on this model is stationary and there is no cowl ventilator as before.

The radiator is ⅝ in. higher and the hood is larger with more louvres. The closed model windows are plate glass and lower flush with the moldings, conveniently located lifters being provided for the purpose. Doors on all models open forward with the exception of the rear doors on the Fordor.

A new design of arm type tire carrier is provided which accommodates either the new Ford wire wheels or the demountable rim. The headlights have polished nickel rims, are set higher and farther apart, and are attached to pressed fender supports. On all body types, the tail light and license plate bracket are now located on the left rear fender.

Tudor upholstery is gray fabric with a fine green stripe to harmonize with the deep channel green exterior finish. Head linings are gray as is the silk back curtain and the carpet is greenish gray. The height of this body from top to road has been reduced four inches and its length has been increased 3½ in. The seats are 2½ in. lower from top of seat to floor and this with the 1½ in. drop in the frame brings them 4 in. nearer the ground. To provide more leg room, the distance from the back of the front seats to the front of the rear seat has been increased two inches.

In the coupe, which has the same upholstery as the Tudor, the rear deck has been made the full width of the body and extends well back over the rear spring with fenders bolted to the body, with resultant increase in the storage space available at this point. The shelf at the back of the seat is five inches deeper and the doors also are broader. The overall height of this body has been reduced 4½ in. and it is 3½ in. longer. The reduction in seat height is the same as in the Tudor.

In the Fordor model, the upholstery fabric is gray with a fine red stripe to match with the new maroon exterior finish. Headlinings and silk window curtains are gray and the carpet also is gray with a suggestion of red. The height of this model is 1½ in. less, due to the chassis changes, but otherwise there are no other dimensional alterations.

The rear deck of the roadster has been redesigned along the same lines as the coupe. This model now has two doors, both of which are wider. The seat has been redesigned to give more comfort and a reduction of 2½ in. in its height from the floor has been made. This model is 4½ in. lower from top to road, 7¾ in. longer and its seat is 3 in. wider.

The touring model also has a door at the driver's left and all four doors are wider. Seat contours have been improved and their tops are 2½ in. nearer the floor. Three inches has been added to the width of the front seat and five to the rear. A reduction of 4½ in. has been made in the overall height of this model and 3½ in. has been added to its length. The distance between the back panel of the front seat and the front of the rear seat has been increased 3½ in.

Body Refinements Made in Velie Royal Sedan

Velie Royal Sedan, the Body of Which Now Has a Full Stream-Line Effect. The Price is $1,825 f. o. b. Moline, Ill.

Velie Motors Corp., Moline, Ill., has made certain changes in the appearance of the Royal Sedan. This body now has a full stream-line effect, heightened by a double molding about the body which meets a single molding extending from the full nickeled radiator shell across the hood and cowl. A curved steel visor is built integral with the roof.

The car is finished in Duco, two color options being afforded: duotone gray and duotone blue, each with a hairline molding stripe of imitation gold. Upholstery is of Chase velmo with head-lining and trimming of matched broadcloth. The rear seat accommodates three. Arm rests, carpet-covered nickel mounted foot-rail, leather covered, chain robe hanger, dome light operated from toggle switch in right door pillar and combination compact and smoking case located on back of front seat are provided. Hardware is of Butler satin finish with ring type, pull-to handles on all doors. Door handles are rotary, self-locking type with outside locking handle on right front door. Four-turn window regulators are provided on doors with Clement single-lift regulators on rear quarter windows.

The instrument board is of black walnut in natural finish, matching garnish rails. Speedometer, oil gauge, gasoline gauge, ammeter and clock are enclosed under a glass in a single panel of satin silver finish.

All lights are controlled from a "finger" type lever located on steering post along with gasoline and spark levers. The steering wheel is 18 in. in diameter with aluminum spider.

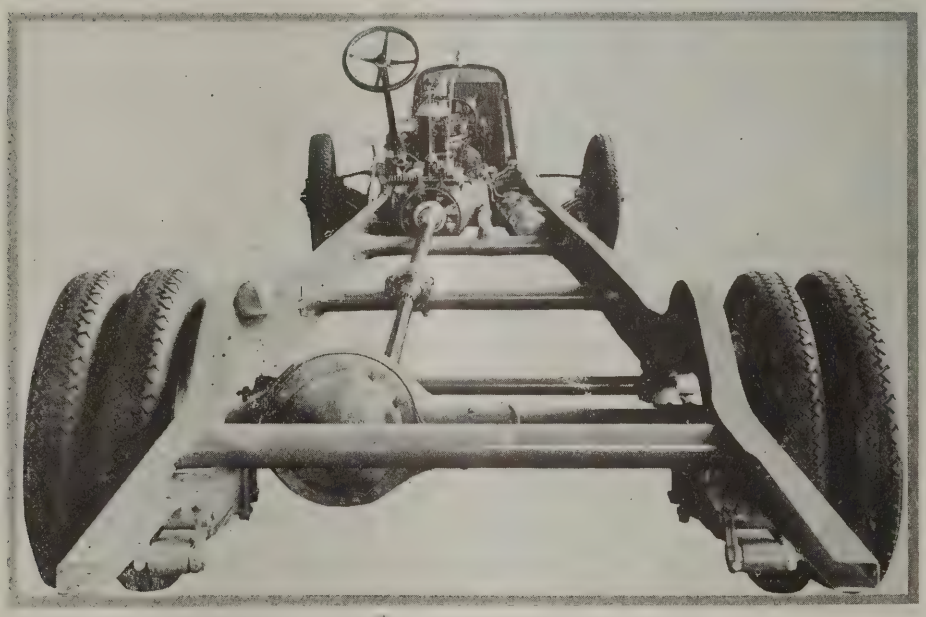
Simple Tests for Engine Timing

(*Continued from page* 13)

spark occurs at the right time. Something is bound to happen. And if the other cylinders all have those essentials, we have an engine that runs. Taking the items one at a time we can have gas by priming each cylinder, even if the action of the carbureter is unknown.

"The compression can be checked with the crank. The spark is good if it will jump $\frac{3}{16}$ in. in air and has some red color or flame to it when seen in a dark place. The matter of timing we have just gone into. To get this spark to the gas requires good plugs, of course, and plugs are easily checked on any ignition system by spreading the points apart and testing them in the open air. If mica is put between the points they can be tested that way to see if they leak or whether the spark is forced to jump from the center electrode to the shell.

"There is one other thing on the ignition distributer that would keep you guessing a long time. On this car someone had changed the wires before the car was brought in, so you figured they must be O. K. Suppose that a distributer arm had been replaced and the wrong kind put on so that when the points opened the arm was between segments (right sketch Fig. 4) instead of being in line with a segment (Left sketch Fig. 4). It's a thing you might not notice, but it causes peculiar results.



"A rough check indicates the ignition system is O. K. but every time you try to run the engine it pops back in the carbureter and behaves in a most eccentric fashion because the spark always jumps to the wrong plug wire, jumping in the cylinder where there is no compression.

"If you ever have indications like that just pick up the distributer cap, see where the segments are and when the points are ready to separate; see if the high tension distributer brush is in line with one of these segments which connects to a spark plug."

New Type Y Yellow Parlor Coach Seats 25-29 Passengers

Type Y Parlor Coach Built by the Yellow Coach Mfg. Co. It Is Designed Especially for Interurban Work

Rear View of the Chassis Used on the Type Y Yellow Parlor Coach. This Shows the Offset Engine and Drive Shaft

A new motor coach built specially for interurban operation is announced by the Yellow Coach Manufacturing Co., Chicago. This is designated as the Type Y 25-29 Passenger Parlor Coach.

As the name implies, the Type Y Parlor Coach is designed to provide comfortable, luxurious transportation. The body framework is second-growth ash. Posts are ash capped with mahogany. Seats are de luxe type wicker chairs with arm rests and divided backs, accommodating two passengers each. Cushions, backs and arm rests are genuine brown Spanish leather.

Generous space between seats and ample aisle room are provided. A signal buzzer is conveniently located at each seat. Interior illumination is provided by ten 21 c.p. opal glass dome lights.

An unusual feature of this coach is the off-centering of driving units to the left of the chassis. This provides seating space for the driver at the extreme left of the body, placing controls within easy reach and providing extra entrance space.

This coach is optionally equipped with four-wheel air brakes. The air compressor is built into the engine as an integral part of that unit. It is driven by a drop-forged connecting rod directly from the engine crankshaft, without belts, chains, gears or couplings. Lubrication is by splash directly off the engine timing chain. Air is drawn into the compressor through the same cleaner that is used for the carburetor intake.

The air control valve is a unit mounted on the rear engine support arm in such a way that the operating button projects throught the floorboard. Pressure is applied directly to the operating valve wit no intermediate pedals, levers or rod This unit serves the functions of th operating valve and of air tank pressur regulator.

The air brake mechanism on each the four wheels is identical. Shoes, cy inders, pistons and other parts are in terchangeable. The brake shoe is a one piece machined casting of the floatin self-centering type. No adjustment necessary during the entire life of th brake lining, since the stroke of th operating pistons is sufficient to assur effective braking until the lining is wor out.

Additional braking facilities are pro vided by an emergency hand-operate brake, which is built into the rear whe air brake mechanism as an integral pa thereof. This consists of two cam-ope ated internal expanding shoes placed b side the air brake band, and operatin against the rear wheel brake drum.

LOADS AND INFLATION PRESSURE FOR BALLOONS

The Tire & Rim Association of Ame ica has approved definite recommend tions for the load and inflation pressur of balloon tires. The recommendation given in the accompanying table, do n represent the unanimous opinion of th members of the association, but are co sidered to be as nearly ideal as possib at present. Weights are based on ave age passenger loads.

Inflation pressures lb. per sq. in.	Loads per tire size			
	4.40	4.75	4.95	5.
22	500	580	.....	7
24	550	635	.....	7

New Bulb Has Two Bright Filaments

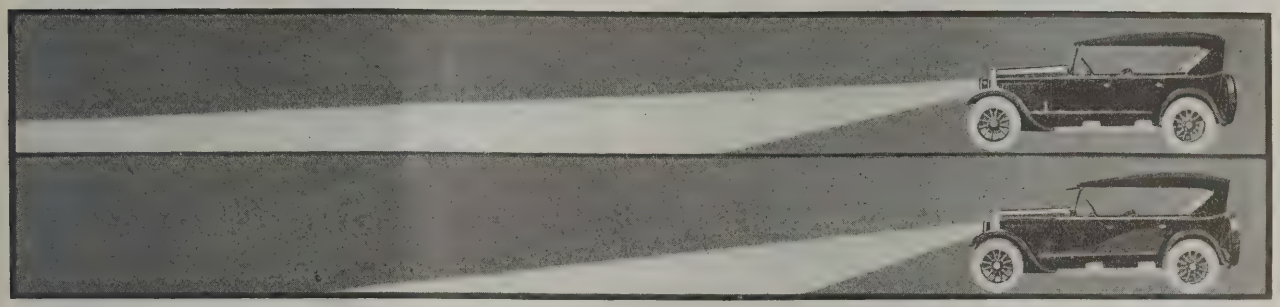

Fig. 2.—Above, normal driving light obtained from lower filament, below depressed beam obtained with upper filament

A NEW contribution to the development of automobile head lighting is seen in the two filament bulb designated as Mazda No. 1110 which has been developed by the National Lamp Works of the General Electric Company. The difficulties of night driving have been about as serious with the dimming system as with the use of bright lights and devices designed to overcome these difficulties have up to the present been only partially successful.

A number of cars have used devices which either mechanically or electrically tilted the reflector or a portion of the reflector so as to depress the bright beam of light when the car approached another car. This method has proven quite successful, but has necessitated some mechanical and electrical complication. The double filament bulb shown in Fig. 1 is designed to accomplish electrically what has previously been done with more complicated construction and the results obtained by this method are indicated in Fig. 2, where the upper view shows the beam of light as used for ordinary driving while the lower view shows the deflected beam used when passing another vehicle.

The principle on which the double filament light operates is illustrated in Fig. 3. At (a) the light source or filament is located at the focus and the rays are reflected in a narrow beam which produces a round spot of light when projected on a vertical surface. If the filament is below the focus as at (b) the pattern made by the beam on a vertical screen is extended upward into an oval while the reverse is true if the filament is above the focus, and as shown at (c) the oval extends downward. Theoretically two filaments located as shown at (a) and (b) or as at (c) and (b) would make available two beams of light, one reflected downward at a greater angle than the other. In practice, however, it is found that the combination of (b) and (c) gives best results. For practical purposes however, the light must not only be controlled in a vertical direction, but must also be spread to the sides of the road to give adequate illumination of ditch or curb and also to reveal pedestrians who might be walking at the side of the road. With vertically fluted lenses or reflectors the patterns (a), (b) and (c) shown in Fig. 3 are spread sideways as indicated in Fig. 4.

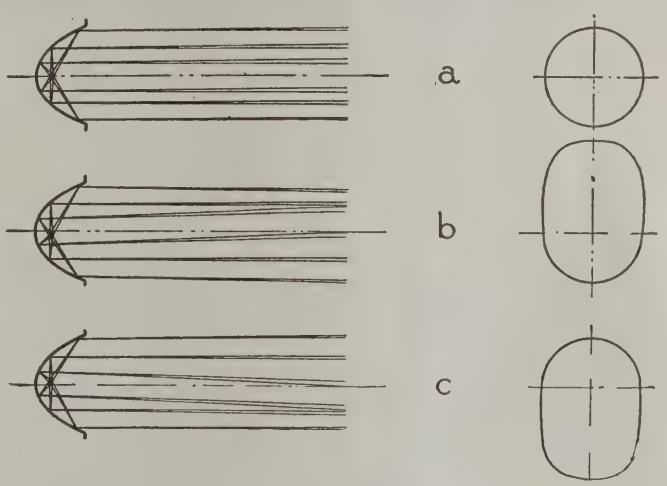

Fig. 3.—Distribution of light with filament at focus is shown at (a); with filament below focus at (b) and above focus at (c)

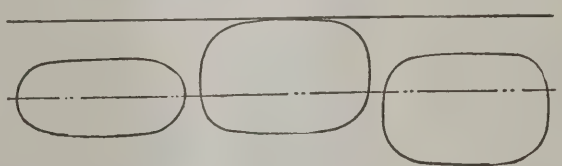

Fig. 4.—With vertically fluted lens or reflector to distribute light to the sides of the road, the left figure shows the light distribution with filament at the focus, the center figure with the filament below the focus and the sketch at the right with the filament above the focus

Fig. 1.—New type double filament head-lamp bulb

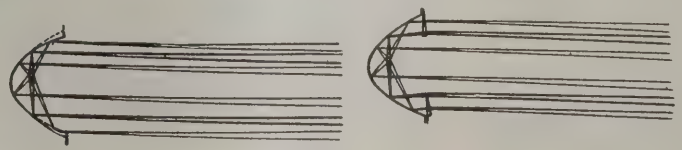

Fig. 5.—Light beam bent downward by using Modified Parabolic Reflector or by use of prisms incorporated in the lens

In the practical application of a bulb of this character it has been found either that a vertical adjustment of some sort would be required or else a special reflector or similar device to correct for inaccuracies in locating the bulb with respect to the reflector focus. Fig. 5 shows the application of two devices which take care of slight inaccuracies in locating the bulb. At the left a lamp is indicated having a specially shaped reflector, while at the right the same result is obtained by means of prisms incorporated in the lamp. With these devices it is said that good results are obtained even though the socket is offset enough to bring one of the filaments on the axis of the reflector. Consequently slight variations in bulb and socket assemblies are not injurious and no vertical adjustment feature is required.

Many Automotive Dealers Selling Radio

Pittman Motor Co. of Durango, Colo., finds profits from radio in winter time a great help. Here one of the company's representatives is shown demonstrating a set in the Cliff Dweller ruin in Mesa Verde National Park

Forty-five Per Cent of Those Responding to MOTOR AGE *Inquiry Are Handling Sets, Supplies or Batteries—Interesting Comment Given*

A VERY large proportion of automotive merchants are interested in radio as a possible source of more sales volume and additional profit. A considerable number already have had experience with radio merchandise and others are contemplating taking up the business.

The widespread interest in radio is revealed in communications to MOTOR AGE from all sections of the country. MOTOR AGE subscribers from coast to coast have responded to the Editor's inquiries as to their experience with, or opinion of, radio. Direct responses at hand as this is written reveal some interesting facts about the automotive merchant's attitude toward the sale and servicing of radio merchandise.

These responses come from all sections of the United States and represent a typical cross section of the MOTOR AGE list of subscribers. Among them are letters from car dealers, garage men, service station proprietors and accessory dealers—in fact, from representatives of the whole field of the retail automotive trade.

The first important fact is that 45 per cent of the dealers responding are now engaged in selling some form of radio merchandise in connection with some form of automotive merchandise. The other 55 per cent are not handling any form of radio goods. Slightly more than half of those selling radio are handling complete sets. The remainder handle only parts, tubes or radio batteries, in addition to their automotive lines.

Another important fact is that 42 per cent of the dealers responding are giving service on radio products. This is only slightly less than the percentage selling radio and indicates that practically all dealers who sell radio give service on sets, installations or batteries.

Fifteen dealers who are not selling radio wrote that they are contemplating taking it on, but a much larger number indicated that they are not now considering it.

With most of these dealers radio is a comparatively new business and for that reason very few gave any information as to their profits from it. Of the number who gave information as to profits, 61 per cent stated they have found the business profitable and 39 per cent said it had not been profitable. In most cases this information was based on only one season's experience.

An analysis of the opinions and experiences of various dealers shows that under present conditions very few rules can be laid down for the guidance of automotive merchants with reference to radio. On certain points there is a tendency towards consensus of opinion. For instance, dealers who have tried radio selling and been dissatisfied with it are almost unanimous in stating that the trouble lies with what might be called a wildcat method of distribution on the part of manufacturers and wholesalers.

One after another of the dealers who have written to MOTOR AGE mentioned the ease with which any Tom, Dick or Harry in their community could buy a radio set at wholesale price, or less, either as the nominal agent of a new line or through a friend who had the agency.

A car dealer in North Dakota wrote:

"There is no protection for radio dealers in small towns. Any one can get sets at wholesale from 50 different places."

From Wisconsin a car dealer gave this comment:

"There are too many dealers in radio and accessories. They are not sold for any set price, but for whatever they will bring. There are at least 15 different machines sold in this city by people who should not be in this business. *They merely sell them for the novelty of it and not to make money.*"

One more example of the indictments voiced against the manufacturers and jobbers of radio by the dealer on account of methods of distribution. This letter is from a garage man in Kentucky:

"I do not think that radio can be handled successfully in a garage and until they make it a strictly dealers' proposition for standard makes there will be no object for any one to stock such merchandise. In our town there are six or more different parties handling radio sets and *even two or three farmers that wanted a set took the agency to get a set at wholesale price.* Our town has a population of 350 and one or two dealers would be plenty to handle radio merchandise, and at a fair margin could make a little money."

On the other hand some garage men and even car dealers have spoken very highly of the business as a profitable adjunct to their automotive lines.

Take this letter from a car dealer and general automotive merchant in Colorado:

"We believe that radio sales are filling the long felt want of the garage business for something to fill out with during the dull winter months. Last year was our first attempt to sell radio, and we were pleasantly surprised with the result. Sets together with tubes and batteries netted us over $3,500 during the part of the winter when we were snowed in and there were no car sales and no repair business. We are planning on doing a large volume of business in radio this winter, expecting to at least double last year's sales, and we know we can do it. Our plans are laid and the first work is already being done. As we said before, we believe that radio is that which the automobile industry needed in order to make its investment profitable all the year round."

A Missouri garage man writes:

"I think radio makes a very nice side line with us in the garage and accessory business. Our battery and electrical man takes care of it, which keeps him busy all the time. And it puts us in touch with people that we would not get otherwise, which gives us a larger field to work."

Radio like the automobile has a fascination for all races. Cliff dwelling Indians experimenting with a set sold by Pittman Motor Co.

What 168 Automotive Merchants Say About Radio

	No.	Per cent
Selling some form of radio merchandise	77	45
Not selling radio in any form	91	55
Number Selling:		
Sets	40	....
Parts	28	....
Tubes	47	....
Batteries	73	....
Giving service on radio	71	42
Not giving service	85	50
Number Servicing:		
Sets	31	....
Batteries	69	....
Installations	39	....

The foregoing figures are tabulated from information sent to Motor Age by 168 automotive dealers. Of those designating whether or not the radio business had been profitable for them 61 per cent said it had been profitable.

Here is the opinion of a car dealer in North Dakota:

"Radio sales will mean a profit showing business every month of the year for the garages in the Middle West where the car sales, accessory sales, etc., cease about January 1. The garage is the proper place for the radio business in the small town where no exclusive radio shops operate, and we are going into it very strong this year."

"The way I look at radio is this," writes an Ohio garage proprietor. "As long as you have facilities for battery work and understand radio enough to build one, you might just as well cash in on what you can by selling, installing and servicing a good make of radio receiving set. It goes along with the garage nicely."

The battery and electrical division of the automotive establishment, mentioned by this dealer, has really been the starting point from which automotive merchants have entered the radio business. Radio A batteries are of the same type and require the same servicing as automobile batteries. A number of dealers have written that their electrical specialists or battery departments take care of their radio business. Of the automotive merchants selling radio those handling and servicing radio batteries lead in number. Of those who do not sell radio sets or parts quite a number are selling and servicing batteries and selling radio tubes.

A bird's eye view of the automotive retail trade would show quite a large number of establishments selling radio merchandise along with cars, accessories and repair work. It would show some making a lot of money out of it and others finding it unprofitable. With some radio would be found in a separate department, pushed as a year round business; with others it would share space with the automotive products and would practically disappear from the store in the summer months.

It is a question for the individual merchant to decide. His local conditions and his own desires must govern him to a great extent. Many dealers have demonstrated that they can make money from radio and that their automotive business does not suffer as a consequence. Others prefer to concentrate at all times on the automotive business. Hence it is hard to formulate any set of rules about radio. Whether or not radio belongs in the automobile store depends on the decision of the individual proprietor. It belongs in many of them because it is already there as an established and profitable part of their business.

Hints on Valves and Bearings

Q. Why is it that in some motors there is an overlap in the valve action? R. H. Prom, 2201 Del Paso boulevard, Sacramento, Cal.

One reason sometimes given for having the inlet valve start to open before the exhaust valve has closed is to permit scavenging the cylinder. This means that there is a slight tendency for incoming fuel to flow through the cylinder and go out the exhaust ports, thus cleaning out the cylinder. Another reason would be to increase the time available for both discharging the old fuel and taking in new fuel.

Q. Has valve timing anything to do with oil pumping?

Not if the engine is in good condition. Where cylinder walls, pistons and piston rings are in need of renewing we have heard of a poor mechanic so changing the valve timing as to make the engine very inefficient, cut down the suction on the intake stroke and thereby reduce oil pumping to some extent. Needless to say this is a practice that is to be severely condemned.

Q. In taking up the main bearings what bearing should you start with? Give proper method of procedure for taking up set of main bearings on a four-bearing crankshaft.

In taking up main bearings there is danger of taking up one more than another and thus throwing the crankshaft out of line. Of course, if each one is taken up so that the friction is the same when attempting to turn the engine over by hand it is evident that the bearings are properly fitted. Assume, however, that the upper portion of one bearing has worn more than the upper portion of another. It would be necessary to bend the crankshaft upward in order to make that bearing tight and it is obvious that this would put a strain in the crank which would quickly loosen that bearing again.

On crankshafts which have splash lubrication it would be desirable to take up each bearing the same amount and it would make no difference as to the order in which this was done. As each one is fitted, however, it is desirable to turn the engine over by hand to make sure that it has been tightened enough and yet not too much. Then this bearing should be loosened and another one tightened and checked in the same way. Where pressure lubrication is used it is necessary to leave a diamentral clearance of .002 inches. This means that you cannot tighten the bearings in the regular way, for it would allow no room for the oil to work out. Instead it is necessary to fit the bearings tightly and then put in shims on each side having a thickness of .002 inches. A better method is to measure the diameter of the crankshaft bearings by means of micrometers and make up a mandrel which is .002 inches larger in diameter and fit this tightly to the bearing. This method is particularly applicable to fitting connecting rod bearings. If it is found that one bearing has to be taken up a great deal so that the crankshaft will be pulled out of line it means that new bearings should be used and preferably line reamed, before the crankshaft is again installed.

Q. In taking up connecting rod bearings, is it considered advisable to remove shims if these can be only removed from one side of the rod, in order to fit the bearing properly.

Theoretically this is wrong but actually if the shim is only .001 inches or .002 inches thick we doubt if any trouble would result.

Q. What causes pitting and rusting of valve stems? Some cars seem to have more trouble with pitting than others.

Pitting in some cases may be due to insufficient oil getting on the valve stem. In other cases the mixture may be too lean so that the exhaust valve stem will tend to oxidize as a result of the exhaust gases. In other cases the lubricating oil may contain acid or may produce acid as a result of its contact with the exhaust gases.

Low Priced Cars with Pressure Lubrication

Q. Is there any car selling under $900 using bronze mirror finished main bearings, hollow crankshaft oiling system and removable valve guides and tappets, except the Star. Ralph S. Frank, Center Point, Iowa.

The Star car uses the hollow crankshaft oiling system and removable valve guides, but does not use bronze bearings on the crankshaft. Perhaps you have in mind the fact that Star cars are now provided with the bronze bearing at the front of the camshaft. We have not had opportunity to check up on the valve mechanism of the various cars to which you refer, but you can get this information easily if you care to drop a postal card to the makers of these cars.

From the MOTOR AGE Specification Table we find quite a number of cars selling under $900. Among these the Ford, Essex and Gray use splash lubrication.

A combination splash and pressure system is used on Dodge, and Chevrolet. Pressure to the crankshaft and connecting rod bearings is used on Auburn, Chrysler four, Cleveland and Oldsmobile. Pressure to the crankshaft, connecting rod and camshaft bearings, is used on Ajax and Durant.

TIMING SLEEVE VALVE ENGINES

Q.—Give information as to the sleeve timing of Moline Knight, this being the model which used a 12 volt battery. Also give the sleeve timing of a Willys Knight. —A. C. Glinke, Palmyra, Wis.

The timing of these two engines is practically the same and the exhaust port is closed when the piston has come up to top dead center or has barely started down, being not more than 1/64 inch down. A method of timing one of these engines was given in the Clearing House Section of MOTOR AGE under date of February 15, 1925.

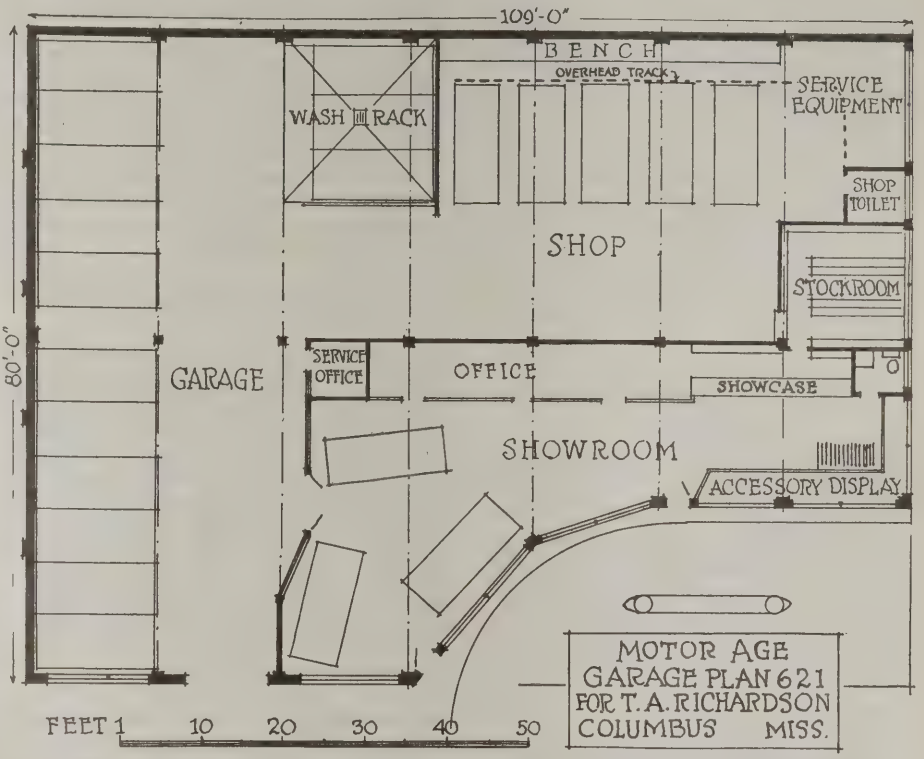
Planning Your New Building

By TOM WILDER

The READERS' CLEARING HOUSE

This Garage May Grow With the Town

Q. I am going to build a garage in a town of 2,000 population and wish to know if you can furnish blue prints from which I can pattern building and fixtures. The garage which I wish plans for is to be situated one block from the center of town, on corner of block. My lot is 80 by 160 feet the side of which is on principal street. Will want gas and oil pumps situated on corner with showroom just to left of office which will be just back of filling station on corner.



The garage is to take care of service as well as do a general repair business and will employ two mechanics and helpers. The building site is level with side street about four feet below level. Please suggest the size of building I will need to take care of the needs of a town of this size. T. A. Richardson, Columbus, Miss.

You apparently have an ideal location for a garage and sales room, but of course the filling station at the corner will interfere to a certain extent and make it hard to plan a good layout. We have used 109 feet as the length of your lot, reserving a 50-foot strip for some future addition. On account of the 4-foot drop in the side street, we believe it would be best to make your entrance on the main street and disregard the side street entirely. An entrance could be made of course where the stockroom now stands, using an incline that would be as long as the width of the stockroom, but if this is done, some other space will have to be sacrificed for stockroom purposes and this space, on account of its location is specially desirable. The shop is well located and we believe is about the right size to take care of your business, although we are making a guess at this, since the population of the town does not mean very much one way or the other. Some men in small towns will do practically all the business there is while others in large towns do not get much of any.

The wash rack is arranged, so that it can answer for storage space when it is not in use and this section as well as the shop should be well lighted by skylights. You will notice that the row of columns through the building is not exactly in the center, this being for two reasons, one to make the office and showroom a little wider and the other to allow one more car storage space.

If your building were eventually extended to cover the other 50 feet, we would suggest running the trusses the other way or parallel with the street and have shown piers in the wall for that purpose. This new section could be used for garage purposes, using the old part to extend the showroom and the shop.

The entrance would be in the new section and at that time it might be well to arrange an entrance on the side street as we have already suggested, as you would then have plenty of room to rearrange the stockroom.

This is Not an Ordinary Layout, But it Seems a Good One and If the Remaining 51 ft. of Frontage are Added Will be Quite Extensive

Profit by What These Customers Say

Here are a few remarks on parts service made by drivers of various kinds of motor cars to Mr. E. H. Spears, sales manager of the Lupton Automotive Equipment Division. Each one of them carries a lesson.

"That's the last time I climb two flights of stairs for a fan belt. I can drop into an accessory shop and get one that's just as good, with a lot less bother."

"After he found the number of the gasket he wanted in the book, the guy looked in about seven places before he found it, and then he had to holler to another bird out in the shop to find out how much it cost."

"If they'd move the factory here I'd get some service. They've got a lot of parts but they always have to send to Detroit for what I want."

"The next time I go in that parts room I'll wear my old clothes. There were six birds there waiting to get parts who certainly were plenty greasy. And the dump is so small we got pretty intimate while we waited. And, believe me, we waited."

But here's a different experience:

"I went in for a commutator arm. I looked over a darn good looking display he had there and I came out with a belt, a couple of door bumpers, a spark plug and a hub cap. I meant to get these time and again and I kept forgetting them. And just to make it good the bird sold me a trick radiator cap with wings and everything."

"The reason I go way over there is because he has some system. I go in, ask for what I want, get it and pay for it while this fellow next door is looking for it. And what's more, I always get it. That's the main reason."

"Most any car is all right these days. The thing that appeals to me is the fact that he sells good service on a flat rate and has a parts department that looks as though I could get parts when I need them."

MILWAUKEE ON AIR LINE

MILWAUKEE, Aug. 29.—Advices received in Milwaukee indicate that this city may be a stopping point on the air transportation which Henry Ford plans to establish between Detroit and his manufacturing units in various parts of the country. The service will be used to rush materials to assembly plants in cases where rail service is too slow.

The READERS CLEARING HOUSE — Defeating Old Man Wear and Tear

Beware of the Nickel Plate Faker

In order to protect other garagemen and accessory stores, we would like to have this printed in MOTOR AGE. On July 13 a well dressed man called at our store selling Triple Plating acids for replating reflectors, handles, etc., claiming to represent a New York concern. He gave the name of J. P. Dillard. He sold us the acids, etc., which were supposed to replate all articles to be plated but without any success. We have done as we were told but with no results. A few days ago we wrote a letter to this company and our mail was returned to us as there is no such company known in New York. We paid $37.50 for the three bottles of acid.—Triangle Garage, Indiana Harbor, Ind.

Removing Studebaker Clutch

Q.—Supply information in regard to the chain adjustment on a 1921 Studebaker Special 6.—Ern DeMets, 36th Street Garage, Moline, Ill.

This car does not have front end timing chain so we assume that you refer to the starter chain. To tighten this you can loosen the stud on the starter plate at the front end of the engine and use a piece of steel as a shim to hold the starter farther from the engine. Then tighten the stud again.

Trouble with Transmission Bands

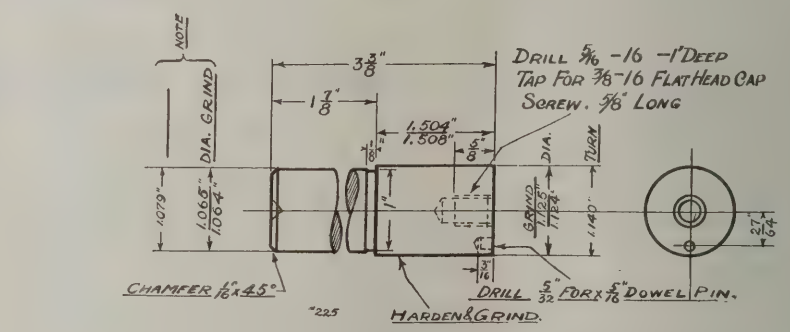
Q.—We have a 1924 Ford coupe that was purchased in October 1923 that is giving trouble with transmission bands. We have used genuine Ford bands and several other makes but are unable to get rid of the grabbing of the bands when the brake is applied or when you start up in low or use the reverse. When we start up the car moves forward a few feet and then grabs and jumps forward and the same thing happens when reversing except that it makes a very peculiar noise as if something was binding, but when I stop the car it slows down slowly until it is nearly stopped and then it grabs and backs up on the recoil, so you see it is very annoying. —Watertown Subscriber.

Due Probably to Backlash

The grabbing of the bands is due probably to backlash some place in the driving system from the universal joint backwards. We would suggest that the wheel nuts be examined to see that the wheels are tight on the taper end of the axle shafts and that the universal joint be examined and then if play still exists that the pinion itself be examined for backlash. It is also possible that the ball cap or rear transmission babbitt bearing is worn somewhat. Any shock transmitted to either rear wheel in a direction parallel to the axle housing would tend to spring the crankcase of the engine or oil pan.

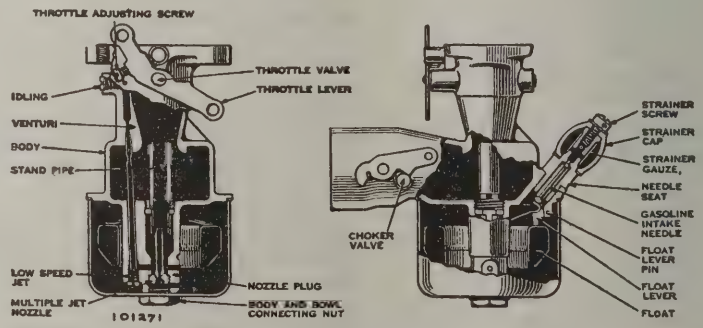
We would suggest that this point be checked by attaching the rear axle to the springs and to the universal joint and then note how the ball cap lines up with the holes in end of the transmission crankcase stamping. If holes do not line up perfectly or if when the axle is out the rear bearing babbitt bushing mounted in the removable ball cap is worn it indicates that the crankcase is sprung and that it should be removed and straightened. When testing for alignment of the two cap screws and two bolts to go through the ball cap, it is advisable to turn the engine over while one man examines to see whether there is any tendency of the axle to move out of position at the ball end of the torque tube during the cranking.

CARTER CARBURETER ADJUSTMENTS



Q.—Supply information in regard to the internal construction and adjustment of the Carter carbureter.—Reginald Trevor, Blubber Bay, B. C., Canada.

We are showing an illustration of the Carter carbureter as used on Chevrolet. It is recommended that every 2,000 miles the filter screen in the strainer cap be removed and thoroughly cleaned. This screen is removed by unscrewing the screen cap screw. The idling adjustment is controlled by the idling adjustment screw. Turning the screw counter clockwise or to the left gives more fuel, running at low speed.



Data on a Tractor Part

Q.—Will you please ascertain for us whether or not Twin City Co., Minneapolis, Minnesota have ever made any change in design of part TW-23 stub shaft for idling gear for Twin City tractor. What we wish to know is if they have discontinued making hole in the part whereby same was locked into the block by means of a taper pin. If they have made such a change would like to know what the design is for the stub shaft they are now using and how same is fastened into the block.—Malam Garage, Waverly, Ill.

According to information supplied us direct by the manufacturer, the idler gear stub shaft which is used on the 12-20 tractor was locked with a taper pin through the crankcase as mentioned in your question. The latest design of this stub shaft, however, is such that the diameter of the pin has been increased making a tight pressed fit into the crankcase and therefore eliminating entirely the use of the taper pin. A print of the stub shaft is shown at Fig. 225.

Idler gear stub shaft on Twin City tractor

Sectional views of Carter carbureter

Clearing Up Electrical Troubles

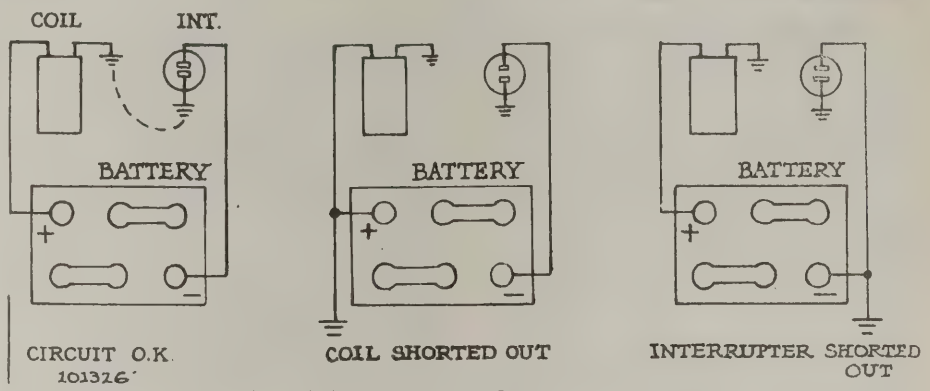
EDITED BY A. H. PACKER

The READERS CLEARING HOUSE

Too Many Grounds Make A Short

Q. If the breaker points are grounded can the coil be grounded too? I am told that if one is grounded the other cannot be grounded. George W. Whitcher, Jr., 366 Chile avenue, Rochester, N. Y.

In general this is correct that both the coil and interrupter cannot be grounded for on practically all cars today it is customary to use a grounded system where one terminal of the battery is connected to the frame of the car. For this reason it is customary to carry the current from the battery through the coil and then through the interrupter, one side of which is grounded. The frame of the car then serves as a return circuit to the grounded battery terminal.



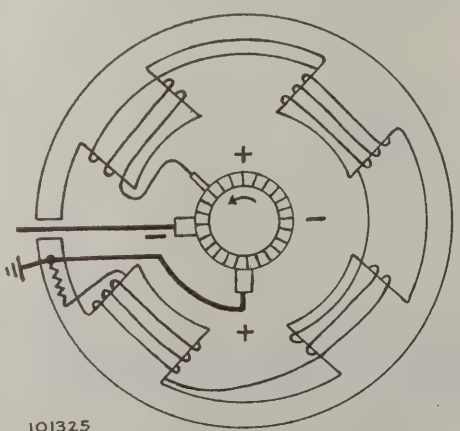
The case you mention however, is possible and we are showing an illustration which contains three sketches, the one at the left showing a circuit where operation would be possible with both coil and interrupter grounded. In this case, current would flow from positive battery through the coil to the grounded coil terminal. The frame of the car will then serve as a connection to the grounded interrupter terminal and when the points close the current would flow back to negative battery.

With these same connections, however, we get into trouble if we ground positive or negative terminal of the battery. The center sketch shows the positive terminal grounded and the current in this case would not have to flow through the coil for the coil is shorted out, both terminals being grounded. The flow would be from positive battery to ground and then through the interrupter and back to negative. As the interrupter has no appreciable resistance, the wiring and interrupter would burn out when the points close.

In the sketch at the right, with the negative battery terminal grounded, you would have current flowing through the coil to ground and then back to negative battery, so that current would flow continuously and would not be interrupted.

Q. In timing ignition in all makes of engines, should the spark be fully retarded before timing of same or should it be advanced to the running positive on steering wheel?

The general practice is to time with the lever in the retarded position for all engines are alike as far as the retard position is concerned. In some cases, however, instruction books refer to a mark on the flywheel where the spark should occur with the spark advance lever in a certain position. If the instructions in the book are followed and then the timing is checked in the retard position, it will be found that the spark on retard occurs when the piston has gone up to top dead center and then has barely started down again. Accordingly, if instructions are available, they may be followed and if not, it is safe to time the spark with the advance lever in the retard position, having the spark occur when the piston has barely started down on the firing stroke.



One of these circuits works and two do not

28 Amperes Minimum on This Third Brush Generator

Q. Please tell me why a generator on a Haynes, model 55 charges too much with the third brush set back as far as it will go. Everything seems to test o. k. but it will charge up to 28 amperes with the third brush set as far back as the adjustment permits. Supply wiring diagram of this generator. D. C. Slick, The East Granite City Garage, Granite City, Ill.

We are showing a diagram which gives the internal circuits of the generator in question. We would first recommend your checking the connections of the shunt field. You will notice in the sketch that the field is connected through a fuse to ground, while the other end of the field is connected to the third brush. If the grounded end of the field, for example, should be connected to the live brush instead, it would make the generator operate in the reverse direction as a motor.

Internal Generator circuits on Haynes 55

Then, some mechanic not experienced with third brush generators might figure that the field was reversed and merely change the field connections. This would leave the field connected from the live brush to the third brush and it could be made to motor in the proper direction and also generate when driven in the proper direction. However, instead of regulating, the current would increase rapidly at high speeds. This generator is supposed to turn left hand or counterclockwise as seen from the commutator end. The lower main brush is positive and the one at the left is negative.

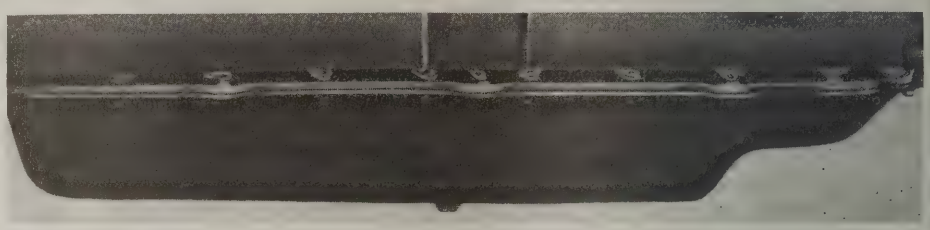
In a four-pole generator, however, opposite points on the commutator have the same polarity. For this reason, the connections of the field are the same as if it should be connected from the third brush to the positive point at the top of the commutator. To reduce the charging rate the third brush should be moved to the right or toward the upper portion of the commutator as seen in the sketch. If we would exaggerate this adjustment and move the third brush all the way to the top of the commutator, we would have both ends of the shunt field, connected to positive, so that there would be no tendency for current to go through the field and the machine would not generate. For this reason you can see that with correct connections you can hardly avoid cutting down the charging current if the third brush is moved in the proper direction. As a precaution it might pay to test the brushes and brush holders for ground and check the position of the main brushes. This is done by lifting the third brush and connecting a battery to the main brushes. There should be practically no tendency for the armature to rotate in either direction. If the tendency is quite strong the brushes should be moved, if the construction permits. A slight tendency for the armature to rotate in the normal direction is usually considered permissable.

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

Parts and a Complete Engine Overhaul

RECENTLY a subscriber to MOTOR AGE stated it always is a losing proposition to give the price of parts with the labor on a flat rate on a job such as overhauling an engine. He says it is almost impossible to list all parts such as gaskets, hose, ignition wire, bearing shims, etc., with the result that the customer is given a quotation below what it should be.



There is no doubt but what it is quite a job to put down in black and white all the things you are going to need when overhauling an engine, but we believe this is largely a matter of "knowing your stuff."

It often has been said that flat rate means considerable book-keeping, that is, you have to use pencil and paper to quite an extent, if there are to be profits. Two jobs are seldom alike and although the work order may call for substantially the same thing, such as "overhaul engine," perhaps one job necessitates a few operations or parts not called for in the other. That's where the pencil and paper come in.

If the various operations in flat rate schedules are correctly interpreted there is little reason why a shop should go wrong on an engine overhaul, once the customer has been sold as to just what he is going to get and the shop knows what it is going to do.

Almost always when an engine overhaul is specified, or an overhaul of any other unit, it is taken for granted the wearing parts in such units are to be replaced with new ones, or the old ones reconditioned. The flat rate schedules make this clear.

Engine overhauls include as a rule the reconditioning of the cylinder bores, new pistons and rings, new piston pins, grinding the crankshaft, fitting new bearings, new timing gears or chain, new camshaft bearings, new hose connections, gaskets, etc., for all of which a price can be set in addition to the labor. Sometimes certain parts need not be replaced with new ones and in such cases it is perfectly possible to deduct from the original quotation.

THINGS THAT HELP FLAT RATE

Here is a case where studs are used for attaching the crankcase pan to the case, quite a timesaver when removal and replacement of the pan is necessary. Every mechanic knows what a job it sometimes is to attach a pan when bolts are used and no assistant is handy to help

The whole matter is largely one of having an understanding with the customer beforehand. The time to have this is when the unit has been torn down and the worn parts measured. This will tell if new parts are advisable or if the old ones can be reconditioned. Then, it is merely a case of listing such parts or operations and setting the price.

Very often where a flat rate is quoted on an engine overhaul it is taken for granted new parts will be installed throughout and any service man or mechanic on to his job can tell pretty nearly what parts are likely to be needed when an engine has done some 25,000 or 30,000 miles. To forget to charge for a gasket or hose connection is merely slack bookkeeping and not the fault of the flat rate system.

Flat Rates on Chevrolet, Dodge Brothers and Overland

To the Editor of Motor Age:

Philadelphia, Pa.

We are very much interested in your Flat Rate Forum and are wondering if you have yet published the rates on the Chevrolet, Dodge and Overland. If so, will you kindly send us copies.

If you have not as yet published the rates on these cars, will you kindly advise us about when they will be shown so that we may be on the lookout for them?—Dewees F. Kirchner.

The Flat Rate Forum has published some flat rate operations on the cars you mention and the dates of these are as follows:

February 26, 1925—Operations on Dodge Brothers fenders.

March 12, 1925—Operations on Overland connecting rods and pistons.

April 7, 1925—Operations on Chevrolet engine (overhaul).

May 21, 1925—Operations on Dodge Brothers front axle.

June 18, 1925—Operations on Chevrolet timing gears and oiling system.

July 23, 1925—Operations on Chevrolet bearings and connecting rods.

If you do not already know it we should like to call your attention to Motor Age's Flat Rate Manual published in the April 30, 1925 issue. This manual contains prices for some 277 operations on not only the cars you ask about, but practically all the present makes of American built automobiles. The manual is sold separately for 50 cents.

Readers are invited to make use of this page in the discussion of Flat Rate. The department is offered as an open forum.

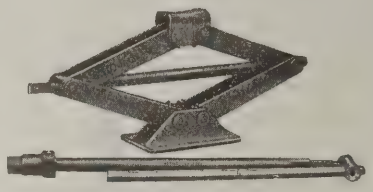
THE MARKET'S NEW OFFERINGS

Accessories—Equipment—Supplies

Losee Best Ever Rim Tool

TIRES can be easily and quickly removed or replaced by use of the Losee Best Ever Rim Tool, according to the Losee Motor Products Company, Hebron, Ill., makers of this and other automotive appliances. The Losee rim tool operates easily, is self locking and folds. It is recommended for all balloon or standard tire rims. In operation its hooks catch the rim firmly while a lever does the work of expanding or contracting. The product is designed compactly so it can be carried conveniently in the car and it weights seven pounds. Price $5. Among this company's other products are its Triple Lever Clutch Control for Chevrolets priced at $3. the Losee Dash Control Cut-Out for Chevrolets, priced at $6.50, Losee Hot Spot for Chevrolets priced at $6, Losee New Improved Heater for Chevrolets priced at $10. Losee Muffler Silencer for Chevrolets priced at $1.50 and the Losee Standard Cut-Out for All Cars, priced from $3 to $5.50 for cut-out only and from $4.25 to $6.75 with dash control.

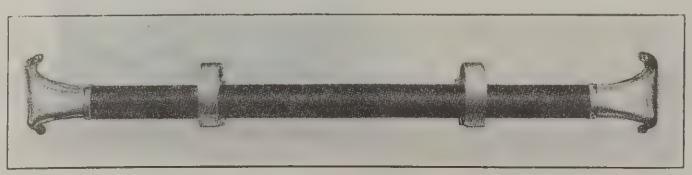


Losee Best Ever Rim Tool

Bumpers and Fender Guards

BRENNAN-TAYLOR Corporation, 24th street and M. C. R. R., Detroit, offers the trade an accessory called the Taylor De Luxe Bumper and also Fender Guards of harmonious design. These devices are recommended by the makers for their serviceability and capacity to add to the beauty of the car. The bumper is of steel tubing, light and resilient, and finished with baked enamel which is coated with lacquer and baked again. Its ends are silvery flares bending toward the car and made of a non-corrosive metal. Bumpers for Hudson, Nash, Studebaker, Buick, Packard etc., are priced $28.50 f. o. b. Detroit. Fender guards are priced at $28.50 per pair. Essex bumpers are priced at $22.

So-Lo Jack

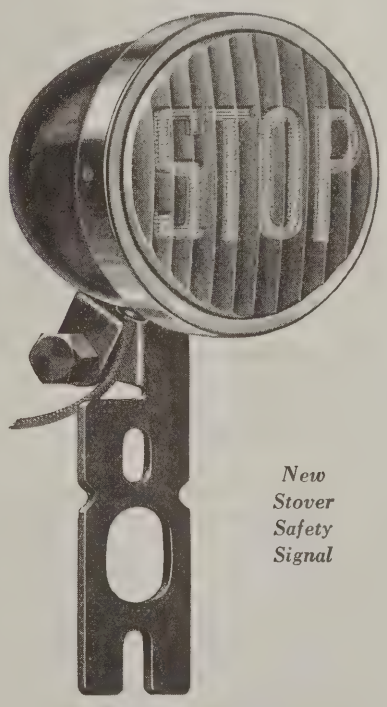


(Cut shown above)

A HANDY jack for the motorist which will lower to a fall of 3¾ in. and rise to a height of 15½ in. is found in a device being produced by the So-Lo Jack Company, Attleboro, Mass. This is the So-Lo Jack. Its big advantage is said to be in its low fall which makes it very practical especially when a flat balloon tire needs attention. At the same time the jack can be elevated to a height sufficient for an ordinary job on the road or in the garage. Ruggedly made and of exceptional lifting strength the jack is unusually light. The base is broad and long to retard sinking into soft ground. The jack packs compactly into the tool compartment of the car.

Keeping Tab on the Fat Pocketbook

Automotive merchants who count considerably on the farmer's patronage are watching this source of prospective business with interest. As crops are converted into cash the farmer will become a larger buyer. All competitive sellers know that well and all are on their toes to be first on the ground as soon as the crop money is about to be released.



One wide-awake automotive dealer, not wanting to be left behind in this race, keeps close tab on the farm selling in his community. He gets leads from elevators, stock pens and railroad sources. He knows that when the farmer sells he will have money and the farmer is promptly sent a letter reminding him to supply his automotive needs. Getting after the prospective buyer when he is supplied with funds is all-important. Don't overlook the farmer when crops are moving.

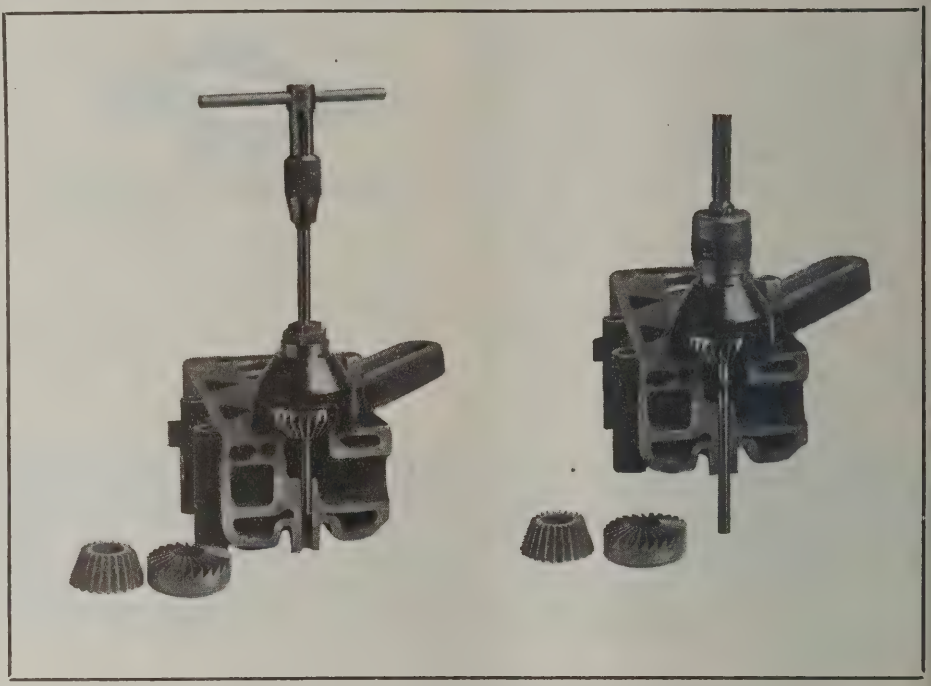
New Stover Safety Signal

AMONG recent development in the stop signal field is appearance on the market of the new Stover Safety Signal, manufactured by the Stover Signal Engineering Company, of Racine, Wis. The new Stover design marks a number of improvements over the earlier signal. Its departures include a new fluted lens, bayonet joint method of attaching the lens rim and a universal bracket. The new fluted lens while giving an intense flare adds further attractiveness to the attachment. The bayonet joint method of attaching the lens rim to the lamp is pointed out by the makers as a decided improvement, there being no rattling or working loose by this plan. At the same time the lens is easily removed for cleaning or replacing the bulb. The standard "Stop" lens is furnished with this new Stover product. This is interchangeable with special lens bearing "Ford" and "Chevrolet" names. List price $2.

New Stover Safety Signal

Clifton's Ford Upholstery

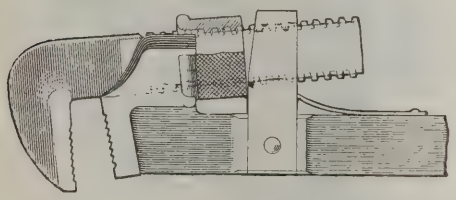


THIS product is put out by the Clifton Mfg. Co., Waco, Texas. It is intended to replace worn out and ragged upholstery for Ford cars, and is well padded and tufted with metal clinch buttons.

List price of frontback touring $5.50, weight 8¼ lbs., rearback touring $6.10, weight 7¾ lbs., roadster $5.50, 8¼ lbs.

GETTING MORE OUT of the SHOP

Valve Reseating and Guide Reaming Strateway Jig



With the use of the Strateway Jig and the different cutters a good job of reconditioning the valve seats may be done and the valve seats will be concentric with the valve stem guides it is said. This result obained is due to the fact that the Jig remains bolted to the cylinder block during the entire operation and the reamer and the re-seating cutter is guided through the jig with a drag fit. If a true valve is placed in a seat made the Strateway way a perfect, gasoline tight joint is obtained which removes the necessity of grind with compound, is the claim. It is made by the Hill Enengineering Co., River Falls, Wis.

Left, Strateway jig for reseating valves; right, jig for reaming guides

Armstrong Stilson Pipe Wrench

Several features, said to appeal to mechanics are incorporated in the Armstrong Stilson all steel pipe wrench. For one thing it is frameless. That is, the nut housing has been entirely removed and the patented ball and socket nut affords increased flexibility and greater strength, especially under heavy side strain. The side pull strain is taken up by two solid forged steel lugs, reinforced by the recessed nut. The adjusting nut cannot fall out and since the handle does not act inside of a frame it is therefore not restricted in size, but so designed to be strongest at the greatest point of strain. There is no projecting part below the line of the handle. A novel spring action insures proper gripping position to the movable pawl and imparts just sufficient tension, it is stated, to prevent it getting out of adjustment. The wrench varies in length from 8 to 48 in. and the prices range from $2.25 to $20.00. The wrench is made by the Armstrong Bros. Tool Co., 317 N. Francisco Avenue, Chicago, Ill.
